THE ENCYCLOPAEDIA OF ISLAM

THE ENCYCLOPAEDIA OF ISLAM

NEW EDITION

PREPARED BY A NUMBER OF
LEADING ORIENTALISTS

EDITED BY

**P. J. BEARMAN, TH. BIANQUIS, C. E. BOSWORTH,
E. VAN DONZEL AND W. P. HEINRICHS**

UNDER THE PATRONAGE OF
THE INTERNATIONAL UNION OF ACADEMIES

VOLUME XI

W — Z

LEIDEN
BRILL
2002

AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have listed after each contributor's name the pages on which his or her signature appears. Academic affiliations are given (for a retired scholar, the place of his/her last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this *Encyclopaedia* or from the *Shorter Encyclopaedia of Islam*. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his or her name appears within square brackets after the name of the original author.

F. Adanir, University of Bochum. 215
C. Adle, Centre National de la Recherche Scientifique, Paris. 471
Feroz Ahmad, University of Massachusetts, Boston. 321
Virginia Aksan, McMaster University, Hamilton, Ontario. 131, 321
R.M.A. Allen, University of Pennsylvania. 251
C. Alvarez de Morales, C.S.I.C., Granada. 15
A.A. Ambros, University of Vienna. 552
Edith G. Ambros, University of Vienna. 132, 205, 251, 319, 350, 519
R. Amitai, Hebrew University, Jerusalem. 18
Meropi Anastassiadou, Institut Français d'Etudes Anatoliennes, Istanbul. 283
A. Arazi, Hebrew University, Jerusalem. 13, 158
Françoise Aubin, Centre d'Etudes de Recherches Internationales, Paris. 122
A. Ayalon, Tel Aviv University. 126
the late D. Ayalon, Hebrew University, Jerusalem. 27
Roswitha Badry, University of Freiburg. 569
Eva Baer, Jerusalem. 425
M.A. al-Bakhit, Āl al-Bayt University, Mafraq, Jordan. 460
Çiğdem Balim, University of Manchester. 163
M.L. Bates, The American Numismatic Society, New York. 148
Tiziana Battain, University of Trieste. 457
M. Bazin, University of Reims. 267
A. Bazzana, University of Lyons. 426
Peri Bearman, Harvard University. 358
the late A.F.L. Beeston, University of Oxford. 302
M.A.J. Beg, Cambridge. 151
P. Behnstedt, University of Heidelberg. 280
Doris Behrens-Abouseif, University of London. 69
H. Bell, Oxford Academy for Advanced Studies. 13
A. Ben Abdesselem, Institut National des Langues et Civilisations Orientales, Paris. 133, 145
H. Bencheneb, Paris. 544
J.P. Berkey, Davidson College, Davidson, North Carolina. 463
Lidia Bettini, University of Florence. 523, 558
Th. Bianquis, University of Lyons. 181, 190, 320, 383, 392, 547
Sheila S. Blair, Boston College. 298, 467
Kh.Y. Blankinship, Temple University, Philadelphia. 311
F.C. de Blois, Royal Asiatic Society, London. 184, 210, 223, 497, 513
J.M. Bloom, Boston College. 298
M. Boivin, Ecole des Hautes Etudes en Sciences Sociales, Paris. 518
C.E. Bosworth, University of Manchester. 2, 16, 34, 52, 100, 101, 130, 134, 135, 136, 144, 148, 178, 179, 184, 202, 205, 214, 220, 221, 224, 227, 235, 238, 246, 255, 288, 290, 294, 297, 301, 302, 312, 333, 334, 336, 337, 343, 358, 362, 366, 371, 387, 394, 426, 432, 440, 447, 458, 459, 463, 464, 483, 485, 487, 516, 522, 540, 559, 565, 571, 575
Annabelle Böttcher, Free University, Berlin. 299
W.C. Brice, University of Manchester. 14, 32, 271, 386
J.T.P. de Bruijn, University of Leiden. 361, 393
Kathleen R.F. Burrill, Columbia University. 162, 202
R.D. Burrowes, University of Washington. 276
Y. Callot, University of Tours. 14, 32
Sheila R. Canby, British Museum, London. 264
S. Carboni, Metropolitan Museum of Art, New York. 554
A. Carmona, University of Murcia. 78, 192
M.G. Carter, University of Oslo. 173, 459
B. Catlos, University of Toronto. 160
Jacqueline Chabbi, University of Paris. 442
Khalifa Chater, Bibliothèque Nationale, Tunis. 490
E. Chaumont, Centre National de la Recherche Scientifique, Aix-en-Provence. 219, 299
H.E. Chehabi, Boston University. 574
W.C. Chittick, State University of New York, Stony Brook. 39
P.M. Cobb, University of Notre Dame. 464
P.M. Costa, University of Bologna. 6
M. Côte, University of Aix-en-Provence. 139, 147, 366
J. Couland, University of Paris. 176
Patricia Crone, Institute for Advanced Study, Princeton. 312
Seta B. Dadoyan, American University of Beirut. 282
R. Dankoff, University of Chicago. 360
R.E. Darley-Doran, Winchester. 171, 200, 231
G. Dávid, Eötvos Loránd University, Budapest. 142, 492, 546
Randi Deguilhem, IREMAM, Aix-en-Provence. 92
F.M. Denny, University of Colorado, Boulder. 121, 210
D. DeWeese, Indiana University, Bloomington. 118
A. Dietrich, University of Göttingen. 343
E. van Donzel, Leiden. 178, 234, 281, 293
Nelly van Doorn-Harder, Valparaiso University, Valparaiso, Indiana. 530, 537
Anne-Marie Eddé, University of Reims. 191, 391
H. Eisenstein, University of Vienna. 130
Mohamed El Mansour, University Mohamed V, Rabat. 133, 201, 202, 388
W. Ende, University of Freiburg. 47, 398, 530
G. Endress, University of Bochum. 246
Sibel Erol, New York University. 257
J. van Ess, University of Tübingen. 165
T. Fahd, University of Strasbourg. 404
Suraiya Faroqhi, University of Munich. 257, 301, 341, 495, 545
Halima Ferhat, University of Rabat. 356, 566

Maribel Fierro, C.S.I.C., Madrid. 15, 103, 249, 425
R. Firestone, Hebrew Union College, Los Angeles. 254, 354, 373
Barbara Flemming, University of Leiden. 362
G.S.P. Freeman-Grenville, Sheriff Hutton, York. 106, 108, 283, 445, 450
M. Gaborieau, Centre National de la Recherche Scientifique, Paris. 120, 358, 406, 536
D. Gazagnadou, University of Paris. 268
G.J.H. van Gelder, University of Oxford. 151, 153, 184, 247
E. Geoffroy, University of Strasbourg. 236, 406, 524
Ali Gheissari, University of San Diego. 239, 309
Cl. Gilliot, University of Aix-en-Provence. 152, 266
Geneviève Gobillot, University of Lyons. 562
G. Goodwin, Royal Asiatic Society, London. 267
Molly Greene, Princeton University. 204
D. Gril, University of Aix-en-Provence. 212
[A. Grohmann, Vienna]. 270
A.J. Gully, University of Exeter. 319
the late U. Haarmann, Free University, Berlin. 175
Wael B. Hallaq, McGill University, Montreal. 389
H. Halm, University of Tübingen. 103, 129, 405
J. Hämeen-Anttila, University of Helsinki. 382
C. Hamès, Centre National de la Recherche Scientifique, Paris. 443, 470
Shah Mahmoud Hanifi, University of Michigan, Ann Arbor. 494
I. Hasson, Hebrew University, Jerusalem. 522, 551
A. Havemann, Free University, Berlin. 359
G.R. Hawting, University of London. 311, 312
S. Heidemann, University of Jena. 392, 452, 455
W.P. Heinrichs, Harvard University. 37, 52, 53, 313, 364, 472
C.J. Heywood, University of London. 290
C. Holes, University of Oxford. 47
[E. Honigmann, Brussels]. 488
M.B. Hooker, Australian National University, Canberra. 99, 493
D. Hopwood, University of Oxford. 26
J.O. Hunwick, Northwestern University. 9, 99, 124
Halil İnalcik, Bilkent University, Ankara. 197
Svetlana Ivanova, National Library, Sofia. 150, 208, 517
Mawil Y. Izzi Dien, University of Wales, Lampeter. 23, 58, 208
P. Jackson, University of Keele. 174
Renate Jacobi, Free University, Berlin. 129, 548, 571
J. Jankowski, University of Colorado. 253
J.J.G. Jansen, University of Leiden. 57
Penelope C. Johnstone, University of Oxford. 145, 152, 225, 486
F. de Jong, University of Utrecht. 185
W.E. Kaegi, University of Chicago. 292
O. Kahl, Sheffield. 496
J.G. Katz, Oregon State University. 468
Barbara Kellner-Heinkele, Free University, Berlin. 341
H. Kennedy, University of St. Andrews. 128
P.F. Kennedy, New York University. 564
R.G. Khoury, University of Heidelberg. 36, 101, 180, 559, 565
Abdelfattah Kilito, University Mohamed V, Rabat. 52, 352
Hilary Kilpatrick, Lausanne. 423
D.A. King, University of Frankfurt. 508
E. Kohlberg, Hebrew University, Jerusalem. 162, 483
G.C. Kozlowski, DePaul University, Chicago. 97
P.G. Kreyenbroek, University of Göttingen. 316
Remke Kruk, University of Leiden. 32
V. Lagardère, Centre National de la Recherche Scientifique, Lyons. 141

[G. Yver, Algiers]. 146
Muhammad Qasim Zaman, Brown University. 188, 258
Th. Zarcone, Centre National de la Recherche Scientifique, Paris. 115, 296, 452, 535
[K.V. Zettersteen, Uppsala]. 129
E.J. Zürcher, University of Leiden. 332, 363
A. Zysow, Harvard University. 422

ADDENDA AND CORRIGENDA

VOLUME I

P. 511b, **ANKARA**, *add to Bibl.*: T.M. Cross and G. Leiser, *A brief history of Ankara*, Vaccaville, Calif. 2000.

P. 1131b, **BAYHAKI**, *add to Bibl.*: F. Bertotti, *L'opera dello storico persiano Bayhaqī*, Naples 1991: Julie S. Meisami, *Persian historiography to the end of the twelfth century*, Edinburgh 1999, 79-108.

VOLUME III

P. 455b, **HIND BINT 'UTBA**, *add to Bibl.*: Renate Jacobi, *Portrait einer unsympathetischen Frau: Hind bint 'Utba, die Feindin Mohammeds*, in *WZKM*, lxxxix (1999), 85-107.

P. 885b, **IBN AL-MUKAFFA'**, *add to Bibl.*: J.D. Latham, art. *Ebn al-Moqaffa'*, in *EIr*, viii, 39-43 (includes material expanding the same author's ch. in *CHAL, II, 'Abbasid belles-lettres*, Cambridge 1990, 48-77, and making certain corrections to it); Mirella Cassarino, *L'aspetto morale e religioso nell'opera di Ibn al-Muqaffa'*, Soveria Mannelli (Catanzaro) 2000.

P. 1117a, **ILEK-KHANS** or **KARAKHANIDS**, *add to Bibl.*: Reşat Genç, *Karahanlı devlet teşkilatı (XI. yüzyil)*, Istanbul 1981; M.N. Fedorov, *Notes on the Qarākhānids and their coinage – I*, in *Suppl. to the Oriental Numismatics Society Newsletter*, no. 165, London 2000, 1-52; *Notes ... – II*, in *Suppl. ...*, no. 168, London 2001, 1-48.

VOLUME V

P. 486b, AL-**KURDJ**, l. 16, *add*: Concerning the etymology of the name, Pers. *gurdj* and *gurdjī* are ultimately identical with Grk. *Ibēres*. The Armenian *virkh* for "Georgians" shows that the original form was **vīr*. An Arm. form without the pl. suffix *-kh* is *vrastan* "Georgia", with normal loss of *i* in a non-final syllable, cf. Pers. *gurdjistān*, older *gurdjastān*. Pers. *gurdjī* shows the normal development of O Pers. *vi-* to NP *gu-* and palatalisation of the velar before *i*, *gurdj* being a back formation. European designations like Ital. *Georgia* are transformations by popular etymology of *gurdjī*, possibly from a Class. Ar. *djirdjī* so far unattested. Georgian *kartvelebi*, *sakartvelo*, etc. originally designated only the area around Tbilisi, so that **vīr* is probably the original name of the Georgians. (F. Thiesen)

VOLUME VII

P. 445b, **MUḤAMMAD MURTAḌĀ**, *add to Bibl.*: Ziriklī, *A'lām*², vii, 297-8; Kaḥḥāla, *Mu'allifīn*, xi, 282-3; 'Abd al-Raḥmān al-Ahdal, *al-Nafas al-yamānī*, Ṣan'ā' 1979, 239-52; Kattānī, *Fihris al-fahāris*, Beirut 1402/1982, i, 527-43, ii, 621-4; M.M. al-Dimyāṭī, *Mu'djam asmā' al-nabātāt al-wārida fī Tādj al-'arūs li 'l-Zabīdī*, Cairo 1966; Ḥ. al-Djāsir, *Naẓarāt fī kitāb Tādj al-'arūs min djawāhir al-Kāmūs li 'l-Sayyid Muḥammad Murtaḍā al-Zabīdī*, al-Riyāḍ 1987; H.Ṭ. Shalāsh, *al-Adwiya wa 'l-adwā' fī mu'djam Tādj al-'arūs*, Baghdād 1408/1987; Ḥ. Naṣṣār, *al-Mu'djam al-'arabī*, Cairo 1408/1988, ii, 604-40; R.L. Lārī, *'Allāma Sayyid Murtaḍā Bilgrāmī Zabīdī. Ḥayāt awr 'ilmī kārnāma*, Lakhnaw 1990; S. Reichmuth, *Murtaḍā az-Zabīdī (d. 1791) in biographical and autobiographical accounts ...*, in *WI* (1999), 64-102.

P. 1007a, **NĀṢIR-I KHUSRAW**, *add to Bibl.*: Alice C. Hunsberger, *Nasir Khusraw: the ruby of Badakhshan. A portrait of the Persian poet, traveller and philosopher*, London and New York 2000.

VOLUME VIII

P. 64a, **NĪSHĀPŪRĪ**, *add to end of first paragraph*: The alleged text of the *Saldjūk-nāma*, indifferently published by Ismā'īl Afshār at Tehran in 1322/1953 is, in the opinion of A.H. Morton, the work of Abu 'l-Kāsim Kāshānī (whose literary activity seems to span the years between 699/1300 and 716/1316), and is quite closely related to the section on the Saldjūks in the *Djāmi' al-tawārīkh* of Rashīd al-Dīn Faḍl Allāh [*q.v.*]. Mr Morton is producing a critical text, based on the R.A.S. Pers. ms. 22b, of an anonymous history of the Saldjūks dedicated to Sultan Ṭoghrïl III b. Arslan and apparently written during his reign. This seems to be one of the later works exploiting the original *Saldjūk-nāma* (if this was indeed its actual name) of Ẓahīr al-Dīn, and the editor believes that his final text, which will take into account readings from parallel historical sources, will be as close as we are likely to get to the text of the original *Saldjūk-nāma*.

VOLUME X

VEYSEL [see ʿĀSHİĶ WEYSEL, in Suppl.].

VIDIN [see WIDIN].

VIDJAYANAGARA, the name of a mediaeval Hindu power which covered large parts of the Deccan from the mid-14th century to the later 17th century and which is relevant to this Encyclopaedia because of the incessant warfare between its Rādjās (some sixty of whom, from various, distinct lineages, issued royal inscriptions claiming sovereignty over India south of the Krishna river) and the Muslim sultanates of the Deccan. It appears in Indo-Muslim sources as Bidjanagar.

The name Vidjayanagara, meaning "City of victory", was that of the state's original capital on the upper Tungabhadrā river. Its ruins lie at Hampī in the Bellary Division in the western part of the modern Karnataka State of the Indian Union (lat. 15° 20' N., long. 76° 25' E.); for the mediaeval city and its buildings, see HAMPĪ. The kingdom arose from the ruins of four great Hindu dynasties which had ruled the territories south of the Vindhya range on the eve of the first Muslim penetration of the Deccan by the Dihlī Sultan ʿAlāʾ al-Dīn Khaldjī in 693/1294 [see KHALDJĪS]. A Hindu reaction came in the time of the Sultan Muḥammad b. Tughluḳ [*q.v.*], when an infant Hindu state arose in the Andhra coastlands along the Bay of Bengal. The ancient Hindu Hoysala kingdom was overthrown by Vidjayanagara in 1346, but expansion by the new state was challenged in the south by the existence of the recently-established Muslim-sultanate of Madura on the Malabar coast [see MAʿBAR]. Nevertheless, this last ephemeral independent sultanate was extinguished by the Vidjayanagara Rādjās in *ca.* 779/1377, and the Malabar region held by Hindu rulers until the short-lived Muslim conquest in the later 11th/17th century by the Mughal emperor Awrangzīb [*q.v.*].

To the north, the sultanate of the Bahmanids [*q.v.*], much more powerful than Madura had been, formed a barrier against both Vidjayanagara and the other main Hindu state of the eastern Deccan, Warangal [*q.v.*]. The Bahmanids conquered Warangal by 830/1425 but were never able to subdue Vidjayanagara. Warfare between the two powers was frequent, with the Rayčūr [*q.v.*] *doʾāb*, the land between the Tungabhadrā and Bhīma rivers, which Muḥammad b. Tughluḳ had overrun, being the main bone of contention. The Bahmanids attacked Telingāna [*q.v.*] in 763/1362, and there were several wars over the next decades between Muḥammad I Bahman Shāh (759-76/1358-75) and his successors, such as Tādj al-Dīn Fīrūz Shāh (800-25/1397-1422), and the Rādjās of Vidjayanagara, with Fīrūz Shāh frequently allied with the Hindu Velama ruler of Warangal. However, there were also periods of peace, with a rough balance of power emerging in the Deccan, as Muslim powers suspicious of Bahmanid expansion, such as those to the north, Khāndesh, Gudjarāt and Mālwā, gave tacit support to Vidjayanagara, and there was also some cultural interaction; Fīrūz Shāh took a Vidjayanagara princess in marriage. But it was an ignominious defeat at the hands of Dēvarāya I at Panagal in 822/1419 which led to Fīrūz Shāh's enforced abdication in 825/1422. His successor Aḥmad I Shāh wrought a condign revenge on both Vidjayanagara and its recent ally Warangal in 827/1424 and then on the former in 836/1433. According to the Muslim historian Firishta, Dēvarāya II, the greatest ruler of the Sangama line of Vidjayanagara recruited Muslim archers and cavalrymen for his army (an inscription of 1430 says that this ruler had 10,000 Turuśka, i.e. Muslim, lit. "Turkish", horsemen in his forces), and in 1433 used his armies to invade the Bahmanid lands. The historian ʿAbd al-Razzāḳ al-Samarḳandī led a mission to Vidjayanagara in 846-7/1443 and describes the splendour of the capital and its court and the flourishing state of the kingdom, and especially of its ports on the Bay of Bengal (*Maṭlaʿ al-saʿdayn*; cf. S.H. Hodivala, *Studies in Indo-Muslim history*, i, 1939, 410 ff.). The Bahmanid sultanate had a resurgence of power later in the 9th/15th century under Muḥammad III Shāh and his able minister Maḥmūd Gāwān [*q.v.*], and the latter in campaigns of 873-6/1469-72 captured Goa, which had in previous decades passed into the orbit of Vidjayanagara, and brought Bahmanid authority to the coastal region of Konkar [*q.v.* in Suppl.] on the shores of the Arabian Sea. Yet after Maḥmūd Gāwān's death in 886/1481, the Bahmanid sultanate fell into chaos and by 934/1528 dissolved into five local Muslim sultanates of the Deccan.

Vidjayanagara, too, was plunged into confusion towards the end of the 15th century but was rescued after 1509 by the energetic Tūluva line of Rādjās. By now a new factor was appearing on the coastlands of the Arabian Sea in the shape of the Portuguese, established at Goa and elsewhere, and it was also now that Vidjayanagara's main Muslim enemy became the ʿĀdil Shāhs of Bidjapur [*q.vv.*]. The ʿĀdil Shāh Ismāʿīl was decisively defeated near Rayčūr in 926/1520 by Krishnadēvarāya, and his forces again worsted in 946/1539. In the middle years of the century, Rāmarāya successfully kept at bay not only the ʿĀdil Shāhs but also the Niẓām Shāhs and Ḳuṭb Shāhs [*q.vv.*], until he was in turn defeated in 972/1565 by a coalition of four Muslim sultanates at the villages of Rakshasa and Tangadi, usually called the battle of Tālīkoṭa [*q.v.*], when Rāmarāya was killed and Vidjayanagara sacked and deprived of its glory.

The Vidjayanagara state survived for another century

under the Āravīdū line of rulers, but with diminished territory and revenues, and with the capital at first transferred south-eastwards to Penukondā, safer from Muslim attacks. Though deprived of its northern provinces, it was still strong under Venkaṭa II Rāya (1568-1614), who ruled from a capital at Čandragiri, allied with the Portuguese, received various foreign embassies and was in direct correspondence with Philip II of Spain. It was Venkaṭa III who in 1639 allowed the English East India Company to build a fort at the village of Madras, which was named Fort St. George [see MADRAS]. But by now, Muslim pressure was being strongly felt, with the ʿĀdil Shāhs extending southwards into Mysore [see MAHISUR] and then eastwards into Karnāṭaka, and the Ḳuṭb Shāhs pushing towards the Bay of Bengal and the Coromandel coast. The then Vidjayanagara capital of Vellore was captured, and Srī Rāya III's territories shrank almost to nothing; he is last mentioned in an inscription of 1678. After Awrangzīb extinguished the sultanates of the ʿĀdil and Ḳuṭb Shāhs, the remaining Vidjayanagara territories in the extreme southwestern tip of the Deccan peninsula passed briefly under Mughal rule.

In modern times, apart from two or three British pioneers, the history of Vidjayanagara has until recently largely been written by Hindu Indian writers, and these have often regarded Vidjayanagara as the guardian of the Hindu heritage in South India, with a historic mission of resistance to Islam; in this same tradition, Vidjayanagara has sometimes been regarded by them not only as a mediaeval Indian state but also as the precursor of the Marāṭhā confederacy [see MARĀṬHĀS].

W

WĀ-SŌKHT, or "bitter repudiation (sc. of the beloved)", a term of Perso-Urdu literary criticism which has two senses. First, it denotes a theme intrinsic to Persian love poetry which came to be prominently exploited for its own sake in the 10th/16th-century Persian *ghazal* by such *sabk-i hindī* poets as Waḥshī (d. 991/1553), although the exclusive association with the latter suggested by Shiblī (*Shiʿr al-ʿadjam*, 3, 16) is to be questioned (P. Losensky, *Welcoming Fighānī*, Costa Mesa 1998, 82). Later, the term *wā-sōkht* was used in the Urdu poetry of the 18th and 19th centuries to describe a stanzaic poem devoted to the theme of repudiating the beloved. Like other such distinctive Urdu developments, this minor genre seems to have originated with the innovative poet Sawdā [*q.v.*], who uses *muthamman* stanzas each concluding with a Persian verse. But *musaddas* stanzas were preferred by later exponents of the *wā-sōkht*, who notably include Mīr Muḥammad Taḳī, Djurʾat and Muʾmin [*q.vv.*]. A standardised semi-narrative structure incorporating the inevitable *sarāpā* came to characterise the final phase of the *wā-sōkht* which was developed by minor poets of the later Lakhnaʾū school, such as Baḥr, Riḳḳat and Shawḳ [*q.v.*]. Maximal exploitation of the inherently limited scope of the *wā-sōkht* was achieved in the two extended examples by Amānat (d. 1275/1858 [*q.v.*]), of 117 and 307 *musaddas* stanzas respectively.

(C. SHACKLE)

WABĀʾ (A., from *wabiʾa* "to be contaminated", said of a region or land affected by the plague), the mediaeval Arabic term for "epidemic, pestilence", and theoretically distinguished from *ṭāʿūn*, from *ṭaʿana* "to pierce, stab", in the more specific sense of "plague". In mediaeval Arabic medical treatises, one encounters the phrase "every *ṭāʿūn* is a *wabāʾ*, but not every *wabāʾ* is a *ṭāʿūn*". While it appears that the distinction had been kept in the early Hidjrī centuries, it is doubtful, however, whether later Muslim writers always used the two terms with the precise distinction in mind, and it has been shown that considerable confusion existed in the usage of terminology.

1. In the mediaeval Islamic world up to the 10th/16th century.

Epidemics of smallpox and measles, and possibly of typhus, tuberculosis, cholera and dysentery, had been known since early Islam, yet the available information is too sparse and vague to enable precise knowledge of specific cases. Mediaeval Muslim medicine, under Greek influence, considered as the cause of such epidemics the pestilential corruption of the environment, particularly the air (miasma).

Enough material has survived to show that medical writers in early Islamic centuries understood *ṭāʿūn* to mean both the bubonic plague and the swellings of the lymph glands so characteristic of this disease. Relying on Greek and Latin sources, and parallel to the classical notion of the "black death", they speak of the "black *ṭāʿūn*", the worst kind of plague, one of the prominent signs of which is the appearance of dark blotches under the skin. The 7th/13th-century author Muḥyī al-Dīn al-Nawawī [*q.v.*], for example, speaks of "tumours . . . accompanied by a fiery inflammation", of "palpitation of the heartbeat and nausea", all symptoms which accord with modern medical data collected on the bubonic plague. The physician Ibn al-Nafīs [*q.v.*] identified buboes with plague infection. The Andalusian historian Ibn al-Khaṭīb [*q.v.*], a contemporary of the Black Death (see below), stands out in his opposition to the view of the jurists and his insistence

on the factor of contagion in spreading the plague.

The plague is a virulent and extremely lethal epidemic illness, which appeared in world history in the form of great cycles of periodic infection known as pandemics. The bacilli, known as *Pasteurella pestis*, are carried by fleas (*Xenopsylla cheopis*) into populations of wild rodents, where the plague can find a permanent reservoir. It is agreed that the factors which led to outbreaks of plague were an epizootic in the rodents, especially in rats, which would destroy the hosts for the fleas and cause the latter to pass to humans. When an infected flea bites a human, plague bacilli multiply and accumulate in the lymph glands and create buboes (hence: bubonic plague). As the disease progresses, the body's temperature rises and the pulse dramatically increases. In plagues attested in history, a large percentage of cases of infections resulted in fatality within two weeks at the most. A mortality rate of up to 70% made bubonic plague a disastrous disease. Complications could draw the plague bacilli into the lungs, causing the highly contagious and absolutely fatal pneumonic plague which prevails mainly in the winter months and causes death rapidly. A septicaemic variety of plague results from the introduction of the bacillus into the bloodstream and is a very acute plague form, since death can occur within hours. Plague infection spread primarily along communication and trade routes, both by land and sea. Contrary to the assertion of some scholars, there seems no ground for the suggestion that populations could develop natural immunity to the plague.

A plague recorded for the years A.D. 573-4 is of interest since it occurred immediately after what is commonly held to have been the date of Muḥammad's birth. It appears to have been part of the pandemic which began with the so-called Plague of Justinian in 541 and continued for two centuries up to 131/749. The geographical origin of this pandemic is unclear, and the mediaeval Muslim ascription of it to an African plague reservoir should be treated with caution. One should also note the so-called Plague of S̲h̲īrawayh (6/628), named after the Sāsānid emperor S̲h̲īrawayh or S̲h̲īrūy Kawād̲h̲ II, who perished in this outbreak, as being the first recorded case of plague in the Muslim era. A decade later, in Syria and ʿIrāḳ in 17-18/638-9, the Plague of ʿAmwās in Palestine [see ʿAMWĀS] was the first plague to strike the newly-established Muslim empire. It appears to have been of devastating proportions in terms of the mortality it caused; many thousands of Arabs and the conquered population perished. Plague then occurred in the Muslim Near East between 49/669 and 131/749, about a dozen times in Syria and ʿIrāḳ, of which the so-called "Plague which snatches people away [in droves]" (*ṭāʿūn al-d̲j̲ārif*) in 67/687 in ʿIrāḳ, and then that of 126/743-4, which persisted almost continuously until 131/749, were particularly devastating. Thereafter, there appears to have been a respite in the incidence of plague until it struck Bag̲h̲dād in 301/913-14. Later, sporadic outbreaks are difficult to identify because of the dubious terminology.

The second pandemic in the mediaeval Islamic world is known as the Black Death. It appeared in Mongolia—where plague had been endemic for a long time—*ca.* 732/1331, and reached Islamic territories in 748/1347, most likely by the overland route through Turkestan and the Black Sea region. It was as devastating to the Near Eastern populations as to the European ones, and although no accurate mortality data are available, modern research has suggested a population decline of between 25% and 33%. From the available sources, it appears that Egypt and Syria were the regions primarily affected. In addition to high mortality there was large-scale flight from infected areas which aggravated the situation. Cultivated land was abandoned and famine developed. Urban centres suffered as well, since economic activity drastically declined and various functions were suspended. In Ibn K̲h̲aldūn's poetic phrase, "It was as if the voice of existence in the world had called out for oblivion and restriction and the world responded to its call". There were frequent recurrences until as late as the 19th century. For Egypt, close to 50 recurrences of either *wabā'* or *ṭāʿūn* have been recorded for the period between 1348 and 1517. For Syria, the number is about 25. Among the effects of this phenomenon, one should point out the almost certain lack of demographic recovery until modern times.

Theological belief and a normative scheme of behaviour with regard to the plague arose and were incorporated into *ḥadīt̲h̲* [*q.v.*] and other kinds of literature, such as the genre of treatises on the plague. Juristic literature furnished not only legal precedents, which set limits to intellectual discussion and communal behaviour in the context of epidemics, but also an aetiological explanation of the plague, methods of prevention and treatment. Theological explanations contradicted the medical ones of an infected environment (see above) by claiming that disease comes directly from God, hence no infection should be feared. Accordingly, plague was a divine punishment inflicted on impious Muslims and unbelievers. A special kind of lore developed around demons (*d̲j̲inn* [*q.v.*]) as the agents of the plague. However, if a pious Muslim survived the ordeal, he would be rewarded in the afterlife. In traditions ascribed to the Prophet, death from the plague is one of the means of gaining the status of *s̲h̲ahīd* [*q.v.*] or martyr. It was maintained that plague was a form of the divine mercy (*raḥma*), and that a pious Muslim should suffer an epidemic patiently, trusting in God's will and not trying to foil it. Such views explain the dicta prohibiting flight from stricken places.

(B. SHOSHAN)

2. In the Ottoman Empire.

The development, in the course of the 16th century, of the vast Ottoman Empire does not seem to have affected the presence and proliferation of the plague, firmly established in the Ancient World since the mid-14th century and persisting there until the time of its disappearance in the early 20th century. Identifying the disease with certainty, establishing the chronology, geographical extension and intensity of epidemics of the plague over four centuries across this immense territory, is a task which has not as yet been tackled. However, publications currently available make

it possible to sketch the major aspects of the presence and effects of the plague, with the following proviso: the available information becomes more thorough and reliable the closer our own time is approached, and data is less complete and less certain the further one travels from towns and coastal regions. From the early 16th to the mid-19th century, the plague was virtually always present in at least one of the Ottoman provinces, spreading periodically over a much larger area, even the whole of the Empire. While the mortality rate of the disease was always very high—an average of three fatalities for every four patients—its intensity varied considerably: in some cases it would cause only a few deaths, then return to the same area some years later and wipe out a quarter of the population within weeks.

The 16th century is the period in which lacunae are most apparent. It is possible, however, to point to a huge pandemic in the years 1572-89, at which time the plague is found to have affected, with a few brief interruptions, the Near East as well as Egypt, Anatolia, the Balkans and North Africa. On the other hand, the plague was much in evidence during the whole of the 17th century, as is shown by these two examples: in Algiers it is recorded in 1600-2, 1605, 1606-9, 1611-3, 1620-4, 1626-7, 1630, 1639-44, 1647, 1649, 1654-61, 1665, 1673, 1675-6, 1680-3, 1686, 1689-95, 1697-1702, thus every other year on average. Cairo was affected, to a degree sufficient to have drawn the attention of the chroniclers, in 1601-3, 1619, 1620-6, 1642-4, 1667-8, 1671, 1696, thus 18 years in total. The plague was still rife in the 18th century; in 100 years, 68 years of pestilence have been recorded in Istanbul, 57 in Aegean Anatolia, 44 in Egypt, 42 in Albania-Epirus, 41 in Bosnia, 33 in Syria, 18 in Bulgaria, 45 in the Regency of Algiers and 19 in that of Tunis. Improved sources of information reveal that these epidemic instances were of limited intensity and that the deadly epidemics, those which could wipe out between one-tenth and one-third of the population of an urban area, the large cities in particular, occurred only rarely, once in each generation on average. This was the case in 1705, 1726, 1751, 1778 and 1812 in Istanbul, 1713, 1741, 1762, 1781 and 1818 in Salonica, 1718, 1733, 1762, 1787, 1812 and 1837 in Aleppo. The beginning of the 19th century was a continuation of the 18th with two great pandemics which ravaged almost the whole of the Empire in 1812-19 and 1835-38. Then, in the years 1840-44, the plague seems to have disappeared from the Ottoman Empire, with the exception of limited outbreaks in Cyrenaica in 1856-59 and in ʿIrāḳ in 1856-9, 1874-7 and 1891-2. It emerged again in 1894, persisting for more than half a century, in African and Asian territories which were formerly Ottoman.

The plague was above all a disease affecting various species of wild rodents, which played a decisive role in the perpetuation of the disease according to a complex process, in which their fleas participated, in what used to be called the natural centres of the plague. In terms of the Ottoman Empire, this refers to Persian Kurdistan, the Libyan desert and the ʿAsīr [*q.v.*] massif between Yemen and Ḥid̲j̲āz. It was from these zones that the disease spread, always carried by rodents, over vast territories and long periods of time, thus forming, in the 17th and 18th centuries, temporary centres, notably in Albania-Epirus, Moldavia-Walachia, Istanbul, Anatolia and Egypt. In these centres, the epizootic disease was communicated, fortuitously, to humans through the intermediary of fleas. On becoming an epidemic disease it would subsequently be diffused, by land and sea, throughout the whole of the Empire, carried by couriers, merchants, sailors, nomads, soldiers and fugitives—any travellers, in fact.

It is difficult to evaluate precisely the demographic effects of the plague. However, the 16th century seems to have enjoyed a fairly long epidemic remission, accounting for the relative prosperity of the population observed in Anatolia and the Near East. This came to an end in the 1580s, and the 17th and 18th centuries show an increase in the frequency of the disease, probably responsible for a stagnation of the Ottoman population taken as a whole. In its more severe manifestations, the plague also damaged economies, disrupting harvests in the countryside and commercial and industrial activities in the towns. The plague was thus one of the decisive factors behind the problems and weaknesses of the Ottoman Empire in the 18th century.

The beliefs and the behaviour of Muslims when confronted by epidemics of the plague were determined in the Middle Ages, and works of this era, especially those of Ibn Ḥad̲j̲ar al-ʿAsḳalānī in the 15th century, were regarded as authoritative in succeeding centuries. The situation changed from the early 19th century onward, with the appearance in the Near East, in 1820, of a new epidemic disease—cholera, originating in Bengal, which, spreading from Mecca, was to add its effects to those of the plague. The change came about through the influence of the Europeans resident in the Levant, who successfully applied the techniques of protection in use in Europe, and especially through the awareness on the part of rulers of Muslim states of the importance of the demographic factor in military, fiscal and economic spheres. Traditional resignation to divine will was replaced, at least in the higher echelons of the state, by a conception which sought to reconcile the *S̲h̲arīʿa* with modern science and the interests of the state. From the 1830s onward, the Ottoman Empire, Egypt, Tunisia and Morocco, equipped themselves with sanitary authorities and regulations, placing quarantine stations on maritime and terrestrial frontiers. These innovations were achieved with the aid of Westerners, diplomats and doctors, who saw an opportunity to enhance their influence. The rapidity of the results obtained, such that no cases of plague were recorded in the Ottoman Empire after 1844, resulted as much from the efforts of local sanitary institutions as from natural extinction of the temporary centres of the previous centuries. Later recurrences of the plague, few and of limited scope, were energetically combatted.

WABĀR, in Arabian lore a district and tribe localised in the southern part of the Arabian peninsula. Al-Bakrī, *Muʿd̲j̲am*, ed. Wüstenfeld, 835, and Yāḳūt, *Buldān*, ed. Wüstenfeld, iv, 896, give the name

as an indeclinable *faʿāli* form, Wabār[i], with the irregular *nisba* Abārī.

1. In Arabian lore and history.

The Wabār are mentioned by the historians alongside the ʿĀd, Thamūd [*q.vv.*] and other extinct tribes like the Djadīs and Ṭasm [*q.v.*] as peoples of Arabia, now vanished (*al-ʿArab al-bāʾida*), accounted by some genealogists as being among the "true, original" Arabs (*al-ʿArab al-ʿarbāʾ* or *al-ʿāriba*), and described as such by e.g. al-Hamdānī and al-Ṭabarī. The latter, i, 221, tr. W.M. Brinner, *The History of al-Ṭabarī*, ii, *Prophets and patriarchs*, Albany 1987, 20, and al-Masʿūdī, *Tanbīh*, 184, and *Murūdj*, iii, 288-90 = § 1161, number the Wabār among the extinct Arab tribes and give their genealogy.

The statements of the Arab geographers and historians about the history of the Wabār are strongly saturated with legend. The stories current among the Arabs are given by Ibn al-Faḳīh, 37-8, whose statements are combined from several sources, al-Bakrī (*op. cit.*), and much more fully Yāḳūt (iv, 896; a brief synopsis in the *Lisān*, still more briefly in the *Ḳāmūs* and a little more fully in the *Tādj*, *s.v.*). Yāḳūt quotes various authorities, including Hishām Ibn al-Kalbī, Muḥammad b. Isḥāḳ, Ibn al-Faḳīh, and other direct and indirect sources. His statements (iv, 897) agree almost word for word with those of Ibn al-Faḳīh. Al-Ḳazwīnī (*ʿAdjāʾib*, ed. Wüstenfeld, ii, 41) and later writers are based on Yāḳūt. The same characteristic features are common to the authors and compilers mentioned. These include the purely legendary elements: that the name of the land goes back to an ancestor Wabār, who flourished at the time of the confusion of tongues (so al-Masʿūdī, *Tanbīh*, 184; al-Ṭabarī, i, 221, 250), that after the fall of the ʿĀd (cf. Ibn Saʿd, *Ṭabaḳāt*, i/1, 20), the previous inhabitants of Wabār, the Djinn, took possession of the land (so also al-Hamdānī, *op. cit.*, 154, 223; al-Ṭabarī, i, 221), and men lived there no longer but only half-men (*nasnās*), beings who had only half a head, one eye, one hand and one leg (Yāḳūt, ii, 263, tells the same story of al-Shiḥr), that no one dared enter this land, and that its mysterious inhabitants destroyed the crops of the adjoining lands between al-Shiḥr and Yaman. A feature which is developed in the legend, on older models, is the story that Wabār was a particularly fertile land, rich in water and fruit-trees and especially in palms (so also al-Masʿūdī, *Murūdj*, iii, 276, 288-9 = §§ 1150, 1161); al-Nābigha's mention of palms in the land of Wabār (in Ahlwardt, *The Divans*, etc., London 1870, 112, from Yāḳūt) was taken as evidence that the land was fertile and inhabited (cf. al-Bakrī, *loc. cit.*, with Yāḳūt, iv, 898). The mentions of Wabār in poetry are, of course, not independent evidence, but repeat as a rule only the conventional notions of the great antiquity and fall of the people and the isolation of their land (cf. also Yāḳūt, iv, 897).

What arouses interest in these fables and may be of use are the geographical ideas at the bottom of them. According to some of these statements, the broad land of Wabār stretched from al-Shiḥr to Ṣanʿāʾ, in general to the eastern frontier of Yaman; according to others, it comprised the whole territory between Nadjrān and Ḥaḍramawt; lastly, according to others, it was the territory between the "sands of Yabrīn" (*rimāl Yabrīn*) and Yaman (see also al-Djawharī). From these topographical hints, which in spite of their differences together give a rough general picture, it can be deduced that the portion of the South Arabian desert, of the Rubʿ al-Khālī or Dahnāʾ, north of the Mahra [*q.vv.*] country, was called Wabār by the Arabs, but this geographical name was also understood in a wider sense and extended to the whole Dahnāʾ. The part called Wabār adjoined in the east the desert area of al-Aḥḳāf (dunes) which lay north and west of Ḥaḍramawt. C. Landberg (*Études sur les dialectes de l'Arabie méridionale*, Leiden 1901, i, 160) says, on the authority of information received from local people, that in the expression *ahl al-aḥḳāf* the place-name, according to South Arabian ideas, refers not only to the district of al-Aḥḳāf but also to caves in which the Arabian troglodytes live (cf. Yāḳūt, i, 154, on the different topographical clues for this district).

It is impossible to accept Ritter's (*Erdkunde*, xiii, 315) identification of the Wabār with the Βανούβαροι, who are mentioned by Ptolemy in connection with the Thamūd and are to be located in the northern half of the west coast of Arabia (the first component of the name is obviously connected with *Banū*). Ritter's comparison (xii, 271, 392) of Wabār in al-Idrīsī (ed. Jaubert, i, 156) is also to be rejected. Nevertheless, although the records are clothed in the form of legend, it does not follow that the whole story is a pure invention, but only that we have here the memory of an ancient people which has become a legend; similar things are to be found in the history of most nations. There is a series of fabulous stories associated with the whole of Southern Arabia between Yaman and ʿUmān, a region little known to Arab scholars and littérateurs.

Various ruined sites and buildings have been noted by European travellers. Thus H.St.J. Philby saw in 1917, at al-Sayḥ in the Aflādj oasis, the ruins of a large building called by the locals Ḳuṣayrat ʿĀd and regarded in local tradition as the capital of a king whose capital was at "Wubār" further south, on the border with Ḥaḍramawt (*The heart of Arabia*, London 1922, ii, 99 ff.). Al-Ṭabarī, i, 221, locates the land Abār between Yamāma and al-Shiḥr in the Ḥaḍramawt, and the geographers generally regard the oasis of Yabrīn as marking the northern edge of Wabār.

2. Modern attempts to locate the site.

As emerges from 1. above, it seems hardly possible to locate the site of Wabār from the written and oral sources. Archaeological research, on the other hand, did not produce any specific results until 1992, when much publicity was given to the supposed discovery of the ancient city of "Ubar" (i.e. Wabār) at al-Shisar in northern Dhofar or Ẓafār [*q.v.*] (Sultanate of Oman), a site well known to the local inhabitants as the last watering point before the vast expanse of the sands of the Rubʿ al-Khālī. It was also suggested that Wabār could be identified with the *Omanum emporium*, a trading settlement mentioned by Ptolemy.

At the time of the present writer's first visit to the site in July 1980, al-Shisar had no permanent dwellings, except for a fortlet built in 1955 by the Sultan of Oman for a small detachment of soldiers. A small cultivated area, with palm trees, vegetables and seasonal crops, covered an area of about half a km^2. The main concern of the garrison was clearly to guard a perennial spring which could be reached at the bottom of a steep descent, some 15 m below ground, in a large cave exposed by the collapse of a limestone dome. The mouth of the cave was in the past encompassed by a stone enclosure, irregularly rectangular in plan, measuring about 60 × 70 m and reinforced at almost regular intervals by small towers. The collapse of the cave mouth, which is still in progress, has some time ago caused the destruction of a large portion of the western side of the enclosure.

On the archaeological discovery at al-Shisar, any firm judgement would be premature, since a detailed scientific report is not yet available. The identification with the *Omanum emporium* is dubious in light of recent extensive work on Ptolemy's *Geography*, which points to the interpretation of the term *emporium* as referring exclusively to coastal market towns; and even the Bedouin who accompanied Bertram Thomas when he crossed the Empty Quarter, and who recounted the legend that Wabār was a great city buried beneath the sands, were indicating an area far to the northwest of al-Shisar. Hence the small size and the architectonic features of the enclosure found at al-Shisar do not seem to offer any evidence for its identification with a major pre-Islamic trading town. According to popular belief in the area, the ruin could be related to a stronghold built by the ruler of Ḥaḍramawt, Sultan Badr b. Ṭuwayriḳ, around the middle of the 10th/16th century (see on him, R.B. Serjeant, *The Portuguese off the South Arabian coast*, Beirut 1974, index of proper names).

WAD MADANĪ, a city in the Republic of Sudan (1993 pop., 220,000), located on the left bank of the Blue Nile 136 km/85 miles southeast of the capital Khartoum [see AL-KHURṬŪM], and the main urban centre of the Djazīra region (the area between the Blue and White Niles). It is adjacent to the headquarters of the Djazīra irrigation scheme at Barakāt.

The name is derived from Muḥammad b. Madanī (*fl.* late 17th century), known as Wad (i.e. Walad) Madanī, a prominent religious scholar and teacher of the Mālikī legal handbook *al-Risāla* by Ibn Abī Zayd al-Ḳayrawānī [*q.v.*]. His tomb, a simple brick *ḳubba* in which his successors were also buried, is located in the oldest quarter of the town, named al-Madaniyyīn. Wad Madanī developed into a large settlement during the 18th century and, in the aftermath of the Turkish-Egyptian conquest of the Fundj [*q.v.*] kingdom in 1821, it supplanted Sinnār as a regional administrative and commercial centre. It also continued to be a major centre of Islamic scholarship and training during the 19th and 20th centuries, with the schools of the Madaniyyīn family, of Muḥammad al-Izayriḳ (d. *ca.* 1883), and of ʿAlī al-Būshī (d. 1929). These schools stressed study of the Ḳur'ān and jurisprudence over Ṣūfism (Muḥammad wad Madanī himself is known as *al-Sunnī*), befitting the city's development into a major commercial entrepôt.

Bibliography: For a biography of Muḥammad b. Madanī, see Muḥammad al-Nūr b. Ḍayf Allāh, *K. al-Ṭabaḳāt*, ed. Yūsuf Faḍl Ḥasan, [2]Khartoum 1974, 329-32; H.C. Jackson, *Two Gezira families*, in *Sudan Notes and Records*, iii (1920), 94-109 includes an account of the Madaniyyīn; Muḥammad al-Izayriḳ is remembered by one of his pupils in Babikr Bedri, *The memoirs of Babikr Bedri*, tr. Yousef Bedri and G. Scott, London 1969, 11-14.

(N. McHugh)

WA'D AL-BANĀT (A.), "the disposal by burying alive of newborn daughters", refers to the practice in pre-Islamic times of burying newborn girls immediately after birth. The concept occurs with strong disapproval in the Ḳur'ān in LXXXI, 8, in the form *al-maw'ūda*, but according to mediaeval *tafsīr*, the practice is alluded to also in LX, 12 (believing women who do not kill their children), XVI, 58/59; XLIII, 17 (anger and grief for the birth of a daughter), and in VI, 151, XVII, 31 (the killing of children for fear of poverty). According to the *ḥadīth*, the practice was explicitly forbidden by the Prophet (see Wensinck, *Concordances*, s.v. *w-'-d*). From two traditions where *al-ʿazl* [*q.v.*] "coitus interruptus" is called respectively *al-wa'd al-khafī* "the hidden burying alive" (Muslim, *nikāḥ*, 141; Ibn Mādja, *nikāḥ*, 61; Ibn Ḥanbal, vi, 361, 434) and *al-maw'ūda al-ṣughrā* "the lesser buried alive one" (Abū Dāwūd, *nikāḥ*, 48; Ibn Ḥanbal, iii, 33, 51, 53) it may be concluded that, more generally, the practice was probably a primitive sort of population control, though "gendered". In modern Islam, the issue of the prohibition of infanticide has played an important role in the debate on the legality of family planning (see Abdel Rahim Omran, *Family planning in the legacy of Islam*, London 1992, 86-89 and *passim*); the opponents argue that *ʿazl* or any practice that prevents pregnancy is to be equated with *wa'd*, whilst the proponents maintain that contraception merely prevents pregnancy and involves no killing and that only *abortus provocatus* is covered by the prohibition of *wa'd* and that *ʿazl* was permitted by the Prophet.

(F. Leemhuis)

AL-WAʿD WA 'L-WAʿĪD (A.), "the Promise and the Threat", represents one of the "Five Principles" (*al-uṣūl al-khamsa*), which since the time of Abu 'l-Hudhayl [*q.v.*] have been considered characteristic of Muʿtazilī theology. With this slogan, the Muʿtazila expressed their conviction that not only the unbelievers had to face damnation on the Day of Judgement but that Muslims who had committed a grave sin (*kabīra* [see KHAṬĪ'A]) without repentance were also threatened by eternal hellfire.

The starting-point of this dogma was the exegesis of certain Ḳur'ānic statements. These stress, on the one hand, that God has "promised" Paradise to the believers (e.g. IX, 72) and Hell to the unbelievers (e.g. IX, 68) (in both cases the verb *waʿada* is used), i.e. He has made a binding declaration of intent. On the other hand, the Ḳur'ān declares that certain grave sins will be punished by eternal damnation. Thus it says in e.g. IV, 10 that "Those who devour the property of the orphan unjustly, ... will in the end roast in a hellish blaze" (cf. also IV, 30; LXXXII, 14, *et al.*).

The Muslims of the early period were nonetheless of the opinion that these "verses of threat" were not addressed to them. They were apparently convinced that, due to their adherence to Islam, they automatically belonged to the "People of Paradise" (*ahl al-djanna*), thinking that such warnings could only be meant for the unbelievers, characteristically called the "People of the Fire" (*ahl al-nār*). This certainty of salvation, however, crumbled during the first century of the Hidjra. Various religious movements (Khāridjites, Ḳadarīs and ascetics) contributed to this process, since they, for a wide variety of reasons, thought that eternal punishment was not precluded in the case of sinful Muslims.

These discussions apparently influenced the opinions of the Muʿtazilīs. The Ḳadarī model was decisive here; for, just like the adherents of the Ḳadariyya, the Muʿtazila were of the opinion that individuals determine their actions themselves and are, therefore, to be held responsible for their good and bad deeds. In addition, the Muʿtazila stressed the principle of

Divine justice. The latter is manifest in the fact that God reliably keeps the promises and threats which He has made in the Ḳurʾān. These declarations were formulated in a general way (*ʿāmm*[an]) and should not be relativised by interpreting them in a particular way (*k͟hāṣṣ*[an]) by having them refer to this or that group (such as the unbelievers). The Muʿtazila concluded that God will punish all individuals, including Muslims, who have committed a grave sin by eternal hellfire. Thus there is no way out for the grave sinner, unless he sincerely repents of his crime (*al-tawba wād͟jiba*; cf. ʿAbd al-D͟jabbār, *Mug͟hnī*, xiv, 335 ll. 2 ff.). If he does, the Prophet will make intercession (*s͟hafāʿa* [*q.v.*]) on his behalf on the Day of Judgement, at which point the sinner can expect God's forgiveness. For justice is binding on both sides: on the sinner who must repent to find forgiveness (*inna 'l-mag͟hfira bi-s͟harṭ al-tawba*; cf. *Mutas͟hābih al-Ḳurʾān*, 596 l. 13), and on God who is obliged to accept this repentance (*ḳabūl al-tawba wād͟jib; Mug͟hnī*, xiv, 337 ll. 6 ff.).

This dogma was internally consistent, but hardly won acceptance outside the school. This was achieved rather by another scenario about the fate of man in the Hereafter, which was developed by the Murd͟jiʾa and became predominant in many varieties of Islam. According to it, no believer has to expect eternal punishment in Hell. His own belief (and the Prophet's intercession) guarantee for him that he will at most suffer a temporal punishment in Hell and in the end enter Paradise. This optimistic basic attitude was adopted by the two Sunnī schools of theology, the As͟hʿariyya and the Māturīdiyya. But it met with approval also among the S͟hīʿīs, for, even though the Imāmī theologians followed the Muʿtazila in many other respects, they rejected the adoption of the Muʿtazilī principle of *al-waʿd wa 'l-waʿīd*.

(U. RUDOLPH)

WAḌʿ AL-LUG͟HA (A.), literally "the establishment of language," a phrase which reflects a view of the nature of language that pervades the classical Muslim linguistic sciences (*al-ʿulūm al-lug͟hawiyya*) and the non-linguistic science most concerned with linguistic matters, *ʿilm uṣūl al-fiḳh* (the science of the methodology of jurisprudence). Language (*lug͟ha*), in that view, was essentially a code made up of patterned vocal sounds or vocables (*alfāẓ*) and their meanings (*maʿānī*). This code was understood to have emerged out of a primordial establishment of the vocables *for* their meanings. Hence the application of the term *mawḍūʿ* to vocables and *mawḍūʿ lahu* to meanings. Considered from the semiotic point of view, vocables were considered to be "signs" (*adilla*) and meanings "things signified" (*madlūlāt*).

Classical Muslim learning attributes to a Muʿtazilī thinker, ʿAbbād b. Sulaymān, and to his followers the belief that vocables signified their meanings by virtue of a natural affinity between vocable and meaning. The term *waḍʿ* connotes a rejection of this view. To the extent that the adherents of the concept of *waḍʿ* contended with the view of the school of ʿAbbād, they repeated the debate among the ancient Greeks between the proponents of *thesis* and the proponents of *physis*. These positions are thus also discussed by Islamic philosophers (see e.g. al-Fārābī, *S͟harḥ al-ʿIbāra*, ed. W. Kutsch and S. Marrow, Beirut 1960, 50-1). However, ʿAbbād's view soon became extinct among the Muslims as the concept of *waḍʿ* assumed the character of an orthodoxy. The correlations between vocables and their meanings were seen as entirely rooted in the primordial *waḍʿ*. Disagreement lingered as to the identity of the agent or agents of *waḍʿ*—some thought God to be the establisher of the code, others assigned this role to primordial human society—but resolution of the debate was not considered necessary. What was important to all parties was the non-natural *posited* character of the code.

Although the meanings of vocables could change over time, the term *waḍʿ* was reserved for the original, primordial assignment of vocables to meanings. All subsequent change occurred within an already established *lug͟ha* and came under the heading of *ʿurf* or *iṣṭilāḥ*, not *waḍʿ* in the strict sense. *Waḍʿ* produced the basic language or code in relationship to which all subsequent semantic development amounted to extension, accretion or modification, and not true invention. In principle, all original meanings, including meanings which have become rare, remain part of the ongoing code and can assume relevance in the interpretation of texts.

In the *uṣūl al-fiḳh* works, features of the language such as ambiguity, synonymity, and figurative usage were defined in terms of *waḍʿ* and thus seen as built into the basic language. For example, an ambiguous expression was considered to be a vocable that had been subjected to multiple establishments. Eagerness to explain in full detail how the primordial *waḍʿ* gave rise to all the multifarious components of language prompted in the late 8th/14th century the formation of a special "science of *waḍʿ*" (*ʿilm al-waḍʿ*). The seminal work in this science was a short treatise by ʿAḍud al-Dīn al-Īd͟jī [*q.v.*] entitled *al-Risāla al-waḍʿiyya*, upon which numerous commentaries, supercommentaries and glosses were written. Eventually, manuals summarising the doctrines of this science appeared.

The science of *waḍʿ* broke the *lug͟ha* down into its meaning-laden components, which included not merely words as such but also constituents of words, such as forms, radicals, and suffixes, and syntactic combinations of words, such as construct phrases, attributive phrases and whole sentences. The *waḍʿ* of each component was then classified with reference to a complex taxonomy that consisted of six basic types of *waḍʿ*. The notion of types of *waḍʿ* was first adumbrated in al-Īd͟jī's treatise, although the full development of the six types was the work of subsequent commentators.

WADAʿ, WADʿ (A., collective, sing. *wadaʿa* or *wadʿa*), shells of the gasteropod *Cypraea*, cowrie shells, most commonly *Cypraea moneta* or *Cypraea annulus*, used in India and widely in West Africa as money

down to the early 20th century. They were also known in Egypt as *kawda* (or *kūda*, see G. Wiet, *Le traité des famines de Maqrīzī*, in *JESHO*, v [1962], 62), reflecting the word's Hindi, and ultimately Sanskrit, origin as *kauri*, whence the English "cowrie". Cowries were also used as money in ancient China and widely in India. They have been used even more widely as ornaments, as fertility symbols, and in Arabia as a protection against the evil eye.

1. Usage in the economies of the Indian subcontinent and sub-Saharan Africa.

The two varieties of cowrie can be found over a wide range in the Indian Ocean and the Pacific, but the principal source of those used as currency (*C. moneta*) was the Maldive Islands [*q.v.*]. The monetary use of the cowrie in India remains understudied. While gold and silver were the media of interregional and international trade, cowries along with copper coinage played an important role in rent and taxation, and in the development of a textile industry. Although huge numbers must have been in circulation in the heyday of their usage in the 17th and 18th centuries, the way in which their importation and circulation were linked to the importation and circulation of precious metals is poorly understood. It is clear, however, that the cowrie-rupee ratio was relatively stable down to the late 18th century, when competition from much-increased copper circulation caused the cowrie to drop sharply against the rupee. Bengal and Orissa remained strongholds of the cowrie well into the early 19th century when, according to Perlin, "rapid inflation—connected with the collapse of the old manufacturing system and the region's changing colonial status—drove them from general use".

It is not known how cowries first reached West Africa, though they may have crossed the Sahara in small quantities in Carthaginian or Roman times. The earliest references to the importation of cowries in Arabic sources are al-Bakrī (writing in 460/1067-8), who mentions cowries as being imported into Kūgha (*K. al-Masālik wa 'l-mamālik*, ed. de Slane, Algiers 1857, 179), and al-Zuhrī (mid-6th/12th century), who says that cowries were imported into Zāfun [Diafunu] (*K. al-Djaʿrāfiyā*, ed. Hadj-Sadok, in *BÉt. Or.*, xxi [1968], 127), but neither says that cowries were being used as currency. The first mention of cowries as currency is provided by al-ʿUmarī, who lists cowries as one of a number of currency items in use, all of which were valued by reference to a locally-woven cloth called *dandī* (*apud* al-Munadjdjid, 23).

He also reports that in Mali (which he calls Takrūr [*q.v.*]) the currency consisted of cowries and that the merchants who imported them made big profits on them. Ibn Baṭṭūṭa (iv, 122) confirms the use of cowries in central Mali and in Gao on the eastern edge of the empire, and gives the exchange rate as 1,500 cowries to the *mithkāl* of gold. Compared with later exchange rates, these cowries were very expensive. This may reflect the long and difficult route they must have taken from the Maldives to the Mediterranean, and across the Sahara on camel back. In the Maldives, where Ibn Baṭṭūṭa had seen them at source, 400,000 could be purchased for one *mithkāl*, and on occasion up to one million. In *ca.* 1510 Leo Africanus reported an even higher exchange rate at Timbuktu: 400 to the *mithkāl*, but this may either be a simple error or reflect a famine rate; in a known period of famine, 1617-19, the exchange rate was 500 to the *mithkāl*. Otherwise, in the Middle Niger area the rate from the 16th to the 19th century remained relatively stable at about 3,000 cowries to the *mithkāl*. Even in 1853 the German traveller Heinrich Barth reported a rate of 3-4,000 to the *mithkāl* in Timbuktu.

To the east of this region in Hausaland, cowries may have been in use as early as the 16th century. Anania reports the use of "small very white sea shells" as money in Katsina, and says they are "as used by all these blacks" (*L'universale fabrica del mondo*, 3Venice 1582, tr. in D. Lange and S. Berthoud, in *Cahiers d'histoire mondiale*, xiv [1972], 335). Cowries were to become central to the trading activities of the Hausa states where gold, which was plentiful in the 16th century, became progressively scarcer and was superseded by the Maria Theresa silver thaler [see SIKKA. 3] by the 19th century. Cowries suffered from galloping inflation in the late 19th century in Hausaland and elsewhere in West Africa, and in the early years of the 20th century were gradually edged out by colonial currencies in silver and copper. Although cowries had been used in Kanem [*q.v.*] in the 14th century, they seem not to have been used in its successor state Bornu [*q.v.*] until very late on. Under Shaykh ʿUmar b. Muḥammad al-Amīn al-Kānimī, cowries were introduced for petty transactions in 1848-9, while larger transactions were carried out with the Maria Theresa thaler. East of Lake Chad, cowries were not used, nor were they acceptable north of Timbuktu or Agades.

Until the 19th century, the Sahelian regions immediately to the south of the Sahara were supplied from North Africa. One of the earliest routes was overland from Bengal to the Mediterranean and thence through Egypt, while some evidently went through Venice and across to North African ports. The evidence, however, is fragmentary, and the mechanics of the trade quite unknown. Following the Portuguese discovery of a sea route to Asia via the Cape of Good Hope in 1499, European ships of various nations began shipping cowries back to Europe, often as ballast, and re-exporting them to African ports. Pétis de la Croix (1697) notes cowries being imported from France to Tripoli for transportation southwards, and evidence from the late 18th century points to Mogador (al-Ṣawīra [*q.v.*]) in Morocco as a point of importation of cowries from Europe for the trans-Saharan trade. European merchants were also importing cowries to ports on the West African coast such as Accra, Whydah and Lagos, and to ports in the Bights of Benin and Biafra. In these coastal regions cowries were used for the purchase of slaves, and constituted the basic transactional currency. By the 1830s cowries imported via Europe to the coast were being traded up the river Niger and supplying some of the Hausa states.

As a currency, cowries had both advantages and disadvantages. They are handsome objects, extremely hard wearing and impossible to counterfeit. Being brought into their area of use from far away, there was little danger of an over-supply leading to inflation, though this did happen on the West African coast from the late 1850s when importation of *C. annulus* from Zanzibar flooded the market. On the other hand, cowries were heavy to transport and tedious to count. The latter problem was partially solved by the fabrication of units containing multiples of cowries. On the West African coast 40 cowries made one "string", while 5 strings made one "bunch" and 50 bunches made one "head". In Hausaland, cowries were counted in fives, and a rush sack or "mat" containing 20,000 cowries was the standard unit, weighing about 50 pounds (or more if there was a preponderance of larger *annulus* shells), which was one man's head load. In the Bambara (or Bamana) area of the upper Niger, there was a peculiar system of counting cowries in which

the unit was ten, but the hundred of cowries was only 80 actual cowries, a thousand was ten "hundreds", ten thousand was ten lots of a "thousand" and 100,000 was only eight lots of "ten thousand"; thus 100,000 was in fact only 64,000 shells, while 10,000 was only 8,000 shells, 1,000 was actually 800 and 100 was only 80. It has been suggested that this way of reckoning was aimed at providing the petty trader with a discount, but it may also represent the remnants of an older indigenous counting system.

2. Definition in the Arabic sources.

The ensemble of information on shells called *wadʿa* in *LA*, vi, 4795, and *TA*, v, 533-4, allows us to identify with certainty that cowries or porcelain-shells are here envisaged; whether large or small, they come from the sea and are thrown up by it and left (hence their name, from the verb *wadaʿa* "to leave, let") on the beaches, and not fished up. They have a split like a date stone and are hollow, with a kind of fleshy worm inside or, as may also be found, a tiny organism like a moth (*al-ḥalama*), a parasite. They are remarkable for their whiteness and hardness like a stone, but they can, however, be pierced. Their brilliance is vaunted by poets. The link with the Indian subcontinent is noted by Ibn al-Bayṭār, ed. L. Leclerc, 188-9, tr. 404-5 no. 2272, repeated by the Rasūlid al-Malik al-Muẓaffar Yūsuf, *al-Muʿtamad fi 'l-adwiya al-mufrada*, Beirut 1370/1951, 544, being called "the bracelet of Sind" (*siwār al-Sind*). The lexica also show that the *wadʿa* could also be called *kharaz*. In a famous verse of Imru' al-Ḳays, cited in *LA*, i, 617, we have *ka-anna ʿuyūn al-waḥsh ḥawl khibā'inā * wa-arḥulinā al-djazʿ alladhī lam yuthakkab*, with *djazʿ* defined as *kharaz yamānī*. The term appears in the lexicon of the Constantinois region of former French Algeria in fairly recent times, as "a variegated sea shell, shaped like a grain of coffee with a split in the middle (porcelain of the sea)" (M.A. Cherbonneau, *Définition lexicographique de plusieurs mots usités dans le langage de l'Afrique septentrionale*, in *JA*, xiii (Jan. 1859), 63-70, at 67: *w.d.ʿ, oudé*).

The term *wadʿa* can nevertheless be used in Arabic for all sorts of other shells, cf. E. Doutté, *Magie et religion dans l'Afrique du Nord*, Paris 1903, 82); the problems raised by a systematic translation of *wadʿa* by "cowrie" were discussed by Th. Monod, using evidence from al-Bakrī and Ibn Baṭṭūṭa, in his *Sur quelques coquilles marines du Sahara et du Soudan*, in *La vie dans la région désertique Nord-tropicale de l'Ancien monde*, vi (1938), 147-78, at 172-3, noting the term's usage for shells in general.

3. Usage for divination in the Arab world.

Divination by cowrie shells is not apparently treated in *ḥadīth*; Ibn Ḥanbal mentions it rather as a protective amulet (*ḥirz*), cf. Wensinck, *Concordances*, vii, 168. The lexica, such as *LA* and *TA*, say, s.v., that it protects from the evil eye. Judy F. Pugh mentions that amongst the Muslim artisans of Benares, divination by means of cowrie shells thrown on to the ground traditionally represents an orthodox form of divination (*Divination and ideology in the Banaras Muslim community*, in K.P. Ewing (ed.), *Sharīʿat and ambiguity in South Asian Islam*, Berkeley, etc. 1988, 295). Nevertheless, it is currently condemned in North Yemen, including by students of *ḥadīth*, as a kind of *tandjīm* or *faʾl* or as a practice of the *ʿarrāf*.

It is difficult to ascertain how old such practices are. The cowrie retains its protective function, as a *ḥirz*, till today, cf. Lane, *Manners and customs*, ch. XI, and is used on animals to ward off the evil eye, cf. A. Fodor, *Amulets from the Islamic world*, in *Catalogue of the exhibition held in Budapest in 1988*, in *The Arabist* (*Budapest*), ii (1990), no. 5, 214-15, 248, 296-8, 341. Today, cowries are either worn round the neck or carried in a pocket as at Ṣanʿāʾ. The cowrie also has medical uses, essentially as a dessicating or detersive agent (Ibn al-Bayṭār, *loc. cit.*; al-Malik al-Muẓaffar Yūsuf, *loc. cit.*). There are descriptions of divination by cowrie shells in travel literature, but these accounts are recent. Also, the relevant knowledge is transmitted orally, and there are no known treatises on it; could this be from the poor image, in orthodox eyes, of the practice, since this form of divination is strongly perceived as charlatanry (*shaʿwadha*)? It has been, and still is, often connected with such groups as the Gypsies and the Ṣulayb or Ṣlēb (for the latter, see ṢULAIB, ṢULAYB, in *EI*[1] and *EI*[2] respectively, and B. Vernier, *Quédar, carnets d'un méhariste syrien*, Paris 1938, 244). It is practised by wandering or nomadic persons, who follow round their clientèle, showing the close link between this form of divination and monetary gain. Probably originating far from the towns, it has been carried thither (Gypsies in the Ghūṭa of Damascus; in Yemen, Bedouin from the region of Ma'rib practising in Ṣanʿāʾ or at Ridāʿ near Dhamār). The essentially feminine nature of its practitioners may have

contributed to its controversial image. The exiguous material is complemented below by material gained by the author's personal observation in Yemen in 1999, at Ṣanʿāʾ and Ridāʿ.

In general, the "instruments" of divination are a jumble of objects, in which shells (cowries are not always precisely noted here) may be dominant—porcelains of the genus *Cypraea annulus*; murex; shells from the *Olividiae* family, probably of the genus *Oliva*—or may not be dominant quantitatively (Emily Said-Ruete, *Mémoires d'une princesse arabe*, Paris 1891, 328; Vernier, *op. cit.*, 103-4; they may often be mixed with inanimate objects or objects formed from organic matter, such as whitened bones or fragments of bone, pieces of money, stones or a rosary, *maṣbaḥa*). One wonders, accordingly, what each element represents. On the other hand, the contents of the basket containing all these objects may be of a homogeneous nature, with a limited number of shells. They are not thrown or allowed to fall on the earth, but may be used in a basket, which keeps them from contact with the dust and defines the area used; and the way in which an object falls is taken into account in the interpretation. According to the author's observations in Yemen, the person seeking guidance chooses a shell and puts it on the pile held in the diviner's hands, and the latter either lets it fall directly or throws it down. The operation of throwing down is repeated from three to five times until the solution to the problem emerges. It is difficult to classify definitively the various configurations that may emerge, given the polysemy of the various elements involved, their symbolic value, and the number of shells involved and their positions, and this large number of variables makes any clear decision almost impossible to attain. Hence the diviner resorts to external factors, such as discovering the reason for the enquirer's resort to this form of divination, or whether the enquirer is a stranger (hence involved in travelling) or whether a love affair is involved (probably to be connected with a daughter of the enquirer's paternal or maternal uncles, the favoured choices for marriage), etc. The actual juxtaposition of the objects thrown may also have significance.

In Yemen, these consultations are not preceded by any perceptible Ḳurʾānic recitation (*tilāwa*). It seems that the problems of the enquirer are evaluated through psychological means and through observation. The presence of a rosary, manipulated in the first place with the shells, may signify the presence of God over the proceedings, but there also exist practitioners who claim to be guided by the *d̲j̲inn*. In general, we lack sufficient material to disengage any fixed lines of procedure, but it seems that this form of divination is inspired by a varied technique of psychology and of manipulation of the divinatory objects, as is clearly apparent in Black Africa, as shown by Amar Samb for Dakar (*Les systèmes de divination en Afrique noir, l'exemple du Sénégal*, in *Notes africaines*, no. 184 (Oct. 1984), 73-4).

4. Usage for divination in Sub-Saharan Africa.

Throwing down cowry shells is not considered historically as being Islamic in origin (Ch. Monteil, *La divination chez les Noirs de l'Afrique occidentale française*, in *Bull. du Comité d'études historiques et scientifiques de l'AOF*, xiv/1-2 (Jan.-June 1931), 53; Samb, *op. cit.*, 73). It nevertheless exists in Black Africa, even though it is at the same time considered as being connected with superstition, paganism or even with what is accursed. Although those who throw down cowries for divinatory purposes are most often Muslims, the interpretation is done with reference to a polytheistic religious context or one of a monotheism connected with the earth (animism). How far it has a place within Islam and the animist religions is hard to define; moreover, its practitioners usually make reference to a popular Islam whose contours are hard to fix precisely.

Divination here rests basically on the principle that it is God who is speaking through the cowries, and these last are inseparably His mouthpiece and His ear. Nevertheless, anthropomorphisation of the shells, or their symbolic value, do not permit one to adopt unreservedly the symbolism of the female vulva that is ordinarily associated with them (see in general here, E.G. Gobert, *Le pudendum magique et la problème des cauris*, in *Rev. Afr.*, xcv [1951], 5-62); furthermore, the colour white, that of God in dreams, may also be the symbolic element visualised.

(Anne Regourd)

WADĀĪ (various renderings of this non-Arabic name, including, in al-Tūnisī, the above one and Waddāī and al-Wāday), conventionally Wadai in English, Ouadai in French, an upland region lying to the west of the Sudanese province of southern Dār Fūr [*q.v.*], now falling mainly within the Republic of Chad [see čad, in Suppl.] but with its eastern fringes in the Sudan Republic.

1. History.

Wadai was one of several Islamic African kingdoms to arise at the dawn of the modern era in the comparatively fertile highlands west of the Nile valley and east of Lake Chad. This zone was inhabited by a mosaic of ethnic groups; many spoke Nilo-Saharan languages, and among these was Boro Mabang, the tongue that defined the ethnic core of Wadai. Islam first entered this polyethnic highland world at the close of the Middle Ages as one of the powerful, prestigous and exotic things accessible to a community only through a powerful chieftain capable of opening roads abroad to diplomacy and trade. Of these chieftains there were many, fierce rivals of each other, one of whom would eventually emerge victorious as the founding monarch of each realm. The earliest legendary history of Wadai is inextricably linked to that of its eastern neighbor, Dār Fūr. When during the 16th century the first Dād̲j̲ū-speaking dynasty of Dār Fūr was overthrown, Wadai welcomed refugees from the east and as suze-

rains sponsored the formation of a small subordinate Dādjū realm of Dār Sila. By the close of the century, however, the same Tundjur conquerors who had ousted the Dādjū had also annexed Wadai as a tributary dependency of their realm, whose capitals at Uri and ʿAyn Farah in northern Dār Fūr attracted visitors from both the Nile and the Mediterranean. In the middle of the 17th century, Tundjur rule everywhere gave way to new dynasties of kings who claimed Arab ancestry and enjoyed the support of Arabic-speaking pastoralists. In Wadai a leader named ʿAbd al-Karīm repudiated ties with Dār Fūr and founded the historical ruling house of his kingdom. In Dār Fūr, too, the Tundjur were overthrown, but the new Kayra monarchs were reluctant to cede authority over Wadai. There followed more than a century of inconclusive but occasionally bitter struggle between the two great formerly Tundjur realms. Finally, at the close of the 18th century, a *détente* was achieved that allowed each rival an imperial age; henceforth Dār Fūr would expand eastwards toward the Nile, while Wadai struck westward to annex a huge empire that soon absorbed the kingdom of Bagirmi [*q.v.*] and touched the shores of Lake Chad.

ʿAbd al-Karīm and his successors were absolute rulers. While viewed as defenders and propagators of Islam, they also led the nation's secret rainmaking rituals on a sacred mountain near the capital of Wara. If not actually "adored as pharaohs", as disparaging Islamic tradition said of their predecessors the Tundjur kings, they were nevertheless surrounded by the full panoply of regalia and restraints that characterise sacral kingship in Africa. The king was served by a complicated array of titled officials, who typically combined one or more duties at court with a military or territorial command elsewhere in the kingdom; since high officials were not allowed to leave the presence of their royal master, however, their functions in the kingdom at large were carried out by trusted agents. Vital to the system was a large corps of confidential messengers who conveyed a steady flow of information or commands between capital and countryside. Each courtier or agent served only at his master's pleasure; competition for official favour was intense and career permanence uncertain. While most of the highest officials were Boro Mabang speakers chosen from the kingdom's dominant ethnic group, a lord might also choose for positions of trust a slave, a eunuch, a capable individual from a lesser ethnic community, or even a foreigner; the cadre of courtiers was therefore fairly cosmopolitan. As Wadai expanded during the 19th century there arose a new category of imperial proconsuls entitled *ʿaḳīds*, who differed from older royal courtiers not only in the great diversity of their ethnic origins but also in that they were allowed to absent themselves for extended periods from the presence of the king. Youths were gathered at the capital as a corps of pages to receive training in statecraft for future government service. Imperial officialdom derived part of its coherence from an intricate network of carefully-arranged marriages, the design of which was entrusted to senior female members of the royal family. Since the women assigned to these liaisons nursed the next generation of leadership, the women's quarters of the palace complex often seethed with dynastic intrigue.

The heartland of Wadai was divided into four provinces corresponding to the cardinal points of the compass; these provinces, in turn, were subdivided for administrative purposes according to the homelands of the diverse ethnic communities who inhabited them. Superimposed upon this tidy arrangement of provinces and districts was an extensive network of royal estates directly responsible to the seneschal of the king's demesne; similar, though smaller, arrays of holdings were assigned to the Queen Mother, and perhaps other very important individuals. Most forms of wealth originated from the land, and an elaborate system of taxation in kind gathered the government's portion of everything produced. Some tax goods were conveyed to Wāra to support the court community, while others were stored in royal magazines near their points of origin to feed an army on campaign or relieve a hungry populace in time of famine.

Recognising the importance of local trade among the subjects, the government allowed the payment of taxes in diverse forms by setting the rates at which, for example, a tax levied in grain might also be paid in cattle, salt or iron ingots; thus the king in effect regulated the market value of all commodities. The king supported a bodyguard from his own estates, and each fiefholding official was required to do likewise; collectively, these forces comprised the professional army of Wadai. On campaign they would be joined by a legion of lightly-armed volunteers whose task it was to dispatch enemy wounded or rescue their own, and above all to loot and pillage for the king in return for a share of the booty. Wars were undertaken for diverse reasons of state, but particularly numerous were the raids launched southward to seize slaves from among the neighbouring small-scale communities who were not Muslims and had no kings, people derogatively dubbed "Kirdi".

Wadai reached its apogee under Sultan Muḥammad Sharīf (1834-58), who opened relations with the Sanūsiyya [*q.v.*] brotherhood. Mediterranean commercial ties increased dramatically under his sons ʿAlī (1858-74) and then Yūsuf (1874-98), who spent his later years adroitly deflecting the acquisitive ambitions of the Sudanese Mahdists [see AL-MAHDIYYA], based in Dār Fūr. After 1898 the kingdom lapsed into a long struggle for the throne among rival princes backed by diverse court factions, Dār Fūr, the Sanūsiyya, and by the French, who assumed control in the capital in 1909.

2. Languages.

Great linguistic diversity characterises the Wadāī region in eastern Chad [see ČAD, in Suppl.]. The official languages of the Republic of Chad are Standard Arabic and French. Maba is reported to be spoken by some of its neighbours as a second language, although the principal *lingua franca* of the region is Chadian Arabic [see SHUWA. 2 and SŪDĀN, Bilād al-. 3].

Like Maba itself, most of the other languages of eastern Chad have been classified as Nilo-Saharan (NS), which is a phylum of diverse languages stretching from Egypt in the northeast [see NŪBĀ] to Tanzania in the southeast (the Maasai language) and to Mali in the west (Songhay [*q.v.*], although the NS

classification of Songhay has recently been challenged).

The Maba language is associated with the historical kingdom of Wadāī, where it was spoken at the royal court (see 1. above). Maba flourishes in the vicinity of the town of Abéché in eastern Chad. It has also been attested in the Republic of the Sudan (see Doornbos [1983] and Bell [1998]).

The term "Maba" is primarily the self-name of an ethnic group (see 1. above). Wadāī seems originally to have been a term that was used by the western and northern neighbours of the Maba such as the Arabs, the Bagirmi, the Hausa, the Kanuri and the Daza (see Edgar [1989]). Neighbours to the east of Wadāī, such as the Masalit, often use the term "Bargū" (or "Borgū") to refer to the Maba people. The Maba language has also been designated by this term (e.g. in the Republic of the Sudan, see Bell [1998]).

Although the Maba language is occasionally cited as "Ouaddaïen", emphasising the close relationship between the terms Maba and Wadāī, the Maba people normally use their own expression which may be glossed as "the language of the Maba". Edgar transcribed this expression as /bùrá mábàŋ/ with marking for tone, high /á/ and low /à/. The phrase may be analysed as follows: /bùrá/ "the language" + /mábà/ "the Maba" + /ŋ/ "of" ("the language of the Maba"). The phrase has also been transcribed as follows: /bora mábaŋ/ by Doornbos (1983), /boro mabaŋ/ by Spaulding (see 1. above), and /burā mabā/ (transliterated from the Arabic characters of Abū Naẓīfa [1994]).

The genitival element "of" is represented above by a velar nasal consonant /ŋ/ (= /ng/). This sound occurs frequently in Maba, e.g. as the second consonant in the word for "three": /koŋāl/. It appears from Perron's 1851 publication that al-Tūnisī represented /ŋ/ in Maba words by a special Arabic-based letter *kāf* with three dots above it, a symbol that might be referred to as a "*ŋāf*".

A full adaptation of Arabic alphabetic characters to the phonology of Maba has recently been published by Abū Naẓīfa (1994). Inspired by the *Adjamī* or *ʿAdjamī* script of Hausa [*q.v.*], he proposed an Arabic-based system with 11 new consonantal characters. His solution to the problem of /ŋ/ was a single dot just under the upper stroke of the Arabic consonant *kāf*. He proposed an interesting set of characters for the pre-nasalised stops of Maba (/mb/, /nd/, /ng/ and /ndj/) by placing a dot under the *mīm*, the *dāl*, the *ghayn* and the *djīm* respectively. In the case of *djīm*, this resulted in two dots horizontally side-by-side. This system is inventive rather than consistent with attempts elsewhere to achieve a standardised set of symbols in *ʿAdjamī* scripts for non-Arabic languages, e.g. at the Institut d'Études et de Recherches pour l'Arabisation in Rabat or at the Khartoum International Institute for Arabic Language.

Maba is closely related to several other languages of Wadāī, and together they are known as the Maban group. Most speakers of the Maba, Marfa, Karanga and Kibet languages live in eastern Chad, but about half of the speakers of the southerly Aiki or Runga language extend across the border of Wadāī into the Central African Republic, probably reflecting their historical interest in trade with the south. The majority of the speakers of the closely related Masalit language are to be found in the Republic of the Sudan.

The Wadāī region also has a number of NS languages which are more distantly related to Maba. A Dadju language geographically separates the Maban languages of northern Wadāī from Maban languages such as Kibet and Aiki in southern Wadāī. Dadju speakers are also present in and around the town of Abéché. Contiguous with Dadju and Aiki on the Sudanese border are the speakers of Sinyar and Fongoro. A close relative of these two languages, the Bagirmi language of western Chad, was associated with the historical kingdom of Bagirmi [*q.v.*], which was defeated by the kingdom of Wadāī in the early 19th century. Immediately to the northeast of Wadāī is the heartland of the Tama group of languages, including Sungor, Mararit and Tama. Just to the north of Wadāī are speakers of Amdang, which is related to Fūr, a language associated with the historical sultanate of Dār Fūr in the Sudan. Amdang is also known as Mimi and this is a source of considerable confusion, since linguistic informants have identified certain other languages as "Mimi", one of these being a Maban group language (for a summary of the problem, see Doornbos [1983]). Saharan languages of northern and western Chad are also attested in Wadāī. These include Zaghawa, Daza [see TUBU. 2], Kanembu and Kanuri [*q.v.*] to the north and west of Wadāī.

In addition to the NS languages enumerated above, several languages of the Hamito-Semitic or Afro-Asiatic (AA) phylum are found in this region. Apart from Arabic, the AA phylum is represented in southwestern Wadāī by some of the so-called Chado-Hamitic languages, especially Kajakse, but also Birgit and Mubi.

AA is distinguished from NS by a number of typological features, most prominent of which is a particular system of grammatical gender (masc./fem.), as in Arabic. According to Roth (1979), when the Maba speak Chadian Arabic, the system of agreement for grammatical gender often tends to disappear, since their own NS language does not possess this feature.

When al-Tūnisī sojourned in Wadāī early in the 19th century, he noted that it was not necessary for him to learn to speak "Ouadayen", since Arabic was so widely used. He noted that the expression for "interpreter" was *khashm al-kalām* "the mouth of speech". He also reported that instruction in Islamic law and religion was provided by an Arab scholar in Wāra, the capital of Wadāī at that time. While some of the Arabic loan-words in his published Maba vocabulary could be suspected to have resulted from the bias of an Arab investigator, a number of Arabic loan-words must already have been in use, e.g. the Arabic term *malik* used in the citation below instead of a Maba term such as *kolik* "king".

/Mélik manik Kalak ni*n*a tounyou-ny/ (/*n*/=/ŋ/)
Roi de nous Dieu vie donne-lui

The transliteration and literal translation come from Perron (1851). The sense of the sentence is thus: "God, give life to our King!" Today, when Chadian Arabic is the principal *lingua franca* of Wadāī, it is not surprising to observe that Arabic has had a major impact on Maba and that a high proportion of the Maba vocabulary consists of Arabic loan-words.

The Sahelian belt embracing Wadāī is a celebrated route for pilgrims travelling between West Africa and Mecca, sometimes over a period of many years. Pilgrims and traders bring with them a great number of different languages. Among these are languages such as Hausa (AA), which is widely used as a *lingua franca*, and also Fulfulde which represents Niger-Kordofanian (NK), a third great phylum of African languages characterised by eleborate systems of noun classes and geographically spread from Senegal to South Africa.

An on-going summary of rough data on the languages of Wadāī and estimates of numbers of speak-

ers may be extracted from the *Ethnologue: Chad* on the internet [http://www.sil.org/Ethnologue/countries/Chad.html] by focusing on the following relevant languages (spelled and classified as presented there): AA: Arabic, Chadian Spoken; Arabic, Standard; Kajakse, Mubi, Birgit. NK: Fulfulde, NS—*Maban group*: Karanga, Mimi, Kendeje, Surbakhal, Kibet, Runga, Maba, Marfa, Masalit, Massalat. NS—*other groups: Tama-Sungor*: Sungor, Tama, Mararit; *Dadju*: Dadju [Saaronge], Dadju [Dar Sila]; *Bongo-Bagirmi*: Sinyar, Fongoro [in the *Ethnologue: Sudan*]; *Fur*: Fur, Amdang [Mimi]; *Saharan*: Teda, Daza, Kanembu, Kanuri, Bideyat, Zaghawa.

al-**WAḌḌĀḤ** [see djadhīma al-abrash].

WAḌḌĀḤ al-**YAMAN**, sobriquet ("person of outstanding handsomeness amongst the Yemenis") of a minor Umayyad poet of the Ḥidjāzī school, ʿAbd al-Raḥmān b. Ismāʿīl b. Kulāl al-Khawlānī, d. *ca*. 90/707.

Two of the earliest sources on him, Muḥammad b. Ḥabīb's *K. Asmāʾ al-mughtālīn*, 273, and al-Balādhurī's *Ansāb al-ashrāf*, fol. 656a, state that one of his ancestors stemmed from the *Abnāʾ al-Furs*, the Persian soldiers and officials sent out to Yemen to aid Sayf b. Dhī Yazan against the Abyssinians, but there are contradictory traditions on his Yemeni ancestry which are late and clearly of a romantic nature.

The only episodes of his life mentioned in the sources concern his amorous adventures. One links him tragically with a lady of the *Abnāʾ* also, Rawḍa bt. ʿAmr. The other is much more elaborated and seems to have been at the origin of his assassination, sc. his liaison with Umm al-Banīn bt. ʿAbd al-ʿAzīz b. Marwān, wife of the Umayyad caliph al-Walīd I b. ʿAbd al-Malik. Several divergent traditions exist on this, but these do not necessarily lead to Ṭāhā Ḥusayn's scepticism about the poet's very existence. One tradition describes how Waḍḍāḥ was discovered in Umm al-Banīn's rooms concealed in a chest, and was forthwith buried alive in it by her husband and master's slaves; this was transmitted by ʿĪsā b. Daʾb, a specialist in romantic tales, as the *K. Waḍḍāḥ wa-Umm al-Banīn*, according to the *Fihrist*, ed. Cairo n.d., 426, and included in the *Miʾat layla wa-layla*, with Waḍḍāḥ as a great martyr for love (tr. M. Gaudefroy-Demombynes, Paris 1982, 69-75). The most credible tradition (from al-Hirmāzī and Ibn Zabāla, in *Ansāb, loc. cit.*) is more prosaic and as such does not seems to have aroused the interests of the anthologists so much: that Waḍḍāḥ eulogised the caliph's wife against his express orders on the eve of her making the Pilgrimage and became linked with her on her return to Damascus, so that al-Walīd, on hearing about this, ordered Waḍḍāḥ's killing.

These traditions seem to have relegated the poet himself and his work to the background of attention. Transmitters and anthologists, unlike the musicians and singers, seem not to have appreciated his talent as a pioneer in the shaping of the tradition of courtly love poetry into its definitive form, with its two essential themes of the poet's attitude to the phenomenon of love and the encounter of lovers. In his poems on the first theme, the poet appears as a *fatā*, vowed to love and pleasure, and the attainment of the beloved appears as an inevitable consequence of the poet's persistence; in a poem on the second theme, we have a dialogue between the two lovers.

(A. Arazi)

WĀDĪ (a.), pls. *awdiya*, *awdāʾ*, etc., in Syrian colloquial *widyān* (see A. Barthélemy, *Dictionnaire arabe-français. Dialectes de Syrie*, Paris 1935-54, 889), in the Arab lands in general, a river valley. The conventional English spelling is wadi.

1. In the Arabian peninsula.

In desert terrain, a wadi is usually dry, but may carry seasonal water, or occasional floods (*sayl*), which are often a mixture of water, mud and stones. These

desert valleys are very different in both topography and gradient from those in lands of higher and more regular rainfall; for while it is easy to follow the valley of a stream which is always visible, it is often difficult to map the course of the Arabian wadis, in long stretches of which water rarely, if ever, appears on the surface.

The greater part of the rainfall which is carried, either on or below the surface, along the wadis of central Arabia, falls on the high western rim of the massif in the Negeb or Negev [see AL-NAḲB], Ḥidjāz, ʿAsīr and Yemen, and flows east-north-eastwards in sympathy with the general slope of the plateau.

In the higher reaches of these wadis, the pattern of drainage is so complex and firmly incised that it was evidently established during periods of higher rainfall in the Pleistocene epoch. At such times, the more powerful streams, which flowed to the Red Sea down the well-watered western slopes, "captured" some of the drainage on the east side of the watershed, notably in the case of the headwaters of the Wādī al-Ḥamḍ. During these pluvial episodes, lakes of water accumulated, the overflows from which incised the deep valleys of some wadis, notably in the case of the Wādī Ḥaḍramawt which rises in the Ramlat al-Sabʿatayn, now a sand-basin but apparently once a lake. The same phenomenon can be traced in the overflows from the former lake basins of Anatolia, and from the high plain at the head of the Samaria gorge in Crete.

In their middle courses the Arabian wadis are characterised not by surface streams in clear-cut meanders, as in valleys of temperate latitudes, but by subterranean flow under broad shallow depressions in the sand, the gentle side-slopes of which are barely perceptible. When the water flow is near enough to the surface to be reached by wells or through the roots of data-palms, oases may be established, as at al-Ḳaṣīm [*q.v.*] in the middle course of the Wādī al-Rumma. In central Arabia in general, the greater part of the underground reserve consists of "fossil water" which accumulated during wetter episodes of the Quaternary and Holocene epochs; the annual rainfall serves as a supplement which raises the level of the water-table.

The terminus of such great wadis as al-Rumma and al-Dawāsir, where they meet the Gulf, is not marked by deltas or estuaries, but simply by the upwelling of freshwater springs through the coastal sands, as in the district of al-Hufūf [*q.v.*], or through the bedrocks under the seawater of the Gulf itself.

Through the convenience of their oasis wells, the wide wadis of Arabia and Syria are often followed by roads of trade or pilgrimage: the Wādī 'l-Sirḥān, for example, leads from Jordan to central Arabia, and the Wādī Rumma is used in part by the Darb Zubayda [*q.v.* in Suppl.], the Pilgrim Road from ʿIrāḳ to Mecca. The flash-floods of the narrow mountain wadis, however, make them hazardous for travellers; but these flows used to be controlled for purposes of irrigation in the Negeb, for instance, and in the Yemen where they filled the great reservoir of Mārib [*q.v.*].

Bibliography: W.C. Brice (ed.), *The environmental history of the Middle East since the last Ice Age*, London 1978.

(W.C. BRICE)

2. In North Africa.

Here, the form *oued* is usual in French usage. In the Maghrib, it denotes all watercourses, including the great perennial rivers, like the Oued Chélif in Algeria; it can equally at times designate, in very arid regions, low-lying areas where there is a total lack of any flow. This is why, in the Great Western Erg/Grand Erg Occidental, to the north of Tinimoun and towards lat. 29° 30' N., long. 0° 30' E., it is used to designate the streams running amongst the dunes (*faydj* [see FUYŪDJ]). The term has acquired a more restricted meaning in physical geography for denoting the watercourses in arid regions, which may have a seasonal flow in semi-arid areas but are spasmodic or temporary in the most desert-like areas.

(Y. CALLOT)

3. In Muslim Spain.

In al-Andalus, this term, through the intermediacy of the Hispano-Arabic dialect word *wád*, gave rise to a large number of toponyms in the Iberian peninsula beginning with "Guad" and "Guadi". In al-Andalus, *wādī* was used not only for smaller, seasonal watercourses which dried up in summer but also for more important ones which might also be described by the word *nahr* "river". It nevertheless seems that, in the peninsula, *wādī* had a toponymical signification whereas *nahr* was a more generic one. The word also appears in many toponyms which have lost any connection with water, such as the towns Wādī 'l-Ḥidjāra [*q.v.*] = Guadalajara, Wādī Āsh [*q.v.*] = Guadix, and such geographical accidents as Wādī 'l-Raml = Guadarrama. Finally, al-Wādī denoted districts (*iḳlīm*) belonging respectively to Seville and Cordova, and, as a second element, also denoted in mediaeval Arabic historiography the name of one of the gates in the wall of Cordova, Bāb al-Wādī, the present fortress Alcalá del Río, Ḳalʿat al-Wādī, and a *munya* set up by al-Manṣūr at Cordova, Dhāt al-Wādiyayn "that of the two rivers".

Many of the Spanish toponyms beginning with "Guad" are followed by pre-Islamic names adapted into Arabic, e.g. "Anas" > Wādī Āna = Guadiana; "Acci" > Wādī Āsh = Guadix; "Salsum" > Wādī Shawsh = Guadajoz; etc. One frequently finds others which are Arabic in their totality with the second term a qualifying adjective, e.g. Guadalimar < Wādī 'l-Aḥmar "Red river", or a substantive, e.g. Guadarromán < Wādī 'l-Rummān "River of the pomegranates". Moreover, some archaic orthographical forms of "Guad-" survive, such as Huad-, Gud-, Got-, Güid-, Güit-, Güed-, Hüet-, Od-, Oid-, etc.; apocopated forms, such as Guaira alongside Guadaira (Seville) or Gurrazar (Toledo); and even contaminated forms like Guandatillo (Soria) or Agua Rocín (Jaén), in which Agua is in reality a reflex of *Wādī*.

(R. PINILLA-MELGUIZO)

WĀDĪ 'L-ʿAḲĪḲ [see AL-ʿAḲĪḲ].

WĀDĪ ĀSH, a town of al-Andalus, modern Guadix, now in the province of Grenada [see GHARNĀṬA] 60 km/37 miles northwest of the province's capital, chef-lieu of a *partido judicial* and seat of the diocese of Guadix-Baza, with a population of *ca.* 20,000, perhaps twice what it had in Islamic times.

The name goes back to a pre-Islamic toponym, perhaps Iberian, *Acci*, rendered *Āsh* by the Arabs, prefixed by the element *Wādī* [see WĀDĪ. 3.], applied not only to the town and the river on which it stood but also to the surrounding region. Sometimes the forms Wādī 'l-Ashā(t) and W. Yāsh are found, or, for the town only, Madīnat Āsh and M. Banī Sām, a name which Simonet thought went back to the Yemeni tribe of Sām(ī) established there. In Castilian texts, one finds

Guedix and above all Guadiex, which evolved into the modern Guadix.

It was a Roman settlement (*Colonia Iulia Gemella Acci*) and then a Visigothic one, and then immediately formed part of Islamic Spain with the arrival of the Arabs, whilst becoming a centre of opposition to the Umayyad state till the time of ʿAbd al-Raḥmān III; the *ḥuṣūn Wādī Āsh* are mentioned by Ibn Ḥayyān in connection with the *amīr*'s campaign of 913-14 in the *kūra* of Ilbīra. In the period of the Taifas [see MULŪK AL-ṬAWĀʾIF. 2.], Guadix formed part of the Zīrid kingdom of Granada, as also its neighbour Baza (Basṭa), both of these being involved together in clashes with Granada and the Taifa of Almeria (al-Mariyya). After being under Almoravid and Almohad control, it passed in 1232 to the Naṣrids of Granada, and from 1238 formed part of their kingdom. This was the period of Guadix's greatest florescence, especially under the rule of the Banū Ashkīlūla, being at that time a focus of rebellion against the authority of Granada. Its role continued to be important under the Naṣrids, until El Zagal, one of the claimants to power in the internecine conflicts, ceded it to the Catholic monarchs in 1489, it already having paid tribute to them since 1433.

The district of Guadix included, according to Simonet, many settlements and fortresses. The town itself was built round the citadel (*alcazaba*), whose remains, going back to the 10th century and forming a complete enceinte, dominated the *madīna* and the suburbs. It had a rich agricultural hinterland, with a *secano* (dry-farming region) very rich in cereals (wheat, barley and millet), above all in the region of the Sened (modern Marquesado del Cenete), and there were irrigated lands along the river fringes (the Vega), with vegetables and fruit. There were, further, mines in the region, stock-rearing and hunting, plus a flourishing silk industry and trade. Famous persons from Guadix included the poets Ibn al-Ḥaddād [*q.v.*] and Ibn al-Niẓār, the *ʿulamāʾ* Ibn Djābir and Abū Hāshim Khālid b. Zakariyyāʾ [*q.v.*] and the mystic al-Shushtarī.

(C. ALVAREZ DE MORALES and R. PINILLA-MELGUIZO)

AL-**WĀDĪʾĀSHĪ**, SHAMS AL-DĪN MUḤAMMAD B. DJĀBIR al-Ḳaysī al-Andalusī al-Tūnisī (673-749/1274-1348: not to be confused with his slightly younger contemporary, the blind poet and grammarian from Almeria Muḥammad b. Aḥmad b. ʿAlī b. Djābir al-Hawwārī), the North African author of a *Barnāmadj*.

Al-Wādīʾāshī was born in Tunis, where he died during the plague. He travelled twice to the East, visiting also al-Andalus, and combining commerce with study. Ibn al-Ghammāz, Ibn ʿAbd al-Rafīʿ, Badr al-Dīn Ibn Djamāʿa, al-Ghubrīnī and the grammarian Abū Ḥayyān were among his 180 teachers; Ibn Khaldūn, Ibn Marzūḳ al-Djadd, Ibn al-Khaṭīb and Ibn Farḥūn were his pupils. He contributed to the diffusion of the works of Ibn Taymiyya, al-Tūnī, Ibrāhīm al-Djaʿbarī al-Khalīlī, Ibn Djamāʿa, al-Būṣīrī, al-Ḥarrālī and Ibn Nubāta. His works dealt mainly with *ḥadīth* (*Arbaʿūn ḥadīth*^an^); he also wrote a biography of Ḳāḍī ʿIyāḍ as well as *Taḳyīd ʿalā ʾl-Ḳaṣīda al-ʿarūḍiyya al-musammāt bi ʾl-Maḳṣad al-djalīl fī ʿilm Khalīl li-Abī ʿAmr b. al-Ḥādjib*, *Urdjūza fī taʿbīr al-ruʾyā* and a *dīwān* of his poetry. But he is mainly known for his *Barnāmadj*, a monumental work (ed. M. Maḥfūẓ, Beirut 1980; [2]Beirut 1982; ed. M. al-Ḥabīb, Tunis 1981) and one of the sources of Ibn al-Ḳāḍī's [*q.v.*] *Durrat al-ḥidjāl* (see J.Mª Fórneas, in *Al-Andalus-Magreb*, [1993], 89-101).

WĀDĪ ʾL-DAWĀSIR [see AL-DAWĀSIR].

WĀDĪ ḤALFĀ or simply ḤALFĀ, a town of the northern Nilotic Sūdān (lat. 21° 46' N., long. 31° 17' E.), the administrative centre of the Ḥalfā District of the modern Republic of the Sudan. It lies just south of the frontier with Egypt. It was formerly on the Nile, some 10 km/6 miles north of the Second Cataract, and formed the northern terminus of the Sudan Railway from the capital Kharṭūm, with a pre-1964 steamboat service taking passengers down the Nile to al-Shallāl and the Egyptian railway system. It played little active role in the Sudanese Mahdiyya of the 1880s and 1890s, the centre of the movement being further south, except for the advance from Dongola on Egypt in summer 1889 of Mahdist forces under ʿAbd al-Raḥmān al-Nudjūmī, abruptly halted on 3 August by the crushing of the Mahdist expedition at Toski (Ṭūshkī) north of Wādī Ḥalfā and the killing of its commander [see AL-MAHDIYYA, at Vol. V, 1250a-b].

What remains of Wādī Ḥalfā now lies on the eastern shore of Lake Nuba, the extension into the Sudan of Lake Nasser, formed behind the Aswān High Dam, constructed after the Nile Waters Agreement of 1959 between President ʿAbd al-Nāṣir [*q.v.* in Suppl.] of Egypt and General Ibrāhīm ʿAbbūd of the recently-independent Sudan Republic, which divided the water which was to accumulate between the two countries. Some 502,000 Nubians of the Wādī Ḥalfā lands which were to be inundated, were compulsorily resettled on the upper Atbara river in Kassala Province [see KASALA] of the eastern Sudan, with their settlement there eventually known as Ḥalfā al-Djadīd "New Ḥalfā" [see NŪBA. 4]. The high-handed action of the Sudan government in expelling these people from their ancestral homes, with no voice in where they were to be resettled, provoked in 1960 widespread rioting in Wādī Ḥalfā itself, Kharṭūm and other towns of the Sudan against the ʿAbbūd régime. The region of Wādī Ḥalfā is rich in antiquities of the ancient civilisations of Nubia [see NŪBA. 2 (a)], and in the 1970s it saw extensive rescue

archaeological work before the flooding of the Nile valley there.

(C.E. Bosworth)

WĀDĪ ḤANĪFA, a valley of Nadjd [*q.v.*], now in Saudi Arabia, named after the tribe of Ḥanīfa [see ḤANĪFA B. LUDJAYM], who in pre-Islamic and early Islamic times occupied the region.

It runs in a northwestern to southeastern direction to the east of the massifs of central Nadjd, rising on the crest of the Djabal al-Ṭuwayḳ [see AL-ṬUWAYḲ, DJABAL] and following to the west of modern al-Riyāḍ. The wadi is *ca.* 150 km/90 miles long and 300 to 600 m wide, and cuts through various gaps in the ridges of the region. After reaching the region of al-Khardj [*q.v.*], it becomes known as the Wādī al-Sahbā' [see AL-SAHBĀ'] and is thereafter largely traceable to the shores of the Gulf near the Ḳaṭar peninsula. In the rainy season, the Wādī Ḥanīfa is joined by several affluent wadis and is filled with water, but outside such times it transports a considerable subterranean flow which is drawn upon by various oases in the vicinity of al-Riyāḍ.

In pre- and early Islamic times, the town of al-Yamāma [*q.v.*] was situated in the wadi, but now consists of only a small group of hamlets; the town was probably destroyed by violent floods, whereas al-Dir'iyya and al-Riyāḍ [*q.vv.*] stand above the flood level. The Wādī Ḥanīfa remains today, as it was in earlier times, a well-cultivated area.

(S.A. al-Rashid)

WĀDĪ 'L-ḤIDJĀRA, Spanish form Guadalajara, currently the capital of a homonymous province situated to the northeast of Madrid. Although it is difficult to define the limits of this region during the mediaeval period with absolute precision, it may be stated that its territory corresponds to the zones enclosed between the river Tagus to the east and the river Jarama, which traverses the Sierra Guadarrama, to the west. The principal axis of communication of the region is the valley of the Henares, comprising the Arabic toponym of Wādī 'l-Ḥidjāra "river [or valley] of stones". The city of Guadalajara is situated on the banks of this river, as are other strongholds such as Alcalá de Henares (Ḳal'at 'Abd al-Salām), the Complutum of the Roman period, Alcolea (Ḳulay'a) and Atienza (Atīnsa), the most northerly point of the region. This zone also formed a part of the "Middle March" (*al-thaghr al-adnā* [see AL-THUGHŪR. 2.]) of which the political and military capital was Toledo (Ṭulayṭula [*q.v.*]). This zone constituted an important site for its defence, being a frontier region and a necessary transit point for armies seeking to move from northeast to south and to defend without too much difficulty the untamed mountains of the Central System. Originating on the right bank of the Henares, there had been since the Roman period a highway linking the cities of Toledo and of Saragossa. Among the principal routes of al-Andalus, mentioned by al-Iṣṭakhrī in the 4th/10th century, is the Cordova-Toledo-Guadalajara-Saragossa route.

Following the conquest, attributed by the sources to Ṭāriḳ b. Ziyād [*q.v.*], Guadalajara appears sporadically in Arabic texts which refer to it as a town of secondary importance, both politically and culturally. From this time onward, the little Roman settlement of Arriaca becomes known as Wādī 'l-Ḥidjāra or, to a lesser extent, Madīnat al-Faradj, from the anthroponymy of the family of the Banu 'l-Faradj, a Berber family which governed the region and was descended from the Banū Sālim, another family which gave its name to the town of Medinaceli (Madīnat Sālim). Both the history of the town and that of its circumscription seem to be strongly influenced by its frontier status, since the chronicles mention numerous walled fortresses, always in connection with various military events taking place in different periods. Thus the region exerts considerable interest in its role as a favoured refuge for dissidents intent on pursuing their aims or as a site for warfare against the Christians. For example, in 151/768, during the reign of the Umayyad *amīr* 'Abd al-Raḥmān I (138-72/756-88), the Berber chieftain Shaḳya al-Miknāsī, who had rebelled and taken control of the region of Mérida (Marīda), sought refuge with the government troops of Cordova in the fort of Sopetran. A century later, in 245/860, Mūsā b. Mūsā b. Ḳasī who had been independent governor of the "Upper March" during the last years of the reign of 'Abd al-Raḥmān II (206-38/822-52) and who no longer recognised the sovereignty of Muḥammad, the new Umayyad *amīr* of Cordova, confronted his stepson Izrāḳ b. Mantīl b. Salīm, governor of Guadalajara in an episode related by the sources in the style of an epic. Mūsā b. Mūsā b. Ḳasī was defeated and then killed by the governor who remained loyal to the Umayyads of Cordova. Despite this, the three sons of Mūsā b. Mūsā b. Ḳasī continued to defy Cordova, being finally defeated after a series of prolonged battles at the end of the reign of Muḥammad (238-73/852-86).

During this period and in the reign of his son 'Abd Allāh b. Muḥammad (275-300/888-912), there was a perceived need for defensive measures against the growing menace of the increasingly powerful Christian kingdoms. As a result, not only were the defensive systems of the "Upper Frontier" consolidated, but there was also a series of military constructions in the region between Toledo and Atienza. Sites fortified included Madrid (Madjrīṭ), Talamanca (Ṭalamanka), Canales (Ḳanālish), Olmos (Wūlmūsh) and Calatalifa (Ḳal'at al-Khalīfa). From this period onward and with the support of the populace of this turbulent region, these fortresses were to prove vital for the defence of al-Andalus, as is illustrated both by the historical chronicles and the bio-bibliographical dictionaries, where details are to be found of numerous local *'ulamā'* who died in combat. It is known that during the amīrate of 'Abd Allāh, at the end of the 3rd/9th century, troops from Wādī 'l-Ḥidjāra participated in the *djihād* against Alfonso III. Later, the caliph 'Abd al-Raḥman III al-Nāṣir (300-50/912-61) exerted effective military control over the region of Guadalajara. On this topic, Ibn Ḥayyān relates that the caliph deposed its governor, a member of the family of the Banū Sālim who had long controlled this region, and appointed a member of the Umayyad family in his place. During this period, this frontier zone was the site of the battle in which the Muslims triumphed over the king of León.

In the aftermath of the fall of the caliphate of Cordova, Wādī 'l-Ḥidjāra became a territory coveted by the Taifa [see MULŪK AL-ṬAWĀ'IF. 2.] kingdoms of

Saragossa and Toledo with which it shared frontiers. The population of Guadalajara was divided between supporters of the Banū Hūd of Saragossa represented by Sulaymān al-Mustaʿīn and the Dhu 'l-Nūnid sovereign of Toledo al-Ma'mūn, in a series of confrontations lasting from 435/1043 to the death of al-Mustaʿīn in 439/1047. During these conflicts, each party sought the aid of Christian sovereigns: Ferdinand I of Castile on the side of Toledo, and Garcia of Pamplona in support of Saragossa. The son of al-Mustaʿīn, Aḥmad al-Muḳtadir, pursuing an expansionist policy, succeeded in taking political and military control of the region of Guadalajara which ultimately became part of the greatly extended territory of his Taifa kingdom.

The impression that is gained of Wādī 'l-Ḥidjāra as being a military frontier region, with the role of protecting cities of greater political importance, is that reflected by the Arab and Christian sources, although the latter seem to be unaware of the exact date of its reconquest; for a long time this was attributed, without historical foundation, to Alvar Fañez. In spite of everything, it is known that it took place in the time of Alfonso VI, and was probably simultaneous with the reconquest of Toledo in 478/1085. A Christian document dated 1107 bears the signature of "un alkad de Medina et de Guadalajara". At a later time, in 1133 Alfonso VII granted the town a *fuero* in which he expressed his intention of repopulating the region, thus countering the dispersal of population suffered by the zone after its reconquest.

The activities of the *ʿulamāʾ* of Guadalajara and their family ties are reasonably well known, being detailed in the biographies of sixty scholars contained in bio-bibliographical compilations between the 3rd/9th and the first half of the 6th/12th century. For the most part they were Hispano-Roman converts, some of whom adopted Arabic *nisbas* reflecting their professional links with families installed in the region. It is also known that numerous Berber families had settled in the region, including the Banu 'l-Faradj and the Banū Masʿada; the latter was the origin of several *ʿulamāʾ*. The interests of the *ʿulamāʾ* of Guadalajara seem to have coincided with those of the other *ʿulamāʾ* of al-Andalus, and special dedication is observed to the study of *ḥadīth*, of *fiḳh* and of Ḳur'ānic readings. The role of scholars of Cordova in the training of the intellectual élite of Guadalajara was crucial, with Muḥammad b. Waḍḍāḥ playing a particularly significant part; in fact, the first *ʿulamāʾ* of the region, from the ascetic Muḥammad b. Bāligh to the *ḳāḍī* Muḥammad b. ʿAzra, studied with Ibn Waḍḍāḥ. In the 5th/11th century, there is observable an increase in the number of *ʿulamāʾ* dedicating themselves to literature and grammar, and even to poetry. It is in this period that the *faḳīh* and writer ʿAbd al-Malik b. Ghuṣn al-Khushanī al-Ḥidjārī makes his appearance. All of the written corpus of the *ʿulamāʾ* of Guadalajara has been lost, with the exception of a few verses and fragments of the geographical work composed by ʿAbd Allāh b. Ibrāhīm al-Ḥidjārī, preserved in Ibn Saʿīd's *al-Mughrib*.

(CRISTINA DE LA PUENTE)

(AL-)**WĀDĪ 'L-KABĪR**, Guadalquivir, the name given by the Arabs to the ancient *Betis* river in Southern Spain. It has remained in Spanish toponymy through the Spanish-Arabic dialect form Wād al-Kibīr. According to the Arab sources, it is also called al-Nahr al-Akbar or al-Nahr al-Aʿẓam (the Great River), Nahr Ḳurṭuba (River of Cordova) and Nahr Ishbīliyā (River of Seville), but it is seldom called Nahr Bīṭī/Bīṭa (Betis River). In poetry sometimes it is called Nahr Ḥimṣ (River of Ḥimṣ), that is, River of Seville. The history of this river goes back to Roman times, where it played a major role within the Roman Baetica, or southern Hispania. After the Islamic conquest, its ancient Latin name was changed to the Arabic one (al-)Wādī 'l-Kabīr (the Great River), possibly due to its extensive flow, which the Muslim conquerors compared with North African small streams that they knew previously.

Wādī 'l-Kabīr was, and still is at present, one of the most important rivers in the Iberian Peninsula, and the southernmost of them all. It flows through the heart of al-Andalus, from northeast to southwest,

through the modern Andalusia. Its course is 560 kms long. It begins at the Cañada de Aguas Frías, among the Pozo Alcón and Cazorla mountains, but according to Arab writers, the course begins west of Baza (Basṭa), in a place called Fatḥ/Fadjdj al-Daylam, today Peña Negra at the Sierra de Cazorla, while other written sources speak of a place in the Sierra de Segura (Shaḳūra).

This river flowed through what were some of the most important cities and districts in al-Andalus such as the districts of Úbeda (Ubbadha [*q.v.*]), Andújar (Andūdjar), Córdoba (Ḳurṭuba [*q.v.*]) and Seville (Ishbīliyā [*q.v.*]). Further downstream, it waters the marshes (Las Marismas, al-Marā'im), finally meeting the Atlantic Ocean near Sanlúcar de Barrameda (Shalūḳa, Barr al-Mā'ida).

Many smaller rivers feed the course of the Guadalquivir, some of which still keep the Arab prefix "Guad" [see WĀDĪ. 3]. Its left bank takes in the waters from the Guadalimar (Wādī 'l-Aḥmar), Jándula (Shandula), Guadalmellato (Wādī Armillāt), Guadiato (Wādī Ātuh ?), and Guadiamar (Wādī Yanbar) rivers, among others. On its right bank the Guadiana (Wādī Yāna) Menor, Guadalbullón (Wādī 'l-Bulyūn), Guadajoz (Wādī Shawsh), Genil (Wādī Shanīl, the most important of these tributaries) and Guadaira (Wādī Ayra) are its main affluents.

In Antiquity, it seems that there were boats sailing along most of its course: Strabo speaks of big ships sailing to Hispalis (Ishbīliyā) and how small boats could sail to Corduba (Ḳurṭuba). Then, in the Muslim period, navigation continued to Seville, but only smaller boats could travel between Seville and Cordova, along the route mentioned by al-Idrīsī as *ṭarīḳ al-Wādī* ("the way of the river"). The river is very often mentioned by the Arab writers. The bridge (*ḳanṭarat al-Wādī*), made by the Romans, still links both sides of the city of Cordova, being the only stone bridge which spanned al-Wādī 'l-Kabīr during Arab times. Al-Wādī 'l-Kabīr was often hymned by the Arab poets, and al-Zuhrī compares it to the rivers Tigris, Euphrates, Nile and Jordan.

(R. PINILLA-MELGUIZO)

WĀDĪ 'L-KHAZNADĀR, the site of a battle in 699/1299 between the Mamlūks and the Īlkhānid Mongols [*q.vv.*], in the plain to the north of Ḥimṣ. The exact location of this site, also referred to as Madjma' al-Murūdj, has not been identified. This was the only time the Mongols were victorious over the Mamlūks in a major field battle.

Angry at the recent Mamlūk incursion to Mārdīn and interference in Mongol-controlled Anatolia, and urged on by Mamlūk renegades at his court, the Īlkhān Ghāzān [*q.v.*] ordered the call-up of some 13 *tūmāns* [*q.v.*], but only five out of every ten soldiers was to report, each bringing five horses. Crossing the Euphrates in the autumn, the Īlkhān and his army passed Ḥalab and Ḥamā and entered the plain of Ḥimṣ. They soon encountered the Mamlūk army, which arrived at the battlefield in an exhausted state, further suffering from other problems. The young sultan, al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*], enjoyed only nominal command, and real control was in the hands of the *amīrs* Salār and Baybars al-Djāshnakīr; the latter, however, became ill and did not participate in the fighting. The contemporary Abu 'l-Fidā' (*Mukhtaṣar*, Cairo 1325/1407, iv, 43), describes the poor morale, discipline, organisation and supply system of the Mamlūk army. Contact between the two armies was made on Wednesday, 27 Rabī' I 699/22 December 1299 (cf. the Mamlūk sources). As the Mongols were dispersed to pasture the horses and fetch water, Ghāzān drew up those troops as he could, ordering the soldiers in the centre to dismount and shoot on foot, with the horses lying down before them as a protective barrier. The Mamlūks attacked first, their right pushing back the Mongol left under Ḳutlū-Shāh, who then joined the Īlkhān in the centre with some troops. The Mamlūk attack in this sector was repulsed. With time, the dispersed Mongol soldiers joined their ruler, and after hard fighting the superior numbers of his army helped decide the battle; some Mamlūk sources specifically mention the defeat of the Mamlūk left. The Mamlūk army retreated in disarray, making their way to Egypt while suffering depredations by the local hillsmen. Mongol raiders swept through Palestine, reaching as far as Gaza, Hebron and Jerusalem. Ghāzān himself advanced as far as Damascus, whose notables submitted to him. After several weeks, the Īlkhān withdrew, and following him the entire Mongol force. By spring, the Mamlūks had reoccupied Syria.

WĀDĪ 'L-ḲURĀ, or "the valley of villages", a once prosperous region including several valleys in northern Ḥidjāz [*q.v.*], four or five days'

journey from Medina. From beginning to end the valley was made of villages arrayed one after the other (*ḳurā manẓūma*).

According to one opinion, the Wādī 'l-Ḳurā extended between Madā'in Ṣāliḥ (i.e. al-Ḥidjr [*q.v.*], ancient Ḥegrā) in the north and al-Badāyiʿ (southeast of al-ʿUlā) in the south; the central settlement in Wādī 'l-Ḳurā during the first centuries of Islam, Ḳurḥ [*q.v.*], should be identified with modern al-Mibyāt (or rather al-Mābiyyāt) south of al-ʿUlā (A.A. Nasif, *The identification of the Wādi 'l-Qurā and the ancient Islamic site of al-Mibyāt*, in *Arabian Studies*, v [1979], 1-19; cf. Ḥ. al-Djāsir, *Laysa 'l-Ḥidjr Madā'in Ṣāliḥ*, in *al-ʿArab* [Riyāḍ], xiii [1978-9]), 3-13). However, according to another opinion, Wādī 'l-Ḳurā traversed a much larger area, joining the sea south of al-Wadjh; Ḳurḥ, according to the latter opinion, should be located at modern al-Khurayba (or Khuraybat al-ʿUlā) which is the northern part of al-ʿUlā (al-Djāsir, *Taʿlīḳāt ʿalā 'l-mawāḍiʿ fī shiʿr al-Aḥwaṣ al-Anṣārī. iii*, in *Jnal. of the Institute of Arabic Manuscripts*, xxxvi [1992], 249-86, at 252-4; idem, *Riḥla ilā bilād al-ʿUlā*, in *al-ʿArab*, xii [1977-8], 161-85, at 183-4).

Ḳurḥ was also known as al-Saʿīd and Ṣaʿīd Ḳurḥ. According to Lughda al-Iṣfahānī (3rd/9th century), the market of Wādī 'l-Ḳurā was called al-Ṣaʿīd. The mosque in Ṣaʿīd Ḳurḥ was built where the Prophet Muḥammad once led his Companions in prayer. His place of prayer (*muṣallā*) was later demarcated with bones and stones (al-Fīrūzābādī, *al-Maghānim al-muṭāba fī maʿālim Ṭāba*, ed. al-Djāsir, Riyāḍ 1389/1969, 336).

In ancient times, i.e. in legendary history, the Wādī 'l-Ḳurā and the adjacent areas belonged to the Thamūd and the ʿĀd [*q.vv.*]. The Jews who came there later dug subterranean conduits and planted palm trees. Wādī 'l-Ḳurā was (from a tribal point of view) in the territory of tribal groups belonging to the Ḳuḍāʿa [*q.v.*]. Other tribal groups living in the same area were of the Ghaṭafān and the Fazāra [*q.vv.*] (a subdivision of the former tribe). Two expeditions against the Fazāra at the time of the Prophet were carried out in the vicinity of Wādī 'l-Ḳurā. As for the Ghaṭafān, the Jews of Wādī 'l-Ḳurā had a treaty with a Ghaṭafānī group, the Thaʿlaba b. Saʿd b. Dhubyān (*Aghānī*[3], iii, 271). Another treaty, between the Jews and the ʿUdhra [*q.v.*], prescribed for the latter a portion of the annual crops. In return, they defended the villages of Wādī 'l-Ḳurā, driving away from them other tribes of the Ḳuḍāʿa. The assigned portion of the ʿUdhra amounted to one-third of the harvest, while two-thirds remained in the hands of the Jewish agriculturalists. When Muḥammad conquered Wādī 'l-Ḳurā (7 A.H.), he received half of the Jews' share, i.e. one-third of the total, while the Jews kept one-third to themselves. Upon the expulsion of the Jews (or rather of some of them) by ʿUmar b. al-Khaṭṭāb, they received in cash the estimated value of their share, sc. 90,000 dīnārs. ʿUmar then offered the ʿUdhra an additional sixth of the crops in return for one-sixth of the value, i.e. 45,000 dīnārs. They accepted, becoming the owners of one-half of Wādī 'l-Ḳurā. One-third of the remaining half was included in the charitable endowments of the Prophet, while one-sixth of the same half belonged to all the Muslims (al-Māwardī, *al-Aḥkām al-sulṭāniyya*, tr. E. Fagnan, Algiers 1915, 362).

At least four indigenous Arabs, all of whom belonged to tribal groups of the Ḳuḍāʿa, are reported to have received from the Prophet grants of land in Wādī 'l-Ḳurā. Two were members of the ʿUdhra, one was probably of the Balī, while another was of the Ḥārith b. Saʿd Hudhaym.

There is no unanimity in the sources on whether or not ʿUmar expelled the Jews of Wādī 'l-Ḳurā. However, the fact that many Companions received from him grants of land in Wādī 'l-Ḳurā indicates that part of the original Jewish inhabitants were driven out. One Jewish family which remained is specified. When Muḥammad alighted in Wādī 'l-Ḳurā, the sons of the Jew ʿArīḍ (or ʿUrayḍ) served him a dish of *harīs*[*a*] (i.e. ground meat and ground wheat fried in much fat). He granted them a portion from the annual crops of Wādī 'l-Ḳurā (perhaps rewarding them for a co-operation of sorts). Several centuries later there was a large Jewish community in Wādī 'l-Ḳurā. In the 4th/10th century, Ḳurḥ, said by al-Muḳaddasī to have been predominantly Jewish (*wa 'l-ghālibu ʿalayhā' l-yahūdu*), was at the apogee of its prosperity. He wrote: "And the region (*nāḥiya*) of Ḳurḥ is called Wādī 'l-Ḳurā. Apart from Mecca, no town in the Ḥidjāz today is higher in rank, is in better repair, more populated, or has more merchants, wealth and fine qualities than it" (see also J. Mann, *The responsa* . . ., in *JQR*, N.S. vii [1916-17], 457-90, at 489).

Several prominent Muslims are known to have owned estates in Wādī 'l-Ḳurā. They included ʿUthmān b. ʿAffān, ʿAlī b. Abī Ṭālib (who had several estates there), Usāma b. Zayd and ʿAbd Allāh b. ʿUmar b. al-Khaṭṭāb [*q.v.*], whose land was cultivated by his own slaves and by those belonging to his wife (Ibn Zandjawayh, *K. al-Amwāl*, ed. Sh.Dh. Fayyāḍ, Riyāḍ 1406/1986, iii, 1257-8). Muʿāwiya I [*q.v.*] reportedly initiated a large irrigation project in Wādī 'l-Ḳurā including watering places (*ʿuyūn*). Part of Muʿāwiya's estate in Wādī 'l-Ḳurā was bought from a Jew, while another part was made productive by Muʿāwiya himself. One has to bear in mind that significant pilgrim roads passed through or near Wādī 'l-Ḳurā, hence the *raison d'être* of the estates was probably the provision of food to the pilgrims.

The development of new irrigation projects, and the maintenance of old ones, required expert knowledge in water engineering. Irrigation experts were probably found among the slaves brought to Wādī 'l-Ḳurā in the early days of Islam. ʿUmar b. Dāwūd b. Zādhān (better known as ʿUmar al-Wādī), a *mawlā* of ʿUthmān b. ʿAffān, was the first in a distinguished line of musicians who lived in Wādī 'l-Ḳurā. At the same time ʿUmar was also a *muhandis* or "one who determines the measures and proportions of subterranean channels for water". This link by *walā'* with ʿUthmān went back to ʿUmar's grandfather, Zādhān (*Aghānī*[3], vii, 85) who was presumably a Persian slave employed in ʿUthmān's estate in Wādī 'l-Ḳurā.

In the 3rd/9th century, the Ḳuḍāʿa were still dominant in the area. According to Lughda, Wādī 'l-Ḳurā and its surroundings belonged to the ʿUdhra, the Balī, the Saʿd Allāh and the Djuhayna (all of whom were subdivisions of the Ḳuḍāʿa). Groups of the Balī, the ʿUdhra (many of whom were absorbed by the Balī) and the Djuhayna can still be found in the same area, in addition to groups of the ʿAnaza and the Ḥarb [*q.vv.*].

(M. LECKER)

WĀDĪ NŪN, the form of more recent times for the earlier WĀDĪ NŪL, a great plain of southwestern

Morocco lying between the Anti-Atlas and its Saharan outliers some 35 km/20 miles from the Atlantic. The plain is formed from the silt carried down by a number of watercourses, of which the chief are the Wādī Ṣayyād and the Wādī Umm al-ʿAshar, which unite to form the Wādī Āsāka, which last runs through a defile into the Atlantic just south of what was the Spanish enclave of Ifni.

The Wādī Nūn contains a number of oases with large villages (Awgelmīm or Glaymīm, Ḳṣābī, Tīlīwīn, Fask, Dubiyān, Tighmart, Asrīr, Waʿrūn, Abbūda, etc.). which in the past served as trading centres for the Saharan nomads. The local inhabitants are Arabophone Berbers, belonging for the most part to the Lamṭa with some Maʿḳil lineages and to the sociopolitical groups (*laff* [*q.v.*]) of the Takna, but some to the Ayt Baʿamrān and the Akhsās. An element present from mediaeval Islamic times has been that of the Ḥarāṭīn [see ḤARṬĀNĪ], and there was a Jewish community until the 20th century.

The region has owed its historic importance to several factors. It is in Morocco one of the rarer groups of oases which through the centuries has communicated in the south with the Mauritanian Adrar and Senegal, and in the southeast, with the Niger bend. It is also at the exit of the easiest route between the desert and the northern slope of the Atlas, a natural route which runs onwards as far as al-Suwayra [*q.v.*] or Mogador. Finally, its proximity to the Atlantic Ocean has enabled its inhabitants at various times to enter into commercial relations with Europe and to act as a corridor for the exporting of the rich products of the Western Sūdān.

The pre-Islamic history of the region is obscure, but its population must have been Berber, of the groups Illmmidn (which in the language of the Iznagn or Ṣanhādja [*q.v.*] would mean "those who have learnt to act together"), i.e. the Lamṭa, and the distinct Iwillimmidn or Lamtūna. In the first Islamic century, Lamṭa Berbers controlled the settlements of the Wādī Nūl, and it was probably the ephemeral rule of ʿAbd Allāh b. Idrīs II in the Sūs [*q.v.*] which brought them for the first time into contact with the Islamic faith. They were probably at this time essentially nomadic, but acquired a significant town, Nūl Lamṭa, which seems to have occupied the site of the later villages of Asrīr Tighmart. It was a great entrepôt, where the famous shields of antelope hide (*lamṭ*) were made, and from it caravans set out to cross the Sahara for Mauritania and the Western Sūdān. It was probably this commercial role of the region which at an early date attracted a Jewish colony.

In the 5th/11th century, Nūl Lamṭa rose to prominence when the Almoravids [see AL-MURĀBIṬŪN] conquered the Wādī Nūl basin, and *ca.* 494/1101 established a celebrated mint there, and the high quality of its gold dīnārs attests the economic importance of the place and its importance to the Almoravids. Amongst the towns of the Great Atlas and the Anti-Atlas, Nūl and Aghmāt [*q.v.*] now consolidated their metropolitan position, with Nūl in third position after Sidjilmāsa and Aghmāt and in front of Fās and Marrākush. Imposing fortresses of the Almoravids above Nūl and Taghadjidjt still attest this importance. Al-Idrīsī describes the large size of the encampments there of the Iwillimmidn. The mint of Nūl Lamṭa continued to operate until 543/1148-9, two years after the death of the last Almoravid Isḥāḳ b. ʿAlī b. Yūsuf b. Tāshufīn, and its continued cultural significance is shown by mentions of scholars there, such as ʿAbd Allāh b. Abī Bakr al-Samkānī who studied there in 663/1264-5 with Shaykh Abū Sulaymān Dāwūd al-Ḥaḥā'ī, who is said to have taught Ibn ʿAbd al-Barr's *K. al-Kāfī*.

The advent of the Almohads [see AL-MUWAḤḤIDŪN] did not prevent Nūl Lamṭa and other nearby towns like Taghadjidjt and Tagawst from retaining their vigorous independence against outside incursions. Hence ʿAbd al-Mu'min sent his commander Abū Ḥafṣ with three corps of troops against the Wādī Nūn, wreaking complete destruction there in 549/1154-5, with massacres and deportations. Nevertheless the three towns later revived: al-Marrākushī, Ibn Saʿīd and Ibn Khaldūn attest the continuing importance of Nūl Lamṭa and Tagawst, whilst Taghadjidjt survived under an Almohad governor.

In 615/1218 the invasions of the Maʿḳil Arabs reached Wādī Nūn, and one of their component tribes, the Dhawū Ḥassān, soon clashed there with the indigenous Illmmidn and Iguzuln. Allying with whoever paid them most, the incomers gradually overlaid the power of the Lamṭa, and with the subsequent conflict of the Dhawū Ḥassān and the Marīnids [*q.v.*] over control of the region, Nūl Lamṭa declined in favour of Tagawst (the modern Ḳṣābī), and it was under the name Tagawst that the Europeans long knew the Wādī Nūn region.

From 1405, expeditions began under Portuguese, Spanish and other European navigators from the Canary Islands to the African coast, in a century when the existence of the confederation of the Takna is first attested. These expeditions were to secure slaves for the agricultural exploitation of the Islands, and constituted the celebrated *entradas*, several of which reached the gates of Tagawst and resulted in the foundation of a number of Spanish fortresses. One of them, San Miguel de Saca, which only lasted, however, for a very short time, was quite close to the Wādī Nūn, at the mouth of the Āsāka. These expeditions were perhaps preceded or accompanied by Christian missions. In 1525 Tagawst venerated the relics of a Portuguese from the Order of the Hermits of St. Augustine, who had lived in this region. It was a period when the Hilālī Arab tribe [see HILĀL] of the Awlād ʿĀmir apparently secured control over Tagawst, although the mass of cultivable land remained in the hands of the indigenous Illmmidn and Igulzuln.

The foundation of the Saʿdian dynasty [see SAʿDIDS] in the 10th/16th century resulted in the expulsion of the Christians and the people of Nūn supplied *gīsh* contingents to the sovereigns who had liberated Muslim soil. But very soon, it seems, their oases began to lose their position as starting-points for caravans. The Shorfā [see SHURAFĀ'] came from Tāgmādārt in the upper Darʿa, and it was by this route naturally that they brought to Marrākush the booty of their conquests on the Niger.

This fact no doubt explains why the people of the Wādī Nūn very soon disowned this dynasty, as well as why they were always at more or less open enmity with the Filālīs, who for similar reasons favoured the route by Tāfīlālt. In the 17th and 18th centuries, the Wādī Nūn seems to have belonged to the marabout state of Tāzarwālt [*q.v.*], founded by Abū Ḥassūn al-Samlālī (Bū Dmiʿa). He and his successors in every case maintained very regular commercial relations with the country south of the desert. In their reign, European ships frequently came to the coast of the Sūs to carry away merchandise brought down by the caravans. This was a period of prosperity for the Wādī Nūn, which, towards the beginning of the 19th century, formed a practically independent state under

Shaykh Bayrūk, the capital of which, Awgelmīm, soon supplanted Tagawst.

The sultans, however, became disturbed at this direct trade between Europe and the southern provinces of the empire; they were losing all the profit from it. In the second half of the 18th century, Sīdī Muḥammad b. ʿAbd Allāh closed the southern ports to merchant ships and forced them henceforth to come to Mogador, which he had just founded. Tāzarwālt and Wādī Nūn had to send their caravans there and pay heavy taxes on the articles exported. All their efforts, and especially those of Bayrūk and his sons, were in the direction of direct relations with the European governments, in order to place their commerce under European protection and to lead ships to disobey the sultan's orders by founding on the coast a port where the customs duties were lower than those at Mogador. The way was paved for this policy by the old relations of the Jews of the Wādī Nūn with the European merchants and by the numerous shipwrecks which took place in this district at the end of the 18th century, which gave Bayrūk an opportunity to discuss his plan with Christians. He tried first of all in 1835-6 to interest England and then France in 1837-53; finally, after his death in 1859, his sons began negotiations with Spain, which enabled this nation to get, by the treaty of Tetouan, the concession of a fishing station on the coast. So far, these attempts had yielded no appreciable result; the commercial strength of the Ulād Bayrūk seemed rather precarious, and the coast of the Wādī Nūn, moreover, did not afford sufficient shelter for ships. It was only in 1876 that Mackenzie built a factory on Cape Juby, soon followed by Curtis, who settled near Awgelmīm in the Wādī Areksīs. These marked the beginning of a series of explorations and experiments which disturbed sultan Mawlāy al-Ḥasan so much that in 1886 he decided upon an expedition to the south. This ended in the submission of Tāzarwālt and of the Wādī Nūn and in the departure of the English merchants. The marabout *shaykh* Māʾ al-ʿAynayn [*q.v.*], whose anti-foreign influence was increasing in the western Sahara, undertook to put a stop to any Christian enterprise on these coasts. It was not till four years after his death, in 1916, that Spain established herself on Cape Juby and a German submarine landed a mission to seek an alliance with his son Mawlāy Aḥmad al-Hība, who was directing the opposition of the tribes in the Anti-Atlas against the French advance; this last effort led to nothing [see AḤMAD AL-HĪBA, in Suppl.].

By the first half of the 20th century, the process of desertification and migrations of the local populations towards the Atlantic plains and the cities, combined with the disappearance of the trans-Saharan commerce, made the Wādī Nūn chiefly significant for stock-rearing (camels, horses, cattle and, especially, sheep and goats), although agriculture included some cereals, vines, figs, oranges, pomegranates and dates. By then, the markets of Awgelmīm and Tighmart were only of local significance. The most notable were the fairs (*mūsem, amuggār*) of Asrīr, Ḳṣābī and Awgelmīm where the settled population and pastoralists exchanged products.

Bibliography: 1. Sources. These include geographers like Yaʿḳūbī, Ibn Ḥawḳal, Bakrī, Idrīsī, the *K. al-Djaʿrāfiyya*; historians like Ibn Khaldūn, *K. al-ʿIbar* and *Muḳaddima*, and Ibn ʿIdhārī's *Bayān*; and hagiographers like Ibn al-Zayyāt, *K. al-Tashawwuf ilā 'l-taṣawwuf*, ed. A. Faure, Rabat 1958. Because of the region's contacts with Europe, the accounts of European travellers, captives, visitors, etc. are important; for these, see the *EI*[1] art., and add Th. Monod and P. de Cenival, *Description de la côte d'Afrique de Ceuta au Sénégal par Valentin Fernandès (1506-1507)*, Paris 1938.

WĀDĪ RĪGH [see MAGHRĀWA. B. 4].

WĀDĪ YĀNA or **ĀNA**, or NAHR YĀNA/ĀNA, the classical Anas, Span. Guadiana, Port. Odiana, a great river of the south-central and southwestern parts of the Iberian peninsula.

It rises in the southeastern part of the central Meseta, in the Serranía de Cuenca [see ḲŪNKA], as the Záncara and Gigüela rivers, and flows westwards and then southwards to the Atlantic, with a course of 578 km/360 miles. Its last part, below Pomarão, forms part of the modern boundary between Spain and Portugal; only this section, and a little further upstream to Mertola, is navigable. Along its middle reaches are a series of seasonal lakes and marshes, *los Oyos del Guadiana* "the Eyes of the Guadiana", known in ancient times as "the re-born Guadiana", i.e. after the summer drought. Arabic authors noted the disappearance and re-appearance of the river, and al-Idrīsī calls it *al-nahr al-ghaʾūr* "the disappearing, subterranean river". Other names for the river in historical and geographical sources are Nahr Uklīsh ("of Uclès"), N. [Ḳalʿat] Rabāḥ ("of Calatrava"), N. Mārida ("of Merida") and N. Baṭalyaws ("of Badajoz"), from the towns along its banks.

Bibliography: F.J. Madoz, *Diccionario geográfico*, Madrid 1846-50, ix, 27. (C.F. SEYBOLD*)

WADĪʿA (A.), noun from the root *wadaʿa* which can denote the opposing meanings or *aḍdād* [*q.v.*], of both depositing an object with and accepting it from a person. It is also the term given to the legal contract that regulates depositing an object with another person, whether real or

supposed. Strictly speaking, *īdāʿ* is the actual act, while the form I verb *wadaʿa* refers to the actual relationship, since *wadīʿa* is in reality the noun for the object of the contract (*maḥall al-ʿaḳd*).

The depositor (*mūdiʿ*) is thus a person who deposits an object or property with the *mūdaʿ*. Although the relationship falls within the area of contract when it involves tangible material matters, it is difficult to conceptualise as a contract when it involves non-material intangibles, such as acts of behaviour or personal or trade secrets.

According to the Ḥanafī school, the contract (*īdāʿ*) is defined as authorising another party to safeguard one's property by either declaration (*ṣarāḥat^an^*) or indication (*dilālat^an^*). The same basic conditions (*shurūṭ*) governing a standard contract apply to *wadīʿa*. This includes the sanity (*ʿaḳl*) of the contracting parties and their majority (*bulūgh*). However, the Ḥanafīs do not stipulate the adulthood of both parties and accept that a minor who has permission to trade (*ṣabī maʾdhūn*) is able to deposit his property freely. Another condition is that the object of the contract should be legal (*māl mutaḳawwim*). Accordingly, the statement made by Otto Spies in *EI*[1], iv, 1080, that "only *māl* can be deposited" applies once it is understood that the *māl* is not the focus of the condition but that the legality of the *māl* is involved. Thus wine is not legally an item of property for an ordinary Muslim but, if it is owned by a newly-converted Muslim it is considered as legal. The final, standard contractual condition required for *īdāʿ* is the offer by the depositor (*mūdiʿ*) and acceptance by the depositary (*mūdaʿ*). The obligations of the depositary dictate that he/she should safeguard the object to the best of his/her ability. When liability is to be assessed by the court, the safekeeping expected would be that normally accepted for similar objects. Liability can only be granted to the depositor if negligence or transgression (*taʿaddī*) is proved.

This occurs:

1. If he deposit the thing with a third person, for the depositing is based on the personal confidence which the depositor has placed in a definite individual known to him, Ibn Abī Laylā alone allows the depositary to deposit again. Opinions differ regarding further depositing with members of the family. Members of the family are considered to be such persons who live with the depositary and belong to his household: wife, children, parents, servants. The Shāfiʿī jurists follow *ḳiyās* and forbid further depositing, while the Ḥanafīs and Mālikīs who follow *istiḥsān* allow it. According to all schools, however, the depositary may deposit again in face of pressure from a higher power in order to save the thing deposited. As cases of this kind, examples are given of shipwreck, fire, inundation and enemy raids.

2. If the depositary uses the thing or derives advantage from it, e.g. if he wears the deposited clothes or rides the mule, unless he is trying thereby to avoid damage.

Contemporary applications of *wadīʿa* are numerous. Many may not have existed in the early days of Islam, but the same principles apply to them. The contract may also be circumstantially concluded in situations such as sporting facilities that provide lockers for clothes and an attendant to safeguard valuables. The responsibility in this case and in all similar cases comes under the rule of *wadīʿa* unless the parties involved declare their non-acceptance of liability in one way or another (al-Sanhūri, iv, 679).

According to al-Sanhūrī, *wadīʿa* is one of the named contracts (*ʿuḳūd musammāt*) which are contracts that are popularly known by a specific term. A distinguishing feature of the *īdāʿ* contract is that it is like *wakāla* [*q.v.*] in being a voluntary contract (*ʿaḳd tabarruʿ*) which converts into a trade contract (*ʿaḳd muʿāwaḍa*) once payment is stipulated. However, the contract is unlike the *wakāla* contract since it is one that involves an actual task, namely, safekeeping of the goods. The *wadīʿa*, however, in the same way as the *wakāla*, is a mutually-agreed contract that does not require a specific formality apart from *īdjāb* and *ḳabūl* [see BAYʿ]. It is also like *wakāla* in the way that it gives an obligation to only one party.

It is also important to highlight the differences between *īdāʿ* and the sale contract which involves the exchange of goods rather than their deposit. The difference between the two probably represents the most basic practical element that distinguishes the Islamic notion of the role of money from that of the modern banking system. The *wadīʿa* in Islamic law is simply a depositing process which produces no benefit or ownership for the depositary vis-à-vis the object, whereas sale is a contract which leads to full ownership of the object and its benefits. Money in Islam is considered to be only a medium of value and not an independent value generator. All schools of Islamic law agree that money can be the deposited object (*maḥall al-īdāʿ*), while almost no-one considers that it can be an object of sale.

Distinguishing the *wadīʿa* contract from other contracts is important in modern commercial life because it represents the legal basis for many forms of transactions within the Islamic banking system. The difference between *wadīʿa* and the loan (*ḳarḍ* [see ḲIRĀḌ]) contract is particularly important, since they represent the two forms of contracts paradoxically used as a basis for modern Islamic banking. The concept of *wadīʿa* is often used as justification for *muḍāraba* [*q.v.*] which represents the heart of Islamic interest-free banking. According to *muḍāraba*, the savings are advanced to an enterpreneur on a mutually-agreed percentage. The net profit would then be shared between the bank and the depositor or *mūdiʿ*. No violation (*taʿaddī*) is present here because the consent of the depositor is given and the contract carries the attributes of mutual responsibility in both the risk and the profit. However, it may be observed that, according to the strict principles of *īdāʿ*, a violation of safekeeping may occur when the bank actually uses the money to derive corporate benefit. As a consequence of this objection, the relationship between the bank and its customers should be viewed as a *ḳarḍ* contract rather than *īdāʿ*. For unlike the *īdāʿ*, a loan contract permits both using the object and providing a replacement should the object perish. Both of these processes represent a daily practice with current accounts and in all other banking transactions and loans. The lack of transparency of such relationships is only a part of the criticism of interest free-banking. Others maintain that the structure of the bank is inherently the same as that of an ordinary bank, only with a change in terminology, for example, the deposit account is called *ḥisāb al-wadāʾiʿ*. Nevertheless, although Islamic banking may appear similar to orthodox banking, it is very different in essence. The primary difference stems from the risk to which the *wadīʿa* is exposed in the two systems. In the *muḍāraba*, there is a clear element of risk that threatens the deposited money, whereas in ordinary banking no risk is involved. At this juncture, it may be correct to conclude that Islamic banking is metaphorically using the word *wadāʾiʿ* (pl. of *wadīʿa*)

to describe capital invested, whereas money deposited in the ordinary banking system, although also called *wadāʾiʿ*, carries only a historical reference to the term since it is inconsistent with original Islamic terminology.

(MAWIL Y. IZZI DIEN)

WADJD (A.), a term in the terminology of Ṣūfī mysticism meaning "ecstasy, rapture". Al-Tahānawī states that *wadjd* "refers to a divine influx of inspiration which strikes the inner being of the Ṣūfī, generating either sadness or joy in him. It may also change his condition in some way, making him absent from his personal qualities by means of a vision of God" (*Kashshāf iṣṭilāḥāt al-funūn*, Bibl. Indica, Calcutta 1862, 1454).

The term derives from the root *w-dj-d*, with a range of meanings including "to find, obtain, experience, be moved by passion". Hence we have such *maṣdars* as the *wadjd* under consideration and *widjdān* "feeling, sentiment, ecstasy". See further on this range of meanings, F. Jabre, *Essai sur le lexique de Ghazālī*, Beirut 1970, 270.

In the period of classical Ṣūfism, the development of *wadjd* as a technical term was bound up with scholastic discussions on moral theory which flourished in the Ṣūfī school of Baghdād. Ibn ʿAṭāʾ's (d. 309/921) celebrated dispute with al-Djunayd (d. 298/910 [*q.v.*]) on whether *wadjd* is characterised by the presence of joy or grief in the mystic is perhaps the most famous in this regard. Whereas al-Djunayd declared that ecstasy means "dissociation, severance (*inḳiṭāʿ*) from one's personal qualities while one's essence is graced with joy", Ibn ʿAṭāʾ agreed only partially with this definition, replacing the word "joy" by "grief" (al-Tahānawī, *loc. cit.*; L. Massignon, *The Passion of al-Ḥallāj, mystic and martyr of Islam*, tr. H. Mason, Princeton 1982, i, 92). Another member of this school, al-Kharrāz (d. 277/890 or 286/899 [*q.v.*]), said in his *K. al-Ṣifāt*, in which he analysed the experience of proximity to God (*ḳurb*), describing the various stations traversed by the mystic to attain that degree, that *wadjd* is the first station experienced by those who have proximity to God. Al-Kharrāz's understanding of *wadjd* has been described by P. Nwyia as not so much "ecstasy" as "instasy", a communion with oneself in order to find (*wadjada*) the word of God within and so be delighted (*Exégèse coranique et langage mystique*, Beirut 1970, 254, 259).

Many of the same ontological connotations of *wadjd* figure in the enigmatic meditations on annihilation of al-Djunayd, who explains that *wadjd* and *wudjūd* belong to the final degree of the three stages of annihilation of the selfhood in the divine (*fanāʾ* [see BAḲĀʾ WA-FANĀʾ]). The concept of existing as a kind of annihilation of self was also often emphasised in later mediaeval Ṣūfism, and figures in the expositions of the spiritual stations [see ḤĀL] of the mystical ascent to perfect love by most of the Ṣūfī authors, often with great intricacy. See e.g. on these, C. Ernst, *The stages of love in early Persian Sufism*, in L. Lewisohn (ed.), *Classical Persian Sufism, from its origins to Rūmī*, London 1993, 448-51.

Wadjd was also intimately connected with the practice of musical audition, *samāʿ* [*q.v.*], and al-Ghazālī states that "Singing produces a state in the heart which is called *wadjd*. In its turn, *wadjd* causes the bodily limbs to move, whether the movement is non-rhythmic and the emotion be disorderly, or a rhythmic movement, in which case it is called clapping and dancing" (*Iḥyāʾ ʿulūm al-dīn*, Cairo 1346-52/1927-33, ii, 237). Thus the highest state of ecstasy is called *wudjūd* or "existence" itself, to be found through *samāʿ*. Al-Ghazālī's philosophical analysis of the nature and place of *wadjd* among the mystico-psychological states experienced by Ṣūfīs during their concerts of *samāʿ* played a central role in subsequent debates on the legality of music and the place of ecstasy in the contemplative disciplines in Islam. An entire book of the *Iḥyāʾ* is devoted to the defence of *samāʿ*, the *K. Ādāb al-samāʿ wa ʾl-wadjd*, thus indicating the important place which rapture had always played in Islamic spirituality. He also enumerates seven reasons why listening to poetry is more conducive to rapture than hearing the cantillation of the Ḳurʾān, substantially because hearers are too habituated to this last to be further stirred by it. Concerning the place of ecstasy in Muslim spiritual life, he says that listening to poetry arouses yearning (*shawḳ* [*q.v.*]) in the lover of God, leading to mystical states (*aḥwāl*) which are called ecstasy (*Iḥyāʾ*, ii, 246-7). At the end of this Book, al-Ghazālī proffers his own definition, based on the opinions of Dhu ʾl-Nūn al-Miṣrī [*q.v.*] and others, that "ecstasy consists in a mystical state which is the fruit of *samāʿ*, it is an infusion of a true, original divine nature, which, following upon *samāʿ*, the listener 'found' (*yadjiduhu*) in himself" (*ibid.*, ii, 258).

(L. LEWISOHN, shortened by the Editors)

WADJDA, conventionally Oujda, a town of eastern Morocco, 14 km/8 miles from the Algerian frontier in the southern part of the Angad plain. Despite its eccentric position, Wadjda is today the eighth largest town of Morocco, with 352,000 inhabitants in 1994. It has a strategic situation as a crossroads of the route from Fās to Orania and the axis of the route from the high plateaux to the Mediterranean; it has been fought over all through the centuries, and destroyed and rebuilt repeatedly.

1. Pre-modern history.

It was founded in 384/994 by Zīrī b. ʿAṭiyya, head of the great Zenāta Berber tribe of the Maghrāwa [*q.v.*]. In the course of the Ṣanhādja-Zenāta struggles, the latter had been pushed back into the extreme Moroccan west, where they became firm partisans of the Umayyads in Cordova. Zīrī was, with his tribe, authorised to occupy the region of Fās, but feeling insecure in that region and that town, and wishing to be nearer to the central Maghrib homeland of his

tribe, he moved to Wadjda, installed there a garrison and his possessions, appointing one of his relatives as governor. According to al-Bakrī, in the mid-5th/11th century, a new quarter with a wall was allegedly added to the primitive core; the Great Mosque remained, however, outside these two urban centres.

In the time of Almoravid expansion, Yūsuf b. Tāshufīn occupied it in 472/1079, and in the next century, it came under Almohad control, with its fortifications repaired and strengthened under Muḥammad al-Nāṣir (*Rawḍ al-ḳirṭās*, 203, tr. 194). However, it was after the ʿAbd al-Wādids were installed at Tlemcen/Tilimsān that Wadjda, "the avenue of the frontier which separates the central from the far Maghrib", according to Ibn Khaldūn, began to play an important strategic role. In 670/1271, the Marīnid Abū Yūsuf Yaʿḳūb, having defeated Yaghmurāsan [*q.v.*] near Wadjda, totally destroyed the town. In 695/1296 Abū Yaʿḳūb Yūsuf seized the town, destroyed what remained of its fortifications, then rebuilt the ruined parts, with a palace, citadel and great mosque (probably the existing one) and began the eight-years' siege of Tilimsān. In 714/1314 Wadjda resisted the Marīnid Abū Saʿīd ʿUthmān's attack, but twenty-one years later was seized by Abu 'l-Ḥasan ʿAlī and its defences dismantled. Once again, under the Marīnids, with both Wadjda and Tilimsān in their hands, the Arab tribes of the region espoused the cause of the dispossessed ʿAbd al-Wādids and came to besiege Wadjda.

From the 16th to the 19th century, Wadjda was the locus for many changes of fortune in the struggles between the Turks of Algiers and the sultans of Morocco, coming within the sultans' realm in times of peaceful progress, but when the sultans were weak and their land troubled, Wadjda became attached to the province of Tlemcen and dominated by the Turks, according to L. Voinot. One of the few times when Sharīfian authority was in fact firmly established was under Mawlāy Ismāʿīl (1082-1139/1672-1727), who transplanted at Wadjda Arabs brought from south of Marrakesh, made them into a *gīsh/djaysh*, strengthened the town's defences, built numerous *ḳaṣbas* in the vicinity and organised the tribes of the plain. But after his death, the Turks reappeared and trouble was renewed. Finally, in 1795 a Sharīfian army took possession of the town again and permanently incorporated it into the Moroccan empire, with an *ʿāmil* installed there to represent the sultan.

In 1844, after the battle of Isly, it was temporarily occupied by French forces in reprisal for the sultan of Morocco's aid to the *amīr* ʿAbd al-Ḳādir [*q.v.*]. French troops reappeared there in 1859, and it was definitively occupied in 1907, even before the Protectorate was installed (1912). Since then, the form Oujda has been the sole one in use, including by the Moroccan administration. (G. Marçais*)

2. The modern city.

The modest small town of 6,466 inhabitants (1910) occupied by the French army was smaller than its neighbour, the Spanish *presidio* Melilla (12,000 people in 1908). Hence Oujda became the focus of an intense colonisation, esentially of "Pieds Noirs" from Algeria, French and then Spanish. In 1936, with the population at 34,500, the town had almost as many outsiders as Moroccans. The Jewish community (whether of Moroccan, Algerian or French origin) was important and active, owning 30% of the commercial enterprises as recorded in 1934, but after 1948, and especially after 1955, it emigrated massively. In 1951, just before independence, Oujda had over 80,000 people, including many Algerians amongst the third of non-Moroccans. The ebb and flow of populations continues now to affect the town, as in the past: the Algerian element was swollen during the 1954-62 Algerian war, brutally reduced after Algeria's achievement of independence, whilst in 1975 35,000 Moroccan refugees arrived there during the latent Algero-Moroccan war before being redistributed over other parts of Morocco, 6,500 of them remaining, however, at Oujda. The more gradual departure of Europeans left only a few hundred by 1982 (Guitouni).

The colonial period made Oujda an important military centre, with many camps and barracks, and also a great railway junction, second only to Casablanca for its freight traffic. Part of the old medina was destroyed to accommodate a new road network, and a new medina built to the north-north-east. A "European" town grew up to the west, mainly between the railway station and the medina, whilst precarious suburbs for rural immigrants grew up round the peripheries. Traffic with Algeria was heavy, and Oujda did not suffer from its distance from the administrative capital Rabat nor from its distance from Casablanca, since the ports of Orania could be used.

But after Moroccan independence in 1956, Oujda found itself in a cul-de-sac, with the Algerian frontier closed and with reverberations from the Moroccan-Algerian conflict. Each time the frontier has been reopened there has been a great surge of persons crossing (2 million in 1991) in search of the contraband goods smuggled out from Melilla. Service and transport businesses, hotel, industrial and financial activities have prospered, but the town has little industrial enterprise (only 4,000 employed) and has suffered from huge rural influxes as mines have closed in its southern hinterland; administrative and military functions (since Oujda is the chef-lieu of a *wilāya*) do not suffice to provide resources for a vastly swollen population (that will reach over 400,000 by the end of the 20th century).

The town has largely spread over the surrounding gardens and orchards and has extended its tentacles along the main roads, especially along that eastwards to Bukane and Algeria. Although well endowed with the fifth largest airport in Morocco and the fifth largest university centre, and being the main commercial centre for the eastern part of the country, Oujda suffers from its position away from the main centres of the country on the Atlantic seaboard and from the cyclical changes of fortune with regard to the Algerian border (last closed on 28 August 1994). It awaits a revived role as a stopover town when international exchanges between the countries of the Maghrib are reactivated.

WADJHĪ [see MATHNAWĪ. 4].

WĀDJIB [see FARḌ].

WAFĀ, the pen-name of various minor Persian poets of the 18th-19th centuries. They include:

1. Muḥammad Amīn, b. 1110/1698-9 in Īličpūr (Eličpur) in the western Deccan, d. 1193/1779-80. His ancestors belonged to Iṣfahān, from where his father, Ḥakīm Muḥammad Taḳī Khān, migrated to India during the reign of Awrangzīb (1658-1707), and rose to a respectable position under Nawwāb Āṣaf Djāh (d. 1748), governor of the Deccan in the time of the Mughal Emperor Farrukhsiyar (1713-19). Muḥammad Amīn received his education from his father, and dedicated his time to the pursuit of poetry and epistolography (Ḳudrat Allāh Gopāmawī, *Natā'idj al-afkār*, Bombay 1136/1957, 756-7).

2. Mīrzā Sharaf al-Dīn ʿAlī Ḥusaynī, called Āḳāsī Beg, b. 1137/1724-5 in Ḳumm, d. 1200/1785-6 (see Rieu, *Catalogue of Persian manuscripts in the British Museum*, suppl., no. 344). He came from a respected family of *sayyid*s, and was one of the custodians of the Imāmzāda Fāṭima in Ḳumm. According to Luṭf ʿAlī Beg Ādhar (*Ātashkada*, ed. Sayyid Djaʿfar Shahīdī, Tehran (?) 1337/1958, 423), he went to India towards the latter part of Nādir Shāh's reign and stayed there for some thirty years. In 1180/1766-7 he returned to Persia, and from there went on the Pilgrimage to Mecca. He has left a *dīwān* containing poems in the traditional forms (Ethé, *Cat. Pers. mss. India Office*, i, no. 1718).

3. Muḥammad Ḥusayn Farāhānī, d. 1209/1794-5 at Ḳazwīn (cf. ʿAbd al-Razzāḳ Dunbulī, *Nigāristān-i Dārā*, ed. Khayyāmpūr, Tabrīz 1342/1963, 147). He belonged to Farāhān, a village of Ḳumm. Most of his ancestors had been ministers during their lifetimes, and he, too, served in that capacity under Zand and Ḳādjār rulers. As minister, he made efforts towards promoting education (Muḥammad Muʿīn, *Farhang-i Fārsī*, vi, Tehran 1371/1992, 2214). Dunbulī credits him with a *dīwān* of poems comprising some 4,000 verses, and also states that he composed a *mathnawī* in the metre of Niẓāmī's *Haft paykar* (*ibid.*, 147).

4. Mīrzā Muḥammad ʿAlī Zawāra'ī, b. 29 Ṣafar 1195/25 February 1781 in Iṣfahān, d. reportedly 1245/1829-30 (Gulčīn-i Maʿānī, *Tārīkh-i tadhkirahā-yi Fārsī*, ii, Tehran 1363/1984, 116-17). He received his education in Iṣfahān and achieved competency in natural sciences, medicine, jurisprudence, and the art of poetry. He was among the intellectuals of Fatḥ ʿAlī Shāh Ḳādjār's reign, and moved in the company of the monarch's poet-laureate, Fatḥ ʿAlī Khān Ṣabā (see Sayyid Aḥmad Dīwān Begī, *Ḥadīḳat al-shuʿarā'*, iii, ed. ʿAbd al-Ḥusayn Nawā'ī, Tehran 1366/1987, 2005). According to Gulčīn-i Maʿānī, he composed a *tadhkira* of poets and poetry named *Ma'āthir al-Bāḳiriyya*, which was completed in 1245/1829-30 (*ibid.*, 110).

5. Shaykh Muḥammad Bāḳir Tammāmī, b. 1278/1861-2 (Mīrzā Ḥasan Ḥusaynī Fasā'ī, *Fārsnāma-yi Nāṣirī*, ii, Tehran 1313/1895, 28). His father, Shaykh Abu 'l-Ḳāsim Shīrāzī, who wrote poetry under the pen-name Ṣafā, held the title of *Shaykh al-Islām*, which was passed on to his son Muḥammad Bāḳir by orders of the ruling monarch Nāṣir al-Dīn Shāh (see Dīwān Begī, *ibid.*, 2007). Muḥammad Bāḳir's date of death is not known but, according to Muḥammad Ḥusayn Rukn-zāda Ādamiyyat, author of *Dānishmandān u sukhan-sarāyān-i Fārs* (iv, Tehran 1340/1961, 820), he was still alive in 1313/1895-6.

6. Mīrzā Ḥasan ʿAlī Shīrāzī, popularly known as Mīrzā Buzurg, b. 1224/1809-10. He studied under his father, Mīrzā Sayyid ʿAlī, who was a poet employing Niyāz as his pen-name. After studying medicine, he went to India in 1259/1838-9, and soon afterwards visited Mecca and Medina and travelled to Europe, where he stayed in Paris and London to complete his medical studies. On returning to India, he took up residence in Calcutta, teaching and practising medicine. In 1276/1859-60 he set out on a pilgrimage to Mashhad, but died en route in Bombay (*Fārsnāma-yi Nāṣirī*, ii, 119-20). According to this last, 122, he was the author of some 15,000 verses.

7. Abu 'l-Ḳāsim Shīrāzī, known as Mudarris. He was among the learned élite of Shīrāz; well versed in many rational and traditional sciences and was the author of a *dīwān* containing Persian poems and Arabic *ḳaṣīda*s (Shaykh Mufīd Dāwar, *Tadhkira-yi mir'āt al-faṣāḥat*, ed. Muḥammad Ṭāwūsī, Shīrāz 1371/1992, 692-3; *Fārsnāma-yi Nāṣirī*, ii, 935).

8. Mīrzā Mahdī Ḳulī, known as Wafā Ashrafī, descended from a Georgian family which had settled in Persia during Ṣafawid times and was employed as confidential secretary to Manūčihr Khān Muʿtamad al-Dawla, who served as governor of Iṣfahān from 1838 until his death in 1847 (*Madjmaʿ al-fuṣaḥā'*, ii/3, 1091; *Ḥadīḳat al-shuʿarā'*, iii, 2004).

9. Mīrzā Muḥammad ʿAlī Kāshānī, a member of the nobility and a man of learning having special knowledge in medicine. He was employed in government service as head of the postal department in Zandjān (*Ḥadīḳat al-shuʿarā'*, iii, 2018).

(MUNIBUR RAHMAN)

WAFD (A., lit. "delegation"), the name of a nationalist political party in modern Egypt, whose heyday was for some three decades after 1918, petering out as an effective force in the 1950s.

It gained its name from the delegation which began to be formed in Egypt in September 1918 in order to make Egypt's demands for independence known at the Peace Conference in Paris. The leading member of the Wafd was Saʿd Zaghlūl [*q.v.*]. The delegation had a meeting with Sir Reginald Wingate, Egyptian High Commissioner, at which they demanded complete independence and asked for permission to go to London to put Egypt's case to the British government. At the same time, the Egyptian delegation (*al-wafd al-miṣrī*) was formed also under the leadership of Zaghlūl. The British refused to give permission for the Wafd to visit London and later deported Zaghlūl and three colleagues. This move led to the outbreak of a general rebellion throughout Egypt in 1919. It was not organised by Zaghlūl and the Wafd, but they came to represent the Egyptian people and to embody their demands for independence.

The British in an attempt to calm the situation sent out the Milner Mission to Egypt in December 1919. It was greeted with strikes and demonstrations and was boycotted by most Egyptians on the demand

of the Wafd. The Mission realised that it had to make concessions and dropped the idea of the protectorate and offered to talk about the aspirations of the Egyptians. The Wafd replied that they would only accept complete independence.

Negotiations dragged on, prolonged by splits amongst the Egyptians over the role of the Wafd. Some politicians, including ʿAdlī Pas͟ha, tended to moderation, while Zag͟hlūl and his associates remained intransigent. The British tried to deal with the moderates but again realised that any move would fail which did not include the Wafd. Even so, no compromise was reached and Zag͟hlūl was again deported. The British reluctantly agreed to end the protectorate in 1922 and Egypt was declared a quasi-independent state.

Egyptian politicians set about drawing up a constitution for the country without the cooperation of the Wafd. However, elections were soon held in which the Wafdist leaders back from exile took part. The Wafd won a crushing victory at the polls and in January 1924 Zag͟hlūl formed the first Wafdist government.

The Wafd was organised formally on hierarchical lines. It became a political party in 1924 on coming into government. The original statutes of 1918 declared that the Wafd had been formed for one objective, sc. the achievement of the complete independence of Egypt. The organisation would be headed by a president who had wide authority, with a central committee which would have branches country-wide. The committee's main task was to collect funds, and consequently it deliberately recruited provincial notables who would help in that task. Students were also recruited into the party and they played a significant part in its activities. The secretary of the Wafd, Muṣṭafā al-Naḥḥās [*q.v.*], relied to a great extent on the support of students. They took part in demonstrations, in boycotts and in electioneering. The formation of labour unions also helped in the activities of the party.

Women played an important role in political activities, demonstrating and protesting. In 1920 the Wafdist Women's Central Committee was formed under the leadership of the prominent Egyptian feminist Hudā al-S͟haʿrāwī. They took the lead in boycotting British goods in 1922 and struggled equally for their own voting rights. They believed that the fight for independence had to be accompanied by the fight for equality.

From 1924 to 1936 and until the beginning of the Second World War, Egyptian politics consisted of a three-way contest for power and authority between the King, the British and the politicians, the latter often being members of the Wafd. It was the leading political party of the period, and won every election which was not rigged against them. It was felt by many Egyptians that the Wafd was the real representative of the people.

On Zag͟hlūl's death in 1927, al-Naḥḥās took over the leadership of the Wafd and played a prominent role in Egyptian politics until 1952. He signed the 1936 Anglo-Egyptian Treaty, not, however, negotiated by him, which formalised relations between Britain and Egypt. The Treaty still withheld complete independence with its reserved points, and the Wafd had consequently to suffer some unpopularity. The 1930s were a period when more extreme political groupings were emerging, such as the Ik͟hwān al-Muslimūn [*q.v.*] and the Miṣr al-Fatāt, with Fascist tendencies. The Wafd tried to keep pace by forming it own paramilitary youth movement, the Blue Shirts.

On the outbreak of war in 1939, the British were keen to preserve Egypt within the Allied camp, although there were some Egyptians who believed that only by helping the Axis to expel the British would they gain complete independence. As the Axis forces approached Alexandria, the British felt they had to have a prime minister who would work with rather than against them. In February 1942 the British Ambassador, Miles Lampson (later Lord Killearn) forced King Fārūḳ to appoint the Wafdist leader Muṣṭafā al-Naḥḥās as prime minister. The Egyptians never forgave this insult, nor did they forget the fact that a Wafdist had been willing to co-operate with the occupier. This contributed to the decline in popularity of the Wafd, although it won elections held in 1942 and tried to regain support by introducing social measures such as free education and greater public health.

The last act of the Naḥḥās government was to host a conference of Arab states in Alexandria in 1944 which led eventually to the foundation of the Arab League. Elections in 1944 were boycotted by the Wafd, and politics in Egypt staggered on under the impact of the loss of Palestine. In January 1950 new elections were won by the Wafd. A very low turnout demonstrated indifference and frustration, and the minority vote obtained by the Wafd showed just how far it had fallen in public esteem. Al-Naḥḥās led his fourth government for only two years until he was overthrown by the Free Officers' coup of July 1952. The Wafd was disbanded in 1953, to return in a new guise in 1976 when Anwar al-Sādāt [*q.v.*] allowed the reformation of political parties. It gained some support, but never threatened the power of the official government party. It was disbanded for a time in protest against al-Sādāt's anti-party moves and re-formed after his death. In 1984 the Wafd won 58 seats. During the election, it had campaigned with the Ik͟hwān. It claimed to be the party of small businessmen and to be the sole heir of the 1952 revolution. In the 1987 elections, it ran alone and won 35 seats. Finally, in the 1990 elections the Wafd decided on a boycott because it had unsuccessfully demanded certain concessions. The Wafd remains a pale shadow of its predecessor.

(D. Hopwood)

WĀFIDIYYA (A.), a collective formation from *wāfid* "one who comes, makes his way, in a delegation or group", in the Mamlūk Sultanate applied to troops of varying ethnic origins who came to Egypt and Syria to join the Sultanate's military forces.

There is no better proof for the superiority of the Mamlūk socio-military system over any other military form during a great part of Islamic history than the attitude of the Mamlūk Sultanate to the Mongol warriors and others, such as Kurds, K͟hʷārazmians, etc. who, for this or that reason, sought and found refuge within its boundaries as *Wāfidiyya*.

The mainly Turkish Mamlūks considered the Mongols to be their next of kin and as belonging to the same ethnicity as they themselves (*min d͟jins wāḥid*). They had the highest regard for their warlike qualities. Quite probably, the Mongols had an impact on the structure of Mamlūk society, although the degree and dimension of that impact have still to be studied more systematically (it has been proven, however, that the Mamlūks were never judged according to the *Yāsa* [*q.v.*], the Mongol law). Furthermore, the greatest influx

of the Wāfidiyya Mongols took place during the reigns of two sultans: Baybars al-Bunduḳdārī (658-77/1260-77), a great admirer of the Mongols, and al-ʿĀdil Kitbug͟hā (694-6/1295-7), who was himself an Oirat Mongol. Baybars even let part of them join the élite corps, the Baḥriyya regiment. However, the influx of these Mongols frightened him: "I fear there is something suspect in their coming from all sides" (al-Maḳrīzī, *Sulūk*, v, 515 ll. 1-6; Ibn ʿAbd al-Ẓāhir, ed. Ṣadaḳa, 105). A measure which he took to neutralise them was to disperse them within much bigger numbers of the Royal Mamlūks (*yufarriḳuhum kull d̲j̲amāʿa bayna aḍʿāfihā min al-mamālīk al-sulṭāniyya*, Ibn ʿAbd al-Ẓāhir, 59, l. 1).

Baybars is said to have appointed from amongst them commanders from the rank of Amīr of a Hundred downwards (*ibid.*, 58 l. 19; al-Maḳrīzī, *K͟hiṭaṭ*, ii, 117; Sato, *State and rural society*, 101). Yet it seems that no *specific* Wāfidī Mongol appointed to that high rank by Baybars has been noted till now by any scholar. The only Wāfidī Amīr of a Hundred noted by the present writer in the reign of that sultan was a K͟hʷārazmian, who was related to him by marriage (see Ayalon, *Wāfidīya*, 93 n. 26a. On the K͟hʷārazmian and Kurdish *Wāfidīya*, who preceded the Mongols, see *ibid.*, 94-7).

Sultan Kitbug͟hā had to conform to the Mamlūk policy towards the Wāfidiyya, who arrived in 695/1296 in huge numbers (10,000 according to some versions, 18,000 according to others). First of all, he returned to the older policy of separating the leaders from their soldiers, by letting only the leaders enter Egypt and forcing the rest to stay in Syria, settling many of them in its devastated coastal area, as was the case with the earlier Wāfidiyya newcomers. Of their chiefs (numbering between 113 and 300, according to different accounts), only their head, Ṭurg͟hāy, a son-in-law of the Īl-K͟hānid Hülegü [*q.v.*] received the medium rank of Amīr of Forty (Zetterstéen (ed.), *Beiträge zur Geschichte der Mamlukensultane*, Leiden 1919, 38 l. 21; Ibn Tag͟hrībirdī, *Nud̲j̲ūm*, ed. Cairo, viii, 60 l. 6). Kitbug͟hā did try, during his short reign, to raise the status of his compatriots, but failed because of the stubborn antagonism of the Royal Mamlūks. It is also stated that one of the two major reasons of his deposition was his favourable attitude to his fellow-Oirats. The Oirats continue to play a political role until the early part of al-Nāṣir Muḥammad b. Ḳalāwūn's third reign (709-41/1309-40). Subsequently, they were on the decline, and in 733/1333 we find them or their descendants as attendants or servants (*atbāʿ*) to the Mamlūks in the Cairo citadel (*Sulūk*, ii, 83 ll. 8-13).

The wide, and usually unbridgeable, gap separating the Mamlūks and non-Mamlūks arriving in the Sultanate, even when the non-Mamlūks belonged to the most highly-appreciated military stock, is well illustrated in the case of the Oirats. Kitbug͟hā and Salār, both of them belonging to that ethnic group, and who arrived in the Sultanate as slaves, rose to the highest ranks, whereas the head of many thousands of Oirats, who arrived there as free men, did not rise above the rank of a medium *amīr*, in spite of his close family connection with one of the greatest Mongol K͟hāns.

After the influx of the Oirats, the Wāfidiyya migration greatly dwindled until it disappeared for good. At that period, when migration no longer posed any danger to the Mamlūks, they became more generous in bestowing the rank of Amīr of a Hundred on a very small number of immigrants belonging to that category.

(D. AYALON)

WĀFIR ("the ample, abundant"), the name of an Arabic poetic metre, the first metre of the second circle in al-K͟halīl's classification [see ʿARŪḌ] of which the commonest pattern (*wāfir*-1) is:

⏑ – ⏕ – | ⏑ – ⏕ – | ⏑ – – ‖ ⏑ – ⏕ – | ⏑ – ⏕ – | ⏑ – –

The two consecutive short syllables alternate with one long syllable (48% of all variable positions in al-Mutanabbī's *wāfir* poems taken together are filled with a long syllable, 52% with two short syllables), but the incidence of double short syllables in the second foot of each hemistich appears to be higher than in the first foot (unpublished scansion data).

Occasionally, the first syllable is lacking in opening lines of the poem, a phenomenon called *k͟harm*, examples of which are al-Nābig͟ha, no. 31; ʿAntara, nos. 1, 12; Ṭarafa, no. 7; Zuhayr, no. 5 (ed. W. Ahlwardt, *The divans of the six ancient Arabic poets*, London 1870); two *Mufaḍḍaliyyāt* poems: nos. 13, 35 (ed. Ch. J. Lyall, Oxford 1921); and four poems in the *Ḥamāsa* of Abū Tammām: nos. 116, 159, 188, 696 (al-Marzūḳī, *S͟harḥ dīwān al-ḥamāsa*, ed. Aḥmad Amīn and ʿAbd al-Salām Hārūn, Cairo, 1951-3).

Throughout the first 300 years of Arabic poetry, the use of the *wāfir* metre appears to be fairly constant: up to 10% of the poems originating from what D. Frolov calls "the metrical school of al-Ḥīra", and up to 20% of the compositions by poets from the "Bedouin metrical school" (see his *Notes on the history of ʿArūḍ in al-Andalus*, 91, 93). Frolov's data may be compared with those in the graph in J. Bencheikh, *Poétique arabe*, 225.

In a discussion of the aesthetic value of different metres, Ḥāzim al-Ḳarṭād̲j̲annī [*q.v.*] places this metre, together with *kāmil*, after *ṭawīl* and *basīṭ* (see his *Minhād̲j̲ al bulag͟hāʾ wa-sirād̲j̲ al-udabāʾ*, ed. Muḥammad al-Ḥabīb Ibn al-K͟hōd̲j̲a, [3]Beirut 1986, 268).

Two truncated (*mad̲j̲zūʾ*) *wāfir* types, labelled *wāfir*-2 (⏑ – ⏕ – | ⏑ – ⏕ – ‖ ⏑ – ⏕ – | ⏑ – ⏑⏑ –) and *wāfir*-3 (⏑ – ⏕ – | ⏑ – ⏕ – ‖ ⏑ – ⏕ – | ⏑ – – –), are occasionally found. Examples in the work of ʿUmar b. Abī Rabīʿa (P. Schwarz, *Der Diwan des ʿUmar Ibn Abi Rebiʿa*, Leipzig 1901-9) are nos. 47, 166, 219, 284, 301, 317, 340, 366, 375, 404, 407 for *wāfir*-2; and 104, 110, 298, 347 for *wāfir*-3. The metrical irregularities in nos. 104, 166, 298 (Schwarz, *op. cit.*, iv, 179) can perhaps be explained as a mixture of metres, due to the similarity between the truncated *wāfir* and *hazad̲j̲*.

In modern poetry, *wāfir* continues to be used, albeit sparingly (S. Moreh, *Modern Arabic poetry 1800-1970*, 219, has six poems in *wāfir* or a *wāfir*-like metre in a sample of 759 modern poems). Badr S͟hākir al-Sayyāb (1926-64 [*q.v.* in Suppl.]) mixes *wāfir* and *rad̲j̲az* in his poem *Fi ʾl-mag͟hrib al-ʿarabī* (see S.K. Jayyusi, *Trends and movements in modern Arabic poetry*, Leiden 1977, ii, 729).

WAFḲ (A.), lit. "harmonious arrangement", the construction of magic squares.

One of the most impressive achievements in Islamic mathematics, in any case the most original one, is the development of general methods for constructing magic squares. A magic square of order n is a square with n cells on its side, thus n^2 cells on the whole, in which different natural numbers must be arranged in such a way that the sum of each row, column and main diagonal is the same. As a rule, the n^2 first natural numbers are actually written in, which means that the constant sum amounts to $\frac{1}{2}n(n^2+1)$. If, in addition, the squares left when the borders are successively removed have themselves this magic property, the square is called a *bordered* square. If any pair of broken diagonals (that is, which lie on either side of, and parallel to, a main diagonal and together have n cells) shows the constant sum, the square is called *pandiagonal*. Then there are *composite* squares: when the order n is a composite number—say $n = r \cdot s$ with r, $s \geq 3$—the main square can be divided into r^2 subsquares of order s; these subsquares, taken successively according to a magic arrangement for the order r, are then filled successively with sequences of s^2 consecutive numbers according to a magic arrangement for the order s, the result being then a magic square in which each subsquare is also magic.

Squares are usually divided into three categories: *odd-order* (or *odd*) squares are those with n odd, that is, $n = 3, 5, 7, \ldots$, and generally $n = 2k + 1$ with k natural; squares are of *evenly-even* order if n, even, is divisible by 4, thus $n = 4, 8, 12, \ldots, 4k$; finally, *oddly-even* squares have their order n even but divisible by 2 only, whence $n = 6, 10, 14, \ldots, 4k+2$. There are general methods of construction, which depend upon the type of magic square considered (standard, bordered, pandiagonal) and the category to which the order n belongs. Those for standard magic squares may, however, not apply for the smallest orders $n = 3$ and $n = 4$, which are particular cases. Those for bordered squares suppose that $n \geq 5$. (Since no square of order 2 is possible, no square of order 4 is bordered.) Finally, those for pandiagonal squares of odd order are generally not directly applicable if n is divisible by 3, and there are no rules for constructing oddly-even squares since pandiagonal squares of this category do not exist.

Information about the beginning of Islamic research on magic squares is lacking. It may have been connected with the introduction of chess into Persia. Initially, the problem was a purely mathematical one; thus, the ancient Arabic designation for magic squares is *wafḳ al-aʿdād*, that is, "harmonious arrangement of the numbers". We know that treatises were written in the 9th century, but the earliest extant ones date back to the 10th century; one is by Abu 'l-Wafāʾ al-Būzdjānī (d. 387/997 or 388/998) and the other is a chapter in Book III of ʿAlī b. Aḥmad al-Anṭākī's (d. 376/987) *Commentary on Nicomachos' Arithmetic* (see *Bibl.*). It appears that, by that time, the science of magic squares was already established: the construction of bordered squares of any order was known; standard magic squares could be formed for small orders (up to $n = 6$), and this was applied to the formation of composite squares. (Although methods for standard magic squares are easier to *apply* than methods for bordered ones, the latter are easier to *discover*.) The 11th century saw the discovery of several ways to construct standard magic squares, in any event for odd and evenly-even ones (see Sesiano, *Un traité médiéval*, and *L'Abrégé*): the much more difficult case of $n = 4k + 2$, which Ibn al-Haytham (d. *ca.* 430/1040) could solve only with k even (Sesiano, *Herstellungsverfahren* (I)), was probably not settled before the second half of the 11th century. At the same time, pandiagonal squares were being constructed for squares of evenly-even and of odd order, provided in the latter case that the order was not divisible by 3. (Little attention seems to have been paid, however, to the sum of the broken diagonals; these squares were considered of interest because their construction characteristically required the use of chess moves and because the initial cell, say the place of 1, could be chosen at random within the square.) Treatises on magic squares are numerous in the 12th century, and later developments tend to be improvements or simplifications of existing methods. From the 13th century on, magic squares were increasingly associated with magic proper and used for divinatory purposes. Consequently, many texts merely picture squares and mention their attributes. Others do, however, keep the general theory alive even if their authors, unlike earlier writers, cannot resist adding various fanciful applications.

The link between magic squares and magic as such has to do with the association of each of the twenty-eight Arabic letters with a number (the units, the tens, the hundreds and one thousand). Thus it was sometimes possible to put in e.g. the first row a sequence of numbers equivalent to the letters of a proper name or the words of a sentence and then complete the square so as to produce the same sum in each line. But this involved a completely different kind of construction, which depended upon the order n and the values of the n-given quantities. The problem is mathematically not easy, and led in the 11th century to interesting constructions for the cases from $n = 3$ to $n = 8$ (Sesiano, *Un traité médiéval*). However, once again the subtle theory ended up mostly in a set of practical recipes and then a wider readership was gained at the expense of scholarship.

This development was unfortunate for Europe, where by the late Middle Ages only two sets of squares associated with the seven known celestial bodies had been learned of through Arabic astrological and magic texts—whence the name—and without any indication as to their construction. (Whereas as early as the 12th century some methods of construction had reached India and China, and also Byzantium, as can be seen from the treatise on magic squares written *ca.* 1300 by Manuel Moschopoulos.) Thus the extent of Islamic research remained unknown for quite a long time; indeed, a very long time, since it has only recently been assessed and its importance recognised.

Some examples of constructions

The smallest magic square is the square of order 3 (fig. 1). By constructing successive borders to this square, Islamic mathematicians found a general method of forming bordered squares of any odd order, which is explained by the two 10th-century authors mentioned above. Let n be the given odd order ($n = 9$ in fig. 2). Starting next to a corner cell, e.g. the lower right one, write in the first odd and even numbers alternately along the adjacent side lines until the mid-

dle lines are reached. Write the next (odd) number in the adjacent (middle) cell, then put the following one in the corner cell diagonally opposite (that is, in the starting line), the next one in the middle-line cell diagonally opposite, the one after that in the other upper corner cell; and finally, arrange the subsequent numbers along the two adjacent side lines as before (lines with numbers of the same parity facing each other). At this point, half of the border cells are occupied. Fill in each of the remaining blank cells with the complement to $n^2 + 1$ of the number in the opposite cell, horizontally or vertically (diagonally for the corners). Repeat this procedure until the central square of order 3 is reached, and fill it with the remaining numbers as in Fig. 1.

It was mentioned above that composite squares were also known in the 10th century. Thus the above square of order 3 is used by both authors to build the smallest possible composite square of odd order (figs. 3 and 4).

The most common method for standard magic squares of odd order, already known in the 11th century and found in a set of three squares transmitted to Europe in the Middle Ages, is that of Fig. 5. Starting with 1 below the central cell, proceed with the consecutive numbers diagonally downwards as far as the side of the square; then move from the cell which would be reached outside the square to the corresponding cell in the main square and proceed diagonally downwards as before. When, after a sequence of n numbers, an occupied cell stands in the way, drop down two cells and continue as before.

The easiest method for constructing evenly-even squares was known in the 11th century as well, and two squares (of order 4 and 8) constructed by this method were also transmitted to Europe. Divide the square into subsquares of order 4 and put dots in each of their main diagonals (fig. 6). Then, count the cells from the first (for Arabs, the upper right) corner and write in the corresponding number whenever the cell contains a dot. When this has been done and the lower left corner has been reached, go backwards, count the cells once again and put the corresponding number in every unoccupied one (fig. 7).

For an oddly-even square, thus with $n = 4k + 2$, put

dots in the main diagonal and in $k-1$ broken diagonals of the first quarter and reproduce them symmetrically in the three other quarters; next, write crosses in a broken diagonal of the first quarter and reproduce them symmetrically in the upper left quarter; then, write ciphers in another broken diagonal of the first quarter and reproduce them symmetrically in the lower right quarter (fig. 8). Fill in the cells which are empty and those which have a dot as in the case of an evenly-even square. In order to fill the remaining cells, count from the other upper angle for the ciphers and from the other lower angle for the crosses (fig. 9). This method is described by al-Kharaḳī (d. 533/1138-9) as above, and with the same symbols (Sesiano, *Herstellungsverfahren (III)*).

Another common method of constructing squares of order 4 used chess moves (fig. 10): starting with 1 in the corner, 2 is placed by a knight's move (a move of two cells in one direction and one cell in the other), 3 by a queen's move (a move to the next cell diagonally), 4 by a knight's move again, whilst 5 to 8 are symmetrically located in the rows in descending order. To complete the square, the complement to $n^2 + 1 = 17$ of each of these numbers is written in the corresponding bishop's cell, that is, two cells diagonally away. The result is a pandiagonal square. This method was extended in the early 11th century to the construction of squares with the order $n = 4k$ (fig. 11). Divide the square into subsquares of order 4; next, fill half of the cells in each of the k^2 subsquares (taken in any order) with series of eight consecutive numbers as above, and then put in each bishop's cell (reached by moving two cells diagonally within the *same* subsquare) the complement to $n^2 + 1$ (to 65 in fig. 11, where $n = 8$). If, as in this example, the subsquares are initially taken in their natural order, the resulting square will be pandiagonal.

Our final example (fig. 12) is taken from an 11th-century text (*L'*Abrégé). The numerical values of the words *salām ʿalā Muḥammad wa-ʿalā ālihi djamīʿ*^{an} occupy the first row and the whole square has been completed so as to produce their sum as a magic constant.

al-**WAFRĀNĪ** [see al-ifrānī].

WĀḤA (a., pl. *wāḥāt*), oasis.

1. In the Middle East.

An oasis is a locality with access to water and cultivable soil in an area which is generally barren and parched. Perennial streams such as the Nile or Tigris-Euphrates, which flow from well-watered mountains through desert valleys, support continuous chains of oases. Other watercourses, which are seasonal, irregular or subterranean, can sometimes be tapped by wells to provide enough water for more isolated settlements, as at Tarīm and Shibām [*q.vv.*] in the Wādī Ḥaḍramawt, and in the district of al-Ḳaṣīm [*q.v.*] on the Wādī Rumma in central Arabia.

Underneath the sand-filled wadis of Arabia there are subterranean reservoirs of "fossil water" which accumulated during pluvial phasis of the Pleistocene period. These permanent reserves of water are supplemented by seasonal rainfall and surface or underground flow from nearby hills, so that the water-table is seasonally raised. In scattered oases, shallow wells operated by hand or animal power reach only the superficial water which is regularly replenished; but more widely the modern petrol-driven deep tube-wells pump from the "capital" stores of fossil water which cannot be restored. The water-table may then fall permanently beyond the reach of the hand-wells.

Throughout the Middle East, another common situation for oases is in the narrow piedmont zone where the long mountain ranges meet the sands of the great desert basins. Just there, the streams fed by the winter rains and snow-melt of the mountains spread out over "dry deltas" of deposited silt, and are thereafter lost in the desert sands. These locations, with fresh water and fertile soil, are ideal for oasis settlement.

In Persia and ʿUmān, the water supply at such sites is often improved by driving tunnels (*ḳanāts*, *kārīz* [see ḳanāt]) into the foothills. Chains of such oases below mountain ranges provide, at convenient intervals, shelter, water and provisions for staging posts, and were followed by many of the great roads of commerce, pilgrimage and imperial control, e.g. by the section of the highway to Khurāsān and Central Asia under the southern slopes of the Elburz ranges of northern Persia, or by the ancient Spice Road from Aden to Gaza along the oases under the high western edge of the Arabian massif.

The relations between the oasis-dwellers and the travellers or nomads who visited them took many forms. Sometimes the Arabian tribes owned the oases and staffed them with servants; sometimes they left them empty, and only called twice a year to fertilise and to harvest the date-palms; elsewhere, the oasis dwellers were dominant, and the nomads begged permission to enter. Certainly, the nomadic economy was heavily reliant on access to the oasis markets and seasonal fairs.

The systems of water-rights and land-holding in the oases also vary greatly. Jean Brunhes in his classic work contrasted in these respects the stony Mzāb [*q.v.*] and the sandy Sūf in sub-montane Algeria: in the first, the well was the unit of ownership; in the second, the palm-tree, for the land was without value until a settler dug a hole in the sand deep enough to reach the ubiquitous water-table and to plant and tend a date-grove. Often a complex arrangement of rights to stream-flow for purposes of irrigation depended on crude but effective sun-calendars and shadow-clocks.

Until the 20th century, the political allegiance of oases was often shifting and uncertain. When the Middle East was divided up after the end of Ottoman rule, the frontiers were frequently only crudely defined and loosely controlled [see takhṭīṭ al-ḥudūd]. Small neutral zones were established in al-Tawal, and between Saudi Arabia and Kuwait, so that tribes from either side could have access to their wells. However, with the exploration for mineral oil, the precise definition of political borders has become of much greater concern; the neutral zones have vanished, and the political allegiance of e.g. the oases of al-Buraymī [*q.v.*] is a matter of grave dispute.

(W.C. BRICE)

2. In North Africa.

In geographical terminology applied to the Maghrib, the equivalent of the term *wāḥa* is an area with dense vegetation, but not necessarily of trees, in a natural environment where most of the land surface is unsuitable for cultivation, attesting an additional supply of water. This can be natural, such as a spring or a wadi/oued [see WĀDĪ], sometimes stored up in a dam. It can also be artificial, by means of a well or bore-hole. The distinction is at times not easy to make when a natural supply is improved by man, e.g. by excavating adits, as with the foggaras of the Algerian Sahara, to increase the flow of a spring which has become rather feeble.

An oasis can have a vegetation of spontaneous growth, but more often it is occupied by men who practise there a form of agriculture which is, to a greater or lesser degree, mechanised and which often waters its plots of land through irrigation canals or waterwheels. This mechanisation allows one to distinguish "traditional" oases, little mechanised, where an intensive type of market gardening is carried out, often on a declining basis, and "modern" oases, often more recent and installed around bore holes or artesian wells, sometimes using greenhouses. These may function concurrently with the first type for the utilisation of water.

(Y. CALLOT)

WAḤAM (A.) also *waḥām, wiḥām*, with the more general term *shahwa* "longing", also in use, denotes "pregnancy craving".

In Arab culture, like in many others, pregnancy cravings traditionally received attention, but this only appears to a very limited extent in Arabic medical works of the Greek tradition. Ibn Sīnā does not pay attention to the phenomenon, not even in discussions about the pregnant woman's [loss of] appetite (*Ḳānūn*, Beirut 1993, ii, 1647). ʿArīb b. Saʿīd al-Ḳurṭubī, *K. Khalḳ al-djanīn*, Algiers 1956, 40 cites Galen on the pregnant woman's craving to eat clay, which apparently comes under "bad (in the sense of harmful) appetite", *shahwa radīʾa*), a complaint for which treatment is prescribed. Al-Baladī, *K. Tadbīr al-ḥabālā*, Baghdād 1980, 135-6, also treats "harmful appetites" very cursorily, as one in a long range of minor pregnancy complaints.

In the popular view, however, pregnancy cravings were considered very important, and there was a threatening and magical aspect to them. Thwarting a pregnant woman's craving for a particular kind of food was considered harmful to the foetus. The view is found in al-Djāḥiẓ's story about al-Kindī (*Bukhalāʾ*, Cairo 1358/1939, 143-4), who threatens to hold his tenants responsible if a woman in his house miscarries after having been refused a share of their food. Al-Kindī's view is obviously seen as a ridiculous exaggeration, but there is sufficient evidence that paying attention to pregnancy cravings was, and is, part of the social code, cf. the verb *waḥḥama* "to slaughter a camel in order to satisfy a woman's craving"; also e.g. ʿAbd al-Laṭīf al-Baghdādī, *K. al-Ifāda*, London 1964, 234, fol. 58b). Observations by anthropologists made during the last century and modern lexicological sources show that the aspect generally emphasised was—and is—that refusing a pregnant woman the food she craves will result in a birthmark (*shahwa* "appetite") on the child in the shape of the food in question. This belief is not restricted to the Arab world, but used to be widespread also in Europe and, for instance, in the West Indies. An example from the Arab cultural sphere is that of a birthmark in the form of a grape that swelled up when grapes were in season (Winifred S. Blackman, *The Fellāḥīn of Upper Egypt*, London etc. 1927, 62). That this provided pregnant women with a means to exercise power otherwise unheard of in this particular cultural context, is illustrated, for instance, by the fuss made by a pregnant black concubine in Luxor (in 1860) with a craving for olives (Lady Duff Gordon, *Letters from Egypt (1862-1869)*, London 1969, 174-5).

(REMKE KRUK)

AL-**WĀḤĀT** (pl. of *wāḥ* "oasis", this being a transcription of Coptic *ouah* denoting cultivated lands within the deserts, as already noted by Yāḳūt), the name of a series of oases in the western desert of Upper Egypt.

E. Amélineau, in his *Géographie de l'Egypte à l'époque copte* (Paris 1893), had great difficulty in identifying the names of the oases with the modern names, and the Arabic texts are equally ambiguous. According to Yāḳūt, *Buldān*, ed. Beirut, v, 341-2, they were three districts (*kuwar*) stretching southwards into the western desert parallel to the Nile valley. The first was opposite Fayyūm and extended to the latitude of Aswān; this was the largest oasis, with numerous villages and palm groves which produced the best dates in Egypt. The second was smaller and less populous. The third was the smallest and contained a town called Santariyya. The population of the oases was of Lawāta Berber stock. In the 9th/15th century al-Maḳrīzī mentions four oases: *al-dākhila* "the interior one", the pair of *al-khāridjatān*ⁱ "the exterior ones" and the oasis of Bahnasā, these yielding a total revenue of 25,000 dīnārs in the year 585/1190 (i.e. the Ayyūbid period). At the time of *al-rawk al-nāṣirī* [see RAWK], sc. in 715/1315, they were not included amongst the provinces of Egypt; the sultan did not appoint a governor and they were administered by those who held them as *iḳṭāʿ*s. In his notice, al-Maḳrīzī, before passing from the "interior" to the "exterior" oases, speaks of the town of Santariyya, this being the older Islamic name of the oasis known since the end of the 10th/16th century as Sīwa [*q.v.*], the classical oasis of Amon. Al-Bakrī is the only geographer, in addition to the later al-Maḳrīzī, who gives the dual form *al-wāḥatān*ⁱ *al-khāridjatān*ⁱ; it may be that *al-wāḥāt al-khāridja* were composed of two distinct urban groupings of settlements. The most important settlement here was Irīs, the modern Bārīs. The oasis of Bahnasā, different from its homonym of the Baḥr Yūsuf (= the ancient Oxyrhynchus; see on it AL-BAHNASĀ), is the oasis known today as *al-wāḥa al-baḥriyya* and there is also the *wāḥat al-farāfira* [see AL-FARĀFRA]. The first of these two was formerly called thus because it was connected

with the town of the same name in the Nile valley by a road to the Nile 200 km/130 miles long. There are main towns called al-Ḳaṣr in Farāfra and in Dakhla.

These oases (*al-baḥriyya, al-farāfira, al-dākhila* and *al-khāridja*: conventionally, Bahariya, Farafra, Dakhla and Kharga) today form one of the 26 governorates of Egypt with the name of al-Wādī al-Djadīd, having an area of 45,800 km² and a population of 132,000, including three administrative centres, three towns and 134 villages.

On the rather complicated dialectology of the oases, see P. Behnstedt and M. Woidich, *Die ägyptischen Oases—ein dialektogischer Vorbericht*, in *ZAL*, viii [1982], 39-71 (includes texts).

(AYMAN F. SAYYID)

WAHB, BANŪ, a family of officials in caliphal service, especially noted as secretaries and viziers to the ʿAbbāsids during the 3rd/9th and early 4th/10th centuries.

The majority of sources state that the family came from Wāsiṭ and were of Nestorian Christian origin before converting to Islam, nevertheless claiming a pure Arabic origin going back to the Yemeni tribe of Balḥārith of Nadjrān. The Wahbīs thus belong to the tradition of servants of the caliphs with Nestorian backgrounds who were prominent in the administrations of the 3rd/9th century (cf. L. Massignon, *La politique islamo-chrétienne des scribes nestoriens de Deïr Qunna à la cour de Bagdad au IXᵉ siècle de notre ère*, in *Vivre et Penser*, 2nd ser. [1942], 7-14). This role of the Wahbīs seems to go back to late Umayyad times, from which they passed into ʿAbbāsid service and then were particularly associated with the Barmakīs. Wahb served Djaʿfar b. Yaḥyā [see BARĀMIKA] and then al-Maʾmūn's minister al-Faḍl b. Sahl [*q.v.*].

1. Sulaymān b. Wahb, Abū Ayyūb, began as a secretary to al-Maʾmūn and then acted for such generals as Mūsā b. Bughā and Aytākh in the reign of al-Wāthiḳ, thereby beginning a link with the Turkish military élite which was to run all through his career. At this time, his brother al-Ḥasan also was a secretary of the vizier Ibn al-Zayyāt [*q.v.*]. Sulaymān was twice *ʿāmil* or financial intendant of the province of Egypt under al-Mutawakkil, apparently deriving rich pickings from the office. In the short reign of al-Muhtadī (255-6/859-60) he served as the caliph's last vizier at a time when all real power in the state had passed to the Turkish military classes and the vizierate had likewise reached a low ebb. Under al-Muʿtamid he became briefly vizier again in 263/877 and again in 264/878, at a time of intrigues and rivalries with another secretary and vizier, al-Ḥasan b. Makhlad b. al-Djarrāḥ [see IBN MAKHLAD], also of Christian origin. But Sulaymān was soon afterwards dismissed, unable to satisfy the financial exigencies of al-Muʿtamid and his brother the regent al-Muwaffaḳ, and died in prison in Ṣafar 272/July-August 885. He had, nevertheless, been the *mamdūḥ* of such leading poets of the time as Abū Tammām and al-Buḥturī [*q.vv.*].

2. ʿUbayd Allāh b. Sulaymān, son of the preceding, and also with long secretarial experience, shared in his father's disgrace, but had the support of the newly-nominated heir to the throne, al-Muwaffaḳ's son al-Muʿtaḍid [*q.v.*], and in Ṣafar 278/June 891 became al-Muʿtamid's last vizier and then, when al-Muʿtamid died the next year, vizier to the new caliph al-Muʿtaḍid, remaining in office till his own death in Rabīʿ II 288/April 901. ʿUbayd Allāh was closely concerned with the re-imposition of caliphal power in Djibāl by military force and with various administrative reforms, and was the patron of the two brothers of the Banu 'l-Furāt [see IBN AL-FURĀT] in their efforts to secure a greater inflow of tax revenues for the state by the strict supervision of provincial agents. ʿUbayd Allāh achieved a great contemporary reputation for his honest conduct and justice, and was favoured by the caliph's addressing him by his *kunya*; also, he seems wisely to have restrained al-Muʿtaḍid from putting blatantly anti-Umayyad, pro-Shīʿī measures into force, fearing the effects on public order.

3. al-Ḳāsim b. ʿUbayd Allāh, Abu 'l-Ḥusayn, son of the preceding, succeeded as vizier when his father died and acted as al-Muʿtaḍid's minister until the caliph himself died in Rabīʿ II 289/March-April 902, and was the first vizier to the new caliph al-Muktafī [*q.v.*] until his own death in Dhu 'l-Ḳaʿda 291/October 904. Al-Ḳāsim had served at his father's side, but was of lower calibre: less scrupulous, more concerned with lining the pockets of himself and his protégés, and brutal with those he regarded as hostile or potentially so. Thus he secured the execution of the governor of Fārs Badr al-Muʿtaḍidī [*q.v.* in Suppl.], of the captive Ṣaffārid *amīr* ʿAmr b. al-Layth [*q.v.*], of the poet Ibn al-Rūmī [*q.v.*], who had satirised the Banū Wahb, and various others, often against the will of his young master. He was planning to move against the surviving brother of the Banu 'l-Furāt, ʿAlī, but fell ill and died before he could achieve this. Although only a mediocre administrator, al-Ḳāsim was an able courtier and managed to raise the prestige of the office of vizier to a new height as the directing power in the state. He received great honours from the caliph, including the new honorific title of *Walī al-Dawla* "Friend, Protector of the State" (which was to appear on coins), and one of his daughters married a son of al-Muktafī. His death, however, meant the eclipse of the family's influence for nearly a generation and the ensuing ascendancy of persons like ʿAlī b. al-Furāt, involving *inter alia* an increase in Shīʿī influence in the state, and new figures like the latter's rival ʿAlī b. ʿĪsā [*q.v.*].

4. al-Ḥusayn b. al-Ḳāsim, son of the preceding, succeeded ʿUbayd Allāh b. Muḥammad al-Kalwadhānī as al-Muḳtadir's penultimate vizier in Ramaḍān 319/September 931, and filled the office for eight months till Rabīʿ II 320/May 932. He relied on Furātid support against the influence of ʿAlī b. ʿĪsā and the powerful commander-in-chief Muʾnis al-Muẓaffar [*q.v.*], and, like his father, received from the caliph an honorific title, *ʿAmīd al-Dawla* "Mainstay of the State", which appears on coins. He endeavoured to restore the disastrous state of the caliphal finances, but fell from power, having been perhaps the last vizier to attempt to retain for the vizierate a measure of its former independence.

5. Muḥammad b. al-Ḳāsim, brother of the preceding, became vizier to al-Ḳāhir in Shaʿbān 321/July 933 in succession to Ibn Muḳla [*q.v.*] and at the time of Muʾnis's fall and death, but served for only two-and-a-half months till his dismissal in Dhu 'l-Ḳaʿda 321/October 933.

Bibliography: 1. Sources. These include the historians Ya'kūbī, Ṭabarī, Mas'ūdī, Hilāl al-Ṣābi', Ibn al-Djawzī, Ibn al-Athīr, Ibn al-Tiktakā, etc.; the works on secretaries and viziers by Djahshiyārī, Ṣūlī, Ibn al-Abbār, etc.; and scattered references in *adab* collections like the *Aghānī*, Tanūkhī's *Nishwār al-muḥāḍara* and *al-Faradj ba'd al-shidda*, and Ibn Ḥamdūn's *Tadhkira*. There is a biography of Sulaymān b. Wahb in Ibn Khallikān, ed. 'Abbās, ii, 415-18, tr. de Slane, i, 596-600.

2. Studies. H.F. Amedroz, *Tales of official life in the "Tadhkira" of Ibn Hamdun*, in *JRAS* (1908), 418-30; H. Bowen, *The life and times of 'Alí ibn 'Ísà, "The Good Vizier"*, Cambridge 1928, 25-6, 45 ff., 57-66, 291-3, 301-3, 312-15, 327, 331-2; Zambaur, *Manuel*, 6-7; D. Sourdel, *Le vizirat 'abbāside*, Damascus 1959-60, i, 300 ff., 312-15, 326-57, 463-7, 476-8, with a genealogical table of the Banū Wahb at 745.

(C.E. Bosworth)

WAHB B. MUNABBIH, Abū 'Abd Allāh, Yemeni narrator and author-transmitter from South Arabia. He was of Persian origin, having been born at Dhimar, two days' march from Ṣan'ā' in the year 34/654-5. Information about his conversion to Islam in the year 10 A.H. is unreliable. More probably the details concerned his father Munabbih, of whom it was said that "he converted to Islam at the time of the Prophet and that he was a good Muslim" (Ibn Ḥadjar, *Tahdhīb*, xi, 167). He lived with his five brothers at Ṣan'ā', and Hammām was the eldest of them. The most reasonable date for the brother's death seems to be 101 or 102/719-20, and the least probable is 132, when compared with that of Wahb (see below). He left a *Ṣaḥīfa* with almost 140 translations and commentaries; these were published by R.F. 'Abd al-Muṭṭalib in 1406/1986, following a manuscript from the Dār al-Kutub in Cairo, which corrects and expands the edition by Ḥamīdullāh, who followed mss. from Berlin and Damascus.

The other brothers were Ghaylān, 'Abd Allāh, Ma'kil (who predeceased Wahb) and 'Umar, all unremarkable except that the last two used to transmit the traditions of Wahb, who was correctly recognised as a great authority in the field of biblical traditions; many varied quotations have come to light to document this aspect of his work and to show that he had inherited the knowledge of the two great converts Ka'b al-Aḥbār and 'Abd Allāh b. Salām (al-Dhahabī, *Huffāẓ*, i, 100; and Ibn al-Fakīh, 34, ll. 9 ff., where such praise astonished even Ibn 'Abbās himself). He can be classified like his brothers, Hammām, Ghaylān and Ma'kil, as one of the *tābi'ūn*.

The question arises whether he was a member of the *Ahl al-Kitāb* before his conversion to Islam (*Fihrist*, 22), or more precisely, whether he was Jewish (Ibn Khaldūn, *Mukaddima*, Beirut 1961, 589, ll. 6 ff., and others before him). The oldest sources do not mention this question, and by contrast the facts are unverified since his father had converted long before the birth of his son. He was therefore probably born a Muslim. Al-Tha'labī, 192, speaks of an alleged meeting with Mu'āwiya; al-Mas'ūdī, *Murūdj*, Cairo 1346/1927-8, ii, 152, recounts that al-Walīd had sent him an inscription discovered at Damascus to decipher.

He acted as a judge in Ṣan'ā', and one day during the governorate of 'Urwa b. Muḥammad he beat an official (*'āmil*), whom people had complained about, with a stick until he drew blood. The statement is also attributed to him that, in accepting the role of a judge, he had lost the gift of seeing the future in his dreams; but as in many similar statements one must see here only an attempt to distract attention from his duties (see below, especially the introduction of the *Akhbār al-kuḍāt* of Wakī' [*q.v.*], ed. Cairo 1947-50, on the problems and dangers involved in being a judge, which stopped more than one Muslim from taking up this responsibility). Similarly, there are many details given about his life which accord well with his ascetic behaviour (see for example al-Dhahabī, *Huffāẓ*, i, 100; Ibn Sa'd, v, 395; Ibn Ḥadjar, *Tahdhīb*, xi, 167). There are also many exhortations of all sorts in this vein attributed to him which were later questioned, according to later books where they are also reported. Wahb is thought to have originally adopted *kadar*, or the doctrine of freewill, but later to have rejected it, since it was contradictory to all the revealed writings. It is not recorded in which period of his life he was sent to prison, probably because of this belief and because of his contact with the People of the Book (see below). Perhaps it took place at the end of his life, for it is known that he died from the consequences of a flogging to which the governor of Yemen, Yūsuf b. 'Umar al-Thakafī, had condemned him in 110/728 or 114/732.

There can no longer be any doubt about the books attributed to the author. Their contents were transmitted orally, taught or set down in writing, partly at least in his own lifetime, and later by particular members of his family. A literature belonging generally to the biblical heritage as disseminated by Judaeo-Christian scholarship (in Yemen and Ḥidjāz, and, especially, in Medina) was formed quite early. It was called biblical but was within Islam. It was disseminated by the philosophers and by others from the same Judaeo-Christian milieux chiefly in Arabia, and then supplemented by posterity.

Wahb, especially because of the books bearing his name which have come down to us and also because of the importance accorded to him by later authors, can be regarded as one of the most important intellectual heirs of this group of people. He handed down a method of approaching the biblical texts properly so-called which can again be found in his successors and in authors as serious as Ibn Kutayba, who in his work reserves a place of honour for Ibn Munabbih (in his *Ma'ārif*, and especially in his *'Uyūn al-akhbār*, see Vajda, Lecomte, and especially a recent thesis of Said Karoui from Heidelberg) in the work of this author on the Bible. There are a very large number of quotations regarding his fame to be found in many of the historical books of al-Ṭabarī (his *History* and his *Commentary*), of al-Mas'ūdī, of al-Tha'labī, etc.; these concern the list of books that deal with the contents of the first book attributed to him (see Khoury, *Wahb*, 227-46). The title of this book as assigned to it by posterity is *K. al-Mubtada' wa-kiṣaṣ al-anbiyā'*, but it varies according to different authors. It starts with the beginning of creation (*bad' al-khalk*) and encompasses the history of the prophets, from Adam to the arrival of the Prophet of Islam (see MUBTADA'. 2).

The most ancient sources which bear witness to the circulation of this material under the name of the author are from the *Ḥadīth Dāwūd* ("The History of David"), which is an Arabic papyrus now kept in Heidelberg, the oldest of its kind in Islam. It was published by the present writer in 1972 (see Khoury, *Wahb*, 34-115) with a translation into German. The original condition in which this papyrus was found showed it to be much ravaged by worms and chronic wear and tear, to the point that certain pages are only half intact and certain lines have only a few

words or even odd letters preserved. It was almost completely restored thanks to the parallel version in the *K. Badʾ al-khalk wa-kiṣaṣ al-anbiyāʾ* of ʿUmāra b. Wathīma al-Fārisī, who made a copy not only of this history but also of others from a more or less original version by Wahb, transmitted by his grandson Idrīs b. Sinān, and by his son ʿAbd al-Munʿim b. Idrīs (d. 228/842, a year before the papyrus was written). It had been kept in the private library of Ibn Lahīʿa, the judge of Egypt, as this man's disciple and transmitter shows, who extended the initial material without changing the structure of the text. For this reason, in this book of ʿUmāra [*q.v.*, see also WATHĪMA] we have a conflation of the oldest and the most weighty versions about biblical narratives from the first two centuries A.H. What is remarkable in the history of these texts is that we have more accuracy in the *isnād*, for where the papyrus sometimes uses simply *ḳāla*, ʿUmāra mentions the name of Wahb, who appears to be a primary source for this voluminous book. Unfortunately for us, only the second part is preserved, from Moses to the arrival of the Prophet Muḥammad (for this, see the ed. of Khoury, *Les légendes prophétiques*, 158-85, Arabic text 1-389; for David, see 102-26).

To these sources should be added information about the biblical world contributed by Ibn Hishām but referring to the same grandson mentioned above (see further below). A *K. al-Isrāʾīliyyāt* (Ḥādjdjī Khalīfa v, 40) is attributed to Wahb, but this does not seem to have been known in the literature of the first century of Islam (Khoury, *Wahb*, 205, 247-57); it probably relates to stories arising out of those in the preceding book. As for the *Ḳiṣaṣ al-akhyār* (Ḥādjdjī Khalīfa, iv, 518), this title can refer only to the same theme, and it points to evidence of how similar materials could have been able to circulate under different titles, given that the first of them was lost in transmission.

Under the rubric of biblical history, a translation by Wahb of the Psalms of David deserves to be mentioned, the *K. Zabūr Dāwūd... Tardjamat Wahb b. Munabbih* (Ibn Khayr, *Fahrasa*, 294). According to the multiple sources consulted (see Khoury, *Wahb*, 207, 258-63), it is less of a translation than a publicising of motifs adopted by David, popularising the Psalms to which he or posterity has added all sorts of material, and these were sometimes (at least partly) Islamicised. There are even three different titles, *Ḥikmat Wahb*, *Ḥikmat Luḳmān* and *Mawʿiẓa li-Wahb* (Ibn Khayr, 291-2, 294; Khoury, *op. cit.*, 206-7, 263-72), all of which relate to the same character and which, together with the traditions of the Psalms, could be considered under the same rubric of *Ḥikam* and *Mawāʿiẓ*, where David and Luḳmān (b. ʿĀd) enjoyed a place of privilege.

It is also worth mentioning here a *K. al-Ḳadar* which he wrote and later regretted (Ibn Saʿd, v, 395; Ibn Ḳutayba, *Maʿārif*, ed. ʿUkāsha, 625, 9; al-Khallāl, fol. 91b, ll. 3 ff.). According to Abū Nuʿaym, *Ḥilya*, iv, 24, ll. 17 ff., he even denied the existence of any material on *ḳadar* (see Khoury, 206, 270-2). In any case, there is a biblical ambience in the traditions attributed to him which are favourable to these ideas. However, it may not be possible to find in these texts the definite statement of such an ideology, which would perhaps have brought disgrace on the author and could have cost him his life.

Alongside the biblical section, which all these titles denote, is another which concerns the pre-Islamic Arab period; this established a true bridge between the biblical world and the Yemeni Arab past. It is the *K. al-Mulūk al-mutawwadja min Ḥimyar wa-akhbārihim wa-ḳiṣaṣihim wa-ḳubūrihim wa-ashʿārihim*, and according to Ibn Khallikān, *Wafayāt*, iii, 671, Ibn Ḳutayba is said to have seen a version of it himself. In any case, the presence of material on the same theme was attested by the *K. al-Tīdjān* of Ibn Hishām, who referred to Wahb as his primary source, through the intermediary of the same grandson, and from him Asad b. Mūsā [*q.v.* in Suppl.]. He found it in the library of the judge of Egypt, who received him and opened his house to him as a disciple (see Khoury, *Asad b. Mūsā*, 23). In the first part of this book Wahb is found everywhere as the only authority; these are the pages containing the beginning of the biblical world, where the indication of names and dates, etc. points to certain, detailed knowledge; and it was to this world that the author wanted to connect Yemen, with a view to enhancing the worth of this country to the bosom of Islam, to Meccan and then to North Arabian roots, and to the centre of rivalries which had built up between north and south.

In the second part of Ibn Hishām's book it is noticeable that the name of Wahb is mentioned increasingly less often, eventually disappearing altogether in the last part. The global tone which dominates this book resides in its distinctively biblical character, and this distinguishes it entirely from the book of ʿAbīd (or ʿUbayd) b. Sharya [see IBN SHARYA], *Akhbār ʿAbīd b. Sharya fī akhbār al-Yaman wa-ashʿārihā wa-ansābihā* (ed., with Ibn Hishām's *K. al-Tīdjān*, Ḥaydarābād 1347/1928-9). In that book we are dealing with a story-teller who becomes the *samīr* of Muʿāwiya in Damascus, and fills out his stories mainly with poetry. This becomes the dominant element and confirms historical narrations (on this subject see Khoury, *Kalif, Geschichte und Dichtung*, esp. 213 ff.).

The last group of books attributed to Wahb is purely Islamic. Firstly, the *Maghāzī Rasūl Allāh* (Ḥādjdjī Khalīfa, v, 646). the only confirmation of which is the piece on the papyrus preserved in Heidelberg and published by Khoury, *Wahb*, 118-75, with a German translation. It is astonishing that Ibn Isḥāḳ, who was so dependent on Wahb for biblical history, as for example al-Ṭabarī clearly shows in his two important books (see above), should not take any account of Wahb in the Islamic field. It is as if Ibn Munabbih, far from the school of Medina and its founder al-Zuhrī, had been banished. It is true that he did not always use the *isnād*, which had not actually been imposed in his period, but he knew of it and used it from time to time, when it applied to writers who took little notice of rigid rules. What is more, the *isnād* was not always used wisely by the teachers of Medina, as has already been shown (see e.g. Khoury, *Wahb*, 276 ff.).

The events to be found there include the beginnings of Islam and the conversion of Zurāra b. Asʿad and his son Asʿad; the meeting at al-ʿAḳaba; the council held by Ḳuraysh at the *Dār al-nadwa*; the migration to Medina; and, finally, the campaign of ʿAlī against the tribe of Khathʿam. In addition to these items concerning the *maghāzī*, we have a small number of traditions which cover aspects of the life of the Prophet (see Khoury, *op. cit.*, 282-4). Ḥādjdjī Khalīfa, ii, 382, also mentions a *Tafsīr Wahb*, and at iv, 387, another reference concerns the caliphs, sc. *Taʾrīkh al-Khulafāʾ*, or *Futūḥ*, but of these there is no trace.

It is easy to see which of the many aspects of the traditions attributed to Ibn Munabbih are covered, but it is difficult to say exactly what was actually put

into writing in the lifetime of the author. The essential point is that the teaching of the master was fixed in writing during the 2nd/8th century, since certain versions were preserved in Ibn Lahīʿa's library by the Egyptian transmitters or settlers in Egypt, as confirmed by the papyrus and, especially, by the book of ʿUmāra b. Wat̲h̲īma.

As for later authors, they often altered certain traditions which they attached to his name, which means that not all of the alterations may have come from him. In any case, in his *K. al-Tīd̲j̲ān* he showed a real knowledge of the Bible, even if this was not extensive, in certain citations from the text (see Khoury, *Quelques reflexions*, 553 ff., esp. 555-6). What was circulated with these biblical and extra-biblical studies was a common Semitic reservoir of great antiquity, and this was often disseminated orally, especially outside the Judaeo-Christian dogmatic centres; this has been very ably noted by H. Schwarzbaum in his book on biblical and extra-biblical stories (see *Bibl.*). In short, Wahb is an important representative of the expansion of the historical perspective. His writings embodied a truly universal vision of history, comprising: 1. ancient biblical history; 2. pre-Islamic Yemeni history; 3. Islamic history of the prophet; and 4. history of the caliphate.

WAHBIYYA [see AL-IBĀḌIYYA].

WAḤDA (A.), "unit, unity".

1. As a term in grammar.

Here the genitive construct *ism al-waḥda* is variously rendered in Western grammars as *nomen unitatis* "noun of unity", "unit noun", "noun of individuality", and "singulative" (but on the last of these, see below).

The *ism al-waḥda* forms the counterpart to the *ism al-d̲j̲ins* or *nomen generis* "generic noun" and is derived from it by adding the feminine ending -*at*^{un}. If the generic noun refers to something which exists in units, the *ism al-waḥda* denotes such a unit; if the referent is homogeneous, the unit noun denotes a separate piece. Thus *naml*^{un} "ant(s)" vs. *namlat*^{un} "one ant" and *ḥadīd*^{un} "iron" vs. *ḥadīdat*^{un} "a piece of iron". The same grammatical feature exists in a number of other Semitic languages (Hebrew, Aramaic, Accadian, Mehri) and even in Berber. A related phenomenon in Arabic is the *ism al-marra* or *nomen vicis* derived from the verbal noun to denote a one-time action: *ibtisām*^{un} "smiling" vs. *ibtisāmat*^{un} "one smile". In the first form of the verb the *ism al-marra* follows the pattern *faʿlat*^{un}, even though not all verbal nouns have the form *faʿl*^{un}. One can, however, argue that *faʿl*^{un} is the default verbal noun, since it is always used with secondary denominative verbs of the first form (e.g. *kabadahū kabd*^{an} "he hit him in the liver").

The pair "generic noun—unit noun" should not be confused with the pair "collective—singulative", and words like *naml*^{un} should not be called collectives, as they frequently are. Generic nouns denote the genus and are not number-sensitive with regard to their referent: *akaltu tamr*^{an} may be said by a date-eater regardless of whether he ate one, two, or many dates. Collectives, in contrast, denote a plurality seen as a unit. The singulative is never derived from the collective by adding -*at*^{un}. As a matter of fact, in many cases it is the collective that is derived from the singulative (by adding the same ending -*at*^{un}, thus in participial forms like *muqātil*^{un} "fighter" vs. *muqātilat*^{un} "fighting force", *nisbas* like *ṣūfiyy*^{un} "Ṣūfī" vs. *ṣūfiyyat*^{un} "Ṣūfīdom", and *faʿʿāl* forms like *nad̲j̲d̲j̲ār*^{un} "carpenter" vs. *nad̲j̲d̲j̲ārat*^{un} "carpenters" [as a group, guild]). There is a variety of other lexical and morphological means to express this contrast. One should include here also the names of tribes/nations and other groups of people, from which the individual is derived by means of the *nisba*: *al-Rūm*^{u} "the Byzantines" vs. *Rūmiyy*^{un} "one Byzantine" and *d̲j̲und*^{un} "army" vs. *d̲j̲undiyy*^{un} "soldier". Some grammars consider these *nisbas* a separate type of *nomen unitatis* (e.g. Corriente, 81, with precedent among the mediaeval grammarians). While collectives/singulatives always denote sentient beings, generic and unit nouns never denote human beings, but otherwise are semantically fairly spread out (see the categories introduced by Ullmann, *Nomen generis*, 19-46). The only overlap between the two classes exists with (large) animals; as a result animal names may—quite unpredictably—be singulars (*kalb*^{un}), collectives (*ibil*^{un}), or generic nouns (*baḳar*^{un}). Synchronically, this variation in usage defies explanation, and animal nomenclature can be very intricate.

While collectives are mainly treated as feminines, generic nouns are mostly used as masculines, although feminine singular and plural forms of attributive adjectives are not rare either. The latter are best explained as *ad sensum* constructions: the generic nouns are felt to function like plurals of the unit nouns. Note that some mediaeval grammarians and lexicographers had no qualms calling the generic noun a plural of the unit noun (e.g. al-Farrāʾ [d. 200/822] according to al-Astarābādī, *S̲h̲arḥ al-Kāfiya*, repr. Beirut n.d., ii, 178 l. 18). This is also the reason why the generic noun is more specifically termed *ism al-d̲j̲ins al-d̲j̲amʿī* "the plural-like generic noun" to distinguish it from the wider meaning of *ism al-d̲j̲ins*, which is "common noun" as opposed to *ism al-ʿalam* "proper name" (see A. Fischer, *Terminologie*, for questions of nomenclature). But this is clearly a secondary development, due to contamination with the collective.

Both the generic noun and the unit noun can be put in the dual and plural. While unit nouns pose no problem in this respect (*shadjaratānⁱ* "two [individual] trees", *shadjarātᵘⁿ* "several [individual] trees"), the semantics of the dual and plural of generic nouns have not yet been fully investigated (even Ullmann is somewhat reticent about the semantic side of these forms in his collection of pertinent references, *Nomen generis*, 50-2). In many instances the connotation is clearly that of "kind": *shadjarānⁱ* "two kinds of trees", *ashdjārᵘⁿ* "[different] kinds of trees". This tallies well with the original meaning of the generic noun. But in other cases the connotation is rather that of "group" (the examples adduced by Ullmann, 50, for *buyūḍᵘⁿ* presuppose the meaning "kinds of eggs" in some cases and "clutches of eggs" in others). In still other cases the plural of the generic noun (e.g. *riyāḍᵘⁿ*) seems to serve as a plural for the unit noun (*rawḍatᵘⁿ*), but that is difficult to prove and needs further study. In Modern Standard Arabic it is clearly felt to be so (personal survey).

2. As a term in philosophy.

Here it conveys the ideas of oneness, unity, union, isolation and solitude (cf. in this last regard the title of Ibn Bādjdja's [*q.v.*] *Tadbīr al-mutawaḥḥid*, and cf. also Ibn Sīnā's usage of *wāḥidiyya* as a synonym of *waḥda*, whereas *waḥdāniyya* conveys rather the idea of "unicity, uniqueness": see A.-M. Goichon, *Lexique de la langue philosophique d'Ibn Sina*, Paris 1938, s.vv. *waḥda*, *wāḥidiyya* and *waḥdāniyya*).

Waḥda is best translated in theological and philosophical contexts as oneness or unity. It does not occur in the Ḳur'ān, and is the equivalent of the Aristotelian μονάς. In Arabic, *waḥda* contrasts directly with *kathra*, *takaththur* "multiplicity, plurality" (for an early philosophical discussion of *waḥda* vs. *kathra*, or *wāḥid* vs. *kathīr*, see al-Fārābī, *K. al-Wāḥid wa 'l-waḥda*, ed. Muhsin Mahdi, Casablanca 1989). Al-Ghazālī in his treatise on the Most Beautiful Names of God, *al-Maḳṣad al-asnā*, defines the divine name *al-Wāḥid* as follows: "The one who can neither be divided nor duplicated... God Most High is one in the sense that it is impossible for His essence to be arranged into parts... it belongs to none but God to be absolute unity" (tr. D.B. Burrell and Nazih Daher, Cambridge 1992, 130-1) (for a discussion of the theological treatment of the name *al-Wāḥid*, and other names meaning "the One", see D. Gimaret, *Les noms divins en Islam*, Paris 1988, 191-200). The modality of the Unity or Oneness of God precipitated much debate in mediaeval Islamic theology, particularly as theologians grappled with the problems arising from the idea that God had attributes.

In Islamic mystical philosophy and theosophy, perhaps the best known articulation of the term *waḥda* was in the phrase *waḥdat al-wudjūd* "the oneness of being" or "unity of existence" [see WAḤDAT AL-SHUHŪD]. Whilst Ibn al-ʿArabī does not seem actually to have used the phrase himself in his own authenticated writings, there is no doubt that it represents his philosophical and theological perspective. As a counter to this, the phrase *waḥdat al-shuhūd* "the unity of witnessing [only God]" came into being amongst more orthodox opponents of Ibn al-ʿArabī's monism, such as Aḥmad Sirhindī [*q.v.*] (see Y. Friedmann, *Shaykh Aḥmad Sirhindī*, Montreal and London 1971, 59-60, and TAṢAWWUF. 2). But in Ṣūfism in general, the matter and definitions of *waḥda* could be very complex, and a work like the *K. Iṣṭilāḥāt al-Ṣūfiyya* of ʿAbd al-Razzāḳ al-Kāshānī (d. 730/1330 [*q.v.*]) is full of gnomic utterances about *kathra* and *waḥda* (cf. *ibid.*, ed. and tr. Nabil Safwat and D. Pendlebury, *A glossary of Sufi technical terms*..., London 1991).

Bibliography (in addition to references in the article): Soheil M. Afnan, *A philosophical lexicon in Persian and Arabic*, Beirut 1969, s.v.; I.R. Netton, *Allah transcendent. Studies in the structure and semiotics of Islamic philosophy, theology and cosmology*, London 1989, 256-320. (I.R. NETTON)

WAḤDAT AL-WUDJŪD [see WAḤDAT AL-SHUHŪD].

WAḤDAT AL-SHUHŪD (A.), with WAḤDAT AL-WUDJŪD, two technical terms of Ṣūfī mysticism.

Waḥdat al-shuhūd "the oneness of witnessing" is a doctrine established by Shaykh Aḥmad Sirhindī [*q.v.*] in response to *waḥdat al-wudjūd* "the oneness of being" or "the unity of existence", a term that by his day was identified with the position of Ibn al-ʿArabī [*q.v.*; see also TAṢAWWUF. 2.]. Most of the secondary literature has assumed that there really is a specific, recognised doctrine known as *waḥdat al-wudjūd* established by Ibn al-ʿArabī and that *waḥdat al-shuhūd* really does offer an alternative or a corrective to that doctrine. Given the history of the expression and the contexts in which it appeared, however, this assumption is difficult to sustain. The various attempts by scholars to explain *waḥdat al-wudjūd* by employing labels such as "pantheism" or "esoteric monism" succumb to the same assumption and fail to clarify what exactly was at issue in the texts. In fact, *waḥdat al-wudjūd* was more an emblem than a doctrine, and if Ibn al-ʿArabī was considered its founder, this simply indicates that his writings mark Ṣūfism's massive entry into the theoretical discussions of *wudjūd* that before him had been the almost exclusive preserve of the philosophers and the *mutakallimūn*.

The underlying issue is how Islam's first principle—*tawḥīd* [*q.v.*], the assertion that there is no god but God—is to be understood. Sirhindī makes this explicit by employing the terms *tawḥīd-i shuhūdī* and *tawḥīd-i wudjūdī* interchangeably with *waḥdat-i shuhūd* and *waḥdat-i wudjūd*. The specific form taken by the discussion goes back to the early adoption of the term *wudjūd* to render the Greek idea of "being" or "existence" and is complicated by the literal sense of the verb, as exemplified by Ḳur'ānic usage (e.g. "He *finds* God", XXIV, 39). The difficulty arises the moment *wudjūd* is ascribed to God, given that it can also be ascribed to everything other than God. If God is *wudjūd*, then nothing else can be considered *wudjūd* in the same sense. It is precisely the status of the "others" that needs to be clarified, and this is a basic issue in *Kalām*, philosophy, and much of theoretical Ṣūfism.

The authors of the early Ṣūfī manuals, such as al-Ḳushayrī, al-Sarrādj, and Hudjwīrī, had the Ḳur'ānic meaning of the term *wudjūd* in mind when they

discussed it along with *wad̲j̲d* and *tawād̲j̲ud* and considered it a stage on the path in which the "finder" (*wād̲j̲id*) is aware only of God. Ibn al-ʿArabī follows this usage when he defines *wud̲j̲ūd* as "finding the Real in ecstasy" (*wid̲j̲dān al-ḥaḳḳ fi 'l-wad̲j̲d*) (*Iṣṭilāḥāt al-ṣūfiyya*, in *Rasā'il Ibn ʿArabī*, Ḥaydarābād 1948, 5; *al-Futūḥāt al-makkiyya*, Cairo 1911, ii, 133.12, 538.1). *Wud̲j̲ūd* in this sense is often difficult to differentiate from *fanā'* [*q.v.*]. In Anṣārī's classic *Manāzil al-sā'irīn*, *wud̲j̲ūd* is made the ninety-sixth of the one hundred stages of the path to God and defined as "achieving the reality of the thing" (*al-ẓafar bi-ḥaḳīḳat al-s̲h̲ay'*). In these discussions, *s̲h̲uhūd* frequently plays a role, and it is not always clear that "witnessing" God means anything other than "finding" God. In offering definitions of *wud̲j̲ūd*, al-Ḳus̲h̲ayrī provides an early example of many verses that use the two terms as rhymes: "My 'finding' [*wud̲j̲ūdī*] is that I absent myself from *al-wud̲j̲ūd*/with what appears to me through *al-s̲h̲uhūd*" (*Risāla*, Cairo 1972, 249). Here, the second *wud̲j̲ūd* can mean both the awareness of self and the "existence" of the self as seen independent from God, while *s̲h̲uhūd* clearly means witnessing God. This interpretation is confirmed by al-D̲j̲unayd's definition of *mus̲h̲āhada*, a term that is often used interchangeably with *s̲h̲uhūd*: "Finding the Real along with losing you" (*wud̲j̲ūd al-ḥaḳḳ maʿa fuḳdānika; ibid.*, 279). These authors frequently discuss the subtle differences between *s̲h̲uhūd* and *kas̲h̲f* "unveiling", and Ibn al-ʿArabī can employ both these terms as synonyms for *wudjūd* (see indexes of Chittick, *The Sufi path of knowledge*, Albany 1989; idem, *The self-disclosure of God*, Albany 1997). In Ibn al-ʿArabī's voluminous discussions of *wud̲j̲ūd*, the philosophical/theological meaning usually, but not always, dominates over the Ṣūfī sense of experiential finding, without excluding it.

In tracing the history of the expression *waḥdat al-wud̲j̲ūd*, we need to distinguish two basic usages. In the earliest instances, it means *waḥdat al-wud̲j̲ūd al-ḥaḳḳ*, "the oneness of the real *wud̲j̲ūd*", and indicates the self-evident fact that God's *wud̲j̲ūd* is the one and only true *wud̲j̲ūd*. Gradually, it comes to designate a distinctive perspective on the whole of reality, though interpretations of what this perspective implies can disagree sharply. The expression itself is not used by Ibn al-ʿArabī, even though his name eventually became associated with it. He should not be called its supporter unless it is explained in a way that corresponds with his teachings (cf. Chittick, *Imaginal worlds*, Albany 1992, ch. 1). However, these teachings are not easy to explain without distortion, since he speaks from diverse standpoints in keeping with various stations of knowledge achieved on the Ṣūfī path. Some, but not all, of these stations demand that God's absolute *wud̲j̲ūd* be seen as obliterating the relative *wud̲j̲ūd* of all else. For example, he sometimes speaks of *ahl al-d̲j̲amʿ wa 'l-wud̲j̲ūd* "the people of bringing together and finding", whom he also calls the "people of One Entity" (*ahl ʿayn wāḥida; Futūḥāt*, iii, 447.18; cf. Chittick, *Self-disclosure*, 183-4). In the Ṣūfī lexicon, *d̲j̲amʿ* is contrasted with *farḳ* "separation", and it denotes seeing all things as brought together through God's reality. The people of bringing together and finding have been so overcome by the vision of God that they see no separation between him and the things. In effect, they say "All is He" (*hama ūst*)—the ecstatic and poetical exclamation found as early as Anṣārī and said in the later debates to be the position of *waḥdat al-wud̲j̲ūd*. But Ibn al-ʿArabī does not consider this sort of vision the highest stage on the path to God, because it amounts to seeing with one eye; with the other eye the true Ṣūfī must also see that all is not He.

If the term *waḥdat al-wud̲j̲ūd* had any significance for Ibn al-ʿArabī's own position, it would have been discussed in the writings of those of his disciples who wrote about theoretical issues, especially Ṣadr al-Dīn Ḳūnawī and ʿAfīf al-Dīn al-Tilimsānī [*q.vv.*]. Ḳūnawī does in fact use it on two occasions, but it arises naturally in the course of discussions of *waḥda* and *wud̲j̲ūd*, and he attaches no special importance to it. In three works of al-Tilimsānī seen by the present writer, the closest he comes to it is *waḥdāniyyat al-wud̲j̲ūd* (*S̲h̲arḥ al-asmā' al-ḥusnā*, commentary on the name *al-samīʿ*). Perhaps more significantly, in *S̲h̲arḥ fuṣūṣ al-ḥikam*, the earliest of the many commentaries written on this famous book, al-Tilimsānī says concerning a passage from the first chapter that Ibn al-ʿArabī is employing philosophical language to allude to *al-tawḥīd al-wud̲j̲ūdī*. In the passage itself, Ibn al-ʿArabī has made the unremarkable statement that *wud̲j̲ūd* brings together all "existent things" (*mawd̲j̲ūdāt*). In the one work of his so far printed, *S̲h̲arḥ manāzil al-sā'irīn*, al-Tilimsānī often uses the expression *al-d̲j̲amʿ wa 'l-wud̲j̲ūd*, defining it, in a phrase reminiscent of al-D̲j̲unayd's definition of *mus̲h̲āhada*, as "the manifestation [*ẓuhūr*] of the Real's *wud̲j̲ūd* through the annihilation [*fanā'*] of the creature's *wud̲j̲ūd*" (ed. Tunis 1989, 462).

What might be considered the earliest instances in which the term *waḥdat al-wud̲j̲ūd* designates a distinct position are found in the writings of Ibn al-ʿArabī's fellow-Murcian Ibn Sabʿīn (d. 669/1270 [*q.v.*]), who was much more conversant with the philosophical tradition. In the most explicit of these, he writes that the ignorant and the common people are dominated by multiplicity, while "the elect *ʿulamā'* are dominated by the root [*aṣl*], which is *waḥdat al-wud̲j̲ūd*" (*Rasā'il Ibn Sabʿīn*, Cairo 1965, 194; see also 38, 189, 264, 266). He may be saying here that *waḥdat al-wud̲j̲ūd* is a doctrinal position; more likely, he is simply asserting that the elect see all things in terms of *tawḥīd*, while the common people see dispersion and incoherence. What is new here is not the idea but the expression, and it is not surprising in the context, given the centrality of the term *wud̲j̲ūd* to philosophy. That this specific expression had no special significance for him is suggested by the fact that he does not mention it in his major work, *Budd al-ʿārif*, though he does insist that *wud̲j̲ūd* is one (Beirut 1978, esp. 228, 303). Another early use of the term is found in two headings of one of the popularising Persian works of ʿAzīz al-Dīn Nasafī, *Kas̲h̲f al-ḥaḳā'iḳ* (written in 680/1281-2), where it designates a doctrine having four different formulations at the hands of two groups of Ṣūfīs, "the people of the fire" (*ahl-i nār*) and "the people of the light" (*ahl-i nūr*; see H. Landolt, *La paradoxe de la "face de dieu": ʿAzīz-e Nasafī (VIIᵉ/XIIIᵉ siècle) et le "monisme ésotérique" de l'Islam*, in *St. Ir.*, xxv [1996], 163-92). The folk of the fire see that the one, true *wud̲j̲ūd* burns away all "others", while the folk of the light see that the "others" are rays of *wud̲j̲ūd*'s light; these two perspectives correlate with *fanā'* and *baḳā'*. Again, the expression is new but not the ideas.

Perhaps the most telling of the early uses of *waḥdat al-wud̲j̲ūd* is by Ḳūnawī's disciple Saʿīd al-Dīn Farg̲h̲ānī [*q.v.*], who employs it many times in both the Persian and Arabic versions of his commentary on Ibn al-Fāriḍ's *al-Tā'iyya*. In this work, which is one of the most detailed and sophisticated discussions of the relevant theoretical issues in this period, *waḥdat al-wud̲j̲ūd* is the complement of *kat̲h̲rat al-ʿilm* and provides a philosophical basis for *fanā'* and *baḳā'*. God's *wud̲j̲ūd*

is one through its necessity, while God's knowledge is many through its objects; thus the oneness of God's *wudjūd* and the many-ness of His knowledge are the two principles through which he gives existence to the cosmos (*Mashārik al-darārī*, Tehran 1979, 344; *Muntahā 'l-madārik*, Cairo 1293/1876, i, 357). On the side of creation, the soul (*nafs*) manifests the many-ness of knowledge, while the spirit (*rūḥ*) manifests the oneness of *wudjūd* (*Mashārik* 359; *Muntahā*, ii, 17). Farghānī is careful to point out that *wudjūd* does not simply mean "existence", but also the habitude (*malaka*) of *wadjd*, that is, finding (*yāft*) one's inner connection to the world of the spirit's oneness (*Mashārik*, 364-5). In the Arabic passage that corresponds to this discussion, he offers what is perhaps the earliest example of the term *waḥdat al-shuhūd*; he tells us that the traveller, finding his own spirit, is attracted to "the world of the oneness of true witnessing" (*ʿālam waḥdat al-shuhūd al-ḥakīkī; Muntahā*, ii, 21). When the traveller reaches the advanced stages of the path, he undergoes annihilation of the soul, and this is accompanied by a subsistence in which he achieves the witnessing (*shuhūd*) of *waḥdat al-wudjūd*. This prepares him for the annihilation of the spirit, which yields a subsistence that is accompanied by the witnessing of *kathrat al-ʿilm*. Both modes of subsistence can be called *djamʿ* (*Mashārik*, 186; *Muntahā*, i, 226). At a still higher stage, he achieves *maḳām djamʿ al-djamʿ*, in which the two earlier stations are harmonised. In the highest stage, *aḥadiyyat al-djamʿ*, which is exclusive to Muḥammad, the two perspectives are seen to be the same (*Mashārik*, 395-96; *Muntahā*, ii, 45). The fact that the earlier, Persian version of this work was based on Ḳūnawī's lectures suggests that Ḳūnawī employed these terms in the same way that Farghānī does. Nonetheless, the term *waḥdat al-wudjūd* itself has not yet gained a special significance, because Farghānī does not always carry it over into the enlarged and thoroughly revised Arabic version of the work.

Despite these usages of the term *waḥdat al-wudjūd*, it is rarely found in the early texts, and apparently it does not become an issue until Ibn Taymiyya [*q.v.*], who mentions it in the titles of two treatises and attacks it violently, claiming that it asserts the identity of God and creation and that it is nothing but the well-known heresies *ḥulūl* ("incarnationism") and *ittiḥād* ("unificationism"). The major commentators on Ibn al-ʿArabī's *Fuṣūṣ*—Muʾayyid al-Dīn Djandī, ʿAbd al-Razzāḳ Kāshānī, and Dāwūd al-Ḳayṣarī—do not mention it, but, by the 9th/15th century, it was controversial. Djāmī in *Nafaḥāt al-uns* (completed in 883/1478) writes that the exchange of letters between ʿAlāʾ al-Dawla Simnānī and Kāshānī in the early 8th/14th century had to do with *waḥdat al-wudjūd*, and this has led modern scholars to treat the debate in the same terms, even though the two authors do not mention *waḥdat al-wudjūd* in the letters, nor, it seems, in any of their other writings (see H. Landolt, *Der Briefwechsel zwischen Kāšānī und Simnānī über* Waḥdat al-Wuǧūd, in *Isl.*, 1 [1973], 29-81).

Sirhindī's reaction to *waḥdat al-wudjūd* occurs in the context of its relatively new-found fame and its general ascription to Ibn al-ʿArabī. He objects to it, he says, because a large number of his contemporaries were employing it as a pretext to avoid observing the rulings of the Sharīʿa (e.g. *Maktūbāt*, Dihlī 1964, no. 43). In explaining its meaning, he demonstrates little acquaintance with the writings of Ibn al-ʿArabī or the major figures who discussed the issues. By insisting that a correct interpretation of *waḥdat al-wudjūd* demands that it mean *waḥdat al-shuhūd*, he was saying that the *wudjūd* of the world is not identical with the *wudjūd* of God in every sense—despite the current rhetoric of "All is He"—and that if certain genuine Ṣūfīs had considered the *wudjūd* of God and the world to be the same, this goes back to their witnessing, not to the actual situation. At least partly because *wudjūd* in his understanding had none of the earlier connotations of finding, he felt it necessary to insist that seeing God in all things goes back to the viewer and does not offer a final explanation of the nature of reality. In any case, most Ṣūfī theoreticians in India ignored or dismissed his objections, while others felt it necessary to point out that he really did not disagree with Ibn al-ʿArabī (e.g. Shāh Walī Allāh, in his well-known *Fayṣala-yi waḥdat al-wudjūd wa 'l-shuhūd*). It is only in the modern period that Sirhindī has been elevated to special rank by historians of Islamic India (see Y. Friedmann, *Shaykh Aḥmad Sirhindī. An outline of his thought and a study of his image in the eyes of posterity*, Montreal and London 1971).

Finally, we should keep in mind that the Muslim authors themselves had no interest in the history of ideas in the modern sense. For Sirhindī, *waḥdat al-wudjūd* was a living issue, and it was not important to know exactly how it had come upon the scene. He saw that his contemporaries ascribed the expression to Ibn al-ʿArabī and, like Ibn Taymiyya, he thought that they understood it to mean the absolute identity of God and creation. Thus although his interpretation of *waḥdat al-wudjūd* exhibits no understanding of the subtleties of Ibn al-ʿArabī's position or of the various meanings that had been given to the term over the centuries, it does reflect the status of ongoing debates on *tawḥīd*, the most basic of theoretical issues in Islamic thought.

Bibliography (in addition to references given in the article): For various meanings given to the term *waḥdat al-wudjūd* in the sources and the secondary literature, see Chittick, *Rūmī and* Waḥdat al-wudjūd, in *Poetry and mysticism in Islam*, Cambridge 1994, 70-111. On Sirhindī, see J.G.J. ter Haar, *Follower and heir of the Prophet: Shaykh Aḥmad Sirhindī (1564-1624) as mystic*, Leiden 1992. For a good summary of Ibn Taymiyya's understanding of *waḥdat al-wudjūd*, see M.U. Memon, *Ibn Taimīya's struggle against popular religion*, The Hague 1976. (W.C. CHITTICK)

WAHHĀBIYYA, a term used to denote (a) the doctrine and (b) the followers of Muḥammad b. ʿAbd al-Wahhāb (1115-1206/1703-92 [see IBN ʿABD AL-WAHHĀB]).

The term is derived from Muḥammad b. ʿAbd al-Wahhāb's father's name "ʿAbd al-Wahhāb" and was originally used by Muḥammad b. ʿAbd al-Wahhāb's opponents to denounce his doctrine as mere personal opinion. Probably the first appearance the term made is in the title of the *K. al-Ṣawāʿiḳ al-ilāhiyya fī 'l-radd ʿalā 'l-Wahhābiyya* (first ed. Bombay 1306/1888-9) of Sulaymān b. ʿAbd al-Wahhāb (d. 1208/1793-4) who up to 1190/1776 had strongly opposed his brother's teachings. Muḥammad b. ʿAbd al-Wahhāb and his followers called themselves *al-Muwaḥḥidūn* "those who profess the unity of God". Nevertheless, *al-Wahhābiyya* (and the derivation *Wahhābī/Wahhābiyyūn*) became the most widespread term for Muḥammad b. ʿAbd al-Wahhāb's doctrine and followers. In the 20th century it was also used by followers and sympathisers of the movement, like Sulaymān b. Saḥmān (d. 1930) in his *K. al-Hadiyya al-saniyya wa 'l-tuḥfa al-wahhābiyya al-nadjdiyya* (Cairo 1344/1926) or Muḥammad Rashīd Riḍā [*q.v.*] in his *al-Wahhābiyyūn wa 'l-Ḥidjāz* (Cairo 1344/1926).

1. The 18th and 19th centuries.

(a) *The doctrine*

The Wahhābiyya came into being by the middle of the 18th century in an oasis settlement in the centre of the Arabian Peninsula. In 1153/1740 Muḥammad b. ʿAbd al-Wahhāb began to proclaim publicly his teachings in Ḥuraymilā [*q.v.*] in the province of al-Miḥmal in Nadjd [*q.v.*].

In Nadjd, Ḥanbalism [see ḤANĀBILA] had for centuries been the dominant *madhhab* and Muḥammad b. ʿAbd al-Wahhāb was educated in its tradition. Yet, when he began to appear in public, his teachings were vehemently rejected as dissent from the Ḥanbalī *madhhab* by local Ḥanbalī scholars (e.g. his brother Sulaymān, then *ḳāḍī* in Ḥuraymilā, ʿAbd Allāh al-Muways (d. 1175/1761), *ḳāḍī* in Ḥarma/Sudayr, Sulaymān b. Suḥaym, Ḥanbalī scholar from al-Riyāḍ [*q.v.*]) as well as Ḥanbalī scholars from the eastern coastal province of al-Ḥasā [*q.v.*] (e.g. Muḥammad b. ʿAbd al-Raḥmān b. ʿAfāliḳ (d. 1164/1751), ʿAbd Allāh b. Fayrūz (d. 1175/1761-2), and Muḥammad b. ʿAbd Allāh b. Fayrūz (d. 1216/1801-2)). The conflict between representatives of the Ḥanbalī *madhhab*—e.g. the Ḥanbalī *muftī* in Mecca Muḥammad b. Ḥumayd al-ʿĀmirī (1235-95/1820-78) and Ḥasan b. ʿUmar al-Shaṭṭī al-Dimashḳī al-Baghdādī (1205-74/1791-1858)—and the Wahhābiyya was to continue also in the 19th century.

The very core of Muḥammad b. ʿAbd al-Wahhāb's teachings was made up of a concept of *tawḥīd* [*q.v.*] and its opposite *shirk* [*q.v.*], on which he based a radical criticism of his contemporaries' religious behaviour. He asserted that the overwhelming majority of Muslims, not only in Nadjd but in the whole Muslim world, had fallen into a state of religious ignorance no better than that of the *Djāhiliyya* [*q.v.*]. The reason for this he saw in the ignorance of the real meaning of *tawḥīd* as prescribed by God and exemplified by His prophet Muḥammad. Still at Ḥuraymilā, Muḥammad b. ʿAbd al-Wahhāb composed the *K. al-Tawḥīd alladhī huwa ḥaḳḳ allāh ʿalā ʾl-ʿabīd*, a thematically arranged collection of Ḳurʾānic verses and *ḥadīth*s which were to become the basic material for his argumentation (for a survey of its imprints and a bibliography of Muḥammad b. ʿAbd al-Wahhāb's writings cf. al-Ḍubayb). According to him, *tawḥīd* had a threefold meaning: *tawḥīd al-rubūbiyya, tawḥīd al-ulūhiyya* and *tawḥīd al-asmāʾ wa ʾl-ṣifāt*. Whereas he only touched upon the third category (the unity of God's attributes as laid down in the Ḳurʾān without interpretation) (e.g. *al-Masʾala al-thāmina*, in *TN*, 432), which was later more specified by his descendants (e.g. ʿAbd al-Raḥmān b. Ḥasan b. Muḥammad b. ʿAbd al-Wahhāb, in *MT*, 158, 176; ʿAbd al-Laṭīf b. ʿAbd al-Raḥmān, in *MRMN*, iii, 319 ff.), he elaborated in detail on the categories *tawḥīd al-rubūbiyya* and *tawḥīd al-ulūhiyya* (for abbreviations used in this section, see *Bibl.*).

Tawḥīd al-rubūbiyya (profession of the unity of God with regard to his divinity) in his definition was the mere verbal profession that God is the only, almighty creator and lord of the world. *Tawḥīd al-ulūhiyya*, which he also called *tawḥīd al-ʿibāda* (*al-Djawāhir al-muḍīʾa*, in *MRMN*, iv, 1-8, esp. 5; *Kashf al-shubuhāt*, in *MT*, 73-92, esp. 75), was the profession of the unity of God by serving God alone and proof of *tawḥīd al-rubūbiyya* through the deeds of the believer. According to him, *tawḥīd al-ulūhiyya* was the decisive dimension of *tawḥīd*, and only its fulfillment formed the distinctive mark between *islām* and *kufr*. Equating *tawḥīd* with the first religious duty, he subjected the behaviour of his fellow-Muslims to an examination according to his criteria concerning *tawḥīd*, and stated that most of them were not to be considered as Muslims because of their continued violation of their most eminent duty towards God. The proof for his accusation he saw in the expression of religious feelings through practices which he considered to be *shirk*. Among these he counted the following unless these were exclusively directed at God: *duʿāʾ* (prayer of invocation [*q.v.*]), *istiʿāna* (seeking help), *istighātha* (appeal for aid), *dhabḥ* (slaughter), *nadhr* (dedication vow [*q.v.*]), *khawf* (fear), *radjāʾ* (hope), *tawakkul* (trust [*q.v.*]), *ināba* (authorisation), *maḥabba* (love), *khashya* (fear), *raghba* (wish), *rahba* (fright), *taʾalluh* (devotion to religious service), *rukūʿ* (bending of the body), *sudjūd* (prostration), *khushūʿ* (submission), *tadhallul* (self-abasement) and *taʿẓīm* (glorification) (*al-Risāla al-tāsiʿa*, in *MT*, 128-30). Any act of devotion which displayed religious affection expended on human beings or objects like the veneration of tombs and entombed persons considered as saints, or veneration of places considered to possess supernatural powers, were therefore an offence against *tawḥīd*, thus *shirk*. The consequences he drew from his definition of *tawḥīd* were that a person guilty of neglecting *tawḥīd al-ulūhiyya* and thus offending against the first religious duty was to be regarded as a *mushrik* and thus outside Islam, even if he verbally confessed the unity of God and fulfilled the other religious duties. "It is well known that the Messenger of God summoned men to *tawḥīd* many years before he called on them to [obey] the pillars of Islam. And it is also well known that [the message of] *tawḥīd* which was brought by Djibraʾīl is the most important religious duty (*aʿẓam farīḍa*), more important than *ṣalāt, zakāt, ṣawm* and *ḥadjdj*. How is it possible that someone who rejects one of the pillars of Islam becomes an unbeliever, even if he acts in accordance with what the Messenger of God taught, whereas someone who refuses to profess *tawḥīd*, which is the religion of the messengers of God from Nūḥ to Muḥammad, does not become an unbeliever only because he utters the formula *lā ilāh*ᵃ *illā llāh*ᵘ?" (*Risāla fī ḥaḳīḳat al-islām*, in *MRMN*, iv, 41-6, esp. 45).

This doctrine of *tawḥīd* formed the fundament on which he based the rules for correct behaviour in belief. Attainment of knowledge about *tawḥīd* (*al-Risāla al-ʿāshira*, in *TN*, 309-12, esp. 311) and refraining from *shirk* had to be accompanied by combat of those who did not act according to the rules of *tawḥīd*, who were thus regarded as not being Muslims and became subject to *takfīr* (*al-Masʾala al-thālitha*, in *TN*, 405-7; *al-Risāla al-sādisa wa ʾl-ʿishrūn*, in *ibid.*, 360-93, esp. 372; *Risāla ukhrā fī kalimat al-tawḥīd*, in *MRMN*, iv, 36-40, esp. 37; for later Wahhābī scholars' statements on this topic, see e.g. *Hadiyya*, 46, 60, 67). By claiming that *tawḥīd* was the most neglected religious duty, Muḥammad b. ʿAbd al-Wahhāb criticised the long-established consensus of the Sunnī *madhāhib* which had accepted the mere uttering of the *shahāda* as fulfillment of the Muslim's first religious duty. He argued that the rules of *tawḥīd* as prescribed by God had become corrupted during the course of history, from the time of the Revelation until the 12th century of the Hidjra due to negligence by generations of religious scholars who had thus wrongly guided the *ʿāmma*, and he asserted that only the direct approach of the Ḳurʾān and the Sunna could again reveal its true meaning. In this matter, he saw himself not bound to any scholarly tradition but independently revealing the lost meaning of *tawḥīd* in an age of *djāhiliyya* to which everybody except himself had fallen victim (*al-Risāla al-ūlā*, in *TN*, 209-24, esp. 211; *al-Risāla al-ʿāshira*, in *ibid.*, 309-10).

The allegiance to *taḳlīd* [*q.v.*] of the *madhhab* authorities was unambiguously rejected by him, even though he did not claim the right to *idjtihād* [*q.v.*]. He argued that the direct approach of the Ḳur'ān and Sunna was not bound to the rigorous demands made on a *mudjtahid* on the part of the Sunnī *madhāhib* because God's prescriptions for mankind had been clearly and for all times revealed to all believers in His book and the Sunna of His Prophet. But the *madhāhib*'s *fiḳh* had alienated the *umma* from His clear will; as the Ḳur'ān and Sunna had been the sole sources for right guidance of the early Islamic community (*al-awwalūn*), their example was incumbent also on the later generations (*al-muta'akhkhirūn*) (*al-Risāla al-ūlā*, 218). The question of *idjtihād* was further discussed by disciples of Muḥammad b. ʿAbd al-Wahhāb (ʿAbd Allāh b. Muḥammad b. ʿAbd al-Wahhāb (*Hadiyya*, 35-53) and Ḥamad b. Nāṣir b. Muʿammar (*R. al-Idjtihād wa 'l-taḳlīd*, in *MRMN*, ii/3, 2-30; see below), who denied any claim for *idjtihād muṭlaḳ* on the part of Wahhābī scholarship but made indispensable the control of *madhhab* decisions in the light of the Ḳur'ān and Sunna; *madhhab* views must be checked on the basis of the Ḳur'ān and Sunna and must be refused if not in accordance with them. These criteria had to be applied to all *madhhab* authorities, including their founders, who had themselves stated that they were not infallible or more authoritative than the Ḳur'ān and Sunna (*R. al-Idjtihād*, 3). *Taḳlid* is allowed only for the iguorant masses, unable to obtain sufficient knowledge, or for scholars with only a limited education (*R. al-Idjtihād*, 6). Although they professed to follow Ḥanbalism in the *furūʿ* (*Hadiyya*, 39), they rejected *taḳlīd* of the *madhhab*'s authorities including Ibn Taymiyya and Ibn Ḳayyim al-Djawziyya [*q.vv.*] (*Hadiyya*, 51), to whom they often refered in their writings with the aim of strengthening their argumentation.

Muḥammad b. ʿAbd al-Wahhāb did not elaborate on a definition of *bidʿa* (innovation [*q.v.*]), apart from rejecting any *bidʿa* as aberration (*ḍalāla*) (*al-Risāla al-tāsiʿa*, in *TN*, 299-308, esp. 306). Probably as a result of the dogmatic dispute with the movement's adversaries, the Wahhābī concept of *bidʿa* was put into more concrete terms by his son ʿAbd Allāh (*Hadiyya*, 48 ff.). According to him, *bidʿa* generally is what happened after the 3rd century (*Hadiyya*, 48), a span of time including in his definition the age of the pious predecessors (*al-salaf al-ṣāliḥ*) as well as the four *imāms* and their immediate disciples (*Hadiyya*, 37). A distinction between *bidʿa ḥasana* and *bidʿa sayyi'a* as accepted by the *madhāhib* is basically inadmissible, unless the term *bidʿa ḥasana* is applied exclusively to the practice of the pious predecessors, which may be divided into the categories *wādjiba, mandūba* and *mubāḥa*; anything else is *bidʿa sayyi'a*, divisible into the categories *makrūha* and *muḥarrama*. Cases of *bidʿa* not concerning religious matters ("*mā lā yuttakhadh*^{u} *dīn*^{an} *wa-ḳurbat*^{an}", *Hadiyya*, 51) may be exempted from this rule as long as they are not mixed up with religious matters (thus drinking coffee is allowed). The consequences of *bidʿa* are not to be confused with *takfīr* resulting from *shirk*. *Bidʿa* is an offensive against the *Sharīʿa* but does not make the believer an unbeliever. Yet *bidʿa* may lead to *shirk*. Invoking God through referring to the rank of the Prophet or pious men to gain access to Him (*tawassul*) is *bidʿa sayyi'a*, whereas addressing the Prophet or pious men in their graves in the days of *barzakh* [*q.v.*] with the aim to obtain their intercession (*shafāʿa* [*q.v.*]) is *shirk*. The miracles of saints (*karāmāt al-awliyā'*) are not to be denied, and their right guidance by God is acknowledged whenever they act according to the *Sharīʿa*; yet swearing an oath by them with the aim of glorification is *shirk*. These rules also apply to the Prophet, who must not be venerated in a special manner; a visit to his grave is allowed in the course of visiting his mosque for prayer but, as a main objective, it is forbidden.

Neither Muḥammad b. ʿAbd al-Wahhāb nor his immediate disciples elaborated specifically on a theory of government and state. Muḥammad b. ʿAbd al-Wahhāb focused on a vision of *djamāʿa* [*q.v.*] which stressed the principle of *al-amr bi 'l-maʿrūf wa 'l-nahy ʿan al-munkar* as the individual's duty to fight *shirk* (*Risāla ukhrā*, 37), to refuse obedience to rulers and religious authorities not acting in accordance with the prescriptions for *tawḥīd* and to perform *hidjra* if necessary. Only in the 19th century did Wahhābī scholars define the functions of the imāmate in their writings (cf. ʿAbd al-Raḥmān b. Ḥasan b. Muḥammad b. ʿAbd al-Wahhāb, in *MRMN*, ii/2, 3-13), based on principles which drew from Ibn Taymiyya (cf. Laoust, 527; *ʿUnwān*, ii, 113).

(b) *Development until 1234/1818-19 (the first Wahhābī-Suʿūdī state)*

Muḥammad b. ʿAbd al-Wahhāb continued to propagate publicly his teachings after he was forced to leave Ḥuraymilā, first in al-ʿUyayna and, after being expelled from there also, from 1157/1744 or 1158/1745 onwards in al-Dirʿiyya [*q.v.*], then controlled by the local *ra'īs* Muḥammad b. Suʿūd (d. 1179/1765 [*q.v.*]). With Ibn Suʿūd's support, there developed the community of *Muwaḥḥidūn*, defining itself through commitment to the rules of *tawḥīd* according to the teachings of Muḥammad b. ʿAbd al-Wahhāb and the exclusion and combat of those not accepting them. By means of *daʿwa* (letters, envoys) and armed campaigus against neighbouring settlements (first attack 1159/1746 on al-Riyāḍ) the community's sphere of influence gradually extended at the local level. Under the leadership of ʿAbd al-ʿAzīz b. Muḥammad b. Suʿūd (1179-1218/1765-1803) it accomplished—settlement by settlement, tribal segment by tribal segment—the voluntary or enforced subjection of the provinces of Nadjd, sc. Sudayr in 1177/1763-4, al-Washm in 1181/1767-8, al-ʿĀriḍ [*q.v.*] after the fall of al-Riyāḍ in 1187/1773, al-Khardj [*q.v.*] and al-Aflādj [*q.v.*] in 1199/1785, al-Ḳaṣīm [*q.v.*] after the surrender of ʿUnayza [*q.v.*], and finally in 1202/1788, Wādī 'l-Dawāsir [*q.v.*] and Djabal Shammar [*q.v.*] in 1205/1790-1.

In the emerging state governed from al-Dirʿiyya, Muḥammad b. ʿAbd al-Wahhāb, bearing the title of *shaykh*, acted as the highest religious authority, teacher and supervisor of instruction in Wahhābī doctrine, and, according to Ibn Bishr [*q.v.*] (*ʿUnwān*, i, 143), he acted as *ḳāḍī*, *imām* and *khaṭīb*. The rulers of the Āl Suʿūd [*q.v.*], bearing the titles of *amīr* and *imām*, directed the state administration, appointing *ḳuḍāt, a'imma* and *umarā'* in the settlements and for the tribes, collecting taxes (*zakāt*) from settled people and Bedouin, imposing punitive measures on the forcibly subjugated sections of the population, such as destruction of the agricultural infrastructure, and confiscation of property for the *bayt al-māl* or payment of ransom for captives and possessions.

By the death of Muḥammad b. ʿAbd al-Wahhāb in Dhu 'l-Ḳaʿda 1206/June 1792, the Wahhābī-Suʿūdī state had already begun to transcend the boundaries of Nadjd into al-Ḥasā, which was subjugated in 1207-8/1792-3, and it had launched the first attacks against the regions of Ḳaṭar [*q.v.*] and northern ʿUmān [*q.v.*]. According to Ibn Bishr (*ʿUnwān*, i, 93), Muḥammad

b. ʿAbd al-Wahhāb was succeeded first by his son Ḥusayn (d. 1224/1809), then by his son ʿAbd Allāh (1165-1242/1752-1827, d. in Cairo), both of them acting as *ḳuḍāt* in al-Dirʿiyya, while ʿAbd Allāh seems to have been more important as a scholar (author of *Djawāb ahl al-sunna fī naḳḍ kalām al-shīʿa wa 'l-zaydiyya* (*MRMN*, iv, 47-221), *al-Kalimāt al-nāfiʿa fī 'l-mukaffarāt al-wāḳiʿa* (*MT*, 229-96), numerous legal treatises (*MRMN*, i) and a *risāla* written on the occasion of the Wahhābī seizure of Mecca in 1803 (*Hadiyya*, 35-52)), directing the Wahhābī *madjālis* and instructing the heir-apparent Suʿūd b. ʿAbd al-ʿAzīz (1218-29/1803-14) and his son ʿAbd Allāh (1229-33/1814-18). Later sources (Āl al-Shaykh, 33; al-Bassām, i, 49) mention ʿAbd Allāh as the direct successor of Muḥammad b. ʿAbd al-Wahhāb. Several other descendants of Muḥammad b. ʿAbd al-Wahhāb (called Āl al-Shaykh) represented Wahhābī scholarship by the beginning of the 19th century: his sons ʿAlī (d. after 1233/1818 in Cairo) and Ibrāhīm (d. after 1251/1835 in Cairo), his grandson Sulaymān b. ʿAbd Allāh (1200-33/1786-1818, temporarily *ḳāḍī* in Wahhābī-occupied Mecca, author of *Taysīr al-ʿazīz al-ḥamīd, sharḥ Kitāb al-tawḥīd* (Beirut ²1970), *al-Tawḍīḥ ʿan tawḥīd al-khallāḳ fī djawāb ahl al-ʿIrāḳ* (first ed. Cairo 1901), *Awthaḳ ʿurā 'l-īmān* (*MT*, 178-92), *Ḥukm muwālāt ahl al-ishrāk* (*MT*, 192-208), *Ḥukm al-safar ilā bilād al-shirk* (*MT*, 209-13)), and other grandsons ʿAlī b. Ḥusayn (d. 1257/1841 or later, *ḳāḍī* in al-Dirʿiyya) and ʿAbd al-Raḥmān b. Ḥasan (1193-1285/1779-1869, *ḳāḍī* in al-Dirʿiyya). Important scholars of other descent were 1) Ḥusayn b. Ghannām (d. 1225/1811 [*q.v.*]), author of the first history of the Wahhābī community *Rawḍat al-afkār wa 'l-afhām li-murtād ḥāl al-imām* and *al-Ghazawāt al-bayāniyya wa 'l-futūḥāt al-rabbāniyya* (first ed. Bombay 1919; adapted prose version by N. al-Asad under the title *Taʾrīkh Nadjd*, Cairo 1961); 2) Ḥamad b. Nāṣir b. Muʿammar (d. 1225/1811), Wahhābī envoy to Mecca in 1211/1797, author of *al-Fawākih al-ʿidhāb fī 'l-radd ʿalā man lam yaḥkum bi 'l-sunna wa 'l-kitāb* (*Hadiyya*, 53-98), *R. al-Idjtihād wa 'l-taḳlīd* (*MRMN*, ii/3, 2-30) and other tracts (*MRMN*, ii/3), *ḳāḍī* in al-Dirʿiyya, and from 1220/1805 until his death, *ḳāḍī* and supervisor of the regulations for *ḳuḍāt* in Mecca; 3) ʿAbd al-ʿAzīz al-Ḥusayn (1154-1237/1741-1822), *ḳāḍī* in al-Washm, envoy to Mecca; 4) ʿAbd al-ʿAzīz b. Ḥamad b. Ibrāhīm (d. 1240/1825), envoy to the Imām of Ṣanʿāʾ under Suʿūd b. ʿAbd al-ʿAzīz and to Egypt 1230/1815, author of *al-Masāʾil al-sharʿiyya ilā ʿulamāʾ al-Dirʿiyya* (*MRMN*, iv, 564-84); 5) ʿUthmān b. ʿAbd al-Djabbār b. Shabāna (d. 1242/1826-7), *ḳāḍī* in ʿAsīr [*q.v.*], Raʾs al-Khayma [*q.v.*] and Sudayr; and 6) ʿAbd Allāh b. ʿAbd al-Raḥmān Abū Buṭayn (1194-1282/1780-1865), *ḳāḍī* in al-Ṭāʾif after 1220/1805, author of numerous treatises (*MRMN*, ii/3, 96-257).

The last decade of the 18th century was marked by increasing hostility between the Sharīf of Mecca, Ghālib b. Musāʿid (1202-28/1788-1813), and al-Dirʿiyya. Since the emergence of the Wahhābī movement, the relationship with the rulers of Mecca had been tense, and scholarly disputations between Meccan *ʿulamāʾ* and Wahhābī delegations (two of them in 1185/1771 and 1204/1790 led by ʿAbd al-ʿAzīz al-Ḥuṣayn) had not resulted in détente. In 1205/1791 Ghālib started off military activities against southern Nadjd, and the ensuing skirmishes lasted up to a peace treaty in 1212/1798, only to be broken in 1217/1802-3 by the Wahhābīs, who finally overran al-Ḥidjāz and took over al-Ṭāʾif (Dhu 'l-Ḳaʿda 1217/February-March 1803) and Mecca (Muḥarram 1218/April 1803). The first occupation of Mecca lasted only two-and-a-half months until Ghālib in Rabīʿ I 1218/June-July 1803 recaptured the town, but at the beginning of 1220/April 1805 the Wahhābīs took Medina and in Dhu 'l-Ḳaʿda 1220/January-February 1806 Mecca for the second time.

Wahhābī rule over the Ḥaramayn, which lasted until the turn of the year 1227/28 (1812/13), became one of the most disputed periods of Wahhābī history (cf. Daḥlān): the destruction of highly venerated tombs and mausoleums (cemetery of Maʿlā in Mecca) and domes erected at the birthplaces of the Prophet, of ʿAli b. Abī Ṭālib, Abū Bakr al-Ṣiddīḳ and Khadīdja bt. Khuwaylid [*q.vv.*]; the banning of the annual Pilgrimage caravans from Syria and Egypt; and the compulsory instruction of *ʿulamāʾ* and *ʿāmma* in Wahhābī doctrines, were the most striking examples of the collision of the Wahhābī interpretation of Islam with the majority view in the Muslim world. In a *risāla* written on the occasion of the conquest of Mecca (see above) in which he took part, ʿAbd Allāh b. Muḥammad b. ʿAbd al-Wahhāb elucidated the main points at issue: abolition of taxes considered to be unlawful (*mukūs/rusūm*); destruction of all utensils for consuming tobacco and prohibition of smoking it (cf. also Burckhardt, 284, 303); destruction of all places of *ḥashshāshīn* and immorality; destruction of all domes on graves and further buildings taken as places for worship of others than God; compulsion of all believers—no matter to which *madhhab* they might belong—to perform each *ṣalāt* collectively behind one *imām* (belonging to one of the four *madhāhib*); distribution of the writings of Muḥammad b. ʿAbd al-Wahhāb among the *ʿulamāʾ* and of a summary of their main contents among the *ʿāmma*, to be studied under supervision; interference in the ritual practices of the *madhāhib* when considered as incorrect (e.g. in the case of *ṣalāt* as performed by the Ḥanafī and the Mālikī *madhhabs* where, from the Wahhābī point of view, the moment of *ṭumaʾnīna* in *iʿtidāl* after *rukūʿ* and in *djulūs* between the *sadjadāt* was not properly observed); destruction of books that might lead to *shirk*, like the *K. Rawḍ al-rayāḥīn* (of al-Yāfiʿī, d. 768/1366-7 [*q.v.*]) or that might cause disturbance to people's beliefs, like books on *ʿilm al-manṭiḳ*; abolition of the special position of the *ahl al-bayt* in society (the doctrine of *kafāʾa* [*q.v.*] in marriage, for which no basis in the Ḳurʾān and Sunna can be found, kissing their hands which might lead to *shirk*, etc.); prohibition of various *bidaʿ*: publicly using the *subḥa* [*q.v.*] or rosary, raising the voice at the place of *adhān* [*q.v.*] other than for the *adhān* (Ḳurʾanic verses, prayers to the Prophet, *dhikr*), *tadhkīr* and *tarḥīm*, reading *ḥadīths* from Abū Hurayra before the Friday sermon, gathering to hear *mawlid al-nabī* recitations, believing this to be a pious deed, gathering for *rawātib al-mashāyikh* like the *rātib al-Sammān* or the *rātib al-Ḥaddād* which even contain *shirk*, recitation of *fawātiḥ* for the *mashāyikh* after the five daily prayers which might lead to *shirk*. The Ṣūfī path (*al-ṭarīḳa al-ṣūfiyya*) and the purification of the inner dimension from sinful acts is not rejected, as long as the adherent of Ṣūfism sticks to the *Sharīʿa* (as understood by the Wahhābīs).

After the seizure of Medina, the treasures amassed in the Prophet's grave were taken by the Wahhābīs (for the discussion on this topic, cf. al-Alūsī, 55-6), yet the grave itself, after unsuccessful attempts to destroy its cupola, remained untouched (cf. Burckhardt, 281, 331-2); domes and buildings erected on other graves were destroyed.

In the first decade of the 19th century, the Wahhābī-Suʿūdī state increased its *daʿwa* activities also outside

the Arabian Peninsula (e.g. in Tunisia and Morocco, cf. E. Pröbster, *Die Wahhabiten und der Magrib*, in *Islamica*, vii [1935], 65-112 and in Syria, cf. H. Fleischer, *Briefwechsel zwischen den Anführern der Wahhabiten und dem Paša von Damascus*, in *ZDMG*, xi [1857], 427-43) and reached the peak of territorial expansion. South of al-Ḥidjāz, the Wahhābīs established dominance over ʿAsīr through their vassal Muḥammad b. ʿĀmir Abū Nuḳta al-Rufaydī and raided the Yemeni ports of al-Luḥayya and al-Ḥudayda [*q.vv.*] in 1225/1810. In the east, they subjugated Ḳaṭar and al-Baḥrayn and the Ḳawāsim [*q.v.*] tribes of northern coastal ʿUmān; in the south, they controlled the oasis of al-Buraymī [*q.v.*] and occasionally collected *zakāt* from the Sultan of Masḳaṭ [*q.v.*]. At the same time, they raided into al-ʿIrāḳ, where in Dhu ʾl-Ḳaʿda 1216/March 1802 they overran the Shīʿī sanctuary of Karbalāʾ [*q.v.*] for the first time (second time in 1223/1808) and pillaged the tomb of al-Ḥusayn [*q.v.*]. Continuous quarrels with the southern ʿIrāḳī Muntafiḳ [*q.v.*], vassals of the Ottoman *wālī* in Baghdād, the Wahhābī hegemony over al-Ḥidjāz and Wahhābī influence on tribes in southern Syria (the only organised military campaign directed against Syrian territory was the raid on al-Muzayrīb and Buṣrā in Ḥawrān [*q.v.*] in 1225/1810), challenged the Ottoman Empire on several fronts simultaneously. In 1222/1807 Muḥammad ʿAlī [*q.v.*], Ottoman *wālī* of Egypt, was ordered to prepare a military campaign against the Wahhābīs, which was not, however, begun until 1226/1811, when Egyptian troops landed at Yanbuʿ [*q.v.*]. In Dhu ʾl-Ḳaʿda 1227/November 1812 Medina, and in Muḥarram 1228/January 1813 Mecca, were taken from the Wahhābīs. Driven back to Nadjd, the Wahhābīs met with a crushing defeat at the hands of the Egyptian troops when in Dhu ʾl-Ḳaʿda 1233/September 1818 al-Dirʿiyya was taken and reduced to ruins in Shaʿbān 1234/May-June 1819. Measures were taken against the Wahhābī-Suʿūdī state aimed at destroying its infrastructure, as well as at annihilating the power of its religious and political élites through executions (among others, ʿAbd Allāh b. Suʿūd, 1234/1818 in Istanbul; Sulaymān b. ʿAbd Allāh b. Muḥammad b. ʿAbd al-Wahhāb, 1233/1818 and his brother ʿAlī, 1234/1819 in al-Dirʿiyya) and deportations to Cairo (including an estimated total of 400 sons and grandsons of Muḥammad b. ʿAbd al-Wahhāb and leading members of the Āl Suʿūd, cf. Mengin ii, 151 ff.).

(c) *Development until the end of the 19th century (the second Wahhābī-Suʿūdī state)*

When the Egyptian troops left Nadjd in 1819 the territories of the former Wahhābī-Suʿūdī state returned to the rule of local *ruʾasāʾ*. In the struggle for re-establishment of a central political authority, Turkī b. ʿAbd Allāh b. Muḥammad b. Suʿūd succeeded between 1235/1820 and 1240/1824 in establishing himself in power at al-Riyāḍ as the new capital.

The political revival was soon after followed by the reconstruction of Wahhābī scholarship, in which ʿAbd al-Raḥmān b. Ḥasan, grandson of Muḥammad b. ʿAbd al-Wahhāb, who had been deported to Cairo, played the major role when he in 1241/1825-6 returned to Nadjd, taking over the office of senior religious authority in al-Riyāḍ. Until his death in 1285/1869, he worked as a *ḳāḍī*, as teacher of a whole generation of Wahhābī scholars and *ḳuḍāt* and as author of commentaries on the *Kitāb al-Tawḥīd* (*K. Fatḥ al-madjīd fī sharḥ K. al-Tawḥīd* (first ed. Cairo 1929), *K. Ḳurrat ʿuyūn al-muwaḥḥidīn fī taḥḳīḳ daʿwat al-anbiyāʾ wa ʾl-mursalīn* (*MT*, 297-542)), refutations of anti-Wahhābī tracts (*Bayyān al-maḥadjdja fī ʾl-radd ʿalā ʾl-ladjdja* (*MRMN*, iv, 223-85), *al-Ḳawl al-nafīs fī ʾl-radd ʿalā Dāwūd b. Djirdjīs*, *al-Maḳāmāt radd^an ʿalā ʿUthmān b. ʿAbd al-ʿAzīz b. Manṣūr al-Nāṣirī* (ms. al-Riyāḍ), *Bayān kalimat al-tawḥīd wa ʾl-radd ʿalā ʾl-Kashmīrī ʿAbd al-Maḥmūd* (*MRMN*, iv, 319-64), *al-Mawrid al-ʿadhb al-zulāl fī kashf shubah ahl al-ḍalāl* (*MRMN*, iv, 287-318)) and numerous other treatises.

Under the reign of Turkī b. ʿAbd Allāh, the Wahhābī-Suʿūdī state was able to regain parts of its former territories outside Nadjd when in 1245/1829-30 al-Ḥasā was retaken from the Banū Khālid, al-Ḳaṭīf and Raʾs al-Khayma [*q.vv.*], as well as al-Baḥrayn, swore allegiance; after a military expedition against ʿUmān in 1248/1832-3 Sultan Saʿīd, ruler of Masḳaṭ, paid an annual tribute. Yet the Wahhābī-Suʿūdī state could not regain its initial political stability because of internal rivalries for the imāmate which led to the assassination of Turkī b. ʿAbd Allāh at the hands of Mashārī b. ʿAbd al-Raḥmān b. Mashārī b. Suʿūd by the end of 1249/1834. The usurpation of power by Mashārī, whose reign lasted only forty days, seems to have been sanctioned in the absence of Turkī's son Fayṣal from al-Riyāḍ by the Āl al-Shaykh. Fayṣal b. Turkī on his return to al-Riyāḍ established himself as the new *imām*, to whom allegiance was sworn in early 1250/1834 by ʿAbd al-Raḥmān b. Ḥasan and other Wahhābī scholars. Fayṣal's rule was soon challenged in 1252/1836, when Muḥammad ʿAlī of Egypt, in the course of expanding his regional hegemony in the Arabian Peninsula, equipped an army under Ismāʿīl Pasha nominally led by Khālid b. Suʿūd, a brother of the late *amīr* ʿAbd Allāh b. Suʿūd, who had been deported to Egypt in 1234/1819. In Ṣafar 1253/May 1837 the Egyptian troops, with Khālid as a figurehead to win over the sympathies of the Nadjdī population, entered al-Riyāḍ, which Fayṣal b. Turkī had given up the previous year. In 1254/1838 Fayṣal surrendered to the Egyptians and was brought to Cairo. ʿAbd al-Raḥmān b. Ḥasan, together with other members of the Āl al-Shaykh, escaped from the new régime by moving to al-Ḥawṭa [*q.v.*] and al-Ḥarīḳ in southern Nadjd, where they kept themselves beyond the reach of Khālid b. Suʿūd until his power declined when the Egyptians withdrew their troops from Nadjd in 1256/1840. The expulsion of Khālid b. Suʿūd, whose rule was never recognised as legitimate by the Wahhābī scholars, seems to have been the prime mover for ʿAbd al-Raḥmān b. Ḥasan to support ʿAbd Allāh b. Thunyān b. ʿAbd Allāh b. Ibrāhīm b. Thunyān b. Suʿūd, who in 1257/1841 defeated Khālid and established himself in al-Riyāḍ as the new ruler. In 1258/1842 the Āl al-Shaykh returned to al-Riyāḍ after five years' exile in southern Nadjd.

But the struggle for the imāmate flared up again in 1259/1843, when Fayṣal b. Turkī returned from his imprisonment in Cairo, and, strongly supported by the Āl Rashīd [*q.v.*] of Djabal Shammar, moved against ʿAbd Allāh b. Thunyān and regained power with the approval of ʿAbd al-Rahmān b. Ḥasan. At the beginning of his second reign, he resumed a tradition seemingly established by his father Turkī to which he had stuck already at the beginning of his first reign in 1250/1834. In his capacity as *imām* of the Wahhābī community, he addressed himself to the population in a letter in which he called his subjects to *tawḥīd* and to the careful observance of all religious duties, emphasising the payment of *zakāt*, and in which he stressed the importance of the principles of *djamāʿa*, *djihād* and *al-amr bi ʾl-maʿrūf wa ʾl-nahy ʿan al-munkar*. He ordered the letter to be read aloud in all mosques and for this to be repeated every two

months. For a period of 23 years up to his death in 1282/1865, Fayṣal remained the undisputed *imām* of the Wahhābī-Suʿūdī state. Under his second reign, a stable dominance was established over central and southern Nadjd, al-Ḥasā and al-Ḳaṭīf, whereas rule over the province of al-Ḳaṣīm and its main settlements Burayda and ʿUnayza [*q.vv.*] was precarious at best; the Djabal Shammar under Ṭalāl b. ʿAbd Allāh b. Rashīd (1264-84/1847-67) enjoyed a semi-autonomous status whilst remaining politically loyal to the Wahhābī-Suʿūdī state and paying *zakāt*. Relationships of political loyalty expressed by payment of *zakāt* were established with al-Baḥrayn, with the coastal shaykhdoms of northern ʿUmān and with the Sultan of Masḳaṭ. The Wahhābī-Suʿūdī state, for its part, expressed a formal loyalty to the Ottoman Empire by payment of an annual tribute via the Sharīf of Mecca.

In al-Riyāḍ, ʿAbd al-Raḥmān b. Ḥasan Āl al-Shaykh was in 1264/1848 joined by his son ʿAbd al-Laṭīf (1225-93/1810-76), who had been deported to Egypt in 1234/1819 and had since lived in Cairo. Like his father, he worked as a *ḳāḍī* in al-Riyāḍ, where he became a teacher in the Wahhābī *madjālis* and author of numerous treatises and refutations (*Taʾsīs al-taḳdīs fi 'l-radd ʿalā Dāwūd b. Djirdjīs* (first ed. Bombay 1892), *Tuḥfat al-ṭālib wa 'l-djalīs fi 'l-radd ʿalā Ibn Djirdjīs*, *Miṣbāḥ al-ẓalām fi 'l-radd ʿalā man kadhaba ʿalā 'l-shaykh al-imām*, *Rasāʾil* (*MRMN*, iii, iv). Another prolific Wahhābī scholar and author of this period was ʿAbd Allāh Abū Buṭayn, who had been a renowned representative of Wahhābī scholarship before the fall of al-Dirʿiyya (see above) and then became *ḳāḍī* and teacher in ʿUnayza and Shaḳrāʾ/al-Washm (*Rasāʾil wa-masāʾil*, in *MRMN*, iv, 466-541; *Risāla fī taʿrīf al-ʿibāda* (*MT*, 217-27), *Taʾsīs al-taḳdīs fī kashf talbīs Dāwūd b. Sulaymān b. Djirdjīs*, *al-Intiṣār li-ḥizb Allāh al-muwaḥḥidīn wa 'l-radd ʿalā 'l-mudjādil ʿan al-mushrikīn*, *Mukhtaṣar Badāʾiʿ al-fawāʾid li-Ibn al-Ḳayyim*, *Ḥāshiya nafīsa ʿalā sharḥ al-Muntahā*, *Taʿlīḳāt ʿalā sharḥ al-durra al-muḍiyya sharḥ ʿaḳīdat al-Safārīnī*). Other noteworthy scholars were Ḥamad b. ʿAtīḳ (1227-1301/1812-83, *ḳāḍī* in al-Khardj and al-Aflādj, author of *Ibṭāl al-tandīd sharḥ Kitāb al-Tawḥīd* (Cairo 1367, Alexandria 1380, al-Riyāḍ 1389), *Bayān al-nadjāḥ wa 'l-fakāk, al-Difāʿ ʿan ahl al-sunna wa 'l-atbāʿ*), Muḥammad b. ʿAbd Allāh b. Salīm (1240-1323/1825-1905, *ḳāḍī* and teacher in Burayda), Muḥammad b. Maḥmūd (1250-1333/1834-1915, *ḳāḍī* in Wādī 'l-Dawāsir, Ḍurmā and al-Riyāḍ).

Fayṣal b. Turkī's second reign was the longest period of uninterrupted development for the Wahhābī-Suʿūdī state in the 19th century. Soon after his death in Radjab 1282/December 1865, a fight for the imāmate began among his sons (ʿAbd Allāh, Suʿūd, Muḥammad and ʿAbd al-Raḥmān), when Suʿūd b. Fayṣal rebelled against his elder brother ʿAbd Allāh, who had been recognised as the legitimate *imām* at his father's death. Suʿūd's claim to rule was uncompromisingly condemned by ʿAbd al-Raḥmān b. Ḥasan and his son ʿAbd al-Laṭīf. When ʿAbd al-Raḥmān b. Ḥasan died in 1285/1869, ʿAbd al-Laṭīf b. ʿAbd al-Raḥmān became the senior Wahhābī scholar, and had to face a worsening of the fraternal strife concerning the imāmate when Suʿūd in 1287/1870 seized al-Ḥasā. Suʿūd's victory led ʿAbd Allāh to apply for help from Midḥat Pasha [*q.v.*], the Ottoman *wālī* of Baghdād. Yet Suʿūd advanced against al-Riyāḍ and captured the town in early 1288/1871. His usurpation of power was acknowledged as a legitimate take-over of the imāmate by ʿAbd al-Laṭīf b. ʿAbd al-Raḥmān for the sake of the Wahhābī community's preservation. When Ottoman troops entered al-Ḥasā in Rabīʿ II 1288/June-July 1871 ʿAbd Allāh b. Fayṣal, to whom the Ottomans seemingly had promised the appointment as *ḳāʾim-maḳām* [*q.v.*] of Nadjd joined them, vehemently condemned by ʿAbd al-Laṭīf b. ʿAbd al-Raḥmān for having deliberately handed over Muslim territory to *mushrikūn*. Yet ʿAbd al-Laṭīf b. ʿAbd al-Raḥmān's claim that *djihād* for the liberation of al-Ḥasā from the Ottomans was incumbent on the Wahhābī-Suʿūdī state was frustrated by the political weakness of Suʿūd, who was expelled from al-Riyāḍ by his uncle ʿAbd Allāh b. Turkī. In Radjab 1288/September-October 1871 ʿAbd Allāh b. Fayṣal renounced his cooperation with the Ottomans and returned to al-Riyāḍ, where ʿAbd Allāh b. Turkī placed the imāmate in his hands with the approval of ʿAbd al-Laṭīf b. ʿAbd al-Raḥmān. But in 1290/1873 he lost power for a second time to Suʿūd, who was once again acknowledged by ʿAbd al-Laṭīf b. ʿAbd al-Raḥmān as *imām* of the Wahhābī-Suʿūdi state. When Suʿūd died in Dhu 'l-Ḥidjdja 1291/January 1875, ʿAbd al-Raḥmān b. Fayṣal took over the imāmate, which he returned in 1293/1876 to his brother ʿAbd Allāh, who was installed for the third time as ruler of the Wahhābī-Suʿūdī state and was once again acknowledged as the legitimate *imām* by ʿAbd al-Laṭīf b. ʿAbd al-Raḥmān.

At this point there ended the fraternal strife over the imāmate which had split the population in their support of the various pretenders to power. Although the formal continuance of the Wahhābī-Suʿūdī state had been secured by ʿAbd al-Laṭīf b. ʿAbd al-Raḥmān through legitimation of each new ruler in al-Riyāḍ, the foundations of the state had been severely weakened not only through the definitive loss of al-Ḥasā to the Ottomans but also through the strengthening of movements for autonomy in other regions. In 1293/1876 ʿAbd Allāh b. Fayṣal had to face an upheaval against his authority in Burayda which was supported by the *amīr* of Djabal Shammar, Muḥammad b. Rashīd (1289-1315/1872-97). From this time onwards, the relationship between the Āl Rashīd and al-Riyāḍ openly deteriorated, with the Āl Rashīd gradually extending their territory at the cost of ʿAbd Allāh's power.

In Dhu 'l-Ḳaʿda 1293/December 1876 ʿAbd al-Laṭīf b. ʿAbd al-Raḥmān died and was succeeded by his son ʿAbd Allāh (1265-1339/1849-1921) as senior Wahhābī scholar. The weakening of the Wahhābī-Suʿūdī state became obvious when in the years 1299-1301/1882-4 ʿAbd Allāh b. Fayṣal lost several battles against Ibn Rashīd and was at the same time challenged by the sons of his late brother Suʿūd. In 1305/1888 Ibn Rashīd advanced against al-Riyāḍ; ʿAbd Allāh and his brother ʿAbd al-Raḥmān were taken prisoners and brought to Ḥāʾil [*q.v.*] in Djabal Shammar, while in al-Riyāḍ an *amīr* on the part of Ibn Rashīd was installed.

After the brother's return to al-Riyāḍ in Rabīʿ I 1307/October-November 1889, ʿAbd Allāh b. Fayṣal died. ʿAbd al-Raḥmān b. Fayṣal tried to establish himself as new ruler, but in 1309/1891-2 Ibn Rashīd advanced again against al-Riyāḍ, seized it, destroyed the city walls and castles and installed Muḥammad b. Fayṣal b. Turkī (d. 1311/1894) as vassal *amīr*. The Wahhābī-Suʿūdī state had at this point ceased to exist.

ʿAbd al-Raḥmān b. Fayṣal fled with his son ʿAbd al-ʿAzīz to Ḳaṭar and then to al-Kuwayt. ʿAbd Allāh b. ʿAbd al-Laṭīf was brought to Ḥāʾil, where he remained for approximately a year and then returned to al-Riyāḍ, where he seemingly worked as a teacher. Other Wahhābī scholars who had to witness the decline of the Āl Suʿūd's power continued their occupations under the new ruler, such as Ḥasan b.

Ḥusayn b. ʿAlī b. Ḥusayn b. Muḥammad b. ʿAbd al-Wahhāb (1266-1341/1850-1922, *ḳāḍī* in al-Aflādj, al-Madjmaʿa and al-Riyāḍ), Saʿd b. Ḥamad b. ʿAtīḳ (1279-1349/1862-1930, *ḳāḍī* in al-Aflādj) and ʿAbd al-ʿAzīz b. Muḥammad b. ʿAlī b. Muḥammad b. ʿAbd al-Wahhāb (d. 1319/1901, *ḳāḍī* in Sudayr and al-Riyāḍ).

Although the Wahhābī community in the 19th century lacked its initial expansionist zeal and had to face setbacks even in its very heartland of Nadjd, Wahhābī ideas gained influence in other regions of the Islamic world [see IṢLĀḤ]. Details of this process are not well known. The second half of the century brought forth fierce anti-Wahhābī polemics and refutations, of which the most important were written by Aḥmad b. Zaynī Daḥlān (1232-1304/1817-86 [*q.v.*]) and Dāwūd b. Sulaymān b. Djirdjīs al-Baghdādī al-Khālidī (1231-99/1816-82) (*Ṣulḥ al-ikhwān min ahl al-īmān wa-bayān al-dīn al-ḳayyim fī tabriʾat Ibn Taymiyya wa-Ibn al-Ḳayyim*, Bombay 1306/1889; *al-Minḥa al-wahbiyya fī radd al-wahhābiyya*, Bombay 1305/1888; *Ashadd al-djihād fī ibṭāl daʿwat al-idjtihād*, Bombay 1305/1888). Their writings prove the growing importance of Wahhābī teachings for others than the community itself and the need felt by its opponents to reject them. Frankly pro-Wahhābī voices were scarce. One open supporter of the Wahhābī cause was the Indian scholar Muḥammad Bashīr al-Sahsawānī (d. 1326/1908), who opposed Daḥlān for his anti-Wahhābī attacks (*Ṣiyānat al-insān ʿan waswasat al-shaykh Daḥlān*, Dihlī 1890). Another Indian scholar, Sayyid Aḥmad Brēlwī (d. 1246/1831 [*q.v.*]), held tenets similar to Wahhābī teachings. However, the actual dimensions of Wahhābī influence in India [see KARĀMAT ʿALĪ for a person with a pseudo-Wahhābī background] and its spreading in other parts of the Islamic world in the 19th century remain as subjects for research.

2. The 20th century.

The development of the Wahhābiyya in the 20th century is marked, from 1902 onwards, by the establishment of the third Saudi-Wahhābī state in the Arabian Peninsula under the leadership of the Imām (later also Sultan and King) ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Suʿūd (d. 1953), known as "Ibn Suʿūd/Saʿūd" [see ʿABD AL-ʿAZĪZ, in Suppl., and AL-SUʿŪDIYYA, AL-MAMLAKA AL-ʿARABIYYA].

The restoration of Saudi power in Nadjd [*q.v.*] was accompanied by a revival there of Wahhābī doctrine and its propagation, especially among the Bedouin tribes. As a result, a religious and paramilitary movement, called the Ikhwān [*q.v.*], succeeded in the settlement of a great number of nomadic tribesmen in cantonments called *hidjra* [see AL-HIDJAR], which at the same time were intended to form agricultural communities. To some extent, the *hidjar* promoted the homogenisation, based on Wahhābī principles, of the population of Nadjd as well as some of the adjacent territories conquered by Ibn Suʿūd (for these developments until 1936, see Kostiner in *Bibl.*).

The revolt of many of the Ikhwān, beginning in 1927, was the result of a conflict between pristine Wahhābism, as conceived by the Ikhwān, and Ibn Suʿūd's political pragmatism, which the latter tried to justify in religious terms by the principles of *idjtihād* and *maṣlaḥa* [*q.vv.*]. The suppression of their revolt (in 1929-30) did not mean the total eclipse of the Ikhwān but their subordination under the state and, later on, their partial transformation into units of the National Guard or a "religious police" called *muttawwiʿūn* [see MUTAṬAWWIʿA]. More recently, the memory of both their rôle in the dissemination of Wahhābī doctrine and of their revolt against Ibn Suʿūd seems to inspire certain oppositional circles within the Kingdom and abroad.

With the conquest of the Ḥidjāz [*q.v.*] in 1924-5 and the elimination of Hāshimite rule there [see HĀSHIMIDS], the pilgrimage to Mecca [see ḤADJDJ and MAKKA] and the *ziyāra* [*q.v.*] to Medina [see AL-MADĪNA] came under Wahhābī control. The religious policy of the new rulers, and in particular their suppression of

practices considered as *bidaʿ* [see BIDʿA] as well as the destruction of mausolea and tombstones at the cemetery of Baḳīʿ al-Gharḳad [*q.v.*] and elsewhere, gave rise to heated agitation in many parts of the Muslim world. Likewise, the intervention of Wahhābīs in traditional practices of the pilgrimage led to serious clashes and even international crises, one of the first and most famous ones being the so-called *maḥmal* incident of 1926 [see MAḤMAL]. These events resulted in serious tensions between Saudi Arabia and a number of Muslim countries such as Egypt and Iran (see Boberg and Kramer, in *Bibl.*). As for Iran, the strife over pilgrimage issues and the control of the Ḥaramayn [*q.v.*] flared up again after the Islamic revolution there of 1978-9 (see the annual surveys by M. Kramer, in *Middle East contemporary survey*, Boulder, Col., etc., esp. from vol. xi [1987] onwards).

With a few exceptions, the leading Ḥidjāzī families of scholars and merchants, most of whom had earlier been closely linked with the Hāshimites, were eventually won over by Ibn Suʿūd and adopted, at least externally, Wahhābī doctrine and practices. To the dismay of many Nadjdī *ʿulamāʾ*, however, the enforcement of Wahhābī norms has been restrained, in the Ḥidjāz and elsewhere, by both tacit local resistance and governmental consent. In addition, there has been a more or less constant influx of foreigners from a great number of Muslim and non-Muslim countries and with differing social and cultural backgrounds: specialised expatriates, asylum seekers, religious students, etc. Their presence, together with local traditions, has militated against a total assimilation of Saudi society to the Wahhābī way of life. Finally, the gradual erosion of Wahhābī values must also be seen in connection with the affluence resulting from oil wealth and a number of social developments related to it (Grandguillaume, in *Bibl.*).

Consequently, the religious discourse and daily practice (not only in the Ḥidjāz) in one way or another has come under the influence of the norms and values of the Salafiyya [*q.v.*] and similar trends (which in the past may have themselves been inspired by the Wahhābiyya). The frame of mind of many intellectuals, civil servants and technocrats in the country is dominated by the principles of reformism [see IṢLĀḤ. i] and may be described as a kind of "neo-Wahhābiyya" (Schulze in *Bibl.*, index, 500, 505). This process of partial moderation has been strengthened, from the 1950s onwards, even by the immigration of members of the Muslim Brotherhood [see AL-IKHWĀN AL-MUSLIMŪN] and related groups who, coming to Saudi Arabia as political refugees, have served there as advisers, school teachers and in other capacities.

Nevertheless, ultra-orthodox Wahhābī principles and practices are upheld to a considerable extent. Representatives of this current, such as Shaykh ʿAbd al-ʿAzīz b. Bāz (until his death in May 1999 Grand Mufti and president of the Board of Senior Scholars, *Hayʾat kibār al-ʿulamāʾ*, established in 1971) make their influence felt, e.g. by issuing *fatwās* [*q.v.*] as well as by shaping the structure and curricula of the Islamic University in Medina, an institution founded in 1961 (Schulze, index, 494, and Nādjī Muḥammad al-Anṣārī, *al-Taʿlīm fi ʾl-Madīna al-Munawwara*, Cairo 1414/1993, 610-40). In addition, Wahhābī *ʿulamāʾ* (including members of Muḥammad b. ʿAbd al-Wahhāb's family, known as the Āl al-Shaykh) still play an important rôle in the deliberations of the Mecca-based Muslim World League (*Rābiṭat al-ʿālam al-islāmī*), a Pan-Islamic organisation founded in 1962 (Schulze, esp. 181 ff., and see AL-RĀBIṬA AL-ISLĀMIYYA). To their embarrassment, however, some of their religious opinions and legal rulings are adopted by militant zealots and used in agitation against what the latter see as a betrayal of religious principles by a régime claiming Wahhābī legitimacy. The ideology of the rebels who seized the *ḥaram* of Mecca in November 1979 is a case in point (see Kechichian, in *Bibl.*, also Schulze, 369-74).

In spite of the opposition of many *ʿulamāʾ* to legal reform, a continuous process of modernist legislation characterised by a pragmatic approach can be observed in Saudi Arabia. There are even indications of the emergence of a legislative authority outside the control of the Wahhābī *ʿulamāʾ* (see Layish, in *Bibl.*). In line with this development, the promulgation in 1992 of three statutes or basic laws (*niẓām*, sing.), including one concerning the establishment of a *madjlis al-shūrā* [see MADJLIS; SHŪRĀ], are to be seen as a further step away from the traditional Wahhābī position of denying the need for any constitution beyond the Ḳurʾān and the Sunna of the Prophet (Teitelbaum, in *Bibl.*).

In the course of the 20th century, the Wahhābiyya have been rehabilitated in the eyes of many Sunnī Muslims all over the world. In particular from the second half of the 1920s onwards, prominent Salafīs and Arab nationalists such as Rashīd Riḍā [*q.v.*], Shakīb Arslān [*q.v.*], Muḥibb al-Dīn al-Khaṭīb [*q.v.* in Suppl.] and others have been instrumental in this development. There are, however, authors of different persuasions (including, of course, Ṣūfīs and Shīʿīs) who have continued to criticise Wahhābī doctrine and practice. (For bibliographical surveys of this literature, see ʿAlī, *Muʿdjam*, in *Bibl.*, and Āl Salmān, who in addition quotes Wahhābī refutations of these works, *Kutub*, i, 250-87.)

Wahhābī authors tend to describe the history of their movement in general, and with regard to the 20th century in particular, as an almost unremitting success story. In this connection, they are prone to exaggerate the *direct* influence of the Wahhābiyya, from the 18th century to the present, on more or less similar reform movements in West Africa, India and elsewhere (see e.g. the works of Djumʿa and Ḍāhir, which nevertheless are useful surveys, and also Q. Ahmad and Kaba, in *Bibl.*).

Ahmad, *The Wahabi movement in India*, Calcutta 1966; L. Kaba, *The Wahhabiya. Islamic reform and politics in French West Africa*, Evanston, Ill. 1974; C. Hock, *Fliegen der Seelen der Heiligen? Muslimische Reform und staatliche Autorität in der Republik Mali seit 1960*, Berlin 1999. (W. Ende)

WAHĪBA, Āl, a large ʿUmānī tribe with both settled and pastoralist sections, whose grazing *dār* covers a large area of the Sharḳiyya region to the south-east of the Djabal Akhḍar extending to the Arabian sea coastline, and including most of so-called Wahība Sands (though locally this sand-sea is known simply as "the sands", and tribes other than the Āl Wahība, notably the Djanaba, also live in it). The Āl Wahība are Hinawīs, and form part of a natural Sharḳiya-Hinawī alliance (which also includes the Ḥirth, Ḥadjriyyīn, and Ḥabs). There are four main tribal divisions: Bin Ḥayya, Hal Anfarri, Yaḥāḥīf, Hal Musallam, and the sheikhly section, Āl Bū Ghufayla, permanently settled at al-Aflādj. Each of these main divisions has a large number of sub-divisions. The Yaḥāḥīf, a semi-autonomous division, are alone said to account for more than half the numerical strength of the Āl Wahība.

Some sections of the Āl Wahība are more or less permanently settled in the towns and villages on the fringes of the sands (notably Sanaw, Bādiya, Barzamān, al-Mintirib), and in the wadis to the west (Wādī Andam, Wādī Ḥalfayn). Here many of the Āl Wahība are involved in agriculture and palm cultivation. In 1986, it was estimated that the nomadic, pastoralist population of the sands was 450-500 families, or about 2,700-3,000 souls, most of these being Āl Wahība. Some members of the tribe are semi-nomadic, summering in the villages on the northern fringe of the sands, and wintering in the sands with their animals. In the sands, the social structure is based on the mobile *farīḳ*, usually consisting of between one and five families who camp together, often in a loose assemblage of rugs and coverings simply draped over the branches of the proposis trees (*ghāf*) which abound in central and eastern sands. Goats and sheep are kept, as are camels by nearly all families, though usually in small numbers. The female camels bred by the Āl Wahība (particularly the *banāt farḥa* breed) are renowned as racing camels, and much in demand in ʿUmān and neighbouring countries such as Ḳaṭar where camel-racing is popular.

(C. Holes)

WĀḤIDĪ, a sultanate and confederation of tribes occupying the territory about 320 km/200 miles to the east of Aden [see ʿADAN], forming a delta shape from the Indian Ocean shore in the south, stretching north about 208 km/130 miles to the region of Bayḥān [*q.v.*], and flanked by the ʿAwlaḳī states in the west and the Ḳuʿayṭī sultanate in the east (see e.g. map in Johnston, *Steamer Point*). Its administrative capital was latterly Mayfaʿa near the impressive pre-Islamic fortifications of Naḳab al-Ḥadjar, whose pre-Islamic name, MYFʿT, it took, in the centre of the sultanate, while nearby ʿAzzān remained the home of the Wāḥidī ruling family (*dawla*) and Ḥabbān in the west the commercial capital. Other important towns included Biʾr ʿAlī (by 1961 incorporated into the one sultanate, but previously independent and whose ex-sultan was alive then), the pre-Islamic incense port of Cana (Ḳanā), on the south coast, and al-Ḥawṭa, a centre of religious visitations, between Mayfaʿa and Ḥabbān.

The name Wāḥidī is traditionally derived from one ʿAbd al-Wāḥid, a Ḳurashī (or Ḥimyarī) chief who gained control of the area, probably about the beginning of the 19th century, and established his residence in Ḥabbān (*Arab tribes*, 100). Local tradition and a passage from Bal-Faḳīh al-Shiḥrī's *Taʾrīkh* (see Serjeant, 40-1), however, relates that this is the oldest *dawla* in Southern Arabia and places ʿAbd al-Wāḥid about two centuries earlier. His inscribed tomb is reputed to be in the *djāmiʿ* mosque in Ḥabbān. In the 1880s, the sultanate appears to have split into three, with Biʾr ʿAlī and Balḥāf on the southern coast becoming independent of the ruler of Ḥabbān and ʿAzzān (*Arab tribes*, 102). When the Protectorate treaties were signed in 1888 and 1890, four separate treaties were ratified between the British government and states covering the area of the later sultanate: the "Shaykh" of ʿIrḳa (on the southern coast) (1888), the "Shaykhs" of Ḥawra (a short distance inland) (1888), the "Sultans of the Wāḥidī tribe" of Biʾr ʿAlī (1890) and the "Chiefs of the Wāḥidī tribe of Balḥāf" (1888) (*Arab tribes*, 180-6, with the texts of the treaties).

From 1937 the sultanate formed a part of the British-administered Eastern Aden Protectorate, but

in late 1961, having joined the Federation of Arab Amirates of the South whose other member states belonged to the Western Aden Protectorate, it joined the latter grouping of states (Burrowes, *Dictionary*, 377, dates accession to 1962). After entry into the Federation, the then Sultan Nāṣir b. ʿAbd Allāh al-Wāḥidī was given the portfolio of agriculture and fisheries in the Federal Government and the sultanate administered by the State Secretary, Amīr Muḥammad b. Saʿīd. The sultanate ceased to exist in 1967, when the British handed over power to the National Liberation Front in South Arabia.

The Wāḥidī sultanate had some large areas of fertile agricultural land and its main produce was dates, grain crops and vegetables. Wādī Djirdān in the north remains famous for its high-quality honey, this high quality said to result from the abundance of *ʿilb* (pl. *ʿulūb*) trees (*Zizyphus spina Christi* Willd.) in the area.

AL-WĀḤIDĪ, Abu 'l-Ḥasan ʿAlī b. Aḥmad b. Muḥammad b. ʿAlī b. Mattūya al-Mattūyī (Mattuwī) al-Naysābūrī al-Shāfiʿī, Arab philologist and Ḳurʾān scholar.

He was descended from a family of merchants from Sāwa [*q.v.*] who were very likely originally Christians. He was born in Naysābūr (Nīshāpūr), and died there after a long illness in advanced age in Djumādā II 468/January-February 1076, highly venerated as *ustādh ʿaṣrihī* "the master of his age". Still a boy, he took part in teaching sessions on *adab* and *naḥw*, and attended classes in the large law schools of his native city. Finally, he joined Abū Isḥāḳ al-Thaʿlabī [*q.v.*] (the form Thaʿālibī is also transmitted), the Ḳurʾān interpreter and authority on the biography of the Prophet, and associated himself with the pupils of Abu 'l-ʿAbbās al-Aṣamm [*q.v.*], the great local authority in the field of Tradition and Shāfiʿī law (Sezgin, i, 186). Of his students may be mentioned al-Maydānī [*q.v.*] and ʿAbd al-Ghāfir al-Fārisī (451-529/1059-1135). Just like other scholars he enjoyed the special favour and protection of the famous Saldjūḳ minister Niẓām al-Mulk [*q.v.*], who as a young man had taken part in al-Wāḥidī's sessions, and of the latter's brother Abu 'l-Ḳāsim ʿAbd Allāh b. ʿAlī b. Isḥāḳ *al-faḳīh al-adjall*.

Among al-Wāḥidī's works which have been preserved, the first to be mentioned are the *shaykh al-tafsīr* and the *imām ʿulamāʾ al-taʾwīl*'s highly-esteemed studies on the Ḳurʾān. Following a lecture given by his teacher Abū Ṭāhir al-Ziyādī (d. 410/1019) in 409/1018, he composed a terse philological commentary, entitled *al-Wadjīz fī maʿānī 'l-Ḳurʾān al-ʿazīz* (Cairo 1305/1887, repr. Beirut 1981). For the time being he put aside a detailed commentary, which he had already begun; he finally finished it five decades later in Radjab 461/May 1069 under the title *al-Wāsīṭ bayna 'l-maḳbūd ('l-Wadjīz) wa 'l-basīṭ ('l-Basīṭ) fī tafsīr al-Ḳurʾān al-ʿaẓīm* (for old mss. of parts of it, see Chester Beatty 4609, 5041, 5204). In the meantime he had published three *madjmūʿāt* on questions concerning the *tafsīr* (cf. Ahlwardt 750; *al-Mawrid*, xvii 4 [1409/1988], 292-304). It has to be checked whether the material of these three *madjmūʿāt* is to be found in his *Djāmiʿ al-bayān fī tafsīr al-Ḳurʾān* which has been preserved, or in *Ḥirār al-maʿānī* or in *al-Ḥāwī li-djamʿ al-maʿānī*, or whether they have been taken up into his third great commentary. So far it is not known when he started this third extensive commentary, entitled *al-Tafsīr al-basīṭ*, nor whether and when he completed it (for old manuscripts of parts of it, see Chester Beatty 3731, 3736, 5105). Particularly in demand was and still is his *Asbāb al-nuzūl* on the occasions in which singular sūras and verses were revealed (for the various recensions, see Ahlwardt, i, 180-1, no. 463-4; *G. des Q.*, ii, 183; for old manuscripts, see Chester Beatty 3733, 4522; latest prints Cairo 1411/1990, Beirut 1411/1991).

Like his teacher al-Thaʿlabī, al-Wāḥidī composed a *K. al-Maghāzī*, which seems to have been preserved (cf. R. Şeşen, *Nawādir al-makhṭūṭāt al-ʿarabiyya*, Beirut 1402/1982, iii, 57).

As grammarian, lexicographer and rhetorician he made a special name for himself with his commentary on the *Dīwān* of al-Mutanabbī [*q.v.*] (Sezgin, ii, ix, index). For the *al-Wasīṭ fī 'l-amthāl* falsely ascribed to him, see mathal.1.iii; Sellheim, in *Oriens*, xxxi (1988), 82-94, xxxii (1990), 468-9.

(R. Sellheim)

WAHM (a., pl. *awhām*), lit. "notion", "supposition", in particular also "false notion", "delusion". In non-technical parlance the negative meaning of thinking something to be the case, contrary to fact, is preponderant; sometimes it comes close to *sahw* "inadvertency", "inadvertent omission". In later texts it may

acquire the meaning of "hallucination" and "spectre" (see Dozy, s.v.).

1. In philosophy the term denotes "estimation", the "estimative faculty" (also *al-ḳuwwa al-wahmiyya*), and the "notion" resulting from the activity of this faculty (the plural is used with this last meaning, rarely also the second). *Wahm* belongs to the "internal senses" (*al-ḥawāss al-bāṭina*, see ḤISS), and in Ibn Sīnā it refers to the highest quasi-mental faculty in animals, that which allows a sheep to recognise the notion (*maʿnā*) "enemy" in a wolf and run away. Goichon and Afnan, following Mediaeval Latin usage, translate the term as "estimative faculty". It is rather close to *k͟hayāl*/*tak͟hayyul* "imagination" [see TAK͟HAYYUL, in Suppl.] and as a result, in Mediaeval Latin translations one finds it rendered as *estimatio, imaginatio, intellectus* and *opinio*.

Rahman found that nothing in Greek corresponded directly to *wahm* but that it was "a differentiation of Aristotle's "phantasia" (φαντασία) through Stoic influences". According to Morewedge, "there is no doubt that the concept was not directly borrowed from Aristotle" (324). Goichon concurs with this, while Wolfson espoused the idea of borrowing from the Greek. Walzer notes the problems that the Arabs had in finding an agreed rendition of the Greek word for "representation" (φαντασία): *Wahm*, as the chosen translation for φαντασία, was popular with such early translators as Usṭāt͟h [*q.v.*] and Ibn Nāʿima who respectively translated Aristotle's *Metaphysics* and the so-called *Theology of Aristotle* [see UT͟HŪLŪD͟JIYĀ] for al-Kindī. Walzer (385) points out that there is a diversity of terminology "in Abū ʿUt͟hmān al-Dimashqī's summary of Ḥunayn b. Isḥāq's translation of Galen's *Peri ēthōn*, which includes *taṣawwur, tawahhum*, and the curious hybrid *tak͟hayyul fi 'l-wahm*". Al-Kindī used the transliteration *fanṭāsiyā* and also *tawahhum*; al-Fārābī, relying on later translators, usually renders "representation" by *tak͟hayyul* (e.g. *al-Madīna al-fāḍila*, ch. i, 14; cf. Walzer, 385), which became the standard equivalent. For al-Fārābī, the delusionary character of *tawahhum* is prominent; commenting on Aristotle's *De Interpretatione* 21a, 32-3, "al-Fārābī is . . . misled by the translator's choice of *tawahhum* [imagination, with a suggestion that what is so imagined is mere fantasy] for δόξα, a word elsewhere rendered as *iʿtiqād* [belief]". He comments: ". . . that is to say, if a thing is said to be imagined it is excluded from existence. For our imagining it means that we picture it in our mind without its existing. If we raise in our minds something which exists we do not imagine it but know it" (Zimmermann, 156-7 and n. 1). Similarly, in Ibn Sīnā's *Dānis͟h-nāma-i ʿAlāʾī*, *wahm* "refers to the ability to have a mental experience of an event in contrast to the actual happening of that event" (Morewedge, 321). But mostly, *wahm* is a technical term in the "psychological epistemology" of Ibn Sīnā whereby it "is an internal sense belonging to the animal soul" (*ibid.*), see above.

Morewedge (322) points out that *wahm* "has frequently been used in Persian to designate a mental power from which a being can cause entities to emanate by mere thought".

2. In mysticism [see Suppl.].

WAHRĀN, the Arabic name for the North African coastal town conventionally known as Oran, the chief port of western Algeria (lat. 35° 45' N., long. 0° 38' W.). It is dominated by the Djebel Murdjadjo (400 m/1,312 feet) and sheltered within one of the large bays of the southwestern Mediterranean. In its hinterland lie vast, semi-arid plains, with the Great Sebkha [see SABK͟HA] in its western part.

It was founded by Muslims from Umayyad Spain in 290/903, not far from the bay of Marsā al-Kabīr, which was probably the ancient Portus Divini mentioned in the *Itinerarium* of Antoninus, and just a short time before the disintegration of the K͟hārid͟jite state centred on Tāhert [see RUSTAMIDS], which had controlled the roadsteads of the port. This was the period of Spanish Umayyad-Fāṭimid conflict. The former, with the support of Berber confederations like those of the Īfran and the Mag͟hrāwa [*q.vv.*], the latter with the support of the Zīrids [*q.v.*], endeavoured to impose their political domination and to control the routes bringing gold from the Sūdān. Hence Wahrān was destroyed and rebuilt on two occasions, in 297/910 and 342/954. Yūsuf b. Tās͟hufīn conquered it in 473/1081, and the Almoravids kept control there till 539/1145. Like other Mediterranean coastal towns, it suffered through the Almoravids' deflection of the gold route to Marrakesh, and possibly—like the Ḥammādid capital Bid͟jāya/Bougie—from incursions of the Normans. Under the succeeding Almohads and then the ʿAbd al-Wādids (whose founder Yag͟hmurāsan [*q.v.*] was recognised by the last Almohads as ruler of the central Mag͟hrib), Wahrān's commercial connections with Muslim Spain increased, thanks to the twin ports of Wahrān itself and Marsā al-Kabīr. The ʿAbd al-Wādids made it, together with Hunayn [*q.v.* in Suppl.] further west, the main maritime outlet for their unified kingdom based on their inland capital Tilimsān/Tlemcen and stretching from the Wadi Moulouya to the south of Kabylia.

In the 4th/10th century, Ibn Ḥawḳal described Wahrān as a lively place exporting great quantities of wheat, and in the next century, al-Bakrī described Marsā Wahrān as a great harbour, sheltered from all the winds; al-Idrīsī was struck by the continuous traffic in and out of it. The Almohad sultan ʿAbd al-Muʾmin had his fleet constructed at Marsā al-Kabīr, a port which Leo Africanus was later to describe in his *Description of Africa* as unparalleled in the world. Wahrān had lively markets (al-Idrīsī) and was surrounded by

gardens with windmills (al-Bakrī); Leo again, at the opening of the 16th century, praised its building and estimated its population at 6,000 hearths, say *ca.* 30,000 inhabitants, sedentary Muslims as well as Jews, some autochthonous and other immigrants from Muslim Spain who had arrived in waves since the setting-up of the Inquisition in Spain in 1391. The town had spread beyond its original site to suburbs on the Karguenta plateau on the other side of the Ra's al-'Ayn defile. Its prosperity was linked with that of Tilimsān, but was nevertheless now an independent maritime city and, like other Mediterranean coastal places, practised corsair marauding to compensate for periods of economic recession.

Encouraged by 'Abd al-Wādid decline and the Mamlūks' deflection of the trans-Saharan trade routes towards the Nile valley, the armies of Castile undertook a Reconquista along the coastlands of the Maghrib. In 910/1505 Marsā al-Kabīr was seized, followed by Pedro Navarro's entry into Wahrān and its agricultural hinterland on 17 May 1509. Massacres (of 4,000, according to Marmol) and deportations took place under Cardinal Ximenes. As at Bidjāya, the population of Wahrān fell, down to 3,500, almost half of these being troops; the town was closed to Muslims, there were forcible conversions and the remaining Jews were expelled. It was near the port that the Spanish defeated and killed the corsair captain Urūdj [*q.v.*], who had made himself master of Algiers, and in 1543 restored the 'Abd al-Wādid Abū 'Abd Allāh to his throne in Tilimsān and made him their vassal. A new state was founded and organised around Algiers by Urūdj's brother Khayr al-Dīn Barbarossa [*q.v.*], and the 'Abd al-Wādids expelled from their capital by Ṣalāḥ Re'īs. An expedition of Count Alcaudete, the Spanish governor in Wahrān, ended in disaster at Mustaghānim [*q.v.*] (965/1558). Thereafter, Wahrān remained for over two centuries (except for an interval 1708-32 when the Turks recaptured it) a *presidio*, to which the fort of Santa Cruz overlooking the town remains, together with the fort of San Andrea, and Burdj al-Ḥawḍī and the Canastel and Spanish gates, bear witness. The Spanish presence created beyond a reduced agricultural region, compared with that which Ximenes described as a paradise, a no-man's land, the *bled el baroud* or "land of warfare", left to tribal allies like those of the Banū 'Āmir, *Los Moros de Paz*, a hinterland left to nomadism and semi-nomadism.

Maritime activity in the port revived somewhat under the *bey* Bū Shalagham in 1120/1708, but after the Spanish, led by the Count of Montemar, regained the undefended town 24 years later, it was reduced to being a port for landing provisions for the increasingly isolated garrison. It had hardly more than 12,000 inhabitants, even after its recapture in 1206/1792 by the Bey of Mascara, the Ḳul-Oghlu [*q.v.*] Muḥammad al-Kabīr, 2,000 people having perished in the previous year from a terrible earthquake. Muḥammad al-Kabīr made Wahrān the capital of the Western Beylik, undertook rebuilding and moved in population, Muslims and Jews, from other towns of the region. To the *plaza de Oran*, dominated by the *ḳaṣba* (now in an advanced state of ruin) was added on the right bank of the Wādī 'l-Rāhī the new Jewish quarter, and two great streets, each 700 m long, along the plateau of the village of Karguenta. Corsair activity revived on a reduced scale, together with external trade, shared with Arzew and Rachgun, especially with nearby Gibraltar and Spain, until the blockade of Algeria which preceded the French occupation of 4 January 1831.

The French army occupied a town largely deserted by its 10-12,000 inhabitants, with the exception of the 3,000 Jews who remained or quickly returned, and now with less than 500 Muslims. According to Rozet, *Voyage dans le Régence d'Alger*, Paris 1833, the soldiers demolished fine houses, seeking wood for the fires of their kitchens. The Oran population, like that of Mustaghānim, had fled to the towns of the interior or the urban centres founded by the Amīr 'Abd al-Ḳādir [*q.v.*]. The deserted houses were occupied by troops or by all sorts of adventurers who came in their wake, or were the object of speculation. Like the *funduḳs*, the mosques served as quarters for the troops (those of the Pasha and Sīdī Ḥawārī) or were transformed into churches (that of the Barrānīs), whilst the old mosque, called after Muḥammad al-Kabīr, was used as baths for the soldiers. Destructions by the army, or subsequently authorised, caused a diminution in the Muslim patrimony and the Spanish fortifications, already much reduced by the earthquake leaving substantially the Pasha and Sīdī Ḥawārī mosques, the Bey's palace and that of his favourite wife, several tombs, occasionally some houses in varying states of preservation, and the Burdj al-Aḥmar and the Burdj al-Marsa, two towers probably built by the Marīnid Abu 'l-Ḥasan in 748/1347.

By virtue of the Desmichels treaty of 6 January 1834, the town received a consul of 'Abd al-Ḳādir, a sign of his sovereignty over the Algerian West recognised by the incomers and one which continued till 1841 in Oran and Mustaghānim. Even after 'Abd al-Ḳādir's surrender, the original, autochthonous population of Oran, including its Jews, did not return to its former level till 1872, whilst the Muslims remained a minority there till the eve of independence, being numbered in the census of 1954 at 104,000 compared with 171,000 Europeans. Thus the town remained, till 1962, the most European in Algeria, with its expansion due to its role as the metropolitan centre of the Algerian West. It absorbed the revenues of extensive colonial landed domains and functioned as the second port of Algeria which, whilst sharing the export of primary products with the other ports of Orania, retained a monopoly of imported products. There were also concentrated there the few industries of the region and the services necessary for the functioning of the colonial agricultural enterprises. The operation of the port and viticulture played large roles in the demographic pattern of Oran and its region. The dockyards and the colonisation of the Oran plateau attracted Algerians and Europeans, and especially Spaniards, after 1870 when there was a boom in vine-growing. The great influx of Algerians from the 1930s onwards arose less from the attractive power of the town of Oran than from the worsening rural crisis conditions and the mechanisation of farming on the plateau, so that from 25,000 in 1926 there were rises of 45,000 in 1936 and 85,000 in 1948.

Communal segregation was a permanent feature of the growth of Oran's population in the colonial period. On the eve of World War II, the 46,000 Algerians (24% of the population) occupied up to four-fifths of the Madina Jdida (see below) and the southern and southwestern suburbs (al-Hamri, Medioni, etc.), and in 1954, it was only there and in the recently-established encampments around the town (Victor Hugo, Petit Lac, Planteurs, etc.) that they were in a majority. In the European part of the town, Algerians were virtually absent from the central quarters—even those that were proletarian in social structure, such as Saint-Pierre—and the middle-class extensions of the town

centre, and a minority in the working-class quarters, except for Saint-Antoine, one of the rare mixed quarters of Oran.

From 1845 onwards, the expansion projects of the colonial town on the Karguenta plateau entailed the regrouping of some 2,000 Algerians there in one stretch of land. In 1880, when the European town had spread over the plateau, forming what became progressively the new town centre, the 9,000 Algerians remained concentrated almost wholly in what the Europeans called the "village nègre" and which the Algerians were to name Madina Jdida, in opposition to the old town and in deference to the Islamic urban tradition, even though neither its regular plan nor the architecture of its buildings conformed to this tradition. The urban life which developed there included the commercial and artisanal specialisation of streets, a concentration of mosques and *ḥammāms*, a *maḥkama*, *zāwiyas* (those of Sīdī Ḳaddūr and Sīdī Bilāl), but also the reformist *madrasa* al-Falāḥ and its offshoots in the suburbs of al-Hamri and Medioni. A form of urban life emerged there, with the oldest immigrants, now Oulad el-bled, contrasted with the *barrānīs*, newly-arrived rural immigrants, making the Madina Jdida, also called *madīnat al-ḥaḍar*, the *ʿāṣima* or capital of Muslim Oran and its rural hinterland.

The disturbances in the wake of the famines of the 1940s and the war for independence greatly swelled the Muslim population, which became a slight majority (210,000 out of a total of 400,000), concentrated on the marginal peripheries, whether planned, or spontaneous like the bidonvilles, and in the now saturated Madina Jdida and the southern and southwestern suburbs. The war brought about a violent cleavage, not between Muslim and Christian, as during the Spanish period, but between the indigenous population and the colons, beneficiaries of the colonial period and jealous of their privileges.

The substitution of Algerians in the 40,000 houses freed by the exodus of Europeans before and after independence has forcibly homogenised the communal landscape. At present, the town centre alone has over a hundred mosques and a large number of prayer rooms. Despite an influx of over 100,000 immigrants from the countryside and from the towns of Orania and Morocco, it was not till *ca.* 1970 that Oran recovered its population level of 400,000. The traditional enlarged family has begun to burst forth. A wage-earning class has developed considerably in the industrial zones of Arzew, Hassi Ameur and Essania since the 1970s, and new public housing in the Z.H.U.N. (*zones d'habitat urbain nouveau*) have made possible a spreading-out of the population. There is now an agglomeration of 1,170,000 inhabitants over 6,500 ha[2] beyond the 1962 perimeter, swallowing up the population groups around that perimeter and with extensions both eastwards and westwards. Liberalisation has, as in other large towns and cities, made the choice of habitat more selective and has extended unplanned zones of habitation, where fundamentalist Islamic ideas have even more appeal than in the town itself, where a vote of 39% for the Islamist candidate in the 1995 presidential election reveals the immense frustrations of a population still deeply attached to Islam.

(G. Marçais-[B. Semmoud])

al-**WAHRĀNĪ**, Abū ʿAbd Allāh Muḥammad b. Muḥriz b. Muḥammad, Rukn al-Dīn, Arabic prose writer. He was born in Oran, but spent a good part of his life in Egypt and then Syria, where he died at Dārayyā near Damascus in 575/1179. He wrote *maḳāmāt, rasāʾil* and *manāmāt* (stories of dreams). In one of his epistles he states that he had written a history of the Almohads, but no trace of this has so far been found. However, in the works of his which have survived, there are reflections on the state of the world in his time, on the Maghrib of the Almohads, on Sicily after its reconquest by the Normans, and on Ayyūbid Egypt and Syria.

There emerges from his writings that he lived off the generosity which he received from the great men of his time, and towards the end of his life he held the office of *khiṭāba*, delivering sermons at the Friday worship. Seeking gifts of money is a favourite theme of his epistles addressed to Ṣalāḥ al-Dīn al-Ayyūbī [*q.v.*] and to various viziers and judges. His panegyrics were mainly in prose, but he also composed numerous satires against his enemies, his rivals, and even against himself, displaying verve and humour, as well as erotic and scatological motifs which recall Ibn Sukkara, Ibn al-Ḥadjdjādj and Abu 'l-Muṭahhar al-Azdī [*q.vv.*]. If this *ṭarīḳ al-hazl* ("light-hearted treatment") of his subjects, dominates his œuvre, there is also a lyric strain when he describes his miserable state as an author and complains that the pursuit of *adab* does not give him a living.

Although a great admirer of al-Ḥarīrī [*q.v.*], al-Wahrānī did not imitate his style. His *maḳāmāt* are rather a gallery of comic portraits, sketching, by a few touches, a burlesque and grotesque picture. Another of his frequent traits is his use of prosopopeia, putting words in the mouths of minarets, or his own mule, complaining of hunger (an indirect method of solliciting help for himself!). In his stories of dreams, he speaks both of his contemporaries and persons of the past, the most developed one being one in which he describes the resurrection of the dead. In a story which recalls al-Maʿarrī's *Risālat al-Ghufrān*, al-Wahrānī finds himself in the Afterlife with various other writers who, although suffering the pangs of Judgement Day, still keep up their trivial and paltry quarrels. Providing an occasion for al-Wahrānī to settle his accounts, this eschatological dream, much admired by Ibn Khallikān, is one of his finest compositions.

Bibliography: Al-Wahrānī's writings have been gathered together by Ibrāhīm Shaʿlān and Muḥammad Naghsh as *Manāmāt al-Wahrānī wa-maḳāmātuhu wa-rasāʾiluhu*, Cairo 1968; a *maḳāma* on Fās was published by Saʿīd Aʿrāb in *al-Baḥth al-ʿilmī*, vi (1965).

There are notices of the author in Ibn Khallikān, ed. ʿAbbās, iv, 385-6; Ṣafadī, *Wāfī*, iv, 386-9; Ziriklī, *Aʿlām*, vii, 19. See also Brockelmann, S I, 489.

(ABDELFATTAH KILITO)

WAHRIZ, son of Kāmdjār, a Persian general of Khusraw Anūsharwān (A.D. 531-79 [see KISRĀ]). The name would apparently stem from MP *vēhrēz* "having a good abundance", see Nöldeke, *Gesch. der Perser und Araber*, 223 n. 2, and Justi, *Iranisches Namenbuch*, 340, but was in origin a title, since the Byzantine historian Procopius names the commander of the Sāsānid emperor Kawād's expedition into Georgia and Lazica (early 5th century) as having the title Ouarizēs (< **wahriz*); see DAYLAM, at Vol. II, 190a.

In response to an appeal *ca.* 570, via the Lakhmids [*q.v.*], from Sayf b. Dhī Yazan, the leader of a Yemeni national movement against Abyssinian rule there, the Persian emperor despatched a force under the aged Wahriz. The story in the Arabic sources that these 800 troops were condemned prisoners released specially from prison for this do-or-die expedition is a later, folkloric detail; the force was much more probably one of Daylamī mercenaries. It sailed from the head of the Gulf around the Arabian shores to Yemen, landed there, fought its way to the capital Ṣanʿāʾ, killed the Abyssinian governor Masrūḳ, son of Abraha [*q.v.*], and installed Sayf b. Dhī Yazan as the Persians' vassal ruler in Yemen. After an attempted Abyssinian revanche, Wahriz returned to Yemen and finally installed the dead Sayf's son Maʿdī Karib as ruler in Ṣanʿāʾ, thus inaugurating a period of some 60 years' Persian dominance in Yemen. Wahriz is said to have died in Yemen shortly before Anūsharwān's own death.

(C.E. BOSWORTH)

WAḤSH (A.), an adjective meaning "wild, desolate, uninhabited" (*al-dār al-waḥsh(a)* "the desolate abode", both with and without gender agreement), but more frequently a collective noun meaning "wild animals". The relative adjective (and the singulative) is *waḥshī*; the "wild ass" (*recte* "onager") is thus either *ḥimār al-waḥsh* or *al-ḥimār al-waḥshī*. The most common plural is *wuḥūsh* "kinds of wild animals", as one typically finds it in the title of the *kutub al-wuḥūsh*, lexicographical studies dealing with wild animals (name of the male and the female, age groups, etc.); see the relevant monographs by Ḳuṭrub (d. 206/821 [*q.v.*]) and al-Aṣmaʿī (d. 213/828 [*q.v.*]), ed. R. Geyer, in *SBAW Wien*, Phil.-hist. Kl., cxv (1888), 353-420. The opposite of *waḥshī* is *ahlī* "domesticated". Non-domesticated wild animals can nevertheless become tame; al-Djāḥiẓ makes this point about the animals kept in "wild-life enclosures" (sing. *ḥayr al-wuḥūsh*, see ḤĀʾIR), as maintained by caliphs and governors (*Ḥayawān*, ed. Hārūn, iv, 422; he mentions those of al-Muʿtaṣim and al-Wāthiḳ).

Waḥshī forms an opposition also with *insī*, the relative adjective, and singulative, of the collective noun *ins* "mankind". As adjectives they are used to denote the two sides of certain things in relationship to the human body: the one that points toward the human body is called *insī* and that which points away from it is called *waḥshī*; this refers to body-parts occurring in pairs (thus the *insī* side of the arm faces toward the rump, the *waḥshī* side away from it, cf. al-Aṣmaʿī, *Khalḳ al-insān*, ed. A. Haffner, in *Texte zur arabischen Lexikographie*, Leipzig 1905, 206, 207, 227), and also *inter alia*, to the two halves of the nib of the reed-pen [see ḲALAM].

Since *insī* is a counterpart not only to *waḥshī* but also to *djinnī*, relative adjective and singulative of *djinn* "jinn-kind", it is not unlikely that the two terms referring to non-human beings influenced each other. This may explain the fact that the metathesised form *ḥūshī* (if it is that; or else < **wuḥūshī?*), usually listed as a synonym of *waḥshī*, has a distinctly jinnic connotation: it is said to be a relative adjective derived from *al-Ḥūsh* [*q.v.*], a land of the jinn ("beyond Yabrīn" [Yāḳūt, *Buldān*, ed. Beirut, ii, 319a], i.e. in the Rubʿ al-Khālī), whence come the *ḥūshī* camels, jinn-owned stallions that allegedly sire offspring among herds belonging to men. It should be noted that *ḥūsh* in itself, not the *nisba*, also refers to camels, often glossed as *mutawaḥḥisha* "feral". (Note that Abu ʾl-ʿAlāʾ al-Maʿarrī uses the term metaphorically, together with two other camel terms, to denote the ease and frequency of certain rhymes: *dhulul* "docile", *nufur* "recalcitrant", and *ḥūsh* "untamed" rhymes, see *Luzūmiyyāt*, ed. I. al-Abyārī and Ṭ. Ḥusayn, Cairo 1378/1959, i, 45.) This being the case, one might suggest that the place name *al-Ḥūsh* was erroneously extracted from phrases like *bilād al-ḥūsh* and *rimāl al-ḥūsh*, which really meant "the land" or "the sands of the feral camels". The general area in which this land is located (broadly speaking between Yabrīn and al-Shiḥr) tallies well with the strong probability that the one-humped camel was dometicated in the desert areas of southern Arabia. The *ḥūsh* may even be a faint memory of truly wild camels, which today no longer exist. Al-Damīrī [*q.v.*] speaks of *ibil waḥshiyya* and *ibil al-waḥsh* "wild camels", which are allegedly the remnants of the camels of ʿĀd and Thamūd (*Ḥayāt al-ḥayawān*, [4]Cairo 1389/1969-70, i, 23, ll. 20-1), and Wabār [*q.v.*], the area in which the *ḥūsh* camels are predominantly found, is the former land/city of the ʿĀd [*q.v.*] that, after their destruction, was given by God to the jinn. Cf. R. Bulliet, *The Camel and the wheel*, [2]New York and Oxford 1990, 48.

For *waḥshī*/*ḥūshī* as a term of literary criticism, see the following entry.

Bibliography: Given in the article.

(W.P. HEINRICHS)

WAḤSHĪ (A.) and **ḤŪSHĪ** (A.), synonymous terms in literary criticism denoting words that are uncouth and jarring to the ear due to their being archaic and/or Bedouinic (often including the criterium of cacophony). It is thus mostly used in the context of "modern" poetry [see MUḤDATHŪN, in Suppl.]; and it mostly refers to single words rather than to any contextual obscurity (ʿAbd al-Ḳāhir al-Djurdjānī says this explicitly: *Dalāʾil*, ed. M.M. Shākir, Cairo 1404/1984, 44, l. 4). It is not, however, an exclusively poetic phenomenon. Al-Djāḥiẓ speaks of speech in general, when he says that the wording should be neither "plebeian, base, vulgar" (*ʿāmmī, sāḳiṭ, sūḳī*) nor "strange, uncouth" (*gharīb, waḥshī*); unless, in the latter case, he adds, the speaker is a Bedouin (*badawiyy[an] aʿrābiyy[an]*), as *waḥshī* speech is understood by *waḥshī* people, just as *sūḳī* jargon (*raṭāna*) is understood by *sūḳī* people (*Bayān*, ed. ʿAlī Abū Mulḥim, [2]Beirut 1412/1992, i, 135). From this we can deduce that (a) there is a golden mean between the all too colloquial, on the one hand, and the all too archaic, on the other, and that (b) for the Ancients and the

Bedouin, the *waḥshī* may be natural and thus not reprehensible. This latter point is taken up again by Ḳudāma [*q.v.*], who says that the Ancients used *waḥshī* words not by conscious search and affectation (*taṭallub, takalluf*) but according to their wont and the nature of their speech (*li-ʿādatihi wa-ʿalā sadjiyyati lafẓihi*) (*Naḳd al-shiʿr*, ed. S.A. Bonebakker, Leiden 1956, 100). Ibn Sinān al-Khafādjī (d. 466/1074) gives it a slightly different slant by putting the "naturally gifted Bedouin" (*al-badawī ṣāḥib al-ṭabʿ*)—who could be a contemporary—in the place of the Ancient and contrasting him with the "effect-seeking sedentary" (*al-ḳarawī al-mutakallif*); the latter knows these words only from the study of books (*Sirr al-faṣāḥa*, ed. ʿAbd al-Mutaʿāl al-Ṣaʿīdī, Cairo 1389/1969, 63). A finely-tuned scale of acceptability with regard to *gharāba* and *ibtidhāl* ("triteness"), based on a tripartite structure of language users (*ʿArab, khāṣṣat al-muḥdathīn, ʿāmmat al-muḥdathīn*) is offered by Ḥāzim al-Ḳarṭādjannī (d. 684/1285 [*q.v.*]) (*Minhādj al-bulaghāʾ*, ed. M. al-Ḥ. Belkhodja, Tunis 1966, 385-6; since the first part of the *Minhādj*, dealing with *lafẓ*, is missing in the unique ms., this passage has been culled from Bahāʾ al-Dīn al-Subkī, *ʿArūs al-afrāḥ fī sharḥ Talkhīṣ al-Miftāḥ*, and printed in an appendix; al-Subkī calls it a *mulakhkhaṣ*).

In spite of all this discussion, there was a popular misconception that the use of *waḥshī* words equalled *faṣāḥa* [*q.v.*]. Ibrāhīm b. al-Mahdī (d. 224/839 [*q.v.*]), the highly cultured ʿAbbāsid prince, is quoted as having said to his secretary ʿAbd Allāh b. Ṣāʿid: "Be careful not to seek out the *waḥshī* in speech, desiring to acquire eloquence; for that is the worst kind of inability to express oneself (*fa-inna dhālika huwa ʾl-ʿiyyu ʾl-akbar*); take that which is easy while avoiding the words of the *hoi polloi*" (*apud* Ibn Rashīḳ, *ʿUmda*, ed. M.M. ʿAbd al-Ḥamīd, Cairo 1383/1963-4, i, 265-7). Ibn Sinān al-Khafādjī recounts a *madjlis* in which one of the people present called Ibn Sinān's teacher, Abu ʾl-ʿAlāʾ al-Maʿarrī, a possessor of *faṣāḥa*, because much of his work was unintelligible even to the literati (!). And a few centuries later, Ṣafī al-Dīn al-Ḥillī (d. *ca.* 752/1351 [*q.v.*]) was accused of being a less than perfect poet, because he did not use *gharīb* words in his poetry, an accusation against which he wrote a well-known poem with a satirical beginning, see Vol. VIII, 803b.

For Ibn Ṭabāṭabā (d. 322/934), finally, all this is just a matter of the art of the poet; if he is good, he can turn the distasteful and *waḥshī* into something pleasant and likeable, and the pleasant and likeable into something *waḥshī* and strange (*ʿIyār al-shiʿr*, ed. al-Māniʿ, Riyāḍ 1405/1985, 202).

(W.P. Heinrichs)

WAḤSHĪ BĀFḲĪ (or **YAZDĪ**), Persian poet of the mid-10th/16th century. Contemporary sources give his name as either Shams al-Dīn Muḥammad (*Maykhāna*) or Kamāl al-Dīn (*ʿArafāt*). Waḥshī was born in the village of Bāfḳ, located between Yazd and Kirmān, sometime around 939/1532-3. After being tutored in poetry by his brother Murādī and the local poet Sharaf al-Dīn ʿAlī Bāfḳī, the young Waḥshī moved to Yazd and the nearby palace-complex in Taft and lived there for most of the rest of his life. Although Waḥshī wrote a few poems dedicated to the Ṣafawid Shāh Ṭahmāsp I [*q.v.*], most of his enconiums were addressed to the local rulers of Kirmān, Kāshān, and especially to the hereditary governors of Yazd, Ghiyāth al-Dīn Mīr-i Mīrān and his son Khalīl Allāh, descendants of Shāh Niʿmat Allāh Walī [*q.v.*] and in-laws of the Ṣafawid royal house. Probably as a result of excessive drinking, Waḥshī died in Yazd in 991/1583.

Although Waḥshī never ventured far from his birthplace, his poetry was widely known during his lifetime and has been admired by both contemporary and modern critics. Awḥadī Balyānī (*ʿArafāt*) considered Waḥshī the greatest rival of Muḥtasham Kāshānī, the poet laureate of Ṭahmāsp's court. Waḥshī is especially important for his role in the development of the *maktab-i wuḳūʿ*, "the school of the incident" or "realist style", which employed simple, colloquial language to describe and analyse the everyday incidents and emotions of profane love affairs. The unusually scornful way in which Waḥshī often addressed the beloved was dubbed *wā-sūkht* [see wā-sōkht]. These features are found chiefly in Waḥshī's *ghazals* and *tarkīb-bands*, the genres in which he achieved his greatest fame. His *dīwān* also contains *ḳaṣīdas*, *tardjīʿ-bands*, *rubāʿīs*, and *ḳiṭʿas*. In addition to several short, untitled works, Waḥshī's *mathnawīs* include *Khuld-i barīn*, *Nāẓir wa Manẓūr*, and *Farhād wa Shīrīn*. The last of these remained unfinished at Waḥshī's death and was twice "completed" in the Ḳādjār period by Wiṣāl-i Shīrāzī and Ṣābir-i Shīrāzī.

Bibliography: For a list of *tadhkira* sources, see Dh. Ṣafā, *Tārīkh-i adabiyyāt dar Īrān*, Tehran 1364 *sh.*/1985, v/2, 761. The most important of these sources are collected and quoted at length by Ḥ. Nakhaʿī in his introduction to Waḥshī's *Dīwān*, Tehran 1339 *sh.*/1960 (including the otherwise unpublished notice from Awḥadī Balyānī's *ʿArafāt al-ʿāshiḳīn*). See also Fakhr al-Zamānī Ḳazwīnī, *Tadhkira-yi Maykhāna*, ed. A. Gulčīn-i Maʿānī, Tehran 1340 *sh.*/1961, 181-97. (P.E. Losensky)

WAḤY (a.), a term of the Ḳurʾān, primarily denoting revelation in the form of communication without speech. Cognates in other Semitic languages include Palmyrene Aramaic *twḥyt* (*tawḥītā*) "decree [of the government]" and Mehri *hewḥū* "to come to someone's help".

In the Ḳurʾān, *waḥy* is presented as an exceptional modality of God's speaking to His creatures. This *waḥy* forms a concept of inspiration and communication without linguistic formulation, conveying the will of God, as in VII, 117: "And We suggested/put the idea into the head (*awḥaynā*) to Moses: 'Cast thy staff'. And lo, it forthwith swallowed up their lying invention". On other occasions, it conveys the speech of God to be shared as a message, as in XVIII, 27: "Recite what has been revealed (*ūḥiya*) to thee of the Book of thy Lord". This *waḥy* contains a prompting into action for its recipient (see T. Izutsu, *God and man in the Koran*, Tokyo 1964, 180), a doctrine held in common with a Biblical motif and reflected in the prophetic stories as retold in the Ḳurʾān (VII, 160, Moses; XX, 77, Moses; XXVI, 52, Moses; XXVI, 63, Moses; X, 87, Moses and Aaron told to take certain houses in Egypt for prayer; XXVIII, 7, Moses' mother told to suckle her child and then cast him into the sea; XX, 38; XXI, 73; XXIII, 27; XCIX, 5).

Prophets are not the only recipients of *waḥy*: the bees (XVI, 68) and heaven and earth (XLI, 12) are also spoken of. Nor is God the only source of *waḥy*: the satans among humans and *djinn* also inspire via *waḥy*, cf. VI, 121: "The Satans inspire (*yūḥūna*) their friends to dispute with you; if you obey them, you are idolaters". But it is *waḥy* which inspires the prophets, cf. IV, 163: "We have revealed (*awḥaynā*) to thee as We revealed (*awḥaynā*) to Noah and the prophets after him, and We revealed (*awḥaynā*) to Abraham, Ishmael, Isaac, Jacob, and the Tribes, Jesus and Job, Jonah and Aaron, and Solomon, and We gave (*ātaynā*) to David Psalms ..." (see also XII, 109; XVI, 43; XXI, 7; XLII, 3, 51, in which a spirit, *rūḥ*, is the agent).

Arthur Jeffery (*The Qur'an as Scripture*, in *MW*, xl [1950], 190-2) argued that *waḥy* has the basic sense of internal prompting, which is to be understood as guidance in a general way (as in XVI, 123, for example: "Then We revealed [*awḥaynā*] to thee: 'Follow thou the creed of Abraham, a man of pure faith and no idolater'"), but that it becomes combined in the Ḳur'ān with an external sense such that the message itself is also a product of *waḥy*, e.g. VI, 19: "Say: 'God is witness between me and you, and this Ḳur'ān has been revealed [*ūḥiya*] to me that I may warn you thereby, and whomsoever it may reach'"; see also XXI, 45. This identification of the literal message as the product of *waḥy* is fully developed in a passage such as XXIX, 45 which associates "the Book" with *waḥy*: "Recite what has been revealed (*ūḥiya*) to thee of the Book". XLII, 7 speaks of an Arabic Ḳur'ān as the product: "And so we have revealed (*awḥaynā*) to thee an Arabic Ḳur'ān". In this usage, the word may be seen to be functionally equivalent to *tanzīl*, the word frequently used with the image of a literal "bringing down" of a message.

In dealing with *waḥy*, it has been common for scholars to resort to ideas of historical development in Muḥammad's thought (e.g. Jeffery, *Scripture*, 193, 201, in which "internal" inspiration is early, reflecting an idea native to Arabs and "external" revelation is later, that being a scriptural notion). Thus a separation is seen between a notion of internal "inspiration", similar to that claimed by the poets and which is argued to belong to Muḥammad's early conceptions, and a firm sense of revelation from outside which is seen to emerge later in Muḥammad's career as the distinction between himself and poets became clearer to him. Even Izutsu (*God and man*, 180), who normally wishes to assign single meanings to words throughout the Ḳur'ān, speaks of the non-technical (and even pre-technical) versus the technical: a prompting to action (for example, in VII, 117 with Moses and the rod) in which "the words do not count", versus a process in which the words are everything (as in XIII, 30, with the combination of "recite" and "reveal", and emphasised further in LXXV, 16, although that passage does not speak of *waḥy* explicitly).

Waḥy, one may rightly conclude, is a difficult term in the Ḳur'ān. The search for a single meaning for the word has proved frustrating to scholarship, for the situations in which it is used do not seem to allow for a unified schematic of its use. The relationship of *waḥy* to *tanzīl* only makes the picture more complex, for the semantic range of the latter word appears to duplicate that of the former to a fair extent. While the desire is to see *waḥy* as meaning "inspiration", problems arise there too, given the complexity of the relationship to *ilhām* [*q.v.*], individual communication by God, as well as the importance of the "external" sense of the process within *waḥy* as compared to "inspiration" which is expected to be an internal non-verbal process (which, of course, it is at times in the Ḳur'ān).

"Inspiration", it is worthy of note, is a reflection of cultural values and has different meanings in different settings. The modern tolerance of the artistic temperament and its inspiration is a continuation of the Platonic (and other) idea of inspiration as a type of madness. However, the prophet of the Near East relied on inspiration to give advice, first to the ruler, then in later times to the public at large. The Ḳur'ān shares in a Near Eastern value of inspiration, one transformed through the history of Islam in the desire to protect Muḥammad (and the Arabic language) from contemporary and necessarily secular (since prophecy had ceased) ideals of "inspiration".

Muslim perceptions and understandings of the process of revelation are contained in the *sīra* and *ḥadīth* literature and are intimately connected to the life of Muḥammad such that his biography is reflective of and shaped by certain understandings of how revelation occurs. The material may be summarised as follows.

The beginning of revelation consisted in dreams anticipating real events (Ibn Hishām, 151; al-Ṭabarī, *Tafsīr*, xxx, 138; Ibn Sa'd, i/1, 129). Also afterwards, such dream visions are said to have occurred. When 'Ā'isha was under suspicion, she hoped that God would reveal her innocence to Muḥammad in a dream vision (Aḥmad b. Ḥanbal, vi, 197; al-Bukhārī, *Tafsīr*, on sūra XXIV, *bāb* 6).

The first revelation in which Djibrīl [*q.v.*] appeared to Muḥammad took place on Mount Ḥirā', when the angel said to him, "I am Djibrīl". Thereupon Muḥammad hastened to Khadīdja, crying, "Wrap me up", an allusion to Ḳur'ān, LXXIII, 1, or LXXIV, 1).

The first portions of the Ḳur'ān revealed was sūra XCVI, when the angel, in the month of Ramaḍān, during the retreat, showed him a piece of cloth, on which this sūra was written, saying, "Recite!" When Muḥammad protested that he could not read, the angel pressed him so strongly that he nearly suffocated. At the third repetition, the angel pronounced the verses which Muḥammad then retained.

After this there came a pause (*fatra* [*q.v.*]) in revelation. During this time Muḥammad was in such a depression that the thought of suicide came upon him (al-Ṭabarī, i, 1150; Ibn Hishām, 156, 166; Ibn Sa'd, i/1, 131). The pause ended with the revelation of Ḳur'ān, LXXIV, or XCIII.

The angel who transmitted revelation was visible to Muḥammad and to others (al-Bukhārī, *Faḍā'il al-Ḳur'ān, bāb* 1; Ibn Hishām, 154, cf. 156; Abū Nu'aym, *Dalā'il al-nubuwwa*, Ḥaydarābād 1320, 69). To some extent the ascension [see MI'RĀDJ] and the night journey may also be reckoned as revelations. Visions are also mentioned in the Ḳur'ān. LIII, 4-18, is the central focus here, with the idea of seeing someone or something typically identified as Djibrīl (see also LXXXI, 22-5). In other parts of the Ḳur'ān, however, revelation is said to have taken place by audition as in LXXV, 18. These auditory experiences become a major element in *sīra* and especially *ḥadīth*, and the accounts may be classified in a variety of ways.

(a) *How they were perceived by Muḥammad*

1. "Sometimes it comes as the ringing of a bell; this kind is the most painful. When it ceases, I retain what was said. Sometimes it is an angel who speaks to me as a man, and I retain what he says" (al-Bukhārī, *Bad' al-waḥy, bāb* 2; *Bad' al-khalḳ, bāb* 6;

Muslim, *Faḍā'il*, no. 87; al-Tirmiḏhī, *Manāḳib, bāb* 7; al-Nasā'ī, *Iftitāḥ, bāb* 37; Mālik, *Muwaṭṭa'*, ch. on *wuḍū' li-man mass al-Ḳur'ān*, no. 7; Aḥmad b. Ḥanbal, ii, 222, vi, 158, 163, 256 ff.).

2. In a different form of this tradition, Muḥammad says, "Sometimes it approaches me in the form of a young man (*al-fatā*) who hands it down to me" (al-Nasā'ī, *Iftitāḥ, bāb* 37).

3. The Apostle of God heard a sound like the humming of bees near his face; thereupon Ḳur'ān, XXIII, 1 ff. was revealed to him (al-Tirmiḏhī, *Tafsīr*, on sūra XXIII, no. 1; Aḥmad b. Ḥanbal, i, 34).

4. The Apostle of God used to move his lips from pain as soon as the revelation began. After the revelation of LXXV, 16, however, he listened until Djibrīl had withdrawn; thereupon he recited what he had heard (al-Bukhārī, *Tawḥīd, bāb* 43; al-Nasā'ī, *Iftitāḥ, bāb* 37; al-Ṭayālisī, no. 2628).

5. "... on the authority of ʿAbd Allāh b. ʿUmar: I asked the Prophet: 'Do you perceive the revelation?' He answered, 'Yes, I hear sounds like metal being beaten [cf. no. 1 above]. Then I listen and often I think I will die (of pain)'" (Aḥmad b. Ḥanbal, ii, 222).

(b) *How they were perceived by others*

1. Even on cold days, sweat appeared on his forehead (al-Bukhārī, *Bad' al-waḥy, bāb* 2; *Tafsīr* on sūra XXIV, *bāb* 6; Muslim, *Faḍā'il*, no. 86; Aḥmad b. Ḥanbal, vi, 58, 103, 197, 202, 256 ff., cf. iii, 21, and cf. further, above (a) 1.).

2. Muḥammad covers his head, his colour grows red, he snores as someone asleep, or rattles like a young camel; after some time he recovers (*surriyya ʿanhu*) (al-Bukhārī, *Ḥadjdj, bāb* 17; *ʿUmra, bāb* 10; *Faḍā'il al-Ḳur'ān, bāb* 2; Muslim, *Ḥadjdj*, no. 6; Aḥmad b. Ḥanbal, iv, 222, 224).

3. Muḥammad's colour grows livid (*tarabbada lahu wadjhuhu*: Muslim, *Ḥudūd*, nos. 13, 14; *Faḍā'il*, no. 88; Aḥmad b. Ḥanbal, v, 317, 318, 320 ff., 327; *mutarabbid*: al-Ṭabarī, *Tafsīr*, xviii, 4; *tarabbud djildihi*: Aḥmad b. Ḥanbal, i, 238 ff.; *tarabbada li-dhālika djasaduhu wa-wadjhuhu*: al-Ṭayālisī, no. 2667).

4. He falls into a lethargy or a trance (*subāt*) (Aḥmad b. Ḥanbal, vi, 103).

5. "Thereupon the Apostle of God sat down, turning towards him [ʿUthmān b. Maẓʿūn]. When they talked, the Apostle of God let his gaze swerve towards heaven; after a while he looked down to his right side and turned away from his companion, following his gaze and began to shake his head as if he tried to understand what was said to him, while ʿUthmān sat looking on. When Muḥammad had reached his aim, his gaze turned anew towards heaven, etc." (Aḥmad b. Ḥanbal, i, 318).

6. "When Muḥammad received a revelation ... this caused him much pain, such that we perceived it. That time he separated himself from his companions and remained behind. Thereupon he covered his head with his shirt, suffering intensely, etc." (Aḥmad b. Ḥanbal, i, 464).

"When the Apostle of God received a revelation, he began to cover his face with his shirt. When he swooned, we took it away, etc." (Aḥmad b. Ḥanbal, vi, 34; cf. above (b) 2.).

7. Zayd b. Thābit said, "I was at Muḥammad's side when the *sakīna* [*q.v.*] came upon him. His thigh fell upon mine so heavily that I feared it would break. When he recovered, he said to me, 'Write down', and I wrote down Ḳur'ān, IV, 97" (Aḥmad b. Ḥanbal, v, 184, 190 ff.; Abū Dāwūd, *Djihād, bāb* 19).

8. ʿAbd Allāh b. ʿAmr said, "*Sūrat al-mā'ida* was revealed to the Apostle of God while he was riding on his camel. The beast could not bear him any longer so he had to descend from it" (Aḥmad b. Ḥanbal, ii, 176). A similar tradition is transmitted from Asmā' bt. Yazīd (Aḥmad b. Ḥanbal, vi, 455, 458); another tradition of the same type is found in Ibn Saʿd, i/1, 131.

(c) *The circumstances under which revelation came upon Muḥammad*

1. Muḥammad is directly or indirectly asked for his opinion or decision when the answer is revealed to him. Examples include the use of perfumes during the *ʿumra* (al-Bukhārī, *Ḥadjdj, bāb* 17 [see above (b) 2.]); excuses for staying at home during an expedition (Abū Dāwūd, *Djihād, bāb* 19; Aḥmad b. Ḥanbal, v, 184); whether evil may proceed from good (Aḥmad b. Ḥanbal, iii, 21; al-Ṭayālisī, no. 2180); whether Muḥammad's wives were allowed to relieve a want near a town (Aḥmad b. Ḥanbal, vi, 56); whether ʿĀ'isha was guilty or not (al-Bukhārī, *Tafsīr*, on sūra XXIV, *bāb* 6; Aḥmad b. Ḥanbal, vi, 103, 197); whether divorce can be demanded in the case of adultery witnessed by one witness (al-Ṭayālisī, no. 2667); and concerning *ẓihār* (al-Ṭabarī, *Tafsīr*, xviii, 2). It is to be noted that the contents of these revelations are not always communicated and, if they are, they are not necessarily a part of the Ḳur'ān (cf. Nöldeke-Schwally, *Gesch. des Qor.*, i, 256-61); examples include Muḥammad's answers to the above questions regarding evil and his wives, as well as issues related to fornication (Aḥmad b. Ḥanbal, v, 317, 318, 320 ff., 327) and the permission of *liʿān* (al-Ṭayālisī, no. 2667).

2. Revelation comes upon Muḥammad while he is riding [see above (b) 8.] (al-Ṭabarī, *Tafsīr*, xxvi, 39), while his head is being washed (*ibid.*, xviii, 2), while he is at the table, holding a bone in his hand (Aḥmad b. Ḥanbal, vi, 56) and while he is on the pulpit (*ibid.*, iii, 21).

In Classical Muslim theology "... revelation as such was not the object of a consistent theory; for this we have to wait until the time of the philosophers. ..." (J. van Ess, *Verbal inspiration? Language and revelation in classical Islamic theology*, in S. Wild (ed.), *The Qur'ān as text*, Leiden 1996, 189; the entire article, 177-94, is a perceptive overview of the implications of the topic, written in anticipation of vol. iv of his *Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidschra*, Berlin 1997). The philosophical challenge [see e.g. NAFS] did, then, produce a theological reaction. Al-Īdjī (d. 756/1355) and his commentator al-Djurdjānī (d. 816/1413) combat the views of philosophers, according to whom it is a charisma peculiar to the prophets that "they see the angels in their corporeal forms and hear their speech by revelation; it is not to be rejected that, when they are awake, they see what the common people see when they are asleep; that is, they see persons who speak poetical words to them, which point to ideas corresponding to what really happens, since their soul is free from bodily occupations and can easily come into contact with the divine world (*ʿālam al-ḳuds*). Often this peculiarity becomes in them a settled faculty which is easily working". This theory of revelation is, according to al-Īdjī, misleading, not being in harmony with the views of the philosophers themselves, according to whom the angels cannot be seen, being merely psychic beings who do not produce audible speech, a property which belongs especially to corporeal beings. So the theory of the philosophers explains revelation as the imagining of what has no basis in reality, as little as what comes from the lips of ailing and lunatic people. Yet if any of us should

command and prohibit on our own authority what is salutory and sensible, we would not, on account thereof, be a prophet. How much less, then, would be a prophetic utterance based upon imaginings which have no foundation and are often contrary to reason? (*Kitāb al-Mawāḳif*, ed. Soerensen, Leipzig 1848, 172 ff.).

(A.J. WENSINCK-[A. RIPPIN])

WĀʾIL [see BĀHILA; BAKR B. WĀʾIL].

WĀʿIẒ (A., pl. *wuʿʿāẓ*), preacher, mostly preacher who admonishes, to be distinguished from *ḳāṣṣ* [*q.v.*] and *mud̲h̲akkir*. This distinction, however, is only clearly made from the 4th/10th century onwards. It is the preacher's task to give sermons conveying admonishments (*waʿẓ*, *mawʿiẓa*), the public performance of which is called *mad̲j̲lis al-waʿẓ* or *mad̲j̲lis al-d̲h̲ikr*. In contrast to the *k̲h̲uṭba* [*q.v.*], it can be held at any place and time. Etymologically, the Arabic root *w-ʿ-ẓ* is related to Hebrew *y-ʿ-ṣ*. A *yoʿeṣ* is a king's adviser, mostly in wordly affairs (Baumgartner, *Hebräisches und Aramäisches Lexikon*, s.v. *y-ʿ-ṣ*); in Hebrew, the term lacks the aspect of religious warning. In the Ḳurʾān, the root *w-ʿ-ẓ* and its derivations (*waʿẓ*, *mawʿiẓa*) in most cases contain a warning. Consequently, the Ḳurʾān commentaries explain *mawʿiẓa* with *ʿibra*. The form II of the root *d̲h̲-k-r*, *d̲h̲akkara*, *mud̲h̲akkir*, and the form V *tad̲h̲akkara*, have the somewhat weaker nuance of "admonishing, to be admonished". However, the root may also indicate "good advice" (*nuṣḥ*, *naṣīḥa*) and "right guidance" (*irs̲h̲ād*). Finally, *waʿẓ* can also mean *waṣiyya*, the spiritual testament which a father gives to his son. In old Arabic poetry the root is also used in the sense of admonition.

1. In classical Islam.

The *wāʿiẓ* often carried a stick and sat on a stool (*kursī*). His public could consist of huge masses of people, as in the case of Ibn al-D̲j̲awzī (see below), but also of individuals, such as rulers, before whom he would stand in a *maḳām*; in principle, his sermon was addressed to everybody. From the 5th/11th century onwards, the function of *wāʿiẓ* becomes institutionalised. Thus Niẓām al-Mulk [*q.v.*] introduced it at the Niẓāmiyya in Bag̲h̲dād. Consequently, the *wāʿiẓ* was often used for political and ideological purposes, as in discussions between schools of law and dogmatic movements, especially in Bag̲h̲dād.

Themes of warning sermons were the transitoriness of the world and of life; the motif *ubi sunt qui ante nos in mundo fuere*, the threat of death; the weakness of the soul; the call to penance and to renunciation of the world (*zuhd*). In this way, the soul was to be shaken up and to judge itself, man was to become his own warning preacher. It is thus understandable that it should be the adherents of the pietistic-mystical movements who were active as *wuʿʿāẓ*.

In addition to the pious traditions found in the Ḳurʾān, *ḥadīt̲h̲* and the *ḳiṣaṣ al-anbiyāʾ*, rhymed prose (*sad̲j̲ʿ*), *badīʿ* [*q.vv.*] and poetry were often used as rhetorical means. Such means could also serve love poetry, re-interpreted in a mystical, Ṣūfī sense, which in the listener's soul was meant to kindle a longing for the only real beloved, God. Criticism of the *wuʿʿāẓ* was directed against an exaggerated use of this kind of poetry, against the use of weak traditions and of stories which only incite wordly interests. Famous warning preachers are above all known from Bag̲h̲dād. To the 3rd/9th century belongs Manṣūr b. ʿAmmār (d. 225/839-40; see van Ess, *Theologie und Gesellschaft*, iii, 102-4), and to the 5th and 6th/10th and 11th centuries belongs the Ḥanbalī theologian Ibn ʿAḳīl (d. 513/1119 [*q.v.*]). ʿAbd al-Ḳādir al-D̲j̲īlānī (d. 561/1161 [*q.v.*]), whose name is connected with the Ḳādiriyya, was also famous as a preacher. The polymath Ibn al-D̲j̲awzī (d. 597/1200 [*q.v.*]), finally, was the most famous of them all. Ibn D̲j̲ubayr [*q.v.*] has left an account of the overwhelming influence of his sermons.

Texts of sermons, in particular of those held before rulers and dating from relatively early times, were transmitted by al-D̲j̲āḥiẓ (d. 255/868-9), Ibn Ḳutayba (d. 276/889) and Ibn ʿAbd Rabbihi (d. 328/940). Abū Ṭālib al-Makkī (d. 386/996) and Muḥammad al-G̲h̲azālī (d. 555/1111) [*q.vv.*] enter into a critical discussion on specific aspects of the *wuʿʿāẓ* phenomenon; in the 8th/14th century, criticism is taken up again in Mamlūk Egypt by Ibn al-Ḥād̲j̲d̲j̲ (d. 785/1383 [*q.v.*]). The most detailed opinion on the function and task of the preacher and his sermons is given by Ibn al-D̲j̲awzī. Not only did he collect information on famous preachers of the past but he also assembled his own sermons into monographs, such as *Ṣayd al-k̲h̲āṭir* and *Kitāb al-Mudhis̲h̲*, and provided them with instructions for correct usage.

2. In modern times.

In the second half of the 20th century, the introduction of cassette tapes began to influence the nature of sermons. Popular preachers now take into consideration that their words are audiotaped by their public on simple cassette recorders, and, sometimes, widely distributed. These cheap cassettes have gained for a number of preachers a popularity only comparable to the popularity of pop stars in the West.

Some preachers have taken the distribution of the cassettes on which their sermons were registered into their own hands, and the sale of such cassettes may have become a modest source of income to them and their staff. However this may be, sermons by popular preachers are offered for sale almost everywhere in towns and villages in the Muslim world. Often, cassettes containing sermons are dated and numbered. This makes it possible to find out whether a preacher has been absent from the pulpit, for reasons of health or imprisonment. *Waʿẓ* can thus be a political manifestation.

The distribution on cassette tapes means that sermons are not only available in a written form (and hence in formal Classical Arabic), but also in the form in which they were actually delivered. Printed sermon collections usually "adapt the language of the sermon to the needs of the printed page", which, at least, means "replacing colloquial words by classical ones". It would be a matter of surprise if this would not have happened in the past as well. The modern cassettes, however, make the observation of the stylistic technique of "code-switching" a distinct possibility.

Although Islam is "a lay religion par excellence" (Snouck Hurgronje), not everybody is allowed to preach a sermon from the pulpit of the mosque. A preacher is usually referred to as *s̲h̲ayk̲h̲* but this is a general, deferential title that also is used in many other settings. Not every address by a preacher is a sermon. Dependent on the social context, his words may be referred to as a *muḥāḍara* "lecture" or *dars* "lesson".

The authority of the preacher depends on his knowledge, and on the recognition of this knowledge by his audience. Formal, Azhar-type training in Ḳurʾān and *S̲h̲arīʿa* is not always deemed to be sufficient: "Specialists in modern technical ways of knowing, and new prestigious branches of science, presume the right to displace traditional scholars" as preachers.

Bibliography: Translations of an example of a 19th century sermon may be found in E.W. Lane, *Manners and customs*..., ed. Paisley and London, 1896, ch. III, 100-2; of a 20th century sermon in G. Kepel, *The Prophet and Pharaoh*, Eng. tr. London 1985, 177-86. The most authoritative, modern study of a *wāʿiẓ* is P.D. Gaffney, *The Prophet's pulpit. Islamic preaching in contemporary Egypt*, Berkeley, etc. 1994. See also the chapters on the popular preachers S̲h̲ayk̲h̲ Kis̲h̲k and S̲h̲ayk̲h̲ Muḥammad Mutawallī al-S̲h̲aʿrāwī in J.J.G. Jansen, *The neglected duty*, New York 1986. (J.J.G. Jansen)

WAḲʿA-NÜWĪS, the title of the late Ottoman official historian.

The post of official historian, *weḳāyiʿ-nüwīs*, later *waḳʿa-nüwīs* ("events/event-writer"), in the Ottoman empire dates from the early 18th century. It was a position attached to the Ottoman central administration, which provided for a series of officially-appointed writers to compile a continuous, approved narrative of recent Ottoman history as a formal historical record, to be routinely printed and made available. The post continued in existence for two hundred years, until 1922, virtually the end of the Ottoman empire.

The term *weḳāyiʿ-nüwīs* is known to have been used of some individual historians from the early 17th century, and continued on an *ad hoc* basis as a general designation for an official charged with recording the events of a military campaign or an embassy. The official historian's recording function may also have been foreshadowed by a possible duty of the late 16th-century court historiographer, the *s̲h̲ehnāmed̲j̲i* [*q.v.*], to keep a regular daybook (see D̲j̲emāl al-Dīn Meḥmed Ḳarṣlī-zāde, *Āyīne-i ẓürefā/ʿO̲th̲mānlı taʾrīk̲h̲ we müwerrik̲h̲leri*, Istanbul 1314/1896, 41-2). However, there is no clear continuity between the early court historiographers and the 18th-century office of *waḳʿa-nüwīs* (cf. L.V. Thomas, *A study of Naima*, New York 1972).

Naʿīmā [*q.v.*] is generally recognised as the first *waḳʿa-nüwīs*, commissioned around 1110/1698-9 by the Grand Vizier ʿAmūd̲j̲a-zāde Ḥüseyin Köprülü [*q.v.*] to write a history of the Ottoman state from the *hid̲j̲rī* millennium (*ca.* 1591-2) onwards. It is likely, however, that a formal post was not instituted until the appointment in 1126/1714 of Rās̲h̲id [*q.v.*]. A general pattern emerged whereby each *waḳʿa-nüwīs* was expected to continue the narrative from where his predecessor had finished (sometimes several years prior to the time of writing), while also compiling notes on contemporary events for his own use or that of a successor. All relevant government departments were instructed to make their records available for consultation by the *waḳʿa-nüwīs* once they were no longer current. Drafts were submitted annually to the sultan, and could be published only with his approval.

Appointees were either members of the *ʿulemāʾ* or, more usually, of the *k̲h̲ʷād̲j̲egān*, section chiefs, within the Ottoman central bureaucracy. They were required to be learned, literary and loyal; an interest in history was an additional qualification. They tended to hold the post for only a few years in the middle of a bureaucratic or *ʿulemāʾ* career, often in addition to their existing post; few left any historical work other than that required of them as *waḳʿa-nüwīs*, and some are shadowy figures about whom little is known.

Consequently, the prestige of the office and its product fluctuated, particularly towards the end of the 18th century, as shown by a series of short-term appointments and complaints by appointees of poor remuneration and limited access to relevant documents. Significantly, the leading Ottoman historian of the mid-19th century, Aḥmed D̲j̲ewdet Pas̲h̲a [*q.v.*], *waḳʿa-nüwīs* from 1855 to 1866, chose to rewrite the history of the period 1774 to 1825. His successor, Luṭfī Efendi [*q.v.*], in post 1866-1907, compiled the last *waḳʿa-nüwīs* history, a basic chronicle of the period 1826-79. New developments in Ottoman historical writing after the *Tanẓīmāt* era rendered the traditional recording function of the official historian obsolete before the end of the empire. The last *waḳʿa-nüwīs*, ʿAbd al-Raḥmān S̲h̲eref, in post 1907-22, combined presidency of the newly-formed *Taʾrīk̲h̲-i ʿO̲th̲mānī End̲j̲ümeni*, an academic history society, with the writing of school textbooks. (For further information, see also individual entries on ʿIZZĪ; ENWERĪ; ʿĀṢIM; ESʿAD EFENDI; and TAʾRĪK̲H̲, Ottoman and modern Turkish, section 3/i "official historians".)

Bibliography: For an extended discussion of the post and its holders, with bibliography and references, see Bekir Kütükoğlu, *İA* art. *Vekāyinüvīs*, of which the present article is a much abridged summary. (Christine Woodhead)

WAKĀLA (A.), verbal noun of the verb *wakala*, a technical term of Islamic religion, and more generally, of commercial practice and law. It means to commission, depute or authorise a person to act on behalf of another. It is a term far from easy to encapsulate in one meaning since it carries a variety of legal, and theological concepts. One of the attributes of God, given in the Ḳurʾān and *ḥadīt̲h̲* is *al-Wakīl*, which indicates protection and sustenance, while according to al-Sarak̲h̲sī, the word indicates the entrusting (*ḥifāẓ*) of another person's property.

The concept of *wakāla* is significant in Islamic law as a practical mechanism by which all forms of

contracts may be activated. According to Ḥanafī law, it is the basis of all forms of contractual partnership. For validity, the following basic rules are required, many of which are the same as expected in general contracts:

1. The condition of contract validity (*ṣiḥḥa*) requires that both parties must be able to dispose of their property, that the object of *wakāla* must be definite and legal, and that the obligation and acceptance of both parties (*īdjāb, ḳabūl*) are clearly manifest.

2. The authorisation may be specific or general within the configuration which will be explained below.

3. The *wakāla* contract is like that of *wadī'a* [*q.v.*], representing a voluntary contract which would be converted into a commercial contract if fees are stipulated.

4. No responsibility is incured on the proxy (*wakīl*) except in case of negligence (*tafrīṭ*) or intentional transgression (*ta'addī*).

5. The contract can be terminated at the behest of either party or, like any other contract, by the death, insanity or legal incompetency of either of them.

Wakāla contracts may vary according to the nature of the economic operation that is governed. According to the requirement of the contract, *wakāla* can be either general (*'āmma*) to cover all forms of transactions and deals, or special (*khāṣṣa*) which is restricted to a particular disposition, for example a *wakāla* for selling cannot be valid in a transaction for letting. Muslim scholars differ regarding the legitimacy of the *wakāla* if it is drawn up in general and unlimited terms. Although the Ḥanafī and Mālikī schools accept this kind of *wakāla*, both Shāfi'īs and Ḥanbalīs restrict the legitimacy of such contracts to what is stipulated. The reason that they give for rejecting general *wakāla* is that it can lead to great deception (*gharar*). This is probably why all the schools of Islamic law accept the prevalent custom (*'urf*) as a guide to control the deputed action. Accordingly, if the deputy violates custom and sells an object with great loss (*ghabn fāḥish*), his action can only be valid if confirmed by his client.

Agents can also be limited within certain logistic stipulations such as price bid, and quality and condition of the good or object. This *wakāla*, which is restricted by its *modus operandi*, is termed a *wakāla muḳayyada*, its opposite being the unrestricted *wakāla muṭlaḳa*. When the timing of the contract is important, the contractors may opt for a time restriction on the *wakāla*. The *wakāla muwaḳḳata* is the form of *wakāla* which is restricted by a time designated in the contract setting it up.

Due to the religious nature of Islamic law, *wakāla* as a legal mechanism extends itself to cover religious practices, too. It is part of the lawyer's undertaking to assess the validity of the *wakāla* in matters such as the pilgrimage (*ḥadjdj*), although, according to Ibn Ḳudāma, *wakāla* is not valid in matters that specifically target or involve the personality of individuals (*'ayn al-mukallaf*) such as testimony (*shahāda*), oaths (*aymān*), and pledges (*nudhūr*), or in rituals that individuals may find physically possible to perform, in contrast to those that may represent potential impossibilities such as *ḥadjdj*. The personality of the two parties is also an important element that differentiates *wakāla* from other contracts. The most important legal consequence of the personal aspect of *wakāla* is that it involves an inbuilt mechanism that terminates the contract once one of the two contractors dies.

Al-Sanhūrī, following the French terminology, cited *wakāla* as one example of the nominated contracts (*'uḳūd musammāt*), which are contracts popularly known by a specific usage term. The nature of a representation contract as a "nominated contract" has apparently caused some confusion in French law and in the Arabic legal systems that have inherited its legacy. This confusion has resulted from the distinctive nature of the *wakāla*'s subject (*maḥall al-'aḳd*) when compared with other contracts' subjects. The nature of the *wakāla*'s subject is a legal action (*taṣarruf ḳānūnī*) or *acte juridique*, whereas all other contracts involves material action or *acte matériel*. The confusion arises in the classification of the contracts of professional persons such as lawyers, medical doctors and teachers which are considered by French law to be a deputisation contract rather than commission (*muḳāwala*) contract. According to al-Sanhūrī, this is an unfounded assumption, based purely on personal grounds, because the subjects of all these contracts are legal actions and not material ones. However, al-Sanhūrī's statement generalises by treating each of these professions as one, despite the difference in their provided services. From an Islamic legal perspective, it is the service which represents the decisive factor whether the contract is one of deputation or commission. Accordingly, lawyers' services would be within the *wakāla* definition, whereas teachers' and medical doctors' employment falls within the spectrum of commission or an employment contract. The critical factor, in all contracts in Islamic law, is the nature of what the individual is offering and not the name of the profession. In Islamic law, all professions are ruled by the rules of professional contract (*'aḳd al-ṣunnā'*), which are contracts that consider the provided service as the main guideline when problems concerning responsibility are raised.

A similar confusion about the position of *wakāla* arises in modern Arabic legal systems. Various definitions of *wakāla* seem to be affected by prevalent practical use within commercial life. Often the term is extended to include the supplier who is not necessarily an agent. In countries like Bahrain, Kuwait, Saudi Arabia and the UAE, it is important to examine each individual law separately in order to decide whether the actual basis constitutes *wakāla*.

WAḲĀR, MĪRZĀ AḤMAD SHĪRĀZĪ, Persian poet of the Ḳādjār period, born in 1232/1817 in Shīrāz, died there in 1298/1881. Waḳār was the oldest of six sons of the poet Wiṣāl-i Shīrāzī, and under his father's tutelage, he became expert in Shī'ī and Ṣūfī lore, calligraphy and classical poetry. After his father's death, Waḳār travelled to India in 1265/1848-9 and published an annotated, lithograph edition of Rūmī's *Mathnawī* during his year-long residence in Bombay. He spent most of the rest of his life in Shīrāz, supported by income from writing, calligraphy, and government stipends. He went to Tehran in 1274/1857-58 on family business and again around 1281/1864 and 1290/1873. Although he was well re-

ceived at the Ḳādjār court and met Nāṣir al-Dīn Shāh, he was ill at ease in the capital city. His five brothers (especially Wiṣāl's third son Muḥammad Dāwarī) and two sons were all also capable poets.

In his many works of poetry and prose, Waḳār adheres to the models and style of the classical writers of the 5th-7th/11th-13th centuries. Containing more than 25,000 verses, his *dīwān* (first vol. printed Tabrīz 1348 *sh*./1969) includes all the traditional genres, but it is in the *ḳaṣīda* that Waḳār shows his real mastery. These poems are addressed to many members of the Ḳādjār court, in particular the governors of Fārs province (see Nawābī, 69-74). Imitating earlier masters, including Farrukhī, Manūčihrī, Sanā'ī and Anwarī [*q.vv.*], Waḳār's *ḳaṣīdas* are noted for their descriptions of the seasons and for an often personal, epistolary tone. His accounts of earthquakes in Shīrāz are frequently cited. Waḳār composed three *mathnawīs*. *Bahrām wa Bihrūz*, a didactic romance about the conflict between two brothers, remains unpublished. *Rumūz al-imāra* (Shīrāz 1331/1913) is a verse translation of 'Alī's letter to the governor of Egypt in the metre of the *Shāh-nāma*. In the manner of Rūmī's *Mathnawī*, Waḳār's *Mūsā wa Khiḍr* (Shīrāz 1361 *sh*./1982) tells the story of these two prophets, digressing frequently into commentary and parallel tales. Among Waḳār's prose works, *Andjuman-i dānish* (Shīrāz 1366 *sh*./1987) consists of anecdotes intermixed with poetry in the style of Sa'dī's *Gulistān*. *Rūzmah-i Khusrawān-i Pārsī* (Shīrāz 1356 *sh*./1977) is an account of the legendary kings of ancient Iran. Also in the historical vein is Waḳār's long prose work on the martyrdom of Imām Ḥusayn, *'Ashara-yi kāmila* (Shīrāz 1361 *sh*./1982). Waḳār penned a number of shorter prose epistles; these are unpublished, except for his commentary on six chronograms by Muḥtashim-i Kāshānī [*q.v.*].

Bibliography: Waḳār's published literary works are given in the body of the article above. Among the *tadhkiras*, see Riḍā Ḳulīkhān Hidāyat, *Madjma' al-fuṣahā*, ed. M. Muṣaffā, Tehran 1336-41 *sh*./1957-62, vi, 1132-53; Mīrzā Ḥasan Fasā'ī Shīrāzī, *Fārsnāma-yi Nāṣirī*, repr. Tehran 1340 *sh*./1961, ii, 66-7; and Ma'ṣūm 'Alīshāh Shīrāzī, *Ṭarā'iḳ al-ḥaḳā'iḳ*, ed. M.J. Maḥdjūb, Tehran 1339-45 *sh*./1960-6, iii, 372-4. Aḥmad Dīwān Baygī Shīrāzī, *Ḥadīḳat al-shu'arā'*, ed. 'A. Nawā'ī, Tehran 1364-6 *sh*./1985-7, iii, 2028-40, and Shaykh Mufīd Dāwar, *Mir'āt al-faṣāḥa*, ed. M. Ṭāwūsī, Shīrāz 1371 *sh*./1992, 698-701, are especially useful for their editors' annotations and bibliographies. Among secondary works, see Browne, *LHP*, iv, 225, 300, 319; Rypka, *Hist. of Iranian literature*, 331-2; and especially, M. Nawābī, *Khāndān-i Wiṣāl-i Shīrāzī*, Tabrīz 1335 *sh*./1956, 51-119, which offers the fullest account of Waḳār's life and works. (P.E. Losensky)

WAḲF (A.), in Islamic law, the act of founding a charitable trust, and, hence the trust itself. A synonym, used mainly by Mālikī jurists, is *ḥabs, ḥubus* or *ḥubs* (in French often rendered as *habous*). The essential elements are that a person, with the intention of committing a pious deed, declares part of his or her property to be henceforth unalienable (*ḥabs, taḥbīs*) and designates persons or public utilities as beneficiaries of its yields (*al-taṣadduḳ bi 'l-manfa'a, tasbīl al-manfa'a*). The Imāmī Shī'a distinguish between *waḳf* and *ḥabs*, the latter being a precarious type of *waḳf* in which the founder reserves the right to dispose of the *waḳf* property.

I. In Classical Islamic Law

Not mentioned in the Ḳur'ān, it derives its legitimacy primarily from a number of *ḥadīths*. The first one is related on the authority of Ibn 'Umar and is included, in various versions, in the main *ḥadīth* collections:

'Umar had acquired land in Khaybar and came to the Prophet to consult him in this matter saying: "O Messenger of God, I have acquired land in Khaybar which is more precious to me than any property I have ever acquired." He [Muḥammad] said: "If you want, make the land itself unalienable and give [the yield] away as alms (*in shi'ta ḥabbasta aṣlahā wa-taṣaddaḳta bihā*)." He (Ibn 'Umar) said: Thereupon 'Umar gave it away as alms [in the sense] that the land itself was not to be sold, inherited or donated. He gave it away as alms for the poor, the relatives, the slaves, the *djihād*, the travellers and the guests. And it will not be held against him who administers it if he consumes some of it(s yield) in an appropriate manner or feeds a friend who does not enrich himself by means of it (Ibn Ḥadjar al-'Asḳalānī, *Bulūgh al-marām*, Cairo n.d., no. 784).

Another *ḥadīth* often quoted in favour of the legitimacy of the *waḳf* is included in the *Ṣaḥīḥ* of Muslim: "The Messenger of God said: 'When a man dies, only three deeds will survive him: continuing alms, profitable knowledge and a child praying for him'" (*ibid.*, no. 783). Further, there is a report by Djābir that all companions of the Prophet who were financially capable of doing so, had made *waḳfs* (Ibn Ḳudāma, *al-Mughnī*, v, 598-9).

1. Origins.

In the legal discussions of the 2nd and early 3rd century A.H. we find several legal institutions that in the later legal doctrine were subsumed under the heading of *waḳf* and left their traces in that doctrine (see Schacht, *Early doctrines*). The terminology was probably fluid in the very beginning and was systematised only later. The first institution is that of *al-ḥabs fī sabīl Allāh*, the donation of horses, weapons, slaves for the sake of *djihād* or houses for sheltering the warriors at the frontier. The second one (*ḥabs mawḳūf, ṣadaḳa mawḳūfa*) is a kind of temporary endowment for a limited number of people that after their extinction reverts to the founder or his heirs. The word *mawḳūf* here has the original legal meaning of "suspended" and only later did it acquire the meaning of "made into a *waḳf*". This type of *waḳf* has survived in Mālikī doctrine. Thirdly, there was the permanent *waḳf* (called *ṣadaḳa muḥarrama* by the early Shāfi'īs), usually in favour of the poor, or in favour of certain classes of relatives and descendants or even clients (*mawālī*) and then, after their extinction, to the poor. Its validity was contested, especially by Abū Ḥanīfa. Finally, there were permanent *waḳfs* in favour of mosques or public utilities. It seems that *waḳfs* in favour of one's relatives or descendants (*waḳf ahlī*)

were very common in the early period and that the *waḳfs* in favour of mosques and public utilities (*waḳf khayrī*) were secondary.

At the beginning of this century, C.H. Becker (in *Isl.*, ii [1911]) argued that the institution of charitable *waḳf* was influenced by the *piae causae* in Byzantine law. His view was widely shared (see e.g. Heffening, art. *Waḳf* in *EI*[1], and J. Schacht, *Droit byzantin et droit musulman*, in *Fondazione A. Volta, atti dei convegni*, xii [1957], 213-15, where the older literature is quoted). Apart from the obvious structural similarities between both institutions (elaborated by A. d'Emilia, *Comparazione*), Becker's arguments were that, according to al-Maḳrīzī, there were only *waḳfs* of urban real estate in Egypt during the first three centuries of Islam, and that this state of affairs, in accordance with Byzantine law, was the same regarding Coptic pious endowments in this period. Cl. Cahen (*Réflexions sur le waqf ancien*, 37-56), however, showed that the evidence put forward by Becker was not convincing. If al-Maḳrīzī's observation is reliable, Cahen argued, this applies only to Egypt. Elsewhere, there is no indication of such a restriction, and, in fact, *waḳfs* of rural property were widespread in early Islam. This seriously weakens the argument of Byzantine influence on the development of the Islamic doctrine of *waḳf*. Moreover, the fact that, in Egypt, *waḳfs* were restricted to urban property in the early centuries of Islam may stem from the fact that the rural population of Egypt at that time was predominantly Christian. Finally, Cahen pointed out that, in early Islam, *waḳfs* in favour of relatives and descendants were predominant and not those in favour of religious institutions.

The immediate spread and popularity of the *waḳf* derives from the fact that it served social and economic needs. It was a means to protect an estate against confiscation by the state or against disintegration as a result of *Sharīʿa* succession. Moreover, it could be used to circumvent the rules of Islamic succession and keep property as much as possible within the agnatic group. At the same time it could provide a regular income for one's relatives and descendants in order to protect them from want. With regard to mosques and public utilities, there were two types, each serving its own purpose: there were *waḳfs* consisting of the mosque or the utility itself (school, bridge, fountain) and there were *waḳfs* generating the income for the maintenance and operation of these utilities. Finally, *waḳfs* provided relief for the poor.

2. Founding a *waḳf*.

(a) *The founder* (al-wāḳif, al-muḥabbis)

The founder of the *waḳf* must have the general capacity to act and contract (*ahliyyat al-adā'*), i.e. he must be adult, sound of mind, capable of handling financial affairs (*rashīd*), a free person and not under interdiction for prodigality or bankruptcy. Being a Muslim is not required; in principle, *waḳfs* founded by *dhimmīs* are valid. In addition, the founder must be sound of body to be legally capable of performing gratuitous acts. For if a person founds a *waḳf* during his last illness (*maraḍ al-mawt*), it is subject to the restrictions with regard to bequests (*waṣiyya* [*q.v.*]), that is, its value may not exceed one-third of the estate. In Mālikī law, finally, a married woman would need her husband's authorisation if the value of the *waḳf* exceeds one-third of her property, as in the case of gifts.

(b) *The object* (al-mawḳūf, al-muḥabbas)

The goods that are made into *waḳf* must be goods that are not excluded from legal traffic and can be the object of a valid contract (*māl mutaḳawwim*). This means that (1) people have control over them (hence not a fish in the sea or a runaway slave); (2) their use is lawful (hence not musical instruments or objects used for worship in other religions, such as crucifixes, nor impure goods like wine and pork); (3) they are not otherwise excluded from legal traffic (hence not public domains; *waḳf* property or an *umm walad* [*q.v.*]). These are general requirements that are applicable to all contracts involving the transfer of property.

In addition, there are some other requirements that are specific regarding the founding of a *waḳf*. Only physical goods (*ʿayn*) that are clearly defined and exist at the moment that the *waḳf* is founded can be made into a *waḳf*. A debt or "one of the houses owned by me" (if the founder owns more than one house) cannot validly constitute the object of a *waḳf*. Furthermore, the founder must be entitled to dispose of the intended object of the *waḳf*. He cannot make a *waḳf* of another person's property or his own property if it has been pledged. The previous conditions are mentioned by all the law schools with the exception of the Mālikīs. *Waḳfs* must be perpetual, but there is controversy on the implications of this principle with regard to the object of the *waḳf*. Goods whose use consists in their consumption cannot be dedicated to *waḳf*, but most schools allow movable goods that wear out by their use. Some jurists have argued that even silver and gold coins can be made into a *waḳf*. The Ḥanafīs, however, are stricter in this respect. Their basic rule is that only immovable property (both *ʿushr* and *kharādj* land) can be the object of *waḳf*. Only in exceptional cases do they allow that movable goods are made into a *waḳf*. These exceptions are:

1. Movable goods that follow immovable property, such as the slaves, animals, and agricultural tools belonging to a rural estate;

2. Movable goods that are mentioned in certain *ḥadīths* as valid objects of *waḳf*, such as horses and weapons for *djihād*; this is Abū Yūsuf's opinion;

3. Movable goods that people are accustomed to dedicate to *waḳf*, such as shovels, pickaxes and biers, to be used in graveyards, copies of the Ḳur'ān, to be read in mosques or schools, and cooking pots to be used in public kitchens for the poor; this view, ascribed to Muḥammad al-Shaybānī, has become the authoritative one within the Ḥanafī school.

(c) *The beneficiaries*

Both persons and public utilities, such as mosques, schools, bridges, graveyards and drinking fountains, can be the beneficiaries of a *waḳf*. Beneficiaries of the first type can be one or more individuals ("*Fulān ibn Fulān*", "my children", "my male offspring") or collectivities ("travellers", "the poor of this town"). The jurists note that in the case of *waḳfs* in favour of public utilities the actual beneficiaries are all Muslims, or the Muslims of a certain region or the inhabitants of a town, who collectively have the right to use these utilities. Modern legislation distinguishes between charitable *waḳfs* (*waḳf khayrī*) dedicated to pious causes (public utilities, the poor) and family *waḳfs* (*waḳf ahlī*) made in favour of one's relatives and descendants. Classical doctrine does not make this distinction and the two types of *waḳf* are governed by the same rules. There can be two groups of beneficiaries who are entitled at the same time, e.g. if the founder has stipulated that half of the proceeds go to the poor and half to his children. Usually, several subsequent classes of beneficiaries are mentioned. A very common clause is to designate first one's sons and unmarried daughters, then one's agnatic grandsons and unmarried agnatic granddaughters, then one's agnatic great-grand-

sons and unmarried agnatic great-granddaughters, and so on. In such cases, no class becomes entitled until the previous one is entirely extinct.

A valid dedication must satisfy the following conditions:

1. The immediate beneficiaries (i.e. the first class of beneficiaries) must exist at the time of the foundation of the *waḳf* and be identified or identifiable. The designation of an unborn child as the immediate beneficiary of a *waḳf* is therefore invalid. Only the Mālikīs hold that beneficiaries that do not yet exist may be designated. The proceeds are saved until he is born. If this does not occur, they return to the founder or his heirs.

2. The beneficiaries must be capable of acquiring property. This excludes slaves and *ḥarbīs*, but not *dhimmīs*. The scholars disagree on whether a *musta'min* can be a beneficiary. Regarding *waḳfs* in favour of public utilities, their users are regarded as the beneficiaries.

3. The purpose of the *waḳf* must be lawful. Therefore, a *waḳf* for the building and maintenance of churches, synagogues and monasteries is null and void, even if made by *dhimmīs*. However, some jurists point out that *waḳfs* in favour of churches and monasteries may be valid if they serve specific functions not related to worship, e.g. offering hospitality to the poor or travellers.

There is controversy on the validity of a *waḳf* in favour of the founder. Most jurists hold that such a stipulation is invalid. They argue that founding a *waḳf* implies the transfer of the right to dispose of and the right to use the *waḳf* property. Retaining (part of) the right to use it is in conflict with this principle. The Ḥanafīs, however (with the exception of Muḥammad al-Shaybānī), assert that such a *waḳf* is valid on the strength of the *ḥadīth* about ʿUmar quoted above, since he stipulated that the *waḳf*'s administrator was entitled to "eat" from its proceeds, and it is well known that he himself was its first administrator. The Ḥanbalīs interpret this *ḥadīth* in a more restricted sense: they regard a stipulation to the effect that the founder can use the *waḳf*'s proceeds during his lifetime as valid, but not his designation as a beneficiary.

The Ḥanafīs, with the exception of Abū Yūsuf, hold that it is required for the validity of a *waḳf* that the designation of the beneficiaries should include a final class whose existence is regarded as perpetual, such as the poor. Otherwise, they argue, the perpetuity of the *waḳf*, which is an essential element, is jeopardised. According to the other law schools and Abū Yūsuf (whose opinion became the prevailing one within the Ḥanafī school), the absence of such a designation does not affect the validity of the *waḳf*, since it is not known that the Companions included such stipulations when founding *waḳfs*. As a consequence the jurists have discussed what happens to the *waḳf* after the extinction of the last beneficiaries, or after the institution for which the *waḳf* has been founded, has been destroyed and cannot function anymore. Some argue that the *waḳf*, being perpetual, remains operative and that it must be determined who are the most appropriate new beneficiaries. According to Abū Yūsuf, it is an implied stipulation that the poor are the new beneficiaries since the founding of a *waḳf* is intended as a charity. The Ḥanbalīs and most Shāfiʿīs hold that the proceeds of the *waḳf* are to be spent on the founder's heirs. They also base their view on the implicit notion of charity in *waḳfs*, but add on the strength of several *ḥadīths* that the best charity is charity in favour of one's relatives. The Mālikīs distinguish between a perpetual and a temporary *waḳf*. After the extinction of the beneficiaries of the first type, the *waḳf* is continued in favour of the poor among the founder's closest agnates, or, in their absence, to the poor in general. If the *waḳf* was founded in favour of a public utility that has been destroyed and is beyond repair, the Mālikīs hold that a similar destination must then be sought for its proceeds. As for the temporary *waḳf* founded in favour of a limited number of individuals, for their lifetime or for a certain period, this type reverts to the founder or his heirs upon extinction.

(d) *The act of founding*

A *waḳf* is founded by a declaration of the founder. Although not required by law, this declaration would normally be recorded in a document (*waḳfiyya, rasm al-taḥbīs*; for the oldest example now known, dating from the end of the 2nd century A.H., see al-Shāfiʿī, *K. al-Umm*, Cairo 1321, iii, 282-3). The general theory of *fiḳh* regarding declaration of intent applies. If the wording of the declaration is obvious and unambiguous (*ṣarīḥ*), the declaration alone is constitutive, otherwise, i.e. if the declaration is indirect (*kināya*), circumstantial evidence pointing to the intent of founding a *waḳf* is required, e.g. the use of additional words, such as "it shall not be sold, given away or inherited". There are small differences between the various law schools, but as a rule expressions containing the words *waḳf*, *ḥabs* and *tasbīl* and their derivatives are regarded as unambiguous. In exceptional cases a *waḳf* can be founded by acts implying the intention. If for instance a person builds a mosque and allows other persons to pray in it or if he establishes a graveyard and lets other persons bury their dead in it, then this is regarded as tantamount to founding a *waḳf*. This is based on the principle that certain acts are by custom regarded as an expression of the intent to perform a certain legal act. Only the Shāfiʿīs always require a verbal declaration.

There are certain stipulations that are regarded as being contrary to essential characteristics of the *waḳf* and their inclusion would make the *waḳf* null and void. Some such stipulations have already been discussed: *waḳfs* dedicated to an unlawful aim or those for which the founder has been designated as beneficiary. There are, however, several others. These are related to two principles: the immediate effect of the act of founding a *waḳf* (*tandjīz*) and its perpetual character. All jurists except the Mālikīs agree that founding a *waḳf* to be effective at a future point of time (*muḍāf*), or making it dependent on an uncertain condition (*muʿallaḳ*), renders the act void. There is only one exception: all law schools allow that a person founds a *waḳf* by testament, effective upon his death. This, then, is governed by rules of testament (*waṣiyya* [*q.v.*]). Stipulations that the *waḳf* is founded for a limited period or that the founder may revoke it or sell or give away its property, are regarded by all jurists except the Mālikīs as contrary to the required perpetuity of the *waḳf* and invalidate its founding.

(e) *Conditions of irrevocability* (luzūm)

The Mālikīs, Ḥanafīs (with the exception of Abū Yūsuf), the Imāmī Shīʿa and some Ḥanbalīs hold, in analogy with gifts, that a *waḳf* is not binding and irrevocable until the property has actually been transferred to the beneficiaries or the administrator. If, before the property has been handed over, the founder dies or loses his right of disposal over the property as a result of bankruptcy or serious illness, the *waḳf* is void. Regarding public utilities, transfer of property is assumed to have taken place as soon as the founder

lets the public use them. The Imāmī Shī'a, however, require also in this case that the property be actually handed over to the administrator. Those who do not require transfer of property argue that the aforementioned *ḥadīth* from 'Umar does not mention it as a condition and that founding a *wakf* is more like the freeing of a slave (an act which does not require this transfer) than making a gift.

There is also a difference of opinion on the question of whether it is required for the irrevocability of the *wakf* that the immediate beneficiaries, at least if they are defined, accept their rights. For most law schools, their acceptance is not a condition for the irrevocability, but, as in the case of bequests, a condition for acquiring their rights. The Shāfi'īs, however, hold in analogy with bequests that the *wakf* is only binding and irrevocable after the immediate beneficiaries have accepted. Those beneficiaries that acquire their rights after the *wakf* has been founded, do not have to accept expressly. However, they may reject it, after which they forfeit their rights.

3. The legal effects.

All law schools hold that establishing a *wakf* is a valid and irrevocable act. Only Abū Ḥanīfa asserted that a *wakf* is only irrevocable if the founder establishes it as from the moment of his death or if it is affirmed by a *ḳāḍī*'s sentence. (For the discussion and arguments of both parties, see al-Kāsānī, *Badā'i' al-ṣanā'i'*, vi, 318-19; Ibn Ḳudāma, *al-Mughnī*, v, 598-600.) If a person founds a *wakf* during his lifetime, Abū Ḥanīfa holds that the *wakf* remains his property and he may revoke the *wakf* by alienating its property. After his death, the property reverts to his heirs. Establishing a *wakf* during one's lifetime is, in Abū Ḥanīfa's view, nothing else than a vow to donate the proceedings of the *wakf* property to the beneficiaries at the moment of one's death. This opinion, however, was not followed by his companions Muḥammad al-Shaybānī and Abū Yūsuf, who held, like the jurists of the other legal schools, that establishing a *wakf* is an irrevocable and binding act. In order to dispel all doubts about the binding character of a *wakf*, Ḥanafī practice was for the founder to have recourse to judicial proceedings. The standard procedure was that the founder, after having handed over the *wakf* property to the administrator, would reclaim it alleging that the *wakf* was revocable according to Abū Ḥanīfa's doctrine. The judge then would establish the irrevocability of the *wakf* by giving judgement according to the doctrine of Muḥammad al-Shaybānī and Abū Yūsuf and finding for the defendant.

The majority of the jurists base their opinion that establishing a *wakf* is a legally valid act on the *ḥadīths* that have been mentioned at the beginning of this article. Abū Ḥanīfa, however, argues that *wakfs* may not infringe upon the rights of one's heirs and quotes a *ḥadīth* transmitted by Shurayḥ to the effect that after the revelation of the verses of succession Muḥammad said: "No *wakfs* to the detriment of the Ḳur'ānic shares of inheritance" (*lā ḥabs 'an al-farā'iḍ*). Moreover, he adduces a *ḥadīth* transmitted by 'Abd Allāh b. Zayd (not included in the main collections; for the text, see Ibn Kudāma, *al-Mughnī*, v, 598) according to which the Prophet sold land that had been made *wakf*. And as to the examples of the Companions, he alleges that these instances may date from before the revelation of the verses of inheritance.

The irrevocability of the act of founding a *wakf* implies for all law schools except the Mālikīs (for whom the founder remains the owner of the goods, albeit without any of the powers of ownership) that the founder ceases to be the owner of the object of the *wakf*. Since Islamic law confers legal personality only on natural persons, the jurists had to come to grips with the problem of who becomes the new owner of the *wakf* goods. In order to answer this question, they made use of two analogies leading to two different solutions. As we have seen above, most law schools compare founding a *wakf* with making a gift or other gratuitous legal act. For them, the beneficiaries become the new owners, although their ownership is a restricted one, not including the right of disposal. As in the case of gifts, they regard the actual transfer of property and the taking possession by the beneficiaries or the administrator as the moment when the founder's property right ceases to exist and the *wakf* becomes irrevocable. Some jurists, however, compare it with the act of freeing a slave (*'itḳ*) and are of the opinion that the ownership, immediately upon the declaration, is transferred to God. On this theoretical issue, advocates of both views can be found within each law school, except for the Mālikīs.

Since a *wakf* is founded in perpetuity, the goods belonging to it need maintenance. If the goods are exploited by renting it out, maintenance must be paid from the proceeds, before the beneficiaries get their shares. If the beneficiaries of the *wakf* only have the right to use it, they themselves are liable for the maintenance of the goods. If they are negligent, the *ḳāḍī* is entitled to take appropriate measures, e.g. evicting the users of a house and renting it out in order to generate money for its maintenance. The same applies to *wakfs* consisting of e.g. slaves or animals. Horses dedicated as a *wakf* to the *djihād*, are the responsibility of the *Bayt al-Māl*.

What happens to the *wakf* if the *wakf* goods are seriously damaged or destroyed? One could think of a ruined house or mosque, a mosque in a region left by its inhabitants, trees that have died or a horse no longer fit for warfare. Now, if the damage to the goods is the result of a tort, there is no problem. The administrators or the beneficiaries can claim compensation, which then belongs to the *wakf* and must be used to repair or replace the goods. However, if the damage is not caused by human activity, there is a great deal of controversy among the jurists. The Shāfi'īs and the Imāmī Shī'a hold that the *wakf* remains in existence as long as there are goods left that can be used or exploited in whatever way. Solely if the remaining goods can only be used by consuming them do they accept that the *wakf* ends and that these goods become the property of the beneficiaries. The other law schools accept under certain conditions that the remaining goods be sold and that new *wakf* property be acquired with the proceeds of the sale (*istibdāl*). The Mālikīs allow this only with regard to movable goods that are unfit for their intended use. The Ḥanbalīs are more permissive in this respect. They regard *istibdāl* as lawful if the goods of the *wakf* have been damaged or destroyed to the extent that they can no longer be used for their intended exploitation. Unlike the other law schools, the Ḥanafīs first pose the question of whether or not the founder has stipulated for himself or for the future administrators the power to practice *istibdāl*. Although Muḥammad al-Shaybānī argued that such a stipulation is void, Abū Yūsuf's view, which prevailed among the Ḥanafīs, is that such a clause is perfectly valid, except with regard to mosques. If the founder has failed to introduce such a clause, or has even expressly forbidden *istibdāl*, the *ḳāḍī* may still allow it, if he deems it in the interest of the *wakf*. However, he can

only act with the authorisation of the caliph or sultan.

4. Administration of the *wakf*.

Especially if there is more than one beneficiary, the founder will usually make arrangements for the administration of the *wakf* by appointing an administrator (*nāẓir, mutawallī, kayyim*) and laying down rules for the appointment of his successors. According to most law schools, the founder is entitled to administer the *wakf* himself during his lifetime. Only the Mālikīs do not allow this, since they require for the validity of the *wakf* that the founder actually hand over the property to the beneficiaries or the administrator. If the founder has not made arrangements, the jurists disagree as to who is entitled to appoint an administrator. According to Abū Yūsuf, the founder, being the person closest to the *wakf*, is entitled to administer it. During his lifetime he has the right to appoint an administrator. By testament he may transfer this right to his testamentary executor (*waṣī*). The other jurists hold that, in this case, the *kāḍī* is responsible for the administration of the *wakf* and that it is he who must appoint an administrator. However, if the number of beneficiaries is limited and identifiable, the Mālikīs, most Ḥanbalīs and the Imāmī Shīʿa are of the opinion that the beneficiaries have the right to administer the *wakf* because they have rights to the *wakf* property, either because they are regarded as the virtual owners of the *wakf* (Ḥanbalīs and the Imāmī Shīʿa) or because they own the right to use and exploit (*milk al-manfaʿa*) the *wakf* property (Mālikīs). An administrator must accept his appointment. The approval of the beneficiaries is not required (except according to those who hold that the beneficiaries, under certain conditions, are entitled to administer the *wakf*, if such conditions obtain).

The administrator must have the capacity to act and contract. According to all law schools except the Ḥanafīs, he must be Muslim and male. In addition he must be trustworthy (*amīn*) and have the necessary skills. The Shāfiʿīs and some Ḥanbalīs require that he should be *ʿadl* [*q.v.*].

His duties are, in the first place, the maintenance and the exploitation of the *wakf* property. He decides on the repairs that have to be carried out and on how the property is made profitable. Finally, he distributes the proceeds among the beneficiaries. He is entitled to take a remuneration for his activities. His position is similar to that of a guardian over a minor or an insane person, and like him, the administrator of a *wakf* is under supervision of the *kāḍī*.

5. Extinction of the *wakf*.

A *wakf* is intended to last forever. Nevertheless the jurists envisage several situations that may result in its termination:

1. When the goods of the *wakf* perish. In the event the goods are destroyed or damaged, to the extent that they can no longer be used or exploited in the way envisioned by the founder, Muḥammad al-Shaybānī held that the *wakf* becomes extinct and that the remains of the goods revert to the founder or his heirs. The other jurists assert, however, that no possibility of alternative use or exploitation must be left unexplored before the *wakf* comes to an end, and they carry this to great lengths. In principle, *wakfs* consisting of land cannot become extinguished.

2. A *wakf* can be declared null and void by the *kāḍī* if it does not satisfy the conditions of validity, or if the founder has introduced stipulations contrary to the essence of the notion of *wakf*.

3. A *wakf* becomes null and void if the founder apostatises from Islam.

4. According to the Mālikīs, if a *wakf* is made in favour of a limited number of beneficiaries for their lifetime or for a certain period, it becomes extinct when the last of them has died or when the period for which the *wakf* has been founded has expired. The *wakf* property then returns to the founder or his heirs.

5. Under Mālikī law, a *wakf* can be cancelled by the founder if he has stipulated that the property will return to him or may be sold by him in case he needs it.

II. In the Arab Lands

1. In Egypt.

The earliest pious foundations in Muslim Egypt seem to be gifts for charitable purposes rather than *awḳāf* as subsequently known. This was the case with the foundation of the first mosque built by ʿAmr b. al-ʿĀṣ in the first year of the Arab conquest (Ibn Duḳmāḳ, i, 62-3). On the return of the Arab troops from Alexandria in 21/641, Ḳaysaba b. Kulthūm, one of the *ahl al-rāya*, donated to the community a piece of land which he owned for the foundation of a mosque. The mosque personnel was paid by the *Bayt al-Māl*. Other plots were similarly donated for

communal use, e.g. to establish a market for cattle. Al-Ḳalḳas̲h̲andī attributes the earliest charitable *wakf* in Egypt based on the alienation of treasury land (*Bayt al-Māl*) to al-Layt̲h̲ b. Saʿd during the governorship of ʿAmr b. al-ʿĀṣ (Ibn Duḳmāḳ, iv, 38), but it is not clear that this was a *wakf* proper.

The earliest known document dealing with a genuine charitable *wakf* of agricultural land in Egypt dates from the ʿAbbāsid period; the founder, the financial official Abū Bakr Muḥammad b. ʿAlī al-Mād̲h̲arāʾī, alienated the pond called Birkat al-Ḥabas̲h̲ together with the orchards around it for charitable purposes (the ponds of Cairo became waterless when the flood began to recede in the fall; they were then used for agricultural purposes). The revenue was to be used to operate a hydraulic complex and to buy food for the poor. The text of this *wakf*, dated 307/919, is published as a résumé by Ibn Duḳmāḳ (i, 55-6; Amīn, *Awḳāf*, 37-8). Another document from the Ik̲h̲s̲h̲īdid period (dated 355/965) refers to a hydraulic complex known as *Biʾr al-Waṭāwīṭ* consisting of waterwheels and a well, which were endowed for charitable use (al-Maḳrīzī, *K̲h̲iṭaṭ*, ii, 135).

Al-Maḳrīzī states that the earliest pious *wakfs* were based on the alienation of commercial buildings, mainly apartment houses (*ribāʿ*), and that no land was alienated in the early period of the governors and their successors; even Ibn Ṭūlūn's foundations of a mosque, a hospital and an aqueduct were financed only with the revenue of apartment buildings (*ibid.*, ii, 295). The previous examples, however, show that during the ʿAbbāsid period pious and family endowments did include agricultural land (*ibid.*, ii, 114).

The origins of a central *wakf* administration cannot be precisely defined. Al-Ḳalḳas̲h̲andī attributes, in rather vague terms, the origin of the *dīwān al-aḥbās* to the time of ʿAmr b. al-ʿĀṣ (*Ṣubḥ al-aʿs̲h̲ā*, iv, 38). During the Umayyad period, an institution for *wakf* administration was already well established, as the case of the *ḳāḍī* Tawba b. al-Namir (115-20/733-8) demonstrates; he supervised the *awḳāf*, ensuring that the charitable funds (*ṣadaḳa*) reached their destination and preventing abuses. Upon his death this *dīwān* had already become an important institution (Halm, 47-8). A similar *dīwān* was later created in Baṣra, which suggests that the Egyptian one might be the first in Islamic history. Half a century later, when another *ḳāḍī*, Ismāʿīl b. Ilyasaʿ (164-7/781-3), tried to apply the principle, accepted in the Ḥanafī *mad̲h̲hab*, according to which a *wakf* is not irrevocable, he provoked a great controversy which eventually led to his dismissal; the S̲h̲āfiʿī *mad̲h̲hab* prevailed in Egypt from the outset.

During the ʿAbbāsid period, some *ḳāḍīs* of Fusṭāṭ carried out strict inspections of the *awḳāf* properties on a monthly basis. The judge was free to administer according to his own discretion the funds donated to the *dīwān* without specific conditions, provided that they were spent *fī sabīl Allāh*, i.e. for any charitable purpose. The *ḳāḍīs* were also in charge of controlling the *awḳāf* of the *ahl al-d̲h̲imma*.

The Fāṭimids modified the *wakf* administration. The caliph al-Muʿizz ordered in 363/974 that the *aḥbās* funds be transferred to the *Bayt al-Māl* and that the beneficiaries should prove their claims (al-Maḳrīzī, *K̲h̲iṭaṭ*, ii, 295). He also cancelled the alienation of agricultural land, which al-Ḥākim, however, shortly afterwards reintroduced. The *wakfs* were then subject to a kind of tax farming (*ḍamān*); an individual would administer the *wakf* estate and collect its revenue, against a fixed yearly amount which would settle the claims of the beneficiaries and leave a balance for the *Bayt al-Māl*. With these funds, the Fāṭimid state used to support all types of philanthropic foundations, in particular those whose assets were exhausted. The tax farming system had the side-effect that the tax farmer (*ḍāmin*) might neglect the property in order to realise a maximum profit for himself. Ibn Mammātī, who witnessed the *wakf* bureaucracy during the late Fāṭimid and early Ayyūbid periods, criticised the renting-out of alienated estates because it deprived the *wakf* of investment opportunities and allowed the major profit to be reaped by the tenant. A large and detailed *wakfiyya* in the name of the Fāṭimid vizier al-Ṣāliḥ Ṭalāʾiʿ b. Ruzzīk [*q.v.*], preserved in a Mamlūk-period copy, is the only known Fāṭimid *wakfiyya* and the oldest example of this type; it refers to an agricultural estate alienated in a private *wakf* to the benefit of the family of Ibn Maʿṣūm, a descendant of the S̲h̲īʿī Imām Mūsā al-Kāẓim [*q.v.*] (Cl. Cahen, Y. Rāg̲h̲ib and A. Taher).

The state control over the *awḳāf* by the *dīwān al-aḥbās* did not exclude the role of the *ḳāḍī*, however, who was directly in charge of the inspection of the premises. The Fāṭimid *ḳāḍīs* of al-Fusṭāṭ and al-Ḳāhira used to inspect yearly the religious buildings in both cities.

With the *iḳṭāʿ* system introduced by the Ayyūbids, important changes occurred in the situation of the *awḳāf*. Land that was previously dedicated to philanthropic purposes was given as *iḳṭāʿ* to officers and state servants, who were to collect its *k̲h̲arād̲j̲*, and this was often detrimental to the philanthropic services which this land originally financed. Following the overthrow of the Fāṭimids, Ṣalāḥ al-Dīn, endeavouring to cope with Crusader threats, alienated on a large scale land of the *Bayt al-Māl* in order to pay ransoms of Muslim prisoners of war and to support religious foundations and various philanthropic services aiming at consolidating Sunnī Islam. An important number of *madrasas* and a major *k̲h̲ānaḳāh* were created, sustaining communities of scholars and Ṣūfīs, including Muslim migrants to Egypt. According to Muḥammad Amīn, however, the Ayyūbid mode of creating pious endowments should not be described as based on *wakf* but rather on *irṣād*, the difference being that *wakf* implies the alienation of privately-owned property for a pious or other purpose, whereas *irṣād* involves the use of public funds, excluding a private involvement in the transaction, to sustain public or philanthropic services (*Awḳāf*, 54, 64). The *irṣād* was supposed to assume charges which were part of the *Bayt al-Māl*'s expenditures (Abū Zahra, 23).

The large quantity of *wakf* documents from the Mamlūk period to be found in Egyptian archives and their ongoing publication allows a much better view of the role of the *wakf* during this period than previously.

The Mamlūk *wakf* system consisted to a large extent of *irṣād*, referred to as *wakf*, thus blurring the line between the *Bayt al-Māl* and the sultan's private property. The Mamlūk establishment thus acquired the benefit of fulfilling a charitable act at the expense of the state. Scholars of the Ḥanafī *mad̲h̲hab*, and mostly during the Ottoman period, did not consider the alienation of *Bayt al-Māl* funds as a true, sound *wakf*. In 789/1387 Sultan Barḳūḳ, who favoured the Ḥanafī *mad̲h̲hab*, tried to liquidate some of the great *wakfs* established by his predecessors on the ground that they were from the outset illicit because they were based on the alienation of *Bayt al-Māl* land. The jurists, however, did not authorise him to liquidate *wakfs* serving pious works (al-Maḳrīzī, *Sulūk*, Cairo 1970-73, iii/1, 345). The S̲h̲āfiʿīs preferred to tolerate *wakfs* financed by *Bayt al-Māl* estates despite their doubtful status, as long as they supported the reli-

gious foundations which were, *per se*, entitled to funds from the public treasury.

The Mamlūks introduced their own reforms of the *waḳf* system. During the reign of Baybars, the *waḳf* administration was divided into three parts. A distinction was made between *aḥbās* and *awḳāf*. The latter included the *awḳāf ḥukmiyya* and the *awḳāf ahliyya*, whereas the *aḥbās* consisted of the *rizaḳ aḥbāsiyya*. The *awḳāf ḥukmiyya* were supervised by the Shāfiʿī chief *ḳāḍī* and included urban buildings in al-Ḳāhira and al-Fusṭāṭ (Miṣr) whose revenue served purely philanthropic functions such as the support of the Holy Cities and the poor and the payment of ransoms for Muslim prisoners of war. The *awḳāf ahliyya* included the great foundations of sultans and *amīrs*, such as *madrasas*, *khānaḳāhs*, *kuttābs* and funerary complexes; they were supported by urban and agricultural estates, both in Egypt and Syria, and their revenue was to serve combined charitable and private purposes by sustaining a religious institution and securing an income to the founder and his clan.

The *rizḳa* (meaning income) according to al-Nābulusī, Ibn Duḳmāḳ and Ibn al-Djīʿān, is a special kind of endowment based on the alienation of treasury land for the benefit of individuals, rather than institutions, for providing specific services. This system seems to have originated in the late Ayyūbid period (Michel, 108). The *rizaḳ aḥbāsiyya* established under the Mamlūks had as their main purpose the provision of services to the rural areas. Individuals were directly endowed with agricultural land which provided them with an income, often coupled with the condition that they maintain or serve some religious or philanthropic institution in the villages. The *rizaḳ* provided for the salaries of the religious personnel of the mosques and *zāwiyas*, for craftsmen and employees, such as the guardians of fields and villages, and building craftsmen. They also provided funds for the purchase of agricultural tools. These services included Christian villages as well (Halm, 52-3; Michel, 111-12). The supervision of the *rizaḳ* came within the Great *Dawādār*'s sphere of competence. N. Michel sees the *rizḳa* as a local Egyptian, non-religious institution, which originally was not ruled by religious law and was thus distinct from *waḳf*. Over the course of time, however, the *rizaḳ aḥbāsiyya* were mistaken for *waḳf* and acquired their legal status as irrevocable and exempted of taxes (Michel, 114).

Al-Ḳalḳashandī writes that the *naẓar al-aḥbās al-mabrūra*, i.e. the general supervision of the pious endowments in the early 15th century, was either in the hands of the Sultan himself or delegated to his deputy or to the Great *Dawādār*, mostly to the latter. In the Baḥrī Mamlūk period, however, the supervision of the great pious *waḳfs* was assumed either by an *amīr* or by the Shāfiʿī *ḳāḍī ʾl-ḳuḍāt*.

Notwithstanding the role of a central *waḳf* administration, the Mamlūk *ḳāḍī* was involved with *awḳāf* at the court level, where every *waḳfiyya* had to be registered in several copies, of which one remained in the *ḳāḍī*'s archives.

From the outset, the Mamlūk sultans made full use of *waḳf* possibilities. Their religious foundations were often part of ambitious urban projects which are still visible in the present Old City of Cairo. For their endowments, they allocated far more investments (land or commercial structures) than necessary for the upkeep of the religious foundation in order to produce a substantial surplus for themselves and their descendants. Such measures became necessary under the *iḳṭāʿ* system, which in principle gave the *amīrs* and state servants only a life-time usufruct of the land or other assets, excluding inheritance, not to mention confiscations and extortions ordered by the sultans. As a result of the large-scale use of *waḳf*, it became a source of income not only for the religious and teaching establishments but also for an important number of administrators and other employees.

The main beneficiaries of Mamlūk *awḳāf* were, in addition to the founders and the religious and educational foundations of all types, the water supply, hospitals, the Holy Cities (including Hebron and Jerusalem), and various services related to the Pilgrimage and its infrastructure, including the *kiswa* for the Kaʿba. There were also public kitchens, like the ones sponsored by Sultan Barḳūḳ in Hebron and by Ḳāʾitbāy in Mecca and Medina. In times of plague, washing and burying the dead and providing coffins and shrouds were also provided for by pious endowments. Ḳāʾitbāy included in his endowment for the Holy Cities two ships to carry wheat from Egypt. Military institutions such as the arsenal (*khizānat al-silāḥ*) and fortifications might also be maintained by *waḳf* in the Mamlūk period.

At this time, all kinds of movable objects or chattels could be alienated, not only books, utensils and furniture for the religious foundations but also slaves or animals. Although discussions about the *waḳf* of cash did take place in Mamlūk Egypt, no such *waḳf* is so far known prior to the Ottoman era (Amīn, *Awḳāf*, 100). The Mamlūk élite also made use of the family *waḳfs*, i.e. those whose beneficiaries were the family and the clan. Sultan al-Nāṣir Muḥammad remunerated his *amīrs* by making family *waḳfs* for them and their descendants. In his own family endowment deed, he stipulated explicitly that his daughters should get the same share as his sons, thus circumventing the inheritance law (M. Amīn, appendix to Ibn Ḥabīb, ii, 378).

Some family *waḳfs* included a simultaneous charitable share, consisting of donations to religious foundations, sometimes tied to specific services, such as to increase the number of students or raise the salaries, to add a fountain or buy candles, etc. The Azhar mosque and the hospital of Ḳalāwūn were among the institutions that, over the centuries, regularly acquired such endowments both in the Mamlūk and Ottoman periods.

The Mamlūk chroniclers repeatedly criticised *waḳf* abuses by the ruling establishment. A device used by sultans and *amīrs* to acquire *waḳf* property was simply to invalidate the *waḳf* on legal grounds, either justifiably or not. The most famous case of *waḳf* confiscation in the Mamlūk period was that of Djamāl al-Dīn al-Ustādār (al-Maḳrīzī, *Khiṭaṭ*, ii, 70-1). Sultan Barsbāy, who demolished *waḳf* shops to build his own *madrasa* in their place, is reported to have made a fair offer to the tenants without pressurising them (idem, *Sulūk*, iv/2, 636-7; *Khiṭaṭ*, ii, 330). The *waḳf* properties accumulated over generations represented a significant share of Egypt's resources and at the same time a great temptation to the rulers. Whenever the Mamlūk state was in need of liquid funds, especially in times of war or other crises, the tapping of the *waḳf* resources was inevitable.

The urban *mawḳūfāt* in the Mamlūk and Ottoman periods included apartment houses (*rabʿ*), commercial buildings of various types (*ḳayṣāriyya*, *wakāla*, *funduḳ*, *khān*), shops, food stalls (*masmaṭ*), factories (sugar, soap, starch, glass, textiles, tanneries, etc.), ovens for hatching chickens, mills, bakeries, oil presses and baths. In the Ottoman period, the coffee-house became one of the most lucrative *waḳf* investments.

The *awkāf* were a major concern for the Ottoman conquerors of Egypt and one of the first issues which Selīm I [*q.v.*] tackled once he entered Cairo. According to legend, Selīm decided to conquer Egypt after having tested the Egyptian *'ulamā'* and finding them corrupt enough to authorise the liquidation of the Azhar endowments for a good bargain. A decree dated Rabī' II 923/May 1517, i.e. the year of the Ottoman conquest, affirms, however, Selīm's intention to respect the pious endowments established by the Mamlūks ('Afīfī, *Awkāf* 256-7). In 928/1522 a *nāẓir al-awkāf* was appointed from Istanbul to control the *wakfs* of Egypt and to reform the religious institutions so that they included Turkish scholars and Ṣūfīs. According to the *Ḳānun-nāme* of Süleymān the Magnificent, the *wakfs* of the Mamlūk sultans were to be inspected by the *daftardār* and controlled by the authorities in Istanbul. Later, this office was replaced by the *nāẓir al-nuẓẓār*, who was appointed from the governor's entourage. The *awkāf* of the *Ḥaramayn* came similarly under Ottoman control. The supervision of the great pious *wakfs*, however, remained on the whole in the hands of local *amīrs* and beys. Those of the Holy Cities were sometimes controlled by Ottoman *aghas* of the Dār al-Sa'āda in Istanbul. Also, *awkāf* were now no longer exempt from taxes, as had been the case in the Mamlūk period.

Owing to the continuous sale of treasury land in the Mamlūk period, the Ottomans found that almost half of Egypt's agricultural land had been alienated as *wakf*. They abolished the *iḳṭā'* system, ordered a new cadaster, dissolved the *dīwān al-aḥbās* and investigated existing *wakfs* in order to cancel all those of dubious origins or which were lacking proper documents. These measures helped them increase considerably the treasury land.

Giving supremacy to the Ḥanafī *madhhab*, the Ottomans stressed the distinction between *wakf* and *irṣād*, a distinction that not had much relevance under the Mamlūks because of the prevalence of the Shāfi'ī *madhhab* at that time (K. Cuno, *Irṣād*). The alienation of treasury land under the Ottomans needed therefore to be authorised by the sultan or his governor (Nahal, 69). Due to the resistance of the *'ulamā'*, however, the Ottomans were cautious when dealing with pious endowments inherited from their predecessors, which they preferred to maintain as long as they fulfilled philanthropic purposes. Thus *rizaḳ aḥbāsiyya* were also investigated but largely tolerated, even when their origin was suspect, as long as they secured an income for the needy. They were called *wakf irṣādī* or simply *irṣād* (Michel; Cuno).

The separation of military and judicial powers by the Ottomans limited the encroachments of the ruling establishment in *wakf* issues. The Ottoman *ḳāḍī* was independent of the *wālī* and had a greater administrative authority than his Mamlūk predecessor, including also some of the *muḥtasibs*' competence. He was expected to appoint or dismiss the *nāẓirs*, to examine their reports, to control rural and urban *wakf* employees, to check that the stipulations were followed and the beneficiaries' interest secured, and also to implement regulations pertaining to the neighbourhood. Because of the importance of the *wakfs*' resources, however, the Ottoman governors of Egypt nevertheless did interfere in *wakf* matters, as on the occasion when the supervisors of all great *wakfs* were compelled to purchase quantities of copper in order to get rid of a surplus sent from Istanbul.

The Ottoman governors of the 10th/16th and the 11th/17th centuries created important charitable *wakfs* in Egypt, some of which also included a private share for the founder. Their *awkāf* involved the foundation of new religious institutions mostly favouring the Ḥanafī *madhhab*; but most of all they endowed, upgraded and often transformed existing ones. Special attention was devoted to saints' tombs and shrines. Al-Azhar's prestige as a teaching institution increased during this period. The governors' *wakfs* included an important number of commercial buildings of the *wakāla* type, built in the port cities and in Būlāḳ, Cairo's port, to facilitate the transport of goods to Istanbul and to provide at the same time funds for philanthropic works. The Pilgrimage infrastructure and its caravan benefited. Sultan Djaḳmaḳ and Ḳā'itbāy's endowments for the Holy Cities (*dashīsha kubrā*) were enlarged by Selīm I and Süleymān the Magnificent; Murād III made a new endowment called the *dashīsha ṣughrā*, and Meḥemmed IV's wife also alienated agricultural land in Egypt for the Holy Cities. The Ottomans thus supported the *Ḥaramayn* mainly with the *wakf* revenue of Egyptian land. Following Ḳā'itbāy's example, Süleymān and Murād III endowed ships for the transportation of wheat from Egypt to Mecca and Medina (Behrens-Abouseif, *Qāytbāy's foundation*, 67). The Ottomans made use of the cash *wakf*, albeit on a small scale (eadem, *Adjustment*, 217).

The military aristocracy of the Ottoman period became increasingly involved from the 11th/17th century onwards in the creation of large private *wakfs* in Cairo for the benefit of the founder's own clan or household, which had a great impact on the upgrading and revitalising of their urban neighbourhoods. Notables of the religious establishment and the merchant class also created such endowments, which included the large number of *sabīl-maktabs* built all over Cairo during the Ottoman period. The Black Eunuchs of the Imperial Harem, whose careers often ended in Cairo, also figure among the founders of great private *wakfs* which included a philanthropic share; that of 'Othmān Agha in the early 11th/17th century, however, was purely charitable and of particular urban importance for the city of Cairo (Behrens-Abouseif, *Tanneries*).

Shortly after coming to power, Muḥammad 'Alī abolished the *iltizām* [*q.v.*] or tax-farming system applied by the Ottomans. He also tried to prohibit the creation of new *wakfs* by a decree of 9 Radjab 1262/3 July 1846, which was never implemented, however, and was even revoked by his successor 'Abbās I. Following the overthrow of the *mamlūks*, his son Ibrāhīm, who became the governor of Upper Egypt, confiscated all *wakf* land there. Muḥammad 'Alī assumed, moreover, control of the *rizaḳ aḥbāsiyya* all over Egypt, compensating their beneficiaries only partly, but did not interfere with *wakf* of urban properties. In 1835 he established a general *wakf* administration which was abandoned three years later, apparently because of the *'ulamā'*'s opposition (Sékaly, 96, 410, 450, 628; Baer, 169). Muḥammad 'Alī himself did alienate large agricultural estates (23,000 *faddāns*) in a *wakf* for educational institutions in his hometown of Kavala or Ḳawāla [*q.v.*]. As a result of his confiscations, pious foundations established prior to Muḥammad 'Alī's reign deteriorated, and primary education provided by the *maktabs* (*kuttāb* [*q.v.*]) was left without income (Baer, 149). The resulting desperate situation of the pious foundations prompted the Khedive Ismā'īl later to allocate 10,000 *faddāns* for the benefit of mosques that were left without resources; moreover, he made vast endowments for the educational system of Egypt. In the second half of the cen-

tury, the alienation of agricultural land increased due to the Khedives' and other high officials' endowments. These were similar to those of their Mamlūk and Ottoman predecessors, sc. a combination of a charitable and a family *waḳf*, and their importance for education and health care and other philanthropic institutions was great. The Muḥammad ʿAlī family also returned to the Mamlūk tradition, abandoned by the Ottomans, of erecting lavish funerary foundations which were supported by *waḳf*.

During the 19th century the great landowners of the Muḥammad ʿAlī family and other notables made extensive use of family endowments with agricultural land in order to regulate inheritance matters and safeguard properties against fragmentation. Paradoxically, the opposite result was achieved. Due to the perpetual nature of the endowment leading to an increasing number of beneficiaries over generations, the property was infinitely split up, as the critics of the family or *ahlī waḳf* have always emphasised. The result was that the beneficiaries, left with an insignificant income, lost interest in their *waḳfs*, leaving the supervisor free to handle it according to his own interests (Baer, 167).

In 1864 Ismāʿīl ordered that the *waḳf* administration established by ʿAbbās I in 1851 should acquire the status of a ministry which would assume greater control over the pious *waḳfs*, and he introduced severe punishment for usurpation and abuses. To achieve this, he needed the authorisation of the Porte to act on behalf of the Ottoman Chief *Ḳāḍī*, who continued to be the *de jure* official authority in Egyptian *waḳf* matters, including those of the *Ḥaramayn*. In 1884, two years after the British occupation of Egypt, the Khedive Tawfīḳ abolished the *Waḳf* Ministry and replaced it by an independent administration under his own direct supervision (Sékaly 111-12; Baer, 171), a measure necessary in order to prevent Christian officials, now in control of the ministries, from dealing with the Muslims' pious endowments and getting involved with *S̲h̲arīʿa* issues. The British, however, did not approve of the way in which the new body functioned, and in 1913 Lord Kitchener re-installed the *Waḳf* Ministry with the consent of the Porte, under the condition, however, that it would be allowed to maintain a certain autonomy including the budget. During the late 19th century the Khedive's control of the *awḳāf* was indisputable, assuming the traditional competencies of the Ottoman Chief *Ḳāḍī*, from whom he still needed an authorisation (Sékaly, 109). This went on until World War I when the *de jure* Ottoman authority was finally also abolished.

The problems of abuse of the *waḳf* system in Egypt have been virtually the same for all periods of Egypt's pre-modern history. Ever since Ibn Mammātī's comments in the 6th/12th century, the subject of *waḳf* abuse was a regular issue in the chronicles and often a major political issue setting rulers against *ʿulamāʾ*. The tremendous accumulation of assets in *waḳf* properties made it inevitable that the rulers, whether due to pressing circumstances or simply to greed, would turn to these resources. The success of the *ʿulamāʾ*'s resistance varied. The Mamlūk sultans managed to a great extent to manipulate judges according to their own will; Ottoman ones were more independent.

In order to safeguard his *waḳf* against abuses, every *waḳf* founder formulated strict stipulations, which often included that no *waḳf* property should be rented for more than three years, neither should it be sold or exchanged (*istibdāl*). The stipulations limiting or excluding the trade of *waḳf* property did not imply, however, the total blocking of an endowment. A *waḳf* could always be enlarged through the addition of new investment estates by the founder himself, his successors or any other person. Sometimes, however, the status of religious foundations changed through such enlargements: a mosque would become a *madrasa*, a *madrasa* for the S̲h̲āfiʿī *mad̲h̲hab* would be enlarged to also include Ḥanafī teaching or Ṣūfī service as well, a mere *masd̲j̲id* might acquire the status of a *d̲j̲āmiʿ*; such transformations, however, did not remain undisputed. Although all important endowments stipulated that the revenue should be spent in the first place on maintaining the premises, over the course of time the alienated estates fell into disrepair, thus becoming less lucrative. The supervisor had no choice but to take rescue initiatives. These included the sale of the dilapidated estate in order to cover the restoration expenses or to acquire other assets instead (*istibdāl*). Such initiatives, which necessarily contradicted the founder's stipulations, had to be authorised by the *ḳāḍī*, who would need an assessment of the estate's dilapidated condition. For this purpose he had to summon a consortium of master-masons, jurists, *waḳf* administrators and witnesses. Such assessments, however, were often fabricated, or the building might even be demolished overnight when a powerful person was involved (al-Maḳrīzī, *Sulūk*, ii, 320-1; *K̲h̲iṭaṭ*, ii, 69).

Long-term lease contracts were another solution to the problem of *waḳf* decay. This allowed the tenant himself to carry out the necessary repairs and restorations, and to subtract the expenditures gradually from the rent. The long term often implied subrenting the estate and freezing the rent for a long period, while it gave the tenant a proprietor-like status. Sultan Barḳūḳ, who was in need of funds for his army but was not authorised to dissolve his predecessor's *awḳāf*, allowed his *amīrs* to rent *waḳf* land on extended terms and exploit it to their profit; they subrented it in order to make a profit from the balance (al-Maḳrīzī, *Sulūk*, iii, 345 ff.).

The *ḥikr* [*q.v.* in Suppl.] was a long-term lease of land only, giving the tenant the right to own and alienate the buildings on it. He could then replace dilapidated *waḳf* buildings by new ones and alienate them in a *waḳf* of his own. As a result, several *waḳfs* could be involved in the same plot. The Mamlūk sultans often participated as share-holders in commercial structures within the city that belonged to older *waḳfs*; this offered them lucrative investment opportunities for their own *waḳfs*, while they could rescue an old one from total decay. The *k̲h̲uluww* was a device that evolved during the reign of Sultan al-G̲h̲awrī and was vividly discussed among the jurists of the time. It was a form of rent that gave the tenant the right to act like a proprietor, i.e. in selling, bequeathing and alienating his rights in the property (ʿAfīfī, *Asālīb*, 116).

3. In North Africa to 1914.

i. *Public endowments.* The Marīnid [*q.v.*] sultans created public endowments (*wakf khayrī*) for mosques, *zāwiyas*, hospitals and, especially, *madrasas*. They built at least six *madrasas* in the period between 721/1321 and 756/1356, designating revenue-producing properties as endowments to pay the salaries of teachers and the expenses of students. These assets included stores (*ḥānūts*) used for commerce and crafts, houses, apartments, stables, public baths, mills, orchards, public ovens, inns, halls, factories for weaving and soap-making, and arable land. Marīnid support for *madrasas* was an aspect of their internal politics. At the beginning of their reign, they sought to check the influence and power of Fāsī notables and religious leaders and to foster a new religious élite that would support their rule. This they accomplished by building *madrasas* and supporting the religious personnel associated with them. *Wakf* inscriptions served as an instrument of Marīnid propaganda.

The Marīnids were careful to demonstrate that they owned the assets that they designated as endowments. According to the chroniclers, the sultans purchased the properties that they used to create or support public endowments; surviving *wakfiyyas* specify that each endowed asset had been purchased from a named owner. However, revenues generated by public endowments were taxed, and proceeds were kept in the Public Treasury, usually located in the central mosque. The sultans apparently considered the funds in the Public Treasury as their private property, which could be used to purchase new properties and to endow them as a *wakf khayrī*, e.g. for the maintenance of a tomb. Some *muftīs* maintained, however, that endowment assets acquired in this manner had been confiscated and that the endowments were therefore illegal.

Abu 'l-Ḥasan (*r.* 731-49/1331-48) built *madrasas* in Fez, Meknès, Salé, Tangier, Anfa, Azemmour, Safi, Aghmāt, Marrakesh, and al-ʿUbbād. According to the chronicler Ibn Marzūḳ, the sultan regarded the construction of these *madrasas* as signs of his respect for religious knowledge and of his personal piety and as a reflection of the glory of his reign. The assets assigned by Abu 'l-Ḥasan for the maintenance of the *madrasa* of the Dār al-Makhzan in Fez (which had been built by his father) may be considered typical: the village of Abū Zayd; the Ḥammām al-Sulṭān in the Kharrāṭīn quarter; the Ḥammām of Darb al-Ṭawīl; the constructions above the two aforementioned *ḥammāms*; the yearly rent of three large houses; sixteen shops; seven-eighths of the Inn of Darb al-Ghurabā'; the mill located on the spring of Ḳammīma; a large oven in Fās Djadīd together with two shops connected to it and constructions above them; and a shop located outside the *madrasa.*

The Marīnids also endowed books and created public libraries, located in mosques or *madrasas*. Abū Yūsuf (*r.* 656-85/1258-86) acquired books from al-Andalus and deposited them in the Madrasa al-Ṣaffārīn which he had constructed in 684/1285. The sultans were aware of the needs of the scholars who taught in the *madrasas*, with whom they consulted before ordering that a manuscript be copied. In 728/1327, Abu 'l-Ḥasan endowed the *K. al-Tamhīd* of Ibn ʿAbd al-Barr and *al-Bayān wa 'l-taḥṣīl* of Ibn Rushd al-Djadd [*q.v.* in Suppl.] for the use of *madrasa* students attached to Andalusian mosques. Other endowed books included: al-Ṭabarī, *Djāmiʿ al-bayān*; al-Ḳāḍī ʿIyāḍ, *Mashāriḳ al-anwār*; al-Ḳurṭubī, *Tafsīr*, and Ibn al-Ghallāb, *K. al-Taʿrīf*. In the middle of the 8th/14th century, Abū ʿInān (*r.* 749-59/1348-58) built a library attached to the Ḳarawiyyīn mosque, one room of which was devoted exclusively to copies of the Ḳur'ān. The sultan also nominated a clerk who was responsible for keeping a record of the books as they were put into use, and provided endowment revenues for the maintenance of the library. At the end of the century, Ibn Khaldūn [*q.v.*] sent a copy of his *K. al-ʿIbar* from Egypt to Fez as a *wakf* to be deposited in the library of the Ḳarawiyyīn mosque.

The management of *wakf* resources was a position of great responsibility, to be undertaken only by persons of unquestioned integrity. A supervisor (*nāẓir*), specifically appointed for this task, was entrusted with the administration of these funds under the supervision of the *ḳāḍī*. This office, like others, was often inherited. Improper management of a public endowment caused a major scandal in 8th/14th-century Fez. Abu 'l-Faḍl al-Mazdaghī, scion of a distinguished family, served as *khaṭīb* of the Ḳarawiyyīn mosque for thirty consecutive years. In consideration of his personal wealth and stature, al-Mazdaghī was entrusted with the *wakf* revenues deposited in the Ḳarawiyyīn. He reportedly invested the money in different economic enterprises, purchasing real estate and hoarding grain, in anticipation of a bad harvest when prices would rise. When it became apparent that he would not be able to return the money, he asked the Sultan Abu 'l-Ḥasan for "three charges of gold". Stung by the discovery that the *khaṭīb* had betrayed his confidence and that of the community, the sultan fasted for three consecutive days, after which he consulted with his religious advisers, who recommended that he draw upon his private resources to replace monies lost by private individuals and members of the community. The properties acquired by the *khaṭīb* were sold and the revenues were used to replace the lost *wakf* revenues. Al-Mazdaghī was reinstated as *khaṭīb*, but died soon thereafter in Fez.

Marīnid endowments had a significant impact on many aspects of urban life and contributed to the urbanisation of Moroccan towns and cities. Public endowments attracted teachers, staff and students to urban centres, thereby increasing the demand for food, shelter, and clothing; the purchase, sale and rental of real estate added capital to the economy. But the heavy reliance on a single sector of the economy, sc. real estate, meant that the daily operation of the endowment system was sensitive to economic fluctuations. It was not difficult for individuals to misuse

the system through embezzlement, extortion or theft, and it was therefore necessary for the agents of the legal system to play an active role in the regulation of endowments.

Beginning in the early 11th/17th century, members of the Turkish ruling élite in Algiers created family endowments (see below) in which they designated the poor of Mecca and Medina (*al-Ḥaramayn*) as the ultimate beneficiaries. As the family lines came to an end, these assets accumulated in what came to be known as the *Waḳf al-Ḥaramayn*. To facilitate the supervision of these individual endowments, local governors issued orders for the compilation of the "*waḳfiyya* of Algiers" sometime between 1101 and 1125/1689-90 and 1713-14; this measure was designed to ensure that the ultimate beneficiaries of the city's many familial endowments would know of their existence. Supervision of the affairs of the *Ḥaramayn* was entrusted to four people, two officers of the Turkish *od̲j̲aḳ* in Algiers and two indigenous Algerians. This was part of a new policy designed to instill confidence in the safety of endowment assets and trust in their proper administration, and to promote a political, administrative and economic atmosphere conducive to the creation of additional endowments. During the second half of the 17th century and the first half of the 18th, administrators of the *Ḥaramayn* used surpluses left over after meeting regular expenses to purchase additional assets. Between 1078/1667-8 and 1250/1834, the number of properties controlled by the *Ḥaramayn* increased from 182 to 1,748, an average annual increase of 9.6%. To deal with the problem of old properties that had fallen into ruin, Muslim jurists and judges adopted a flexible approach to the interpretation of *waḳf* law, giving their approval to legal instruments that served the material interests of the *waḳf*, including perpetual leases (*ʿanā*ʾ; *d̲j̲alsa*), and exchanges (*muʿāwaḍa*) that made it possible for *waḳf* administrators to relinquish one asset and receive another in its place. In most cases, the rental value of the incoming asset was higher than that of the outgoing property. Exchange transactions were used to expand and improve the water system, to establish industrial enterprises, and to build or reconstruct mosques and *zāwiyas*. The new policy facilitated the recycling of urban property and the re-allocation of urban space, thereby contributing to the development of Algiers (see Hoexter, *Endowments*).

ii. *Family endowments*. The specific terms of a family endowment are set out in an endowment deed, a legal instrument drafted with great care in an effort to eliminate any possible ambiguity. In the words of the Fāsī jurist al-Mawāsī (d. 896/1491), "Legal documents are predicated upon the removal of all ambiguities and summary statements . . . even if this causes them to run on at great length" (al-Wans̲h̲arīsī, *Miʿyār*, vii, 346). Unlike the Ḥanafīs, the Mālikīs do not allow a founder to designate himself or herself as the initial beneficiary. The founder customarily begins by designating the first generation of beneficiaries, usually one or more children, and indicating whether or not males and females are to be treated equally. Next, the founder indicates what happens to the revenues belonging to a beneficiary of the first generation upon his or her death. If that beneficiary leaves a child, his or her share reverts to that child; if the beneficiary dies without a child, his or her share reverts to the surviving beneficiaries of the first generation or their descendants. In this manner, the entitlement of extinct branches reverts to the surviving branches of the lineal descent group.

Referring to the second generation of beneficiaries, the founder generally indicates that the revenues are "for their descendants *and* their descendants' descendants" (emphasis added). Such phrasing was understood by the jurists as signifying that entitlement now applies to anyone who qualifies as either a descendant (*ʿaḳib*) of the founder or a descendant of a descendant; thus two (or more) generations of lineal descendants may qualify as beneficiaries simultaneously. Such an endowment is characterised as being *muʿaḳḳab* ("for a descent group").

A founder who does not want an endowment to become *muʿaḳḳab* must use some particle, word or phrase conventionally understood as signifying that entitlement does not pass from the first to the second generation of beneficiaries (or from the second to the third, etc.) until all members of a given generation have died out. The founder may use the particle *t̲h̲umma* ("then"), as in the phrase, "then for their descendants", or the phrase one [generation] after the other (*awwal^an^ fa-awwal^an^*)". The revenues in an endowment of this type are distributed exclusively among the members of a single generation. As the members of a single generation of beneficiaries die, the revenues accumulate in the hands of the surviving members of that generation until the longest-lived member eventually controls the entire endowment. Upon his or her death, the revenues are divided *per capita* among the next generation of beneficiaries, whereupon the process begins again.

When a line of beneficiaries dies out completely, the revenues revert to the charitable purpose specified by the founder, usually a mosque or some other religious institution (see below).

ii. (a) *Social practice*. Any family endowment rests upon the presumed charity or piety of its founder, as specified in an endowment created "for the poor among my children and my children's children", or "for the needy of so-and-so's family" (*ibid.*, vii, 484), or for the founder's "needy relatives on both his father's and mother's sides" (*ibid.*, vii, 478), or for the town's lepers (*ibid.*, vii, 186).

By creating an endowment for a pious purpose, the founder hoped to earn a divine reward in the next life, a hope that is expressed in common formulae that appear in testamentary endowments, e.g. the founder indicates that he or she is seeking "the face of God the Almighty and the abundance of His momentous reward". This formula invariably is followed by the citation of Ḳurʾān, XVIII, 30, "Surely We leave not to waste the wage of him who does good works" (al-Wans̲h̲arīsī, vii, 80).

A family endowment may be created for many reasons: as an act of piety; as a legal fiction to prevent revocation of a sale or to secure property whose ownership is contested; to avoid confiscation; as an act of loving kindness toward a dying husband; etc. Whatever the founder's motive, the endowment serves to keep property intact, to assure the entitlement of beneficiaries for the duration of the object and to regulate the transmission of usufructory rights from one generation to the next. Not only does the institution accord a founder the freedom to make decisions denied him by Islamic inheritance law [see FARĀʾIḌ; MĪRĀT̲H̲], but the creation of a family endowment also gives a proprietor a legal means to remove all or part of a patrimony from the effects of that law.

The creation of an endowment for the benefit of one's children and descendants—regarded as a pious act—reduces the quantum of property available as an inheritance for the founder's ascendents, collaterals,

and spouse or spouses, thereby limiting its fragmentation through inheritance.

Founders who created an endowment for sons and their lineal descendants to the exclusion of daughters and their descendants frequently stipulated that, if the line of males came to an end, the endowment was to revert to a daughter or her female descendants (*ibid.*, vii, 80, 223). The specification of females as secondary beneficiaries of familial endowments suggests that Muslim society in the Marīnid period was not as rigidly patriarchal as is often asserted. Indeed, the family endowment frequently was used to supplement the rights of females. Family endowments customarily were created for the benefit of the founder's children, male and female (*ibid.*, vii, 9). It is true that a founder more often than not invoked the Ḳur'ānic principle that a son was to receive twice the share of a daughter. But the founder's ability to define a descent strategy made it possible to circumvent this provision if so desired (*ibid.*, vii, 281). The stipulation of equality between males and females could be applied to the founder's grandchildren and subsequent descendants, as, for example, in a deed specifying that the revenues of the endowment were to be divided "equally among [the founder's] male and female children and grandchildren" (*ibid.*, vii, 141).

In a study of 101 disputes relating to family endowments, seventy-five cases were identified in which both a founder and a beneficiary are mentioned. Of these endowments, 75% were created by fathers and mothers on behalf of their children and, less frequently, grandchildren. Fathers outnumber mothers as founders by a ratio of six to one. The remaining 25% of the endowments were created for someone other than the founder's children and lineal descendants (Powers, *The Maliki family endowment*, 386-8).

The institution commonly was used by males to support the interests of other males. In the same sample, fathers were three times as likely to create an endowment for sons as for daughters. By contrast, mothers appear to have been more even-handed.

Twelve percent of the endowments created by parents for the benefit of their children specify that the children were minors at the time the endowment was created, suggesting that it was common for a parent to establish a family endowment soon after he or she married and produced offspring. This practice points to a desire on the part of proprietors to make *de facto* arrangements for the ultimate devolution of their property while they were in the prime of life, a phenomenon that required founders to make special provisions for the inclusion of unborn children in the endowment (al-Wans̲h̲arīsī, vii, 223, 229, 269, 442). If a man had two or more wives, his calculations were more complex. Some husbands favoured the offspring of one wife over those of another; others treated sons of co-wives equally (*ibid.*, vii, 278, 281).

Because a testamentary endowment takes effect only upon the founder's death, the founder retains control of his property throughout his lifetime. This advantage is offset by two disadvantages: the endowment is limited to one-third of the estate and it may not be made in favour of an heir. The latter restriction entails that a testamentary endowment may not be created for the benefit of a son or daughter, thereby posing a dilemma for the founder who wants to maintain control of his property until he dies, but also wishes to designate one or more children as beneficiary. Because the prohibition on bequests to heirs does not apply to a grandchild whose father is alive, one way to solve the dilemma is to designate a currently living or unborn grandchild as the initial beneficiary. Since a minor grandchild is subject to the authority of its father, the latter would exercise effective control of the endowment revenues. Naming an unborn grandchild or great-grandchild as an endowment beneficiary also gives the founder an opportunity to privilege the offspring of one branch of the family over another (*ibid.*, vii, 311).

When a designated family line becomes extinct, the endowment revenues revert to a public institution. Commonly, a founder specifies that the revenues are to revert to "the Muslim poor" (*ibid.*, vii, 49) or to "the poor and indigent" (*ibid.*, vii, 60). Some made very particular designations, e.g. "the poor and the indigent in Granada and al-Bīra" (*ibid.*, vii, 463), or "the poor and indigent who reside in the mausoleum of S̲h̲ayk̲h̲ Abu 'l-'Abbās al-Sabtī" (*ibid.*, vii, 343), or "lepers" (*ibid.*, vii, 186). One founder stipulated that upon the extinction of the designated line, the revenues were to be used to support students, ransom captives and to manumit slaves (*ibid.*, vii, 438).

The most common way to insure the perpetuity of an endowment was to designate a religious institution such as a mosque, school or Ṣūfī convent—or the personnel associated with such an institution—as the ultimate beneficiary (*ibid.*, vii, 46, 281, 452, 459). In a testamentary endowment created on 5 Rad̲j̲ab 791/30 June 1389, the founder stipulated that when the descendants died out, the revenues were to revert to the D̲j̲āmi' al-Ṣābirīn inside the Victory Gate of Fez for the purchase of olive oil and carpets and for the repair of the mosque itself; any surplus revenues were to be used to feed the poor Ṣūfīs and *murābiṭūn* associated with the mosque (*ibid.*, vii, 312). Other founders designated as the ultimate beneficiary "the muezzin in a Friday mosque" (*ibid.*, vii, 202), or "whoever recites [the Ḳur'ān] over the graves of the founder and his relatives" (*ibid.*, vii, 141).

There are no constraints on the size of endowments created *inter vivos*, and we find individuals who designated part or all of their property as a familial endowment (*ibid.*, vii, 80, 432). In the 9th/15th century, the Zayyānid Sultan Abū 'Abd Allāh Muḥammad designated as an endowment for a religious scholar immovable property that included gardens, lands prepared for sowing and a bath (*ibid.*, vii, 248-9). More commonly, however, a founder would designate a discrete piece of property or a fraction thereof as a familial endowment: residential property such as a room (*bayt*), house (*dār*) or compound (*rab'*); non-residential property such as a shop, bakery or mill; agricultural property such as gardens, orchards and olive groves; unspecified village properties; and even entire villages. It was not uncommon for a founder to designate a share of a piece of property as a familial endowment, e.g. half a house, one-fourth of a jointly-held compound, half of an unspecified share in several shops, two-thirds of a well-known strip of land, or one feddan of land (*ibid.*, vii, 45, 49, 75, 202, 226, 423, 446). It is likely that, over the course of time, considerable segments of the urban and rural landscape were being converted from private property into endowment property.

ii. (b) *Disputes.* Unaware of both the gender and number of his or her lineal descendants, the founder of an endowment would formulate a descent strategy designed to regulate its smooth functioning for every possible combination of male and female children and descendants. In an effort to avoid any ambiguity that might upset the subsequent functioning of the endowment, the notary who drafted the deed acted with

great care. But even the most carefully drafted deed could not anticipate every potential dispute over control of the endowment. Such disputes typically were of two types: an external challenge to the endowment by persons who did not qualify as beneficiaries; or an internal struggle for control of the revenues among the beneficiaries themselves. A dispute over control of an endowment might arise during the lifetime of the founder, or, more commonly, one or more generations after his or her death (*ibid.*, vii, 261-2, 311-21, 435, 452-3); such disputes might last for several generations (Powers, *Court case*, 229-54).

The tendency for disputes to arise one or more generations after the death of both the founder of the endowment and the witnesses to the deed meant that written records played a critical role in the resolution of disputes. For this reason, an endowment deed was customarily deposited in a family archive for safekeeping, and it would pass from one generation of beneficiaries to the next. In the event of a dispute, the deed, together with other important documents, would be presented to the judicial authorities (al-Wans̲h̲arīsī, vii, 80-2). In one case, a woman produced an endowment deed in an effort to secure her status as a member of the first set of beneficiaries. The deed was torn, and this fact cast doubt on the validity of the endowment. Although the *muftī* to whom the case was referred suspected that someone had tampered with the document, he accepted it as legitimate in its current state; he also warned that whoever had torn the document would suffer disgrace in both this world and the next (*ibid.*, vii, 455). Another strategy of a person who exercised physical possession of an endowment deed was to frustrate the claims of potential beneficiaries by refusing to make the document available. Such behaviour typically manifested itself in connection with the transfer of entitlement from one generation of beneficiaries to the next (*ibid.*, vii, 278-81).

Many *muftīs* refrained from issuing a judicial opinion until they had seen a certified transcription of the original endowment deed (*ibid.*, vii, 29-30, 228-9). On occasion, the *muftīs* complained about the summary nature of the transcription (*ibid.*, vii, 81). It was only when a *muftī* was presented with an accurate transcription of the endowment deed that the interpretative task could begin in earnest. No matter how carefully the notary had formulated the deed, how detailed the descent strategy specified therein, and how long the resulting document, the subsequent pattern of births, deaths and marriages within the family frequently resulted in ambiguous situations that required the intervention of either a judge, or if the case was difficult, a *muftī*. Asked to determine the exact intention (*irāda, ḳaṣd*) of the founder at the time of the endowment's creation, the jurists generally assumed that this intention was accessible in the words preserved in the endowment deed, irrespective of the passage of time or the changed circumstances of the endowment beneficiaries. They treated the founder's words as sacred and immutable, comparing them to God's words as preserved in the Ḳur'ān. One Andalusī jurist wrote:

"The words of the founder are like the words of the Divine Lawgiver. Their sense must be followed with respect to both the unambiguous meaning of the texts (*nuṣūṣ*) and the preponderant meaning of ambiguous texts (*ẓawāhir*)" (*ibid.*, vii, 285). In response to the contention that the revenues of a testamentary endowment created for both currently alive and unborn persons should be frozen until all of the potential beneficiaries had come into existence, the Fāsī jurist al-Mazd̲j̲aldī (d. 864/1459-60) said, "This [conclusion] is not required by either the founder's words or his intention" (*ibid.*, vii, 23).

Viewed from the perspective of the nature of the relationship between litigants, endowment disputes fall into three categories:

(1) *Beneficiaries versus the founder's heirs and agnates.* Unlike inheritance law, which imposes compulsory rules for the division of property among a wide group of male and female heirs in a manner that tends to fragment property, endowment law enables a proprietor to allocate usufructory entitlements to specified people in specified amounts, to regulate the transmission of those entitlements from one generation of beneficiaries to the next and to insure the physical and economic integrity of an estate or a piece of property. The wide gap separating these two sets of legal norms, sc., inheritance and endowments, may be illustrated by comparing the group composed of the beneficiaries of a familial endowment with the group composed of the founder's heirs. While most beneficiaries are also heirs, many heirs do not qualify as beneficiaries. A man who establishes an endowment for his children and lineal descendants effectively disinherits his spouse, siblings, cousins, uncles and nephews, to mention just a few. Because they have been disinherited, these "outsiders" have an obvious material interest in challenging the validity of the endowment; a successful challenge will result in the property's redesignation as inheritable property. As heirs, the spouse, siblings and other relatives stand to inherit a fractional share of the estate.

Endowments created from jointly-held property frequently resulted in disputes between the endowment beneficiaries and the founder's other heirs. The relationship between endowment beneficiaries and others could be complicated if the relative amount of endowed and unendowed portions of jointly-held property was unknown, e.g. due to carelessness on the part of the notary who formulated the endowment deed (*ibid.*, vii, 45-6, 49, 72, 432).

(2) *Founders and their children.* As noted, Mālikī jurists do not permit the founder of an *inter vivos* family endowment to serve as the initial beneficiary. This means that the numerous advantages of the endowment system vis-à-vis the inheritance laws are offset by the requirement that the founder immediately relinquish physical control of the property, a requirement that runs counter to the natural human desire to retain effective control of property until one dies. Many proprietors circumvented this obstacle by creating an endowment while their children were either unborn or minors. The law allows a founder who creates an endowment for a minor child to exercise control of the property on behalf of the child; when the child reaches the age of legal majority, the founder is obligated to convey the property (*ḥiyāẓa*) to the young adult. In practice, many founders ignored these regulations, spending the endowment revenues on their own interests and continuing to exercise *de facto* control of the endowment even after a child had reached the age of legal majority. This irregularity exposed the endowment to subsequent challenge and possible nullification (*ibid.*, vii, 202-3).

When the object of an endowment was a house in which the founder resided, the founder was obligated to vacate the premises for one year; failure to observe this rule could result in nullification of the endowment. In practice, many founders ignored the rule. A founder's failure to observe the one-year rule could

result in litigation setting parent against child (*ibid.*, vii, 202, 218, 260-2, 426).

(3) *Disputes over transmission of entitlement from the beneficiaries of the first generation to those of the second and subsequent generations.* Questions relating to the timing of economic transfers surface again at the moment when endowment revenues are transferred from the first generation of beneficiaries to the second and subsequent generations. At this stage, three issues appear repeatedly: [a] the determination of whether or not an endowment becomes *muʿaḳḳab* (see above); [b] in the event that it does, the criterion according to which the revenues are to be divided among the qualifying beneficiaries; and [c] the definition of the lineal descent group for which the endowment had been created.

[a] The first issue has important consequences for the division of revenues among the founder's lineal descendants: If an endowment does become *muʿaḳḳab*, the revenues, in theory, are to be divided among all of the founder's living lineal descendants irrespective of their generation; if it does not become *muʿaḳḳab*, the revenues are controlled by the members of the oldest generation. In practice, a younger generation of descendants often contended that the endowment had become *muʿaḳḳab*, while the surviving members of an older generation insisted that it had not. In disputes of this nature, one or more paternal uncles might try to prevent the inclusion of their nephews in the division of the endowment revenues (*ibid.*, vii, 248-57, 486-8).

[b] If it is determined that an endowment does in fact become *muʿaḳḳab*, there remains the determination of the criterion according to which the revenues are to be divided among the qualifying beneficiaries. Some authorities maintained that they should be divided on a *per capita* basis, while others held that the judge should allocate the revenues according to need, as determined by his independent reasoning (*ibid.*, vii, 358). Need was defined by a number of variables, including family size, financial resources and degree of the beneficiary's relationship to the founder (*ibid.*, vii, 88, 358, 396, 462, 478, 484). In their discussions of this issue, the jurists manifest an explicit concern for the notion of equity (*ibid.*, vii, 359).

[c] The third recurring issue relates to the principle of agnation, as reflected in the definition of kinship terms. The term *walad* was defined by Mālik b. Anas as "a man's sons and daughters and his son's children, males to the exclusion of females". An uninterrupted line of Mālikī jurists defined the word *ʿaḳib* as "the descendants of a person who are not separated from him (or her) by a female link" (*ibid.*, vii, 281-5). Thus a female may qualify as a member of an agnatic lineal descent group, but she does not transmit this status to either her sons or daughters. If a man creates a family endowment for his son and the latter's lineal descendants, the principle of agnation will progressively exclude from the resulting lineal descent group both female *and* male cognatic descendants of the founder. These cognates are referred to as "the children of daughters" (*awlād al-banāt*).

We repeatedly find "the children of daughters" seeking inclusion in a lineal descent group established by a founder, and, significantly, a series of *muftīs* interpreted the terms of a particular endowment in such a manner as to validate their claims. This approach to the issue of gender was made possible by the *muftīs*' adoption of a literalist approach to statutory interpretation, as illustrated by a case referred to the Cordovan jurist Ibn Rus̲h̲d (d. 520/1126 [*q.v.*]). A man created an endowment for his two concubines, stipulating that when both had died, the endowment was to revert to his two paternal cousins, Aḥmad and al-Ḥasan, and to "their descendants and their descendants' descendants". The two concubines died; Aḥmad died leaving no descendants; and al-Ḥasan produced at least three generations of lineal descendants, including a grandson whose mother was al-Ḥasan's daughter, and a great-grandson whose mother was al-Ḥasan's agnatic granddaughter (his son's daughter). Although neither of these two persons was agnatically related to al-Ḥasan, both sought inclusion as beneficiaries of the endowment. Ibn Rus̲h̲d ruled that the grandson qualified but that the great-grandson did not. He reasoned that al-Ḥasan's daughter is his agnatic descendant and that her son qualifies as the "descendants' descendant" mentioned in the deed. The great-grandson, on the other hand, did not qualify as a beneficiary because the founder had not specified "the descendant of a descendant's descendant" (al-Wans̲h̲arīsī, vii, 463-4; Powers, *Fatwās*, 313).

iii. *Algeria 1820-1914.* The 19th century was a turning point for Muslim family endowments. Observers of early modern Muslim society have noted the rapid rate at which religious endowments proliferated throughout the Muslim world. By the beginning of the century, one-half of the land in Algeria and one-third in Tunisia had been reportedly transformed into endowment land (Köprülü, *L'Institution du vakouf*, 3). Over the course of the century, the *ʿulamāʾ* came into conflict with Muslim and non-Muslim rulers who wanted to weaken their power and gain access either to the revenues generated by religious endowments or to endowment property itself. In Algeria, the endowment system frustrated French efforts to purchase land on the open market. From Algeria to India, endowments in the 19th century increasingly were viewed as an obstacle to economic welfare and social progress.

Inspired by Western social and economic theories, modern advocates of reform—Muslim and non-Muslim—marshalled economic, moral, religious and legal objections to the *waḳf* system. These objections were directed exclusively at family endowments, which, so the argument ran, were solely responsible for retarding a given nation's social and economic development by sequestering large quantities of its capital resources. Despite the fact that the overwhelming majority of Muslim scholars have always accepted family endowments, advocates of reform now cited the opinions of early Muslim jurists who had opposed the institution, and they asserted that objections to the institution had persisted through the centuries.

To exploit the colony's important agricultural and mineral resources, France settled increasing numbers of its civilians in the Algerian countryside. The settlers clashed almost immediately with the Muslim population over the issue of access to, and control of, land. It was essential that the government should facilitate the colonists' acquisition of land and assure them of their rights. To this end, the French endeavoured to elaborate a new system of property law that favoured the colonists.

In the period immediately following the occupation of Algiers, Muslims sold large amounts of *habous* property to Europeans, who were ignorant of the fact that such property was inalienable. Other Muslims, presumably the endowment beneficiaries, subsequently entered claims to the property on the strength of endowment deeds in their possession. These litigations created considerable turmoil (Mercier, *Code*, 90). Although the French ceased to be duped as they grew more familiar with the system of endowments, the *habous* system continued to remove large amounts of

land from the free market, thereby posing a serious, ongoing obstacle to "economic progress".

Initially, the French tried to mitigate the effects of *habous* by legislative means. The Ordinance of 1 October 1844 declared the sale of endowment property by Muslim beneficiaries to European settlers to be legally binding (*ibid.*, 90-1). According to Article Three of this ordinance, "No conveyance of immovable property agreed upon by a native in favour of a European may be contested [merely] on the ground that immovables are inalienable according to Muslim law" (Sautayra and Cherbonneau, *Droit musulman*, ii, 414). This provision was extended, by the Decree of 30 October 1858, to sales between natives. Now, "the provisions of Article Three of the Ordinance of 1 October 1844 ... will apply to past and future transactions between a Muslim and a Muslim, and between a Muslim and a Jew" (*ibid.*). To the chagrin of the French, most Muslims ignored this legislative decree and refused to sell endowment land.

French settlers pressured their leaders to create better conditions for European entry into the Algerian land market. In response, the French government enacted a legislative decree on 26 July 1873 that was intended to resolve the land problem by declaring that all land in Algeria was henceforth subject to French law. Known as the *Loi Warnier*, the decree stated that "the establishment of immovable property in Algeria, its conservation, and the contractual transmission of immovables and property rights, irrespective of the [legal status] of the proprietor, will henceforth be subject to French law". Article Seven of this decree left Muslims subject to their own laws in matters of personal status and inheritance—a provision that was to be of critical importance (*ibid.*, i, i).

Like its predecessors, the *Loi Warnier* proved inadequate, in part because the divisions and categories of French law do not correspond exactly with those of Islamic law. Most French jurists maintained that family endowments were subject to the law of property, while Muslims viewed them as subject to the law of succession (Henry and Balique, *La doctrine coloniale*, 15-6). French jurists soon became embroiled in a controversy over the proper interpretation of the *Loi Warnier*. One group held that the law abolished religious endowments, basing its argument on Article One, para. 2, which states, "All property rights (*droits réels*) ... based upon Muslim law that are contrary to French law are hereby abolished". These jurists reasoned that an endowment was a property right, that it was contrary to French law, that it was included within the scope of Article One, and that it had therefore been abolished. Other French jurists came to the opposite conclusion. They referred to Article Seven of the law, which not only states that nothing had been derogated from the Muslim law of inheritance but also makes no distinction between successions regulated by the law of inheritance and those regulated by family endowments. This latter group reasoned that family endowments, which would permit a person to transmit property to the next generation according to his or her own wishes, constituted a special case (*ordre spéciale*) of inheritance. Therefore, they insisted, the legal status of family endowments should be determined, not by Article One of the *Loi Warnier*, but by Article Seven. Their view was validated by the Court of Algiers in a decree issued on 23 March 1874. Accordingly, family endowments remained within the jurisdiction of the Muslim courts (Sautayra and Cherbonneau, *Droit musulman*, ii, 413-4).

French jurists understood the economic and political interests of colonialism, and many served those interests, consciously or unconsciously, by advocating changes that facilitated the new system of land tenure. Specifically, they argued against the aforementioned view confirmed by the Court of Algiers on 23 March 1874. Between 1885 and 1904, E. Zeys, E. Mercier, and M. Morand published a series of studies of *habous* that collectively developed the following three-fold argument: (1) historically, public endowments antedated family endowments; (2) family endowments deviated from the pious and humanitarian goals of public endowments and thus were, from an Islamic perspective, not only immoral but also illegal; and (3) family endowments and inheritance were mutually exclusive and incompatible institutions. French colonial scholarship, virulent in its opposition to family endowments (see especially Zeys, *Traité élémentaire*, ii, 185-6; Mercier, *Code*, 14, 27, 43-5, 129-34; Morand, *Etudes*, 226, 228-30, 233, 249-50, 264-6; for other French studies of *habous* published between 1886 and 1904, see Henry and Balique, *La Doctrine coloniale*, 118-21), prevailed in much of the Western scholarly literature during the course of the 20th century, resulting in a serious misunderstanding of both Islamic legal history and the social dynamics of Muslim societies (see *EI*[1] art. *Wakf*).

4. In Muslim Spain.

The term *waḳf* is generally replaced in al-Andalus by *ḥubus* or *ḥubs* (pl. *aḥbās*). The root *ḥ-b-s* as used in this sense appears in one of the *ḥadīth*s which is cited to trace the institution back to the Prophet: *ḥabbis aṣlahā wa-sabbil thamaratahā*. The Spanish Arabism *habiz* is assumed to have been derived from *aḥbās* pronounced with a variation in timbre (*imāla*), i.e. *aḥbīs*, and not from the word *ḥabīs*. The oldest Arabic texts use this term to denote property intended for charitable use and converted into a non-transferable right, but it is one which is not recognised in the Andalusī juridical texts concerning mortmain.

Matters concerning this institution occupy numerous pages of Andalusī works of *fiḳh* (see *Bibl.*), and these describe *taḥbīs* as the process by means of which during his lifetime the founder (*muḥabbis*) renounces ownership of property, and such property remains permanently withdrawn from any commercial transaction (*ḥubus mu'abbad*) and is converted from an item of personal estate to the real estate of a family or an institution. An essential clause states that the *muḥabbis* entrusts the property to a third party who will take possession (*ḥawz wa-ḳabḍ*) of it on condition that the usufruct is passed on for the immediate or longer term benefit of the needy, or for a charitable cause.

The Andalusīs have always maintained that, in accordance with the teaching of the school of Mālik, their goods and chattels may become the property of a charitable foundation. Thus among the *awḳāf* about benevolent giving, there are found gifts of books "which are to be available for those who are seeking knowledge, so that they may copy them, compare them or study them" (al-Djazīrī [d. 585/1189], *Maḳṣad*, 288). Normally, such works or pamphlets were deposited in mosques or *madrasas*, but they have also been known to have been kept in an individual's house if necessary. Hārūn b. Sālīm (d. 238/852-3) was one such individual, and he set up a *waḳf* with his books in the house of Aḥmad b. Khālid (Ibn al-Faraḍī, *Ta'rīkh*, ed. Codera, no. 1528).

In al-Andalus it was common to arrange more specifically for goods and chattels or animals to be *aḥbās*, and these could be used in the cause of *djihād*, such as swords and other military equipment, slaves, beasts of burden, horses, etc. The horse would be marked on the hindquarters with a distinctive sign to show that it was *muḥabbas*, and then it was frequently placed in the hands of a horseman whose valour and prowess in combat were recognised.

The majority of *aḥbās khayriyya* or charitable foundations of a public nature, were based on goods and chattels. Most of the mosques, hospitals and cemeteries were built in this way or equipped with private funds. It is also the case that houses were sometimes set up as *aḥbās* for particular individuals to live in, such as pious women who were living alone, the *imām* of the mosque, pilgrims, etc. The running of such establishments was made possible by patrimonial funds granted as *aḥbās*: farmlands, property for letting, commercial establishments (kilns, bathhouses), and the income from them was allocated to such religious or charitable institutions.

But not all the mosques had access to sufficient *aḥbās* to meet their needs. Ibn al-Imām was therefore consulted about the person in charge of a mosque who was supplementing his salary with different *aḥbās*. All the property which was called *aḥbās al-dīwān* in al-Andalus was let out to individuals (*mutaḳabbilūn*) by means of a contract in which the amount (*ḳabāla*) to be paid each year was specified. The intermediary or agent charged with the task of reaching an agreement with the tenants was called the *dallāl*. All those who were in possession of property in any location belonging to the *aḥbās* were summoned once a year, eight days after the *'īd al-aḍḥā*, to draw up a corresponding contract for the following year. In order to avoid the situation whereby the tenant of *muḥabbasa* land would eventually claim the ownership for himself, in al-Andalus it was recommended that it not be leased out to the same person for more than four years.

If there was a drop in income it was usual for the tenants to approach the *ḳāḍī* with a request for a reduction in the amount they were liable to pay. The causes most commonly pleaded by the farmers were plagues and damage caused by the passage of troops (e.g. during the sieges suffered by Cordova in the 5th/11th century). The tenants in charge of bathhouses pleaded scarcity of water at their disposal, or particular difficult circumstances in which they found themselves, such as trying to heat these establishments with wet wood during a period of persistent rain. Then the *ḳāḍī* would send along witnesses to assess for themselves the alleged damage, and a reduction in the total sum to be paid as rent was made on the grounds of gracious remission (*isti'lāf*).

Since their task was the good business management (*naẓar*) of the *aḥbās*, the *fuḳahā'* were in the habit of allowing such remissions to ensure that there would always be candidates willing to rent the property, seeing that they were vying with each other to profit from some of these contracts. There was a fear that the land would remain unoccupied, as is evident from numerous reports of *muftīs* consulted on this subject in Andalusia. However, other *'ulamā'* deplored the fact that the tenants abused the custom, and that they accepted these contracts in the sure knowledge that they would be granted the exemptions requested and that the result would be that it would in fact become an implicit clause in any contract in question.

Numerous *aḥbās khayriyya* were established by members of the Andalusī aristocracy. In 364/975 this was the way that caliph al-Ḥakam II [*q.v.*] set up a

foundation with rents from the shops in the market of Cordova, which were used to pay the salaries of the teachers whom he had appointed to teach the Ḳur'ān to the sons of the poor. He also instituted as a *ḥubus* for the recently enlarged mosque in Cordova the revenue derived from a quarter of all the rural properties he had inherited from his father, the caliph ʿAbd al-Raḥmān III, properties which were spread throughout all regions of al-Andalus. He appointed his *ḥādjib*, Sayf al-Dawla Dja'far, to collect, account for and administer these *ḥubus*. This famous eunuch, an officer of al-Ḥakam II, in turn set up important *aḥbās* for which Ibn al-Mashshāṭ (Ibn al-Abbār, *Takmila*, ed. Codera, no. 384) was appointed *nāẓir*.

In al-Andalus an essential tool for legally avoiding the application of the Islamic rules of inheritance was the *waḳf ahlī*, an allocation to the descendants of the founder, on the condition that if they disappeared it would revert to needy persons or to charitable causes. It was frequently established with the aim of preventing the fragmentation of the family inheritance and ensuring that it remained economically viable. In addition it could prevent the transmission of property to women, although that would have been considered *makrūh* by the Andalusī *ʿulamā'*. It was also used to defend the inheritance from confiscation, such as was decreed by higher authority with relative frequency. They would declare that the owners of the property concerned were guilty of infringement, or were lacking in loyalty towards authority. The celebrated formularies of Ibn al-ʿAṭṭār (d. 399/1009) and of al-Djazīrī provided models of deeds authenticated by a notary of *istirʿā'* or of *taḳiyya*, in which a person would testify that he was going to set up a foundation in mortmain, not as a meritorious gesture before God, but as a means of avoiding being forced by authority to relinquish it.

The high number of *aḥbās* which are known to have been instituted in favour of descendants of the founder shows that the Andalusīs must frequently have thought them a good means of providing security against poverty for their successors. But this did not always yield the good results anticipated, for the heirs might not receive with the land the money necessary for running it. It has been shown that sometimes they ran the risk of incurring severe hardship, for they were prevented from selling any part of the land to obtain liquid assets. In such cases, the Andalusī *muftīs* were consulted about the possibility of disposing of some of this property. However, according to Ibn al-ʿAṭṭār (*Wathā'iḳ*, 176), the founder could decree that, if any of the beneficiaries of the *ḥubus* were to find himself in a state of need (it would have to be properly certified, unless he had stipulated that the heir would simply have to be believed if he claimed to be in a state of poverty, and that he would not have to have his statement attested), he could sell his portion and thus be relieved from his penury.

In Andalusī works about notorial formularies, there are various models of deeds of constitution for a *ḥubus* (*wathīkat taḥbīs, ʿaḳd ḥubus*). In these models the verbs *ḥabbasa* and *waḳḳafa* are used in the same document; the one indicates that the property has been placed outside the commercial channels, and the second states that it has been established exclusively for a specific purpose. It was within the power of the founder to designate a person to be in charge of the foundation and to be responsible for the aims that he had envisaged for it. If this person were to die, or prove to be unfit for such a mission, it was the duty of the *ḳāḍī* to find someone to be a substitute for him.

The most delicate clause was perhaps the one in which the *muḥabbis* designated the tenants to benefit from the property in question. The Andalusī authors of *wathā'iḳ* advise that the drafter of the document should question the grantor about his intentions in the matter. The founder could institute that the male descendants would be paid a double portion, or that all the descendants would have equal portions; or he could decide that the sons would be included in the division of profits during the lifetime of their father, or only after his decease, etc.

The Andalusī *ʿulamā'* discussed whether the expression "in favour of my children (*awlādī*) and their children" included the sons of daughters. Ibn Abī Zamanīn was of the opinion that the female line of descent should not be included, but other *fuḳahā'* expressed the opposite opinion; for this question they were followed by Ibn Rushd al-Djadd. On the basis of one of these decisions, the *ḳāḍī* Muḥammad b. Isḥāḳ b. al-Salīm (d. 367/978) was able to pronounce judgement in favour of the inclusion of the female line of descent for beneficiaries of a specific *ḥubus*. The jurist Muḥammad b. ʿAbd al-Malik b. Ayman (d. 330/942) instituted a *ḥubus* in favour of an unborn child. No-one really thought it was licit, but nevertheless the *ḳāḍīs* Muḥammad b. Isḥāḳ (already mentioned) and Ibn Zarb (d. 381/991) pronounced a judgement in favour of mandatory compliance with the clause.

As indicated in the formularies of Ibn al-ʿAṭṭār and of Ibn Mughīth (d. 459/1067), several copies of the *taḥbīs* documents were in existence. One assumes that there were as many as there were interested parties. But it does not appear that the original was placed in an archive at the disposal of those who needed it. This absence of central archives is proved by the fact that al-Djazīrī (297) included a model of a deed authenticated by a notary for an instance where the heirs of the *ḥabus* had lost the original deed of constitution, and they had to acknowledge that they had received just such a deed from their father. It is obvious that if a copy of it had been kept in an archive, it would not have been necessary to draw up this new document because the original deed had been lost. Although we know that in Egypt in 363/974 al-Muʿizz directed that the deeds of constitution of the *awḳāf* should be deposited in the *bayt al-māl*, there is nothing to reassure us that this custom was also followed in al-Andalus. It is surprising that, in the model supplied by al-Djazīrī, it was the heirs who had to apply probatory force to the clauses which appeared in the deed of constitution by the request of the founder. These were clauses which the heirs might consider unfavourable, such as for example if the sons of the daughters were included among the beneficiaries (for a lawsuit which is particularly interesting on this point, see Ibn ʿIyāḍ, *Madhāhib*, 192-6).

From the time when the founder drew up the deed before witnesses he renounced ownership of the property in question, which then had to be formally taken over by a third party. If the *ḥubus* was in favour of the children and these were minors, he could remain as administrator (providing this fact was sufficiently publicised) or designate someone else to be in charge of the administration of the property. He was, however, obliged to have a document drawn up in front of witnesses, stating that he undertook to hand over to them the revenue or profits which the property in question had produced since the time of the *taḥbīs* when they reached majority. If he instituted a *waḳf* agreement on a house in which he was still living, he would have to leave it and go live in another.

The witnesses would have to attest that the house in question was empty of tenants and furniture, and closed up from the outside when the *ḥubus* was established. For the founder to be able to come and live again in that house, or use it as reserve space, a year would have to elapse, otherwise the *ḥubus* was not valid.

Generally, the Andalusī deeds of *taḥbīs* designated with great precision the ultimate recipient of the *ḥubus*, like for example the lepers' quarter on the other side of the river in Cordova, the maintenance of a certain bridge, the payment of the salary of the *imām* and other servants of a mosque, or repairs to the mosque, or the purchase of matting or oil for the lamps in the sanctuary, etc. However, there probably had to be a certain number of foundations devoted to charity where the revenue did not have such a specific destination, since we know that these funds under the control of the *ḳāḍī* were used many times for a purpose which was considered useful to the community, such as combatting the enemies of religion.

The various political systems in al-Andalus have always included a *ṣāḥib al-aḥbās*, a curator or administrator general of mortmain property, whose mission was to prevent the disappearance of real estate, or the alteration of its status, i.e. the purposes for which it had been intended, the beneficiaries designated and the actual location of the building (even if there was a proposal to exchange the property for another on a better site). This official was responsible to the treasury (*māl al-aḥbās*), made up of the revenue of the charitable bequests detailed for the mosques and other public institutions or good causes. In his *Ta'rīkh ʿUlamāʾ al-Andalus*, Ibn al-Faraḍī (d. 403/1013 [*q.v.*]) gave him the title of *nāẓir fi 'l-awḳāf* (*or fi 'l-aḥbās*), which appears to indicate that the term *ṣāḥib* came into general use after the 4th/10th century. This would leave the title *nāẓir fi 'l-aḥbās* to designate the representative of the *ḳāḍī* in each location, whose task it was to supervise the mainmort property, and to engage and pay the servants of the mosque. The title *nāẓir* was also given to the administrator of a specified *waḳf*. Ibn al-Faraḍī also reports that the *nāẓir fi 'l-awḳāf* could sometimes carry out his tasks jointly with another office-bearer. This fact was established in his *Ta'rīkh* concerning two characters whose biography he was writing.

Given that controlling the *aḥbās* was one of the tasks of the *ḳāḍī* (or according to the expression of Ibn Sahl, the *dīwān al-ḳuḍāt*), this term denoted the person who was entrusted with attending to it on his behalf. This was one of the most important tasks of the administration (the names of dozens of people who have held it figure in the *Ta'rīkh*), and it gave rise to the appearance of the name of Ibn Ṣāḥib al-Aḥbās. The testimony of such a personality was worthy of trust and was a determining factor in the litigations surrounding such property. Certain lawsuits were conducted against those who were accused of embezzlement while carrying out their job (see e.g. Ibn al-Faraḍī, no. 1360).

The treasury of the *aḥbās* was of great economic importance as early as the time of ʿAbd al-Raḥmān I [*q.v.*]; it was reported that this treasury was the source of the 200,000 dīnārs necessary for the construction of the first great mosque in Cordova in 170/786. This treasury at Cordova was kept in the *maḳṣūra* of the great mosque, in the *bayt māl al-muslimīn*, and would have formed the most significant part of the revenues held there. The expression *bayt al-māl* [*q.v.*] is often interpreted as "the treasury of the charitable foundations", thus implying that all its income came from the *awḳāf*. The value of dīnārs arising from the *aḥbās* kept in the great mosque of Cordova and placed in the hands of the *ḳāḍī* was always very important, and it gave rise to clashes with the religious and political authorities, because at certain points in time the latter wished to use these funds for purposes which their guardians did not always consider appropriate.

The situation where it was impossible to transfer the *ḥubus* from its original location to another property was maintained by the *fuḳahāʾ* of al-Andalus, except for when it was necessary to proceed with the extension of a mosque. This initially prevented the caliph al-Nāṣir from enlarging his palace at the expense of some real estate (*madjshar*) which was a charitable foundation for lepers. Later, however, he produced a very advantageous exchange for the *ḥubus*, thanks to a very timely *fatwā* from Muḥammad b. Yaḥyā b. Lubāba, who authorised the exchange, basing his opinion (he disagreed with Mālik) on that of the ʿIrāḳīs, who were obliged to respect the original location of the *ḥubus* except where a mosque was concerned.

The *ʿulamāʾ* posed the question of what to do if the property about which the *ḥubus* had been instituted could not be found. One case which frequently came up in al-Andalus was that of property allocated to an institution situated in an area which in the interim had been seized by the enemy. In this hypothesis, the judgement was always that the property should go to a worthy public cause. Sometimes the Andalusī *ʿulamāʾ* considered that some of the causes for which specific *aḥbās* had been detailed were illicit. Numerous consultations recorded in the *Miʿyār* of al-Wansharīsī [*q.v.*], all dating from the Naṣrid period, have as their subject the legality of the *aḥbās* instituted in favour of the "Night of the Birth of the Prophet". The revenue from these was paid to the *imām*, so that he would organise a public prayer on the said night. An equivalent amount was also distributed to the *fuḳarāʾ*, who enlivened the celebrations with their singing and dancing. The *fuḳahāʾ* were unanimous in disapproving of the innovation of these festivities, and they stipulated that these legacies should be used for some other charitable purpose. The *ḥubus* which benefitted them was called a *fuḳarāʾ al-waḳt*. These were brotherhoods which existed in the Naṣrid period, and their members devoted themselves wholeheartedly to music and dance, and they were without question supported by a section of the population; nevertheless they were not considered legitimate.

The *ahl al-dhimma* [*q.v.*] of al-Andalus also instituted *aḥbās* in favour of their successors, probably because they wanted to obtain the same advantages as the Muslims were looking for from that institution. In order to do this they had to respect the norm, according to which the ultimate goal of the foundation had to comply with the precepts of Islam; an example of this was a *ḥubus* set up by a Jew in Lorca with the aim of benefitting the poor of the Muslim community of that city. There was also the case of another Jew who had set up a *ḥubus* in favour of the mosque of Cordova.

The transfer of the property rights of Christian churches constituted a very important problem in the period between the 4th/10th and the 6th/12th centuries, judging by the numerous legal opinions which have been preserved concerning such problems. The discussion by the Andalusī *fuḳahāʾ* about the *aḥbās* of the Christians focused on two questions. Were their churches (and the properties attached to them) to be regarded as real *aḥbās*? Were the foundations instituted

by the *dhimmīs* in their lifetime irreversible? Ibn ʿAttāb (d. 462/1070), a Cordovan *muftī*, affirmed in a *fatwā* received by Ibn Sahl that these *aḥbās* did not prevent their founder from cancelling them and disposing of the property by sale. Then again Ibn ʿAttāb maintained that the land where the churches were built could equally well be sold, despite the fact that it was recognised that they were the *aḥbas* of the Christians. However, Ibn Sahl adds his contribution by citing this opinion, which is contrary to that of Ibn al-Ḳāsim, who forbade the sale of churches.

Now it is known that in al-Andalus the Christians sold their churches throughout the entire 2nd/8th century. But despite all that, and applying the doctrine of Ibn al-Ḳāsim, the *fuḳahā'* denied al-Manṣūr the chance of buying the property attached to churches. Many other *fuḳahā'*, however, defended the idea that according to the legislation of the *ahl al-dhimma*, these properties were not non-transferable, and the Christian *muḥabbis* had the chance to retract. Indeed, they maintained that in any case, Muslim legal authority should not be involved in the internal problems of that community, nor consequently protect in a coercive way such property from any further changes by sale or exchange. Besides, it was considered that since this property was not dedicated to Allāh, Muslims did not have to defend the principle that it was inalienable; the norms which protected the *aḥbās* drew their validity from the fact that they were dedicated to Allāh, whereas those of the Christians were dedicated to their idols. However, the question was resolved in a specially expeditious way. When the Almoravids expelled the Christians from al-Andalus, their churches were converted into mosques, and the property attached to Christian sanctuaries was then either turned into *aḥbās* for the new mosque, or even incorporated directly into the *bayt al-māl.*

Mediaeval Castilian legislation also recognised (perhaps in imitation of that of the institution of the *waḳf ahlī*) the right to decide that certain property could not be transferred by the heir, who is obliged to pass them on in their entirety to his successor, with the same conditions of non-transferability. This right, called the *mayorazgo*, was introduced by Alphonso X to his subjects in the 13th century. The expression "the non-transferability of property" (*vinculación de bienes*), which was used to describe this institution, is reminiscent of the technical term *taḥbīs*. The Castilian institution, like the Islamic one, was very strict, since even the work and improvements brought about in a property which fell into this category were considered non-transferable.

After the Christian conquest, some of the Andalusī *aḥbās* were returned to the church, as was the case in Seville in the 13th century, or at Granada in 1501. For after the conversion or expulsion of the Muslims, the churches were considered the legitimate heirs to the possessions of the mosques and religious retreat houses. Others remained attached to mosques and were administered by the Mudéjar [*q.v.*] authority as designated by the Christian monarchs; this is well established, e.g. for Elche in 1281. Eventually some were divided up between the new conquerors, as happened in Murcia in 1272 after the Mudéjar rebellion.

(A. Carmona)

5. In the modern Middle East and North Africa.

i. *The impetus for reform*

In the 20th century, public criticism of the *waḳf*'s ill-effects on economy and society increased due to the following reasons:

(1) The severance of the judicial link between the *waḳf* and the founder's heirs reduced their interest in the property.

(2) The tying-up of the *waḳf* by freezing its ownership withdrew it from both private and national economic cycles. In some countries (like Egypt) this entailed a serious setback of the agrarian system, with manifold economic, social and political implications.

(3) The exclusive concentration of the *waḳf* administration in the hands of the *mutawallī*, without effective supervision by the *Sharīʿa* court and the beneficiaries, especially with respect to *waḳf khayrī*, could encourage deviations from proper management.

(4) The original purpose of the *waḳf* could cease to exist in the course of time, or its functions could be taken over by state agencies.

The objectives of reform are economic, social and political: restoration of the *waḳf* property to the economic cycle; accommodation of *waḳf* law to the inheritance rules so as to prevent the deprivation of females and cognates of their inheritance rights; redivision of *waḳf* landed property within the framework of agrarian reform; and (in Egypt) the undermining of the position of traditional leadership closely bound up with the agrarian system.

Juristic basis for the reforms has been provided mostly by the "eclectic" method (*takhayyur, talfīḳ* [*q.v.*]), *siyāsa sharʿiyya* [*q.v.*], and the technical distinction between family (*dhurrī* or *ahlī*) *waḳf* and that for charitable purposes (*khayrī*).

Relevant legislation: Algeria—Law No. 91-10 (*awḳāf*), 1991; Egypt—Law No. 48 (*waḳf* rules), 1946 and its amendment by law No. 87 of 1947; Law No. 180 (abolition of non-charitable *waḳf*), 1952, and a decree of September 14, 1952; Law No. 247 (supervision of *awḳāf khayriyya*), 1953 (amended by Law No. 30, 1957); Law No. 549 (abolition of *ḥikr*), 1953; Law No. 525 (requisition of *waḳf ahlī* administered by the Waqf Ministry), 1954; Law No. 152 (exchange of agricultural lands endowed for charitable purposes), 1957 (amended by Law No. 51, 1958); Law No. 29 (*Waḳf* of Southern Province), 1960; *Israel*—The Absentees' Property (Amendment No. 3) (release and use of *waḳf*) Law, 5725-1965; *Jordan*—Waḳf Law No. 25, 1946, replaced successively by Law of Awḳāf and Muslim Affairs, No. 45, 1962 and No. 26, 1966, and amended by Law No. 36, 1982; *Kuwait*—Decree concerning Application of Waḳf Rules in Sharīʿa Courts of April 5, 1951; Decree No. 257 (establishment of Secretariat General for Awḳāf), 1992; *Lebanon*—Law of Fam-

ily Waḳf, 1947; *Libya*—Law No. 10 (establishment of General Board for Awḳāf), 1971; Law No. 74 (principles of *awḳāf*), 1972; Law No. 16 (abolition of non-charitable *waḳf*), 1973; *Palestine*—Order of the Supreme Muslim Council, 1921; *Saudi Arabia*—The Administrative Regulations of the Sharīʿa Courts, No. 109, 1962; *Syria*—Decree No. 753, 1921; Decree No. 76 (abolition of family *waḳf*) amended by decree No. 97, both of 1949; Decree No. 128 concerning *waḳf khayrī*, 1949; Law No. 204, 1961; *Turkey*—Act No. 6219, 1954; *United Arab Emirates*—Waḳf Decree, 1980; *Yemen*—The Aden Mohammadan Waḳf Ordinance, 1939; Waḳf Law No. 78, 1976 amended by Law No. 15, 1978 and replaced by Waḳf Law no. 23, 1992.

ii. *Egypt, Lebanon and Syria*

Until the military coups, reforms were confined to supervision of the *waḳf* administration by means of governmental agencies, and moderate substantive amendments in the *waḳf* itself.

In Egypt (1946) and Lebanon (1947), the validity of the family *waḳf* was limited in time; a *waḳf khayrī* could be either temporary or perpetual; the founder could revoke his *waḳf* and recover it for himself, and after him, for the beneficiaries; the exclusion of legal heirs from their rights to entitlement was prohibited; and the founder's stipulations designed to restrict the freedom of the beneficiaries with respect to marriage, place of residence, or the raising of credit were deemed null and void.

The circumvention of the *sharʿī* inheritance rules were frustrated through "obligatory entitlement" to close relatives with respect to two-thirds of the estate; the founder could grant his or her orphaned grandchildren an entitlement equal to what would have been due to their parent had he or she been alive at the time of the founder's death.

Waḳf property was to be managed, wherever possible, by the beneficiaries; the administration of a *waḳf khayrī*, in default of an administrator, was vested in the Ministry of Awḳāf; the consideration of sold *waḳf* property (*amwāl al-badal*) was to be invested in constructive projects, and *awḳāf* irretrievably neglected were to be abolished.

The actual effect of these reforms was slight because most of them were related to future, rather than existing, *awḳāf*, and royal ones were excluded from most of these reforms.

In Syria, under the French Mandate the Contrôl Général des Wakfs was established in 1921, but no reforms beyond *waḳf* registration were introduced.

The military régimes in Syria and Egypt introduced radical reforms in the *waḳf* to the point of its complete abolition. Syria, in 1949, abolished both the family *waḳf* and the *mushtarak* (partly *dhurrī* or *ahlī* and partly *khayrī*) *waḳf*, and prohibited the foundation of such *awḳāf* in future. The family *waḳf* was to be registered, in full ownership, in the name of the founder, and if not alive, in that of the beneficiaries. The administration of the public *awḳāf* was transferred to a special Ministry. In case of *idjāratayn* (prolonged lease), the *waḳf* was to be sold and its consideration distributed among the beneficiaries. A founder's stipulations intended to exclude legal heirs from the estate were invalidated.

The function of *mutawallī* (administrator) of both family and public *awḳāf* was abolished, and the management was vested in the Ministry of Awḳāf which could allocate entitlement to charitable purposes regardless of the founder's stipulations.

Under the 1961 Law, the Ministry of Awḳāf was authorised to administer the *awḳāf khayriyya*, including those that had been abolished, family *awḳāf* of which there were no longer any beneficiaries, *waḳf ghayr ṣaḥīḥ* (of the *mīrī* category), *waḳf* with no specification of beneficiaries, and *waḳf al-Ḥaramayn* [see AL-ḤARAMAYN].

The Egyptian Law No. 180 of 1952 prohibited the creation of family *awḳāf* in future, and abolished *waḳf* existing property, which was to revert to the founder, and if not alive, to the existing beneficiaries according to their shares in entitlement or *amwāl al-badal*.

Under Law No. 525 of 1954, the Ministry of Awḳāf was authorised to expropriate family *awḳāf* under its direct administration, and to compensate beneficiaries out of the *amwāl al-badal* of *awḳāf khayriyya*.

Under Law No. 247 of 1953, the Ministry of Awḳāf was to administer all *awḳāf khayriyya* (except those whose *nāẓirs* were their founders) and allocate their proceeds to whatever public purpose it deemed appropriate, regardless of the founder's stipulations.

Between 1952-4, *ḥikr* [*q.v.* in Suppl.] (long-term lease of dilapidated *awḳāf*) on *awḳāf ahliyya* and *khayriyya* was abolished. In 1960 the lessee was given the option to buy the property from the *waḳf*, failing which it would be sold by auction.

Under Law No. 152 of 1957, the full ownership of all agricultural lands pertaining to *awḳāf khayriyya* was nationalised to be distributed within the framework of the agrarian reform. Their former *nāẓirs* were to receive bonds, and on their redemption after 30 years the capital was to be invested in development projects.

Under Law No. 29 of 1960, the founder may dedicate property to charitable purposes and allocate entitlement to himself. In the presence of close relatives, the *waḳf* is valid only with respect to one-third of the estate.

iii. *Palestine, Jordan and Israel*

In Palestine under the Mandate, the British established the Supreme Muslim Council (1921) with a view to replacing the Ottoman Ministry of Awḳāf. In 1937, the Council's Waḳf committee was relieved of its functions, and the *waḳf* properties were transferred to a government-appointed commission. The attempts during the Mandate to convert Muslim *awḳāf* into secular trusts failed.

After the incorporation of the West Bank into the Hashemite Kingdom in 1951 [see AL-URDUNN. 2(c)], the government's policy was aimed at strengthening the state control in the management of the *awḳāf*. In 1951, the 1921 Order establishing the Supreme Muslim Council was abrogated and the 1946 Waḳf Law was extended to the West Bank and Jerusalem. A Waḳf Council, presided over by the *Ḳāḍī 'l-Ḳuḍāt*, was established under that law, to be replaced, with minor changes, by the 1962 and 1966 Waḳf laws and amended by that of 1982; it controls the management of the *awḳāf* and its budget. No reform, however, has been introduced in the actual institution of the *waḳf*.

In Israel, the vast majority of the Muslim *awḳāf* became absentee property after their administrators had left Israel for the Arab states. The management and entitlement of absentee beneficiaries were vested in a Custodian. Holy places were administered by the Ministry of Religious Affairs, on behalf of the Custodian, by means of Muslim advisory boards. The income was allocated to Muslim religious services and social welfare. The consideration of properties that had been transferred to a governmental development authority were invested in the establishment of educational and social institutions and projects for the benefit of the Muslim community.

Under 1965 law, the Custodian may transfer the family *waḳf* to the beneficiaries' full ownership; *waḳf khayrī* is to be transferred to Muslim boards of trustees empowered to own and dispose of it at will, to use the income for social and cultural purposes regardless of the founder's stipulations, and to use the *amwāl al-badal* to establish institutions for the same purposes. The *waḳf* properties in East Jerusalem, under Israeli rule, have been exempted from the status of "absentee properties". The powers of the Council of Waḳf and Muslim Affairs and the General Director of the Muslim Waḳf Department—as defined in Jordanian law—were delegated to the Sharīʿa Court of Appeal in East Jerusalem.

The Palestinian authority appointed a general director of the *awḳāf* in the West Bank and East Jerusalem, who holds, since the early 1990s, the office of President of the Supreme Muslim Authority.

iv. *Saudi Arabia and Yemen*

No statutory legislation relating to *awḳāf* except certain minor provisions with no substantive significance, has taken place, but *ḳāḍīs* may resort here, as in other aspects of the law, to a school other than the Ḥanbalī one in case the relevant doctrine in the latter may cause hardship and is opposed to the public interest.

The Saudi Ministry of Awḳāf supervises the administration of the *waḳf khayrī*. The 1962 regulations prescribe that, upon the extinction of beneficiaries, income shall pass to charitable purposes and a *nāẓir*, preferably the Director of the Awḳāf, be appointed by court. The Ministry allocates the income of the *waḳf* in accordance with the founders' stipulations. Foreigners are prohibited from transmitting the income abroad.

Endowments on a large scale have been founded in favour of *ribāṭs* [*q.v.*] (hostels for the poor) by pilgrims from all over the Muslim world; these *ribāṭs* are managed by *nāẓirs*.

The 1939 Ordinance restored the validity of the family *waḳf* in the Aden colony, following its invalidation by the British Privy Council in 1894.

The Yemenite 1992 law prohibits an endowment exceeding one-third of the estate in the presence of a heir. Poor descendants of the founder have priority over other poor. Upon the extinction of a beneficiary, the founder may replace him by another one. A family *waḳf* is deemed void unless the beneficiary enters the category of a charity, or is physically disabled and has nobody to maintain him.

Family *awḳāf* contradicting the provisions of this law are deemed null and void unless endorsed by a *Sharīʿa* court or the founder's heirs, or forty years have elapsed since their establishment. The beneficiaries and the court may abolish a family *waḳf*, whereupon the ownership reverts to the beneficiaries according to their shares in entitlement. A beneficiary's heirs take their share in entitlement according to inheritance rules. In case of dispute between the beneficiaries concerning entitlement in and matters pertaining to division of a *waḳf* that has been revoked, the court will apportion entitlement according to the rules of inheritance or, in case of obscurity, *per capita* among the existing beneficiaries, male and female; the division of the property will be according to their shares in the entitlement.

Waḳf in favour of visions (*ḥaḍarāt*), commemoration (*iḥyā'*) of the nights, birthdays of saints (*mawālid*), of holy men (*awliyā'*) and of tombs (*kubūr*) is void.

Disposition of a *waḳf* is permissible only with the approval of the Ministry of Awḳāf and Guidance. The Ministry is in charge of the public *awḳāf* and supervises the administration of *awḳāf* pertaining to mosques by private *mutawallīs*.

v. *Kuwait and the United Arab Emirates*

Under the Kuwaiti 1951 Decree, the founder's poor relatives have precedence in a *waḳf khayrī*. In *awḳāf khayriyya* or *mushtaraka* where the founder has not stipulated otherwise, supervision is invested in the General Awḳāf Department. The founder may revoke any part of a family or charitable *waḳf* (excluding mosques).

Where a family *waḳf* is in a state of dilapidation, or the beneficiaries are numerous, the share of each being insignificant, the *waḳf* expires and reverts to the ownership of the founder or—if dead—to the beneficiaries. The family *waḳf* terminates with the expiry of the beneficiaries or the period specified by the founder; the ownership thereof reverts to the founder, his heirs, and—in their absence—to some public charity. The 1992 Law provides for the establishment of a General Secretariat for the Awḳāf and a Board of Awḳāf, the chairman of which is the Minister of Awḳāf.

In the United Arab Emirates, the 1980 decree abolished the existing family *waḳf* and prohibited its creation in the future.

vi. *Turkey*

In 1926, Turkey abolished the family *waḳf* and nationalised the public ones. Agricultural properties (exchanged for urban properties) were distributed within the framework of agrarian reform. In 1935, *idjāratayn* and *muḳāṭaʿa* (= *ḥikr* [*q.v.* in Suppl.]) were abolished and the establishment of new ones was prohibited. Lessees were made owners of the properties in return for monetary compensation. *Waḳf* institutions were replaced by charity associations. Public *awḳāf* were transferred to public ownership (known as "foundations") to be administered either directly by the foundations (*mazbut*) or by *mütevellis* under the control of the foundations (*mülhak*). The Türkiye Vakıflar Bankası was established under a 1954 Act in order economically to utilise the capital of these foundations. The Bank may lend against securities and immovable assets, establish or participate in partnerships and insurance, buy and sell real estate, and perform all kinds of banking transactions and services.

vii. *Libya and Algeria*

During Italian rule over Libya, some reforms were introduced in the administration of the *waḳf* (decree of 1939), but the institution itself remained intact. No substantial changes occurred during the British rule and under King Idrīs al-Sanūsī. Prior to the military coup, the bulk of *khayrī* endowments belonged to the Sanūsī order [see SANŪSIYYA] and served its lodges (*zāwiya*). Colonel Gaddafi/Ḳadhdhāfī outlawed the order and confiscated its *awḳāf*.

The 1971 law provides for the establishment of a General Board for Awḳāf to administer *awḳāf* in favour of charitable purposes or those whose beneficiaries are not known. The Board supervises the *awḳāf* in favour of the *zāwiyas* and tombs and the administration of family ones. The 1972 law, drafted along the pattern of the Egyptian 1946 law, introduced moderate reforms regarding the *waḳf*. The 1973 law abolished the *waḳf ahlī*. The founder may revoke his *waḳf* and resume the ownership himself provided he has retained the right to do so, failing which the *waḳf* reverts to the beneficiaries. *Amwāl al-badal* following expropriation for public purposes or sale due to dilapidation are to revert to the beneficiaries.

Under the Algerian 1991 law, the founder may revoke his own stipulations. The *ḳāḍī* may do so on grounds of damage to the *waḳf* and its beneficiaries. No renunciation of entitlement is permissible in respect

to public *awḳāf* except in favour of a charitable purpose. A family *waḳf* for a specified period is deemed null and void. On the extinction of the descendants, a *waḳf* is to revert to the Waḳf Authority. This applies also to landed and movable property endowed in favour of associations and institutions when the endowment becomes extinct. *Waḳf* properties nationalised by virtue of 1971 law with a view to being distributed within the framework of the agrarian reform, are to be revived in favour of the original purposes, failing which they are to revert to the Waḳf Authority.

viii. *The decline of the waḳf in modern times*

Some of the main factors for the flourishing of the *waḳf* in Muslim society over the past centuries have ceased to exist in modern times:

(1) The extension of freedom of testation in modern legislation has diminished the incentive for using the family *waḳf* for circumventing Islamic law of inheritance with a view to preventing the fragmentation of the agnatic patrimony.

(2) The concern for social welfare, economic and development enterprises, and investments in infrastructure, which was partly the function of the *waḳf khayrī* in pre-modern times, have become the responsibility of the state and other agencies in modern times.

(3) The religious motive which also played an important role in traditional society as an incentive to found *awḳāf*, especially in favour of pious institutions and charity, seems to have diminished in modern society.

(4) Practical considerations, such as the desire to secure property from expropriation and exemption from taxes, and to prevent encumbrance and loss of property as a result of indebtedness, which often traditionally prompted the foundation of *awḳāf*, can be satisfied nowadays by legal devices that do not entail the negative repercussions.

(5) The reforms introduced in the *waḳf* to the point of complete abolition also diminish the incentive to endow.

III. In Persia

Precise details of the extent of *awḳāf* in Persia and their value at different periods and in different places are not available and the effect of the spread of *awḳāf* on the economy of the country has yet to be worked out. Moreover, what was typical of one district at one point in time cannot be taken as typical of others at all times. Government offices no doubt contain records of *awḳāf* but these are not generally available. Shrines also presumably have records of *awḳāf* constituted in their favour. Many surviving *waḳfiyyas* are held in private hands and some have been published. Some also survive in the form of inscriptions in mosques and other charitable buildings; historical works, especially local histories, biographical works and collections of state documents also contain information on *awḳāf*. Much of what follows is based on state documents and *waḳfiyyas* and does not necessarily reflect practice as opposed to theory. The available information on *awḳāf* for some districts, notably Yazd, Ḳum, Kirmān and, for the Ṣafawid period, Iṣfahān, is richer than elsewhere.

As stated in I. above, there are differences in the legal regulations governing *awḳāf* between Sunnī and Shīʿī theory and minor differences between the different rites. Under both Sunnī and Shīʿī governments in Persia, the constitution of *awḳāf* by rulers and their officials was common, and also by private individuals, both rich and poor, but it is the foundations by rulers and prominent persons of which the sources for the most part speak. The classical legal theory, whether Sunnī until the 10th/16th century or Shīʿī from the 10th/16th century onwards, remained normative, but in practice there were often modifications or deviations, especially in respect of the type of land which could be made into *waḳf*. The stipulation that property to be made into *waḳf* must be in the full legal possession of the founder was in theory observed, and sometimes it is specifically mentioned in the documents that the property had been legally bought by the founder. It is, however, doubtful whether all the *awḳāf* constituted by rulers were in fact made out of crown property [see khāliṣa] or had been legally bought and not usurped; similarly some of the property of powerful individuals made into *awḳāf* may, at some stage, have been usurped.

In practice, there does not appear to have been any restriction on the type of land made into *waḳf*. As well as landed estates, water rights, water mills, real estate, bazaars, shops and houses were also constituted into *awḳāf*, and, more rarely, rights of usufruct (A.K.S. Lambton, *Continuity and change in medieval Persia*, New York 1988, 148-9). Jean Aubin noted that Öldjeytü [*q.v.*] authorised Inal Khātūn in a decree (*nishān*) dated to the equivalent of 31 July 1305 to constitute over half of the village of Kalkhurān, which Ghazan Khān [*q.v.*] had given her for her upkeep (*ikhrādjāt*), into *waḳf* for Shaykh Ṣafī and his descendants. Ten years later, Öldjeytü constituted the remainder of the village into *waḳf* for the Shaykh, who later nevertheless managed to sell it to the descendants of the *ṣāḥib dīwān* Shams al-Dīn Djuwaynī, to whom it had originally belonged (*La propriété foncière en Azerbaydjan sous les Mongols*, in *Le Monde iranien et l'Islam*, iv [1976-7], 99-101). Books, carpets and other objects were frequently made into *waḳf* for mosques and *madrasas*.

The great majority of charitable *awḳāf* were constituted for the benefit of mosques, *madrasas* and *khānaḳāhs*, and their revenue devoted to purposes such as the support of the *ʿulamāʾ*, feasts and the feeding of the poor on religious festivals, the holding of religious assemblies, *rawḍa-khʷānīs* and so on. Many were also made for the upkeep of charitable buildings such as hospitals, caravansarais, water storage tanks and drinking-fountains. The first call on the funds of a *waḳf* was the development and upkeep of the property itself, and then, unless exemption had been granted by a special *farmān*, the payment of government taxes, after which came the payment of the wages of the servants of the foundation for which the *waḳf* had been constituted and the *mutawallī*, who was usually

entitled to one-tenth of the revenue, though in some cases it was stipulated in the *wakf-nāma* that he should be paid more or less than this. Landed property held as *wakf* was often leased; some *wakfiyyas* laid down that the term of the lease should not exceed three years (see also Lambton, *Landlord and peasant in Persia*, repr. London 1969, 234-5. For expenditure of the revenue from Ghazan Khān's foundations, see Rashīd al-Dīn, *Tārīkh-i mubārak-i ghāzānī*, ed. K. Jahn, London 1940, 316-18, and for Rashīd al-Dīn's foundations, see *Wakf-nāma-i Rabʿ-i Rashīdī*, ed. M. Minovi and Īradj Afshār, Tehran 1977-8, 42-4; and see Lambton, *Awqāf in Persia, 6th-8th/12th-14th centuries*, in *ILS*, iv/3, [1997], 316-18).

With the fragmentation of the caliphate and the rise of semi-independent dynasties, the conquered territories, whether belonging to Muslims or non-Muslims, fell to the conquerors and their military auxiliaries. The extent to which existing *awkāf* continued to function varied and is not well documented. Many were probably usurped; and others decayed over time and fell out of operation.

From the early years of the semi-independent dynasties, the importance of *awkāf* is attested by the existence of a *dīwān-i awkāf* or a special office in charge of *awkāf* [see DĪWĀN. iv, at Vol. II, 333b]. For political and financial reasons, control over *awkāf* was important for rulers. First, *wakfī* land, unless specially exempted, was liable to taxation and its prosperity therefore contributed to state revenue. Secondly, the constitution of *awkāf* gave prestige and opportunities of patronage to its founders and wealth to the administrators and beneficiaries.

For the Ṭāhirid, Būyid, Ṣaffārid, Sāmānid and Ghaznawid periods, information on *awkāf* is sparse, and such *awkāf* as were constituted were probably of a modest nature. Under the Sāmānids there was a separate *dīwān* for *awkāf* (Narshakhī, *Tārīkh-i Bukhārā*, ed. M. Riḍawī, Tehran AHS 1317/1938-9, 31; Barthold, *Turkestan*, 229). Narshakhī mentions a number of *awkāf* made by Amīr Ismāʿīl b. Aḥmad (279-95/892-907) (16-17, 33-4), all apparently of a modest nature. Much *wakfī* land was seemingly held by the *ʿulamāʾ* as *mutawallīs* [see SĀMĀNIDS. 1, at Vol. VIII, 1029a].

Under the Saldjūḳs [see SALDJŪḲIDS], there was probably an increase in *wakfī* land and in the control exercised over it by the state. The spread of *madrasas* [*q.v.*], apart from anything else, and the foundation of mosques and other charitable buildings, is likely to have contributed to an increase of *awkāf*. Māfarrūkhī states that Niẓām al-Mulk [*q.v.*] constituted innumerable estates into *wakf* for a *madrasa* which he had built in the Dar Dasht quarter of Iṣfahān and that its annual revenue was over 10,000 dīnārs (*Maḥāsin Iṣfahān*, ed. Sayyid Djalāl al-Dīn Tihrānī, Tehran n.d., 104-5). Ḥusayn b. Muḥammad b. Abi 'l-Riḍā Āwī states that when he was writing (*ca.* 729/1328-9), the *madrasa* was still in existence but its *awkāf* had been misappropriated (*Tardjuma-i Maḥāsin Iṣfahān*, ed. ʿAbbās Iḳbāl, Tehran AHS 1328/1949-50, 142, and see IṢFAHĀN. 1, at Vol. IV, 101b). It is probable that Niẓām al-Mulk's foundations were made partly with government funds (see further Lambton, *Continuity and change*, 43).

General supervision over *awkāf* was exercised by the *wazīr*, the head of the *dīwān-i aʿlā* (see DĪWĀN. iv, and Lambton, *The internal structure of the Saljuq empire*, in J.A. Boyle (ed.), *Camb. hist. Iran*, v, 263, also in Lambton, *Theory and practice in medieval Persian government*, Variorum, London 1980), but immediate supervision was probably usually exercised by the *ḳāḍī al-mamālik* (cf. a document dated Muḥarram 457/Dec. 1064-Jan. 1065 for the chief *ḳāḍī* of the empire, in the *Munshaʾāt Evoghli Ḥaydar*, in H. Horst, *Die Staatsverwaltung der Grosselǧūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 147-8). The *mutawallī* of an important *wakf* or group of *awkāf* was probably often appointed by the state and, even if named in the *wakfiyya*, was given a document of appointment. If not a *ḳāḍī*, he was usually a member of the religious classes (Lambton, *The internal structure of the Saljuq empire*, 276).

The extent of the control exercised by the *dīwān-i awkāf al-mamālik* over *awkāf*, especially with regard to provincial *awkāf*, is not entirely clear. Practice varied. In general, it seems that the provincial *ḳāḍī al-ḳuḍāt* was appointed by the *ḳāḍī al-mamālik* and had charge of provincial *awkāf*, but the general supervision of provincial *awkāf*, like most other aspects of the administration, was delegated to the provincial governor or *muḳṭaʿ*. For example, the document issued by Sandjar's *dīwān* appointing Tādj al-Dīn Abu 'l-Makārim *raʾīs* of Māzandarān (although he is called *raʾīs*, his office was clearly that of governor), instructs him to investigate the condition of *awkāf* and to see that their proceeds were expended on the objects for which they had been constituted (*ʿAtabat al-kataba*, 24) and he or his deputy was to remedy any disorders in their administration, remove any *mutawallī* or person in charge (*mutaṣarrif*) who committed peculation and as far as possible to revivify those *awkāf* which had decayed (*ibid.*, 24, 28, 29; see also Lambton, *The administration of Sanjar's empire as illustrated in the ʿAtabat al-kataba*, in *BSOAS*, xx, [1957], also in eadem, *Theory and practice in medieval Persian government*, 383-4).

However, in some cases the *awkāf* of a particular district were expressly placed outside the control of the *dīwān-i awkāf-i mamālik*. In a document appointing Abū Saʿd Muḥammad b. Ismāʿīl as *ḳāḍī* of Nawḳān and the villages of Ṭūs which belonged to it, the *dīwān* is forbidden to interfere in the office of *mutawallī* of the *awkāf*, "which from ancient times had been in the name of his (Abū Saʿd's) forebears" (*ʿAtabat al-kataba*, 33).

Such documents as have survived suggest that the main concern of the Saldjūḳ government was to ensure that *wakf* revenue was expended as laid down in the relevant *wakfiyya* and to prevent encroachment on *awkāf* by unauthorised persons. A document issued by Sandjar's *dīwān* appointing Madjd al-Dīn (who already had the title if not the office of *ḳāḍī al-ḳuḍāt*) as *ḳāḍī* of various branches of the military establishment, states that he was to look into large and small *awkāf*, to enquire into their produce, to stop any damage being done to them, and to prevent encroachment upon them or their seizure by those who would devour them; also, he was to act in accordance with the conditions laid down by their founders and see that their produce was expended on the proper purposes (*ibid.*, 59). With the weakening of the central administration towards the end of the Great Saldjūḳ period, it is not unlikely that irregularities in the administration of *awkāf* occurred (see further Lambton, *Landlord and peasant in Persia*, 68-9).

It seems that in some cases the term *mutawallī* is used in the documents in the general sense of an official placed in charge of the *awkāf* of a district, each of which had its own *mutawallī*. Thus a document in the collection *al-Mukhtārāt min al-rasāʾil* (ed. Īradj Afshār, Tehran AHS 1355/1976) issued by the *dīwān* of Maḥmūd b. Muḥammad (511-25/1118-31 [*q.v.*]) reappointing Muntadjab al-Dīn Abu 'l-Ḳāsim Ismāʿīl b. ʿAbd al-ʿAzīz over the *awkāf* of Iṣfahān and its dis-

tricts (which had been constituted for the Friday mosques, other mosques,. shrines, hospitals, *ribāṭs*, and other purposes), instructs him to carry out this office as formerly and to expend the produce of the *awḳāf* as laid down by the founders and to restrain the hands of those who would encroach upon them. No-one was to interfere with him or his deputies; complete control over *wakfī* affairs was vested in him. The *sipahsālār* Alp Ṭoghrïl Bilge Beg Abū Saʿīd Mawdūd b. Artuḳ was to listen if any of Muntadjab al-Dīn's children or deputies had recourse to him and was not to send any *ghulāms* to the *wakfī* estates except at the request of a deputy of the *dīwān-i awḳāf*. A certain Muḥammad b. Abi 'l-Khayr, who had misappropriated a sum from the estates of the *wakf* for the Ḥaramayn, was to be summoned. The sum was to be recovered and Muḥammad b. Abi 'l-Khayr punished. Tādj al-Dīn Abu 'l-Ṭālib al-Ḥusayn b. Zayd b. al-Ḥusayn was not to interfere in the *awḳāf* of Iṣfahān and its neighbourhood or their produce or revenue and if, before the arrival of this *farmān*, he had taken anything from the *awḳāf*, it was to be immediately extracted from him to the last *man* [see MAKĀYĪL and MAWĀZĪN for this unit of weight] and any *wakf* in his possession was to be surrendered. The *mutawallīs* and peasants of the *awḳāf* were placed under the orders of Muntadjab al-Dīn (278-9). A similar situation may have existed in other major mosques and shrines, and certainly did so in the Ṣafawid period and later (see below) when there was a *mutawallī* appointed by the government over the shrine or mosque in charge of the administration of its *awḳāf* made at different times, each, or some of which, may have had its own *mutawallī*.

Under the Khwārazmshāhs, the situation with regard to *awḳāf* was probably broadly similar to that which had prevailed under the Saldjūḳs. A diploma (*manshūr*) for the *ḳāḍī al-ḳuḍāt* Khalaf al-Makkī renewed his charge of *awḳāf* properties which had been in the possession of his trusted agents (*muʿtamidān*) and of the *tawliyat* of the *awḳāf* of the mosques and *madrasas* which had been in the care of former *ḳāḍīs*, and at his request the accountant of the *dīwān*, who had been in charge of the *wakfī* accounts, was recalled and all affairs connected with the administration of the *awḳāf*, their development and their protection from the hands of those who would encroach upon them, were entrusted to him (Bahā' al-Dīn Baghdādī, *al-Tawassul ilā 'l-tarassul*, ed. Aḥmad Bahmanyār, Tehran AHS 1315/1936-7, 51-4, and cf. the document appointing Khalaf al-Makkī *ḳāḍī* of the empire in succession to his father, *ibid.*, 61, 72). Another (undated) document in the same collection illustrates the interest of the government in ensuring that *wakfī* property was in good condition. It states that the village of Sakān Akhsak (?), which was *wakf* for the Khātūn Bahā' *madrasa* and one of the most important *wakfī* properties of Khwārazm, was beginning to fall into decay owing to the incompetence of the *mutawallī* (*ibid.*, 86). Accordingly, the sultan had decided to appoint the *wazīr* Naṣīr al-Dīn as *mutawallī* of the *wakf* and to give him full control over it. He was to arrange its affairs through deputies (*nā'ibān*) so that it might quickly return to a prosperous condition and its revenue be spent as the founder had laid down; and a suitable *mudarris* was to be appointed (*ibid.*, 87-9). This case is unusual in that the newly-appointed *mutawallī* was a *wazīr* and not a *ḳāḍī*.

In Fārs, various of the semi-independent Saldjūḳ governors, notably Ḳarača Sāḳī, who was the virtual ruler of Fārs in the early years of the 6th/12th century, and Zāhida Khātūn, the wife of Boz-Aba, who ruled the province after the death of her husband in 541/1146-7, were active in the constitution of property into *awḳāf*. The latter spent all the money, treasure and jewels which she had inherited from her ancestors and from Boz-Aba on the purchase of large villages to make into *wakf* for the *madrasa* which she built in Shīrāz. The Atabegs of Fārs continued this tradition (see further Lambton, *Continuity and change in medieval Persia*, 150). The rulers of other Saldjūḳ succession states, notably the Ḳutlugh Khānids (Ḳarā Khiṭā'iyān) of Kirmān [*q.v.*] made many charitable foundations and constituted *awḳāf* for them (see further *ibid.*, 151, and eadem, *Awqāf in Persia*, 310-13).

Terken Khātūn, who ruled Kirmān after the death of her husband Ḳuṭb al-Dīn Muḥammad in 655/1257 until her death in 681/1282, made numerous villages and estates into *awḳāf* for mosques, shrines, hospitals and lesser charitable purposes. These are recorded in the *Tārīkh-i Shāhī-yi Ḳarā Khiṭā'iyān* (ed. Muḥammad Ibrāhīm Bāstānī Pārīzī, Tehran AHS 1355/1976-7), the anonymous author of which states that records of the *awḳāf* of Kirmān had been kept in the provincial *dīwāns* (93). Piety may have been her primary motive, but it may be that she needed the public support which such foundations gave. She is stated to have claimed her dowry (*ṣadāḳ*) on her husband's death and with the 10,000 dīnārs to which it amounted to have bought land which she made into *awḳāf* for the *madrasa* and tomb complex which she built in Bardasīr (*ibid.*, 100). It seems likely that many, if not all, of her *awḳāf* were made out of her personal property. She had a private *dīwān* (*dīwān-i khāṣṣ*) separate from the state or public *dīwān* and owned considerable resources (*ibid.*, 232). Her sons, Sulṭān Ḥadjdjādj and Soyurghatmish, also made many charitable foundations out of their inherited estates and private property (Naṣīr al-Dīn Munshī, *Simṭ al-ʿulā*, ed. ʿAbbās Iḳbāl, Tehran AHS 1328/1949-50, 39-40, 58). Terken Khātūn designated herself as *mutawallī* of some of the foundations she constituted, including the numerous properties she made into *wakf* for the Friday mosque outside Bardasīr (*Tārīkh-i Shāhī-yi Ḳarā Khiṭā'iyān*, 244-5). In some of her smaller foundations, especially those made for slaves and slave-girls, her children were designated *mutawallī*. This was also the case of the mill (in Bahrāmdjird) which she had bought and repaired and made into *wakf* for the shrine in the village of Ardashīr in Djuwayn (*ibid.*, 225-6). The office of *mutawallī* of the *awḳāf* of the Friday mosque which she built at the New Gate of Bardasīr in 673/1274-5 was entrusted to "the ruler who was on the throne of Kirmān and (thereafter) to his/her children" (*ibid.*, 235-6). Some of Terken Khātūn's *awḳāf* were for administrative affairs and public welfare. In 673/1275 she made the village of Ṣūfiyān in Rūdān into *wakf*, stipulating that thirty men should reside there to protect the road and escort caravans. The leader of the troop was to receive 5,000 *mans* of grain annually by way of wages and each of the thirty soldiers 2,000 *mans*, two-thirds to be paid in winter and one-third in summer (*ibid.*, 235). Whether Ṣūfiyān belonged to Terken Khātūn or to the *dīwān* is not stated (see further, Lambton, *Awḳāf in Persia*, 310-13).

During the Mongol invasions, much *wakfī* land which lay in the path of the invading hordes must have suffered devastation, but so far as it escaped its status appears to have been little changed. From an early date there was a department of *awḳāf* in the Ilkhānate. When Hülegü [*q.v.*] charged Naṣīr al-Dīn Ṭūsī [*q.v.*] with the establishment of an observatory at Marāgha,

the building of which was begun in 657/1259, he appointed him over the *awḳāf* of the empire. Naṣīr al-Dīn also held this office under Abaḳa [*q.v.*] and finally died when on a tour of inspection of *awḳāf* in ʿIrāḳ. He appointed in each locality an official responsible for the administration of *awḳāf*, allowing him to keep one-tenth of the *waḳfī* revenue for his salary. The *dīwān*'s share of the revenue was to be sent to Marāgha for the observatory (Hassan Mahmud ʿAbdel-Latif, *Naṣīr al-Dīn Ṭūsī (d. 1274) and his Tajrīd al-iʿtiqād*, Ph.D. thesis, London University 1977, unpubl., 70 ff.). Tegüder Aḥmad, who succeeded Abaḳa in 680/1282, appointed Kamāl al-Dīn ʿAbd al-Raḥmān al-Rafīʿī *mutawallī* of the *awḳāf* of the empire, and ordered the proceeds of all *awḳāf* to be expended as laid down by their founders with the cognisance of Kamāl al-Dīn and the great *imāms* and *ʿulamāʾ*. The proceeds of the *awḳāf* for the Ḥaramayn were to be collected annually and sent to Baghdād at the time of the pilgrimage (Waṣṣāf, *Tārīkh*, ed. M.M. Iṣfahānī, lith. Bombay 1269/1852-3, 100). Under Ghazan Khān (694-703/1295-1304) there was probably an attempt to tighten control over the administration of *awḳāf*. It would seem, however, that Ghazan was not over-scrupulous in observing the legal prescription that property to be made into *waḳf* must be the personal property of the founder. When the Ḳāḍī Ṣāʾin Simnānī was executed after interrogation by the *yarghu* [*q.v.*] in 700/1301, his estates and property were added to the *khāliṣāt* and registered in the *awḳāf* registers of the royal tomb (Waṣṣāf, 419-20). However, Rashīd al-Dīn states that the property made into *awḳāf* for the complex which Ghazan made in the Shanb-i Ghāzān in Tabrīz, had all been in his full and legal possession and this had been corroborated by *fatwās* (*Tārīkh-i mubārak-i ghāzānī*, 215).

Al-ʿUmarī, quoting information given to him by Niẓām al-Dīn Abu 'l-Faḍāʾil Yaḥyā al-Ṭayyārī, who had been a secretary to Abū Saʿīd, the last Īlkhān (716-36/1316-35), states that "no one interfered with them (*awḳāf*) either in the reign of Hülegü or his successors. Every *waḳf* was in the hands of its *mutawallī* and whoever had authority over it. Whatever might be said with regard to any damage (*naḳṣ*) to the affairs of *awḳāf* [in Persia], such damage was entirely due to abuses committed by those in charge of the *awḳāf* and not to anyone else" (K. Lech, *Das mongolische Weltreich. Al-ʿUmarī's Darstellung der mongolischen Reiche im seinem Werk Masālik al-abṣār fī mamālik al-amṣār*, with tr. and comm., Wiesbaden 1968, Arabic text, 92). This may have been an accurate statement as regards the central government, but there was much usurpation of property in general, including *awḳāf*, by Mongol officials and others. Ḥamd Allāh Mustawfī states that in Shīrāz there were over 500 charitable foundations, which had innumerable *awḳāf*, but the revenues of few of them reached their proper purposes (*Nuzhat al-ḳulūb*, Persian text, 116). He also alleges that the Pishkil Darra district of Ḳazwīn, which was *waḳf* for the Friday mosque of Ḳazwīn, had been usurped by the Mongols (*ibid.*, 67). Waṣṣāf asserts that most of the *awḳāf* of the empire and the buildings which they served were in a state of ruin and their revenues misappropriated, but he states that Kürdüdjin, the daughter of Tash Möngke and Abish Khātūn, to whom the last Īlkhān Abū Saʿīd had given the taxes of Fārs on a permanent contract (*bar sabīl-i muḳāṭaʿa-yi abadī*) three years after his accession, paid particular attention to the buildings of her forebears, increased their *awḳāf* and devoted their revenues to their proper purposes (*Tārīkh*, 624-5).

In spite of the fact that many *awḳāf* may have been devastated during the Mongol invasions and others usurped during the Īlkhānate, there appears to have been a proliferation of *awḳāf* during the period. One reason for this was probably the prevailing insecurity of tenure which led men to seek to safeguard their property from confiscation and to secure its continued enjoyment, or at least part of it, by themselves and their descendants by constituting it into *waḳf*. Both Ghazan Khān and Öldjeytü founded many *awḳāf*. Their motives were various; some of Ghazan's benefactions were clearly prompted by charity (see Lambton, *Awqāf in Persia*, 315 ff.), and some by a desire to secure the possession of property to his descendants, as when he laid down that his *īndjū* lands should be constituted into *waḳf* for the sons of his chief wife Bulughan Khātūn, or, if she had no sons, for the sons of his other wives and their male descendants (Rashīd al-Dīn, *Tārīkh-i mubārak-i ghāzānī*, 331). Al-Kāshānī mentions that Ghazan gave orders for a *dār al-siyāda* to be built in every province in Persia and for estates and villages to be made into *waḳf* for them, so that the annual income of each would be 10,000 dīnārs (*Tārīkh-i Uldjāytū*, ed. Mahin Hambly, Tehran AHS 1348/1969, 93-4). Rashīd al-Dīn confirms that Ghazan made such buildings in Iṣfahān, Shīrāz, Baghdād and various other towns (*ibid.*, 215). However, most of Ghazan Khān's *awḳāf*, and also Öldjeytü's, were for the benefit of foundations in their respective capitals, Tabrīz and Sulṭāniyya.

In spite of, or perhaps because of, the dislocation of traditional life under Mongol rule, many officials and private individuals acquired enormous wealth, some of which came from trade and possibly from money-lending. Much of it appears to have consisted of, or been invested in, land and real estate and to have been constituted into *waḳf*. The most outstanding case is that of Rashīd al-Dīn Faḍl Allāh Hamadānī [see RASHĪD AL-DĪN ṬABĪB]. Most of his *awḳāf* were for the benefit of the Rabʿ-i Rashīdī, the quarter which he built in Tabrīz; but he also constituted *awḳāf* for foundations in Yazd, Hamadān, Shīrāz and Kirmān. Lists of the properties which he made into *waḳf* for these foundations, which included mosques, *madrasas*, *khānaḳāhs*, and hospitals, and *awḳāf* for his children and various holy men, are set out in the *Waḳf-nāma-i Rabʿ-i Rashīdī*, dated 709/1309-10, and include property in Yazd, Hamadān, Sharrāh, Tabrīz, Shīrāz, Iṣfahān and Mawṣil. Property in the first four places had also apparently been made into *waḳf* by Rashīd al-Dīn at an earlier date, for which special *waḳfiyyas* had been drawn up (Lambton, *Awqāf in Persia*, 317-18). As a convert to Islam, the support of the *ʿulamāʾ* was important for him and this he might have expected to gain as a result of his charitable foundations.

Among private individuals who constituted their property into *awḳāf*, the example of Sayyid Rukn al-Dīn Muḥammad and his son Shams al-Dīn Muḥammad of Yazd is notable. Sayyid Rukn al-Dīn disposed of a great deal of property—shares in *ḳanāts* [*q.v.*], land and real estate in Yazd—and he also apparently had considerable capital available with which he purchased new property with a view to making it into *awḳāf*. His foundations and those of his son and their *awḳāf* are set out in the *Djāmiʿ al-khayrāt*, dated 748/1347-8 (ed. Muḥammad Taḳī Dānishpazhūh and Īradj Afshār, in *FIZ*, ix [AHS 1345/1966-7], and a revised edition in Afshār, *Yādigārhā-yi Yazd*, ii, Tehran AHS 1354/1975-6, 391-557; see also YAZD). An interesting feature of Shams al-Dīn Muḥammad's *awḳāf* is the inclusion of pensions (*idrārāt*) which he held on vari-

ous funds among the property which he made into *wakf* (*Djāmiʿ al-khayrāt*, 174, 203, 213, 214, 216). Rukn al-Dīn Muḥammad, Shams al-Dīn's father, had also had a pension drawn on the revenue of Yazd, part of which he had inherited from his forefathers and part from the *sayyids* and *imāms* of Yazd. After his death, it passed to Shams al-Dīn (*ibid.*, 140; see also Lambton, *Awqāf in Persia*, 213-15). Al-ʿUmarī states that *idrārāt*, which consisted of money or villages, were the property of their holders, who could dispose of them like landed estates, sell them, give them away, or constitute them into *wakf* (*Das mongolische Weltreich*, Arabic text, 95-6. See also Naṣīr al-Dīn Ṭūsī, *Madjmūʿa-yi rasāʾil az taʾlīfāt-i Khʷādja Naṣīr al Dīn Ṭūsī*, ed. M. Riḍawī, Tehran AHS 1336/1957, 31).

Many of the *awkāf* constituted during the Īlkhānate disappeared over time. On Rashīd al-Dīn's fall, the revenue of the *awkāf* which he had made for the Rabʿ-i Rashīdī was withheld from expenditure on its proper purposes and his estates taken for the *dīwān* (Ḥāfiẓ Abrū, *Dhayl-i djāmiʿ-i tawārīkh-i rashīdī*, ed. Khān Bābā Bayānī, Tehran AHS 1350/1971, 129). The Ghiyāthiyya *awkāf* or some of them, made by his son Ghiyāth al-Dīn Muḥammad, appear to have still been in existence in 1073/1662 (Lambton, *Landlord and peasant*, 113-14). There is also mention of Ghāzānī *awkāf* in the 10th/16th century (Iskandar Beg Munshī, *Tārīkh-i ʿĀlamārā-yi ʿAbbāsī*, Tehran AHS 1334/1956, i, 148).

The Tīmūrids in Bukhārā, Harāt and elsewhere, and the Ṣafawids in Iṣfahān, followed the practice of Ghazan and Öldjeytü in founding magnificent buildings in their capitals and constituting valuable *awkāf* for them. Perhaps partly as a result of the increasing number of royal foundations, the *ṣadārat* was expanded and separated from the wazīrate and the office of *ṣadr* [*q.v.*] regularised (see documents in the *Sharaf-nāma* of ʿAbd Allāh Marwārīd, in H.R. Roemer, *Staatsschreiben der Timuridenzeit*, Wiesbaden 1952). Maria E. Subtelny has drawn attention to the proliferation of *awkāf* in Khurāsān under the Tīmūrids, especially Ḥusayn Mīrzā Bayḳara (*A Timurid educational and charitable foundation: the Ikhlāṣiyya complex of ʿAlī Shīr Nawāʾī in 15th century Herat and its endowment*, in *JAOS*, ix [1991], 38-61). Khʷāndamīr notes that in the reign of Ḥusayn Mīrzā Bayḳara [see ḤUSAYN (Mīrzā b. Manṣūr b. Bayḳara)] the spread of *awkāf* in Khurāsān was such that two or three persons were needed to carry out the office of *ṣadr* (*Ḥabīb al-siyar*, Tehran AHS 1333/1954-5, iv, 321). Tīmūr apparently constituted a number of properties into *wakf* for the Ṣafawid family (Lambton, *Landlord and peasant*, 112 n. 1), and the early Ṣafawid shāhs, notably Ṭahmāsp I (930-84/1524-76 [*q.v.*]), made property into *wakf* for the Ṣafawid shrines in Ḳum [*q.v.*] and elsewhere. A document for the appointment of the *mutawallī* of the shrine of Sittī Fāṭima in Ḳum issued by the Aḳ Ḳoyunlu Yaʿḳūb Beg in 884/1479 mentions earlier appointments by Tīmūr and Shāhrukh (see H. Busse, *Untersuchungen zum islamischen Kanzleiwesen*, Cairo 1959, 56-7). Some of the *awkāf* for the Ṣafawid shrine at Ardabīl [*q.v.*] also predated the assumption of royal power by the Ṣafawids.

Although the Tīmūrid and Ṣafawid periods were characterised by royal foundations, there was also much constitution of *awkāf* by provincial governors, officials and private individuals. The motive for many of these foundations was probably local patriotism, but their founders were probably also influenced in many cases by the hope of obtaining local support as public benefactors. In Yazd, important *awkāf*, were founded by the Tīmūrid governor Amīr Čaḳmaḳ and his wife Bībī Fāṭima and later by Muḥammad Taḳī Khān, who as governor of Yazd under the Afshārids, Zands and Ḳādjārs, exercised a considerable degree of independence [see YAZD]. Under the Ṣafawids, there was probably an increase in family *awkāf*, made in the hope of ensuring the enjoyment of their revenues by the founder and his family and of preventing, or at least lessening, the interference of the government in the administration of the property so constituted. A typical example is the *wakf-nāma* of Ghiyāth al-Dīn ʿAlī al-Ghiyāthī dated Ramaḍān 951/Nov.-Dec. 1544 (*Mawḳūfāt-i Ghiyāth al-Dīn ʿAlī al-Ghiyāthī*, ed. Karāmat Raʿna Ḥusaynī, in *Madjalla-yi Dānishkada-yi Adabiyyāt wa ʿUlūm-i Insānī* (Tehran), xvi/4 [Farwardīn 1348/ March 1969], 465-76). The founder relinquished ownership of the endowed properties and took them over again as *mutawallī* (*ibid.*, 471).

Ismāʿīl Ṣafawī [*q.v.*], the first Ṣafawid shāh, among his early acts appointed Shams al-Dīn Gīlānī *ṣadr* and put him in charge of the *awkāf* of the empire (Khʷāndamīr, iv, 468). In the reign of Shāh Ṣafī (1076-1105/1666-94 [see SULAYMĀN SHĀH]), the office of *ṣadr* was divided; the *ṣadr-i khāṣṣa* administered and generally supervised *awkāf* in the *khāṣṣa* provinces and the *ṣadr-i mamālik* those in the provinces under governors. The *ṣadr-i khāṣṣa* had additional functions in connection with those *awkāf* of which the shāh was the *mutawallī*, including the appointment of administrators (*mubāshirān*) over them, deputy *mutawallīs* (*mutawalliyān-i djuzw*) and overseers (*nāẓirān*). In the case of *sharʿī awkāf* (i.e. those constituted by private individuals), neither the *ṣudūr* nor *sharʿī* judges were to interfere with whomsoever the founder had designated as *mutawallī* (Mīrzā Rafīʿā, *Dastūr al-mulūk*, ed. Muḥammad Taḳī Dānishpazhūh, in *MDAʿUI*, xvi/1-2 [Ādhar 1317/November 1968], 66). The *awkāf* in Iṣfahān, Yazd, Abarḳūh, Kāshān, Ḳum, Sāwa, Māzandarān, Astarābād, Giraylī, Ḥadjdjilar, Kabūdjāma, Naṭanz, Ardistān, Nāʾīn, Ḳumisha, Kamara and Maḥallāt, Farāhān, Gulpāyāgān, Dilidjān, Khʷānsar, Djāpalak, Barwarūd (?), Firaydan, Rārā, Mizdadj and Kuyar were under the *ṣadr-i khāṣṣa* (Mīrzā Rafīʿā, *loc. cit.*), who presumably appointed officials to take charge of the *awkāf* in these districts (cf. the document appointing Muḥammad Mufīd *mustawfī* of the *awkāf* of Yazd dated 1077/1667, in Muḥammad Mufīd, *Djāmiʿ-i mufīdī*, ed. Afshār, Tehran AHS 1340/1961-2, iii, 752-4). The precise relation of the *ṣadr-i khāṣṣa* to the *wazīr* of the Fayḍ Āthār department, also called the *wazīr-i mawḳūfāt*, who was in charge of the agriculture of the Maḥāll (the districts round Iṣfahān) and the repair of buildings in the Maḥāll and of gardens which were *wakf* (apart from certain named gardens which were under the *nāẓir*), is not clear (Mīrzā Rafīʿā, in *MDAʿUI*, xvi/3, 321).

The Ṣafawid shāhs made extensive *awkāf* for various shrines [see IMĀMZĀDA] and appointed *mutawallīs* for them. Shāh Ismāʿīl I allegedly took possession of estates in Maymand which had been made into *wakf* for the Shāh Čirāgh mosque in Shīrāz, and vested the office of *mutawallī* in his children (Fasāʾī, *Fārs-nāma-i nāṣirī*, lith., Tehran 1313/1895, ii, 305). During the disorders after the fall of the Ṣafawids, they were usurped by Mīrzā Abū Ṭālib, the *kalāntar* of Shīrāz. Nādir Shāh [*q.v.*] restored them to the shrine in 1142/ 1729-30 (*ibid.*, i, 104). Misappropriation of *awkāf* was not uncommon. The *wazīr* Ḳāḍī Djahān is alleged to have converted certain *wakf* villages into his private property. After he had retired to Ḳazwīn, this came to the ears of Shāh Ṭahmāsp, who ordered him to be deprived of their possession and the equivalent of

the revenue due from them to be recovered. However, because of Ḳāḍī Djahān's age and weakness, the shāh forgave him and granted him a sum of money as a *soyurghal* (Ḥasan Rūmlū, *Aḥsan al-tawārīkh*, ed. C.N. Seddon, Baroda 1931, i, 375-6).

Ṭahmāsp I constituted *awḳāf* for the shrine of Shāh ʿAbd al-ʿAẓīm in Ray according to a *farmān* dated 960/1153 (Shihābī, *Waḳf dar Islām*, Tehran AHS 1343/1964, 72). His sister Shāhzāda Sulṭānum constituted *awḳāf* for the Čahārdah Maʿṣūm (sc. the twelve *imāms*, the prophet Muḥammad and Fāṭima, the wife of ʿAlī b. Ṭālib) and appointed as *mutawallī* Ṭahmāsp and whichever of his sons should become shāh after him. Ṭahmāsp appointed Mīr Kamāl al-Dīn Astarābādī his deputy (*nāʾib al-tawliya*) (Iskandar Munshī, i, 111-12). The latter, during Ṭahmāsp's reign, was also, with Mīr Abu 'l-Ḳāsim Iṣfahānī, joint *mutawallī* of the shrine of the Imām Riḍā at Mashhad; he undertook the *tawliya-i sunnatī* and Mīr Abu 'l-Ḳāsim the *tawliya-i wādjibī*. The first concerned the administration of *soyurghals* and what was given from the *khāṣṣa* administration for the expenses of the shrine on public feasts (*shīlān*) and for allowances for the servants of the shrine, *sādāt*, and others, while the *wādjibī tawliya* was concerned with the revenue of the *awḳāf* of the shrine and from vows (*ibid.*, i, 149). The most numerous *awḳāf* constituted by a ruling shāh belong to the reign of Shāh ʿAbbās I [*q.v.*]. R.D. McChesney has examined the *awḳāf* of Shāh ʿAbbās in detail and attempted an assessment of their political and economic aspects (*Waqf and public policy: the waqfs of Shāh ʿAbbās, 1011-1023/1602-1614*, in *Asian and African Studies*, xv [1981], 165-90). The best known of these foundations is that made, according to Iskandar Beg Munshī, in 1015/1606-7 or 1016/1607-8 when he constituted all his private estates (*djamīʿ-i amlāk wa raḳabāt-i muktasab-i khāṣṣa-i khᵂud*), "the just value of which was 100,000 *tūmān-i shāhī-yi ʿirāḳī* and the produce of which after the deduction of what was needed for their cultivation was, using a medium conversion rate, nearly 7,000 *tūmāns*", together with various buildings in Iṣfahān and the neighbourhood into *waḳf* for the Čahārdah Maʿṣūm. He vested the office of *mutawallī* in himself and thereafter in the reigning monarch. According to the terms of the *waḳf-nāma* drawn up by Shaykh Bahāʾ al-Dīn, the revenue of the *waḳf*, after the deduction of the dues of the *mutawallī* (*ḥaḳḳ al-tawliya*) was to be expended at the discretion of the *mutawallī* and according to the exigencies of the time (Iskandar Beg Munshī, i, 536). Mīrzā Raḍī, the *ṣadr*, was appointed the shāh's deputy in charge of the administration of the *waḳf* (*ibid.*, 64). According to Shihābī, most of the founders of *awḳāf* for the shrine of the Imām Riḍā at Mashhad after this designated the reigning shāh as the *mutawallī*. The shāh's deputy in the management of the *awḳāf* of the shrine was called the *mutawallī-bāshī* and later the *nāʾib al-tawliya* (*Waḳf dar Islām*, 60. On Shāh ʿAbbās's foundations, see also ʿAbd al-Ḥusayn Sipintā, *Tārīkhča-yi awḳāf dar Iṣfahān*, Iṣfahān AHS 1346/1967-8, 41 ff., 331 ff.).

Shāh Sulṭān Ḥusayn, the last of the Ṣafawids, constituted property into *waḳf* for the Madrasa-i Sulṭānī (Madrasa-i Mādar Shāh, now known as the Madrasa-i Čahār Bāgh) in Iṣfahān in 1122/1711-12 and designated himself as *mutawallī* and thereafter the reigning shāh (Sipintā, 120-32). He made the taxes and dues of the property so constituted into a permanent *soyurghal* for the administration of the *madrasa* (*ibid.*, 131).

The office of *mutawallī* of the shrines which had *awḳāf-i tafwīḍī* (i.e. *awḳāf* constituted by the reigning shāh) was influential and profitable. Mīrzā Rafīʿā describes the duties of the *mutawallīs* of the shrine of the Imām Riḍā in Mashhad, the shrine of Fāṭima, the sister of the Imām Riḍā, in Ḳum, the shrine of ʿAbd al-ʿAẓīm in Rayy, the Ṣafawid shrines in Ḳum, and the Ṣafawid shrine in Ardabīl and the respect in which the *mutawallīs* were held at the royal court (*MDAʿUI*, xvi/1-2, 66-9). Shihābī gives a list of the properties made into *waḳf* for the shrine of Shāh ʿAbd al-ʿAẓīm (*Waḳf dar Islām*, 72-3). He states that Mīrzā Ḥabīb Allāh, the grandson of Shaykh ʿAlī Karakī, was appointed *mutawallī* of the shrine of Fāṭima at Ḳum by Ṭahmāsp, while the *tawliyat* of the shrine at Māhān was given to another grandson, Mīr Sayyid Murtaḍā. Another of Shaykh ʿAlī's descendants, Mīrzā Ibrāhīm, *shaykh al-islām* of Ray, became *mutawallī* of the shrine of ʿAbd al-ʿAẓīm; his descendants still held that office in the 19th century. Yet another of Shaykh ʿAlī's sons, Sayyid Aḥmad, and his descendants after him, held the office of *mutawallī* of the shrine of Ṣafī al-Dīn at Ardabīl (*ibid.*, 74). Shāh ʿAbbās II (1052-77/1642-67 [*q.v.*]) redistributed the offices of *mutawallī* of the major shrines in an attempt to break up the large fortunes which their holders accumulated (Chardin, *Voyages*, ed. Langlès, Paris 1811, vi, 63-5), reorganised the administration of the *awḳāf-i tafwīḍī* (Muḥammad Ṭāhir Ḳazwīnī, *ʿAbbās-nāma*, ed. Ibrāhīm Dihgān, Arāk AHS 1329/1950-1, 223-4) and appointed Mīrzā Masʿūd Djābirī *wazīr-i awḳāf*. J.B. Fraser was informed by the *mudjtahid* Mīrzā ʿAbd al-Djawād that the revenues of the shrine of the Imām Riḍā from property and land in every province of Persia amounted in the reign of Shāh Sulṭān Ḥusayn to 15,000 *khurāsānī tūmāns*. In later years, his informant told him, there had been usurpation and the rents were ill-paid so that the revenue was probably not more than 2,000 or 2,500 *khurāsānī tūmāns* (*Narrative of a journey into Khorasan in the years 1821 and 1822*, London 1825, 455).

Although the richest and most extensive *awḳāf* in the Ṣafawid period were those made by the shāhs, there were also numerous *awḳāf* constituted by individuals, some affluent (for example Muḥammad Beg Begdilu (d. 1021/1612-13), a man of wealth and substance who made his landed estates into *waḳf* (Iskandar Munshī, ii, 608), but many less so, who were influenced not only by personal gain but by religious feeling and pietas (cf. the case of a certain Ḥādjdjī Yār Beg, a tanner of Iṣfahān, Luṭf Allāh Hunarfar, *Gandjīna-i āthār-i tārīkhī-i Iṣfahān*, Iṣfahān AHS 1344/1961-2, 541-3).

When the Afghāns took Iṣfahān on the fall of the Ṣafawids, they usurped much *waḳfī* property and made it into *khāliṣa* [*q.v.*]; and many records were destroyed (Shaykh Djābir Anṣārī, *Tārīkh-i Iṣfahān wa Ray*, Iṣfahān AHS 1322/1943, 35). Under Nādir Shāh, many *waḳfī* properties were resumed in Iṣfahān, if not elsewhere, and included in the Nādirī registers (*ibid.*, 37-8; see also Mīrzā Muḥammad Kalāntar-i Fārs, *Rūznāma*, ed. ʿAbbās Iḳbāl, Tehran 1946, 13). ʿĀdil Shāh revoked Nādir's regulations and ordered the *awḳāf* to be returned to their *mutawallīs*. However, a good deal of confusion prevailed and it is not clear to what extent this took place (*ibid.*). Karīm Khān, according to Sipintā, made an abortive attempt to rectify affairs (343). Further decay and confusion occurred in the famine years of 1871-2 (Shaykh Djābir Anṣārī, 51-2).

The Ḳādjār period was not notable for the constitution of *awḳāf*. One of the most important was that made for the Sipahsālār Madrasa in Tehran. The building was begun in 1819 by Amīn al-Dawla Ḥādjdjī Muḥammad Ḥusayn Khān Ṣadr-i Iṣfahān, who designated himself first as *mutawallī* and thereafter the ruling shāh

(Shihābī, 40). He died two years later before the building was completed. His brother Yaḥyā Khān Mushīr al-Dawla continued the work but also died before it was completed. It was finally finished by the shāh's *mutawallīs* (Shihābī, 38-9; for the text of Muḥammad Ḥusayn Khān's *wakfiyya*, see Sipintā, 408-20).

In 1854 a Ministry of Pensions and *Awkāf* was founded. In 1863 it was announced in the official gazette, *Rūznāma-i dawlat-i ʿāliya-yi Īrān*, that those in charge of all *awkāf* both in districts near the capital and in the provinces were to send their accounts, duly attested by a *mudjtahid*, to the Ministry of Pensions and *Awkāf*. Anyone who failed to do so would be deprived of office (no. 535, 17 Radjab 1279/1863). After the grant of the Constitution [see DUSTŪR. iv] the duties of the department of *awkāf*, which came under the Ministry of Education, were set out in Article 6 of the Law of 28 Shaʿbān 1328/1910 and in the Supplementary Law of 19 Djumādā II 1329/1911 (Sipintā, 11). The legal position was in due course laid down in the Civil Code (see Lambton, *Landlord and peasant*, 230 ff.).

(ANN K.S. LAMBTON)

IV. IN THE OTTOMAN EMPIRE TO 1914

The understanding and interpretation of the role of *wakf* in the Ottoman empire has radically changed since the opening of the vast Ottoman archival holdings in Turkey and the successor states, to which should be added the considerable number of Ottoman documents held in European libraries and archives (e.g. the Archives d'Outre-Mer in Aix-en-Provence which represent one of the more important holdings in Europe for Ottoman Algeria). The increased accessibility, especially from the 1970s onwards, for the international scholarly community to study portions of the Ottoman imperial and provincial archives—and the *wakf* documents within them—in addition to the ongoing publication of archival catalogues in Turkish, Arabic, the Slavic languages, English, etc. (Kenderova, 1984; Lewis; Bilici, 1997; Faroqhi, 1999, 54-5, 60-61, 96; Temimi; Ivanova and Ivanova; bibliographical references cited within manuscript and library catalogues published by Başbakanlık and IRCICA; relevant library and archive internet sites), represents no less than a revolution in research on Ottoman *wakf*. Furthermore, Ottoman *wakf* foundation deeds themselves (*wakfiyye* and *kitāb al-wakf*) and associated documents are gradually being published under the auspices of the General Directorate of Wakfs in Ankara (i.e. the foundation document of the Ottoman sultan, Meḥemmed the Conqueror, published in 1938 and the deeds published in the *Vakıflar Dergisi*), by Wakf Ministries in the former Ottoman provinces (such as the Lālā Muṣṭafā Pasha *wakfiyya* published by the Syrian Wakf Ministry in Damascus) and by other organisations.

Access to this primary material has drastically changed methodological approaches to the study of Ottoman *wakf* which, heretofore, had almost exclusively relied upon Islamic legal compendia (*aḥkām al-awkāf*, *fatwā* collections and legal studies) or Western interpretations of it (i.e. Mercier), overwhelmingly giving a normative or interpretative view (Heffening). Barkan and Ayverdi's research, based on the data of a mid-10th/16th-century *taḥrīr* [*q.v.*], was the first to have systematically and quantitatively studied Ottoman *wakf* at a given time and place. Since then, quantitative statistical analyses on predetermined aspects of a corpus of documents related to Ottoman *wakf*, combined with qualitative evaluations drawn not only from *wakf* endowment deeds (the above-mentioned *kitāb al-wakf* and the *wakfiyye*) but also from the *ḥudjdjat al-wakf*, have been published (Raymond; Saidouni; Bakhit; Hénia; Roded; Shuval), revealing trends related to the identities and status of endowment founders and the administrators of the foundations, properties owned by *wakf*, renters of this property, beneficiaries of the revenues, etc. Some publications on Ottoman *wakf* have also analysed archival data juxtaposed with information from the legal domain, such as the *aḥkām al-awkāf* or *fatwā* collections (Rafeq; Reilly; Cuno; Deguilhem, 1988).

An overall picture of Ottoman foundations which comes closer to reality is made possible by understanding *waḳf* as a dynamic and very diversified institution which partially developed on-the-ground in reaction to altering circumstances but which responded, at least to a certain extent, to predefined structures. Both the changing as well as the continuous practices of *waḳf* were reflected in the juridico-administrative Ottoman tribunal and bureaucratic records (which, though seemingly of formulaic language, expressed nonetheless changing circumstances), but also within the corresponding legal normative framework articulated in *fiḳh* [*q.v.*] (Hüsnü) and *ḳānūn* [*q.v.*] (A. Çetin, 221-7). In other words, the primary sources have indisputably shown that, far from being static or in "mortmain", foundation properties were not, in fact, inalienable and often changed hands not only through the legal mechanism of *istibdāl, irṣād* (Deguilhem, 1988) and other legalised means, but also simply as an integral part of the economy, in line with market demands. The economics and politics of Ottoman *waḳf* were based upon a flexible but stable system that had long since produced an institution capable of interacting and responding to individual, family, community and state needs.

Waḳf was omnipresent in all levels of Ottoman society, urban and rural, both in the form of individually functioning units and as separate parts of a basic single institutional system. Studying the institution *in situ* from the vantage point of the data found in endowment deeds, in the *ḥudjdjat al-waḳf* and in documents inscribed in *waḳf* and other registers (i.e. the *taḥrīr*, the *daftar mufaṣṣal*, etc.) reveals the extreme multiplicity of functions that were initiated, established and activated by *waḳf* networks in the Ottoman world (for an overview and state-of-the-art survey of *waḳf* research up until the end of the 1990s, see Hoexter, *Waqf studies*, and Bilici, 1997), over which the imperial authority attempted to exercise supervision with varying degrees of success over the centuries.

To grasp the ubiquitous character of the Ottoman foundations, one may say that the three most striking traits of the Ottoman *waḳf* were its widespread vertical and horizontal use throughout all socio-economic strata of society; its capacity to adapt to individual, group and state needs within Islamic as well as within Ottoman Christian (Abou Nohra; Ghazzal; Davie; Slim; Saliba—see for these references, *Bibl.*, below) and Jewish communities (Yazbak, 55-6, 60, 214-15, 217-18; Shaham; Gerber, *The Jews*); and, finally, its longevity—not only of the institution itself but also of the abundant individual *waḳfs* (although, of course, many also disappeared), whether endowed in the Ottoman period or founded during Ayyūbid or Mamlūk times but which continued to operate during the centuries of Ottoman rule (their longevity perceived, for example, via a comparative study of 10th/16th-century *tapu taḥrīr* registers which surveyed the existing *milk* [*q.v.*] and *waḳf* properties in relation to 20th-century *waḳf* liquidation documents).

From the early years of the empire, even while taking into account the regional differences across its vast Asian, African and European territories, the institution of *waḳf* continued to assume its traditional dual and complementary role within both urban and rural Ottoman contexts by simultaneously creating and financing religious, political, social, charitable, cultural and spiritual networks through the establishment of a continuous "permanent" economic linkage between *waḳf* beneficiaries and their corresponding revenue-producing assets, in addition to the personnel working for the endowments (Hütteroth and Abdelfattah, esp. map 4 showing regional *waḳf* links between late 10th/16th-century Egypt, Syria and the Ḥaramayn [*q.v.*]; Hoexter, *Endowments*, esp. for links between 17th-19th-century Algeria and the Arabian Holy Cities). *Waḳf* was the infrastructural core around which many aspects of Ottoman civilisation expressed itself.

Ottoman endowments included the *khayrī, dhurrī/ahlī* and *mushtarak waḳfs* (identifiable according to the *waḳf*'s immediate line of beneficiaries); the politically influential pilgrimage foundations—including the *dashīsha* (Afifi 1991, 1995) and Ḥaramayn foundations (which contributed towards the financing of more than just the Arabian Holy Cities: Hoexter, *Endowments*; Heywood; Faroqhi, 1994, 4, 76-8, 80-4, 87-9, 182; the sultanic imperial *humāyūn* [*q.v.*] (Barnes) *waḳfs* (to which also individuals contributed who were not associated with the sultanic household: Faroqhi, 1995, 97); the *irṣād* (Cuno) *waḳfs*, as well as a plethora of foundations which simultaneously incorporated elements from several of the above categories. Boundaries between the types of *waḳf* were not impermeable and differences between them should often be sought in terms of nuances.

For instance, revenues from the *irṣād waḳfs*, founded mostly by imperial family members and personalities close to the sultan, were presumably and frequently created for the general welfare (*maṣlaḥa* [*q.v.*]), but a considerable part of the *irṣād* shares in Egypt, during the latter centuries of the empire, were also distributed in the form of inheritable allocations (females not being excluded) to individual members of the *ʿulamāʾ* and the military institution. This was also a common enough characteristic of the other types of *waḳfs* mentioned above, especially the *khayrī* ones, but also the sultanic and Ḥaramayn endowments in that *waḳf* revenues were routinely used to create, modify or maintain local, regional or empire-wide political alliances. A striking example is the poor relief soup kitchen (*ʿimāret* [see KHAYR]) endowed, as an imperial *waḳf*, by Khürrem Sulṭāne [*q.v.*], wife of Süleymān Ḳānūnī, which, from its founding in 1552 until the end of the Ottoman period, catered to both the poor and wealthy in Jerusalem; being inscribed as a beneficiary of this *ʿimāret* became, in fact, a sign of political importance (Peri). Continuing to use the *irṣād* endowments as a comparative measure, juridical works and chronicles show that this type of Ottoman *waḳf* (recently studied by Cuno) was often founded with property belonging to the state (*bayt al-māl*), a feature obviously also shared with the imperial foundations. On a similar note, research in the Ottoman archives likewise documents the fact that private individuals constituted *waḳf* in Ottoman times not only with their private property, as the normative texts would have it, but also with *mīrī* [*q.v.*] state properties; in the 19th century, the *mīrī* property would, in this situation, have been held with a *sanad al-ṭābū* contract (Deguilhem, 1991, 70-4).

The Ottoman world was profoundly shaped by the foundations, each of which was administered as a separate unit by one or several *mutawallī*, supervised by a *nāẓir(a)* who, depending upon the size of the endowment, may have had an accountant (*muḥāsib*) and other personnel under his or her authority. By the 18th and, more especially, throughout the 19th century, the administration of *waḳf* became a veritable profession with some individuals managing ten or more foundations at a time. Aside from the individual administrators, the management of *waḳfs*, both in the provinces and in Istanbul, increasingly became con-

centrated and institutionalised, on one level, within the hands of local mosque officials (*imāms* and *mu'adhdhins*) and, on another level, permanently associated with such positions as—to cite just a few among myriad examples—the offices of the Grand Vizier, the *shaykh al-islām* [*q.v.*], the inspector of the Ḥaramayn foundations, the Chief Black Eunuch, etc.

Revenue-generating properties belonging to *wakf* in Ottoman times whose incomes subsidised the endowments' beneficiaries were located within urban centres, in the cities' immediate surroundings and outlying hinterlands, as well as sometimes in very remote rural regions. *Wakf* assets consisted of all types of commercial and residential properties that were usually rented in order to create funds for the foundation beneficiaries. Such properties included the *bayt, dār, maghzan, dukkān, kahwa, ḥammām, kayṣāriyya, khān, bedestān*, parts of or an entire *sūk*, etc. *Wakf* assets also consisted of agricultural real estate which equally yielded revenues for the foundations through rent contracts or by payment in kind from different types of gardens (*djunayna, ḥākūra*) and orchards (*bustān* [*q.v.*]) located within or close to urban centres in addition to parts of or entire villages and tracts of rural agricultural land such as the *ḥānūt, mazra'a* [*q.v.*], *čiftlik* [*q.v.*], *rizka aḥbāsiyya* in Ottoman Egypt, etc. Furthermore, as in previous periods, endowment wealth in the Ottoman realm also included moveable properties (*mankūlāt*) amongst assets belonging to a *wakf*, such as books, Ḳur'ān holders, etc. as well as animals, in particular, those used for pious purposes such as for the Pilgrimage (horses, camels). Nomadic communities living in the Ottoman empire used this type of foundation, putting a part of their animals into *wakf*, as a means of keeping a portion of their properties within the family.

It is now a well-documented fact that sums of cash were also widely possessed by Ottoman *wakfs*. By the mid-10th/16th century, cash holdings in fact already represented a substantial part of Ottoman *wakf* assets (Barkan and Ayverdi) which, in the 18th and 19th centuries, represented, in some ways, the precursors of the Ottoman banking system. Foundation administrators lent out the cash at interest, often via specifically named money changers, members of the *ṣarrāf* profession, so indicated in the foundation document, with the purpose of creating liquid assets for the endowment. Ebu 'l-Su'ūd (1545-74 [see ABU 'L-SU'ŪD]), *sheykh al-islām* under Süleymān the Magnificent, was one of the Ottoman religious authorities to have pronounced *fatwās* on the legality of monetary *wakf*, whereas his contemporary, Meḥmed Birgewī (1520-73), opposed the practice. Since the cash *wakf* (*wakf al-nukūd*) produced money for the endowments through interest, it was the object of controversy even before Ottoman times (Mandaville; Yediyıldız, 116-20, 144-9; Bilici, *Les waqfs monétaires*; Cizakca). Towards the end of the Ottoman era, during the second half of the 19th and the beginning of the 20th centuries, some *wakf* administrators placed money with the Ottoman Bank as a means of fructifying capital both on their own behalf as well as in the name of a *wakf*, including endowments founded for Ṣūfī orders such as the Mewlewiyye (Eldem, 288-9).

Many public leaders—sultans but also local governors and bureaucrats as well as all types of notables at all hierarchical levels—marked their political power, often transforming and modifying the character and topography of cities and towns in the process, thanks to proceeds coming from *wakf* assets, by establishing and subsidising religio-educational structures (*djāmi'*, *masdjid* [*q.v.*], *madrasa* [*q.v.*], *dār al-Ḳur'ān, dār al-ḥadīth*; Ṣūfī lodges and places of assembly (*zāwiya, khānkāh, ribāṭ, tekke* [*q.vv.*]); poor relief sites such as soup kitchens or places giving other sorts of assistance (*'imāret* and the *takiyya madrasa* frequently used for giving poor relief in the Arab provinces); mausolea which often served as social gathering places (*turba* [*q.v.*]), medical dispensaries (*bīmāristān* [*q.v.*]); and public infrastructural services in the form of bridges, irrigation systems, fortresses, lighthouses, water conduits, aqueducts, water fountains, etc., in urban and rural areas alike.

During the expansionist periods of the empire, especially in the 9th/15th and 10th/16th centuries, *wakf* was an important political instrument for the Islamisation of newly-conquered localities and frontier areas. To this end, the endowments funded convent-type structures (*ribāṭ*) situated in areas near or bordering on the *dār al-ḥarb* [*q.v.*], notably in the European Ottoman provinces where Ṣūfīs and other Muslims lived, worked the land, engaged in commerce and eventually colonised regions as a concrete means of increasing the expanse of lands belonging to the realm. As part of the Islamisation programme, which was closely tied to the legitimisation efforts of the sultanate, income from sultanic *wakfs* and associated endowments within all the Ottoman provinces also funded the construction and maintenance of buildings intended for Islamic ritual and teaching (as mentioned above) and, during the early days of the empire, was sometimes involved in the transformation of churches, cathedrals and other already existing edifices into places for use by the Islamic community (Barkan, 1942; Inalcik, 1980, 1990).

Wakf networks in Ottoman lands were the essential infrastructural link in the transmission of knowledge, since the construction and patronage of places for ritual observances and institutionalised learning, i.e. the mosques and religious schools mentioned above, were almost exclusively subsidised by *wakf*; this was equally true for many libraries, both public (associated with mosques, Ṣūfī lodges or schools) and private. By way of a famous example, Meḥemmed the Conqueror, immediately upon annexing Konya to his empire in the middle of the 9th/15th century, recorded, in the *wakf* registers, the magnificent 7th/13th-century manuscript collection there which had formerly belonged to the Ṣūfī Ṣadr al-Dīn al-Ḳūnawī, son-in-law of Ibn 'Arabī [*q.v.*] (Faroqhi, 1999, 46). Although this endowed library counted spectacular manuscripts amongst its holdings, other more modest libraries throughout the different provinces, including those owned by private individuals, were very common (Kenderova, 1999, for an endowed collection in the Balkans). Some of these private libraries were maintained for the active use of scholars and students, while others undoubtedly simply represented a form of capital, the manuscripts not necessarily being read. The *sālnāmas* or late Ottoman almanacs sometimes give lists of the endowed libraries and their contents.

Throughout the empire's territories and through the course of the centuries, *wakf*-financed utilities ranged from extremely impressive and influential foundation complexes, which continue to function up until today (one of the many outstanding ones is the mid-10th/16th-century Süleymāniyye complex built by Mi'mār Sinān: Necipoglu), to much more modest but still functioning structures, all of them reaching deeply into the society of their time, so that almost everyone living in the empire was affected at some point,

during his or her life, by *waḳf* networks which criss-crossed local, regional and international as well as confessional boundaries.

That endowments were often used as a political instrument by the sultans, by members of the harem and the imperial family, by persons who occupied bureaucratic, religious, military and other official positions at all levels, in addition to individuals in their private capacity, should not overshadow the fact that many *waḳfs* were also founded for pious, religious and charitable purposes and that, in fact, one purpose did not always exclude the other. As dispensers of justice toward the community, the Ottoman sultans and members of their extended households, as well as the average Muslim, undertook poor relief, via the agency of *waḳf*, as one of their responsibilities. Thus, for example, in 1570, Muṣṭafā Čelebi Efendi, a son of the *defterdār* [*q.v.*], Murād Čelebi Efendi, established a large *waḳf* in Istanbul which, according to his *waḳfiyye*, was for the salvation of his soul (an invocation often referred to in the foundation documents). This *waḳf*, similar to so many others, distributed, among other things, water "obtained from pure snow" to the poor and passers-by in Istanbul during the three hottest months of the year (Sauvan, 242). The fact that this water was of such high quality lent an even greater importance to the charity-giving.

The existence of the huge sultanic *waḳf* should not overshadow the fact that modest endowments, sometimes constituted from extremely limited assets, such as a very small plot of cultivated land or a tiny room in a *dār*, *k͟hān* or other building, or even a portion of the above, were also very frequently established as *waḳf*. These modest or middle-sized endowments made by small property owners in the Ottoman empire were often of the *mus͟htarak* type and thus represented the method of simultaneously enacting a good deed through conferring largesse (even though of a limited amount) on a public or needy beneficiary while, at the same time, ensuring the transmission of family wealth from generation to generation according to specific inheritance strategies which did not necessarily exclude females. Certain *waḳf* strategies sometimes even favoured females both as beneficiaries and administrators of endowments (Garcin; Doumani).

Primary research has also dismantled the misconception of *waḳf* as a secure tax shelter. Ottoman administrative records reveal that both buildings and agricultural properties belonging to the foundations were indeed subject to taxes. Work by Barkan clearly demonstrates that *waḳf* and freehold lands (calculated together as a unit) contributed rather more than 13% in the form of taxes to the overall revenue budget for the Ottoman empire in 1527-28 (Barkan, 1953-4, 277; figures given by Inalcik, 1997, 82-3); in a like manner, Hütteroth and Abdulfattah (98) have shown that endowment properties were subject to the *ʿus͟hr māl al-waḳf* tax in late 10th/16th-century Palestine. But, since the information on taxes levied upon foundations in the Ottoman empire has not yet been sufficiently researched so as to establish substantial quantitative data, it is difficult to evaluate the differences between the types and frequency of taxes imposed on endowment assets in relation to other types of property. Yet, in view of the fact that so many private individuals chose to establish *waḳf* as a means to pass on their properties to future generations instead of simply allowing their assets to be inherited according to Ḳur'ānic inheritance precepts [see FARĀ'IḌ], presumably indicates that *waḳf* property taxes were less onerous than those imposed on non-*waḳf* assets.

Archival work has also been done on the *waḳfs* owned by the guilds [see ṢINF. 3] in the Ottoman empire. Often used as a type of solidarity fund for guild members but also for other individuals associated or not with the guild, this type of endowment was frequently bestowed with cash assets which were lent out at interest. Aside from the endowments founded by individual craftsmen for the benefit of their guild, research has shown that, contrary to normative *waḳf* law where only an individual person may create a foundation, entire guilds also established *waḳf* for their common use (Akarli; Faroqhi, 1995, esp. 97, 102-8, who has studied *waḳf* registers, now held in the manuscript division of Milli Kütüphane in Ankara, from late 18th-century Bursa).

Another collective use of *waḳfs* in the empire was regarding those that were founded for the benefit of an urban quarter (*maḥalla* [*q.v.*]). The assets of the neighbourhood *waḳfs*, similar to those of the guild endowments, were mostly but not exclusively held in the form of currency, which was bestowed in *waḳf* by the quarter's inhabitants or by other individuals; revenue also accrued to this type of foundation by renting the real estate owned by that *waḳf*. The foundation's properties were therefore collectively owned by the quarter, and this *waḳf* acted as a safety net in times of need by the residents of that quarter. In particular, the neighbourhood *waḳf* often helped defray taxes imposed upon a quarter's population as an ensemble as well as assisting neighbourhood inhabitants for their material needs. Although further primary research needs to be conducted on this type of endowment, it seems that the neighbourhood *waḳf* was usually managed by the *s͟heyk͟h* of the *maḥalla* or by another notable of the quarter.

As the Ottoman centuries went by, huge amounts of buildings and agricultural lands increasingly belonged to the endowments but, for the time being, it is impossible to assess, with any real certainty, the extent of *waḳf* holdings in the Ottoman lands. Nonetheless, 19th and 20th-century studies generally estimate *waḳf* properties to comprise approximately three-quarters of buildings and arable land in the empire. Without being quantitatively specific, it is abundantly clear that *waḳf* represented enormous assets in the Ottoman empire and were an integral part of the economy and the real estate market. Apart from the sultanic and associated *waḳfs*, over which the Ottoman state exercised some centralised control from at least the mid-9th/15th century (although local *mutawallīs* and *nāẓirs* of the sultanic endowments usually held considerable decision-making powers), periodic attempts were made by the state to extend its administration over the other foundations. But, it was only in the late 18th century under sultan Selīm III's reform programme, the Niẓām-i̊ Ḏjedīd [*q.v.*], and especially after the crushing of the Janissaries in the summer of 1826, that the imperial power succeeded in incorporating important endowments under its control. As a first measure, just a few months after the destruction of the Janissaries, the central government created the Ministry of *Waḳf* in October 1826 which, in the next few years, increasingly took over the administration of the influential and wealthy endowments attached to the offices of the Grand Vizier, the *s͟heyk͟h al-islām*, the *re'īs al-küttāb* [*q.v.*], the inspector of the Ḥaramayn foundations, the Chief Admiral, the Chief Black Eunuch and others. The subsequent *Tanẓīmāt* [*q.v.*] reorganisations widened and, to some extent, enforced regulatory legislation over the management of *waḳf* and its assets. Ascertaining the real extent of state interven-

tionary powers regarding the control over *wakf* is somewhat problematical; yet it is indisputable that the 19th-century Ottoman empire and the Young Turks régime progressively created the infrastuctural apparatus to incorporate management of the endowments within its centralised administration (Barnes, 87-153; Yerasimos).

The end date for this section, 1914, does not in any way reflect a chronological rupture in the history of Ottoman *wakf*; the hostilities of World War I did not specifically affect the endowments in the empire. A much more significant date was 1924 when, along with the abolition of the caliphate and the Ministry of *Sherīʿat*, *wakf* administration and its properties were incorporated within the secular state apparatus of Muṣṭafā Kemāl's Turkish Republic.

(Randi Deguilhem)

V. In Central Asia

Since in Islamic times the region governed from such Transoxanian cities as Bu<u>kh</u>ārā and Samarḳand often included the southern banks of the upper Oxus river course, it is convenient to consider here also what is now northern Af<u>gh</u>ānistān.

(a) *The pre-Mongol period*

One of the earliest, if not the earliest, known *waḳf* foundations was established by the Sāmānid Ismāʿīl b. Aḥmad (d. 295/907) at Bu<u>kh</u>ārā. The date of the original deed was 254/868, but it was redrafted in 676/1277 and the surviving version written during the reign of the Man<u>gh</u>it Amīr Ḥaydar (1215-42/1800-26); according to this last, the foundation supported both the family mausoleum and the descendants of Ismāʿīl.

The Ḳarā<u>kh</u>ānid or Ilek-<u>Kh</u>ānid Tam<u>gh</u>āč Bu<u>gh</u>rā <u>Kh</u>ān founded *waḳfs* for a hospital (*bīmāristān*) in Ra<u>dj</u>ab 458/May-June 1066 and for a college (*madrasa*) at some unknown date in Samarḳand. In the course of listing the properties abutting the Ḳarā<u>kh</u>ānid endowments, other *waḳf*-supported institutions are mentioned: the Mas<u>dj</u>id-i Dāwūd; the Congregational Mosque; the tomb (*ma<u>sh</u>had*) of "al-Ṭar<u>kh</u>ān" and his daughter "al-<u>Kh</u>ātūn"; and a student scholarship fund (M. Khadr, 318-19, 325; ILEK-<u>KH</u>ĀNS, at Vol. III, 1115b).

A second known Ḳarā<u>kh</u>ānid *waḳf* is that of Arslan <u>Kh</u>ān Muḥammad b. Sulaymān (495-?523/1102-?1129) for a "*madrasa* for jurists" in Bu<u>kh</u>ārā. The documentation on it includes a reference to it in the version of Nar<u>sh</u>a<u>kh</u>ī that has survived (R.N. Frye, *The History of Bukhara*, Cambridge, Mass. 1954, 30) and a lawsuit of unknown date seeking restitution of grain and money embezzled from the *waḳf* income. See O.D. Če<u>kh</u>ovič, *Tyažba o vakfe medrese Arslān-<u>Kh</u>āna*, in *Pis'mennye pamyatniki vostoka: Ežegodnik 1978-1979*, Moscow 1987, 123-44, 355-64.

(b) *The Mongol period*

A family endowment (*waḳf-i awlād*) from 698/1299 by ʿAbd al-Raḥīm b. Muḥammad b. ʿAbd Allāh Istī<u>dj</u>ābī (Isfī<u>dj</u>ābī) for his son Ḳuṭb al-Dīn Yūsuf and then his male descendants in Bu<u>kh</u>ārā and for the upkeep of the mosque and shrine of a local saint, <u>Kh</u>ʷā<u>dj</u>a <u>Kh</u>amana, is the first known *waḳf* from Transoxania in the Mongol period (see A.K. Arends, A.B. <u>Kh</u>alidov and O.D. Če<u>kh</u>ovič, *Bu<u>kh</u>arskii vakf XIII v.*, Moscow 1979, 8). The *waḳfiyya* exists in its Arabic original with an accompanying contemporary Persian translation. The endowment included the village of <u>Kh</u>amana in the district (*tūmān*) of Sām<u>dj</u>ān, including its own canal (*nahr-i <u>kh</u>āṣṣ*). One unusual feature of this *waḳf* was the assignment of the income of specific amounts of land (rather than a percentage of the endowment income or fixed amounts of money) to pay the salaries of the mosque officials and for the specific requirements of the *waḳf*.

(c) *The post-Mongol era: the Bā<u>kh</u>arzī* waḳf *foundation*

The 726/1326 *waḳf* founded by <u>Sh</u>ay<u>kh</u> Yaḥyā in memory of his grandfather, the Ṣūfī *<u>sh</u>ay<u>kh</u>* Sayf al-Dīn Bā<u>kh</u>arzī, established a pattern of large *waḳf* complexes associated with the shrine of a religious figure, a pattern which is a characteristic feature of the urban landscape of the region. Major architectural complexes, usually with a shrine as the focal point, underwritten by extensive *waḳf* endowments that were in turn administered by family dynasties, are a recurrent feature of the socio-economic history of the cities of Central Asia.

The Bā<u>kh</u>arzī *waḳf* is also an example of how *waḳf* was used as a source of development capital in Bu<u>kh</u>ārā as it was in Iṣfahān (R.D. McChesney, *Waqf and public policy. The waqfs of Shāh ʿAbbās 1011-1023*, in *Asian and African Studies*, xv [1981], 165-90) and Istanbul [*q.v.*, at Vol. IV, 226-9] in order to revive local economies. The foundation document, a scroll of nearly 1,000 lines, detailed a vast agricultural expanse, including an area outside the Ḳar<u>sh</u>ī Gate of Bu<u>kh</u>ārā estimated at more than 100 km^2 (O.D. Če<u>kh</u>ovič, *Bu<u>kh</u>arskiye dokumenti XIV v.*, Ta<u>sh</u>kent 1965, 14). These lands, which were intended to support a mosque and *<u>kh</u>ānaḳāh* complex as well as the tomb of Sayf al-Dīn Bā<u>kh</u>arzī, were situated amidst extensive ruins. At the same time, on its own lands the document speaks of newly-planted vineyards, orchards and vegetable gardens. When Ibn Baṭṭūṭa recalled his stay at the *<u>kh</u>ānaḳāh* in 1333, only seven years after the foundation was established, he mentions vast agricultural *waḳfs* belonging to it and its ability to feed "all comers" (*Riḥla*, tr. Gibb, iii, 27-8, tr. iii, 554).

Like many of the large foundations of the time, the Bā<u>kh</u>arzī foundation was very long-lived. The surviving documents pertaining to the foundation include

a grant in 1745 of two parcels of irrigated land totalling four hectares, and a record of the restoration (*ta'mīr wa marammat*) of the *wakfiyya* itself by the *khaṭīb* of Fatḥābād, the location of the tomb, al-Ḥādjdj Mīr Maḳṣūd Dahbīdī.

(d) *Tīmūrid* waḳfs

The advent of the Tīmūrid era in Central Asia brought an efflorescence of large *wakf* foundations. Those published or described include:

1. A *wakf* of 785/1383 involving much irrigated land in the Samarḳand region. See O.D. Čekhovič, *Vakufnii dokument vremeni Timura iz kollektsii Samarkandskogo Muzeya*, in *Epigrafika Vostoka*, iv [1951], 56-67.

2. Tīmūr's *wakf* for the shrine of Shaykh Aḥmad-i Yasawī. The document, purporting to be Tīmūr's original *wakfiyya* for the shrine in Turkistān, has been called a "crude forgery" (Čekhovič, *Sobraniye*, 309), but it is more than likely that Tīmūr did endow the shrine when it was built, or at least encouraged others to do so. In 1866, Mīr Ṣāliḥ Begčurin described the *wakf* of the shrine complex (which at the time included a mosque, a *madrasa*, and a staff of eight, not including the *madrasa* teachers) as comprising two inns and a caravanserai, this last, donated in 1820, with 80 shops producing 100 *tillas* of income used for upkeep of the shrine (*Opisanie mečeti Azreta*, in *Voennii sbornik*, viii [1866], 209-17).

3. The endowments for the library, *madrasa, khānaḳāh*, and mosque of Khwādja Muḥammad Pārsā (d. 822/1420), one of Bahā' al-Dīn Naḳshband's chief disciples. See Maria Eva Subtelny, *The making of Bukhārā-yi Sharīf: Scholars, books, and libraries in medieval Bukhara* (forthcoming in a Festschrift for Yuri Bregel).

4. The *wakfs* for Ulugh Beg's *madrasa* and *khānaḳāh* in Samarḳand (both built in 823/1420, according to Ḥāfiẓ Ābrū, *Zubda*, Tehran 1372/1993, 743-4) and his *madrasa* in Bukhārā (1417-20). Although modern scholars have not yet studied in any detail the endowments for the two great *madrasas* founded by Tīmūr's grandson, there is a considerable amount of archival material on them in the Uzbek State Archives, including a series of 17th century endowments of books for the *madrasa* library.

5. The 868/1464 *wakf* of Ḥabība Sulṭān Bīgum, daughter of the Tīmūrid *amīr* Djalāl al-Dīn Suhrāb for the mausoleum called 'Ishrat-Khāna in Samarḳand, the tomb of Khāwand Sulṭān Bīgī. See M.E. Masson, *Samarkandskii mavzolei, izvestnii pod imenem Ishratkhana*, in *Mavzolei Ishratkhana*, Tashkent 1958, 27-29, and V.L. Vyatkin, *Vakufnii dokument Ishratkhana*, in *ibid.*, 109-36.

6. Sulṭān-Ḥusayn Bāyḳarā's endowment with commercial properties and a large canal at the rediscovered alleged tomb-site of 'Alī b. Abī Ṭālib east of Balkh in 885/1480-1 (see McChesney, *Waqf in Central Asia*, Princeton 1991).

7. The *wakf* foundation of Khwādja 'Ubayd Allāh Aḥrār [see AḤRĀR, in Suppl.] in Samarḳand for the complex called Muḥawwaṭa-i Mawālī" in the city district of Khwādja Kafshī (Kafshīr), present-day Ulugh Beg. It held properties throughout Central Asia right up to the Soviet period, and was established principally as a family trust (see Čekhovič, *Samarkandskiye dokumenti XV-XVI vv.*, Moscow 1974, and McChesney, *Central Asia. Foundations of change*, Princeton 1997, 98-109, for the development of the foundation during the 17th century).

(e) *The Shībānid and Tuḳāy-Tīmūrid periods, 10th-11th/16th-17th centuries*

When the revivers of the Činggisid khānate, the Abu 'l-Khayrid Shībānids [*q.v.*], ousted the last of the Tīmūrids from Central Asia and northern Afghānistān, they and their 11th/17th-century successors, the Tuḳāy-Tīmūrids (Djānids, Ashtarkhānids) similarly used the financial instrument of *wakf* to establish and fund their own public works.

8. One of the earliest is the extensive endowment for a pair of *madrasas* in Samarḳand dedicated in the name of Shībānī Khān (d. 916/1510) and established by his daughter-in-law Mihr Sulṭān Khānum, probably before 926/1520 (see R.G. Mukminova, *K istorii agrarnikh otnoshenii v Uzbekistane XVI v.: Po materialam "Vakf-name"*, Tashkent 1966).

9. In Djumādā II 947/October 1540, an *amīr* named Kamāl al-Dīn Ḳanāḳ (Ḳiyāḳ, Ḳunāḳ) set up a large *wakf* to support an educational-cultic complex of congregational mosque, *madrasa*, ablution stations and *ribāṭ* inside Balkh in the Čuḳur Mūsā Shaykh quarter (see G.A. Dzhuraeva, *Vakfnii dokument 1540 g.*, in *Vostočnoe istoričeskoe istočnikovedeniye i spetsial'niye istoričheskiye distsiplini*, Moscow 1995, 190-8). Like many *wakfs* both before and after, this large public *wakf* was in fact a "mixed" one, as it made provisions for both the founder's descendants and public institutions. In this case, the future generations were to receive 10% of the income (after expenditure on building maintenance) in accordance with the Ḳur'ānic rules on the *farā'iḍ* [*q.v.*]. The document also refers to four other mosques which Kamāl al-Dīn had already endowed and three mosques which his brother had likewise built and endowed.

The pattern of large *wakfs* jointly supporting public institutions and the private interests of future generations of the founder's family continued through the 16th and 17th centuries. In Bukhārā, one of the more notable *wakf*-founding families was the Djūybārīs. From their origins as keepers of the Čār (Čahār) Bakr shrine in the western Bukhāran suburbs and beneficiaries of its endowments, the family emerged as one of the wealthiest and most influential families in Central Asia, and preserved both its wealth and influence for several centuries, in large part through the purchase of real estate, conversion of those purchases into *wakf* and designating as beneficiaries not only the *madrasa*-mosque complexes that they built but also succeeding generations of the family. There are many unpublished endowment deeds of the family in the Uzbek State Archives, which taken together establish the long-term economic influence of the family in Central Asia. On the family's origins, see F. Schwarz, *From scholars to saints. The Bukharan Shaykhs of Ğūybār and the ziyārat to the Four Bakr*, in *Iz Istorii kul'turnogo naslediya Bukhari*, vi, Bukhārā 1998. On the building and endowment activities of the family, see McChesney, *Economic and social aspects of the public architecture of Bukhara in the 1560's and 1570's*, in *Islamic art*, ii [1987], 217-42, and idem, *Central Asia. Foundations of change*, 109-14.

In the 11th/17th century, besides additions made to the large endowments of the preceding centuries (e.g. Nadr Dīwān-Begī Arlāt's dramatic expansion and endowment of Khwādja Aḥrār's tomb area on the southern side of Samarḳand with a large *madrasa*, and several large *wakfs* of books for the Ulugh Beg *madrasa* in Bukhārā), there were new projects in Samarḳand (the Shīr Dār and Ṭillākār *madrasas* on the Rīgistān built by another leading *amīr*, Yalangtūsh Bī Alčīn); in Bukhārā (Nadr Dīwān Begī's *madrasa* and *khānaḳāh* and 'Abd al-'Azīz Khān II's two *madrasas*); and in Balkh (the two *madrasas* of father and son, Nadhr Muḥammad and Subḥān Ḳulī (for the latter, see A.D. Davidov, *Imeniya medrese Subkhankuli-khana v Balkhe (po vakufnoi gramote XVII v.)*, in *Kratkiye Soobshčeniya Instituta Vostokovedeniya*, xxxvii [1960], 82-128), all of which generated major new endowments.

Throughout the century, the issue of *wakf* also touches on the relations between the Tuḳāy-Tīmūrids in Bu<u>kh</u>ārā and the Tīmūrid rulers of India. A tradition about the endowment of the Gūr-i Amīr complex in Samarḳand had persisted through the centuries. Muḥammad Sulṭān (d. 805/1403), grandson of Tīmūr, was believed to have founded a *wakf* for his *madrasa*, one of the buildings of the complex, the terms of which local residents believed they knew as late as 1101/1690. Because of the importance of the tombs there to such Tīmūrid epigoni as the Mu<u>gh</u>als ruling in India, efforts, ultimately unsuccessful, were made by the latter late in 1102/1690-1 to re-capitalise the *wakf* with cash sent from Kābul and to revive the terms of what was believed to be the original endowment.

(f) *The Man<u>gh</u>it and Russian periods (mid-18th to early 20th centuries)*

The great bulk of surviving *wakf* documents date to the late 18th, 19th and early 20th centuries. This is in part due to the usual effects of time on paper documents and in part to the project of the Man<u>gh</u>it *amīr*, <u>Sh</u>āh Murād b. Dāniyāl ("Amīr-i Maʿṣūm", 1199-1215/1785-1800), either as an act of piety or perhaps to ensure the government had a record of *wakfs* in Bu<u>kh</u>ārā, to have many *wakfiyyas* re-copied. As a consequence, many foundations are only known through these late copies. Another factor was the arrival of the Russians, who were interested in the tax potential of the regions that they had conquered. In 1886, the Governor-General ordered that all *wakf* deeds should be presented for inspection, with the threat of their nullification if these documents were not brought forward. At that time, the authorities tallied 7,509 *wakfs* in the territories under Russian direct administration based on the documents presented, with a slightly different count in an earlier publication: 2,909 *wakfs* in Turkestan, 1,326 in Syr Darya, 1,076 in Fergana, 507 in Zaraf<u>sh</u>an, 1,177 in Khojent, 382 in Namangan, 297 in Samarḳand and 282 in Margelan for a total of 7,956 separate foundations. To these numbers should then be added the thousands of *wakfs* in the <u>kh</u>ānates of Bu<u>kh</u>ārā and <u>Kh</u>īwa. See N. Emel'<u>ya</u>nov, *Čislennost' vakufov Turkestanskogo kra<u>ya</u>*, in *Turkestanski<u>ye</u> Vedomosti*, 1887, no. 1.

But the practice of document preservation and duplication is well attested long before the time of <u>Sh</u>āh Murād. On the reverse of the 947/1540 *wakfiyya* is a note specifying how many copies were to be made of the document and where they were to be kept—two in Bu<u>kh</u>ārā, one at a private house in Samarḳand and a fourth in <u>Sh</u>ahr-i Sabz. In Bal<u>kh</u>, there were to be three copies, one kept by the settlor himself, the other two to be kept by two named *ḳāḍīs*. Inside the body of the document is a further stipulation that, every ten years, the *mutawallī* was to make a fresh copy of the *wakfiyya*.

After the Soviet Revolution of 1917, *wakf* property was officially abolished. The extent to which it persisted as social practice even under official prohibition has yet to be studied. While the institution was being swept away, its records were being preserved. The establishment of the Central State Historical Archives in Tashkent and the accumulation of manuscript works (both books and single documents) by the Academies of Sciences in the new Soviet Republics meant the history of *wakf* in Central Asia, if not the institution itself, would be preserved.

The extensive documentary record for *wakf* has great potential for historians of Central Asia. The *wakfiyyas* are rich in topographic, toponymic and architectural information. The Ḳarā<u>kh</u>ānid ones, for example, specify the structural elements of *<u>kh</u>āns* (caravanserais) in 5th/11th-century Samarḳand. These may then be compared with later deeds in which caravanserais or comparable commercial structures (*tīms*) are described. What is true for individual buildings is also true for topography and toponomy. The 947/1540 *wakf* in Bal<u>kh</u> details the layout of three of the city's quarters (Sallā<u>kh</u>-<u>kh</u>āna, Āsiyābād, and Čuḳur Mūsā <u>Sh</u>ay<u>kh</u>). In light of the virtual disappearance of all traces of the mediaeval and early modern internal plan of the city, this record is invaluable. Similarly, from the corpus of <u>Dj</u>ūybārī endowments deeds, complemented by property sales records, whole streets of Bu<u>kh</u>ārā may be reconstructed as they existed in the 10th/16th century.

The documents are also a major source for economic history. Already one study has used *wakf* documents to establish wage and price trends in Bu<u>kh</u>ārā in the 10th/16th century (E.A. Davidovič, *Istori<u>ya</u> dene<u>zh</u>nogo obra<u>sh</u>čeni<u>ya</u> srednevekovoi Srednei Azii*, Moscow 1983, 281-91). Currency and units of account in use (*rāyi<u>dj</u> al-waḳt*), types of land tenure, institutional budgets, wages and prices in historical context, all may be studied through these materials. The cash *wakf*, controversial in the 10th/16th century but apparently routine by the 19th century, also emerges from the documentary records. See A. Dzhalilov, *Dokumenti ob obra<u>sh</u>čenii deneg v* vakf *v <u>Kh</u>ivinskom <u>kh</u>anstve (XIX-načhalo XX veka)*, in *Ob<u>sh</u>čestvennye Nauki v Uzbekistane*, i [1989], 45-9.

Social history, too, finds a wealth of data in *wakf* records. The owners and tenants of property which bounded *wakf* property, or tenants on *wakf* property itself are often identified by name thereby indicating property ownership and tenancy by gender, occupation and ethnicity.

The "Ḥaramayn *wakf*", that is, endowments made to help support institutions in Mecca and Medina or related to the Pilgrimage, has a venerable history in Central Asia. Tīmūr's spiritual guide, Amīr Sayyid Baraka, who is buried alongside him in the Gūr-i Amīr, was reportedly an official of the Ḥaramayn *wakf*. According to <u>Kh</u>ʷāndamīr, writing more than 100 years later, Sayyid Baraka had been sent from Mecca to Bal<u>kh</u> in 771/1369-70 to inspect Ḥaramayn *wakf* lands in the Bal<u>kh</u> region when he first came to Tīmūr's attention (*Ḥabīb al-siyar*, Tehran 1333/1954, pt. 3, vol. iii, 415-16). In the late 15th century, an official (*wakīl*) of the Ḥaramayn came to Harāt from Mecca to complain that revenue from the *wakf* lands in And<u>kh</u>ūd in <u>Kh</u>urāsān was not reaching the holy cities. Sulṭān-Ḥusayn Bāyḳarā reportedly investigated and a *fatwā* was issued stating that Ḥaramayn *wakf* revenues were being spent on *sayyids* from Mecca visiting <u>Kh</u>urāsān rather than being sent west (Niẓām al-Dīn ʿAbd al-Wāsiʿ Niẓāmī, *Man<u>sh</u>aʾ al-in<u>sh</u>āʾ*, Tehran 1357/1978, 83). There are archival records of numerous endowments, many of them from the early 20th century, that continued the tradition of founding *wakfs* to benefit the Holy Cities. One of the more unusual properties donated to the Ḥaramayn *wakf* by the Man<u>gh</u>it *Amīr* ʿAbd al-Aḥad (1886-1910) is a room (*ḥu<u>dj</u>ra*) in the Muḥammad Naẓar Parwānačī *madrasa*, suggesting that *madrasa* rooms, originally the object of an endowment, had been transformed into an income-generating piece of property that could then be made into *wakf*.

Bibliography: 1. Sources. Information on Central Asian *wakfs* may be found in several kinds of records: in *<u>sh</u>urūṭ* literature (e.g. the *wakf* for a hospital founded by the Ḳarā<u>kh</u>ānid Ibrāhīm b. Naṣr Tam<u>gh</u>āč Bu<u>gh</u>rā <u>Kh</u>ān, given by M. Khadr and Cl. Cahen,

Deux actes de waqf d'un Qarahānide d'Asie Centrale, in *JA*, cclv/2 (1967), 305-34, found in the *Ghurar al-shurūt wa-durar al-sumūt* of al-Righdamūnī); in a dynamic documentary tradition which includes original foundation charters and/or later updated recensions of the original decrees, in governmental decrees (*farāmīn, manāshīr, ahkām*) regulating the operation of a foundation; in court records of litigation (*mukhāsama, daʿwā*); in other property records: sale affidavits (*ikrārāt, kibāladjāt*), ownership transfers (*tamlīk-nāmas*), wills (*taraka-nāmas*) and bequests (*wasiyyat-nāmas*); and in many genres of literature (histories, biographies, geographies/cosmographies).

The known collections of Central Asian *wakf* documents include more than 2,000 *wakf* deeds, virtually all from Bukhārā, in Tashkent in Fond I-323 of the Uzbek State Archives (ms. catalogue by I. Miradîlov, *Kollektsiya vakufnîkh dokumentov*); several hundred *wakf* deeds and related documents in the Fond Vakfname at the Institute of Oriental Studies of Uzbekistan (O.D. Čekhovič, *Sobranye vostočnîkh aktov Akademii Nauk Uzbekistana*, in *Istoričeskie Zapiski*, no. 26 (1948), 306-11; idem, *Novaya kollektsiya dokumentov po istorii Uzbekistana*, in *ibid.*, no. 36 (1951), and G.A. Džuraeva (Juraeva), *Dokumental'noe nasledie Uzbekistana (Vakfname Instituta Vostokovedeniya Ak. Nauk Respublika Uzbekistana)*, n.d., unpubl. paper); at least 75 *wakf-namas* in Samarkand, at the Uzbek State Historical Museum (K.D., *Inventarnaya kniga rukopisnîkh dokumentov feodal'nogo-kolonial'nogo perioda Uzbekskogo Gosudarstvennogo Istoričeskogo Muzeya*, Samarkand, n.d., unpubl. catalogue), an unknown number in Bukhārā at the Bukharan State Library and the Bukharan State Art and Architecture Museum (see B. Kazakov, *Kollektsiya istoričeskikh dokumentov Bukharskogo Gosudarstvennogo Arkhitekturno-Khudožestvennogo Muzeya-Zapovednika*, in *Iz istorii kul'turnogo naslediya Bukharî*, Tashkent 1990, 62-8), and an unknown number in Dushanbe, Tadjikistān at the Firdawsī State Public Library, the Institute of Oriental Studies, and the Ahmad Donish Institute of History (see on these, A.A. Egani and Čekhovič, *Regestî Sredneaziatskikh Aktov*, in *Pis'mennye pamiyatniki vostoka. Ežegodnik(i) 1974-1979*, Moscow 1981-7).

Many more documents pertaining to *wakf* in the area that came under Russian direct administration after 1865 (e.g. Samarkand, Farghāna, Tashkent) are to be found in other fonds of the Uzbek archives, especially Fond no. 1 "Kantselariya Turkestanskogo General-Gubernatora", no. 17, "Sîr-Dar'inskoe Oblastnoye Pravlenye", no. 18, "Samarkandskoye Oblastnoye Pravlenye", no. 19, "Ferganskoye Oblastnoye Pravlenye", and no. 26 "Upravlenye Kush-Begi Emira Bukharskogo". See Z.I. Agafonova and N.A. Khalfin, *Putevoditel'* (Tsentral'nyi Gosudarstvennyi Istoričeskii Arkhiv UzSSR), Tashkent 1948. The collection of 19th-century Khīwan documents, including many *wakfiyyas* was moved from Leningrad (St. Petersburg) to the Uzbek Central State Historical Archives in Tashkent in 1962 (subsequent to the publication of the Agafonova-Khalfin guide) and was added to Fond I-125, "Kantselariya Khana Khivinskogo" (Yu.È. Bregel', *Arkhiv Khivinskikh Khanov*, in *Narodî Azii i Afriki* (1966), no. 1, 67-76, and idem, *Dokumentî Arkhiva Khivinskogo Khanov po istorii i ètnografii Karakalpakov*, Moscow 1967, 10-11). No doubt much more *wakf* material from Central Asia is to be found in other archival holdings in the former Soviet Union.

2. Studies. These are given in the article.

(R.D. McChesney)

VI. In Muslim India to 1900

In their operation as institutions, *awkāf* in India resembled similar organisations in Muslim West Asia. At the same time, a number of forces unique to the subcontinent gave South Asian endowments a distinctive history. Several Indian historical circumstances gave them characteristics that made them diverge from patterns in the structure of *awkāf* found in territories farther west. Muslims in the subcontinent were always a minority—influential certainly, but a minority none the less. Muslim-dominated states spread throughout South Asia in temporal fits and starts. During the crucial period of Mughal hegemony, a cash economy greatly enhanced the revenues available to the state, thus changing the complexion of patronage for individuals as well as establishments. Finally, the relatively early date, the late 18th century, at which British imperialism began to shape Muslim customs meant that Indian *awkāf* were hybrids of a sort not found elsewhere in the Islamic world.

Inscriptional evidence concerning South Asian endowments is limited. Existing collections of epigrapha have not picked up information on endowments or widely disseminated it. Dedicatory carvings frequently employ terms other than *wakf*: *inʿām* might be used in one inscription, *lā kharadj* in another, and sometimes even Hindu terms such as *devutter* will appear. During the Mughal period in Bengal, the expansion of Islamic institutions was underwritten by revenue abatements known as *sanads* (R. Eaton, *The rise of Islam and the Bengal frontier*, Berkeley, etc. 1993). Historical chronicles which often amount to panegyrics to one or another ruler make but perfunctory mention of *awkāf*. They restrict themselves to the notice that a sultan established endowments or that he seized and redistributed the endowments of his predecessor (P. Jackson, *The Delhi Sultanate*, Cambridge 1998). When we look at the great dynastic histories dealing with the Mughals in India, mention of *awkāf* virtually ceases.

Climate and vermin have meant that few, if any deeds of endowments, *wakf-nāmas*, have survived. Also, documents have had a tendency to disappear when they proved inconvenient to the needs of later generations. While we know that a number of *awkāf* were established for the maintenance of the Tadj Mahall [*q.v.*], not a single document concerning them has come down to us (W. Begley and Z. Desai, *The Taj Mahal*, Seattle 1989; Irfan Habib, *The agrarian system of Mughal India*, Bombay 1963). Endowments in South Asia, therefore, cannot provide the material for the kinds of analysis of particular ruling groups such as the Mamlūks (C. Petry, *The civilian elite of Cairo in the later Middle Ages*, Princeton 1981), or of institutions such as the *mazar-i sharīf* (R. McChesney, *Waqf in Central Asia*, Princeton 1991).

We know that the Dihlī Sultanates tried to use the *iktāʿ* as the basis for supporting their military and fiscal élites. In West Asia, e.g. in Saldjūk Persia, *awkāf* were sometimes part of an effort to convert prebendary tenures (*iktāʿāt*) into possessions (see III. above). In any case, the complications of revenue collection and control over access to agricultural surpluses in India meant that few attempts to secure absolute possession of some bit of territory were likely to endure. Though India's population was always big when compared to that of the rest of the world, land remained open for cultivation well into the 20th century. The crops that the land produced and the people who produced them were far more important than the ownership of mere real estate. Also, many cities and towns served as the capitals of states. Rulers, even within the same dynasty,

tended to shift from place to place, taking their courtiers with them. Thus the farms and houses that usually provided the incomes of *awḳāf* had a somewhat fluid place in the lives of those notables who were in the position to establish an endowment (G. Kozlowski, *Muslim endowments and society in British India*, Cambridge 1985).

The reign of the Mug̲h̲al emperor Akbar coincided roughly with the influx of silver brought by Europeans to purchase Indian goods (J. Richards, *The Imperial monetary system of Mughal India*, Delhi 1987; idem, *The Mughal empire*, Cambridge 1993). Irfan Habib has reckoned that by 1600, 85% of the Mug̲h̲al revenue demand was collected in coin. While cash *awḳāf* were known in the Ottoman empire (see IV. above), they do not seem to have been extensively used in Mug̲h̲al India. Rather, the Mug̲h̲als made use of a number of other chancery terms for what were grants of revenue or the right to collect revenue, e.g. *wad̲j̲h-ī milk*, *waẓīfa* and *inʿām*. Prebends known as *madad-ī maʿās̲h̲* were very common. The holders of *inʿām* and *madad-ī maʿās̲h̲* grants over several generations later claimed to British officials that their prebendary holdings were actually *awḳāf* and should therefore be exempt from most kinds of sale, as well as immune from seizure for debt (Kozlowski, *op. cit.*, 39-40).

For their part, the Mug̲h̲al rulers' reliance on stipends may have arisen from their need to bring within their own imperial orbit the religious figures and institutions which had been patronised by the lines of sultans who had preceded them (Kozlowski, *Imperial authority, benefactions and endowments* (awqāf) *in Mughal India*, in *JESHO*, xxxviii [1995], 355-70). Religious scholars, the tomb-shrines of saints (P. Currie, *The shrine and cult of Muʿīn al-Dīn Chishtī of Ajmer*, Delhi 1989) and *madrasas* were scattered all over India. The sultanates not only of Dihlī, but also of Bengal, Gud̲j̲arāt, D̲j̲awnpūr and the Deccan, offered support for places of prayer, schools and mausoleums as well as for the various functionaries attached to them. The task of the Mug̲h̲als was somehow to reconcile these important places and people to their authority. The most flexible way of accomplishing that feat was through the distribution of rights to cash generated by produce and manufactured goods. In such an environment, the permanence associated with a *waḳf*, though usually more theoretical than realistic, may have made them seem unsuitable to the dynamic process of forging Mug̲h̲al legitimacy. Unlike the experience in the Ottoman empire, imperial notables and local leaders do not seem to have turned to endowments as ways of anchoring their material assets as well as their status. In Mug̲h̲al politics, assertions of independence almost invariably took the form of armed rebellion. Rather, the nobility, including the women of the imperial household, built many of the mosques that later generations were to associate with Mug̲h̲al grandeur. Nobles or imperial sisters, cousins, aunts and wives provided the financial wherewithal for edifices such as the Maḥabbat K̲h̲ān mosque of Peshawar, the somewhat misnamed Bād̲s̲h̲āhī of Lahore and some of the greater mosques of Old Dihlī (S. Blake, *Shahjahanabad*, Cambridge 1991, 53 ff., and Kozlowski, *Private lives and public piety*, in G. Hambly (ed.), *Women in the medieval Islamic world*, New York 1998, 469 ff.).

In theory, the *ʿulamāʾ* should have had an important role in the administration of endowments. In certain places and periods (M. Hoexter, *Endowments, rulers and community*, Leiden 1998), the learned classes did have considerable authority over *awḳāf*. In 18th-century Egypt, the *ʿulamāʾ* were themselves prodigious founders of endowed establishments (see II.1. above), but in India, the role of religious functionaries was residual. They seem to have held power over endowments only in the last resort. Though celebrated for the compilation of Ḥanafī *fiḳh* known as the *Fatāwā-yi ʿĀlamgīrī*, when it came to *awḳāf*, the scholars of Mug̲h̲al India simply repeated what had come down to them. Unlike the work of Ottoman scholars such as Ebu 'l-Suʿūd, they do not seem to have made any original contributions to the legal theory of endowments.

With the growing influence of British law, the configuration of economic, political and social forces in Mug̲h̲al India changed in a number of formal as well as informal ways. In part through ignorance and in part through design, British notions of land ownership gradually became the crucial economic fact of India. The cash that the mortgaging of land could produce greatly increased seizures for unpaid loans. Likewise, the British-sponsored law courts enforced highly-textual notions of inheritance. For Muslims, that meant literal enforcement of Ḳurʾānic injunctions regarding inheritance, which made a division of property among a number of heirs almost inevitable. The subdivision of landed property also led inexorably to the fragmentation of material assets and the loss of family prestige. This was countered to some extent by creating a *waḳf* which allowed donors to stipulate how the income of dedicated property was to be disbursed. The donors themselves as well as their children could receive the income of an undivided estate apportioned as seemed best according to the notions of honour in leading families. An estate owner who left only wives and daughters would know that, if the usual Ḳurʾānic inheritance rules applied, the share of his property that would have gone to sons would be distributed among male first cousins, and daughters and wives would not get any markedly bigger portion. An endowment, by contrast, allowed for the transmission of the income of an intact inheritance.

When faced with legal suits regarding *awḳāf*—often lodged by individuals who claimed that the endowment violated their Ḳurʾānic rights—British judges of the 1870s and 1880s issued conflicting judgements. In 1894, the Privy Council under the leadership of Lord Hobhouse issued a ruling in the case of *Abdul Fata Mahommed Ishak (and others) v. Russomoy Dhur Chowdhry (and others)* stating that a *waḳf* had to be a "charitable and religious trust" (Kozlowski, *Muslim endowments*, 144 ff.) In that way, British judges and Indians trained in British law schools created, in effect, a Muslim law of endowments.

At the same time that British judicial functionaries were encountering *awḳāf* that to their minds looked suspiciously like attempts by Muslims to avoid the strictures of their own law, administrative officials were gradually drawn into managerial oversight over large establishments that had public religious as well as educational purposes. Despite some regulations that forbade official involvement in the management of Hindu, Muslim and Sikh institutions, local officers could not sometimes avoid attempts to settle muddles that led to widespread discontent. Attempts to ensure "good order" often gave rise to thorough transformations of some institutions. Thus the Hughli Imāmbārá was altered by the involvement of imperial officials. The building had been a shrine where the rites of Imāmī S̲h̲īʿism had been performed. A few boys, both Muslim and Hindu, had studied Persian there. The organisation eventually became Hughli College, with a curriculum of "modern" subjects and a student body

including both Muslims and non-Muslims. Perhaps the most significant effect that the involvement of British administrators had was to implant the message that efficient management was a slogan under which campaigns against the custodians of particular, big endowments could be launched. The assets of any given *waḳf* could look to a politician, including politically-inclined *ʿulamāʾ*, like an important financial resource for any "reform" project he had in mind.

By 1900, *awḳāf* had become an issue in India's emerging political arena. Various associations and religious scholars, together with a variety of would-be politicians, lined up to have their say on the issue of endowments. In particular, the opinion of Lord Hobhouse in *Abdul Fata Mahommed Ishak, etc.*, became a focal point for controversy. With the exception of a few who argued that Hobhouse was right about Muslim law, most criticised the view as an erroneous interpretation of *fiḳh*. Moreover, critics argued that the inability to secure continuity in their undivided estates by means of *waḳf* placed the Muslim gentry of India in peril. That side of the debate over Muslim endowments gradually disappeared from the press and other venues for public discussion, but the larger and more public Muslim endowments, however, have remained matters of great interest and debate to the present day (cf. J. Malik, *The colonialisation of Islam*, New Delhi 1996).

Bibliography: Given in the article.

(G.C. Kozlowski)

VII. In Southeast Asia

The institution of *waḳf* (various local spellings, inc. *waqf, wakaf, wakap, wagf*, etc.) has undergone considerable change here as a result of reformulations by English and Dutch colonial laws. There are only minimal references in the historical texts (Malay and Javanese) and little evidence as to how the *waḳf* operated in pre-European Southeast Asia except for the odd mention in accounts of Arab trading practice. However, in the 19th and 20th centuries the institution has a prominent part in the *S̲h̲arīʿa* (Syariah) as administered in the European possessions. Each has to be considered separately.

(i) *British Burma.* The religion of Burma is Buddhism. Islam is the religion of minority Muslim immigrants, and of border peoples incorporated within the boundaries of the state of Burma (e.g. the Arakanese, Rohyinga). The main immigration dates from the 1880s, and the Indian Muslims made up about 1% of the total population or about 20% of the Indian migrant population by World War II. Islamic law was allowed to Muslims for succession, inheritance, marriage and any "religious usage or institution" (Burma Laws Act, 1898. § 13). This included *waḳf*, and the latter was further defined in the Mussalman Waḳf Validating Act of 1913, and Act of British India. There were no particularly Burmese features [see zerbadis and section VI. Muslim India, above].

(ii) *The Straits Settlements and the Malay State. Ca.* 1880-1952 to 1957, legal policy in respect of *waḳf* was uneven in these territories. In the Straits Settlements (then comprising Singapore, Penang and Malacca) a *waḳf* was always defined in terms of the English law on charities. Many *waḳf*, perfectly good in *S̲h̲arīʿa* terms, were refused for breaches of the technical rules on charitable trusts. The only exception in the long and complex precedent was that gifts for the relief of poverty were always allowed. On the other hand, gifts for "religious purposes", such as the construction of mosques, schools, the provision of books and food for students were often disallowed, and generally restricted. The courts were not applying the *S̲h̲arīʿa* at all. There was no legislation except for the Muslim and Hindu Endowments Ordinance (1905) which was solely concerned with administrative matters. In the Malay States, the position was rather more complicated. The problem was that the dates for the reception of English law were uncertain and always a matter of later legal dispute. In addition, the Malay States were classed as "Federated" and "Unfederated" and this had important consequences for the *S̲h̲arīʿa.* Broadly speaking, in the Unfederated States the *S̲h̲arīʿa* was rather sheltered from British re-organisation and administration. The main issue, so far as *waḳf* was concerned, was the consistent attempt by Malay sultans to control the use of *waḳf* for private or family benefit. A *waḳf* would only be allowed if it were for a clear religious or public benefit. In addition, however, the courts in both the Federated and Unfederated Malay States were, from about 1900, increasingly required to implement principles of English law, including laws on charitable trusts. The result was a partial assimilation of *waḳf* to the English trust and a large scale importation of Anglo-Indian laws on the subject into the Malay States. Family *waḳf*s were almost unknown from the 1920s onwards, and even the incidence of public *waḳf* was much reduced. The assimilation of the *waḳf* to the English trust had the effect of much reducing the confidence of Muslim donors in the institution.

(iii) *Singapore, 1950s-present, and Malaysia, 1950s-1988.* In preparation for independence (Malaysia in 1957, Singapore in 1965), the constituent states all passed legislation promoting the *S̲h̲arīʿa.* These are the Administration of Islamic (or Muslim) Law Enactments. While there are variations amongst them, they all provide for the establishments of a "Muslim Fund" (*Bait-ul-Mal*) the main purpose of which is to administer *waḳf* property through an Islamic religious Council (*Majlis Ulama Islam*). The following description, which is typical of all the legislation, is taken from the Singapore Act of 1966. The Majlis administers all *wakaf 'am, waḳf, wakaf khas, nazr 'am* and all trusts of any description for the benefit of Muslims "to the extent of any property affected thereby and situated in the state". The Majlis has the power to appoint a *mutawali* (manager) to manage any *waḳf* or *nazr 'am* and it may remove any existing trustee where there has been mismanagement, or where it would otherwise be to the advantage of the *waḳf* or *nazr 'am.*

The Act provides for restrictions on the creation of Muslim charitable trusts. No *waḳf* or *nazr* may involve more than one-third of the property of the person making the same by will. All *waḳf khas* and *nazr* must be validated or ratified by the President of the Majlis or, if it was made during a fatal illness, it must be in writing and witnessed by two adult Muslims, of whom one has to be a Kathi or Naib (Assistant) Kathi. In any case, the Act cannot render valid any will, death-bed gifts, *waḳf* or *nazr* which are invalid under Muslim law. The income of any *waḳf* or *nazr* is to be applied in accordance with the provisions of the instrument or declaration which creates the *waḳf* or *nazr.* Where there is no specific provision for expenditure, the income forms part of the Fund. Subject to an impossibility of performance or changed circumstances, the property and assets effected by a lawful *waḳf* or *nazr 'am* does not form part of the fund but is held as a segregated fund and applied in pursuance of the *waḳf* or *nazr 'am.* Where there has been a lapse of time or changed circumstances so that the provisions of a *waḳf* or *nazr 'am* cannot be carried out, the Majlis may prepare an alternative

scheme, as analogous as possible to that in the original. It may also direct that the property and assets be added to and form part of the Fund. All questions as to validity or as to the meaning and construction of documents or declarations affecting a Muslim charitable trust are to be decided according to Muslim law. However, where in the opinion of the Majlis, the meaning of any instrument or declaration is obscure, the Majlis may request the Court to construe it and must act in accordance with the construction. In its construction the Court must apply Muslim law.

The Majlis is obliged to comply with stringent requirements in respect of its financial dealings. It must produce an annual report, together with a balance sheet for the Fund, an income and expenditure account, and a list of properties and investments. These documents are all subject to audit by the Director of Audit or a Public Officer authorised by him. In addition, the Majlis must also publish an annual list of all the properties subject to any trust, *waḳf* or *nazr* which do not form part of the Fund. This list is also subject to audit. The Majlis must also prepare and submit to the Minister estimates for each ensuing year in respect of all income or property receivable and disposable. These estimates may be approved by the Minister or they may be amended by him.

One point may be emphasised, sc. the reference to "Muslim" (or "Islamic") law. In Singapore still and in pre-1988 Malaysia, this reference is (a) to Anglo-Muhammadan precedents from India or the Straits, and (b) to the standard textbooks of the S̲h̲āfiʿī school. At the lower levels of the *S̲h̲arīʿa* courts, it is the latter which prevails, but in the higher levels and in the secular courts, it is the Anglicised precedent. In addition, the *S̲h̲arīʿa* courts are also developing their own precedent, so that in the official law reports for both Malaysia and Singapore classical *fiḳh* now appears in an English form and the doctrine of precedent, unknown as such in *S̲h̲arīʿa*, has come to apply in *waḳf* as in other matters.

(iv) *Malaysia* [*q.v.*] *1988-present.* In June 1988 the Malaysian Constitution was amended (Art. 121 (1A)) so as to reserve matters of *S̲h̲arīʿa* for the religious courts. The intention was to oust the jurisdiction of the secular courts on any matter of Islam within the jurisdiction of the *S̲h̲arīʿa* courts. This includes *waḳf*. At about the same time, most states in Malaysia introduced additional detailed legislation on Islamic family law and also on the administration of Islamic law. The effect of this legislation is to elaborate and reinforce the administration of the classical *waḳf*, but at the same time, the statutes have also increasingly introduced English law technical classifications. *Waḳf*, for example, is equated with a "charitable trust", other terms used include "domicile", "conveyance", "vesting", "cyprès", and so on. In addition, the reported cases (jurisprudence) interpreting the legislation refer to the complex Indian or Anglo-Indian precedent.

The main features are that the motive must be religious, that the dedication must be permanent and that the usufruct must be utilised for the good of mankind. However, there are also several points of contrast with the English trust as well as similarities. Thus the motive in *waḳf* is always religious, but this need not be the case in trust. In *waḳf*, the property belongs to God and the dedication is thus permanent. In trusts, on the other hand, the perpetuity rules are crucial. In a trust, a settlor may take an interest, but this is not the case in *waḳf* except for Ḥanafīs. On the other hand, both *waḳf* and trust laws agree that the subject-matter is any property capable of being owned. Perhaps the major distinction is that the *mutawali* is not a "trustee"; Islam does not recognise an intermediate vesting as in the case of a trustee. But, on the other hand, the duties laid on the *mutawali* do come close to those laid on trustees, particularly in financial matters.

While all the Malaysian legislation refers to the "Islamic law" as to determining the validity of an individual *waḳf*, it is difficult to see how this reference can be sustained given the complete reformulation of *waḳf* as a "charitable trust". This trend, of course, was present in the Straits Settlements in the 1920s and 1930s, and now seems to have come to fruition.

(v) *Indonesia* [*q.v.*]. In the former Netherlands East Indies, Islam was heavily controlled and the *S̲h̲arīʿa* was allowed very little recognition as a law for Muslims. It was not until 1882 that a Muslim Court (*Priesterraad*) was established, but with a very limited jurisdiction, which included *waḳf*. The 1882 regulation and later amendment in 1937 was purely procedural, providing only for the administration of and accounting for *waḳf*; this remains the position today. "The Compilation of Islamic Law" (implemented by Presidential Instruction No. 1/1991), Book iii (§§ 215-228) defines *waḳf* as a "legal act . . . which institutionalises assets for religious purposes or other public needs in accordance with the teachings of Islam". The eighteen sections of Book iii are, after this definition, wholly procedural. Assets must be durable and of value according to the standard S̲h̲āfiʿī textbooks. Assets must also be free from claim by any other person and the assets are held and administered under the supervision of an officer appointed by the Minister of Religion. The *nadzin* (legal person administering) must be an Indonesian national, an adult, "emotionally and spiritually healthy", and must be registered by the local office of the Ministry of Religion. Reports and accounts of administration must be provided. Alteration of the use of assets may be approved for the public benefit or if the original purpose has become impossible. Detailed data are as yet only slowly becoming available, but the future of *waḳf* seems assured.

(vi) *The Philippines* [*q.v.*]. *Waḳf* undoubtedly existed in the Muslim South, but equally certainly was heavily overlaid with customary rules. This is certainly the case in the 1977 Muslim Code of the Philippines (Presidential Decree No. 1083) where *waḳf* is mentioned twice. It is defined in Art. 173 as constituting "communal property" along with customary heirlooms and ancestral property. It is described as "charitable trust property" and must be administered or disposed of in accordance with "Muslim law, *ada* (*adat*) and special provisions of the law". The administrator is a "trustee" (Art. 174 (2) (3)) who is appointed by the *S̲h̲arīʿa* Circuit Court. The terms of the Code are quite clear; *waḳf* is a charitable trust (as in Malaysia) and the *mutawali* is a trustee. Further, room is left for customary forms of *waḳf*. The second mention of *waḳf* in the Code is in Art. 104 which allows for the creation of a *waḳf* ("*waqf-bil-wasiya*") by will but amounting up to one-third of the estate only, unless allowed by the heirs (Art. 106). Detailed data are as yet lacking.

2. From 1980. (a) Malaysia: the primary source is the legislation. A good example is the Administration of Islamic Law (Federal Territory) Enactment, No. 505/1993, Part vi. For imported Anglo-Indian

precedent, see D.S. Mulla, *Principles of Mahomedan law*, 16th ed., Bombay 1968. (b) Indonesia: the primary source is the *Compilation of Islamic law* (Presidential Instruction No. 1/1993), Book iii. See also Suhardi (Hj Imam), *Hukum wakaf di Indonesia*, Yogyakarta 1985, which gives examples of registered *waḳf*s.

(M.B. Hooker)

VIII. In sub-Saharan Africa

Unlike the Middle East and North Africa, in most of sub-Saharan Africa before the 20th century the *waḳf* institution was little used as an instrument for endowing mosques, colleges, and other religious establishments. The reasons for this are not entirely clear, but the lack in most parts of Africa of building stone and the consequent impermanence of structures may have been a contributory factor. In West Africa and the Nile valley, the institution of the *madrasa* [*q.v.*] was itself lacking, even in such considerable centres of learning as Timbuktu, and no ruler saw fit to endow one. Learning was imparted on a purely individual, non-institutional basis.

Only in Zanzibar under the Bū Saʿīdī dynasty (1804-1964 [see bū saʿīd]) was land regularly set aside as *waḳf*, and this was not for the construction of religious buildings but to create inalienable areas in the N'gambo, the non-élite quarter of the city. This was typically where ex-slaves were settled, and the plots of land were made into *waḳf* by their élite owners for the benefit of the poor and needy, or in some cases for the benefit of sons or daughters. The institution was bureaucratised by the British in the 20th century, and a Wakf Department was created. Many *waḳf* dedications were invalidated by the British, resulting in the loss of such land and the imposition of land rents and even house rents on the poorest segment of the population, despite protests from *waḳf* dedicators and the poor of N'gambo.

Muslim rulers in West Africa, however, did establish endowments outside the region, notably in the Ḥidjāz and Egypt. During his pilgrimage of 903/1497 Askiya *al-ḥādjdj* Muḥammad of Songhay [*q.v.*] purchased gardens in Medina for the use of West African pilgrims. In the late 10th/16th century Mai Idrīs Alawma of Bornu purchased a house and a date grove in Medina, and placed slaves in it as an act of piety. Much earlier, in the mid-7th/13th century, a *madrasa* had been established in Cairo for Kānemī students, and although this is not stated, it is likely that this was a *waḳf*. In 1251/1837-8 a *waḳf* was established by Muḥammad ʿAlī Pasha to support the *riwāḳ* of Sinnār at the request of a Sudanese *shaykh*, and clearly for the benefit of Sudanese students.

There are two domains other than real estate for which there is literary or documentary evidence of the *waḳf* institution in sub-Saharan Africa: slaves and books. In his questions to al-Maghīlī [*q.v.*], Askiya *al-ḥādjdj* Muḥammad raised the matter of royal slaves who were inherited by succeeding rulers and never sold or given away, and wanted to know if this was lawful. Al-Maghīlī sanctioned the custom, invoking the *ḥubus* (the North African equivalent of *waḳf*) institution to justify it (J.O. Hunwick, *Sharīʿa in Songhay*, Oxford 1985, 86, 88). In 19th-century Timbuktu, individuals made slaves into *waḳf*s for their descendants; documents preserved in the Centre Aḥmad Bābā there show, for example, a woman making a slave woman into a *waḳf* for her male and female children (doc. 3851/ii), and another in which a woman makes a slave woman a *waḳf* exclusively for her daughter and the daughter's female descendants (doc. 3851/ix). Again in Timbuktu, in the 10th/16th century Askiya *al-ḥādjdj* Muḥammad made a *waḳf* of sixty *djuzʾ* (two complete copies) of the Ḳurʾān for the Great Mosque of Timbuktu (al-Saʿdī, *Taʾrīkh al-Sūdān*, in Hunwick, *Timbuktu and the Songhay Empire*, Leiden 1999, 83). In Lamu [*q.v.*] on the East African coast there is evidence that, in the nineteenth century, not only were copies of parts of the Ḳurʾān endowed in perpetuity but an array of other Arabic texts.

If the *waḳf* proper was not generally an instrument for endowing land and buildings, another institution which resembled it in some ways was widespread in Sahelian Africa in the 9th/15th to the 12th/18th centuries, and possibly earlier; it also appears to have been unique to this area. It consisted of the granting by a ruler of a piece of land, and sometimes taxation rights over people, together with exemption from payment of taxes and fines, and certain other privileges (notably freedom from harassment and the hospitality demands of royal officials) to religious scholars and favoured notables. Such endowments are known from the kingdom of Sinnār on the Blue Nile, from Dār Fūr, from Kānem-Bornu, and (though marginally) from Songhay. In the case of religious scholars and holy men, these grants were made in order to encourage them to settle in the sultan's domains, and often to perform religious services for him. These are only occasionally designated as *waḳf*s (see Spaulding, *Public documents*, 182-3; O'Fahey, *Endowment, privilege and estate*, 339); more usually they are called *djah* or *ṣadaḳa* in the Sudanese kingdoms (the estate granted being called *ḥākūra*). While the documents making such grants do not always state that land is alienated in perpetuity, as one would expect in a true *waḳf*, they were effectively titles to land that extended to descendants, and were often confirmed and reconfirmed by succeeding sultans; indeed, those that have been published were discovered in the personal archives of the families concerned in the 20th century, indicating their continuing validity in the eyes of their owners. In Kānem-Bornu and Songhay, where the documents grant privilege without land, they are called respectively *maḥram* and *ḥurma*, terms that indicate that the grantee's person and property were inviolate.

(J.O. Hunwick)

WAKHĀN, a region in the heart of Inner Asia, to the south of the Pamir [*q.v.*] range, essentially a long and narrow valley running east-west and watered by the upper Oxus or Pandja and the Wakhān Daryā, its southernmost source.

The length of Wakhān along the Oxus is 67 miles and of the Wakhān Daryā (from Langar-kish to the Wakhdjīr pass) 113 miles. Afghan sources put the distance from Ishkāshim to Sarḥadd at 66 *kurōh* (= 22 *farsakh*s).

To the south of Wakhān rises the wall of the Hindū Kush, through which several passes lead to the lands of the upper Indus. The main pass (12,460 feet) of Baroghil leads into Čitrāl. The northern wall of Wakhān is the Wakhān range, the peaks of which reach a height of 23,000 feet. In the west, Wakhān stretches to the bend of the Oxus, where the river entering the boundaries of Shughnān [q.v.] turns northwards. In the east Wakhān (through the high valley of Wakhdjīr) is adjoined by Chinese possessions and Lake Čakmak Tīng.

Wakhān has historically formed part of the mountain barrier separating Central Asia from northern India. By the 1895 Russo-Afghan Agreement (see below), the frontier was defined as running: (*a*) in the lower part of Wakhān, up the course of the Oxus as far as Langar-kish where the two sources of the Oxus meet: the river Wakhān from the south-east (from the Little Pāmīr) and the river Pāmīr from the north-east (from the Great Pāmīr); (*b*) from Langar-kish the frontier follows the course of the Pāmīr river to its source (Lake Zor-kul or Victoria); (*c*) more to the east again, the frontier runs by a zigzag line towards the south to China (near the Beyik pass). Afghan territory therefore comprises the left bank of the Oxus, all the valley of the Wakhān Daryā, the land on the left bank of the Pāmīr river and a small part of the upper course of the Ak Su (including Lake Čakmak Kul).

The Afghan part of Wakhān contains seven districts, namely from west to east: Warg, Ūrgand, Khandūd, Kalʿa-yi Pandja, Bābā-Tangī, Nirs-wa-Shalak and Sarhadd (this last-named village is at the foot of the Baroghil pass at a height of 11,350 feet), as well as the thinly-populated territory of the Little Pāmīr (watered by the Wakhān Daryā).

On the Afghan side, there are in Wakhan 64 villages and on the Russian 27 ones. The indigenous population (Wakhīs) belongs to the race of Iranian mountaineers (*Ghalča*), very often with blue eyes, a feature which had struck the Chinese as early as the 6th century; there are also Kirghiz Turkish nomads. The Wakhī language is an Eastern Iranian one, with archaic features, spoken by some 10,000 persons (see J.R. Payne, *Pamir languages*, in R. Schmitt (ed.), *Compendium linguarum iranicarum*, Wiesbaden 1989, 417-44; ĪRĀN. iii. Languages, in Suppl.).

From the 7th century, Wakhān is continually mentioned in the early Chinese sources under the names of Hu-mī, Po-ho, etc. (cf. Marquart, *Ērānšahr*, 243, and Chavannes, *Documents sur les Tou-kiue occidentaux*, index). Hiuen-Tsang mentions the greenish eyes of the people of Ta-mo-si-t'ie-ti (a form not yet satisfactorily explained) and its capital Hun-t'o-to (= Khandūd) with its great Buddhist *vihāra*. In 747 Wakhān was the theatre of the operations of the famous Chinese general Kao-sien-tse against the Tibetans (cf. Chavannes, 152-3). Among Arab authors, al-Iṣṭakhrī (< al-Balkhī) several times mentions Wakhān as a land of infidels, as the place from which musk comes and where the Oxus rises (see al-Iṣṭakhrī, 279, 280, 296; Ibn Rusta, 91). Al-Masʿūdī, *Murūdj*, i, 213, and *Tanbīh*, 64, applies the term "Türk" to all the inhabitants of the upper Oxus: the Awkhān (اوخان, read: وخان), Tubbat (Tibetans) and Ayghān (?). As to the Iranian Wakhīs, the term "Türk" can only refer to their ruling dynasty (cf. Markwart, *Wehrot und Arang*, Leiden 1938, 101-2). More detailed information is supplied by the Persian geographical work *Ḥudūd al-ʿālam*, tr. Minorsky, 121, comm. 366-7, which calls Wakhān the residence of the king and capital of the land (*shahr*) of Sikāshim (it ought probably to be emended to *Ishkashim, the capital of Wakhān). At Kh-mdādh (*Khundād) are the temples (*but-khāna*) of the Wakhīs, and "to its left" was a fortress occupied by the Tibetans. Samarkandāk was regarded as the remotest frontier of the dependencies of Transoxiana; it had Hindu, Tibetan and Wakhī inhabitants (probably the Sarḥadd of the present day).

In the struggle for political and strategic positions in Central Asia, which Kipling calls in *Kim* "the Great Game", Wakhān played a significant role. After the October 1872 Anglo-Russian Agreement tacitly recognised the Amīr of Kābul's territories as extending up to the Oxus, the Russians in February 1873 conceded Afghan control of Badakhshān [q.v.] and Wakhān. But after 1891, Russia attempted to explore and annex the Wakhān area and thereby acquire a common frontier with British India, provoking a vigorous reaction from Britain. Hence the March 1895 Russo-Afghan Agreement conceded all lands north of the Oxus to Russia and all of them south, as far west as Khodja Ṣāliḥ, to Afghānistān; ʿAbd al-Raḥmān Khān [q.v.] now somewhat reluctantly assumed control of the Wakhān corridor or "panhandle" of Afghānistān, which thus became a buffer against Russian designs on India.

The former British Indian frontier with the Wakhān corridor is now shared by Pākistān in the west and [Āzād] Kashmīr in the east; its extreme eastern tip is contiguous with the People's Republic of China (Sinkiang or Xinjiang Uighur Autonomous Region; the boundary was not actually delimited by surveyors on the ground until 1964). When, after the Second World War, the Communists took over in Sinkiang, Kirghiz who lived on the Chinese side of the Russo-Turkish border fled for refuge in the eastern part of Wakhān and settled around Buzai Gumbad under their leader Raḥmān Gul; in the 1980s, they finally emigrated to Turkey. In contemporary Afghānistān, the corridor comes within the *wilāyat* or province of Badakhshān. The parts of Wakhān north of the corridor formerly came within the Gorno-Badakhshan Oblast of the Soviet Tajikistan SSR, and are now in the independent Tajikistan Republic.

WAKHSH, a district of Central Asia and the name of a river there. The Wakhsh Āb is a right-bank tributary of the Oxus, flowing down from the Alai range of mountains to the south of Farghāna. Geiger and Markwart thought that the Greek name

Ὦξος came from Wakhsh, the tributary thus giving its name to the great river (see Markwart, *Wehrot und Arang*, 3 ff., 89; Barthold, *Turkestan down to the Mongol invasion*, 65; and ĀMŪ DARYĀ).

In early mediaeval times, the Wakhsh district must have had a population which included remnants of the Hephthalites, such as the Kumīdjīs [*q.v.*] and also Turks, the Ḳarluḳ being mentioned by Ibn Rusta, 92. The geographers describe it as a prosperous region where horse-rearing was important; at that time (4th/10th century), the part of Wakhsh along the left bank of the river came within the province of Khuttal(ān) [*q.v.*]. The name still survives today as that of the Wakhsh river (called in its upper course the Surkhāb), at present coming within the independent Tajikistan Republic.

Bibliography: See also *Ḥudūd al-ʿālam*, tr. Minorsky, 71, 120, comm. 198, 209, 361-3; Markwart, *Wehrot und Arang*, Leiden 1938, 53-5, 57-60, 75-8, 89-90; Le Strange, *The lands of the Eastern Caliphate*, 434-6, 437-9. (C.E. BOSWORTH)

WAKĪʿ, MUḤAMMAD b. KHALAF b. Ḥayyān Ṣadaḳa al-Ḍabbī (d. 24 Rabīʿ I 306/4 September 918), historian, expert in *ḥadīth*, geography, Ḳurʾānic verse-numbering and other subjects.

His best-known work is *Akhbār al-Ḳuḍāt*, a biographical dictionary of *ḳāḍī*s, with a preface on the nature of judgeship. The work is arranged first regionally—according to the *amṣār*—then chronologically. His aim in the work is to provide "information about [*ḳāḍī*s] and their rulings; the way in which they were appointed; their genealogies and tribes; their methods; those who transmitted reports from them and samples of those reports" (i, 5). Wakīʿ's extensive introductory section has reports from the Prophet condemning bribery and covering other themes that became standard in *Adab al-Ḳāḍī* literature, e.g. the difficulties of being a *ḳāḍī*, that one ought not to judge when angry, etc. Some of the entries, e.g. on Shurayḥ [*q.v.*] (ii, 189 ff.), are practically intellectual biographies, with extensive lists of judicial rulings that may help trace the earliest stages of Islamic positive law. Much of Wakīʿ's information comes from sources now lost to us, such as Abū Thawr [*q.v.*]. His other works on the numbering of Ḳurʾānic verses, on geography, on archery, and on technical subjects such as weights and measures, do not survive.

Little is known of his life, except that he was born and died in Baghdād, and served as *ḳāḍī* in Ahwāz, or "all the districts of Ahwāz" (*kuwar Ahwāz kulluhā*). He moved in literary circles, as well as religio-legal ones, and was an associate of Abu 'l-Faradj al-Iṣfahānī [*q.v.*]. He is reported to have been laconic in speech, but to have had an "easy" style in his writing.

Bibliography: See Sezgin, *GAS*, i, 376 and biographical sources cited there, to which add Yāḳūt, *Irshād*, iii, 848; Ibn al-Nadīm, *Fihrist*, ed. Tadjaddud, 127, tr. Dodge, i, 250; Baghdādī, *Hidāya*, ii, 25 (garbled); *Akhbār al-ḳuḍāt*, ed. ʿAbd al-ʿAzīz Muṣṭafā al-Marāghī, 3 vols. Cairo 1369/1950. (A.K. REINHART)

WAKĪʿ B. AL-DJARRĀḤ B. MALĪḤ al-Ruʾāsī, Abū Sufyān, famous ʿIrāḳī traditionist, b. Kūfa 129/746, where his father was head of the *bayt al-māl*, d. at Fayd [*q.v.* in Suppl.] on the Pilgrimage route in 197/812.

He was schooled in the Islamic sciences, above all *ḥadīth*, through his father, and transmitted not only from this last but also from many ʿIrāḳī and non-ʿIrāḳī scholars of the 2nd/8th century, such as Ismāʿīl b. Abī Khālid, ʿIkrima b. ʿAmmār, al-Aʿmash, al-Awzāʿī and Mālik, amongst the long list given by Ibn Ḥadjar, *Tahdhīb*, xi, 124-5, together with another list of the scholars who transmitted from him, 125-6. His fame was so great that he was considered to be the foremost of the *muḥaddithūn* of his age, despite the errors of transmission attributed to him. In general, he seems to have made an impression on more than one great scholar through his intellectual honesty, which is said to have left his integrity intact *vis-à-vis* the ruling power, probably in allusion to the offer of a post as judge which Hārūn al-Rashīd reportedly made to him but which he refused out of piety and fear lest the job should involve him in dependence to the state. His attitude is further explicable by his well-known asceticism.

Although Wakīʿ had a legendary memory and was said never to have been seen with a book in his hand, several works of his are known: *Tafsīr al-Ḳurʾān, al-Sunan, al-Maʿrifa wa 'l-taʾrīkh, al-Muṣannaf* (cited by Ibn Hanbal, i, 308, and Ibn Ḥadjar, *Iṣāba*, i, 434) and also a book on *zuhd*, preserved in the Ẓāhiriyya, Damascus, see Sezgin, i, 97 no. 2.

AL-**WĀḲIʿA** [see AL-ḲURʾĀN].

AL-**WĀḲIDĪ**, MUḤAMMAD B. ʿUMAR b. Wāḳid, historian from Medina, also expert in *fiḳh*, author and often-quoted authority on early Islamic history (*sīra, maghāzī, ridda, futūḥ*), b. 130/747-8, d. 12 Dhu 'l-Ḥidjdja 207/28 April 822. He is of paramount importance for early Arabic historiography on account of the quantity and quality of the information which he passed on in the literature, and for the nature of his methodology.

The outlines of his biography are given by his pupil and secretary Ibn Saʿd (vii/2, 77 and v, 314-321). Al-Wāḳidī was a client of the Sahm, a sub-tribe (*baṭn*) of Aslam. ʿAbd Allāh b. Burayda al-Aslamī, *ḳāḍī* of Marw (d. 115/733), is mentioned as patron of a man who was probably al-Wāḳidī's grandfather. His mother is said to have been the granddaughter of a Persian who was a merchant, and a singer at Medina (*Aghānī*[3], viii, 322). In 180/796-7 he settled at Baghdād, were he was appointed at some later date *ḳāḍī* of ʿAskar al-Mahdī, i.e. al-Ruṣāfa, at the eastern side of the city. According to Ibn Saʿd, the caliph al-Maʾmūn appointed him to this office when he came from Khurāsān. Since al-Maʾmūn returned to Baghdād only in 204/819, al-Wāḳidī's appointment would have been three years before his death. Ibn al-Nadīm (*Fihrist*, ed. Tadjaddud, 111) and, depending on him, Yāḳūt (*Irshād*, vii, 56) mention that Hārūn al-Rashīd had already appointed him to the judgeship. The appointment by al-Maʾmūn may therefore have been a re-appointment after an interruption for a certain period of time. However, al-Wakīʿ (*Akhbār al-ḳuḍāt*, iii, 270-1) mentions al-Wāḳidī as being only in al-Maʾmūn's service.

Al-Wāḳidī was known for a somewhat excessive generosity, and this habit, as well as a failed transaction

in the grain trade (see al-Khaṭib al-Baghdādī, iii, 4), seems to have had a lasting impact on his life, since he was henceforth encumbered by debts. He even left debts when he died, and these were settled by al-Ma'mūn, who acted as his executor. A richly colourful and lively account allegedly told by al-Wāḳidī himself (Ibn Sa'd, v, 314-19) tells how he came to enjoy the patronage of Yaḥyā b. Khālid al-Barmakī, to whom he owed the particular favour of the caliph Hārūn al-Rashīd and, subsequently, of his son 'Abd Allāh al-Ma'mūn: When Hārūn came, together with Yaḥyā b. Khālid, to Medina on one of his pilgrimages, al-Wāḳidī served them as a guide. Subsequently, he left for Baghdād, and thence to al-Raḳḳa, the residence of Hārūn at that time (and until 192/808). Here he succeeded after much difficulty in coming into contact with Yaḥyā, who honoured him and interceded with the caliph for him, showing al-Wāḳidī special attention and generous support.

In consequence of this patronage, we may conclude, al-Wāḳidī's work at Baghdād exceeded that of an average *muḥaddith* in respect to the range of facilities to which he had access. Ibn Sa'd points out his expertise of early Islamic history, his acquaintance with contradicting doctrines concerning *ḥadīth* and *fiḳh* (*aḥkām*) and knowledge of opinions which were generally approved; "and he explained all this in books which he excerpted (*istakhradja*), composed (*waḍa'a*) and transmitted formally (*ḥaddatha bihā*)." Both of these traits, the attempt to evaluate the information he received, and the extensive use and production of books, are characteristic of his work. The huge amount of written materials ("books") which were in his possession was impressive. He is said to have left six hundred bookcases, each one weighing as much as two men (*Fihrist*, 111, line 6; *Ta'rīkh Baghdād*, iii, 6). The importance and quantity of this material was renowned, and Ibn al-Nadīm mentions that he had two slave boys writing for him day and night. Equally famous were the number and variety of his own writings. Aḥmad b. Ḥanbal, although he did not quote al-Wāḳidī because of his critical stance concerning al-Wāḳidī's reliability, attached great importance to his books, read them and used to take notes from them (*Ta'rīkh Baghdād*, iii, 15).

Among the experts on *ḥadīth* of the 3rd/9th century, censure of al-Wāḳidī's untrustworthiness prevailed, unjustifiably in the view of al-Dhahabī (*Siyar a'lām al-nubalā'*, ix, 469). The most substantial—and influential—rebuke was advanced by Yaḥyā b. Ma'īn (d. 233/847), who discovered the use of false ascription in his material (Ibn Abī Ḥātim al-Rāzī, *al-Djarḥ wa 'l-ta'dīl*, iv/1, 21). He was also blamed, mostly by Aḥmad b. Ḥanbal, for applying the technique of combining several traditions into one tradition, which he introduced by a collective *isnād*, instead of presenting each tradition separately together with its proper *isnād*, although this usage was already established by older authorities. Nevertheless, the *ḥadīth* experts denied al-Wāḳidī's authority in this field, and although examples for the precision and extent of his memory are given, scepticism prevailed. This attitude is, however, characteristic only of the circles of *muḥaddithūn* of the 3rd/9th century, whereas later, due to the indispensability of al-Wāḳidī as a historian, a general condemnation was no longer tolerated. Ibn Sayyid al-Nās, for instance, saw the distrust as caused by the fact that al-Wāḳidī handled a huge amount of traditions, which would naturally encompass some strange materials (*'Uyūn al-athar*, Cairo 1406/1986, i, 29). The leaning towards a moderate Shī'ī viewpoint ascribed to al-Wāḳidī by Ibn al-Nadīm is not corroborated in his writings, although it is noticeable that he has quite a number of traditions that report that the Prophet lay on 'Alī's lap when he was dying.

Al-Wāḳidī's work survives in the *Kitāb al-Maghāzī* (ed. J. Marsden Jones, London 1966), the only book of his which is preserved in a *K. al-Ridda* attributed to him (ed. M. Ḥamīdallāh, Paris 1989, and Yaḥyā al-Djabbūrī, Beirut 1990), and in many quotations throughout historical literature. The manuscript which serves as basis for the edition of the *Maghāzī* is a copy of a recension made by Muḥammad b. al-'Abbās Ibn Ḥayyawayh (d. 382/992), as Brockelmann already noted (S I, 207). In this text, al-Wāḳidī is repeatedly quoted (*ḳāla*), and in some instances (e.g. 74,690) Ibn Ḥayyawayh refers to 'Abd al-Wahhāb b. Abī Ḥayya, the librarian (*warrāḳ*) of al-Djāḥiẓ (d. 319/931; *Ta'rīkh Baghdād*, xi, 28-9), from whom he had received authorisation for the transmission of this text. The *Maghāzī* represents some of the particularities of al-Wāḳidī's work as an historian. As already observed by Caetani, al-Wāḳidī's accounts reflect, in comparison with others, coherent, straightforward and historically reasonable reports (*Annali*, ii, 1545, vi (Indices), 198-9). More than any other authority in this field before him, he attempted to establish the chronology of the military campaigns (cf. Ella Landau-Tasseron, *Processes of redaction: the case of the Tamīmite delegation to the Prophet Muḥammad*, in *BSOAS*, xlix [1986], 253-70, at 269). In pursuit of this goal, he sometimes became entangled in contradictions (Marsden Jones, Introd. (Arabic) to the *Maghāzī*, 32-3). After presenting the details of an event, he generally adds short remarks explaining his preference of a certain version which he has chosen from different accounts, such as "and this is the most certain" etc. (*ibid.*, 34). His technique of personal inquiry is also referred to in various accounts. He states that he used to ask the descendants of the participants at the military campaigns of the time of the Prophet for their knowledge of events and places. It is also said that he used to go out to the locations themselves in order to gain a personal impression of the topography (*Ta'rīkh Baghdād*, iii, 6). It may be in this context that we have to understand al-Wāḳidī's remark that he retained more in his memory than in his books, possibly referring here not only to the power of his memory but also hinting at the information he had brought to light through personal inquiry and inspection.

Another typical trait of his work is the use of combined reports. It has been argued that al-Wāḳidī presents new texts in so far as they did not exist in this form in any earlier source, but that they actually follow earlier sources which can be reconstructed (M. Lecker, *Wāqidī's account of the status of the Jews in Mecca*, in *JNES*, liv [1995], 27-8). On the other hand, the fusion of various accounts into one may have a direct impact on the contents of reports in that it results in combining different events into one (cf. Landau-Tasseron, *op. cit.*, 262-3). This may even be discovered when al-Wāḳidī does not indicate a combined report (G. Schoeler, *Charakter und Authentie der muslimischen Überlieferung über das Leben Mohammeds*, Berlin-New York 1996, 137-40). Al-Wāḳidī also presents materials that betray their origin from Ibn Isḥāḳ, whom he does not quote. Against the allegation that he plagiarises Ibn Isḥāḳ it has been argued that both authors drew on a common corpus of material (Marsden Jones, *Maghāzī literature*, in *Camb. hist. of Ar. lit. To the end of the Umayyad period*, 349; against this view, Schoeler, *op. cit.*, 141). Evidence gained from

the comparison of historical texts shows that al-Wāḳidī had a variety of sources at his disposal (see Lecker, *The death of the Prophet Muḥammad's father: did Wāqidī invent some of the evidence?*, in *ZDMG*, cxlv [1995], 9-27).

As Ibn al-Nadīm explains, Ibn Saʿd composed his books from al-Wāḳidī's orderly arranged collections (*taṣnīfāt*), and we may suppose that for his *Ṭabaḳāt*, Ibn Saʿd mainly used materials from a work of al-Wāḳidī carrying this same title. A *K. al-Ṭabaḳāt* of al-Wāḳidī seems to have been used by Khalīfa b. Khayyāṭ (*Ṭabaḳāt*, ed. al-ʿUmarī, Introd., 28), and Ibn ʿAbd al-Barr refers to it as his source. Al-Wāḳidī's *K. al-Ridda* is quoted by Ibn Hadjar al-ʿAsḳalānī in his *Iṣāba*, but the *K. al-Ridda*, which is extant (see above), does not contain al-Wāḳidī's material only but also quotes Ibn Isḥāḳ. To the traces of his works noted by Jones and Sezgin, one may add the quotations from al-Wāḳidī's *al-Futūḥ*, *al-Kāmil*, and *al-Mubāyaʿāt* in Ibn Ḥadjar's *Iṣāba*. A *Taʾrīkh al-Wāḳidī*, the contents of which are hard to establish with certainty, may also have been in the hands of Ibn Abi 'l-Ḥadīd, who quotes al-Wāḳidī several times (*ḳāla*, *dhakara*, *rawā*) on various matters and once mentions his *Taʾrīkh* (xvi, 279); his son Muḥammad transmitted this work from his father, according to al-Samʿānī (*Ansāb*, Beirut 1988, v, 567).

Legendary accounts about the early Islamic conquests ascribed to al-Wāḳidī, like the *Futūḥ al-Shām* (ed. W. Nassau Less, 3 vols., Calcutta 1854-62), which served Simon Ockley as a source for his *History of the Saracenes*, London 1718, and the *Futūḥ Diyār Rabīʿa wa-Diyār Bakr* (tr. as *Geschichte der Eroberung von Mesopotamien und Armenien von Mohammed ben Omar al-Wakedi* by B.G. Niebuhr, ed. A.D. Mordtmann, Hamburg 1847, also known as *Futūḥ al-Djazīra wa 'l-Khābūr wa-Diyārbakr wa 'l-ʿIrāḳ*, ed. Ḥarfūsh, Damascus 1996, and the *Kitāb Futūḥ Miṣr wa 'l-Iskandariyya*, ed. Hamaker, Leiden 1825), are of later origin and their ascription to al-Wāḳidī is false (cf. F. Rosenthal, *A history of Muslim historiography*, [2]Leiden 1968, 186-193). For titles and manuscripts of the legendary *futūḥ* literature ascribed to al-Wāḳidī, see Brockelmann, I, 141-2, S I, 207-8; Sezgin, i, 294-7.

AL-**WĀḲIFA** or AL-WĀḲIFIYYA, a Shīʿī sect (*firḳa*) whose adherents maintained that the seventh Imām Mūsā al-Kāẓim (d. 183/799 [*q.v.*]) had not died but that God had carried him out of sight (*rafaʿahū ilayhi*), and awaited his return as the Mahdī [*q.v.*]. By their Twelver Shīʿī (Imāmī) opponents they were called *al-wāḳifa* ("the ones who stand still" or "those who stop, put an end to [the line of Imāms]", because they let the succession of imāms end with him and contested the transfer of the imāmate to his son ʿAlī al-Riḍā [*q.v.*].

The sect is mentioned by Twelver Shīʿī as well as Sunnī heresiographers (al-Nawbakhtī, *Firaḳ al-Shīʿa*, ed. H. Ritter, Istanbul 1931, 68 = Saʿd b. ʿAbd Allāh al-Ḳummī, *al-Maḳālāt wa 'l-firaḳ*, ed. M.Dj. Mashkūr, Tehran 1963, 90; pseudo-Nāshiʾ al-Akbar, ed. J. van Ess, Beirut 1971, 47; al-Ashʿarī, *Maḳālāt*, ed. Ritter, Wiesbaden 1963, 28; al-Shahrastānī, ed. Cureton, 127); the Imāmī authors of *ridjāl* books (al-Kashshī, al-Ṭūsī, al-Nadjāshī) identify many men as Wāḳifīs in order to disqualify them as transmitters of traditions. Several Wāḳifīs, mainly Kūfans, defended the occultation (*ghayba* [*q.v.*]) of the Seventh Imām in special treatises of which only the titles are still extant (listed by Klemm, in *WO*, xv, 126-7); the youngest of these authors, al-Ḥasan b. Muḥammad b. Samāʿa al-Kūfī, died in 263/876-7. Towards the end of the 3rd/9th century the sect seems to have merged with the Twelver Shīʿa or Ithnā ʿAshariyya [*q.v.*].

Bibliography: V. Klemm, *Die vier sufarāʾ des Zwölften Imam. Zur formativen Periode der Zwölferšīʿa*, in *WO*, xv (1984), 126-43; H. Halm, *Shiism*, Edinburgh 1991, 31-3.

WAKĪL [see WAKĀLA].

AL-**WAḲḲASHĪ**, Abu 'l-Walīd Hishām b. Aḥmad b. Hishām al-Kinānī al-Waḳḳashī al-Ṭulayṭulī (408-89/1017-96), Andalusī scholar in both the traditional and speculative sciences from Waḳḳash, modern Huecas in the province of Toledo.

He was a pupil of al-Ṭalamankī [*q.v.*]. Nominated judge in Talavera by the Dhu 'l-Nūnid rulers of Toledo, he later settled in Denia where he died. Abu 'l-Ṣalt Umayya [*q.v.*] of Denia was his pupil. Al-Waḳḳashī was praised for his vast knowledge extending to many fields: *handasa*, mathematics, logic, *fiḳh*, *uṣūl*, *iʿtiḳādāt*, grammar, lexicology, poetry, history (especially *ayyām* and *ansāb al-ʿarab*). He wrote on *al-ḳadar wa 'l-Ḳurʾān* and *tanbīhāt wa-rudūd ʿalā kibār al-taṣānīf al-taʾrīkhiyya wa 'l-adabiyya*, such as *tahdhīb al-Kunā li-Muslim*, *Mukhtaṣar li-Kitāb al-Ḳabāʾil li-Muḥammad b. Ḥabīb*, *Sharḥ al-Muwaṭṭaʾ* and *Nukat al-Kāmil li 'l-Mubarrad* (the last-mentioned together with Ibn al-Sīd al-Baṭalyawsī; it has been edited by Ẓuhūr Aḥmad Aẓhar, Balāhūr (Pakistan) 1401/1980; see also Razzūḳ, in *Mawrid*, iii/1 [1974], 250, and al-Faḥḥām, in *RIMA*, xxix [1985], 75). The *Mukhtaṣar al-fiḳh* attributed to al-Waḳḳashī in Brockelmann, I, 384, and S I, 662, is the work of another scholar, al-Ṭulayṭulī. Al-Waḳḳashī's most famous work is the *ḳaṣīda* he wrote on the occasion of the conquest of Valencia by El Cid (see R. Menéndez Pidal, *Sobre Aluacaxí y la elegía árabe de Valencia*, in *Homenaje a F. Codera*, Saragossa 1904, 393-409; A.R. Nykl, *La elegía árabe de Valencia*, in *Hispanic Review*, viii [1940], 9-17). He was suspected of *iʿtizāl* and of being critical of religious revelation (see M. Asín Palacios, in *al-And.*, iii [1935], 368-74; Pérès, *Poésie*, 456).

WAḲT [see ZAMĀN].

WĀḲWĀḲ, WAḲWĀḲ, WĀḲ WĀḲ, WĀḲ AL-WĀḲ, AL-WĀḲWĀḲ (A.), a name, possibly onomatopoeic, of uncertain origin, found in mediaeval Islamic geographical, zoological and imaginative literature. One of the most mystifying place names in the geographical literature, it refers variously to an island or group of islands, inhabited by a dark-skinned population who speak a distinct language; a people or race; and a tree producing human-fruit. There is also the cuckoo bird, onomatopoeically known as Wāḳwāḳ.

1. The island or islands of Wāḳwāḳ.

(a) *Introduction*

There are many stories connected with it but none

of them help to identify the place with certainty and there is no suitable equivalent toponym. European scholars have equated Wāḳwāḳ with nearly every island and peninsula in the Indian Ocean, and some with places in the Pacific. The general impression is that Wāḳwāḳ is a coastal country (*arḍ, bilād*) or island (*dj̲azīra*) on the shores of one of these oceans.

Ferrand's summary of the material in the 1st edition of the *Encyclopaedia of Islam* was extremely full but Ferrand took his texts too literally. Reducing Wāḳwāḳ to a definite two locales, and equating these with Madagascar and Sumatra, is perhaps going a little too far. After all, both places were adequately provided with names by most geographers and both were well known to the Arabs. Moreover, they were certainly aware of the distinctions between the Zandj̲ and their neighbours and would consequently not have mistaken the Zandj̲ for Malagasy or Bushmen populations (Ferrand in *EI*[1], IV, 1108).

Nevertheless, the texts do require careful examination, with note taken of their chronology. Thus al-Masʿūdī deserves particular credence for both his early date and also his being the only one of the Arab geographers actually to have visited Zanzibar and to have been well informed about the East African coastlands; and other early sources, as well as al-Masʿūdī, such as Ibn al-Faḳīh and Buzurg b. S̲h̲ahriyār (see below) do refer to an African Wāḳwāḳ (however it is spelt).

The island of Wāḳwāḳ has been given many identifications by European scholars over the past two centuries. Habicht, in his edition of the *Thousand and one nights* in 1825 (i, 299), decided on Japan. Langlès (*Voyage de Sindbad*, 147) thought it was the islands of Southeast Asia. Reinaud (Introduction to *La Géographie d'Aboul-Feda*, 1840, pp. cccv, cccxv) favoured Africa, i.e. Madagascar. De Slane, in his translation of the *Prolegomena* of Ibn K̲h̲aldūn (i, 95 n. 3), believed it to be the Seychelles, but Rosenthal in the notes to his translation (i, 99 n. 29) thought that the context pointed rather to Madagascar or the East African coastlands; Ibn K̲h̲aldūn himself probably had as little idea of its position as any of the European scholars.

The appearance of Buzurg b. S̲h̲ahriyār's *ʿAdj̲āʾib al-Hind* in 1883 almost doubled the amount of information available to help scholars better identify Wāḳwāḳ. Devic himself (Buzurg, tr. 169) said that Wāḳwāḳ most probably belonged to the neighbourhood of the Malayan Archipelago but that it was too vaguely defined to be able to identify precisely. Lane (*Arabian Nights*, 1247 n. 32) held similar views, and suggested that Wāḳwāḳ was "All the islands which they (sc. the Arab geographers) were acquainted with on the East and South-East of Borneo". De Goeje reverted to the Japan theory on the basis of Ibn K̲h̲urradād̲h̲bih's text, stating that the connection with Africa was only the fault of Ptolemy, while Ferrand attempted (*Madagascar et les îles Uâq-Uâq*, in *JA* [1904], 489-509) to prove that it was Madagascar and that the Far Eastern one was due to Ptolemy. Later (*Les îles Râmny, Lâmery, Wâkwâk, Komor des géographes arabes et Madagascar*, in *JA* [1907], 450-506) he discovered that some passages must refer to the Far East, probably Sumatra, and finally (*Le Wâqwâq, est-il le Japon?*, in *JA* [1932], 193-243) he proved that there were definitely two Wāḳwāḳs, sc. Madagascar and Sumatra. Thus Ferrand intimated that the Wāḳwāḳs are the two areas of Malay culture on each side of the Indian Ocean and that the attack on Ḳanbalū, described by Buzurg (*ʿAdj̲āʾib al-Hind*, ed. al-S̲h̲ārūnī, 142-3; *Captain Buzurg*, tr. Freeman-Grenville, 103; Tibbetts, *Arabic texts on South-East Asia*, 171 n. 14), was a description of a Sumatran expedition to the African coast.

Ferrand's views were validated in J. Faublé and M. Urbain-Faublée, *Madagascar vu par les auteurs arabes avant le XI*[e] *siècle*, in *Studia*, xi (1963), 445-62. Viré (see below) has argued for an Indian Ocean-wide identification (as has Miquel, *Géographie humaine*, ii, 511-13). More recently, Allibert has argued for an approach that incorporates information from imaginative literature (see below), and Toorawa (see *Bibl.*) for one that brings the Mascarene islands into Wāḳwāḳ's fabular cartography. In actual fact, all the theories seem to be right, although the less definite they make their identifications, the better. The theories of Devic and Lane, who make Wāḳwāḳ some ill-defined place in Southeast Asia, and those of Viré and Allibert, who find evidence for Wāḳwāḳ in several places on the Indian Ocean littoral simultaneously, appear to be the most defensible.

(b) *The waters around the Wāḳwāḳ islands*

The usual names given to the waters around Wāḳwāḳ were *Baḥr al-Hind* and *al-Baḥr al-Hindī* [*q.vv.*] the "Indian Sea", *Baḥr al-Zandj̲* [*q.v.*] and the less common *Baḥr al-Ḥabas̲h̲ī*, the "Sea of the Blacks", and *Baḥr Fāris* [*q.v.*], the "Persian Sea". The uncertainty about this sea's name is underscored by the very name of the waters further south into which the *Baḥr al-Hind* appears to melt: the *Baḥr al-Ẓulma* (or *Ẓulumāt*) [see AL-BAḤR AL-MUḤĪṬ], the "Sea of Obscurity". Al-Idrīsī writes that "In it are a number of islands, some of which are visited by merchants, others of which are not by virtue of the difficulty of access, the [terrifying] power of the[ir] waters [for navigation], the unpredictability of the winds, and the savagery of their peoples who maintain no contact with any of their known neighbouring populations" (*Opus geographicum*, ed. Cerulli *et al.*, i, 87). Mariners driven off course were said to be tossed forever in this sea, said to join *al-Baḥr al-Ẓiftī*, the "Black Sea" or "Sea of Pitch" in Northern Asia, reminiscent of the "Gravelly Sea" described by Mandeville in his *Travels* (*The tales of Sir John Mandeville*, tr. Moseley, Harmondsworth 1983, 169). Indeed, one scholar has corresponded certain of Mandeville's descriptions with those of al-Idrīsī (C. Deluz, *Le livre de Jehan de Mandeville. Une géographie du XIV*[e] *siècle*, Louvain-la-Neuve 1988, 75-86).

(c) *Two Wāḳwāḳs?*

The first author to speak of two Wāḳwāḳs is Ibn al-Faḳīh (A.D. 902), referring to "Wāḳwāḳ al-Ṣīn", "the Wāḳwāḳ of China", and "Wāḳwāḳ al-Yaman", the Wāḳwāḳ of Yemen" (Ibn al-Faḳīh, at 55, page references here and elsewhere to G. Ferrand, *Relation de voyages et textes géographiques arabes, persans et turcs relatifs à l'Extrême-Orient du VIII*[ème] *au XVIII*[ème] *siècles*, 2 vols. with continuous pagination, Paris 1913-14, with actual translation of the texts in question given in the book, repr. Frankfurt 1986). Little interpretive attention has been paid to Yemen as a possible location as other sources speak either of great sailing distances or of its being "south of ʿIrāḳ". Ferrand equated this Wāḳwāḳ of the South with al-Masʿūdī's Wāḳwāḳ near Sofāla, which he claims as Madagascar (see *EI*[1], IV, 1105); but there is no clue that Ibn al-Faḳīh's Wāḳwāḳ was in Africa. Judging from the number of texts placing Wāḳwāḳ in Southeast Asia (see Ferrand, *Le Wâqwâq, est-il le Japon?*), there is no reason why this should not be the location of Wāḳwāḳ. It is possible that Ibn al-Faḳīh, confused by the conflicting statements that he had before him, came to the conclusion (as did Ferrand) that the only solution was that there was more than one Wāḳwāḳ. Until the time

when the Ptolemaic theory of the eastern extension of Africa came to confuse the topographical picture of South Africa and Southeast Asia, Ibn al-Faḳīh is the only author who produces more than one Wāḳwāḳ.

(G.R. TIBBETTS and SHAWKAT M. TOORAWA)

(d) *The African Wāḳwāḳ?*

Mediaeval geographers and travellers mention Wāḳwāḳ in connection with East Africa in a confusing number of ways. Thus these sources state that the isles of Wāḳwāḳ are situated in the Larwī sea which washes the western coast of India and the lands inhabited by the Zandj (al-Yaʿḳūbī, at 49). The Wāḳwāḳ of the south is different from that of China (Ibn al-Faḳīh, at 55). The lands of Sofāla [*q.v.*] and of Wāḳwāḳ are situated in the extremity of the sea of the Zandj (al-Masʿūdī, at 108). The land of Wāḳwāḳ is contiguous to that of Sofāla; there are two towns in it, D.d.w. (Dārū? Waru? [see Daunicht, 190-1]) and B.n.h.na (Nabhana?), miserable and sparsely populated (al-Idrīsī, at 183). The town of D.ghd.gha (Daghdagha?), inhabited by a hideous and deformed dark-skinned population, is next to the land and island of Wāḳwāḳ (*ibid.*, at 184). Wāḳwāḳ is situated in the land of the Zandj (Ibn al-Wardī, at 425), to the east (= south) of Sofāla on the same southern (= western) shore of the Indian Ocean which extends without interruption to the end of the tenth section of the first clime, at the place where the Indian Ocean flows out of the Encompassing Sea (Ibn Khaldūn, at 460). The islands of Wāḳwāḳ are near the last islands of Dībādjāt al-Dum (= the Laccadives and Maldives [*q.vv.*]) (Buzurg b. Shahriyār, at 586). The Wāḳwāḳ of the land of the Zandj is vast, fertile and prosperous (Ibn al-Wardī, at 425). The gold of Wāḳwāḳ of the south is of inferior quality compared with that of the Wāḳwāḳ of China (Ibn al-Faḳīh, at 55). There is much gold in the Wāḳwāḳ of the land of the Zandj (al-Masʿūdī, at 108; Ibn al-Wardī, at 425). The natives of the Wāḳwāḳ of the land of the Zandj have no ships, but the merchants of ʿUmān come to trade with them and get slaves in exchange for dates (Ibn al-Wardī, at 425; cf. also al-Idrīsī, at 183). They know neither cold nor rain (Ibn al-Wardī, at 425). Of all these authorities, only al-Masʿūdī actually visited the East African coastlands, as was noted above, section 1(a). What he writes stands out from other confused items of information (his account of the Zandj gives many examples of his accuracy, including Bantu words which are recognisable as such); he realised that Sofāla and the Wāḳwāḳ were below, i.e. south of, the Zandj country, in a region where one today finds speakers of click languages.

However, as Tolmacheva (*The African Wāq-Wāq. Some questions regarding the evidence*, in *Fontes historiae africanae*, xi-xiii [1986-7], 9-15) has asserted, in spite of the great number of Arabic texts (and the often derivative Persian and Turkish ones) that speak of Wāḳwāḳ, very few speak of an African connection. In her important re-interpretation of al-Masʿūdī's account (*Murūdj*, § 847), Tolmacheva sees no direct evidence for an (African) Wāḳwāḳ connected to Sofāla and the Zandj. She believes that although al-Masʿūdī's words seem to place the Zandj capital in Wāḳwāḳ, the only explicit statement concerning Wāḳwāḳ in this passage is that it is located in the farthest reaches of the sea, possibly but not unambiguously the Sea of the Zandj. For Tolmacheva, the presumption of a link between Wāḳwāḳ and the Zandj accounts for al-Idrīsī's erroneous link, and for all subsequent mediaeval and modern placement of Wāḳwāḳ in Africa. This is corroborated by the fact that al-Masʿūdī travelled to both the East and to East Africa, and yet never mentions two Wāḳwāḳs, nor a "southern" one. He also at no point characterises Wāḳwāḳ or its inhabitants. Against her arguments, however, is the undoubted fact that al-Masʿūdī *does* mention an East African Wāḳwāḳ.

With regard to the references to the *arḍ al-Wāḳwāḳ* in Arabic literature, Tolmacheva has source-critically divided these into three groups: (1) al-Masʿūdī (*Murūdj*, i, 233, iii, 6-7 = §§ 246, 847-8, see also Pellat's indices, vii, 750); (2) al-Idrīsī, whose accounts are partly derivative from, but give greater precision to, al-Masʿūdī's accounts, and who is the "true generator" of a specifically African Wāḳwāḳ—yet who was, it must be admitted, entirely dependent on informants, unlike al-Masʿūdī (on al-Idrīsī, see now the translation by Viré); and (3) the weakest group, comprising the late, often redundant compilations of Ibn al-Wardī, al-Ḥimyarī, Ibn Saʿīd al-Maghribī (in spite of the originality of some of his material), and even Ibn Khaldūn's passing remarks, all of which are derivative from al-Idrīsī's accounts.

According to al-Idrīsī, Wāḳwāḳ is the fourth and southernmost of the divisions of the eastern African coast. Like the name of his first division Bilād al-Barbarā or Barābara (perpetuated in the northern Somali town of Berberā [*q.v.*]), the word Wāḳwāḳ might be the onomatopoeic rendering of the name for click-speakers. Of the towns mentioned by al-Idrīsī, B.n.h.na could be the modern Inhambane in southern Mozambique, the present Portuguese spelling of which would be better represented in speech by *Nyambana*, or the Moluccan Amboina. If it is true that identifications of Wāḳwāḳ with East African coastal toponyms, or indeed any toponyms, rely on linguistic and ethnonymic arguments rather than on textual ones and must always be treated with prudence, such linguistic and ethnonymic arguments cannot be disregarded.

(e) *The Wāḳwāḳ attack on Ḳanbalū*

A question to be resolved is the attack by Wāḳwāḳ ships on Ḳanbalū in A.D. 945 mentioned in the sources. Buzurg b. Shahriyār's description of the attack by a fleet of 1,000 ships may be regarded as literary hyperbole. It was quite possibly made from Sumatra or Java, but this does not prove, of course, that Sumatra was Wāḳwāḳ. To the inhabitants of Ḳanbalū the attackers came from an unknown island in the east beyond the range of their knowledge. Recent archaeological excavations now also support the argument that Ḳanbalū was Mkumbuu on the island of Pemba, where, significantly, a 10th-century mosque has now been located. It would have held some 600 worshippers, suggesting that in its heyday it was by far the largest and most important trading centre yet discovered in eastern Africa. Ferrand was right in dismissing de Goeje's suggestions that these ships were Japanese, but his proposal that they were Sumatran, based on philological arguments, is rivalled by Madagascar, where the language, Malagasy, is related to Indonesian ones, and where outrigger canoes, *ngalawa*, were used in numbers (and still are; but they are too small to have carried sufficient food and water for a voyage across the Indian Ocean). Very recently, Fāṭimid coins, as yet unpublished, have been recovered in Diego Suarez bay at the northern tip of Madagascar [see further MADAGASCAR].

It thus seems that, on the whole, Wāḳwāḳ referred to a country just beyond one's reach in the general direction of the east. Thus it appears as a well-populated land east of China, about which one heard

stories but which was never really reached in any numbers. Similarly, it is applied in Southeast Asia to some island a little off the usual path of Arab traders. Thus stories of islands a little off the route, as well as a few legendary tales, became attached to Wāḳwāḳ. As new ground was explored, Wāḳwāḳ retreated eastwards, always to be the last island in the east until Sīdī Čelebi in the 10th/16th century was able to place it anywhere but south of the islands of Timor. Daunicht (*Der Osten nach der Erdkarte al-Ḫuwārizmīs*, Bonn 1970, ii, 172-274) has made a fascinating case for identification with the Moluccas, Irian Jaya, and northwestern Australia (where three Islamic coins from Kilwa have been found, in company with tamarisk trees, not native to Australia).

(G. Ferrand-[G.S.P. Freeman-Grenville and Shawkat M. Toorawa])

(f) *Wāḳwāḳ and the Far East*

One group of stories relating to Wāḳwāḳ is based on a passage from Ibn Khurradādhbih (69-71) where he places Wāḳwāḳ east of China and says it is a country producing much gold, mentioning golden dog chains (? leads) and monkey collars. This is one of the standard stories passed down from author to author. The ingenuity of the natives and the fact that it was a prosperous country east of China caused de Goeje to identify it with Japan (*Le Japon connu des arabes*, 295). De Goeje's identification was based partly on the description given by Ibn Khurradādhbih and partly on his identification of the word Wāḳwāḳ with an early Chinese name for Japan, *Wo-kuo*, in Cantonese *Wo-kwok*, of which Wāḳwāḳ is an acceptable rendering. The description of the people of Wāḳwāḳ, given in one passage of Buzurg's *'Adjā'ib al-Hind* (ed. Shārūnī, 135), where the great size of the towns and islands is mentioned, is even more reminiscent of Japan. Although Ibn Khurradādhbih's story is the only original one mentioning the prosperous country, there are several texts which state that Wāḳwāḳ is east of China. Some are merely quoting from Ibn Khurradādhbih but others add a little.

In his 4th/10th-century encyclopaedia, the *Mafātīḥ al-'ulūm*, al-Khwārazmī (ed. Van Vloten, 217), writes that Kandiz is the most easterly town in the world and is situated at the extremity of China and Wāḳwāḳ. He describes the world as a bird, with China as its head and Wāḳwāḳ beyond it. Ibn 'Abd al-Ḥakam (d. 257/871) describes the world as a bird in *Futūḥ Miṣr wa 'l-Maghrib*, ed. C.C. Torrey, New Haven 1922, stating that the right wing is 'Irāḳ, beyond which is a people called Wāḳ, and beyond whom another called Wāḳ Wāḳ, and beyond them people known only to God (19), disassociating Wāḳwāḳ from China. The story of the world as a bird is a very common one in Arabic literature and very early appears as a story from 'Abd Allāh b. 'Amr b. al-'Āṣ in Ibn al-Faḳīh and Ibn 'Abd al-Ḥakam. It is obvious that, at this very early stage, Wāḳwāḳ was regarded as a land not simply in the extreme east but at the edge of the known.

(g) *Southeast Asia*

Another group of stories mentions a primitive people with whom the Arab sailors trade. Stories of this kind give locations for Wāḳwāḳ in Southeast Asia, mentioning it in connection with Zābadj, Ḳumār or Ṣanf. Such stories come mainly from Buzurg b. Shahriyār's *'Adjā'ib al-Hind* and from other writers who copied this work. They have the appearance of sailors' tales. The ship in the first story (Buzurg, 8) comes across al-Wāḳwāḳ on the way to Zābadj or in the direction of Zābadj. In a similar tale found later in the same work (190), it is between Sribuza and China. In yet another case it is beyond the end of Dībādjāt al-Dum (the Maldives) (Buzurg, 163). The *Mukhtaṣar al-'adjā'ib* of Ibn Waṣīf Shāh (38) also prefers to put Wāḳwāḳ in Southeast Asia; in one place it makes it the home of a Māhārādja and in another "in the Sea of Ṣanf" (Čampa) (39). In the latter account, it has been mixed up with a story about a volcano which, according to other authors, is definitely about Southeast Asia. Al-Bīrūnī, from whom one would expect a clear account, says Wāḳwāḳ belongs to Cambodia (Ḳumār), and mixes earlier accounts of Wāḳwāḳ and Ḳumār so that, in spite of his unrivalled knowledge of India, it is certain that he had no clear idea himself of the location of Wāḳwāḳ. These stories about primitive peoples could equally well refer to the coast of Africa where such peoples could be found.

(h) *The Indian Ocean littoral*

Viré, who believed the word Wāḳwāḳ to be onomatopoeic, and who relied in part on Ibn al-Faḳīh (tr. Massé, 9) and his identification of three (*pace* Viré), not just two Wāḳwāḳs, posits that Wāḳwāḳ definitively refers in all instances to small-statured, dark-skinned populations that inhabit three distinct areas on the Indian Ocean littoral: the Akkas and Negrillos in Africa, the Negritos in Malaya in Southeast Asia, and the Lapons, Samoyeds and Manchus in the Arctic and sub-Arctic regions of northern Asia (Viré, 35 n. 1). More recently, Allibert (*Wakwak: végétal, minéral ou humain? Reconsidération du problème*, in *Études Océan Indien*, xii (1991), 171-89), whose research has focused on the Wāḳwāḳ tree and its human-fruit (see below), has persuasively argued for a Southeast Asian location of both the tree and island(s).

Allibert, taking his lead from the observations of Miquel and Bremond (*Mille et un contes de la nuit*, Paris 1991), has attempted to demonstrate that islands of women in geographical and imaginative literature and the islands of Wāḳwāḳ are one and the same thing (*L'Île des femmes dans les récits arabes*, in *Études Océan Indien*, xv, 261-7). This is consonant with Allibert's call for an integrated and coherent approach to the Wāḳwāḳ issue. He shows, to his mind unequivocally, that the fruit of the Wāḳwāḳ tree is the Southeast Asian coconut and that Wāḳwāḳ is thus the vehicle of an ancient mythology inscribed in the story of the human-fruit and woman-island. The evidence for his argument is, like Ferrand before him, primarily linguistic, but has virtue. He reflects at length on the *rāndj* of al-Mas'ūdī, which he ties to various accounts in the geographies about palms and coconuts. He goes on to explain the mythological dimension by making the equation, "botanical reality + animal or human and/or geographical reality = mythical term", which for him translates into: "coconut palm + Austronesian population = Wāḳwāḳ fruit".

2. Living organisms bearing the name of Wāḳwāḳ.

One early story usually connected with Wāḳwāḳ mentions a tree named Wāḳwāḳ with fruit having a human appearance (a coconut, divested of its coir, has "eyes"), and another early story a strange race who utter the cry "*Wāḳ, Wāḳ*!"

(a) *The "race"*

In an early story which appears in its full form in Ibn Waṣīf Shāh (26), a kind of animal is mentioned which from the description appears to be a baboon. The name *wakwak* or *wahwah* is given to a species of gibbon in Malay, for it is an onomatopoeia for its cry, just as it could be for the bark of a baboon. In his *EI*[1] art., Ferrand showed that *wak-wak* or *vak-vak*

is a name given by the Bantus to baboons and to Bushmen.

(b) *The tree*

The tree with the human-fruit first appears in Arabic in the *K. al-Badʾ wa ʾl-taʾrīkh* of al-Muṭahhar al-Maḳdisī [*q.v.*] (89) at the end of the 4th/10th century. Here we have a short note saying that the tree was called Wāḳwāḳ and grew in India. A fuller account of this tree is given in Buzurg (65-6) (quoting Muḥammad b. Bābishād), where the tree is not named but is stated to come from the land of Wāḳwāḳ. However, the story itself must have been common in the Near East, for it appears much earlier in a Chinese text, the *T'ung-tien* of Tu Huan, which was written between A.D. 766 and 801 and is of Middle Eastern provenance. According to this work, the story was told to Tu Huan's father, who had been captured and taken to the Middle East, where he stayed between 751 and 762, as a story emanating from Arab sailors, who sailed toward the West. The story given by Tu Huan resembles that of Buzurg almost word-for-word, except that the tree in his account bears a crown of small children instead of fruit with human faces. Hence, in spite of the more factual representation of the story given by Buzurg in the *ʿAdjāʾib al-Hind*, the "little humans" seem to be part of the original story. The story is given throughout by many writers, but is embellished in various ways. The "little humans" on landing on the ground are said to utter the cry "Wāḳ, Wāḳ", which seems an alternative version borrowed from the second tale. A full version is given in the 6th/12th-century *K. al-Djughrāfiyā* written in Spain. The story is also given in one version of Friar Odoric's travels (Sir Henry Yule and H. Cordier, *Cathay and the way thither*, London 1915, ii, 138-9). It differs in detail, but only in as much as the Arabic accounts differ from each other. In Ibn al-Wardī's 9th/15th-century account, the women-fruit cry out praise to the Creator (*al-Khallāḳ*). This is reminiscent of an account about ʿĀʾisha who, on her deathbed, is reported to have wished she were a leaf or a tree uttering the praises of God (Ibn Saʿd, viii, 51).

There is a very early attestation of a tree the fruits of which are corporeal in Arabic. In Ḳurʾān, XXXVII, 60/62, 62/64, mention is made of the tree of Zaḳḳūm, with heads of demons where fruit should be. This motif would have been known to all the authors writing about the Wāḳwāḳ tree. The possibility that this description informed the many later accounts of the Wāḳwāḳ tree cannot be excluded. Al-Djāḥiẓ had mentioned that the Wāḳwāḳ are the product of a cross between plants and animals and is cited by al-Damīrī, *Ḥayāt al-ḥayawān al-kubrā* (Cairo 1336, ii, 123) to that effect.

In his account, Marwazī (*Sharaf al-Zamān Ṭāhir Marvazī on China, the Turks and India* [= *Ṭabāʾiʿ al-ḥayawān*], ed. and tr. V. Minorsky, London 1942, 60, cf. 160, writes: "I have read in the *Kitāb al-Baḥr* ("Book of the sea") that in the island of Wāq-Wāq, where ebony grows, there is a tribe whose nature is like that of men in all their limbs, except the hands, instead of which they have something like wings, which are webbed like the wings of a bat. They, both males and females, eat and drink while kneeling. They follow the ships asking for food. When a man makes for them, they open these wings and their flight becomes like that of birds, and no one can overtake them." This account is noteworthy both for its conflation of tree, human and bird, and for its evocation of the bat, *waṭwāṭ* in Arabic.

Eva Baer, *Sphinxes and harpies in medieval Islamic art*, Jerusalem 1965, has catalogued examples of Wāḳwāḳ tree motifs in mediaeval Islamic art, and writes that the earliest depiction is to be found on a slab attributed to one of the Ghaznawid palaces but probably datable to a little later (66-8, figs. 82-6). She observes also that the decorative designs reflect the talking or Wāḳwāḳ tree of the Alexander Romance. It is widely found in manuscripts of the "Wonders of the World" genre, especially the works of al-Ḳazwīnī. This talking tree is the transformed oracular Tree of the Sun and Moon which is reputed to have told Alexander of his approaching death (see Phyllis Ackerman, *The talking tree*, in *Bulletin of the American Institute for Persian Art and Archaeology*, iv/2 [1935], 67-72). In an Old French poem on the legend of Alexander, young women are born with and wilt with the flowers of a tree: they cannot leave the shade of these trees without dying (see *King Alisaunder*, ed. Smithers, Early English Texts Society, Old Series, ccxxvii (1952) and ccxxxvii (1957), and the unpublished Anglo-Norman *Roman de toute chevalerie* on which it is based).

The Wāḳwāḳ tree is described, and depicted, in the introductory passages to the first Ottoman work describing the New World, the anonymous 10th/16th-century *Tārīkh-i Hind-i gharbī* (T.D. Goodrich, *The Ottoman Turks and the New World. A study of* Tarih-i Hind-i Garbi *and sixteenth-century Ottoman Americana*, Wiesbaden 1990, 58). This account relies in large part on al-Ḳazwīnī and, although it does not place the tree in the New World, gives the impression that it is to be found there (see Toorawa, *Where women grow on trees. An Arab-Islamic tree in the New World*, forthcoming).

The tree also makes an appearance in the Turkish shadow-play tradition, scholars of which have attributed its origin to the legend of the tree whose fruits are shapely women. But, as İ. Başgöz (*The Waqwaq tree in the Turkish shadow-play theatre Karagöz and the story of Esther*, in A. Levy, *The Jews of the Ottoman Empire*, Princeton, N.J. 1994, 552-3) points out, it appears rather to be inspired by the execution by hanging, from a particular tree (*Platanus orientalis*), of Janissaries in 1826, in a re-enactment of an earlier such execution (1066/1655-6). The latter became known as "the vakvak incident" (*waḳʿa-i wāḳwāḳiyye*). Başgöz shows further that another possible source is the final act in the story of Esther and Haman in the Old Testament (554-5). A comment made by Ewliyā Čelebi in his *Seyāḥat-nāme* (*The intimate life of an Ottoman statesman, Melek Ahmed Pasha (1588-1662)*, tr. R. Dankoff, Albany 1991, 74-5) is contemporary, but apparently unrelated. He notes that dead *celalis* lying beneath the trees of a meadow "ador[n] the plain like the Tree of Vakvak".

The tree was long ago identified as the *ʿushar* (*Calotropis syriaca*) by de Goeje, when he connected Wāḳwāḳ with Japan. The story does appear in Japanese literature, but almost certainly comes from the Chinese of Tu Huan, which again comes from the Arabs, so it cannot be used to strengthen de Goeje's theory. The description given by Buzurg's *ʿAdjāʾib al-Hind* resembles that of the *ʿushar*, which is a tree of the Middle East and Africa. Ferrand claimed that this tree could not be the *ʿushar* and suggested the Pandanus tree on philological grounds, for it is called *vakwa* in Madagascar, thus using it to strengthen his own Madagascar theory. The fruit of the Pandanus may bear little resemblance to the fruit of the story but is attested in a Filipino story of related interest.

An argument might, in fact, be made for identifying Wāḳwāḳ with the Philippines. In addition to its numerous islands, "dark"-skinned population, and

distinct language (actually several dozen), there are in Philippine mythology creatures reported to be pretty-faced, fair-skinned maidens who drape their wings over the branches of trees in the heart of the jungle while they sleep out the day, their long hair thrown over their faces (M.D. Ramos, *Creatures of Philippine lower mythology*, Quezon City 1990, 127). They are called *aswang* in Tagalog, Bikol and several other languages, and *wakwak* in Surigao. In one account, the *aswang/wakwak* is depicted as tying a skirt round her when flying, and "beating her buttocks with a magical pandanus streamer" (Ramos, 128, citing B. Malinowski, *Argonauts of the Western Pacific*, New York 1961, 242). The *wakwak* are said to live in trees, and to call out "Kakak! Kakak!" (Ramos, *Creatures*, 133, citing F.X. Lynch, *An mga Asuwang. A Bikol belief*, in *Philippine Soc. Sc. and Hum. Rev.*, xiv (Dec. 1949), 420) or other similar sounds.

(G.R. Tibbetts and Shawkat M. Toorawa)

3. Wāḳwāḳ in imaginative literature and the imaginaire.

There is a convincing piece of evidence that Wāḳwāḳ is simply the name given to the conceptual limit of the known world in the statement made by Ḥasan al-Baṣrī's eventual guide, the Shaykh ʿAbd al-Ḳuddūs, in the *Thousand and One nights*—Ḥasan is trying to reach Wāḳwāḳ in order to get back his wife who has fled to her home with their two sons (Lane, *The Arabian nights' entertainment*, 796): "My son, relinquish this most vexatious affair; you could not gain access to the Islands of Waqwaq even if the Flying Jinn and the wandering stars assisted you, since between you and those islands are seven valleys, seven seas and seven mountains of vast magnitude."

There is a similar quest for a spouse in the 8th/14th-century *Sīrat Sayf b. Dhī Yazān*, when King Sayf is urged by his wronged and distraught wife to pursue her and her son: "'You seized me first, then afflicted me with grief and deserted me to take other women. But what has been has been. If you have any valor and resolve, and if you truly love me, then pursue me to the City of Maidens in the islands of Waq al-Waq.' With that she clasped her son beneath her garment at her breast and vanished through the air..." (*The adventures of Sayf Ben Dhi Yazan, an Arab folk epic*, tr. L. Jayyusi, Bloomington 1996, 241). Lane noted the similarities between the *Thousand and one nights*' story of Ḥasan and the Bird-Maiden and the romance of Sayf b. Dhī Yazān, in particular the beautiful women with wings of feather who fly like birds (Lane, 1246 n. 16).

In one Persian tale, the fruits of a tree ripen, fall to the ground, mature into men's heads, and then one of the fruits greets the king respectfully (see *The Palace of the Nine Pavilions* [Bodl. ms Caps. Or. A. 4.], in *The three dervishes and other Persian tales and legends*, tr. R. Levy, Oxford 1947, 160).

Ibn Ṭufayl's [*q.v.*] description in his philosophical-allegorical tale, *Risālat Ḥayy b. Yaḳẓān* (ed. Saʿd, Beirut, 117), famously speaks of an island below the equator where people are born without mother or father, and where there is a tree which bears women as fruit. This is analysed by F. Malti-Douglas, *Woman's body, woman's word. Gender and discourse in Arabo-Islamic writing*, Princeton 1991, 85-96.

Yāḳūt, a systematic recorder of geographical information, observes that Wāḳwāḳ is only to be found in fables and superstitions (*khurāfāt*) (*Muʿdjam al-buldān*, ed. Wüstenfeld, vi, 936). This appearance in fables and superstitions has extended, seven centuries later, even further than Yāḳūt could ever have imagined; thus the Islands of Wāḳwāḳ now appear as a "card" in the Arabian Nights "expansion" of a fantasy game called "Magic".

Just as it provided material for Ibn Ṭufayl and for "Magic", so too has Wāḳwāḳ been used in modern Arabic literature. In what might at first appear to be a more traditional appropriation/appearance, it figures in a 1975 short story by the Moroccan writer, Mustafa al-Masannawi, *Abdullah Samsa in Waqwaq Island* (in M. Shaheen, *The modern Arabic short story. Shahrazad returns*, London 1989, 114-18). This post-modern, Borgesian-Kafkaesque tale, divided into ten numbered sections of unequal length, and accompanied by five appendices, evokes Wāḳwāḳ in a number of ways. In section three, a description is quoted from *The great Pharaonic encyclopaedia*, and section seven consists of "An extract from a radio broadcast from the Island of Waqwaq". In 1997 the Palestinian poet ʿI. al-Manāṣira published a volume titled *Lā athiḳu bi-ṭāʾir al-wakwāḳ*, Jerusalem 1999 (title poem, 20-32).

Finally, one may invoke the contemporary Egyptian colloquial expression *il ḥāga-di ma-tiḥṣal-sh walā fi bilād wāʾ il-wāʾ* "these things don't happen, not even in Wonderland", which makes of Wāḳwāḳ a place of wonderment somewhere beyond the horizon (M. Hinds and El-Sayyid Badawi, *A dictionary of Egyptian Arabic, Arabic-English*, Beirut 1986, 921).

(Shawkat M. Toorawa)

4. As a zoological term.

Here, *wāḳwāḳ*, *waḳwāḳ* and *waḳūḳ* are onomatopoeic masc. nouns denoting a member of the Cuculides family of birds and imitating their cries (Fr. "coucou", Eng. "cuckoo", Ger. "Kuckuck"); the pl. ought to be *waḳāwīḳ*, but this is never found in the texts. With this general name, members of the Cuculides (*waḳwāḳiyyāt*) also have numerous local names, according to region: *ḥamām ḳawwāl*, *ṭāṭawī*, *ṭaḳūḳ*, *ḳawḳal*, *kukur*, *kukum*, *kunkur* and *hūhū*. The Arabic-speaking lands distinguish

five species of cuckoo: (a) the Common cuckoo (*Cuculus canorus*), with two sub-species *C.c. canorus* and *C.c. telephonus*; (b) the Great spotted cuckoo (*Clamator glandarius*); (c) the Pied crested or Jacobin cuckoo (*Clamator jacobinus*), with the sub-species *C.c. serratus*; (d) the Collared cuckoo (*Cuculus torquatus*); and (e) the Large-heeled cuckoo (*C. senegalensis aegyptius*).

Bibliography: Damīrī, *K. Ḥayāt al-ḥayawān al-kubrā*, Cairo 1937, ii, 390; A. Malouf, *Muʿdjam al-ḥayawān*, Cairo 1932, 77-9; E. Ghaleb, *al-Mawsūʿa fī ʿulūm al-ṭabīʿa*, Beirut 1936, ii, 648; F. Hue and R.D. Etchecopar, *Les oiseaux du Proche et Moyen Orient*, Paris 1970, 394-5. (It is surprising that neither Djāḥiẓ, *Ḥayawān*, nor Ḳazwīnī, *ʿAdjāʾib al-makhlūḳāt*, mention the cuckoo under any one of its names.)

(F. Viré)

WALAD [see ṣaghīr].

WALĀTA, conventionally Oualata, an important Saharan caravan town in mediaeval Islamic times, now a small town in the southeastern region of modern Mauritania, the Ḥawḍ or Hodh (lat. 17° 15' N., long. 6° 55' W.).

For its history, see mūrītānīyā, at Vol. VII, 625a-b.

WALĀYA (a.). For the use of this term in Shīʿism, see wilāya. 2.

WALBA, a district of the *kūra* of Niebla in the southwestern part of al-Andalus, the modern Huelva. The name appears in various forms in the Arabic sources, such as Wānyu in al-ʿUdhrī (5th/11th century) and Wāniba (Yāḳūt), both going back to Latin Onuba.

Its political history is closely linked with that of Niebla [see labla], even though it was for a while, in the time of the Taifas, separated from Niebla. This was, in fact, a period of prosperity and security for the people there. This was due to the actions of ʿAbd al-ʿAzīz al-Bakrī who, in 403/1012, in the midst of the civil wars of that time, made himself the ruler of a little principality embracing Walba and the island of Saltés. Soon afterwards, in 414/1023-4, Abu 'l-ʿAbbās Aḥmad al-Yaḥṣubī arose in Niebla to form a second *ṭāʾifa* in similar fashion within the ancient *kūra*. The ʿAbbādid al-Muʿtaḍid [*q.v.*], ruler of the neighbouring *ṭāʾifa* of Seville, altered this state of affairs in his greed to acquire new territories, which he achieved in 443/1051-2. Out of prudence, ʿAbd al-ʿAzīz decided to cede Huelva and shut himself up in Saltés, but he could only maintain this for a short while under pressure from the Sevillan ruler, and had in the end to abandon it. Out of all the versions in the chronicles of the period, the most probable seems to be that of Ibn Saʿīd, who says that al-Bakrī marched on Cordova and definitively established himself there. It was in this capital that his son, the famous historian and geographer Abū ʿUbayd, received his education along the traditional lines of the age.

The island of Saltés considered itself as naturally linked with Huelva. It was not a separate district, and was in fact—as al-Idrīsī said in the 6th/12th century—less than a mile from Huelva and separated from it by a narrow neck of the sea only a stone's throw wide. Numerous historians stress its commercial importance, iron-working and falconry being amongst its main activities. Al-Ḥimyarī (9th/15th century) mentioned the traces of Antiquity there and attributed to it the advantages of both a maritime and a continental town.

(Fátima Roldán Castro)

WĀLĪ (a., pl. *wulāt*), from the root *w-l-y* "to be near something", hence "to be in charge of something", comes to mean "person in authority, governor, prefect, administrator manager", with the *maṣdar* of *wilāya* for his office and/or sphere of competence. The word occurs once in the Ḳurʾān, XIII, 12/11, applied to God in the sense of "patron, protector". See on aspects of the function of the governor in mediaeval Islamic times, amīr. A near-synonym is *ḥākim* "one who exercises power, jurisdiction, etc." Under the Ottomans, the *wālī*, also termed *pasha* [*q.v.*], was the governor of a province, *eyālet* or *wilāyet*; see Pakalın, i, 577-8.

In contemporary North Africa and the Middle East as far east as Afghānistān, various terms are employed for the administrative divisions of the province, including *wilāya, muḥāfaẓa, imāra, liwāʾ* and *ustān* in Arabic and Persian usage, and *il* in modern Turkey, with corresponding titles for their governors like *wālī, muḥāfiẓ, amīr*, etc. (Ed.)

WALĪ (a., pl. *awliyāʾ*), indicates a friend of God or a saint, often also a mystic in general.

1. General survey.

Walī is a *faʿīl* form of the root *w-l-y* with the meaning of "to be near". The one who is near is also a friend, he possesses friendship (*wilāya* [*q.v.*]) (more rarely *walāya*; for a discussion of these two forms, see Corbin, *En Islam iranien*, iii, 9-10; Chodkiewicz, *Sceau*, 34). But in some way, the *walī* also acquires his friend's, i.e. God's, good qualities, and therefore he possesses particular authority, forces, capacities and abilities. In the Ḳurʾān, the adjective *walī* is also applied to God, Who is the believers' friend (II, 257). Ḳurʾān and *ḥadīth* do not know the concept of exceptional, blessed people who are close to God, but by the 2nd/8th century it seems to have been accepted (van Ess, *Theologie*, ii, 89-90; Radtke-O'Kane, *The concept of sainthood*, 109-10; Radtke, *Drei Schriften*, ii, 68-9). In many aspects, its origin is obscure; ancient Christian and Jewish elements can be recognised (Mach, *Der Zaddik*, 134-46). Stories about the wonderful deeds of God's friends also seem to have been collected and transmitted at an early stage, among others by Ibn Abi 'l-Dunyā (d. 281/894 [*q.v.*]). He wrote the *Kitāb al-Awliyāʾ*, the earliest compilation on the theme of God's friends; Abū Nuʿaym al-Iṣfahānī (d. 948/1038 [*q.v.*]) made use of it in his *Ḥilyat al-awliyāʾ*. Ibn Abi 'l-Dunyā's work does not show any method or explanation, but some writings dating from the second half of the 3rd/9th century had already passed the stage

of pure compiling. The Baghdādī Ṣūfī Abū Saʿīd al-Kharrāz (d. probably 286/899 [see AL-KHARRĀZ]) wrote a short treatise *Kitāb al-Kashf wa 'l-bayān*. Dealing with a number of questions concerning the theme of *awliyā'/wilāya*, he discusses (1) the relation between the friends of God and the Prophet, and opposes the opinion of mystics, whose names he does not mention, according to whom the friend of God is higher in rank than the Prophet; (2) the question whether the friend of God receives inspiration (*ilhām*); and (3) the distinction between the miracles of the prophets (*āyāt*) and those of God's friends (*karāmāt*).

Further writings, which not only deal in much greater detail with the themes treated by al-Kharrāz but already develop the entire concept of the friend of God and friendship with God, came from al-Ḥakīm al-Tirmidhī (d. between 295/907 and 300/912 [*q.v.*]). Later authors, such as Ibn al-ʿArabī (see below), would in principle only develop further the questions first raised by al-Ḥakīm al-Tirmidhī. Basically, they are dealt with in his famous treatise *Sīrat al-awliyā'*, also known as *Khatm al-awliyā'* or *Khatm al-wilāya*. Next to this main work there exist two other writings by al-Tirmidhī on the theme of the friend of God. One is called *al-Farḳ bayn al-āyāt wa 'l-karāmāt*, the first monograph on the possibility of miracles worked by God's friends and their relation with the miracles of the prophets. After an introduction, which is based on proofs taken from Holy Scripture and on psychological observations, but does not show any knowledge of scholastic-rational proofs, al-Tirmidhī adduces more than sixty stories on friends of God from early times. The greater part is also found in the works of Ibn Abi 'l-Dunyā and of Abū Nuʿaym al-Iṣfahānī. The other work by al-Tirmidhī on the theme is his autobiography *Bad' sha'n Abī ʿAbd Allāh*. It is the first autobiography of a Muslim mystic before al-Ghazālī's *Munḳidh min al-ḍalāl*.

The *Sīrat al-awliyā'* begins with the fundamental distinction between two classes of friends of God, the *walī ḥaḳḳ Allāh* and the *walī Allāh*. If the *walī ḥaḳḳ Allāh* wants to come near to God on the mystical path, he can only achieve this by observing the obligations of the divine legal order (*ḥaḳḳ*) with all his inner power, while the *walī Allāh* reaches his aim through divine grace. The former is obliged to walk on the path encumbered with all sorts of hardships: he is a *sālik*, while the latter is exempted from this toil; he is attracted to God by God and is a *madjdhūb* [*q.v.*]. In later Ṣūfism, this opposition, represented here for the first time in a systematic way, was to play an important role. Other terms used by al-Ḥakīm al-Tirmidhī for the two classes of mystics are *muhtadī* (rightly guided) and *mudjtabā* (elected).

For al-Tirmidhī, the path, i.e. the journey to God, means a delving into the inner self on the one hand and the ascent to God through the macrocosmos on the other, it is a journey to heaven (*miʿrādj* [*q.v.*]). The ascent of the *walī ḥaḳḳ Allāh* must stop at the end of the created cosmos, God's throne. He can attain God's proximity, but not God Himself; he is only admitted to God's proximity (*muḳarrab*). It is the *walī Allāh* who reaches God. Ascent beyond God's throne means to traverse consciously the realms of light of the divine names which, in gnostic tradition, are grouped hierarchically around God's unknowable essence. When the *walī Allāh* has traversed all the realms of the divine names, i.e. has come to know God in His names as completely as possible, he is then extinguished in God's essence. His soul, his ego, is eliminated and he is in God's hands. When he acts, it is God Who acts through him. And so the state of extinction means at the same time the highest degree of activity in this world.

The friend of God, therefore, is recognisable in the world because of a number of external characteristics: (1) when people see him, they are automatically reminded of God; (2) anyone who advances towards him in a hostile way is destroyed; (3) he possesses the gift of clairvoyance (*firāsa*); (4) he receives divine inspiration (*ilhām*); (5) he can work miracles (*karāmāt* [*q.v.*]) like walking on water (*al-mashy ʿalā 'l-mā'*) and shortening space and time (*ṭayy al-arḍ*); and (6) he associates with al-Khaḍir [*q.v.*] (for this list, see Radtke, *Drei Schriften*, ii, 82, § 80; Radtke-O'Kane, *The concept of sainthood*, 124-5; for further miracles, see Radtke, *Miracles*, where an analysis of al-Tirmidhī's *Farḳ* is given). This list of themes from now on forms a constant element of the discussion on God's friends and friendship with God.

In this way the friend of God not only knows that he is indeed God's friend—this question is raised at the very beginning of the *Sīrat al-awliyā'*—but he can also be sure of eternal bliss. This is communicated to him through good tidings from God (*bushrā*), for, though he is not sinless (*maʿṣūm*) like the Prophet, he is preserved from sin (*maḥfūẓ*). The good tidings can be transmitted to him in dreams or by divine inspiration (*ilhām*). In his autobiography, al-Tirmidhī imparts a number of such dreams.

Divine inspiration of a friend of God is never in contradiction to the Prophet's revelation (*waḥy*) or law, for notwithstanding the high blessing he has received, his spiritual rank is lower than that of the Prophet. His life and its stages come about in the external and internal imitation of the Prophet, he is the latter's real heir, for God's friends, contrary to a *ḥadīth* of the Prophet, are the true heirs of the prophets (*al-awliyā' warathat al-anbiyā'*).

Just as in the case with Muḥammad, who is the seal of prophecy or of the prophets (*khatm al-nubuwwa/al-anbiyā'*), and as such the last and most complete of them, there exists a hierarchy among God's friends. Indications for this idea are already found in the 2nd/8th century, but here, too, al-Tirmidhī is the first of whom it can be said that he gives the broad outlines of a systematic presentation. Forty elected *awliyā'*—other names are *ṣiddīḳīn*, *abdāl* [*q.v.*], *umanā'* and *nuṣaḥā'*—after the Prophet's death took over control of the world, each one of them exercising it in temporal succession. The fact that they exist is a guarantee for the continuing existence of the world. Among them is a group of seven who are especially blessed. As runners-up of creation, the forty friends of God form, after the prophets, the second spiritual hierarchy of the cosmos. In the same way as in the prophets' hierarchy, there is within the friendship with God or among the friends of God a highest, perfect one, the seal (*khatm al-wilāya; khātam/khātim al-wilāya/al-awliyā'*); as is clear from his autobiography, al-Tirmidhī considered himself as this highest friend of God.

Al-Tirmidhī's new creation of *khatm al-wilāya*, in particular, had a wide effect. The concept was taken up and further developed by Ibn al-ʿArabī, and through him it entered later Ṣūfism. But for almost three centuries, al-Ḥakīm al-Tirmidhī's systematic position vis-à-vis *walī* and *wilāya* remained without successor in Ṣūfī mystical writings. The concept *khatm al-wilāya* was avoided, the comparison with the Prophet being shunned. With the exception of the *Kashf al-maḥdjūb* by the Persian Hudjwīrī (d. *ca.* 465/1072 [*q.v.*]), which is based on al-Tirmidhī, the authors of the basic hand-

books speak only briefly of the theme of the friend of God. Among them, mention should be made of al-Kalābādhī (d. *ca.* 380/990 [*q.v.*]), of Abū Naṣr al-Sarrādj (d. 378/988 [*q.v.*]), of Abū Ṭālib al-Makkī (d. 386/996 [*q.v.*]), of Abū Nuʿaym al-Iṣfahānī and of al-Ḳushayrī (d. 465/1072 [*q.vv.*]) (for details, see Chodkiewicz, *Sceau*, 41-64). It is discussed whether the friend of God can work miracles, can be recognised while in this world, and can know that he himself is a friend of God. The wording often seems to have been borrowed verbatim from al-Tirmidhī without the authors mentioning him; this is the case with al-Ḳushayrī's *Risāla*. ʿAbd al-Ḳādir al-Djīlānī (d. 561/1166 [*q.v.*]), the progenitor of the Ḳādiriyya, also borrowed extensively from al-Tirmidhī's *Sīrat al-awliyāʾ* (*Drei Schriften*, i, introd., 7-9). Al-Tirmidhī's presentation of the hierarchy of the saints is taken over and slightly modified by ʿAmmār al-Bidlīsī (d. between 590/1194 and 604/1207), the teacher of Nadjm al-Dīn Kubrā (d. 617/1220 [see KUBRĀ, NADJM AL-DĪN]; he uses in particular the concept of *khatm al-wilāya* for the first time since al-Tirmidhī (Badeen, *Bidlīsī*). Rūzbihān-i Baḳlī (d. 606/1209 [*q.v.*]) not only wrote an autobiography, like Ḥakīm al-Tirmidhī, but also knew a highly developed hierarchy of God's friends. The theological-scholastical literature (for a summary, see Gramlich, *Wunder*, 94-110; Fakhr al-Dīn al-Rāzī's Ḳurʾān commentary is particularly detailed) discusses above all whether miracles worked by saints can stand up to intellectual scrutiny. The Muʿtazilīs denied them, whereas the Ashʿarīs in general admitted them. The scholastic arguments have survived until today and still serve to justify the miracles worked by saints (Radtke, *Traditionalismus*, 243-50).

Until modern times, the discussion has been shaped by Ibn al-ʿArabī, who in substance adopted al-Ḥakīm al-Tirmidhī's basic themes about the *walī*. In the *Futūḥāt makkiyya* (ch. lxxiii) and in a smaller work (*Tirmidiana minora*, 277-8), he comments on a section of al-Tirmidhī's *Sīrat al-awliyāʾ*. It is true that the commentary does not contribute anything to the understanding of al-Tirmidhī's text; the latter is for Ibn al-ʿArabī only a peg on which he can hang his own system and develop it. As is the case with al-Tirmidhī, the theory of the *walī* is entirely embedded in an Islamic cosmological and prophetological system (for the latter, see the works by Nyberg, Afifi, Chodkiewicz and Chittick). Two ways of al-Tirmidhī's doctrine are substantially elaborated upon by Ibn al-ʿArabī. One is that the hierarchy of God's friends is fundamentally differentiated [see ḲUṬB], the other that the concept of *khatm al-wilāya* is expanded, because Ibn al-ʿArabī introduces various kinds of *wilāya* [*q.v.*] (Chodkiewicz, *Sceau*, 65-78). Via Saʿd al-Dīn al-Ḥammūʾī (d. 649/1252 [*q.v.*]), who belonged to Ibn al-ʿArabī's school, the latter's doctrines reached such authors as ʿAzīz-i Nasafī (d. *ca.* 700/1300) in the Persian-speaking regions. A renaissance of the *khatm al-wilāya* doctrine can be observed particularly in the 18th and 19th centuries. Aḥmad al-Tidjānī (d. 1230/1815), the founder of the Tidjāniyya [*q.v.*], and Muḥammad ʿUthmān al-Mīrghanī (d. 1268/1851), the founder of the Khatmiyya, adopted for themselves the title *khatm al-wilāya*, to which the latter order owes its name [see MĪRGHANIYYA]. It is not only during his lifetime that the friend of God possesses extraordinary powers. After his death, too, he acts as a mediator with God; his help can be sought (*tawassul, istighātha*). His tomb confers blessings (*baraka*), which can also be obtained through pilgrimage. The aim of the latter is to obtain blessings through the friend of God (*tabarraka*). For this reason, everywhere in the Islamic world there arose centres for the veneration of saints. For opponents of Ṣūfism such as Ibn Taymiyya (d. 728/1328 [*q.v.*]) and the Wahhābīs, these practices are an abomination, because the latter see in them a form of idolatry (*shirk*). While expanding their territory, the Wahhābīs destroyed the tombs of saints wherever they were able.

Stories about the lives of outstanding friends of God lived on among their disciples, and especially in their families. Some time after the death of the friend of God, they were collected in biographies, from which arose Islamic hagiography [see MANĀḲIB]. The first of these lives of saints are written in Arabic, but they have only been preserved in Persian translation, as in the case of Ibn Khafīf (d. 371/982 [*q.v.*]) and of Abū Isḥāḳ Kāzarūnī (d. 426/1033 [*q.v.*]). These lives often have little historical value. The authors, mostly members of the saint's family, of his school or of his order, are concerned with the glorification of the saint by proving that he possessed extraordinary blessings and powers.

It is not only movements such as the Salafiyya [*q.v.*] and the Wahhābiyya which, inside the framework of Islamic theology, have formed a front against the veneration and theory of saints. Since the 19th century, proponents of the *walī* concept have also had to assert themselves against the attacks of Western rationalism. Convincing answers are not yet at hand (Radtke, *Traditionalismus*, esp. 255-7).

(B. Radtke)

2. In North Africa.

The saint (*walī*, also *sayyid* or *ṣāliḥ*) has played an essential role in the religious and social life of the Maghrib for more or less a millennium.

Historical development. Historically speaking, the first figures of ascetics, popularly admired and with followings, appear in Ifrīḳiya in the 4th-5th/10th-11th centuries (cf. H.R. Idris (ed.), *Manâqib d'Abû Isḥâq al-Jabnyânî et de Muhriz b. Khalaf*, Paris 1959). But we depend here on few written sources, and the phenomenon may well be older. The outstanding, prominent figures here appear rather to the west of that region. Abū Yaʿzā (or Yaʿazzā, d. 572/1177) was the typical illiterate, charismatic and miracle-mongering saint (see Y. Lobignac, *Un saint berbère, Moulay Ben Azza*, in *Hésperis*, xxxi [1944], and E. Dermenghem, *Le culte des saints dans l'Islam maghrébin*, Paris 1954, [2]1982). His contemporary Ibn Ḥirzihim (d. 559/1163) was more cultivated but had nevertheless a very popular reputation.

Abū Madyan (d. 594/1197) was a spiritual disciple of these preceding two saints, and was the first figure in Maghribī Ṣūfism to exercise an influence beyond his own region. This Andalusī went to the East where he may have met some of the great masters, e.g. ʿAbd al-Ḳādir al-Djīlānī. On returning, he settled at Bougie and formed a circle of disciples, headed for the Almohad court of Yaʿḳūb al-Manṣūr at Marrakesh, and died en route at Tlemcen, whose patron saint he became (see ABŪ MADYAN and A. Bel, *Sidi Bou Medyan et son maître Ed-Daqqâq à Fès*, in *Mélanges René Basset*, Paris 1923, i, 30-68; C. Addas, *Abū Madyan and Ibn ʿArabī*, in *Muhyiddin Ibn ʿArabi, a commemorative volume*, Shaftesbury 1993). One of his disciples was the saint from the Rīf ʿAbd al-Salām Ibn Mashīsh [see ʿABD AL-SALĀM], who was rather sparsely noticed in his lifetime but had a posthumous fame through his being recognised as a master and a "pole" by Abu 'l-Ḥasan al-Shādhilī [*q.v.*]. It is with this last (d. 656/1258 in Upper Egypt), and especially his disciples of the 8th-9th/14th-15th centuries [see IBN ʿAṬĀʾ ALLĀH and SHĀDHILIYYA, with *Bibls.*] that the Ṣūfism of the brotherhoods appeared and enjoyed a spectacular rise in the Maghrib.

Among the main saints of the ensuing period, one may note the heads of brotherhoods like the Fāsī Aḥmad al-Zarrūḳ (d. 899/1494), educated in Egypt, but exercising his reformist influence first in Morocco and then Libya (see A.F. Khushaim, *Zarruq the Sufi*, Tripoli 1976). Also within the Shādhiliyya was Abū ʿAbd Allāh Muḥammad al-Djazūlī [*q.v.*], who returned to Morocco after a long trip to the East and then began a life as a hermit. But his preaching, his reputation as a thaumaturge and his Sharīfī birth ensured him a prodigious success. He died *ca.* 869/1465 and his body, after several delays, was buried at Marrakesh, where he became one of the city's seven patron saints. The Ṣūfī tradition was periodically given fresh life by notable personalities such as Muḥammad b. Nāṣir from southern Morocco, or the Shādhilī Abū Ḥāmid al-ʿArabī al-Darḳāwī (d. 1823 [see DARḲĀWA]), whose influence spread all over the western and central Maghrib. Aḥmad al-Tidjānī (1737-1815 [*q.v.*]) was initiated into many orders before founding at ʿAyn Māḍī near Laghouat in what is now Algeria his own *zāwiya*, which spread especially into Morocco and then into Sudanic Africa (see J.M. Abun-Nasr, *The Tijaniyya, a Sufi order in the modern world*, London 1965). Another type of active, organising saint was al-Sanūsī (*q.v.*, and also K.S. Vikør, *Sufi and scholar on the desert edge. Muhammad ben ʿAlī Sanūsī*, London 1995). More recently still, the charisma and the activity of Aḥmad b. ʿAlīwa of Mustaghānim (d. 1934) marked his age, although he was rather too late to become a *walī* in the traditional sense (see IBN ʿALĪWA, and M. Lings, *A Moslem saint of the twentieth century, Shaikh Ahmad al-ʿAlawī*, London 1961, Fr. tr. *Un saint musulman du 20e siècle, le cheikh Ahmad al-ʿAlawī*, Paris 1984).

Characteristics. This development of the *walī*'s role over a millennium, coupled with the great geographical and social diversity (town vs. village) and cultural traditions (Berber, Bedouin), produced a great diversity of images of saints. Hagiography nevertheless allows us to discern a certain number of dominant types found in one region or another or at one time or another. The most current profile is of the pure, ascetic Sunnī, refusing all ostentation. The quality and amount of his education matters little, and even when he is a scholar, it is not his doctrinal works or poetry which attach the hearts of his disciples to him. On the other hand, he is clearly charismatic, and his miracles (*karāmāt*) are innumerable but stereotypical: reading people's thoughts, cures, bilocations, visions, etc. He is often the head of a brotherhood. But other profiles exist at the side of this one. Hence the popularity of the ecstatic and eccentric saint (*madjdhūb*); Shūdhī and his pupil Ibn al-Marʾa (d. 611/1214; cf. Dermenghem, *op. cit.*) or ʿAlī al-Ṣanhādjī (10th/16th century) and his pupil ʿAbd al-Raḥmān al-Madjdhūb (d. 976/1569; see A.L. de Premare, *Sîdî ʿAbder-Rahmân al-Medjdûb*, Paris-Rabat 1985) remain till today popular figures. Moreover, the antinomian saint, who hides his interior states with a veil of conduct which may be habitually shocking, illustrates the *malāmatī* tradition in the Maghrib; thus Aḥmad Abu 'l-ʿAbbās b. al-ʿArūs, one of the patron saints of Tunis (d.

868/1463; cf. Brunschvig, *Ḥafṣides*, ii) has remained famous for his provocative behaviour and his outrageous sayings. Sometimes saints have been warriors, *murābiṭūn*, who have died as martyrs. One should also note that Maghribī sainthood is by no means confined to men, and certain women have marked the memories of the faithful; some of the tombs of female saints are very frequently visited. Nor are saints exclusively Muslim; Jewish saints may be respected well beyond their own communities of origin and vice-versa. Popular sainthood, bursting out of a framework of the brotherhoods, sometimes shows very old features probably stemming from a pre-Islamic "shamanism"; thus the ʿĪsāwiyya claim to stem from the Shādhilī-Djazūlī master Muḥammad b. ʿĪsā al-Mukhtār (d. 931/1524; cf. R. Brunel, *Essai sur la confrérie religieuse des Aïssaouas au Maroc*, Paris 1926), although this last would probably have been surprised to have been present at the therapeutic rituals, of animist inspiration, practised by certain branches of the brotherhood. An analogous remark can be made in regard to ʿAlī b. Ḥamdūsh and the Moroccan brotherhood of the Ḥamdūshiyya (see V. Crapanzano, *The Hamadsha, a study in Moroccan ethnopsychology*, Berkeley, etc. 1973).

This extreme veneration for saints stems from the basic, cosmic function attributed to *awliyāʾ*. These last are viewed as active members of the spiritual hierarchy of friends of God, and it often happens that great saints are seen attributing to themselves the function of *ḳuṭb* [*q.v.*] (Ibn Mashīsh, al-Shādhilī, etc.). The saint assures for his close retainers and adepts not only his spiritual guidance and strength but also material prosperity, and he is an intercessor with the supernatural world. His presence diffuses *baraka* or spiritual blessing, which his entourage tries to acquire for aims often far removed from purely spiritual ones (health, social success, etc.) through practices common to magic: whence the recitation for secular aims of ejaculatory prayers (*ḥizb*) taught by the saints. Thus within the Djazūlī current, the connection with the saint is lightened to the far limit of its strictly mystical dimension. The diffusing of *baraka* is made possible by a fairly simple allegiance and devotional rites like recital of the litanies of the *Dalāʾil al-khayrāt*, without there being any question of asceticism or a long spiritual journey. One should further note how the development of Sharīfism has played a certain role in the tone of Maghribī sainthood, especially from Marīnid times onward; Idrīsid Sharīfī origins are therefore attributed to Ibn Mashīsh, al-Shādhilī and al-Djazūlī. The spreading of *baraka*, according to such masters as al-Djazūlī, can be effected not only through the spiritual successors of Muḥammad, which the saints are, but also by his genealogical descendants.

The *walī*'s role as protector of a place may be considerable. Certain patron saints are well known, such as Ibn ʿArūs for Tunis, Abū Madyan for Tlemcen, Mawlāy Idrīs for Fās, etc. But one should also take into account thousands of minor, local saints whose tombs remain visible in villages or the quarters of towns, little-known, anonymous, sometimes even legendary. Even though history can find hardly anything to say about them, their presence and their social efficacity can be immense. They remain, in effect, very much alive at their tomb, to the point that the person's name most often serves to denote the place. The rituals can be purely private, but the patronal festivals (*mawsim, mawlid* [*q.vv.*]) give rise to massed groups with Ḳurʾān recitations, *dhikr*s, processions and fairs. Among the most important should be mentioned those of Mawlāy Idrīs at Fās, of Muḥammad b. ʿĪsā at Meknès and Ibn Mashīsh in the Rīf. But basically, it is not really necessary for the saint to have been really buried in the spot in question, as shown by the number of *maḳāms* of ʿAbd al-Ḳādir al-Djīlānī in the Maghrib, who in any case never went to the Maghrib. Protection and intercession are drawn and raised by the effect of the rites rather than by a sanctity attached to the place itself.

3. In the Arab lands of the Fertile Crescent [see Suppl.].

4. In Turkey, the Balkans, the Caucasus and Ādharbāydjān.

Saints play an important role here, especially in connection with the cults which have grown up around their tombs (*ziyāra*). Between the Turks of the Balkans and Anatolia, and those in Central Asia, despite the distance separating them, the concept of the saint and the organisation of pilgrimages displays no fundamental differences. This concept of sainthood derives its originality from the syncretic character of Turkish Islam, which has incorporated certain beliefs and practices from earlier cults, such as animism, shamanism,

Buddhism, Zoroastrianism and Christianity (in the study of the phenomenon of sainthood, it is not always easy to separate the various regions of the Turkish world, but for a detailed consideration of the situation in Central Asia, see 5. below).

These elements are particularly discernible in the saints of the 10th to the 14th centuries before being opposed by the *'ulamā'*, the representatives of orthodoxy. They nevertheless maintained themselves in certain out-of-the-way parts of Central Asia, especially in rural areas and amongst nomads of the whole Turkish world (e.g. amongst the Yürüks, Takhtadjīs [*q.vv.*] and 'Alewīs in Anatolia). One may note e.g. that the earliest Turkish saints, such as Aḥmad Yasawī and Ḥādjdjī Bektāsh Walī [*q.vv.*], performed miracles reminiscent of those of Central Asian shamans (changing into birds and totemistic creatures like the crane or deer; raising a man to life from his bones; etc.). Such saints were generally to be found amongst the Bektāshī, Yasawī and Ḳalandarī holy men. On the other hand, the Turkish saint often corresponded to the usual image of the Muslim holy man, often the founder or an adept of Ṣūfī orders like the Naḳshbandiyya, Ḳādiriyya, Khalwatiyya, etc. One should bear in mind, too, that in the Turkish world sainthood is the product of two factors: the ideal of the holy war, *djihād*, marked by the spirit of *ghazw*, and Ṣūfism. This is understandable in the light of the fact that the Turkish world, over long centuries, was the object of campaigns of Islamisation conducted by Ṣūfīs, rather than by the *'ulamā'*, being at the origin of the conversion of some pagan rulers to Islam.

As well as the Arabic term *walī*, and the Persian *shāh* and *pīr*, saints in the Turkish world are denoted by Turkish terms like *baba* in Anatolia, *ata* in Central Asia (both meaning "father"), as well as *eren* or *ermish* (< *ermek* "to reach, attain") or *yatīr* ("one who settles down") in Anatolia. Saints' tombs are denoted by terms of Arabic or Persian origin alluding to the idea of pilgrimage (*mazār, ziyāratgāh*), tomb (*ḳabr, maḳbar*) or domed mausoleum (*gunbad, ḳubba*). But such tombs are also denoted by terms usually used for dervish convents, or a particular part of it (*tekke* in the Balkans, *langar* "refectory" and *ribāṭ* in Central Asia), or by a quality of the saint (*pīr* "venerable, respectable", in Ādharbāydjān).

Saints of the Turkish world may be classified into three categories. The first includes the *ghāzīs*, heroes of the Islamisation process and martyrs for the faith; the second, saints from the Ṣūfī milieu; and the third, the great figures of Islam and certain rulers.

The most representative types of the first in the regions under consideration are Abū Ayyūb al-Anṣārī (7th century [*q.v.*]), killed beneath the walls of Constantinople, Sayyid Baṭṭāl Ghāzī, who fought the Christians in Anatolia, and Ḳïzïl Deli Sulṭān, who converted Western Thrace to Islam. Religious figures and warriors who fought the Tsarist and Soviet Russians from the 18th to the early 20th century have also been canonised (the Imāms Manṣūr Ushurma and Shāmil [*q.vv.*] in the Caucasus, Ḳurbān Murād in Turkmenistan, etc.) or against Kemālist Turkey in the 20th century (Sheykh Es'ad and 'Abd al-Ḥakīm Arwāsī in Istanbul). Others in this category added the qualities of the Ṣūfī to their work of Islamisation, such as Ṣarï Ṣaltuḳ in Turkey and the Balkans, Ḥādjdjī Bektāsh, his disciple Ḥādjdjīm Sulṭān, and Abdāl Mūsā, in Anatolia, 'Othmān Baba in the Balkans, etc.

In the second, most important category, which includes the Ṣūfīs, one finds, in one group, those engaged in Islamisation and the fight against the infidels (a process which came to an end in Turkey in the 15th-16th centuries, but which continued in Central Asia up to the opening of the 20th century), and in the other group, those Ṣūfīs wholly occupied by their spiritual mission. These last include the founders of the great *ṭarīḳas* of the Turkish world plus their pupils and spiritual descendants: the Naḳshbandī Emīr Bukhārī at Istanbul; the Khalwatīs Merkez Efendi and Ḳodja Muṣṭafā Pasha and the Ḳādirī Ismā'īl Rūmī at Istanbul; Mawlānā Djalāl al-Dīn Rūmī at Ḳonya; Ḥādjdjī Bektāsh Walī in Anatolia; etc.

In the third category are to be found both Biblical figures (Daniel's tomb at Tarsus in southern Turkey), figures from the Ḳur'ān or Islamic history (tombs of Khiḍr in several places, etc.), and theologians. Amongst the rulers around whom a cult grew up, one might mention the Ottomans Bāyezīd II and 'Abd al-Ḥamīd II [*q.vv.*] in Turkey.

In numerous cases, the spots chosen for a Muslim saint's tomb could be either exceptional places already sacred from pagan times (hill tops, springs, grottoes, large rocks, etc.) or ruins of sanctuaries connected with pre-Islamic religious cults. Most of the mausolea in Eastern Turkestan were built on a spot where there had previously been Buddhist monasteries or funerary monuments (Kuhmarī Mazār and Kum Rabāt Pādishāhīm at Khotan). Likewise, ancient Christian churches and monasteries were used in the Balkans and Anatolia (Ṣarï Ṣaltuḳ at Babaeski in Thrace, Khiḍr at Samarḳand). A Nestorian saint who has become a Muslim one in Kirghizistan has even been identified.

As for saints' tombs connected with the *ghāzī* tradition, these tend to be in strategically situated and protected places connected with the saint's military functions: the summits of hills (Gözdjü Baba in Istanbul and Muḥyī al-Dīn Abdāl in Eastern Thrace) or defiles (*derbend*) (Ḳïzïl Deli Sulṭān (Derbendī) in Western Thrace).

However, there are also in the Turkish world a certain number of towns which have always attracted saints and where tombs are very numerous. There exist pilgrims' guides for such towns, rich in historical details for the historical researcher: Istanbul (cf. Khodjazāde Aḥmed Ḥilmī, *Ziyāret-i ewliyā*, Istanbul 1325/1907-8), Bursa (cf. Meḥmed Shems el-Dīn, *Yādigār-i Shemsī*, Bursa 1332/1913-14), Bukhārā (cf. Nāṣir al-Dīn al-Ḥanafī al-Bukhārī, *Tuḥfat al-zā'irīn*, Novo-Bukhārā 1910), Samarḳand (cf. Muḥammad 'Abd al-Djalīl Samarḳandī, *Ḳandiyya*, ed. Īradj Afshār, in *Du risāla dar tārīkh-i mazārāt wa djughrāfiyā-yi Samarḳand*, Tehran 1367 *sh.*/1988).

On the architectural plane, there are several features which distinguish tombs of Turkish saints from those of the rest of the Islamic world. One might cite e.g. the remarkable height (sometimes 20 m) of the cenotaphs of certain Central Asian saints, the presence there of customs inherited from the steppe peoples like a tall mast with a horse's tail at its top and the presence of arms (axes, halberds, etc.) near the tombs of dervish *ghāzīs* in Anatolia.

The main saints' tombs with an active cult around them today are: in Turkey, those of Ḥādjdjī Bektāsh (Hacıbektaş), Mawlānā Djalāl al-Dīn (Ḳonya), Abū Ayyūb al-Anṣārī (Istanbul) and Ḥādjdjī Bayram Walī (Ankara); and in the Balkans, that of Aywaz Dede (Bosnia). The faithful, and especially women, who make up the greater part of the visitors to these shrines, address themselves directly to the saints or else through the intermediacy of the custodians of the shrines, hoping for their intercession (*shafā'a* [*q.v.*]) with God on their behalf. The reasons for such pleas are

various: illness, sterility, social success, etc. The offerings (money, cereals or beasts) given to the custodians are in the western Turkish world called *adak* (Tkish. *adamak* "to make a vow"), *nedhr* (Ar. *nadhara* "to vow, dedicate") and sometimes *niyāz* (Pers. "vow, supplication") (in Central Asia, one finds, additionally, *ṣadaḳa* (Ar. "pious gift") and the composite term *nadhr-niyāzmanlik*).

Denounced by the *'ulamā'*, and above all, by the Wahhābiyya [*q.v.*], the cult of saints was subsequently dismantled by the Soviets and the Kemālists, but has nevertheless survived and is at present enjoying a remarkable resurgence in both Turkey and Central Asia.

5. In Central Asia.

The veneration of saints in Central Asia, as elsewhere in the Muslim world, has usually been approached as a syncretic phenomenon fraught with "survivals" from pre-Islamic times, and as a "concession", in popular religion, either to a presumed indigenous attachment to deep-rooted non-Islamic practices, or to the psychological rigours, deemed unpalatable to the masses, of an austere monotheism. For Central Asia the weight of Soviet, Sovietological, nationalist, and antiquarian scholarship has left this approach deeply entrenched, with the result that antecedents for the veneration of Muslim saints in Central Asia are typically located, though unconvincingly, in Buddhist, Christian, Zoroastrian, "shamanist" or "national" traditions. The rich sources on the historical development of doctrine and practice focused on the *awliyā'* have been less often studied.

Early and fundamental doctrinal formulations regarding the *awliyā'* had, with al-Ḥakīm al-Tirmidhī (d. *ca.* 300/910 [*q.v.*]), a Central Asian locus; while al-Tirmidhī's formulations remained somewhat controversial, a more mainstream defence of the saints and their *karāmāt* was offered by the Bukhāran al-Kalābādhī (d. 385/995), and still later the Khʷārazmian Nadjm al-Dīn al-Kubrā (d. 618/1221) discussed the marks, qualities and stages of *walāya* [*q.v.*]. Doctrinal writings of later Central Asian Ṣūfīs have hardly begun to be explored; of pivotal importance in shaping and refining the Central Asian consensus on the notion of the *walī* were the writings of the Naḳshbandī *shaykh* Khʷādja Muḥammad Pārsā (d. 822/1419), especially his *Faṣl al-khiṭāb*, which became a basic work in Central Asian *madrasa* curricula down to the present century.

The *walī* is encountered only abstractly through doctrinal formulations, but is met more directly through hagiographical narratives inspired by his or her charismatic person or legacy; it is there that we often find the principal doctrinal issues and controversies regarding the *awliyā'* addressed in polemical contexts. The perennial issue of the relationship between *walāya* and *nubuwwa*, for instance, was injected into the rivalry between the Naḳshbandī and Yasawī orders by the 10th/16th-century Yasawī Ṣūfī Ḳāsim Shaykh of Karmīna, who criticised Naḳshbandī claims that the silent *dhikr* was superior to the vocal *dhikr*. Equating the former with *walāya* and the latter, through its public character, with *nubuwwa*, Ḳāsim Shaykh reportedly argued that, although sainthood is superior to prophethood, when those two qualities are combined in a single person (as in Muḥammad), it would be absurd, when *walāya* is found in one person and *nubuwwa* in another, for the saint to claim primacy over the prophet; hence Naḳshbandī partisans should not exalt their "hidden" and silent *dhikr* over the public "mission" of the *dhikr-i djahr* (Mīr Musayyab Bukhārī, *Kitāb-i maḳāmāt-i mashā'ikh*, ms. St. Petersburg University No. 854, fol. 520a).

Similarly, the much-discussed question of whether the saints are known to the world is cast in concrete political terms by Sayyid Manṣūr, another Yasawī *shaykh* of 10th/16th-century Transoxania, in a hagiographical narrative that assumes the equivalence between "*shaykh*" and "saint". Asked by a local ruler to serve as the *shaykh* in his domains (and implicitly his legitimiser), Sayyid Manṣūr agreed on condition that the ruler would publicly affirm his saintly status by exhibiting the external signs of deference and consultation; this was necessary, he explained to the ruler, because the public does not know the saints whom God creates, "but if you make me a *shaykh*, everyone will know" (Ḥazīnī, *Cevâhiru 'l-ebrâr min emvâc-ı bihâr*, facs. ed. Cihan Okuyucu Kayseri 1995, 171-2).

Perhaps the most fruitful venue for approaching the links between doctrinal systematisations and the actual experience of the *awliyā'*, public or private, are hagiographical traditions intended to legitimise individual saints and the communities associated with them, especially accounts formulated before the principle of a *silsila* linked to the Prophet emerged, by the 9th/15th century, as the definitive (if never quite exclusive) mark of legitimacy. Outside the *silsila* principle, we find appeals to many other sources of legitimacy and authority: to "charismatic" sanctity as demonstrated

simply through *karāmāt*; to transmitted sanctity conveyed through heredity, by receipt of a holy "legacy" or various spiritual insignia; or to "ascriptive" sanctity (claimed through attestations of status within classified hierarchies of saints, through the notion of "Uwaysī" transmission from the spirit of a deceased prophet or saint [see UWAYSIYYA], or simply through claims of divine *djadhba*). Often, of course, specific saints or their partisans appealed to different combinations of these and other legitimising principles. In any case, doctrinal defences of the legitimacy of the saints and their *karāmāt* found hagiographical adaptation in narratives evoking these various principles, typically in the context of overcoming the "rejection" (*inkār*) of a *shaykh* by his opponents, whether portrayed as formalist scholars or rival *shaykhs*.

The late 6th/12th and early 7th/13th centuries in Central Asia were especially productive of saints whose public memory has endured down to the present, above all in at least one of three major venues for ongoing "encounters" with a saint: (1) a *walī*'s spiritual descendants, in the form of a Ṣūfī order; (2) the putative natural descendants of a saint (who still form distinct social groups, despite Soviet-era efforts to dissolve such communities, throughout Central Asia); and (3) the most public aspect, the shrine. In this era lived the great Ṣūfīs adopted as the spiritual ancestors of the three major Central Asian orders: Aḥmad Yasawī (eponym of the Yasawī order, for whom the death-date customarily given, 562/1166-7, is probably a half-century too early), ʿAbd al-Khālik Ghudjduwānī (spiritual ancestor of the Khʷādjagānī and later Naḳshbandī traditions, d. most probably in 617/1220), and Nadjm al-Dīn al-Kubrā (d. 618/1221, to whom is traced the Kubrawī order). In addition to the Ṣūfī communities stemming from these saints, their shrines became pilgrimage centres and benefitted from state patronage; Yasawī, and probably Ghudjduwānī, were also known as the ancestors of prominent descent groups. More locally prominent in their own time, however, were several Central Asian "patron" saints whose memory was cultivated primarily among their descendants and at their shrines; these figures, known from historical and hagiographical sources of the 8th-9th/14th-15th centuries, include Burhān al-Dīn Ḳilič of Uzgand in the Farghāna valley; Maṣlaḥat al-Dīn Khudjandī; Nūr al-Dīn Baṣīr of Samarḳand; Badr al-Dīn Maydānī of Bukhārā; and Zayn al-Dīn Kūy-i ʿĀrifānī of Tashkent. None of these figures was clearly fitted into any *silsila*-defined Ṣūfī community; others of this era, such as Bābā Māčīn (Tashkent), Ḥakīm Ata (Khʷārazm), Zangī Ata (Tashkent), or Shaykh Khāwand-i Ṭahūr (Tashkent) came to be implicated in spiritual or hereditary lineages linked with Yasawī or Naḳshbandī figures.

The 9th/15th century witnessed the beginnings of a flowering of hagiographical literature linked in large measure to the rise of the great *silsila*-based Ṣūfī orders. Important collective biographies of the *ʿulamāʾ* (for the regions of Samarḳand, Balkh, Khʷārazm and, probably, Kāshghar) were produced in pre-Mongol Central Asia, and hagiographical material relevant to the region appears in the basic works of al-Sulamī, Anṣārī, Hudjwīrī and ʿAṭṭār, as well as in hagiographies devoted to saints such as Abū Saʿīd b. Abi ʾl-Khayr and Aḥmad-i Djām; nevertheless, individual and collective hagiographies are relatively rare in Central Asia until the 9th/15th century, which began with works devoted to Bahāʾ al-Dīn Naḳshband (especially the *Anīs al-ṭālibīn*, recently edited), saw the compilation of family-based hagiographies focused on Nūr al-Dīn Baṣīr and the Khʷādjagānī saint Amīr Kulāl, and ended with major literary compilations of saints' lives, sponsored at the Tīmūrid court in Harāt, such as Djāmī's *Nafaḥat al-uns* (and its Turkic translation by ʿAlī Shīr Nawāʾī, the *Nasāʾim al-maḥabba*) and Kamāl al-Dīn Gāzurgāhī's thematic *Madjālis al-ʿushshāḳ*. From the 10th/16th and 11th/17th centuries, a rich body of *ṭarīḳa*-based hagiographical literature may be regarded as the discursive reflection of the competitive rivalries among Ṣūfī communities; these largely unstudied works, extant in large numbers from the 10th/16th to the 19th centuries, offer important theoretical and practical perspectives on the role of the *walī* in society, by tracing the political and economic activities of Ṣūfī *shaykhs*. The 10th/16th century alone produced several works devoted to Khʷādja Aḥrār (of which the best known is the *Rashaḥāt-i ʿayn al-ḥayāt*), a series of hagiographies on the Naḳshbandī saint known as Makhdūm-i Aʿẓam and on the Djūybārī *shaykhs*, two substantial works on the Kubrawī *shaykh* Ḥusayn Khʷārazmī (the *Miftāḥ al-ṭālibīn* and the *Djāddat al-ʿāshiḳīn*), and (apparently) lost hagiographies on the Yasawī saints Khudāydād and Ḳāsim Shaykh (of which excerpts are preserved in 11th/17th-century Yasawī works).

Female saints are well represented in modern Central Asian shrine traditions (e.g. ʿAnbar Ana in Tashkent, Paraw Bibi near Gïzïl Arbat in Turkmenistan), and may be presumed to have been no less popular in the past; unfortunately, they are less often the subject of hagiographical accounts and usually appear formulaically grouped near the end of large collective hagiographies such as Djāmī's. An exception is a remarkable, though little studied, 10th/16th-century work entitled *Maẓhar al-ʿadjāʾib wa-madjmaʿ al-gharāʾib*, written by Ḥāfiẓ Baṣīr Khuzārī, on the life of a female saint called simply "Āghā-yi Buzurg", who lived near Bukhārā (see *Sobranie vostočnïkh rukopisey Akademii nauk Uzbekskoy SSR*, v [1960], no. 4137).

As suggested, the most public venue for encountering the *awliyāʾ* is the shrine. Our information on saints' shrines and pilgrimage in Central Asia from before the Mongol era is relatively sparse; we find some material on the shrines of Ḳutham b. ʿAbbās [*q.v.*] in Samarḳand, of Abū Ḥafṣ-i Kabīr in Bukhārā, and of Ḳutayba b. Muslim [*q.v.*] in the Farghāna valley, for instance, while the 6th/12th-century *Asrār al-tawḥīd* on the life of Abū Saʿīd b. Abi ʾl-Khayr [*q.v.*] offers rich evidence on the public prominence of saints' shrines in northern Khurāsān; the same century also saw the "discovery" of the shrine of ʿAlī near Balkh, and the emergence (at least into our sources) of the pattern of state patronage of shrines that would become much clearer by the Tīmūrid era (e.g. in Tīmūr's own patronage of shrines in Harāt, Shahr-i Sabz, Turkistān and Tirmidh). An unexplored source from the middle of the 6th/12th century promises new insights into the veneration of saints' shrines in Central Asia and Persia; the Persian *Laṭāʾif al-adhkār li ʾl-ḥuḍḍār wa ʾl-suffār*, written by Burhān al-Dīn Muḥammad b. ʿUmar al-Bukhārī, offers a "defence" of the practice of *ziyāra* and describes the major shrines of several towns along an itinerary leading from Bukhārā to Mecca and Medina. The work, preserved in a single manuscript in Dushanbe (see *Katalog vostočnïkh rukopisey Akademii nauk Tadzhikskoy SSR*, i, Stalinabad 1960, no. 188), has remained unstudied, but is of interest for the study of saints and shrines in the Muslim world at large (it predates the celebrated *Kitāb al-Ziyārāt* of ʿAlī al-Harawī [*q.v.*]—see Janine Sourdel-Thomine, *Guide des lieux de pèlerinage*, Damascus 1957—by half a century).

The legitimacy of visiting saints' tombs is still de-

fended in the 9th/15th-century *Tārīkh-i Mullāzāda*, written by a pupil of Khʷādja Muḥammad Pārsā, on the shrines of Bukhārā (in which shrines of Ṣūfīs appear alongside those of the city's jurists); the practice became such a definitive part of Central Asian religious life that later shrine guides—for Samarḳand, Balkh, Bukhārā, Khʷārazm, Sayrām and the Volga-Ural region—rarely bother to address at any length the possibility that *ziyāra* might be regarded as *bidʿa*. The veneration of saints at their shrines had by the 9th/15th century (and probably in fact much earlier) clearly become a central and accepted part of Muslim religious life, and the shrines themselves were not only the definitive features of Islamic religious geography in the region but the chief public "evidence" of the saints themselves (whether the shrine marked the grave of a pre-Islamic prophet, a member of Muḥammad's family, a martyr for the faith, an Islamiser, a communal ancestor or a Ṣūfī saint). Equivalents of the term *awliyā'* (with the plural used here as a singular) in modern Central Asian languages often refer simply to a shrine, whatever it is understood to signify, or to the entire cemetery typically centred upon a shrine, indicating a popular understanding of the saint's continued presence at the site. The shrines were the setting at which the *awliyā'*'s intercession was sought, not only for the private needs of health, fertility, success and solace but also for communal protection and solidarity; the shrine marked the continuing presence of the saint, and God's blessing, in his or her community, and the 18th-century romantic hagiography of the antinomian saint Mashrab could in effect forget the celebrated jurists buried in Bukhārā and declare that, were it not for the presence near that city of Bahā' al-Dīn Naḳshband's shrine, Bukhārā would be an infidel town (*Dīwāna-yi-Mashrab*, tr. N.S. Likoshin, Samarḳand 1915, 194).

In more recent times, the veneration of saints' shrines was the target of intense pressure during Soviet anti-religious campaigns; many local shrines were demolished—as recently as 1986, under Gorbachev—and both pilgrims and unofficial shrine custodians were subject to prosecution. Since 1990, shrines have enjoyed a remarkable revival throughout Central Asia, with reconstruction and repair undertaken by local constituencies, though often with renewed state patronage; little work has yet been done to gauge the effects of Soviet rule on traditional conceptions and practices focused on the saints of Central Asia, or on the re-emergence and reformulation of those traditions in post-Soviet times.

Bibliography: Few specifically Central Asian hagiographical works have been edited; some relevant works include ʿAbd Allāh Anṣārī, *Ṭabaḳāt al-ṣūfiyya*, ed. Muḥammad Sarwar Mawlā'ī, Tehran 1362/1983; Farīd al-Dīn ʿAṭṭār, *Tadhkirat al-awliyā'*, ed. Muḥammad Istiʿlāmī, Tehran 1347/1968, repr. 1370/1991; "Muʿīn al-fuḳarā'", *Tārīkh-i Mullāzāda*, ed. Aḥmad Gulčīn-i Maʿānī, Tehran 1339/1960; Djāmī, *Nafaḥāt al-uns*, ed. Maḥmūd ʿĀbidī, Tehran 1370/1991; Nawā'ī, *Nasā'im al-maḥabba*, ed. Kemal Eraslan, Istanbul 1979; Ṣalāḥ b. Mubārak Bukhārī, *Anīs al-ṭālibīn wa-ʿuddat al-sālikīn*, ed. Khalīl Ibrāhīm Ṣārī Oghlī, Tehran 1371/1992; ʿAlī b. Ḥusayn "Ṣāfī", *Rashaḥāt-i ʿayn al-ḥayāt*, ed. ʿAlī Asghar Muʿīnīyān, Tehran 2536/1977. A popular Turkic hagiography was published in K.G. Zaleman, *Legenda pro Khakim-Ata*, in *Izvestiya Akademii nauk*, St. Petersburg, ix/2 (1898), 105-50. See also the translation of J. O'Kane, *The secrets of God's mystical oneness or the spiritual stations of Shaikh Abu Saʿid (Asrār al-towḥid) (fi maqāmāt al-Šeyk Abi Saʿid)* [by] *Moḥammad Ebn-e Monavvar*, Costa Mesa, Calif. 1992. Useful studies of the development of Ṣūfī traditions in pre-Mongol Central Asia include F. Meier, *Abū Saʿīd-i Abū l-Ḥayr (357-440/967-1049): Wirklichkeit und Legende*, Leiden, Tehran and Liège 1976; Jacqueline Chabbi, *Remarques sur le développement historique des mouvements ascétiques et mystiques au Khurasan, IIIᵉ/IXᵉ siècle-IVᵉ/Xᵉ siècle*, in *SI*, xlvi (1977), 5-72; B. Radtke, *Al-Ḥakīm at-Tirmidhī—Ein islamischer Theosoph des 3./9. Jahrhunderts*, Freiburg 1980; idem, *Theologen und Mystiker in Ḫurāsān und Transoxanien*, in *ZDMG*, cxxxvi (1986), 536-69. For the post-Mongol era, see J. Aubin, *Un santon quhistānī de l'époque timouride*, in *REI*, xxxv (1967), 185-216; Jo-Ann Gross, *Multiple roles and perceptions of a Sufi Shaikh: symbolic statements of political and religious authority*, in *Naqshbandīs*, Istanbul and Paris 1990, 109-21; J. Paul, *Hagiographische Texte als historische Quelle*, in *Saeculum*, xli (1990), 17-43; idem, *Scheiche und Herrscher im Khanat Čaġatay*, in *Isl.*, lxvii (1990), 278-321; R.D. McChesney, *Waqf in Central Asia*, Princeton 1991; A.A. Semenov, *Unikal'nïy pamyatnik agiografičeskoy sredneaziatskoy literaturï XVI v.*, in *Izvestiya Uzbekistanskogo filiala AN SSSR* (1940), no. 12, 54-62 (1941), no. 3, 37-48; M. Hartmann, *Ein Heiligenstaat im Islam. Das Ende der Čaghataiden und die Herrschaft der Chogas in Kašgarien*, in *Der islamische Orient*, i, Berlin 1905, nos. 6-10, 195-374; A. Frank, *Islamic shrine catalogues and communal geography in the Volga-Ural region, 1788-1917*, in *JIS*, vii (1996), 265-86. On Central Asian developments of the Uwaysī conception, see J. Baldick, *Imaginary Muslims. The Uwaysi Sufis of Central Asia*, New York and London 1993, but see also the review article of D. DeWeese, in *CAJ*, xl (1996), 87-127, and DeWeese, *An "Uvaysi" Sufi in Timurid Mawarannahr. Notes on hagiography and the taxonomy of sanctity in the religious history of Central Asia, Papers on Inner Asia*, no. 22, Bloomington Ind. 1993. For shrine traditions, see H. Einzmann, *Religiöses Volksbrauchtum in Afghanistan. Islamische Heiligenverehrung und Wallfahrtswesen im Raum Kabul*, Wiesbaden 1977; for East Turkistān, see Hamada Masami, *Islamic saints and their mausoleums*, in *Acta Asiatica*, xxxiv (1978), 79-98. No substantial studies of shrine veneration in Russian-dominated Central Asia, before or after the Soviet collapse, have yet appeared; see the survey of Maria E. Subtelny, *The cult of holy places. Religious practices among Soviet Muslims*, in *MEJ*, xliii (1989), 593-604. A list of holy sites appears in J. Castagné, *Le culte des lieux saints de l'Islam au Turkestan*, in *L'Ethnographie*, xlvi (1951), 46-124, and see I.A. Kastan'e, *Drevnosti Kirgizskoy stepi i Orenburgskago kraya*, in *Trudï Orenburgskoy Učenoy Arkhivnoy Komissii*, vïp. 22 (1910). Reflective of local traditions of saints and shrines are W. Gordlevsky, *Choğa Aḥmed Jasevi*, in *Festschrift Georg Jacob*, ed. Th. Menzel, Leipzig 1932, 57-67; V.A. Shishkin, *Mazarï v Zangi-ata, [ʿIqd al-djumān]: V.V. Bartol'du turkestanskie druz'ia, učeniki i počitateli*, Tashkent 1927, 165-70; Yu. V. Knozorov, *Mazar Shamun-Nabi (Nekotorye perežitki domusul'manskikh verovaniy u narodov Khorezmskogo oazisa)*, in *Sovetskaya étnografiya*, 1949, no. 2, 86-97; DeWeese, *Sacred history for a Central Asian town. Saints, shrines, and legends of origin in histories of Sayrām, 18th-19th centuries*, in *RMMM*, forthcoming. Soviet-era ethnographic studies include V.N. Basilov, *Kul't svyatïkh v islame*, Moscow 1970; S.M. Demidov, *Turkmenskie ovlyadï* Ashkhabad 1976; Demidov, *Sufizm v Turkmenii*, Ashkhabad 1978; G.P. Snesarev, *Khorezmskie legendï kak istočnik po istorii religioznïkh kul'tov Sredney Azii*, Moscow 1983; and, still somewhat reflective of

Soviet approaches, R.M. Mustafina, *Predstavleniya, kul'ty, obryadī u kazakhov* (*v kontekste bytovogo islama v Yužnom Kazakhstane v kontse XIX-XX vv.*), Alma-Ata 1992. The genre is no longer productive, but Soviet anti-religious literature remains a useful source of information (despite its obvious biases) on the veneration of saints in 20th-century Central Asia; see, for example, Yu. G. Petrash, *Sviatīe mesta obmana*, Frunze 1961; T. Säksanov, *Muqäddäs jaylär—khurafat vä bid'ät ochaghi*, Tashkent 1984; S.M. Demidov, *Legendī i pravda o "svyatīkh" mestakh*, Ashkhabad 1988.

(D. DeWeese)

6. In Muslim India.

Since 1831 orientalists like Garcin de Tassy have underlined the importance of the saints of Islam in India. They are known in Arabic as *walī* and in Persian as *pīr*, terms which apply to a living saint as much as to one who is venerated after his death.

The existence of a cult of saints and a theory of saintliness is sporadically attested in India from the beginning of the presence of Muslims there. Holy individuals not as yet attached to Ṣūfī orders were worshipped in the region of Sind [*q.v.*] in present-day Pakistan when it was under Arab domination (from the 8th to the 11th centuries), then in the Pandjab [*q.v.*] under the Ghaznawids [*q.v.*] (11th to 12th centuries).

There in Lahore Hudjwīrī (d. *ca.* 1072 [*q.v.*]), was already venerated. He left the first treatise on Ṣūfism in Persian in his *Kashf al-mahdjūb*, an ambitious theory of saintliness, which stated that "God has saints (*awliyā*) whom He has specially distinguished by His friendship and whom He has chosen to be the governors of His kingdom ... He has made the saints governors of the universe ... Through the blessing of their advent the rain falls from heaven, and through the purity of their lives the plants spring up from the earth, and through their spiritual influence the Moslems gain victories over the unbelievers" (tr. R.A. Nicholson, 212-13); furthermore, he had already described the invisible hierarchy of the saints [see ABDĀL] who govern the world (*op. cit.*, 214).

The documented history of sainthood in India begins with the founding of the sultanate of Dihlī [see DIHLĪ, SULTANATE OF] in 1210, which established Muslim supremacy on the Indian subcontinent for six centuries, and the consolidation soon afterwards of the orders of mystics [see ṬARĪḲA]. From this time onwards it is possible to outline the history of sainthood in India within the context of the Ṣūfī orders until the 16th century, throughout the unified sultanate of the 13th-14th centuries, and then the regional sultanates of the 14th-16th centuries [see HIND. iv. History]. Mystical theology was dominated by the Čishtiyya [*q.v.*] who rivalled the Suhrawardiyya [*q.v.*]; and from the 15th century onwards the Ḳādiriyya [*q.v.*] was established. The minor brotherhoods, such as the Kubrawiyya [*q.v.*] in Kashmīr, and the Firdawsiyya and then the Shaṭṭāriyya [*q.v.*] in Eastern India, had a regional importance. In contrast to the socially respectable orders, which were obedient to the *Sharīʿa*, India was also familiar with less conventional orders described as *malāmatī* [*q.v.*], and more recently by the specifically Perso-Indian expression *bī sharʿ* [*q.v.*]; these included the Ḳalandariyya [*q.v.*] and the Madāriyya [see BADĪʿ AL-DĪN SHĀH MADĀR] in the north, and the Rifāʿiyya [*q.v.*] in the west and south of the subcontinent.

The conception of sainthood which prevailed among the brotherhood was inherited from Khurāsān and Central Asia. It was first to be seen in hagiography, in which the saints close to God are seen to be endowed with supernatural powers and able to perform miracles (*karāma* [*q.v.*]). They display these gifts in an ostentatious fashion, especially in the heteropraxic orders. Then there are those who are obliged to mediate between God and man, guiding man towards Him; the distress of the faithful is consoled and their illnesses cured by their intercession (*shafāʿa* [*q.v.*]). Saints also have a cosmic role, for they may have control over the rain and the crops, like Ghāzī Miyān [*q.v.*]. But in particular, they play a political role by assuring victory for the armies of Islam, like Muʿīn al-Dīn Čishtī (d. *ca.* 1234), to whom is attributed the foundation of the sultanate of Dihlī. Saints make and unmake kings, for sainthood (*walāya* or *wilāya*) really implies "the government of a territory" (*wilāya*). Therefore it was believed that from its inception the throne of Dihlī was controlled by the great saints of the Čishtiyya, in particular Niẓām al-Dīn Awliyāʾ [*q.v.*], and it is from this that there arises conflict-ridden relations between the saints and the sultans, who found it hard to tolerate this spiritual control.

In an India where Islam was very much in the minority, Muslim saints were also competing with Hindu mystics. Saints such as ʿAbd al-Ḳuddūs Gangohī (1456-1537) and Muḥammad Ghawth Gwāliyārī (1500-62), while not hesitating to use techniques such as yoga, were intent on showing the superiority of Islam in magical contexts. Their tombs are often to be found at resanctified former Buddhist or Hindu sites. The saint within the Dihlī sultanate was most often given a highly colourful character. Alongside the sages devoted to the spiritual improvement of their disciples, like Sharaf al-Dīn Yaḥya Manērī (d. 1391), representing the Firdawsiyya, emphasis was given to the ecstatic personalities who were enamoured of music and poetry. Ḳuṭb al-Dīn Bakhtiyār Kākī died at Dihlī in 1235 after four days of ecstasy spent singing the same Persian verses. A saint could become violent in the working of miracles in order to put an end to his own adversaries.

From the middle of the 14th century onwards, saintliness became the subject of theological discussions. The influence of Ibn al-ʿArabī spread, especially through the medium of the Kubrawiyya with ʿAlī al-Hamadānī (d. 1385 [*q.v.*]), and especially with Ashraf Djahāngīr al-Simnānī (d. 1436 [*q.v.*]), who passed on to membership of the Čishtiyya.

The Mughals (16th-18th centuries [*q.v.*]) beginning with Bābur, brought a new brotherhood from Central Asia, the Naḳshbandiyya [*q.v.*]. It developed theories of sainthood by aligning itself with Ibn al-ʿArabī, especially under the influence of Aḥmad Sirhindī [*q.v.*], the founder of the *mudjaddidiyya* branch. He gave a firm emphasis to the supremacy of the *Sharīʿa* and the superiority of prophecy (*nubuwwa*) over sainthood (*wilāya*); but this did not imply, as was wrongly thought, abandoning the traditional ideas of sainthood. Sirhindī and his son placed themselves at the top of an invisible hierarchy of saints with the title of *ḳayyūm*, which like the *ḳuṭb* [*q.v.*] played the role of the *axis mundi*. Today, the Naḳshbandiyya keep alive the mediaeval conception of sainthood and align themselves with the Barelwīs (see below) in venerating saints.

The Mughals also supported other orders: Humāyūn [*q.v.*] put trust in the Shaṭṭāriyya, especially in Muḥammad Ghawth (1500-62 [*q.v.*]), a great musician and a patron of musicians; Shāh Djahān and his son Dārā Shukōh favoured the Ḳādiriyya and saints like Miyān Mīr. But since Akbar, the true organiser of the empire, who renewed links with the traditions of the Dihlī sultanate, the dynasty was placed

under the protection of the Čis̲h̲tiyya. He generously donated the tomb of Muʿīn al-Dīn at Ad̲j̲mēr [*q.v.*], and he attributed the perpetuation of the dynasty to Salīm Čis̲h̲tī (d. 1571), constructing his new capital Fatḥpūr Sikrī [*q.v.*] around his tomb. In the 18th century the last Mug̲h̲als revived the cult of Ḳuṭb al-Dīn at Dihlī.

A definite cult certainly developed around thousands of saints. First, there were the great saints born outside India, especially the founders of the great brotherhoods like ʿAbd al-Ḳādir al-D̲j̲īlānī [*q.v.*]. Then there were the great historical characters of India, founders of Indian orders like Badīʿ al-Dīn, founder of the Madāriyya. There were also those who played a political or religious role in a particular region, among whom the most famous were those belonging to the Čis̲h̲tiyya, like Farīd al-Dīn (d. 1265) from Pak-Pattan, protector of the Pand̲j̲ab, Niẓām al-Dīn Awliyāʾ (d. 1325), the principal architect of the spiritual influence of the Dihlī sultanate, and Muḥammad Banda Nawāz Gēsū Darāz at Gulbarga, who consecrated the foundation of the Bahmanī sultanate in the Deccan [see BAHMANĪS]. The great saint of Bengal was the Suhrawardī D̲j̲alāl al-Dīn Tabrīzī (d. 1244). Besides these, each local branch of a brotherhood, each town and each village, even each lineage, had its local saints marking stages in religious history and covering the whole territory, and there are countless numbers of them. They fall into two groups, and they are traditionally arranged by Indian Muslims in poetry and religious manuals according to the cycle of their feasts in a double calendar: for one group (Islamic), it is the lunar calendar, and for the other group (Hindu), it is lunar and solar, for protectors of the crops, like G̲h̲āzī Miyān, must be celebrated according to the cycle of the seasons. Ethnologists have also classified the saints according to their function; thus in addition to the great all-powerful figures, there were others who specialised in curing this or that mental or physical ailment, such as G̲h̲āzī Miyān who cured leprosy, or those under the patronage of trade associations which were regrouped into castes in India [see HIND. ii. Ethnography; NEPAL], such as Ḥasan Telī, who protected the oil-pressers (*telī*), or those who were within the protected limits of a territory (villages, districts, houses).

Saints took over most of the functions of the divinities of the Hindu pantheon, and they appropriated for themselves ancient sacred sites. The cult was observed within certain buildings, which had at least to include a *mazār*, a tomb or a cenotaph of earth or stone. It could have other buildings, with varying degrees of elaboration, superimposed or surrounding it, including hospices for the servitors in charge (*k̲h̲ādim*, pl. *k̲h̲uddām*). These were generally the descendants of the saint or adherents of his mystical order, and they shared the income from the sanctuary. A large complex created in this way was called a *dargāh*, a royal palace, for the saint was treated like a sultan. The *ḳawwāls*, musicians of low status, were attached to the larger sanctuaries to perform mystic chants (*ḳawwālī*) in Persian and in Urdu.

Besides the daily devotions of the faithful, collective celebrations took place once every week (generally on a Thursday evening) or once every month. Great festivities were organised once a year on the anniversary of the death of the saint, which was called an *ʿurs*, meaning marriage (i.e. mystical marriage), the term *mawlid* not being used as in the Arab world. These festivals gave rise to pilgrimages [see ZIYĀRA].

These devotions gave rise to controversies as early as the 16th century, perhaps as a consequence of the spread of the doctrines of Ibn Taymiyya [*q.v.*], which were known (according to Ibn Baṭṭūṭa, iii, 252) as early as the reign of Muḥammad b. Tug̲h̲luḳ (1325-51). Women were forbidden to visit the tombs by Fīrūz S̲h̲āh Tug̲h̲luḳ (1351-88), and the processions in honour of G̲h̲āzī Miyān by Sikandār Lōdī (1489-1517) were banned. At the end of the 18th century S̲h̲āh Walī Allāh Dihlawī [see AL-DIHLAWĪ], and then his grandson Ismāʿīl S̲h̲ahīd [*q.v.*], a disciple of Aḥmad Brēlwī [*q.v.*] drew fresh inspiration from Ibn Taymiyya and reopened a controversy which can be traced up to the present day. Without denying the existence of saints, they denied them all powers of intercession. They condemned any devotion given to them and to their tombs. This doctrine was transmitted directly to the schools of Deoband and of the Ahl-i Ḥadīt̲h̲ [*q.vv.*], and indirectly to the modernists through the medium of Sir Sayyid Aḥmad K̲h̲ān, and to the fundamentalists who followed Abu ʾl-Aʿlā Mawdūdī [*q.vv.*]. In the face of these critics Aḥmad Riḍā K̲h̲ān of Bareilly reaffirmed the mediaeval position, reasserting the powers of the saints and justifying recourse to their intercession. His disciples formed the school of the Barelwīs. It is well organised within the framework of Pakistan but more informal elsewhere, and expresses a religiosity which remains predominant in the entire subcontinent.

Bibliography: For a general listing of works in the field and of sources, see J.A. Subhan, *Sufism, its saints and shrines: an introduction to the study of Sufism with special reference to India*, ²New York 1970 (¹1938); S.A.A. Rizvi, *A history of Sufism in India*, 2 vols. Veinstein (eds.), *Les ordres mystiques dans l'Islam. Cheminements et situation actuelle*, Paris 1986, 105-34; C.W. Troll (ed.), *Muslim shrines in India. Their character, history and significance*, Delhi 1989.

For the saints of Arab Sind, see D.N. Maclean, *Religion and society in Arab Sind*, Leiden 1989, 110-14; Hud̲j̲wīrī, see R.A. Nicholson, *The Kashf al-Maḥjúb, the oldest Persian treatise on Ṣúfism*.

On the nature of sainthood and the powers of the Indian saints according to the hagiography of the Dihlī Sultanate, see above all the synthesis of S. Digby, *Sufi Shaikh as a source of authority in Mediaeval India*, in Gaborieau (ed.), *Islam et société en Asie du Sud*, Paris 1986, 57-77; see also Digby, *ʿAbd al-Quddus Gangohi, 1456-1537. The personality and attitudes of a medieval Sufi*, in *Medieval India. A miscellany*, iii, Aligarh 1975, 1-66; idem, *Qalandars and related groups. Elements of social deviance in the religious life of the Delhi Sultanate*, in Y. Friedmann (ed.), *Islam in Asia*, i, *South Asia*, Jerusalem 1984, 60-108; idem, Shaykh *and* Sulṭān: *a conflict of claims to authority in medieval India*, in *Iran*, xxviii (1990), 71-81; idem, *To ride a tiger or a wall? Strategies of prestige in Indian Sufi legend*, in W.M. Cellewaert and R. Snell (eds.), *According to tradition. Hagiographical writing in India*, Wiesbaden 1994, 99-129; P.M. Currie, *The shrine and cult of Muin al-din Chishti of Ajmer*, Delhi 1989. See further the following translations and studies: B. Lawrence, *Notes from a distant flute. The extant literature of the pre-Mughal Indian Sufism*, Tehran 1978; idem, *Morals for the heart. Conversations of Shaykh Nizam ad-din Awliya*, New York 1992; P. Jackson, *Letters from Maneri, Sufi saint of medieval India*, New York 1980; idem, *The way of a Sufi. Sharafuddin Maneri*, Delhi 1987.

On the saints of the regional sultanates, see R.M. Eaton, *The Sufis of Bijapur, 1300-1700. Social roles of Sufis in medieval India*, Princeton 1978; idem, *The rise of Islam and the Bengal frontier, 1204-1760*, Berkeley, etc. 1993; C.W. Ernst, *Eternal garden. Mysticism, history and politics at a South Asian Sufi centre*, New York 1992.

The theological speculations about sainthood among the Naḳshbandiyya in the Mug̲h̲al and post-Mug̲h̲al periods are analysed in Friedmann, *Shaykh Aḥmad Sirhindī. An outline of his thought and a study of his image in the eyes of posterity*, Montreal 1971; J.G.J. ter Haar, *Follower and heir of the Prophet: Shaykh Ahmad Sirhindi (1564-1624) as a mystic*, Leiden 1992, 87-105; A.F. Buehler, *Sufi heirs of the Prophet. The Indian Nakshbandiyya and the rise of the mediatory Sufi Shaykh*, Columbia, S.C. 1998. On patronage of the Čis̲h̲tiyya under the Mug̲h̲als, see J.F. Richards, *The formation of imperial authority under Akbar and Jahangîr*, in idem (ed.), *Kingship and authority in South Asia*, Madison 1978, 252-89. The hagiography of the Ḳādiriyya in the Mug̲h̲al and post-Mug̲h̲al periods is studied by B. Lawrence, *Biography and the 17th century Qâdiriyya of North India*, in Anne L. Dallapicola and Stephanie Zingel-Ave Lallemant (eds.), *Islam and Indian regions*, Stuttgart 1993, i, 399-415.

For the veneration of saints, the traditional Islamic views, and the views of early orientalists, as well as the calendars, see Garcin de Tassy, *Mémoire sur les particularités de la religion musulmane en Inde*, in *JA* (1831), [2]Paris 1969, annotated Eng. tr., *Muslim festivals in India*, Delhi 1995; G.A. Herklots, *Islam in India or the Qânûn-i-Islam*, London 1832 (new annotated ed. W. Crooke, London 1921); on the calendars, see also C.W. Ernst, *An Indo-Persian guide to Sufi shrine pilgrimage*, in G.M. Smith and Ernst (eds.), *Manifestations of sainthood in Islam*, Istanbul 1993, 43-67.

For studies of ethnology and social history in general, see I. Ahmad, *Ritual and religion among Muslims in India*, Delhi 1981; Gaborieau, *The cult of saints among the Muslims of Nepal and Northern India*, in S. Wilson (ed.) *Saints and their cults. Studies in religious sociology, folklore and history*, Cambridge 1983, 291-308; Troll (ed.), *Muslim shrines in India. Their character, history and significance*, Delhi 1989.

Overviews of the veneration of saints in the different regions of the subcontinent are given by D. Matringe, *Pakistan*, Gaborieau and C. Champion, *Inde*, and Lyndell-Jones, *Bangladesh*, in H. Chambert-Loir and C. Guillot, (eds.), *Le culte des saints dans le monde musulman*, Paris 1995, 167-234; Gaborieau, *Pouvoirs et autorité des soufis dans l'Himalaya*, in V. Bouillier and G. Toffin (eds.), *Prêtrise, pouvoirs et autorité en Himalaya*, Paris 1989, 215-38; S. Bayly, *Saints, goddesses and kings. Muslims and Christians in South Indian society*, Cambridge 1989; J. Assayag, *Au confluent de deux rivières. Musulmans et Hindous au Sud de l'Inde*, Paris 1995; D.D. McGilvray, *Village Sufism in Sri Lanka*, in *Lettre d'information. La transmission du savoir dans la monde musulman périphérique* (Paris, EHESS), viii (1987), 1-12.

For detailed studies of the cult of the great saints, see e.g. P.M. Currie, *The shrine and cult of Muin al-din Chishti of Ajmer*, Delhi 1989; Eaton, *Court of Man, Court of God. Local perceptions of the shrine of Bâbâ Farîd, Pakpattan, Punjab*, in R.C. Martin (ed.), *Contributions to Asian Studies*, xxvii, *Islam in local contexts*, Leiden 1982, 44-61; Gaborieau, *Légende et culte du saint musulman Ghâzî Miyân au Népal occidental et en Inde du Nord*, in *Objets et Mondes*, xv/3-4 (1975), 289-318; idem, *Les saints, les eaux et les récoltes*, in M.A. Amir-Moezzi (ed.), *Lieux d'Islam, cultes et cultures de l'Afrique à Java*, Paris 1996, 239-54.

For the controversies around the cult of saints and the arguments of its opponents, see analyses in J.M.S. Baljon, *The religion and thought of Shâh Walî Allâh Dihlawî, 1703-1762*, Leiden 1986; idem, *Shah Wali Allah and the Dargah*, in Troll (ed.), *Muslim shrines in India*, 189-97; Gaborieau, *A nineteenth century Indian "Wahhabi" tract against the cult of Muslim saints*: al-Balāgh al-mubīn, in Troll, *op. cit.*, 198-239; idem, *Le culte des saints musulmans en tant que rituel: controverses juridiques*, in *Archives de sciences sociales des religions*, lxxxv (Jan.-March 1994), 85-97; idem, *Criticising the abuses of the Sufis: the debate in early nineteenth-century India*, in F. de Jong and B. Radtke (eds.), *Islamic mysticism contested. Thirteen centuries of controversies and polemics*, Leiden 1999. The position of the Deobandis and the Ahl-i Ḥadīt̲h̲ is presented in B.D. Metcalf, *Islamic revival in British India. Deoband, 1860-1900*, Princeton 1982. The reaffirmation of the mediaeval doctrine by the Barelwīs is analysed in U. Sanyal, *Devotional Islam and politics in British India. Ahmad Riza Khan Barelwi and his movement, 1870-1920*, Delhi 1996, 96-165. On Mawdūdī and the saints, see S.V.R. Nasr, *Mawdūdī and the making of Islamic revivalism*, New York 1996, 122-5.

(M. Gaborieau)

7. In Southeast Asia and Indonesia.

Veneration of saints has been well established in the classical Malay and Javanese worlds of Southeast Asia since at least the 15th century. Nine legendary figures, the famous *wali sanga* ("nine saints"), are thought to have planted Islam in Java and successfully displaced the old Hindu-Javanese political and socio-religious order in the northern coastal areas. With the exception of Mawlānā Mālik Ibrāhīm, who early went to Java as a missionary from abroad and is buried in Gresik (an elaborate Gud̲j̲arātī tombstone from 822/1419 marks his grave), the saints were accorded the Javanese title *sunan* ("eminence") and most were closely associated with particular places in Central and East Java: Sunan Ampel with Surabaya, Sunan Giri with Gresik, Sunan Kalijaga with Demak, Sunan Kudus (also known as D̲j̲aʿfar al-Ṣādiḳ) with Kudus, Sunan Gunung Jati with Ceribon, Sunan Bonang with Tuban, Sunan Drajat with Demak, and Sunan Muria (a son of Sunan Kalijaga) with Pati. Sunan Kalijaga is usually considered to be the greatest of the *wali sanga*. Additional personages are also sometimes grouped with the *wali sanga*, giving rise to modern scholarly speculation that the number nine was more a symbolic than arithmetical concept. As G.W.J. Drewes suggested: "In Hindu-Javanese cosmological mythology, nine was a very important number, and it is possible that the nine saints occupy the places of the nine guardian deities who presided over the points of the compass in the old cosmological system" (*Indonesia: mysticism and activism*, in *Unity and variety in Muslim civilization*, ed. G.E. von Grunebaum, Chicago 1955, 297). Nevertheless, the listing of nine named saints continues to be widely maintained.

Although most of the sources about the *wali sanga* are hagiographical and sometimes conflicting, certain of the saints appear to have been significant religio-political leaders in their times, and they continue to enjoy a prestigious position in Javanese Muslim consciousness to the present. They may be understood to represent, among other things, the essentially harmonious and gradual transition into an increasingly Islamic worldview as the religion gradually spread in-

land from the coastal regions. Such cultural legacies as the shadow play, the gamelan orchestra, and the magically potent keris (wavy, double-edged dagger) are attributed to Muslim saints. Many saints since the *wali sanga* are known in Indonesia, and their cults have been extensively described in a series of articles by D.A. Rinkes in his *De heiligen van Java*, in *Tijdschrift voor indische Taal-, Land- en Volkenkunde*, lii-liii (1910-11). Annual saint festivals (*mawālīd*) in honor of the *wali sanga* and other saints are celebrated, with parades, banners, special foods, circumcisions and litanies in the graveyards, all resembling similar festivals in saint-rich countries like Egypt. People make pilgrimages [see ZIYĀRA] to Javanese saint shrines, both at the time of the *mawlid* and throughout the year. (A nuanced treatment of traditional, syncretistic Javanese—*agami jawi*—and orthodox Islamic—*agami santri*—saint-related beliefs and practices appears in Koentjaraningrat, *Javanese culture*, Singapore 1985, ch. 5.)

Not all Javanese have admired the Muslim saint tradition of their island. A controversial genre of literature developed during the later 19th century emphasising the incompatibility of Islam with traditional Javanese ideals and values. One book, the *Serat Dermagandal*, recounts the history of the last period of the Madjapahit dynasty and depicts such *walīs* as Sunan Bonang, Sunan Giri, and Sunan Kalijaga and their roles unfavourably. The book is summarised by G.W.J. Drewes, *The struggle between Javanism and Islam as illustrated by the* Sĕrat Dĕrmagandul, in *Bijdragen tot de Taal-, Land- en Volkenkunde*, cxxii (1966), 309-65.

The process of Islamisation in Java included a fair amount of accommodation with Javanese traditional religious and cultural values and symbols. It is possible that the Ḳurʾān was introduced in the interior to some degree by means of traditional Javanese song and in translation. The shrine complex of Sunan Giri in Gresik, East Java, near Surabaya, features a Madjapahit-style stone split gate with large sculpted *nagas* (Hindu serpent guardian spirits) at the entrance to the cemetery. There are also elaborately carved wooden *nagas* on either side of the entry to the *walīs* wooden tomb chamber, which is decorated with carved lotus figures. The tomb is devoid of the kinds of Arabic calligraphic designs that typically decorate saints' graves in the Middle East and South Asia. The layout of the shrine complex on a hilltop overlooking the town has a Friday mosque occupying the eastern part, with a cemetery lot beyond the *ḳibla* wall to the west (the direction of Mecca is somewhat northwest of Surabaya). Further west are several substantial tombs of venerated personages, with that of Sunan Giri occupying a pre-eminent position. The layout resembles a congregation, with the living ranged at the back of the mosque building and then the tombs of the deceased, but "living" saintly members in a higher status arrangement toward the "front", with the great saint serving, as it were, as *imām* for the prayers. A similar arrangement may be seen at the shrine complex of Sunan Kudus in the small city of that name. The *minbar* of the Sunan Giri mosque is low, with a canopy, and more than a traditional Middle Eastern *minbar*, the design resembles a traditional seat for a Hindu god. The mosque (whose actual name is *Masdjid ʿAyn al-Yaḳīn*, from another name of the *walī*) is of the early Javanese type with a three-tiered roof popularly known as the "Meru" style, after the Buddhist cosmic mountain. All of these syncretistic details designed into monumental Islamic structures bear witness to a blending of Hindu-Javanese and Islamic ideas and symbols during the period when Islamisation was taking root among the Javanese society at large, including the royalty, and not merely in the coastal market towns and ports.

Although this article has focused on sainthood in Java, the phenomenon is also found in various manifestations in the traditional Malay world. C. Snouck Hurgronje wrote of the saint veneration of a century ago in Aceh as relating principally to the fulfilment of vows by persons who visit shrines seeking favours such as healing (*The Achehnese*, Leiden 1906, ii, 292-303). Such practices were often of a popular folk character and not within the boundaries of orthodox Islam. They included bestowing gifts of food and flowers, processions with a small orchestra (*geundrang*) of a woodwind instrument and percussion, and dramatic performances, as well as recitation of the Ḳurʾān or other religious texts. In Aceh the Malay title *tuan* ("master") rather than the Ar. *walī* has been preferred (*ibid.*).

Ṣūfism has also influenced the understanding of sainthood in Southeast Asia, for example through the concept of the "Perfect Man" (*al-insān al-kāmil* [*q.v.*]) as applied to early Muslim rulers in the Straits trading-centres of Pasai and Melaka. Evidence that the concept had currency in the latter place is contained, e.g. in the 16th/17th century *Malay annals* (*Sĕjarah Mĕlayu*; see A.C. Milner, *Islam and Malay kingship*, in *JRAS*, ser. 3, i [1981], 55).

Bibliography (in addition to references given in the article): Solichin Salam, *Sekitar wali sanga* ("About the Wali Sanga"), Kudus 1960 (a popular handbook); C. Geertz, *Islam observed: religious development in Morocco and Indonesia*, New Haven 1968 (features a highly perceptive analysis of Sunan Kalijaga); M.R. Woodward, *Islam in Java: normative piety and mysticism in the sultanate of Yogyakarta*, Tucson 1989 (integrated coverage of saints, Ṣūfīs and royalty).

(F.M. DENNY)

8. In Chinese Islam.

The term *walī* does not seem to have existed in traditional Chinese Islam, whether in the form of transliteration of the Arabic into Chinese characters with a phonetic rendering distantly identical, or in translation. Moreover, when this topic is raised before a Chinese Muslim, a "Hui" in Communist China, from the milieu of strict observance, he will indignantly repudiate it as an invention of the West brought forward to harm Islam; or at most, as a Sunnī of the Ḥanafī school, he will consider it as belonging to Shīʿism. Nevertheless, the cult of dead saints, and to a lesser extent living ones, exists in Chinese Sunnī Islam, having strongly developed within the 19th century and the first decades of the 20th.

(i) The sacred tomb, a place of pilgrimage on a greater or lesser scale, is called in Chinese Islam *kung-pei* (*gongbei* in pinyin, a term transliterated from Pers. *gunbad* = Ar. *ḳubba* [*q.v.*]). In Western China, where Muslim communities are most concentrated and the cult of tombs is at its most active, the sacred tomb generally appears as a hexagonal pavilion made of mud bricks surmounted by a dome and with an entablature curving upwards at the corners, thus giving a Chinese appearance. In the centre of Ninghsia (Ningxia, the "Autonomous Hui Region" of the PRC) [see NINGSIA], the sacred tomb has the unusual form of a lime-washed sugarloaf, in front of which is a portal lined with bricks and a hood decorated with Chinese motifs and Ḳurʾānic sūras within medallions. Inside these various structures, the tomb is roughly finished, in lime mortar, with no ornamentation, but is sometimes covered with a silken covering when the local faithful have the means for supplying this. In

front of the tomb are a prayer mat, a water pot for ablutions, and—a typical Chinese custom—sticks of incense stuck into a vessel full of sand. The *kung-pei*, rebuilt or newly-built in large numbers since the religious liberalism of the 1980s, are now crowned with a crescent moon and follow a Pakistani-Middle Eastern architectural style. But this was not the case in pre-Communist times, when the faithful strove not to appear distinct from their cultural environment. In Western China, outside the brotherhoods, there is often to be found, on the edge of fields or in the heart of a Muslim cemetery, one of these tombs, whose dedicatee, often a mythical Muslim hero, has the role of being the ancestor of the local community, which pays homage to him through prayer, incense and food offerings. It does not seem that there is any adaptation of previously-existing non-Muslim cults.

(ii) The prominence of spiritual leaders is characteristic of the ensemble of popular Ṣūfism in those parts of Western China where the brotherhoods have a significant role. The *ṭuruḳ* burst forth into numerous religious, social, economic and even political small units, the *men-huan* [see TAṢAWWUF. 6. In Chinese Islam], whose pivot is, for each of them, the *kung-pei* of the founder of the line, surrounded by the *kung-peis* of his male and female relatives. The required cult of ancestors has contributed in China, without doubt more than the influence of practices from Central Asia, to the legitimisation of hereditary transmission of the direction of the *men-huan* and to the investiture of the supreme charisma inherent in the tomb of the dead "Head of the Way" (*tao-chang* or *daozhang*, also called "Master of the Faith" *chiao-chu* or *jiaozhu*, i.e. *s̲h̲ayk̲h̲*). For the adept of the *men-huan*, the first of his obligations is to make a pilgrimage once in his life to the "Hall of the Way" (*tao-t'ang* or *daotang*, centre of the Master's *k̲h̲ānaḳāh* [*q.v.*]) and to pay homage to him by the great prostration (the *k'ou-t'ou*, whence the Western European word "kowtow"), without worrying about orientation towards Mecca, and by the offering of a "present" (*hai-ti-yeh*, i.e. *hadiyya*) of a value proportionate to his own income.

The usual ritual at these pilgrimages and the frequent mass ceremonies on the occasion of the "anniversaries" (*erh-mai-li*, i.e. *al-mawlid*) of the dead members of the sacred line, comprised the chanted recitation of the *d̲h̲ikr*, the reading of sacred texts appropriate to the *men-huan*, fumigations with incense, offerings of fruit, the presenting of "gifts" to the Master, the latter's blessing and the offering by him of a gift of a monetary value inversely proportionate to the one which he received. If the Master was an ascetic, the system of presents and presents in return functioned like a redistribution of wealth amongst the adepts; in the opposite case, it was a heavy tribute destined for the Master's treasury and that of his relatives. The Master was considered by his faithful as at least the equal of Muḥammad, if not his superior, since he had the advantage of being alive and visible. The faithful would often go so far as to say that they preferred to make a pilgrimage to a living saint rather than to a dead one, and that it was better to be wrong in the presence of the living saint than to be right against the latter's will.

(iii) An extensive religious structure in the Chinese style grew up, at least before the destructions of the Cultural Revolution, around the sacred *kung-pei* enabling the Master of the time to exercise his charisma. Thus the "Great *Kung-pei*", on a site founded in 1689 by the one who introduced the Ḳādiriyya into China, Ch'i Ching-i (1656-1719) at He-chou (the modern Lin-hsia, in the extreme west, on the borders of Kansu and Ch'inghai), extended, as it does until the present time, over *ca.* 2,700 ha, with a mosque, a Ḳur'ān school, a secular school, the administrative services of the *men-huan*, lodgings for the resident religious members and for visitors, a cemetery and, behind a low wall, the sacred mausoleum.

The importance of the sacred bodies, or at least one of their heads, in the transmission of charisma has resulted in the fact that *men-huans* of identical *silsila* have stolen these bodies or heads from each other at the time when their power became consolidated, i.e. in the last decades of the 19th century up to the 1930s. Thus one of the *men-huans* arising out of the D̲j̲ahriyya (a Chinese branch of the Naḳs̲h̲bandiyya), in the so-called Ling-chou line, the *men-huan* of Pan-ch'iao, held on to the headless corpse of the executed Fifth Master Ma Hua-lung (1810-71 [*q.v.*]), whilst the head was the property of the *men-huan* of Pei-shan, from the same line, at Ch'ang-chia-ch'uan (in Kansu), which further held the body of Ma Yüan-chang (1853-1920), although this last was venerated by the opposing line, of Kuan-ch'uan, which attached itself hereditarily to the D̲j̲ahriyya's founder, Ma Ming-hsin (1719-81 [*q.v.*]). Similarly, the *men-huan* of Sha-kou, at Hsi-chi (in Ninghsia), of this line of Kuan-ch'uan, after 1920 spread its domination over a mausoleum of Ma Yüan-chang, in which there was no corpse, and over the Hall of the Way of this last, as well as, by stretching its antennae over various points in Greater China, notably in Sinkiang, over the tombs of male and female ancestors of Ma Yüan-chang.

The cult of dead saints has had a revival in the 1980s in the PRC (not much is known about living saints), since, in the words of one of the faithful, addressing a saint in the hope of having one's request granted by God is like making use of the "back door" (*hou-men*), i.e. using relatives who are well placed in the Communist world in order to gain a favour.

(FRANÇOISE AUBIN)

9. In West Africa.

While the term *walī* (and the feminine *waliyya*) is frequently applied as an epithet of holy or saintly persons in the Islamic literature of West Africa, there is little development of any "cult of saints", and tombs, although sometimes known, are generally very modest. Persons described as *walī* are generally distinguished by their being the locus of manifestations of divine grace (*karāmāt*) in the form either of thaumaturgical acts, or, more simply, by acts demonstrating extreme piety. The *Ta'rīk̲h̲ al-Sūdān* of al-Sa'dī gives brief biographies of several such persons, though none of these is among the dozen saints buried around the edges of the old city of Timbuktu who are currently considered to be the chief among its 333 guarding saints. Muḥammad al-Kābarī (mid-9th/15th century) was able to inflict leprosy on a scholar of Marrakesh who insulted him; he could also walk on water. The North African *walī* Sīdī Yaḥyā al-Tadallisī (who was also a *s̲h̲arīf*) was his contemporary and is categorised

as a *ḳuṭb*. When he came to Timbuktu he used to see the Prophet nightly, but later when he engaged in business to avoid being dependent on other people, he saw him only once a week, then once a month and finally once a year. As a *sharīf*, he was not only immune to fire, but whatever he touched became similarly immune. He was reputed to be clairvoyant (*dhū mukāshafāt*), as were several others. Muḥammad ʿUryān al-ra's (*fl.* 1009/1600), not only met with al-Khaḍir [*q.v.*], but when he exhibited signs of madness it was explained that this resulted from a vision of God. Others could relocate themselves daily to Cairo to pray in al-Azhar mosque, while the Egyptian saint Abu 'l-Makārim al-Bakrī (d. 994/1586), who had met several Timbuktu scholars when they passed through Egypt, made daily visits to Timbuktu. The only one of these saints now celebrated in any sense is Sīdī Yaḥyā al-Tadallisī, in whose name a mosque was built, and whose tomb is within the mosque enclosure. Some of the currently-existing saints' tombs in Timbuktu have keepers who receive cash offerings from the faithful who supplicate the saint, but there are no organised celebratory festivals.

The same is true for Kano. In 1406/1985 Ṣāliḥ Bābah b. Abī Bakr published in Kano a booklet entitled *Tabshīr ahl Allāh bi-dhikr man bi-Kānū min awliyā' Allāh*, giving brief biographies of saintly men and women buried in the city and locations of their tombs. A few of these have regular guardians, but again there is little ceremony about visitation and no large parades or gatherings. However, ʿAbd al-Ḳādir al-Djīlānī's *mawlid* was celebrated in public fashion with parades in the city and beating of *bandiri* drums during the latter part of the lifetime of Nasiru Kabara (d. 1996), the leading Ḳādirī *shaykh* of West Africa.

Only in Senegal is there the kind of annual festival and visitation that is common in Egypt and North Africa, with large boisterous crowds and a carnival atmosphere. This is the *maggal* at Touba, the burial place of the "national" saint of Senegal, Aḥmad Bamba (d. 1927 [see MURĪDIYYA]). The followers of Aḥmad Bamba, who was exiled by the French to Gabon, have developed a rich hagiography of him. The most common iconographic reminder of his miraculous powers is the picture of the saint praying upon his prayer rug cast upon the waters when the French captain of his ship to Gabon forbade him to pray on board the vessel. Angels hover above and the ship's crew looks on in disbelief. Another religious figure exiled by the French, Ḥamā Allāh (correctly Ḥamāhu 'llāh) of Nioro in Mali (d. 1943 [see ḤAMĀLIYYA]) also gained the status of *walī*; indeed, his followers saw him as the *ḳuṭb*, and in poems in praise of him proposed a status for him that was scarcely distinguishable from the divine (B. Soares and J. Hunwick, *Falkeina IV: the shaykh as the locus of divine self-disclosure: a poem in praise of Ḥamāhu 'llāh*, in *Sudanic Africa*, vii [1996], 97-112). His son Muḥammad still lives in Nioro and is the object of pious visitation and gift-giving by Muslims from a broad spectrum of Malian society. Ḥamāhu 'llāh died in exile in France, but his most devoted followers fervently believe that he did not die, and they await his return.

There were other West African saints who are said to have attained similarly exalted mystical ranks. ʿAbd Allāh al-Barnāwī (d. 1088/1677), whose mystical initiator was the angel Isrāfīl, guardian of *al-lawḥ al-maḥfūẓ* [see LAWḤ], was regarded in Bornū as a *ḳuṭb*. Another Bornū *walī* of similar name who died in 1126/1714-15, was an intimate of the well-known Moroccan saint ʿAbd al-ʿAzīz al-Dabbāgh (Aḥmad al-Mubārak al-Lamaṭī, *K. al-Ibrīz*, Cairo 1380/1961, 14). In the early 13th/19th century Muḥammad Sambo, a son of the reformer ʿUthmān b. Fūdī [*q.v.*], attained "a high rank in *walāya*, and a firm stance in divine knowledge (*maʿrifa*), and a true state in *ṣiddīqiyya*" (J.O. Hunwick, *A supplement to Infāq al-maysūr: the biographical notes of ʿAbd al-Qādir b. al-Mustafā*, in *Sudanic Africa*, vii [1996], 35-51), this latter being the station just below *ḳurba*, which is the station of *al-walāya al-kubrā* (on this see M. Chodkiewicz, *Seal of the saints: prophethood and sainthood in the doctrine of Ibn ʿArabī*, Cambridge 1993, ch. 7). According to his biographer ʿAbd al-Ḳādir b. al-Muṣṭafā "he had seen the land of the *samāsima* (*sic*) and had entered it" (*ibid.*, 15 and appendix), the *arḍ al-simsima* being "the land at the extremity of the imaginal world at the point where it adjoins the sensory world" (H. Corbin, *Terre céleste et corps de résurrection*, Paris 1961, 214).

There is not a large theoretical literature on the concept of the *walī* in West Africa. The most extensive treatment of questions relating to the *walī* is to be found in the important Tidjānī manual of *al-ḥādjdj* ʿUmar b. Saʿīd (d. 1280/1864), the *Rimāḥ ḥizb al-raḥīm* (see B. Radtke, *Studies on the sources of Kitāb Rimāḥ ḥizb al-raḥīm of al-ḥājj ʿUmar*, in *Sudanic Africa*, vi [1995], 73-114). These elaborate older concepts; the illuminated *walī* is not bound by the *madhāhib*: pledging allegiance to a perfected *walī* is like pledging allegiance to the Prophet; the Prophet is omnipresent and the *walī* has the ability to see him in a waking state. Ch. 36 deals with the seemingly innovatory claim of Aḥmad al-Tidjānī to be the "seal of the Friends of God.... and the support of the poles and the nurturers (*khātim al-awliyā' wa-mumidd al-aḳṭāb wa 'l-aghwāth*)", and the "ultimate link (*al-barzakh al-makhtūm*) who is the intermediary between the Prophet and the Friends of God such that none of the Friends, either of greater or lesser rank, finds an effusion [of grace] from the plane (*ḥaḍra*) of a prophet except through his mediation". However, the claim to be the "seal of the Friends of God" was first made by Ibn al-ʿArabī, and despite the seemingly final nature of such a phrase in its parallelism with the phrase "seal of the prophets" (*khātam al-nabiyyīn*) as applied to the Prophet Muḥammad, Chodkiewicz suggests that the term may have come to represent a rank rather than an ultimate claim (*op. cit.*, 128 ff., esp. n. 42). Whether Aḥmad al-Tidjānī saw it in this light is doubtful, in light of his claim to be the sole source of mediation of an effusion of divine grace (*fayḍa*) from the plane of a prophet; indeed, al-Tidjānī actually claims that Ibn al-ʿArabī gave up his claim to this rank in favour of him.

10. In Chad and the Nilotic Sudan.

In the eastern Bilād al-Sūdān, the term *walī* overlaps in usage with *faḳīr, faḳīh*, colloq. *fakī* (which often share the pl. *fuḳarā'*), *shaykh* (pl. *mashāyikh*), *rādjil* (used in compound phrases with a place-name, e.g. *rādjil* Rayba), *mu'allim, mallam* (Hausa), and *goni* (Kanuri, strictly one who has memorised the Ḳur'ān), names which variously reflect the *walī*'s spiritual qualities and station, and social status and roles.

Awliyā' are prominent figures from the beginnings of recorded or remembered Islamic history in the region—remembered and celebrated as propagators of Islam, promoters of the *Sharī'a*, founders of lineages, clans, settlements, schools, even of dynasties. The earliest personalities are associated with (1) the flow of Islamic influences into the western end of the region along an axis extending from Tripoli southwards to Lake Chad by way of Fezzan, Tibesti and Kanem, and into the Nile valley at its eastern end from Egypt to the north and the Arabian peninsula across the Red Sea to the east; and (2) the rise of Muslim-ruled dynasties in Kanem, Sinnar, Dārfūr, Wadai, Bagirmi, Taqali and other states—dynasties that offered the holy men patronage and security in return for spiritual support, political legitimation and practical services (e.g. as scribes). Among the earliest of the *awliyā'* venerated in oral tradition and recorded in charters of immunity, genealogical treatises and biographical literature (*manāḳib*; see below) are Muḥammad b. Mānī (5th/11th century), who is associated with the conversion to Islam of the ruler of Kanem, and Ghulām Allāh b. 'Ā'id, a Yemeni who migrated to the Dongola area of Nubia and "built the mosques and taught the Ḳur'ān and religious sciences" for a people sunk in "extreme perplexity and error" (Yūsuf Faḍl Ḥasan, *The Arabs and the Sudan*, Khartoum 1973). Traditions represent the founders of kingdoms across the eastern Bilād al-Sūdān as Muslim "wise strangers", and some clearly resemble the pious charismatic figure of the *walī*, e.g. 'Abd Allāh Djammā' of the 'Abdallāb and 'Abd al-Karīm, founder of the Maba dynasty in Wadai.

The *walī*'s nearness to God endowed him (or occasionally, her) with divine blessing or grace (*baraka*), which manifested itself in extraordinary acts and capacities (*karāmāt*). The recounting of these *karāmāt* is an important genre of sacred literature and folklore, and, in the Nilotic Sudan, has been incorporated into works of *manāḳib* such as Muḥammad al-Nūr b. Ḍayf Allāh, *K. al-Ṭabaḳāt fī khuṣūṣ al-awliyā' wa 'l-ṣāliḥīn wa 'l-'ulamā' wa 'l-shu'arā' fī 'l-Sūdān*, ed. Y.F. Ḥasan, [2]Khartoum 1974; Aḥmad b. Aḥmad al-Rubāṭābī, *al-Ibānat al-nūriyya fī sha'n ṣāḥib al-ṭarīḳa al-Khatmiyya*, ed. Muḥammad Ibrāhīm Abū Salīm, Beirut 1991; and 'Abd al-Maḥmūd Nūr al-Dā'im, *Azāhīr al-riyāḍ fī manāḳib al-shaykh Aḥmad al-Ṭayyib b. al-Bashīr*, Cairo 1973. The *walī* was known for the efficacy of his prayer, e.g. for rain, health and fertility, and of his curse upon the oppressor and the violator of pledges. He was distinguished by his faculty of "uncovering" the unknown (*kashf*), i.e. perceiving thoughts, distant places, the past, and the future. He personified detachment, abstinence, probity on the one hand and openhanded hospitality and generosity on the other. These attributes and capabilities fitted the *walī* to mediate in conflicts and feuds, to intercede for his followers and to provide sanctuary for the fugitive. Prominent among his regular activities were the preparation of amulets (*ḥidjāb*) and erasures (*miḥāya*, sc. verses that are washed off the writing-board and drunk by the patient), the teaching and initiation of disciples, and prolonged withdrawal into solitary meditation (*khalwa*).

The social life of the *fuḳarā'* centred on the mosque, the school and the tombs of sanctified forbears. Their instruction frequently combined Ṣūfī *dhikr* with Ḳur'ānic study, jurisprudence (following the Mālikī school), and theology (Abū 'Abd Allāh al-Sanūsī's works were popular). Significantly, the word *khalwa* (= Ṣūfī retreat, place of seclusion for prayer) is widely used in the region for Ḳur'ānic school. A substantial proportion of settlements were founded by holy men. The right of sanctuary held by the *walī*, the exemptions from taxation and other impositions by secular authorities (though the *fuḳarā'* themselves collected canonical taxes) attracted settlers and sometimes contributed to the rise of flourishing market towns. With the steady inflow of visitors and offerings, these communities became nodes of redistributive networks. There has long been a tendency for families of noted *awliyā'* to divide into "religious" and "secular" branches, with the latter handling their growing assets.

Research in recent decades has confirmed the existence, at least as early as the 17th century, of a vast network of *awliyā'*, their centres of religious instruction and devotional practice, spanning the Bilād al-Sūdān (see J. Lavers, *Diversions on a journey, or the travels of Shaykh Ahmed al-Yamani (1630-1712) from Halfaya to Fez*, in Y.F. Ḥasan and P. Doornbos (eds.), *The Central Bilād al-Sūdān. Tradition and adaptation*, Khartoum n.d. [1979]). Some holy men accompanied a diaspora of Nubian traders from the Nile (known collectively as *djallāba*) extending westward to Dārfūr and Wadai, and others a countervailing stream of Hausa merchants, Fulbe and Bornawi migrants, and pilgrims originating in the western Bilād al-Sūdān. Eastern and western influences have their counterpart in the distribution of types of Arabic script: *Maghribī* is used in Kanem and Bagirmi, *Naskhī* in Wadai and Dārfūr. Only in the Nile region did the Arabian and Egyptian style of domed tomb (*ḳubba* [*q.v.*]) become firmly implanted, during the era of Fundj rule (16th-19th centuries). School of regional importance up to the 19th century were located at Bidderi (Bagirmi), al-Dāmir (at the Nile-Atbara confluence), Arbadjī (on the Blue Nile), and Kubayh (Dārfūr). Itinerant students (*muhādjirūn*), pilgrims, traders, and *shurafā'* circulated among the schools and shrines scattered throughout the region and continually renewed linkages with the Ḥidjāz, Yemen, Egypt and the Maghrib.

The Ḳādiriyya [*q.v.*] brotherhood was pervasive and unchallenged throughout the region (except for a minor presence of Shādhiliyya [*q.v.*] along the Nile) until the 18th century when the Sammāniyya (a branch of the Khalwatiyya [see MĪRGHANIYYA]) was established in the Gezira by Aḥmad al-Ṭayyib b. al-Bashīr. The 19th century witnessed the advent of several new fraternities, notably the Khatmiyya from the Ḥidjāz, the Tidjāniyya [*q.v.*] from the Maghrib by way of Borno and Hausaland, and the Sanūsiyya [*q.v.*] from Cyrenaica. The independence, individuality, and idiosyncrasies of the *walī* were somewhat constrained within these more centralised, hierarchical and regulated brotherhoods.

During the 19th and 20th centuries, imperialism (Egyptian, British and French), social upheaval and millenarianism presented new challenges, roles and opportunities for the *awliyā'*. A number of holy men entered the arena of politics—most successfully,

Muḥammad al-Amīn al-Kānimī, who founded the Shehu dynasty of Bornu subsequent to a challenge from the Fulbe *mudjāhidūn* of the Sokoto Caliphate, and Muḥammad Aḥmad, the Mahdī, whose defeat of the Egyptian colonial government inaugurated a short-lived independent state. The subsequent Anglo-Egyptian and French colonial systems, imposed over the former Egyptian Sudan and Chad respectively, perpetuated old patterns of patronage and subsidy to control and propitiate the Ṣūfī leadership. The *ṭuruḳ* have proliferated in the 20th century, while the authority and religious culture of the *walī* has come under increasing challenge from Islamist movements in the decades since national independence.

WALĪ, Urdu poet whose pivotal significance from the viewpoint of literary history is tellingly unsupported by much reliable biographical data. Even his name is uncertain, although the best evidence suggests "Walī Muḥammad". The popular sobriquet "Walī Dakanī" indicates the general belief that he was born in the Dakan at Awrangābād, probably in 1079/1668. At the age of twenty he moved to Aḥmadābād, where he studied at the *madrasa* attached to the shrine of the Ḳādirī saint Wadjīh al-Dīn. A number of Walī's poems attest his close association with Gudjarāt, including a short *mathnawī* in praise of Sūrat. He died in Aḥmadābād, probably in 1119/1707 (rather than the now discredited suggestion of 1175/1742, although Djālibī, 537-9, argues for the early 1720s).

The later *tadhkira* writers make much of Walī's supposed meeting during a visit to Dihlī in 1112/1700 with the Naḳshbandī saint and Persian poet Shāh Saʿd Allāh Gulshan (d. 1141/1728), who advised him to write in the Urdu [*q.v.*] of Dihlī rather than the Dakhinī Urdu in which he had hitherto composed, and for the embellishment of his poetry to draw upon the full resources of Persian. Polished in the light of Gulshan's recommendations, it is said, Walī's poetry rapidly achieved a universal popularity which greatly aided the replacement of Persian by Urdu as the preferred poetic language of the courts of Dihlī and northern India. However suspect its convenient underpinning of Dihlī's cultural supremacy may be as history, the endurance of the Walī-Gulshan story as myth was ensured when Muḥammad Ḥusayn Āzād used it to initiate his immensely influential account of Urdu literature. It is this passage (*Āb-i ḥayāt*, 80), whose rhetoric neatly eliminates the entire Dakhinī phase of Urdu poetry, which generated the two clichés most commonly applied to Walī, either as the Ādam of Urdu poetry (*naẓm-i Urdū kī nasl kā Ādam*), or as its Chaucer.

Many later critics have noted the difficulty of detecting radical changes of language and aesthetic justifying any notion of consistent pre- and post-Dihlī phases in Walī's extensive *dīwān* of some four hundred *ghazals*. This is not to deny the relevance to the characterisation of Walī's poetry as transitional between older Dakhinī and later northern norms of the internal stylistic contrasts which may be partially established by suitable isolated examples (e.g. Sadiq, *History*, 64). The *dīwān* is, however, less remarkable for any internal diversity than for the general uniformity of its emphasis upon distinctly human amatory themes, often delightfully treated. While Walī's name has predictably caused the mistaken attribution to him of Ṣūfī and other religious works, little conviction attaches to attempts at mystical readings of his *dīwān* beyond the conventions of *taṣawwuf barāy-i shiʿr guftan khūb ast* "Ṣūfism is good for composing poetry".

WALĪ AL-ʿAHD (A.), the heir-designate to a caliph or ruler, literally "successor [by virtue of] a covenant" [see ʿAHD]. Heirs to the caliphate were more formally entitled *walī ʿahd al-muslimīn*. It is not

entirely clear when the title came into use. Historians from the 3rd/9th century (e.g. Ibn Ḳutayba, 155 ff.) apply it to the Umayyad ʿAbd al-ʿAzīz b. Marwān and subsequent heir-designates of that dynasty, but this may be anachronistic. Coins from the ʿAbbāsid caliph al-Mahdī's period (158-69/775-85), proclaiming his heir Mūsā (al-Hādī) as *walī ʿahd al-muslimīn*, categorically attest to its being in use by then (al-Bās͟hā, 542-3; Lane-Poole, *Cat.*, i, 54).

Designation was a standard way of transferring power, including caliphal power, throughout Islamic history. The precedent—itself based on old tribal norms—was set by the first caliph Abū Bakr, who nominated ʿUmar to succeed him; the latter in turn designated a group of leading Muslims to select the next in line from among themselves. Muʿāwiya, the first Umayyad caliph, established another precedent by naming his own son Yazīd as successor, thereby introducing a dynastic principle. A later Umayyad caliph, Marwān I, went a step further by designating not one but two of his sons, ʿAbd al-Malik and ʿAbd al-ʿAzīz, to come after him successively; but when the former of the two came to power he manoeuvred his brother out of the succession and nominated his own two sons instead. Such early practices established the pattern: succession by designation, normally of a son (not necessarily the eldest) or brother; the option of nominating more than one heir at a time; and the annulment of a designation in favour of another candidate. The majority of caliphs, and most other hereditary Islamic rulers—in the Buwayhid, Sald͟jūḳ, Fāṭimid, and Mamlūk states and in Muslim Spain, among others—came to power through such procedures. The most common alternative to this practice was seizure of government by force.

Designation was effected through an *ʿahd*, a unilateral voluntary testament by the incumbent ruler. Under the Umayyads this was a relatively simple act, with the nomination sometimes made public only after the caliph's death. The ʿAbbāsids developed a more elaborate routine. A stereotypic text of the *ʿahd* was adopted, and the nomination came to be announced in a ceremony presided over by the caliph, whereupon the heir-designate was offered a *bayʿa* [*q.v.*] by the dignitaries at hand. The appointment was then publicised throughout the empire. Once designated, the *walī al-ʿahd* was accorded a black insignia, his own palace and staff and, if still a minor, a tutor. His name was mentioned in the *k͟huṭba* alongside that of the caliph and inscribed on the empire's flag and coins. Upon his nomination, the *walī al-ʿahd* was given a regnal title (*laḳab* [*q.v.*]), which he later retained as caliph; al-Mahdī was the first to be so entitled, while still heir-designate, by his father al-Manṣūr. To train the candidate for his future post, he was sent as governor to a major province. Thus ʿAbbāsid heir-designates became governors of Syria, Armenia or provinces of the west; and in Ḳād͟jār Persia they were customarily in charge of Ād͟harbāyd͟jān. The institution of *walī al-ʿahd* had its peak in the early ʿAbbāsid period, when the heir was second to none but the caliph and replaced him on the throne during the latter's absence from the capital. His status declined when caliphs came under the sway of sultans, in Bag͟hdād and then in Cairo, who curbed their authority and interfered in the selection of their heirs.

Based on Abū Bakr's and ʿUmar's precedents, Sunnī jurists sanctioned designation as one of two accepted modes of succession, along with election (in S͟hīʿī doctrine, designation carried a different sense and importance; see IMĀMA; S͟HĪʿA). They saw no contradiction between these two principles: the caliph, as *imām*, was capable of selecting for the post the fittest man possessing the required mental, spiritual and physical traits, on behalf of the entire community. But his choice did not depend on the consent of the community or even a part of it; and in that sense the *bayʿa* offered to a *walī al-ʿahd* was viewed as a confirmatory measure rather than a legitimising condition. The *ʿahd* and the nomination were considered irrevocable: once an heir was designated, he could not be unilaterally deposed nor could he resign. But since in practice such appointments were repeatedly reversed or annulled, jurists justified the dissolution when both nominator and nominee agreed or when an assembly ruled that the candidate was no longer fit.

In modern times, the institution of *walī al-ʿahd* continued to exist, or was revived, in some of the dynastic Islamic states: in Persia under the Ḳād͟jārs and Pahlawīs; the post-World War I kingdoms of Egypt and ʿIrāḳ; Saudi Arabia (since 1933); Jordan (since 1965), Ḳaṭar and Bahrain (since the mid-1980s).

(A. AYALON)

WALĪ ALLĀH AL-DIHLAWĪ [see AL-DIHLAWĪ, S͟HĀH WALĪ ALLĀH].

WĀLIBA B. AL-ḤUBĀB al-Asadī, Abū Usāma, Arab poet of the early ʿAbbāsid period, *flor.* in the later 2nd/9th century.

Wāliba was born in Kūfa where he probably spent the largest part of his life. When his cousin on his father's side, Abū Bud͟jayr Yaḥyā al-Nad͟jās͟hī al-Asadī, was appointed governor (or landtax collector) of al-Ahwāz by al-Manṣūr, Wāliba followed him there. During his stay there he met with Abū Nuwās [*q.v.*], who was then a handsome beardless youth (*amrad*). According to some sources, this happened in al-Ahwāz, where Abū Nuwās had gone together with his employer at the time, a perfume merchant (*ʿaṭṭār*) from Baṣra, in order to offer their wares to al-Nad͟jās͟hī; according to others, it happened at the souk of the druggists in Baṣra, where al-Nad͟jās͟hī had sent his cousin to buy supplies. The ties between Abū Nuwās and Wāliba were not only of an erotic nature. Wāliba rapidly recognised the poetic talent of his *g͟hulām*. He took him along to Kūfa and looked after his education; Abū Nuwās's poetry was to be decisively influenced by him.

Wāliba came to Bag͟hdād most likely in the time of al-Mahdī, who admired his poetry but, on account of the latter's hemistich "I am a man who sleeps with his commensals", did not want to make him one of his boon-companions. Wāliba was, however, unable to establish himself there, because he let himself be drawn into a *hid͟jāʾ* exchange with Abu ʾl-ʿAtāhiya, in which he emerged as the loser. Abu ʾl-ʿAtāhiya doubted, *inter alia*, the Arab descent of Wāliba because of the latter's light skin and blond hair. Humbled, Wāliba had to return to Kūfa. From a poem composed in alternate lines by himself and Abū Nuwās and which describes the toils of a foot march to al-Ḥīra

near Kūfa, we know that he also visited that place.

Wāliba must have died before 180/796, because after Wāliba's death Abū Nuwās attached himself to Khalaf b. Ḥayyān al-Aḥmar [*q.v.*], who in turn died in 180/796. Abū Nuwās composed a *marthiya* on his teacher.

Wāliba was above all known as a poet. His inclusion in Ibn Ḥadjar's *Lisān al-Mīzān* (cf. ed. Ḥaydarābād 1331, vi, 216) probably results from the fact that, in a facetious poem, Abū Nuwās called him a transmitter of a fictitious *ḥadīth*. In Kūfa, Wāliba belonged to a circle of poets and *udabā'* who upheld a libertine lifestyle; it included also Ḥammād ʿAdjrad, Ḥammād al-Rāwiya, and Muṭīʿ b. Iyās [*q.vv.*], and, from outside Kūfa, Salm al-Khāsir, al-Ashdjaʿ b. ʿAmr al-Sulamī, and Abān al-Lāḥiḳī [*q.vv.*]. Al-Raḳīḳ al-Nadīm describes the group as follows: "Wāliba had friends (*ikhwān*) who were like him in their companionship (*futuwwa*), in their elegant and witty behaviour (*ẓarf*), and in their addiction to gluttony and entertainment (*idmān al-ḳaṣf wa 'l-lahw*). They were completely uninhibited (*khalaʿū 'l-ʿidhār*) and squandered both their acquired and their inherited wealth". In this early combination of *futuwwa* and *ẓarf* (on which see Susanne Enderwitz, *Du Fatā au Ẓarīf*, in *Arabica*, xxxvi [1989], 125-42; eadem, *Liebe als Beruf*, Beirut 1995, 31-65), a third component also played a role: indifference toward religious precepts. This won them an accusation of *zandaḳa* [*q.v.*] (cf. G. Vajda, *Les Zindîqs en pays d'Islam*, in *RSO*, xvii [1938], 173-229). In this respect Wāliba was probably not quite innocent, since he established the connection between *ẓarf* and *zandaḳa*, even before Abū Nuwās, by calling his friend, Yaḥyā b. Ziyād al-Ḥārithī, "wittier (*aẓraf*) than a *zindīḳ*". In this urban bohemian milieu, Arabic love poetry received a new turn: alongside the *ʿudhrī* and the *ḥidjāzī* variety of *ghazal* [*q.v.*] poetry, the *kūfī* kind now emerged (cf. Nallino, *Scritti*, vi, 143-50; G. Schoeler, in *Camb. hist. Ar. lit.*, ii, 281-2). The latter often acquired obscene traits and should in part more appropriately be called *mudjūn* [*q.v.*]. Wāliba's poems, of which hardly more than one hundred lines have been preserved, deal with pederasty on the one hand and with wine, especially the morning draught, on the other. A collection of his poetry on one hundred leaves was once known to Ibn al-Djarrāḥ [*q.v.*] (cf. Ibn al-Nadīm, tr. Dodge, i, 357).

(E. Wagner)

AL-WALĪD, the name of two caliphs of the Marwānid line of the Umayyads.

1. al-Walīd (I) b. ʿAbd al-Malik b. Marwān (r. 86-96/705-15).

He was probably born *ca.* 54/674 in Muʿāwiya's reign. His mother was Wallāda bt. al-ʿAbbās b. Djaz' of a well-known family of ʿAbs b. Baghīḍ of Ḳays. He was his father's nominee to inherit the caliphate and the death of his uncle ʿAbd al-ʿAzīz b. Marwān in 85/704 meant that he succeeded unopposed. After the struggles of his father's reign, al-Walīd's caliphate was generally a period of internal peace and external expansion. As caliph he never seems to have left Syria except to lead the *Ḥadjdj* in 91/710. He is said to have instituted a system of poor relief and charity in Syria. He was certainly a great patron of architecture, building the Great Mosque in Damascus in its present form and rebuilding the mosque of the Prophet in Medina. In political affairs, he continued his father's policies with little change. He attempted to keep a balance between the different groups in the Umayyad élite and control the divisions between Ḳays and Yaman. He maintained al-Ḥadjdjādj b. Yūsuf [*q.v.*] as governor of ʿIrāḳ and the East until his death in 95/714. His brother and heir, Sulaymān, was governor of Syria and, for most of the reign, his cousin, ʿUmar b. ʿAbd al-ʿAzīz, later to be caliph himself, was governor of the Ḥidjāz. Both had Yemeni sympathies and gave refuge to political opponents of al-Ḥadjdjādj.

The reign of al-Walīd saw the success of Muslim arms in many areas. In the west, Spain was invaded in 92/711 and almost completely taken by 97/716. In the East, the expansion was managed by al-Ḥadjdjādj. In Khurāsān, his governor Ḳutayba b. Muslim [*q.v.*] (86-96/705-15) launched a series of attacks on Transoxania which the Muslims had hardly penetrated before. He secured the submission of Bukhārā in 87-90/706-9, Khwārazm and Samarḳand in 91-3/711-2 and Farghāna in 94/713. From 90/708-9 Muḥammad b. al-Ḳāsim al-Thaḳafī began the Muslim conquest of Sind. Despite frequent Muslim raids, little progress was made against the Byzantines. Al-Walīd never led the campaigns himself but entrusted the frontier to his brother Maslama [*q.v.*], who built up a formidable power base in the area.

Al-Walīd died in Damascus in Djumādā II 96/late February 715. In accordance with his father's will, the caliphate was to pass to his brother Sulaymān, with whom his relations seem to have been increasingly strained. Some sources say that he was trying to secure the acceptance of his own son ʿAbd al-ʿAzīz as heir but that he died before this could be accomplished, and Sulaymān duly succeeded. His reign had been remarkably successful and represents, perhaps, the zenith of Umayyad power. It is less clear to what extent the caliph himself contributed directly to this, and perhaps his main achievement was to preserve balance and stability among the factions of the ruling family and their allies.

Bibliography: The main sources on early Islamic history all contain accounts of his reign, notably: Ṭabarī, ii, 1172-1281; Yaʿḳūbī, *Ta'rīkh*, ii, 337-51; Ibn Khayyāṭ, *Ta'rīkh*, ed. al-ʿUmarī, 299-313; Masʿūdī, *Murūdj*, iii, 365-80. Creswell, *Early Muslim architecture*, i, Oxford 1932; M.A. Shaban, *Islamic history A.D. 600-750*, Cambridge 1971; P. Crone, *Slaves on horseback*, Cambridge 1980; G.R. Hawting, *The first dynasty of Islam*, London 1986; H. Kennedy, *The Prophet and the age of the Caliphates*, London 1986; G.M. Hinds, *The zenith*

of the Marwanid house (= vol. xxiii of *The History of al-Ṭabarī*, ed. E. Yar-Shater, Albany 1990).

2. AL-WALĪD (II) b. Yazīd b. ʿAbd al-Malik (r. 125-6/743-4).

His date of birth is uncertain and estimates of his age at his accession to the caliphate vary between 37 and 45. His mother was Umm al-Ḥadjdjādj Zaynab, daughter of Muḥammad b. Yūsuf al-Thaḳafī.

His father, Yazīd II b. ʿAbd al-Malik, had nominated him to succeed his own brother Hishām. At first, Hishām seems to have regarded his young nephew with some affection but he became increasingly disillusioned by his dissolute lifestyle; he reduced his allowances and punished some of his undesirable associates. Al-Walīd in turn withdrew from court and established himself in a remote desert residence which may be the ruined site now known as Ḳaṣr al-Ṭūba in the Jordanian desert.

The exact chronology of events in al-Walīd's short reign is not clear, but he faced opposition from the time of his accession and seems to have exacerbated this by his conduct. The stories of his debauchery and wine-drinking may have been exaggerated, but they allowed his enemies to claim that it was legitimate to depose him. After taking the *bayʿa* in Damascus, he lived entirely in remote desert palaces which allowed rumour to spread and opposition to grow unchecked.

The new caliph's first actions were populist, increasing the stipends for the Syrians and other supporters and providing slaves to help the blind and crippled. However, he soon began to arouse political opposition by his reliance on members of the Ḳays-Muḍar faction and, especially, the Thaḳafī relations of his mother. The most important of these was Yūsuf b. ʿUmar Ibn Hubayra [*q.v.*], who had been appointed governor of ʿIrāḳ and the east by Hishām and was retained in office by al-Walīd. He also appointed his own maternal uncle Yūsuf b. Muḥammad b. Yūsuf al-Thaḳafī to the prestigious governorate of the Ḥidjāz. He allowed the Ḳays-Muḍar leaders to persecute their Yemeni opponents, in particular the widely-respected former governor of ʿIrāḳ, Khālid b. ʿAbd Allāh al-Ḳasrī [*q.v.*] who was effectively sold to Yūsuf b. ʿUmar and tortured to death. The caliph also took action against Hishām's sons and other members of the Umayyad family whom he suspected of opposing his accession, and the powerful Sulaymān b. Hishām was flogged and exiled to ʿAmmān. A broad coalition of interests, including many Umayyads and the family of Khālid al-Ḳasrī and other leading Yemenis emerged, and leadership of the opposition was assumed by the caliph's cousin, Yazīd b. al-Walīd. While the caliph remained in his desert retreat, the opposition was able to take over Damascus. Shortly afterwards, an expeditionary force under ʿAbd al-ʿAzīz b. al-Ḥadjdjādj b. ʿAbd al-Malik was sent to al-Walīd's palace at al-Bakhrāʾ, south of Palmyra. Here, after a short siege, the caliph was killed, according to al-Ṭabarī, on 27 Djumādā II 126/15 April 744.

Bibliography: The main sources on early Islamic history all contain accounts of his reigu, notably: Ṭabarī, ii, 1740-1825; Yaʿḳūbī, *Taʾrīkh*, ii, 396-401; Ibn Khayyāṭ, *Taʾrīkh*, 362-8. (H. KENNEDY)

Al-Walīd (II) as a poet.

However ill-fated as a caliph, al-Walīd gained lasting fame as one of the most original poets in Arabic literary history. He was also a gifted musician and composer, who set some of his own verses to music; this may have influenced his poetic technique. His reputation rests on his *ghazal* [*q.v.*] verses addressed to Salmā, his wife's sister, and on his wine songs [see KHAMRIYYA], which constitute an important stage in the development of the genre. Not needing to please a patron, al-Walīd was able to follow his taste and creative inspiration without restraint. His *dīwān* appears to be a genuine manifestation of his complex character, aestheticism and licentious life-style.

Al-Walīd's verses have been collected from various sources and edited with an essay by F. Gabrieli, *Al-Walīd ibn Yazīd. Il califfo e il poeta*, in *RSO*, xv [1934], 1-64, re-ed. Beirut 1967. The edition contains 102 poems and fragments, 428 verses in all, love (43 texts) and wine (14 texts) forming the main themes. Of his five elegies, two are devoted to his beloved Salmā, who died shortly after he had forced her to divorce and married her as caliph in 743 (nos. 29, 56). The remaining texts may be roughly classified as *mufākhara* and *hidjāʾ* [*q.vv.*], e.g. against his uncle Hishām, whose death he welcomed with undisguised joy (nos. 60, 84). There is also a religious *urdjūza* (no. 37) he allegedly recited as *khuṭba* at a Friday worship (*Aghānī*[1], vi, 128).

His poems are usually short (4-8 verses) and carefully structured on different linguistic levels. Metrical variation is extremely high. Al-Walīd employs 13 metres, five of them also in their shortened (*madjzūʾ*) variant, with preference, in statistical order, for *ramal madjzūʾ*, *wāfir*, *khafīf* and *ṭawīl* [see ʿARŪḌ]. Phonological and morphological repetition and syntactic parallelism are his favourite techniques (cf. R. Jacobi, *Theme and variations in Umayyad Ghazal poetry*, in *JAL*, xxiii [1992], 109-19). As a result, his verses achieve a distinctive rhythm and sound quality, a musicality, as it were, unknown in Arabic poetry before.

Al-Walīd continues the tradition of ʿUmar b. Abī Rabīʿa and Djamīl al-ʿUdhrī [*q.v.*], as he himself avows (no. 42,3). From the aspect of form, his *ghazal* was influenced by ʿUmar, but it reveals the melancholy mood and passionate devotion to one beloved of the ʿUdhrites, mixed with courtly elements and a playfulness all his own (cf. Jacobi, *Zur Gazalpoesie des Walīd ibn Yazīd*, in W. Heinrichs and G. Schoeler (eds.), *Festschrift für Ewald Wagner*, ii, Beirut 1994, 154-61). One of his most original traits is the use of nature as a lyrical medium, e.g. his dialogue with a bird (no. 74) or the image of a garden touched by autumn in his *marthiya* [*q.v.*] for Salmā (no. 56). The defiance and eroticism of his bacchic verses prepares the way for the *khamriyya* of Abū Nuwās [*q.v.*] (cf. P. Kennedy, *The wine song in Classical Arabic poetry*, Oxford 1997, 27, 100). Living in a period of transition, al-Walīd unites Umayyad lyricism and ʿAbbāsid sophistication. In his verses, if not in his life, he achieved a perfect balance, his exuberance and sensuality being controlled by poetic genius and formal discipline.

(RENATE JACOBI)

AL-**WALĪD** B. **HISHĀM**, Abū Rakwa, a pseudo-Umayyad pretender who led a revolt against the Fāṭimid caliph al-Ḥākim [*q.v.*]. He was an Arab, probably of Andalusian origin, who for some time had earned his living as a schoolteacher in al-Ḳayrawān and Miṣr (Old Cairo) and then went into service with the Arab Bedouin clan of Banū Ḳurra (of the Hilāl tribe) whose pasture-grounds were the hilly country of Cyrenaica south-east of Barḳa (modern al-Mardj); there he taught the boys of the clan to read and write. His nickname Abū Rakwa "the one with the waterbottle", seems to point to his Ṣūfī-like appearance. (The most detailed reports of his early career are found in al-Nuwayrī, *Nihāyat al-arab*, ed. M.M. Amīn and M.Ḥ.M. Aḥmad, xxviii, Cairo 1992, 181-4, and Ibn al-Athīr, ix, 197-8.)

When in 394/1004 a conflict broke out between the Banū Ḳurra and the caliph al-Ḥākim, the Bedouin rebelled, and young Abū Rakwa—then in his mid-twenties—took the lead in the revolt. He passed himself off for a descendant of the Umayyad caliph of Cordova ʿAbd al-Raḥmān III, and in Djumādā II 395/end of March 1005, in the village of ʿUyūn al-Naẓar in Cyrenaica he took the caliphal title of *amīr al-muʾminīn* and the royal name *al-Nāṣir li-Dīn Allāh*, the same which his alleged ancestor ʿAbd al-Raḥmān III had borne; the "caliph" posed as the champion of Sunnism against Shīʿī heresy. The Arab Banū Ḳurra under their chief Māḍī b. Muḳarrab were supported by several Berber fractions of the Zanāta, Mazāta and Luwāta tribes. Barḳa, the capital of the Cyrenaica, was evacuated by the Fāṭimid garrison in September 1005 after a siege of five months, after an Egyptian force of relief under the Turk Yināl al-Ṭawīl had been crushed by the rebels.

In 396/1006 the hordes of the rebel tribes with their tents and flocks hurled themselves against Egypt; their vanguard overran a Fāṭimid contingent near today's El Alamein. As Alexandria was too strongly fortified, Abū Rakwa led his bands to the south. Since al-Ḥākim had occupied the bridgehead of al-Djīza, the rebels were forced to march across the desert in order to gain the fertile lowlands of al-Fayyūm. Here the hordes of Abū Rakwa were engaged by the Fāṭimid main army under Faḍl b. Ṣāliḥ at Raʾs al-Birka and annihilated (3 Dhu 'l-Ḥidjdja 396/30 August 1006). Abū Rakwa fled to Nubia, where he found asylum in a Christian monastery, but he was handed over by the Nubian king at al-Ḥākim's request in exchange for a considerable ransom. He was brought to Cairo and executed there in March 1007.

The short career of Abū Rakwa was accompanied by a celestial phenomenon, a Super Nova which from May to August 1006 was observed also in Europe; in the Egyptian chronicles a parallel was drawn between its appearance and fading and the rise and fall of Abū Rakwa (Yaḥyā al-Anṭākī, 475; al-Maḳrīzī, *Ittiʿāẓ* ii, 61).

Aguadé, *Abū Rakwa*, in *Actas del IV Coloquio Hispano-Tunecino, Palma de Mallorca 1979*, Madrid 1983, 9-27.

(H. HALM)

AL-**WALĪD** B. AL-**MUGHĪRA** B. ʿABD ALLĀH, member of the powerful and numerous clan of Makhzūm [*q.v.*] in pre-Islamic Mecca, opponent of the Prophet Muḥammad and uncle of another opponent, Abū Djahl [*q.v.*] ʿAmr b. Hishām b. al-Mughīra, d. just after the Hidjra.

Little is known of his life, but he clearly represented the aristocratic interests of his clan and was himself prosperous, seen in the fact that he is said to have owned a garden in Ṭāʾif which he planted for pleasure only and never gathered the fruit in it (Sprenger, i, 359). According to the commentators, there are references to him in several passages of the Ḳurʾān, e.g. VI, 10, XLIII, 30, LXXIV, 11 ff. and LXXX, 1 ff., although his name is never expressly mentioned. One cannot, of course, place implicit confidence on such statements, which are sometimes based on later deductions. Muslim historians frequently mention al-Walīd among those members of Ḳuraysh who vigorously persecuted Muḥammad and endeavoured to silence him. Thus he is said to have been a member of a deputation which went to Abū Ṭālif [*q.v.*] and protested to him, but without success, at the Prophet's conduct. It is also related that Muḥammad's enemies had on one occasion, on the approach of the pilgrimage, discussed the best means to set strange visitors against Muḥammad and proposed in turn the epithets *kāhin* "sooth-sayer", *madjnūn* "possessed" and *shāʿir* "poet", but al-Walīd rejected them all until those present finally agreed to his proposal to call Muḥammad a *sāḥir* "magician", who would separate a man from his father, brother, wife and whole family, and to warn the pilgrims seriously against the alleged magician. When ʿUthmān b. Maẓʿūn [*q.v.*], a relative of al-Walīd, who had adopted Islam and taken part in the emigration to Abyssinia, but was still under al-Walīd's protection, wished to break off this relationship, the latter endeavoured to dissuade him, but in vain. After al-Walīd had therefore released himself from all obligations to his relative, ʿUthmān was severely wounded in a squabble, whereupon al-Walīd again offered him his protection but ʿUthmān rejected this kindly-meant offer.

Al-Walīd died in Mecca in the year 1, and three of his seven sons adopted Islam. In keeping with his aristocratic descent and social status, his actions were frequently characterised by magnanimity and dignity.

(K.V. ZETTERSTEEN*)

AL-**WALĪD** B. **ṬARĪF** al-Taghlibī al-Shaybānī al-Shārī, Khāridjite rebel in al-Djazīra in 178-9/794-5, i.e. during the reign of Hārūn al-Rashīd. The Arabic sources tell us much about al-Walīd and his outbreak, although some details are contradictory; the most explicit sources are Khalīfa b.

Khayyāṭ, the *Aghānī*, Ibn al-Athīr and Ibn Khallikān.

Starting from Naṣībīn, al-Walīd swept through Armenia and Ādharbāydjān into al-Djazīra, an old Khāridjite stronghold, defeating several caliphal armies. Hence in 179/795 Hārūn sent against him the experienced Yazīd b. Mazyad al-Shaybānī. Pressed by the caliph and accused by the Barmakīs of deliberately hanging back, Yazīd attacked al-Walīd at a place called Ghirra near Hīt [*q.v.*] on 2 Ramaḍān 179/19 November 795, defeated his army and killed the rebel. The caliph, relieved of this threat, left for the *ʿumra* and the *ḥadjdj*, performing all the prescribed ceremonies by walking.

Many of al-Walīd's own verses are cited in Arabic literature, as are also the elegies for her brother by al-Walīd's sister Fāriʿa or Laylā; contrariwise, there exist verses by Muslim b. al-Walīd [*q.v.*] praising Yazīd for his victory.

(H. EISENSTEIN)

AL-WALĪD B. ʿUḲBA B. ABĪ MUʿAYṬ, Companion of the Prophet and member of the Abū ʿAmr family of the Umayyad clan in Mecca, d. 61/680.

His father ʿUḳba fell at Badr opposing Muḥammad, but al-Walīd became a Muslim at the conquest of Mecca in 8/630. He acted as collector of the *ṣadaḳa* [*q.v.*] from the Banū Muṣṭaliḳ under the Prophet and that from the Christian Banū Taghlib [*q.v.*] in al-Djazīra under ʿUmar. Through his mother, he was a half-brother of the ʿUthmān b. ʿAffān, and when the latter became caliph he appointed al-Walīd governor of Kūfa after Saʿd b. Abī Waḳḳāṣ (29/645-6). His licentious behaviour and wine-drinking made him unpopular with the pietistic elements there, and after complaints had been made to him ʿUthmān removed him in 29/649-50. When ʿUthmān was murdered, al-Walīd fled to al-Djazīra and stayed there, standing apart from politics, dying at Raḳḳa in 61/680. He had some fame as a poet (see *Aghānī*[3], v, 122-53), as did his son Abū Ḳaṭīfa ʿAmr (d. before 73/693, see Blachère, *HLA*, iii, 621, and Sezgin, *GAS*, ii, 424-5).

Bibliography: The sources are detailed in Ziriklī, *Aʿlām*, ix, 143, to which should be added Balādhurī, *Ansāb*, v, 29-35. See also G. Rotter, *Die Umayyaden und die zweite Bürgerkrieg* (680-692), Wiesbaden 1982, 111-12. (C.E. BOSWORTH)

WĀLIDE SULṬĀN (A.), Turkish pronunciation *vālide* or *valde sulṭān*, a term meaning "mother sultana", or "queen mother". It was used in the Ottoman Empire to refer to the mother of the reigning sultan, and only for the duration of the son's reign.

The history of the position and its occupants, like a great deal of the history of the *ḥarīm* [*q.v.*] and its influence on the dynastic politics of the Ottomans, is couched in myth and exoticism, and much of its early development is completely obscured. The interference of the royal women in politics, a fact which most Ottoman chronicles of the middle period note and deplore, became intimately linked to, as well as blamed for the long decline of the empire, especially after the death of Süleymān the Magnificent in 1566. In both Turkish and Western histories, the period from the mid-10th/16th to the mid-11th/17th centuries has been known as the *ḳadïnlar salṭanatï* "women's sultanate" or "the rule of the women". Abundant material is available, from both documentary and foreign observers alike, although less so in more circumspect Turkish sources, but all has to be sifted with care. Of newer work, two studies on the sovereignty and ceremonial aspects of the dynasty have placed the role of the imperial household in a more reasonable context (those of Peirce and Necipoğlu).

The source of most of the women for the imperial household was slavery [see ʿABD]. Initially, free-born daughters of rivals and allies, or captives of war, were the choice for marriage. In the middle period, women from the Caucasus and other areas, prized for their beauty, were enslaved and became part of the sultan's entourage, often as gifts. While the early sultans married in order to contract or cement alliances, once a royal palace [see TOPḲAPÏ SARĀYÏ] was constructed in Constantinople after its conquest in 1453, the private quarters of the sultan and his household altered the public role of women in the sultanate, although the *ḥarīm* remained a source of royal brides for the upper echelon of the Ottoman administration. Thereafter, the sultan himself never married, with the exceptions of Süleymān to his beloved Roxelana (d. 965/1558 [see KHURREM] and ʿOthmān II (1618-22 [*q.v.*]). Sultans had a number of favourites, usually, but not always, limited to four, called *khāṣṣekī* [*q.v.*], and those who had borne the sultan a child were called *khāṣṣekī sulṭān*.

Nothing could enhance the prestige of a *khāṣṣekī* more than to have her son become sultan. This equivalent of the dowager queens of other dynasties commanded a respect that at least partially derives from Muslim and Turkish filial piety, exemplified in the *ḥadīth* "Paradise lies at the feet of the mother". In addition, when succession was contested, the problem of a potential heir and his survival in fratricidal disputes embroiled many mothers in their sons' affairs, creating often unique, but ambivalent, bonds of affection and power. All princes of the Ottoman household after 1600 were confined to the royal precincts, given very small allowances, and prevented from producing unwanted offspring upon entering maturity. The women, especially mothers, came to assume a disproportionate influence in the safe passage of such sons to the throne. Royal mothers were paid the highest stipend [see BASHMAḲLÏḲ] in the empire (Peirce, 126). They often became considerable patrons of large building projects, and allied themselves when necessary with ambitious officials of the court, most especially, with the chief black eunuch, the guardian of the *ḥarīm*, the *Ḳïzlar Aghasï*, who in the middle period of the empire became the third most important palace official after the sultan and the Grand Vizier. As the royal women rarely appeared in public, all such political and financial arrangements were conducted from within the confines of the palace.

The *wālide sulṭān* commanded an enormous household which grew in the period 1550-1700 from under 200 to close to 1,000, in addition to the *wālide* or

the *khāṣṣekīs* (Peirce, 122). The *wālide* was given special recognition on two ceremonial occasions: upon her son's accession, she too was installed in a separate ceremony, which sometimes involved a procession from the old palace (*eski sarāy*), where retired or out of favour *khāṣṣekīs* as well as royal mothers and sisters of previous sultans resided. The sultan himself greeted her at the gate of Ṭopḳapî Sarāyî. Should she die while her son was in office, the sultan bade her cortège farewell at the gate and she was treated to a royal burial. If her son died before she did, she retired to the *eski sarāy*. Palace etiquette surrounding the *wālide sulṭān* set her apart from all the other women of the *ḥarīm*, as well as from most other high dignitaries of the court.

The list of women entitled to be called *wālide sulṭān* varies according to the source, in part because the early genealogy of the dynasty is coloured with much later accretion, probably encouraged by the sultans themselves, and centring on their putative relationship to other regal bloodlines. Such is the much-embellished life of Aimée du Buc de Rivery, called the "French Sultana", a relative of Empress Josephine of France, reputedly a captive concubine in the *ḥarīm* of Selīm III (1789-1807 [*q.v.*]) and erroneously called the mother of Maḥmūd II (1807-1839 [*q.v.*]). Even the legendary mother of Ertoghrul Ghāzī, father of ʿOthmān I [*q.v.*] and Mal Khātūn (d. 726/1325-6), ʿOthmān's wife and mother to Orkhān [*q.v.*], were accorded the title of *wālide* by the 19th century. Of the eighteen *wālides* in Alderson's list (83), a handful achieved extraordinary status: Nūr Bānū (d. 991/1583 [*q.v.*]), mother of Murād III; Ṣafiyye (d. 1014/1605 [see ṢAFIYYE WĀLIDE SULṬĀN]), mother of Meḥemmed II; Māhpaykar or Kösem (d. 1061/1651 [*q.v.*]), wife of Aḥmed, mother of sultans Murād IV and Ibrāhīm and grandmother of Meḥemmed IV; and finally, Turkhān (also Tarkhān) (d. 1094/1683), mother of Meḥemmed IV, the latter two women bitter rivals.

The most notorious mother of the dynasty, Khurrem, died before her son Selīm II (1566-74 [*q.v.*]) achieved the throne. The "rule of the women" dates from her taking up residence in Ṭopḳapî Sarāyî in 1541, necessitated by a fire in the *eski sarāy*. In each of the other four cases as well, palace intrigues and shifting coalitions characterised their exercise of political power, which was precariously attached to the well-being and accession of their sons. Notable in that regard is Turkhān's culpability in the execution of her rival Kösem, who is often blamed in Western histories for encouraging the lurid excesses of her son, the mad Ibrāhīm.

These powerful women are equally exemplary for having used their wealth and position to establish charitable foundations [see WAḲF] around mosque complexes, and financing other projects which contributed to the construction of the permanent legacy of imperial Istanbul and other cities of the empire. Ṣafiyye, for example, the fifth of the queen mothers in the palace, began the construction of the New Queen Dowager Mosque (Yeñi Wālide Djāmiʿ), known as Yeñi Djāmiʿ, at Eminönü in Istanbul, which Turkhān completed during her rule as the first truly imperial mosque of the royal women. Ṣafiyye also built a mosque in Cairo. Nūr Bānū built the Wālide-yi ʿAtīḳ mosque complex in Üsküdar, which included a school, hospital and a library, as did that of Turkhān. Nūr Bānū built numerous public baths. Kösem, who served as regent for five years before Murād IV reached maturity, exercised considerable power for close to thirty years, and is evoked in the popular imagination for her generosity and intelligence. Included among her projects was the Činili Djāmiʿ (Çinili Mosque) and its associated buildings in Üsküdar, as well as other charitable foundations. She was also the builder of a market [see KHĀN] in the centre of the city (see *EI*[1] s.v. (Deny), 1116-7, for a more complete list, and the articles in this *Encyclopaedia* on the individual *wālides*; Peirce, 200-20, discusses the role such projects played in promoting Ottoman sovereignty).

By the 18th century, when succession was more regularised, the political influence of the *wālide sulṭān* was much diminished, although the ceremonial and psychological bond between mother and son remained strong. Of *wālides* of the 18th century, Gülnūsh (d. 1127/1715), mother of Muṣṭafā II and Aḥmed III and Naksh-i Dil, mother of Maḥmūd II, reputedly influenced the two great reformer sultans of the age. Alderson lists Şevkefza (i.e. Shewḳefzā), mother of Murād V; whose reign lasted 93 days in 1876, as the last designated *wālide*, but ʿAbd al-Ḥamīd II (1876-1908 [*q.v.*]) bestowed the rank on his adopted mother, Peresto Khānîm, having lost his natural mother at an early age. The mothers, like royal married sisters, were on the civil list in the 19th century and still commanded considerable salaries.

Bibliography: J. Deny, *EI*[1] art. *Wālide Sulṭān* (a complete list of primary and earlier secondary works); M. Tayyib Gökbilgin, *İA* art. *Başmaklık*, at ii, 333-4, and M. Cavid Baysun, art. *Kösem Sultan*, at vi, 915-23, listing more works in Turkish; B. Miller, *Beyond the Sublime Porte*, New Haven 1931 (still a worthy study of the palace and its residents); N. Penzer, *The Harem*, [2]London 1965 (less so); A.D. Alderson, *Structure of the Ottoman dynasty*, Oxford 1956; Gibb and Bowen, i, 71-7; Gülru Necipoğlu, *Architecture, ceremonial and power. The Topkapı Palace in the fifteenth and sixteenth centuries*, Cambridge 1991; Leslie Peirce, *The Imperial Harem*, New York 1993. The latter two have considerable bibliographies of their own. J. Freely, *Istanbul: the imperial city*, New York 1996, includes valuable information on the building projects of the *wālides*.

The literature on the harem has itself grown vast, a majority of the writers, to quote Deny, "reveal[ing] a remarkable credulity" (1118). See ḤARĪM for a fuller list. Lady Wortley-Montagu's letters of the 18th century give a clear-eyed picture of the institution in its later stages (*Selected letters*, ed. R. Halsbend, New York 1986). One of the most entertaining of the captive slave accounts is the fictionalised tale of Aimée de Buc du Rivery, in Leslie Blanch, *The wilder shores of love*, London and New York 1954. Of the autobiographies of members of the late Ottoman household, an interesting one is Ayşe Osmanoğlu's *Avec mon père le sultan Abdulhamid de son palais à sa prison*, Paris 1991, published also in English and Turkish. (VIRGINIA H. AKSAN)

WĀLIHĪ, the pen-name (*makhlaṣ*) used by several Ottoman poets of the 10th/16th century, two of whom are prominent.

1. ḲURD-ZĀDE of Edirne. After a *medrese* education, he left the *ʿIlmiyye* [*q.v.*], went to Cairo and became a *mürīd* of *seyyid* Aḥmed Khayālī, son of Ibrāhīm Gülshenī, the founder of the Gülsheniyye order. After his return to Edirne, he earned great repute as a preacher, delivering exceptionally captivating sermons (*waʿẓ*). When the Selīmiyye mosque in Edirne was completed in 982/1574, Wālihī became its first preacher, and he retained his position there until his death. However, his emotional temperament and inclination to love affairs involved him in various

incidents, one of which resulted in his temporary banishment from Edirne in 971/1563-4. He joined the Eastern expedition of Lālā Muṣṭafā Pasha [*q.v.*] and in Tbilisi, following the city's surrender to Özdemir-oghlî ʿOthmān Pasha, delivered a memorable *khuṭbe* to the army in the name of Sultan Murād III on Friday, 29 August 1578. He died in 994/1586 according to ʿAṭāʾī's calculation of the chronogram which his namesake Wālihī of Üsküb (see below) wrote on his death (or in 996/1588 according to Ḥibrī) in Edirne and was buried in the cemetery of the *sheykh* Shudjāʿ *zāwiye* on the shore of the Tundja.

Poems by him of a lyrical (*ʿāshiḳāne*) and mystical (*mutaṣawwifāne*) character are to be found in *medjmūʿas* and *tedhkires*; Ḳînalî-zāde Ḥasan Čelebi relates that he also composed pleasing chronograms (*tārīkh*). There is no mention in any of the *tedhkires* of a *dīwān*, so that the *dīwān* attributed to him in the *ʿOthmānlî müʾellifleri* (and thereafter in other sources) must be due to a confusion with Wālihī of Üsküb, who is, in fact, the author of a *dīwān*.

Opinion is divided concerning the separate identity of a Wālihī whose particulars are very similar to those of Ḳurd-zāde Wālihī. This is Wālihī of Djisr-i Ergene or Ergene Köprüsü (Uzunköprü near Edirne), who was a pupil of Muḥashshī Sinān Efendi during the time (942-5/1535-9) when he taught at one of the Ṣaḥn-i themān [*q.v.*] *medreses* in Istanbul. He later likewise quit the *ʿilmiyye* to join the Gülsheniyye order, becoming a *mürīd* of *sheykh* Ḥasan Ẓarīfī in Istanbul. Although Ḳînalî-zāde Ḥasan Čelebi's *tedhkire* is the only *tedhkire* with an entry on him, the fact of Ḳînalî-zāde's sojourn in Edirne as a contemporary of Ḳurd-zāde Wālihī, which gave him the possibility of collecting information *in situ* for his *tedhkire*, lends verisimilitude to his information. Ḳînalî-zāde also cites a few verses by him.

2. Aḥmed of Üsküb (Skopje). The son of a *ḳāḍī*, he finished his *medrese* education in Istanbul and thereafter became a tutor (*muʿīd*) at the Sultan Bāyezīd II *medrese* in Edirne. Later, he served as *ḳāḍī*, but no details on his appointments are known. He died in Üsküb in 1008/1599-1600. Ewliyā Čelebi relates that his grave is in the *zāwiye* of *sheykh* Luṭfullāh near the fortress of Üsküb and that it has become the object of pious visits.

He enjoyed great repute as a poet and is the author of a *dīwān*. There is only one known ms. of a Wālihī *dīwān* and that is no. Diez 30 in the Staatsbibliothek Preussischer Kulturbesitz in Berlin (edition in preparation by the author). This fragmentary ms., containing about 300 *ghazels*, is attributed to Wālihī-yi Belghradī (cf. W. Pertsch, *Die Handschriften-Verzeichnisse der Königlichen Bibliothek zu Berlin*, vi, Berlin 1889, no. 413).

A Wālihī of Belgrade is mentioned solely by Laṭīfī and is conceivably identical with Wālihī of Üsküb, for whom there is no entry in Laṭīfī's *tedhkire*. He may have been unaware of the poet's true provenance, who may have lived for a time in Belgrade in his youth, perhaps even during Laṭīfī's stay there prior to finishing his *tedhkire* in 953/1546. However, we do not know if Wālihī of Üsküb's date of birth is early enough to make this possible. Although Laṭīfī states that his given name is Meḥmed, he also remarks that he has a brother called Aḥmed, giving no further details on Wālihī's *curriculum vitae*. That Laṭīfī speaks in the most contemptuous language of Wālihī's, and his brother's, poetic capabilities should be viewed in connection with the fact that he was the butt of their satirical verses; the few verses he cites are insufficient proof for his exceedingly low opinion.

Bibliography: The *tedhkires* of Laṭīfī, ʿAhdī, ʿĀshîḳ Čelebi, Ḳînalî-zāde Ḥasan Čelebi, Beyānī, Riyāḍī, Ḳāf-zāde Fāʾiḍī and Riḍā; ʿAṭāʾī, *Dheyl-i Shaḳāʾiḳ*, Istanbul 1268, 364-5; Ḥādjdjī Khalīfa, i, 818; ʿAbd el-Raḥmān Ḥibrī, *Enīs el-müsāmirīn*, Istanbul Üniv. (Edith G. Ambros)

WALĪLĪ, an ancient town of Morocco.

Walīlī, or Walīla as it was known to the early Muslim historians, is the arabised form of the Roman name Volubilis. Located at 27 km/16 miles north of Meknès, Walīlī occupies the ledge of the Zarhūn plateau and enjoys a privileged position in the midst of a very fertile valley. It is uncertain whether this Roman city served as capital for all of the Roman province known as *Mauritania Tingitana*, but there is no doubt that it served as the chief city of the southern part of it at least. Held for a long time to have been a Roman creation, it is clear today, on the basis of recent findings, that the agglomeration is much older than the Roman presence in this part of North Africa. It was abandoned by the Roman garrison in A.D. 285 but continued to be an important political centre for several centuries afterwards, even if it lost much of the splendour and prosperity which it had enjoyed earlier.

The Islamic history of the place started with the arrival in A.D. 788 of a Sharīfian fugitive, Idrīs b. ʿAbd Allāh, who took refuge in the far Maghrib following an unsuccessful uprising against the ʿAbbāsids of Baghdād [see idrīs i]. For a short time, Idrīs took up residence at Tangier, the other important city of Mauritania Tingitana, but he soon realised that an inland place like Walīlī would better serve his political ambitions. In fact, Walīlī happened to be well protected by the Zarhūn massif, and in the middle of rich lands belonging to the influential Awrāba Berbers. At Walīlī, Idrīs enjoyed the hospitality and support of the Awrāba chief, Isḥāḳ b. Muḥammad b. ʿAbd al-Ḥamīd. According to Ibn Khaldūn, the Awrāba were then the most powerful Berber group, something which proved to be of crucial importance in gathering the support of the other Berber tribes for the cause of Idrīs. The latter was proclaimed *amīr* by the Berbers of central and northern Morocco in a significant move to free the western Maghrib from ʿAbbāsid domination. The fact that Idrīs chose Walīlī to be the seat of his kingdom is a clear indication that, by the end of the 8th century A.D., the city was still an important urban centre, even if mediaeval sources such as Ibn Abī Zarʿ in his *Rawḍ al-ḳirṭās*, describe it as being then "a middle-sized city".

Traditional historiography has for a long time maintained that the Idrīsids contented themselves with Walīlī as capital of their kingdom until the death of Idrīs I in 187/803. It was his son Idrīs II who, according to historians such as al-Djaznāʾī or Ibn Abī Zarʿ, decided to leave Walīlī after it became too small for his growing entourage and build a new capital at Fez. However, this view has been seriously challenged, and

enough historical evidence is available today to indicate that Fez could very well have been the creation of the first Idrīs rather than that of his son.

Whoever was the real founder of the new capital, it remains true that the transfer of the Idrīsid centre of government to Fez inaugurated a period of decline for Walīlī, despite the burial of Idrīs I in a place located a few kilometres only from old Volubilis, in the village which thereafter acquired the name of Mawlāy Idrīs. By the 6th/12th century, the place was no longer known under the name of Walīlī. Contemporary sources mention it under the Berber name of Tizra, which in Berber means "stones". Apparently, the place was then all in ruin and, therefore, looked more like a field full of stones. In the 8th/14th century, according to al-Djaznā'ī, it was known to the people of the far Maghrib as Ḳaṣr Fir'awn (Pharaoh's castle), a clear tendency to obliterate the memory of Roman Volubilis and to bring it within the pagan pre-Islamic heritage. This name continued to be used until the beginning of this century when, during the First World War, the French employed German prisoners to dig up a large part of the buried city. However, not far from the old Walīlī the burial place of Idrīs I grew from a village into a town-*zāwiya*, especially after the resurgence of Sharīfism during the Marīnid period (7th-9th/13th-15th centuries) and the miraculous discovery in 719/1319 of the mortal remains of Mawlāy Idrīs, in good shape and in their original shroud. Thereafter, a *zāwiya* was built to honour the founder of the Idrīsid dynasty and the town of Mawlāy Idrīs developed into the important pilgrimage centre which it remains today [see MAWLĀY IDRĪS].

(MOHAMED EL MANSOUR)

WALĪMA [see 'URS].

WĀLISHĀN [see SĪBĪ].

WALLACHIA [see EFLĀḲ].

WALLĀDA BT. MUḤAMMAD III B. 'ABD AL-RAḤMĀN, poetess and littérateuse of the Spanish Umayyad family, d. Ṣafar 480/May-June 1087 or 484/1091.

Her father was placed on the throne with the *laḳab* of al-Mustakfī, but reigned for sixteen months only 414-16/1024-5, being killed shortly afterwards. Hence Wallāda's childhood and youth coincided with the particularly troubled and confused end of the Umayyad caliphate in Spain. Aged about sixteen at this time, and the offspring of a slave mother of European origin (*djāriya*), she was able now to exercise a relatively free life and, having received a thorough education in the Islamic literary sciences, she gathered round herself at Cordova a literary salon which was "the rendezvous of the well born, frequented by writers and poets who sought out her friendship, welcoming attitude and the numerous society round her" (Ibn Bassām, *Dhakhīra*, i/1, 429). Amongst the famous persons attending her salon was Ibn Zaydūn [*q.v.*], who had an amorous relationship with Wallāda, much elaborated in the sources, e.g. al-Fatḥ b. Khāḳān, *Ḳalā'id*, 79-93, in which she herself took the initiative, daring for her time. Wallāda composed verses on this liaison and had them embroidered on her dresses.

The relationship deteriorated, however, when Ibn 'Abdūs [*q.v.*], the *wazīr* of Cordova under the local ruler Abu 'l-Ḥazm Ibn Djahwar [*q.v.*], succeeded in replacing Ibn Zaydūn in her heart. Ibn Zaydūn reacted furiously by trying to pin his own *al-Risāla al-hazliyya* on her, but failed to sow dissension between Wallāda and her new lover, and had to leave Cordova. Wallāda then remained Ibn 'Abdūs's mistress until his death aged 80, never marrying, having no children and also dying aged over 80. At the time of the break with Ibn Zaydūn, Wallāda attacked her ex-lover in verses of a singular coarseness, so much so that Ibn Bassām refused to admit them to the pages of his *Dhakhīra*. The humiliated Ibn Zaydūn was nevertheless subsequently inspired to address one of the finest works of Arabic poetry to her, a *nūniyya* of over 50 verses, an unusual length in Arabic poetry for a love-poem addressed to a lady, replete with the devices of *badī'*. In it, Ibn Zaydūn cleverly reproached Wallāda in a gentle fashion only, mixing this with her praises and contrasting their past happiness with his present misery.

Wallāda has gradually become the type of the free woman of al-Andalus and the symbol of her emancipation. It is true that she appears as freer in her attitudes and her relaxation from certain social constraints than her oriental counterpart. But she must be regarded here as far from typical, even if the political troubles of the time and the more relaxed régimes of the Taifas allowed her a measure of freedom, and indeed, regarded as exceptional, from her father's premature death and the possible inheritance of some of the mores of the *djawārī* from her foreign mother. This exceptional status within the usual Arabo-Muslim aristocracy is probably seen also in Ibn Zaydūn's temerity in addressing to her *galant* verses and speaking freely of his liaison with her. Certainly, his poems to her have immortalised her as much as the poet himself.

(A. BEN ABDESSELEM)

WALWĀLĪDJ, WARWĀLĪDJ, a town of mediaeval Ṭukhāristān, in what is now northern Afghānistān, mentioned in the *Ḥudūd al-'ālam*, tr. 72, 109, as the *ḳaṣaba* or administrative centre of the

province. It lay on the road from Bal**kh** and **Kh**ulm [*q.vv.*] to Ṭālaḳān and Bada**khsh**ān [*q.vv.*] between the confluence of the Dō**sh**ī (Sur**kh**-āb) and Ṭālaḳān rivers, whose united stream then flowed into the Oxus. It seems to be the *A-hua* of Hiuen-tsang, attesting to its existence in pre-Islamic, Hephthalite times. E.G. Pulleyblank suggested that the element *wal-/war-* reflects the name of the Central Asian people of the Avars and that the second component reflects the Altaic word for "town", Tkish. *balïḳ*, Mgl. *balgasun* (*The consonantal system of Old Chinese. Part II*, in *Asia Major*, N.S. ix [1963], 258-9). The town continued to be of importance, including as a mint-centre for the early **Gh**aznawids in the 420s/1030s, until Sal**dj**ūḳ times, but thereafter seems to have been replaced by Ḳunduz (< *kuhan-diz*, perhaps the old citadel of Walwālī**dj**) [*q.v.*].

At least one literary person was connected with the place, sc. Rūḥī Walwāli**dj**ī (*sic*), mentioned by ʿAwfī (? *flor.* in the second half of the 6th/12th century; cf. Storey-de Blois, v, 509-10, 636).

WĀMIḲ wa **ʿADHRĀʾ** "the Lover and the Virgin", the names of two exemplary lovers, often referred to in Muslim literatures together with other famous loving couples such as Laylā and Ma**dj**nūn, and Yūsuf and Zulay**kh**ā.

Although references to Wāmiḳ and ʿA**dh**rāʾ are not infrequent, no fixed and widely known story about them has been preserved. The best-known version is that of the Persian poet Abu ʾl-Ḳāsim ʿUnṣurī (d. 431/1039-40 [*q.v.*]). Of this, however, only fragments have survived, partly in isolated verses quoted in lexical works, like the *Lu**gh**at-i furs* of Asadī (d. *ca.* 473/1080), and partly in a fragmentary manuscript found as late as the 1950s (see M. Shafi, *Wāmiq-o-Adhrā of ʿUnṣurī*, Lahore 1967). These fragments show clearly that ʿUnṣurī's *ma**th**nawī* poem is based on a Greek story. For a long time the identity of this Greek romance was unclear (cf. I. Kaladze, *Epičeskoe nasledie Unsuri*, Tbilisi 1983, 39-40), but it was recently established that the Greek original is the novel of Metiochos and Parthenope (see T. Hägg, in *Symbolae Osloenses*, lix [1984], 61-91, B. Utas, in *Orientalia Suecana*, xxxiii-xxxv [1984-6], 429-41). The authorship of this Parthenope Romance, which has only been preserved in parts, is not known, but it seems to belong to the centuries around the beginning of our era (cf. H. Maehler, in *Zeitschr. für Papyrologie und Epigraphik* [1956], 1-20).

How this story reached ʿUnṣurī about a millennium later is far from clear. There is nothing to substantiate a Middle Persian intermediary, as has been deduced from an anecdote in the *Ta**dh**kirat al-**sh**uʿarāʾ* by Dawlat**sh**āh (ed. E.G. Browne, London-Leiden 1901, 30). The distortions that some of the Greek names have undergone in the ʿUnṣurī fragment speak against an intermediary in another alphabet than the Arabic, e.g. Maʿ**sh**aḳūlī as a distortion of a *Ha**gh**sifūlī for Greek Hegesipyle, the step-mother of Wāmiḳ/Metiochos. On the other hand, the *Fihrist* by Ibn al-Nadīm (ed. Flügel, 120) mentions that the director of al-Maʾmūn's **Kh**izānat al-Ḥikma, Sahl b. Hārūn al-Dastmaysānī, among his works counted a *Kitāb Wāmiḳ wa ʾl-ʿA**dh**rāʾ*, and al-Bīrūnī, in a list of his own works that is preserved in Codex Golius 133 of Leiden, maintains that he has "translated the tale (*ḳiṣṣa*) of Wāmiḳ and ʿA**dh**rāʾ". Possibly Sahl b. Hārūn had produced an Arabic version which al-Bīrūnī later translated into Persian prose, a story which easily might have been taken over and put into Persian verse by his contemporary ʿUnṣurī.

Both the fragments of the Greek novel and those of the poem by ʿUnṣurī deal mainly with the beginning of the poem (cf. Utas, *op. cit.*, 431-4). The Persian fragments first describe the wedding of ʿA**dh**rāʾ's father, Fuluḳrāṭ, i.e. Polycrates, king of the island of Samos (here written ***sh**ʾms*), and a certain *Nānī (written *yʾny*). As a result of their union, a remarkable girl is born, who because of her unequalled talents is given the name ʿA**dh**rāʾ (seemingly a translation of the Greek Parthenope "virgin"). Then the narrative turns to the hero of the story, Wāmiḳ (Ar. "ardent lover", no translation of Greek Metiochos), the son of King Mil**dh**īṭas (Greek Miltiades) of *Karūnīs (for Greek Khersonesos). Because of his evil step-mother, he is forced to flee his native land and ends up in Samos, where he happens to see ʿA**dh**rāʾ at the entrance of the (Hera) temple. The two immediately fall in love with each other. ʿA**dh**rāʾ's mother makes the king invite Wāmiḳ to a banquet in the palace, and the sage *Na**kh**minūs (i.e. the philosopher Anaximenes of Miletus) questions Wāmiḳ on the nature of Eros. This symposium scene is also preserved in the Greek version, partly in almost parallel words. After the discussion of Eros, Wāmiḳ tells a story of how Hermes (written *hrmz*) invented the musical instrument *barbaṭ* (Greek *barbiton*). After that, the available text is too fragmented to allow of a coherent interpretation.

The story of ʿA**dh**rāʾ is also found in a Persian prose version in the compilation of narratives called *Dārāb-nāma* by Abū Ṭāhir Ṭarsūsī, probably written in the 6th/12th century (ed. **Dh**. Ṣafā, Tehran 1344/1965, i, 164-5). This version, although very concise, is more complete and continues the story by telling how ʿA**dh**raʾ's father was executed by his enemy (in fact, the Persian Satrap Oroites, cf. Herodotos 3.124) and ʿA**dh**rāʾ herself was sold into slavery by his successor *mndʾrs* (for Greek Maiandrios). After many adventures, ʿA**dh**rāʾ is set free by a kind merchant who promises to bring her to Wāmiḳ. However, the end of the original story remains uncertain.

No less than 24 later poems about the couple Wāmiḳ and ʿA**dh**rāʾ are known, at least by name. Strangely enough the surviving versions contain stories that differ widely from each other (see Shafi, *op. cit.*, 30-129; M.J. Maḥ**dj**ūb, in *Su**kh**an*, xviii [1347], 43-52, 131-42; N. Şahinoğlu, *IA*, art. "Vâmik ve Azrâ"). The two oldest of these works, the Persian poems by Faṣīḥī **Dj**ur**dj**ānī (court poet of the Ziyārid Ḳābūs II, 5th/11th century) and Amīr Far**kh**ārī (court poet of the Sal**dj**ūḳ Kay Kāwūs in Konya, 7th/13th century) are unfortunately only known by name. After those two in time come a Persian poem by a certain Ḳatīlī Bu**kh**ārāʾī (court poet of the Uzbek **Sh**āh Yaʿḳūb, 9th/15th century) and the best-known Turkish version, that of Lāmiʿī (d. 938/1531 [*q.v.*]). The latter was made known in Europe by J. von Hammer-Purgstall (*Geschichte der osmanischen Dichtkunst*, ii, Pesth 1836-8, 45-63; cf. Utas, in *AO Hung*, xlviii [1995], 229-39). Then follows a great number of little known Turkish and Persian versions and even one poem in Kashmiri (written in 1854 by Sayf al-Dīn Ā**kh**und Sayf Ka**sh**mīrī, cf. ms. India Office 1733/6).

(B. Utas)

WĀN, conventionally Van, the name of a lake and of a town (lat. 38° 28' N., long. 43° 21' E.) in what is now the Kurdish region of southeastern Turkey.

1. The lake (modern Tkish., Van Gölü). This is a large stretch of water now spanning the *ils* of Van and Bitlis. It lies at an altitude of 1,720 m/5,640 feet, with a rise in level during the summer when the snows on the surrounding mountain ranges melt. Its area is 3,737 km²/1,443 sq. miles. Being landlocked, with no outlet, it has a high content of mineral salts, especially sodium carbonate, which makes its water undrinkable, but freshwater springs along its shores have always enabled human communities to thrive there, most notably the town of Van (see 2. below). Before the First World War and the subsequent massacres and deportations, there were many Armenians living in its towns and villages, plus some sedentary and transhumant Kurds; the population is now largely Kurdish.

In mediaeval Islamic times, Lake Van was usually known as the Lake of Ardjīsh or Akhlāṭ [*q.vv.*], from the towns on its northern shore. It was famed for its *ṭirrīkh* fish, which were adapted to its waters, and were caught and salted for export as far away as ʿIrāḳ and Khurāsān. The early 10th century Armenian church of the Holy Cross, famed for its sculptures, stands on the island of Aghthamar in Lake Van.

Bibliography: Le Strange, *The lands of the Eastern Caliphate*, 183-4; Admiralty Handbooks, *Turkey*, London 1942-3, i, 187-90; *İA*, art. *Van* (lake and region) (Süha Göney). (C.E. Bosworth)

2. The town. The name Wān is not found in the Arabic sources on the Arab conquest of Armenia (for which see armīniya), but Ibn Ḥawḳal, ed. Kramers, 348, tr. Kramers and Wiet, 342, mentions Ibn al-Dayrānī as being lord of Zawazān, Wān and Wusṭān (for these places in the Lake Van area and the principality of Vaspurakan to its east, see Marquart, *Südarmenien und die Tigrisquellen nach griechischen und arabischen Geographen*, Vienna 1930; Canard, *H'amdanides*, 183-92). In the later 3rd/9th century, the Bagratid Ashot (Ashūṭ) was recognised as king of Armenia by the ʿAbbāsid caliph, with the princes of Vaspurakan, of whom the Artsrunids were the chief, as his vassals.

Already in this century, colonies of Arabs had settled in Armenia, like the *Amīrs* of Manāzkert (Malāzgird [*q.v.*]) whom the Armenians call Kaisikkʿ (< Ḳays) and who ruled on the northern shore of Lake Wān (Apahunik), and the ʿUthmānids (in Armenian, Utʿmanikkʿ) on the northeast shore of the lake, at Bergri and Amiuk. Towards the east, Vaspurakan was exposed to the attacks of the Arab governors of Ādharbāydjān. The Sādjid Afshīn occupied Wān and Wusṭān and appointed eunuchs as governors there (cf. Thomas Artsruni, tr. Brosset, 221).

In 303/916 the Sādjid Yūsuf executed the Bagratid king Smbat in Dwin (cf. Stephen Asoḷik, *History*, iii, chs. iv-v, tr. F. Macler, 18-24). Before this catastrophe, the Artsrunid prince Gagik (through his mother, a nephew of Smbat) had enrolled himself in Yūsuf's suite and by this manœuvre was able to assert the independence of Vaspurakan against Smbat's successors (kings of Ḳars and Ani). The Artsrunid kings were overlords of the principalities of Mokkʿ (now Mukus) and Andzevatsik (cf. Markwart, *Südarmenien*, 359-82).

The Artsrunid princes are several times mentioned in Ibn Miskawayh's *Chronicle*. In 326/937, the troops of the Daylamī chief Lashkarī were defeated near ʿAḳabat al-Tinnīn by Atom b. Djurdjīn (= Gurgen), lord of Zawazān (Ibn Miskawayh, i, 402; Ibn al-Athīr, viii, 262). This Atom belonged to the elder line of the Artsrunids, which was eclipsed by that of Hadamakert. In 330/940 (*ibid.*, ii, 33), Daysam, prince of Ādharbāydjān, took refuge with Djadjīḳ b. al-Dayrānī (Gagik b. Deranik). In 342/953 (*ibid.*, ii, 151), Ibn al-Dayrānī and (?) Ibn Djadjīḳ (probably "Deranik b. Gagik") surrendered Daysam to the Musāfarid Marzubān.

In 1004, the Artsrunid Senekʿerim, being pressed on all sides, ceded Vaspurakan to the emperor Basil II, who gave him in exchange Sīwās, to which 40,000 Armenian families followed their king. Byzantine domination was of short duration: the battle of Malāzgird in 463/1071 lost the Byzantines the last of their possessions in Armenia.

The name of Wān is briefly mentioned among the towns of "the province of Akhlāṭ" which the Khʷārazmshāh Djalāl al-Dīn besieged after the capture of Akhlāṭ in 626/1229 (Bargrī, Manāzgird, Bitlīs, Walashdjird, Wān, Wusṭān).

In the Mongol period (after Arghun Khān, 1284-91), the region of Wān was close to the summer encampments of the Mongol Il-Khānids (on the mountain of Ala-Tagh, the ancient Νιφάτης, Tendürek, to the northeast of Lake Van), but the local authority of Wān must have been in the hands of the Kurd chiefs of Ḥakkārī (see below). Mustawfī's *Nuzhat al-ḳulūb*, 102, says that "Wān is a fortress while Wusṭān (Ostan) has been a large town but now is a medium-sized one", and "Its climate and its fruits are good, its water comes from a mountain; its taxes amount to 53,400 dīnārs (Urmiya, 74,999 dīnārs, and Ardabīl, 85,000 dīnārs)".

Towards the end of the 8th/14th century, the rule of the Ḳara Ḳoyunlu Turkomans, whose hereditary centre was at Ardjīsh, was extended over Wān, but the direct administration remained in the hands of a family of Kurdish begs. When in 789/1387 Tīmūr had plundered the Ḳara Ḳoyunlu encampments of Ala-Tagh, he ordered the destruction of the fortress, but "this building from the time of Shaddād" resisted his efforts. Tīmūr made ʿIzz al-Dīn, lord of the fortress, governor of the "*wilāyat* of Kurdistān" (*Ẓafar-nāma*, i, 421-4). The ʿIzz al-Dīn, here referred to in the *Ẓafar-nāma*, was an important figure and took part in many of the events of his time (see ʿAbd al-Razzāḳ Samarḳandī, *Maṭlaʿ al-saʿdayn*, tr. Quatremère, in *NE*, xiv, 110, 153, 180). The son of ʿIzz al-Dīn Muḥammad was well received by Shāh Rukh in 824/1421. Under Uzun Ḥasan [*q.v.*], the Aḳ Ḳoyunlu troops conquered Hakkārī and placed it under the Domboli tribe, but the local Nestorian Christians restored the power to a scion of the old family.

After the coming of the Ṣafawids, prince Zāhid b. ʿIzz al-Dīn II entertained friendly relations with Shāh Ismāʿīl. In view of the rival propaganda of the Ṣafawids, the Ottoman empire must have endeavoured to strengthen the very loose organisation given to Kurdistān by Idrīs, but the incorporation of the distant frontier district of Wān, filled with foreign elements, was full of incidents.

Thus in 940/1534, during the offensive of the grand vizier Ibrāhīm Pasha against Tabrīz, delegates from Wān gave him the keys of the fortress. But as soon as the cold weather forced Sultan Süleymān's army to withdraw, the Persians advanced to Wān and soon afterwards occupied both this town and Ardjīsh (Iskandar

Mun<u>sh</u>ī, *Tārī<u>kh</u>-i ʿĀlam-ārā*, 51; according to Ewliyā Čelebi, iv, 174, the Persians retook Wān in 953/1546). The situation during the years from 940-55/1534-48 is not very clear, but when, at the instigation of the Persian prince Alḳāṣ Mīrzā, Süleymān again marched on Tabrīz, he laid siege to Wān in Rad̲j̲ab 955/August 1548. The town surrendered through the mediation of Alḳāṣ Mīrzā, and the *defterdār* Čerkes Iskender Pa<u>sh</u>a was appointed governor (see von Hammer, *GOR*², ii, 209; Ewliyā Čelebi, ii, 174). From this period date the baths of Rüstem Pa<u>sh</u>a at Wān and a mosque of 975/1567-8. With the appearance of the Ottoman *mīr-i mīrān* at Wān, the Kurdish chiefs retired to their fiefs of D̲j̲ūlamerk and Wusṭān.

In 1013/1604, Či<u>gh</u>āle-zāde, appointed commander-in-chief against Persia, established his headquarters at Wān (of which he had previously been *wālī* in 993/1585; see von Hammer, ii, 552). He was besieged there by the Persian troops under the command of Allāh Werdi <u>Kh</u>ān, and escaped from the fortress by boat. Very soon he undertook a new campaign against Tabrīz, but it ended in a complete débâcle in the autumn of 1014/1605; cf. Iskandar Mun<u>sh</u>ī, 474-6, and TABRĪZ; von Hammer, ii, 678, 660; Gowvea, *Relation des grandes guerres*, French tr. Rouen 1649, book ii, chs. xvi-xviii, 268-86; Arakel de Tauris, *Livre d'histoires*, tr. Brosset, St. Petersburg 1874, ch. vi, 303-7.

About 1008/1600 the administrative organisation of Wān was described by Ḳod̲j̲a Ni<u>sh</u>ānd̲j̲ï (934-74/1528-67), who in his *Ṭabaḳāt*, quoted by Ḥād̲j̲d̲j̲ī <u>Kh</u>alīfa, included in this *eyālet* some places now belonging to Persia (e.g. Salmās), and by ʿAyn-i ʿAlī (cf. Tischendorf, *Das Lehnwesen in d. moslem. Staaten*, Leipzig 1872, 72) who numbers in Wān 13 *sand̲j̲aḳ*s and one *ḥükūmet*, including in all 1,115 large and small individual fiefs (*ḳïlïč*).

Ewliyā Čelebi, who in 1065/1655 accompanied his uncle Aḥmed Melek, who had been appointed *wālī* of Wān, has given us a very full description of the *eyālet* of Wān (iv, 130-90). It is curious that the text is silent about the Christian population, unless this information was suppressed from the printed text by the censorship under ʿAbd al-Ḥamīd II.

Ewliyā (iv, 176) gives 37 feudal *sand̲j̲aḳ*s in Wān of different dimensions and with different privileges. The most important were the *ḥükūmet* of Hakkārī (with an army of 47,000, including 10,000 with guns?), of Bidlīs, Maḥmūdī and Pïnyāni<u>sh</u>.

In the autumn of 1236/1821 the heir to the Persian throne, ʿAbbās Mīrzā, took advantage of some complications with the Ottomans to invade the Turkish territory of Bāyezīd as far as Bitlīs. Diplomatic complications and more particularly the epidemic of cholera, arrested the Persian operations and the status quo was re-established (see Mīrzā Taḳī Sipihr, *Tārī<u>kh</u>-i Ḳād̲j̲ār*, Tehran, i, under the years 1236-7; cf. R.G. Watson, *A History of Persia... to 1858*, London 1866, 197-221). After the Russo-Japanese war of 1905, the Ottomans in their turn advanced claims to the "unredeemed" territories, and in July 1907 Yāwer Pa<u>sh</u>a occupied many districts of the region of Salmās [*q.v.*]. The status quo was, however, re-established after the Balkan War (Ottoman note of 12 October 1912) and given legal sanction after the delimitation of 1913-14 (on the basis of the Final Protocol of 17 November 1913).

Wān was at various points in its later mediaeval history a mint centre: under the Il-<u>Kh</u>ānids, the Tīmūrids, various Turkmen dynasties, the Ṣafawids in their brief occupation of the 10th/16th century and, on various occasions, the Ottomans (see Zambaur, *Die Münzprägungen des Islam*, Wiesbaden 1968, i, 269). It also acquired some fine buildings, especially when it came under Ottoman rule in the 10th/16th century and was administered by energetic *beylerbey*s like Iskender Pa<u>sh</u>a, Rüstem Pa<u>sh</u>a and <u>Kh</u>osrew Pa<u>sh</u>a. The citadel and walls were repaired, together with the Ulu Cami, which probably dated from the end of the 8th/14th century, and baths, a caravanserai and a covered market built (see *İA*, art. *Van. Tarih*, for details).

Towards the end of the 19th century, V. Cuinet, in his *La Turquie d'Asie*, Paris 1891-3, ii, 629-760, gave population estimates for the *wilāyet* of Wān (which then comprised the two *sand̲j̲aḳ*s of Wān and Hakkārī [*q.v.*] to its east: 30,000 Turks, 210,000 Kurds, 79,000 Armenians and 92,000 Nestorian or Assyrian Christians, with a total of 430,000. It was during the last decade of this century that Wān was caught up in the Armenian revolutionary activity of the time, with large-scale violence there from 3 to 11 June 1896, in which 500 Armenians and 150 Muslims were killed, and which caused much damage in the town, hardly repaired when Mark Sykes passed through Wān fifteen years later (see his *The Caliphs' last heritage*, London 1915, 419).

In the First World War, Russian troops attacked Van and held it from 20 May 1915 to 4 August 1915, and again, after a brief Turkish re-occupation, from late August until the armistice of 18 December 1917. The town had an estimated population in 1914 of 25,000 Armenians and 10,000 Muslims. Most of the Armenians left with the Russians, but many Armenian villages in the vicinity of the town were sacked and their inhabitants massacred by the Muslims. In 1918, the town was virtually derelict.

Under the Turkish Republic, the town of Van (lat. 38° 28' N., long. 43° 20' E.) gradually revived and became the chef-lieu of a *vilayet*, later *il*, replacing what in Ottoman times had been the *sand̲j̲aḳ* of Van. In 1970 the town had a population of 88,600 and the *il* one of 326,000; by 1997 these figures had risen to 226,965 and 762,719 respectively.

(V. MINORSKY-[C.E. BOSWORTH])

WANG TAI-YU (Wang Daiyu) (*Mathews' Chinese-English dictionary*, revised American ed. 1943, characters nos. 7037, 5997, 7618), Muslim author of one major work and probable author of four minor works in Chinese. His date of birth is unknown, but he called himself an "old man" in 1642; he seems to have died in 1657 or 1658. He tells us that his ancestor was an astronomer who came from Tianfang Hung-wu ("Arabia") to bring tribute during the Ming (Hongwu) era (1368-98).

Wang studied the Islamic sciences in the Islamic languages, presumably Persian and Arabic, but did not begin a serious study of Chinese until he was thirty. He became well versed in the Classics and is comfortable discussing Confucian, Taoist, and Buddhist teachings. In the introduction to his major work, he mentions colleagues who had read his book and criticised him for going too deeply into Taoist and Buddhist teachings, and he replies that without borrowing all his terminology from other traditions, he

would have no way to explain Islamic teachings to those unfamiliar with the Islamic languages; it seems his intended audience was primarily well-educated, Chinese-speaking Muslims. He almost never mentions Arabic words and makes no attempt to translate Islamic ideas into Chinese in any direct fashion. His whole effort is focused on re-expressing basic Islamic perspectives in the appropriate Chinese idiom; given the time and place, this gives his writings a markedly Neo-Confucian flavour. Perhaps it needs to be pointed out that Wang and those Muslim scholars who followed him, such as Liu Chih [*q.v.*] (Liu Zhi), represent the first example in Islamic history in which Muslims discussed Islamic teachings in the language of a major intellectual tradition other than their own. He was buried in a graveyard belonging to a mosque in San-li-ho (Sanlihe) in the Western part of Peking or Pei-ching (Beijing), though neither mosque nor graveyard exists today.

Wang's longest work is *Cheng-chiao chen-ch'üan* (Zhengjiao zhenquan) ("The real commentary on the true teaching", Mathews, nos. 351, 719, 297, 1672), the earliest extant book on Islam in Chinese by a Muslim. It was first published during Wang's lifetime in 1642 in Nanking or Nan-chin (Nanjing) and several times subsequently, most recently in 1987 (existing editions also include 1657, 1801, 1873, 1904, and 1933). The editions of 1801 and onwards have a preface explaining that the text was re-engraved by the mosque of Canton. An abridged version by Ma Fu-ch'u and Ma An-li with the title *Chen-ch'üan yao-lu* (Zhenquan yaolu) was published in 1864 and has also been printed with the title *Cheng-chiao chen-ch'üan* (Zhengjiao zhenquan) (bibliographers have sometimes confused the two versions). The book is about 82,000 characters in length and consists of four sections in two books, each book with twenty chapters. Book One is devoted mainly to theological principles, such as the divine attributes, predestination, creation, and human nature. Book Two focuses more on spiritual attitudes, ethics, and various commandments of Islamic law.

A second work is *Ch'ing-chen ta-hsüeh* (Qingzhen daxue) ("The great learning of the pure and the real", nos. 1171, 297, 5943, 2780), which is about 6,000 characters in length. The word *ta-hsüeh* (daxue) or "great learning" refers to the Neo-Confucian classic of the same name, while *ch'ing-chen* (qingzhen), "The pure and the real", refers to "The pure and real teaching", i.e. Islam. The work has been published many times, but the date of its first publication is not known; existing editions include 1827, 1921, and 1931. In it Wang discusses *tawḥīd* in a much more philosophical style than is found in *Cheng-chiao* (Zhengjiao). The work's three chapters deal with topics that seem to correspond with God, the Muḥammadan Reality, and the perfect human being, although the Arabic terms are not mentioned. A third work is *Hsi-chen cheng-ta* (Xizhen zhengda) ("The true answers of the very real", nos. 2416, 297, 351, 5951), a collection of some two hundred conversations in about 25,000 characters. It was first published in 1658, apparently after Wang's death, by his disciple Wu Liang-ch'eng (Wu Liangcheng), and existing editions include those of 1827 and 1925. Some of the conversations take the form of dialogues of varying lengths, and some are single questions and answers. The questioners were Muslims, both *'ulamā'* and common people, and non-Muslims, mainly Confucians. Topics range from metaphysics to details of daily ritual. In the 1925 edition, this work includes two short treatises whose authorship has been disputed but which are apparently by Wang. One is called the "appendix" or *fu-lu* (fulu), the other the "addendum" or *sheng-yü* (shengyu). The first, in about 3,000 characters, adds thirty-six conversations in the same style as the main text; the second is a series of short questions from Buddhist monks with equally short answers in about 4,000 characters.

Leslie, *Islamic literature in Chinese*, Canberra 1981, 22-4; idem, *Islam in traditional China*, Canberra 1986, 117-18; Tazaka Kōdō, *Chūgoku ni okeru kaikyô no denrai to sono gutsu*, Tokyo 1961, 1376-1431; Yu Chên-keui and Yang Huai-chung (Yu Zhengni and Yang Huaizhong), *Chang-kuo i-ssu-lan wên-hsien chu-i ti-yao* (Zhongguo yisilan wenxian zhuyi tiyao), Ning-hsia 1993, 69-73.

(SACHIKO MURATA)

WANGARA, a people of West Africa.

The Wangara identity appears to have been formed in the context of the long distance trade, first of imperial Ghana, and then, in the 13th century, of imperial Mali [*q.v.*]. The earliest reference to the Wangara is probably that by Abū 'Ubayd al-Bakrī of Cordova in 460/1067-8, who wrote of the black gold merchants of Yarasna, a Muslim town in lands of unbelievers somewhere in the region of the headwaters of the Niger river. Writing for Roger II of Sicily almost ninety years later, al-Idrīsī referred to the inland delta of the Niger as "the country of Wangara" and commented that "its inhabitants are rich, for they possess gold in abundance. . . ." In the 17th century the Timbuktu author of the *Ta'rīkh al-Fattāsh* essayed a definition: "The Wankara and Malinke are of one origin. Malinke is used to mean the soldier among them, whereas Wankara refers to the one who engages in trade and travels from one horizon to another."

The vast network of trade built up by the Wangara extended from the Sahelian termini of the trans-Saharan caravans and the great entrepôts of the western and central Sudan, southwards to the rich, gold-bearing forest country of the hinterland of the Guinea Coast between the Volta and Comoé rivers. Along the roads they established trading posts, most commonly adding their own quarters to existing towns and villages. Many of the communities of the Wangara diaspora were far beyond the authority of any Muslim ruler, and the settlers were obliged to live among, do business with, and rely on the protection of those whom they regarded as unbelievers.

Drawing upon writings of early Mālikī jurists, Wangara scholars rationalised their position within the *dār al-ḥarb*. Most influential of these was the late-15th to early 16th century al-Ḥādjdj Sālim Suwari who, while holding that relations with unbelievers need not be confrontational, stressed the importance of education and introduced a system of licensing, by *isnād*, teachers of the *Tafsīr al-Djalālayn* of al-Maḥallī and al-Suyūṭī, and the *Muwaṭṭa'* of Mālik. In the 19th century the "Suwarian" rejection of *djihād* as an instrument of change brought them into conflict with militant reformers. Early in the century, the Wangara of Yandoto and Kurmin Dan Ranko, in Hausaland, failed to support 'Uthmān b. Fūdī's [*q.v.*] call for *djihād*, and both towns were destroyed. In the 1880s Wa and Nasa (in present-day Ghana) were sacked by the Zabarima warlord Babatu, and in the next decade the forces of Almami Samori massacred the *'ulamā'* of Kong and

Buna (in Côte d'Ivoire or Ivory Coast). The Wangara were consequently inclined to regard the French colonial forces if not as liberators, at least as allies. The tolerant and liberal nature of the "Suwarian" ideology enabled them to adjust comfortably to French and British administrations, and to the subsequent post-independence régimes and governments.

The Wangara of the eastern diaspora have now become, other than in their own remembrance, all but totally assimilated to the culture of Hausaland. In contrast, those of the southern diaspora, extending into the modern republics of Ivory Coast, Burkina Faso and Ghana, have developed an identity of their own. They call themselves Juula (Dyula, etc.) and still, in some contexts, Wangara. They speak their own dialect of Mandekan, refer their origins to Mande Kaba in Old Mali, and continue to revere al-Ḥādjdj Sālim Suwari. They remain a highly entrepreneurial class within the modern states.

WĀNḲULĪ, Meḥmed b. Muṣṭafā al-Wānī, famous Ottoman jurist in the time of Murād III (982-1003/1574-95), who especially distinguished himself in the field of *fiḳh*, lexicography and literature.

Born in Wān [*q.v.*], he acted in a number of towns (Istanbul, Rhodes, Manisa, Salonika, Amasya, Kutāhiya, Yeñishehir) as *müderris*, *ḳāḍī* and *mollā*, and died in 1000/1591-2 as *mollā* of Medina, to which he had come in 998/1590 in succession to Suʿūdī. In his long period of 30 years' service, he displayed great activity in writing and translating. His principal work was the Turkish translation of the *Ṣaḥāḥ* or *Ṣiḥāḥ* of al-Djawharī [*q.v.*], more esteemed by some people than the *Ḳāmūs* of al-Fīrūzābādī. This work brought him enduring fame. It was printed in 1141/1729 by Ibrāhīm Müteferriḳa [*q.v.*], as one of the first books printed in Turkey [see maṭbaʿa. B. 2.], with a second printing, in two volumes, in 1169-70/1757-7. His translation of al-Ghazālī's *Kīmiyā' al-saʿāda* (which according to Meḥmed Ṭāhir is also attributed by many to Nawalī) is celebrated. In addition to a few brief works like his *Tardjīḥ-i bayyināt wa-tartīb-i siyāsat*, he wrote commentaries on the *Dürer-i ghurer* entitled *Naḳd al-dürer* and on the *Ferā'id-i seyyidī*; also one on the *Wesīle* entitled *Miftāḥ al-nadjāh*.

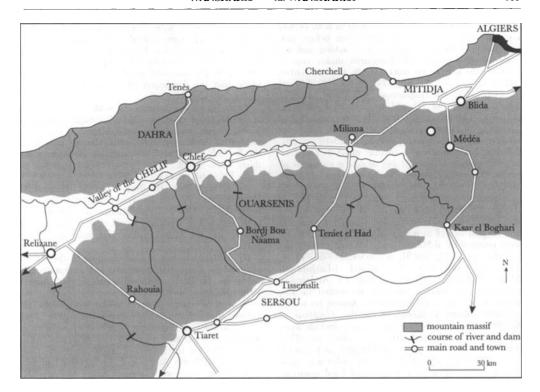
Bibliography: *Manāḳib-i Wānḳulī*, in the 1141/1729 *Kitāb-i lughat-i Wānḳulī*; *Shaḳā'iḳ-i nuʿmāniyye*, *Dheyl* of ʿAṭā'ī, 316-17; Meḥmed Thüreyyā, *Sidjill-i ʿothmānī*, iv, 130; Bursalī Meḥmed Ṭāhir, *ʿOthmānlī müʾellifleri*, ii, 48; Sāmī, *Ḳāmūs al-aʿlām*, vi, 4678; von Hammer, *GOR*, ii, 575. For Wānḳulī's Turkish tr. of the *Ṣaḥāḥ*, see Brockelmann, S I, 197; Sezgin, *GAS*, viii, 223. (Th. Menzel)

WANSHARĪS, conventionally Ouarsenis, the name of a mountain massif in the central Algerian Tell. Lying to the southwest of Algiers, Wansharīs owes its toponomy to its central part, the Kef Sidi Amar (1,985 m/6,510 feet), whose imposing pyramidal peak dominates from 800 m/2,625 feet the nearby topography (Berber *wansharīs* = "nothing higher"). For local people, this term only applies to the central part, but modern geographers have extended it to the whole massif.

The early history of the massif is little known, though there are numerous prehistoric sites to the west of the Oued Rhiou, such as that of Columnate, but these tend to be peripheral, and there is very little in the central and eastern parts of the massif. It seems likewise to have been avoided by the Romans, and their roads (and their *limes*) are marked out along the Chélif valley and the southern piedmont (Sersou).

The population was formerly Zanāta Berber, but the mediaeval geographers, and even Ibn Khaldūn, hardly mention them, since their itineraries could not cross this inaccessible region. C. Courtois (1955), basing himself on Procopius, suggested the hypothesis of a Wansharīs political entity bordering on Chélif to the north and Sersou to the south. At the time of the colonial period in Algeria, Berber speech still persisted among the Beni Hindel and in the region of Théniet el Had (Thāniyat al-Ḥadd) (R. Basset, 1895), but these have totally disappeared today. This complete Arabisation of a mountain region, difficult of access, seems hard to explain when other less difficult massifs have remained Berberophone.

The local population was tribally organised and, at the time of the French conquest, local prophets, the best known being Bou Maza, tried to achieve unity there. Colonial settlements soon appeared, and were more numerous than one might expect in such an unwelcoming milieu. There were a series of zones of colonisation in the northern valleys, before the massif opens out on the Chélif (Massena, Bougainville and Lamartine), a series along the southern piedmont (Waldeck Rousseau and Liébert) and a series in the massif itself (Guillaumet, Molière, Théniet el Had and Letourneux). Today it is organised administratively as the Commune Mixte of Ouarsenis, with five component *wilāyas*, based on the piedmont towns of Ain Defla, Chélif, Relizane, Tissemsilt and Tiaret.

The Wansharīs massif is oblong in shape, some 200 km/125 miles long and comparatively clearly delimited: in the north by the Chélif valley (100-200 m altitude), in the south by the Sersou plains and the Nahr Ouessel (900-1,000 m), to the west by the Mina valley and to the east by the course of the Chélif. The massif is made up of mountain ridges running essentially west to east, with gritstone ridges and clayey and marno-schistous formations. Deep valleys like those of the oueds Deudeur, Fodda, Rouina and Sly fall towards the great valley of the Chélif, but make communications difficult because they cut across the longitudinal lines without creating real axes for everyday life. With moderate precipitation (628 mm at Théniet el Had), there are layers of classic vegetation patterns: oleasters and lentiscus regions in the lower parts; above these, Aleppo pine forests; from 900 m/2,950 feet upwards, oak forests; and from 1,300 m/4,265 feet, a few fine cedars, which have led to the formation of national parks (Parc National de l'Ouarsenis at


Bordj Bou Naama and the Parc Nationale des Cèdres at Théniet el Had). Until the mid-19th century, lions and panthers were numerous but they had been exterminated by the beginning of the 20th century.

A specific feature of this massif is the functioning of a mini-community, the *bocca*, whose administrative coverage often corresponds to a cleared area, with a hamlet which marks the countryside by its irrigated gardens and orchards. The people were semi-nomadic, living in tents during the hot season and in modest houses of stone during the rest of the year; they are nowadays completely sedentarised.

The tribes, comprised on average of five to twelve *boccas*, take advantage of the complementarities of the land to compensate for the poverty of the milieu as a whole: those of the northern slopes with limits taking in the valley of the Chélif, and those of the southern slopes bordering on cereal-growing piedmont areas. One can thus understand that the century of colonisation, breaking the continuity of these administrative areas and leading to a demographic explosion, was marked by upsets to the traditional balances previously existing (Dj. Sari, 1977). Deforestation and forms of erosion are often spectacular. The population, too great for the skimpy cultivable land (average density = 60 persons per km^2), has led to the existence, for several decades, of severely disadvantaged groups.

Within the framework of independent Algeria, the installation of state enterprises, modernisation of the road system and the improvement of administrative divisions, have strongly contributed to integrating the massif into the national economy and life. Even so, the Wans̲h̲arīs massif functions mainly as a reservoir for water supplies, with a dozen barrages, of varying sizes, across the north-flowing rivers and thus irrigating the Chélif valley, and as a reservoir for man-power, with a migration extending over the last four or five decades to the plains and towns around the massif. Hence the true capitals of the massif are outside it, Chélif to the north and Tiaret to the south.

AL-WANS̲H̲ARĪSĪ, ABU 'L-ʿABBĀS AḤMAD B. YAḤYĀ b. Muḥammad b. ʿAbd al-Wāḥid b. ʿAlī (834-914/1431-1508), Mālikī jurist and *muftī*, born possibly in the Ouarsenis (Algeria, Ar. Wans̲h̲arīs [*q.v.*]), where he grew up and pursued his education. His family belonged to one of the numerous Berber tribes which populated these mountains. At this time, the situation was relatively unstable on the political, military and social levels, on account of the struggles for power between the Zayyānī family [see ʿABD AL-WĀDIDS], the Ḥafṣids [*q.v.*], who were intent on taking control of Tlemcen, and the local tribes who were allied with the Marīnids [*q.v.*] in opposing the kings of Tlemcen. Shortly after his birth, the family left the mountains of the Ouarsenis to settle in Tlemcen, where he was educated. The most eminent intellectual figures of Tlemcen were his teachers. These were jurists, and consequently al-Wans̲h̲arīsī's education was predominantly a legal one in addition to linguistic studies.

Among the teachers whose classes he attended were: (1) Ḳāsim al-ʿUḳbānī (d. 854/1450-1), eminent jurist

of Tlemcen, who travelled to the East in 830/1426-7 and was *ḳāḍī* of this city for some time before quitting his post to devote himself to teaching and the composition of *fatwās*. Al-Wan<u>sh</u>arīsī makes copious reference to him in his work (*Miʿyār*, i, 10-11, 181-6, 321-2, 428, vi, 40, 41, 42, 47-8, 504-5). (2) al-Murrī (d. 864/1460). (3) Muḥammad al-ʿUḳbānī (d. 871/1467), grandson of (1) and nephew of Ibrāhīm b. Ḳāsim al-ʿUḳbānī, cited below. He was grand *ḳāḍī* of Tlemcen, an expert in *nawāzil*; some of his *fatwās* are retained by al-Wan<u>sh</u>arīsī (*Miʿyār*, ii, 15-16, v, 107, 109-10). He composed a treatise entitled *Tuḥfat al-nāẓir wa-<u>gh</u>unyat al-<u>dh</u>ākir fī ḥifẓ al-<u>sh</u>aʿāʾir wa-ta<u>gh</u>yīr al-manākir* (Zaytūna Library, Tunis). (4) Ibn al-ʿAbbās al-ʿUbbādī (d. 871/1466), teacher of Ḳurʾānic and grammatical commentaries, jurist and *muftī*, one of the great scholars of Tlemcen and the most important of his time. He composed works on grammar and religion as well as numerous *fatwās*, some of which were retained by al-Māzūnī and al-Wan<u>sh</u>arīsī (*Miʿyār*, i, 404-7, ii, 17-18, 388-91, iv, 363-4, 449-50, 451-4, 454-7, v, 106-7, 109). (5) al-Ḳawrī al-La<u>kh</u>mī al-Miknāsī (804-72/1401-2 to 1468). Of Andalusian extraction but born in Meknès, he settled in Fās, where he was *muftī* and grand *ḳāḍī*. Among his works, an eight-volume commentary on the *Mu<u>kh</u>taṣar* of <u>Kh</u>alīl stands out. Al-Wan<u>sh</u>arīsī was to include some of his *fatwās* in his work (*Miʿyār*, ii, 396-7, vii, 187-8, 328-9). (6) Ibn al-<u>Dj</u>allāb al-Ma<u>gh</u>īlī al-Tilimsānī (d. 875/1470-1), a jurist of Tlemcen, who was capable of answering a large number of legal questions without referring to texts, relying solely on memory. He held the post of grand *ḳāḍī* of Tlemcen and was the author of *fatwās* reproduced by al-Wan<u>sh</u>arīsī (*Miʿyār*, iv, 349, 366, 454). (7) Abū Sālim al-ʿUḳbānī (808-80/1405-6 to 1475-6), *muftī* of Tlemcen and author of numerous works, who was grand *ḳāḍī* of this city following the removal of his nephew Muḥammad. His *fatwās* were collected by al-Wan<u>sh</u>arīsī (*Miʿyār*, i, 177-8, iv, 302, 326-7). (8) Ibn Ḥarzūza (d. 883/1478), preacher and expert in *uṣūl*. (9) Ibn Marzūḳ al-Kafīf (d. 901/1421), born in Tlemcen where he also died, author of a commentary on *fatwās*. (10) Ibn Zakrī al-Ma<u>gh</u>rāwī al-Mānawī al-Tilimsānī (d. 899 or 900/1493) who was *ḳāḍī* and *muftī*, and who studied the foundations and applications of the law. Author of numerous judicial works, he issued *fatwās* reproduced by al-Wan<u>sh</u>arīsī (*Miʿyār*, ii, 217-18, 228-9, ix, 312-16). (11) al-Ḳāḍī al-Miknāsī (d. 917/1511), grand *ḳāḍī* of Fās for more than thirty years, the author of a work on the judiciary.

In 885/1482, al-Wan<u>sh</u>arīsī was awarded a diploma by two Egyptian *ʿulamāʾ*, Abū ʿAmr ʿU<u>th</u>mān al-Diyyāmī and Muḥammad al-Sa<u>kh</u>āwī. When he was approaching his fortieth year, a conflict, the reasons for which are no longer known, led to a confrontation with the Zayyānī sultan Muḥammad IV (d. 910/1504). His house was ransacked and he was forced to flee and take up residence in Fās on 1 Muḥarram 874/11 July 1469.

During this second phase of his life in Fās, al-Wan<u>sh</u>arīsī was treated as a distinguished person, occupying various teaching posts, and thereby arousing hostility on the part of the *ʿulamāʾ*, leading to his dismissal from these posts. He taught in the Muʿallaḳ mosque, in the al-<u>Sh</u>arraṭīn quarter of Fās al-Ḳarawiyyīn, and occupied the *Mudawwana* chair in the Miṣbāḥiyya *madrasa*. Little is known of his personal life, but it is assumed that he married in Fās since his son ʿAbd al-Wāḥid, the only one mentioned, was born in this city *ca.* 880/1475-6.

He died on 20 Ṣafar 914/Tuesday, 20 June 1508 aged eighty, the same year that the Spanish captured Oran. He was buried in Fās, in the Kudyat al-Barāṭīl cemetery, near the tomb of Ibn ʿAbbād of Ronda (d. 792/1390). His profound knowledge of Mālikī *fiḳh* had made him the flag-bearer of the school at the end of the 9th/15th century.

As for his œuvre, the principal work of al-Wan<u>sh</u>arīsī is the *Miʿyār al-muʿrib wa ʾl-<u>dj</u>āmiʿ al-mu<u>gh</u>rib ʿan fatāwī ʿulamāʾ Ifrīḳiya wa ʾl-Andalus wa ʾl-Ma<u>gh</u>rib*, a vast compilation of Andalusian and North African *fatwas* from the 3rd/9th to the 9th/15th centuries. He wrote some thirty books in all.

(a) Printed works.

(1) *K. al-Wilāyāt* (H. Bruno and M. Gaudefroy-Demombynes, *Le livre des magistratures d'el-Wancherisi*, Rabat 1937). This is a compendium of legal jurisdictions and public functions in relation to the judicial power, and the characteristics and functions of the *ḳāḍī*.

(2) *al-Mustaḥsan min al-bidaʿ*. Section of the *Miʿyār* on customs and social traditions, and acceptable innovations (H. Pérès, *al-Mustaḥsan min al-bidaʿ*, Algiers 1946; *Miʿyār*, ii, 461-511).

(3) *Asnā al-matā<u>dj</u>ir fī bayān aḥkām man <u>gh</u>alaba ʿalā waṭanihi al-naṣārā wa-lam yuhā<u>dj</u>ir wa-mā yatarattabu ʿalayhi min al-ʿuḳūbāt wa ʾl-zawā<u>dj</u>ir*. *Fatwā* tract written in response to a question formulated by Abū ʿAbd Allāh Ibn Ḳūṭiyya on the subject of Andalusians who had emigrated to North Africa and, having failed to find a satisfactory situation, wanted to return to Spain (H. Mu'nis, *Asnā al-matā<u>dj</u>ir*..., in *RIEIM*, v [Madrid 1957], 129-91; *Miʿyār*, ii, 90 ff.).

(4) "Prologue" to the *Mu<u>th</u>lā* of Ibn al-<u>Kh</u>aṭīb. An epigraph written in response to the satire of the Granadan vizier attacking the notaries of his day for their corruption and incompetence.

(5) *Wafayāt*. Obituary notices honouring distinguished persons of the Ma<u>gh</u>rib from 701/1301 to 912/1507 (Ḥamzāwiyya library, ms. no. 240; al-Wan<u>sh</u>arīsī, *Wafayāt*, ed. Ḥa<u>djdj</u>ī, in *Alf sana min al-wafayāt*, Rabat 1976).

(6) *Īḍāḥ al-masālik ilā ḳawāʿid al-imām Abī ʿAbd Allāh Mālik*. Compendium of judicial principles and norms for the application of the law (ed. Aḥmad Bū Ṭāhir al-<u>Kh</u>aṭṭābī, Rabat 1980, ed. al-Ṣādiḳ b. ʿAbd al-Raḥmān al-<u>Gh</u>iryānī (?), Tripoli (Libya) 1401/1991).

(7) *Naẓm al-durar al-maʾ<u>th</u>ūra wa-ḍamm al-aḳwāl al-ṣaḥīḥa*... Letter replying to objections and criticisms issued by a jurist of Tlemcen on the subject of a *fatwā* concerning a transaction (*Miʿyār*, vi, 574-606).

(8) *Tanbīh al-ḥā<u>dh</u>iḳ al-nadis ʿalā <u>kh</u>aṭaʾ man sawwā bayna <u>dj</u>āmiʿ al-ḳarawiyyīn wa ʾl-Andalus* (*Miʿyār*, i, 251-74).

(9) *Tanbīh al-ṭālib al-darrāk ʿalā taw<u>dj</u>īh ṣiḥḥat al-ṣulḥ al-munʿaḳid bayna Ibn Saʿd wa ʾl-Ḥabbāk* (*Miʿyār*, vi, 532-4).

(10) A biography of al-Maḳḳarī al-<u>Dj</u>add.

(b) Lithographed works.

(11) *al-Manha<u>dj</u> al-fāʾiḳ wa ʾl-manhal al-rāʾiḳ wa ʾl-maʿnā al-lāʾiḳ bi-adab al-muwa<u>thth</u>iḳ wa-ahkām al-wa<u>th</u>āʾiḳ* (Fās 1881, 384 pp.). The central theme of this work is the composition of notary documents and the function of the notary.

(12) *<u>Gh</u>unyat al-muʿāṣir wa ʾl-tālī fī <u>sh</u>arḥ fiḳh wa<u>th</u>āʾiḳ al-ḳāḍī al-Fi<u>sh</u>tālī*. This is a commentary on al-Fi<u>sh</u>tālī's work on notary documents, written in the margin of a copy of this text (Fās 1890).

(13) *Mubdī li-<u>kh</u>aṭaʾ al-Ḥumaydī*, on the marriage of people hindered by legal obstructions, such as guardianship or minority (Fās 1895).

WARAʿ (A.) in Islamic religious terminology denotes religious scrupulousness and delicacy of conscience. Neither the term itself nor its root is found in the Ḳurʾān, but it nevertheless enjoyed a great renown in relation to various spheres, their sole common point being their falling under the topic of legal status (*ḥukm*). Hence its history may perhaps be grouped under the question of the relation between the law (*sharʿ*) and the mystical perspective.

In the 3rd/9th century, in a region with a strong eremitical tradition like Egypt, one finds the conciliatory position of Dhu 'l-Nūn al-Miṣrī [*q.v.*] for whom *waraʿ*, conceived as total abstinence, allows one to reach the extreme of asceticism (*zuhd* [*q.v.*]). However, in Baghdād at the same time, the conflict between the two attitudes became exacerbated. A *K. al-Waraʿ* attributed by tradition to Ibn Ḥanbal is actually by his immediate disciple Abū Bakr Aḥmad b. Muḥammad al-Marwazī, relating from (*ʿan*) his master. This is a collection of anecdotes concerning the uncertainty of pious Muslims that, when involved in an action apparently without consequences, they may be contaminated by its possible results, even in a long-distance fashion. This compilation is without order, but one can discern the significant frequency of verbs like *kariha* "detest"—in nineteen paragraph titles out of fifty—and *ʿadjiba* "be astonished", showing the essential motivation of the pious man as being the feeling of repulsion or at least fear of scandal. The same solicitude is found in the work of the same title by Ibn Abi 'l-Dunyā [*q.v.*], which is more orderly, since he classifies his anecdotes by theme or by reference to famous persons. Al-Muḥāsibī [*q.v.*] in his *K. al-Makāsib wa 'l-waraʿ wa 'l-shubuhāt*, cites Ibn Ḥanbal four times, and explicitly places *waraʿ* below renunciation of the world (*zuhd*).

This is, furthermore, the position attributed by the texts to al-Ḥasan al-Baṣrī [*q.v.*], but one wonders whether this is not an attempt to cite an ancient authority during a polemic obviously of the 3rd/9th century. Al-Muḥāsibī's text is considered to be one written in his maturity, representing not only an elaboration of his thought but also his awareness of the various nuances in the opinions of his contemporaries. His solution was to co-ordinate them by placing them in a hierarchy. He starts from a definition of the Good as doing what God has ordained and renouncing what He has forbidden. Fear of God (*taḳwā* [*q.v.* in Suppl.]) is that which integrates purity of intention with works so that the actual work is done for God alone. The resultant *waraʿ* does not extend merely to clothing and food, as certain people think, but to the fear of God in all circumstances where there is a prohibition or an obligation. Four conditions are necessary for genuine scruple. Two are obligatory: not to do anything that God has forbidden, such as innovation or heresy, and not to take or make anything illicit that God has permitted, whilst the other two are recommended: to avoid anything ambiguous, lest it be illicit, and to avoid everything that, although licit in itself, can serve as a means for illicitness (e.g. gossip, which can lead to defamation or lying). A criterion is necessary in order to avoid becoming victim to an illusion: this consists of resisting temptation when it presents itself, intention alone not being enough. This is why renunciation is better than scrupulousness.

The various aspects of this doctrine are developed by later authorities. Al-Tirmidhī stressed the doctrine of *taḳwā*, defined by him as *wiḳāyat al-ḳalb wa 'l-waraʿ* "guarding the heart and scrupulous abstention". But it was above all the hierarchisation of the mystical "stations", subsequently elaborated, that allowed the progressive integration of the mystical approach within the ensemble of the believer's attitudes. The following stages may be distinguished:

(1) Al-Sarrādj [*q.v.*] considers that the mystic's scrupulosity must exceed that of the ordinary believer. He places it in second place after *tawba*, repentance, but before *zuhd*, *faḳr*, poverty, *ṣabr*, endurance of adversity, *tawakkul*, confidence in God, and, finally, *riḍā*, submission to and agreement with the divine will.

(2) In his *Book of stages*, al-Anṣārī defines *waraʿ* as "the last stage of *zuhd* for the masses and the first one of *zuhd* for the élite", and he distinguishes three degrees of it: (a) concerning obligations; (b) "the maintaining of sanctions for what is not in itself evil, through reserve and *taḳwā*, by [desire of] elevating oneself above base things, and in order to be pure of all infringement of the legal penalties (*ḥudūd*)"; and (c) "scrupulosity towards everything which tends towards the dispersion of time and attachment for separation, and which is opposed to the state of union".

(3) Finally, al-Ghazālī [*q.v.*] in his *Iḥyāʾ*, defines four degrees: (a) simple observance of all which issues from the Islamic profession of faith, sc. abstinence from what is clearly forbidden (*ḥarām*); (b) the scrupulosity of the *ṣāliḥūn*, abstinence from everything which is dubious; (c) that of the *muttaḳūn*, sc. abstention from all that is licit in itself but which might lead to what is forbidden; and (d) that of the *ṣiddīḳūn*, which is "turning away from everything which is other than

God through fear of wasting an hour of one's life on things which do not increase one's nearness to God".

This classification was to be later completed by the idea of *tark al-waraʿ* "abandonment of scruple", to which Ibn al-ʿArabī devotes a chapter in his *Futūḥāt* after that on *waraʿ*. This concerns only gnosis. In effect, abstention from what is licit and necessary would be disobedience, and abstention from what is licit and superfluous concerns only *zuhd*. Conversely, the person who does not have his eyes fixed only on the things of this world but sees in them only the face of God cannot apprehend the signs which would guide him towards scrupulosity regarding what is doubtful.

Even so, these distinctions are not always respected by the person who makes them himself, e.g. Ibn al-ʿArabī, who in his profession of faith uses *waraʿ* and *zuhd* almost without distinction.

WĀRĀD [see NAGYVÁRAD].

WARADĪN (Serbian Petrovaradin, Hungarian Pétervárad, German Peterwardein), a town and centre of a *nāḥiye* in Ottoman Hungary (lat. 45° 15' N., long. 19° 55' E.), earlier a settlement on both sides of the Danube in the mediaeval Hungarian counties of Bács and Szerém; today the southern part of Novi Sad (Hungarian Újvidék) in Serbia.

The place was already inhabited in Roman times as Cusum. Of its later history nothing is known until the 13th century, when the Hungarian king Béla IV (1235-70) conveyed it to the Cistercians. After 1439 it was under the patronage of the *banus* of Macsó. The northern part of the town, which had 18 heads of families and a widow, most of them with Hungarian names and insignificant Southern Slav infiltration, was registered as Vasarus Varad in 1522. However, the inhabitants could not pay taxes since the settlement "was devastated and desolated".

Among the fortifications along the Danube, the stronghold of Waradīn was of considerable importance in the first line of the Hungarian defence system against the Ottomans. In March 1523, Bālī, the *beg* of Semendire, made an unsuccessful attempt to conquer it. During the 1526 campaign of Sultan Süleymān I, the castle was captured after a siege of two weeks.

Waradīn became the centre of a *nāḥiye* and of a *ḳaḍāʾ* within the *liwā* of Szerém/Sirem which belonged to the province of Buda [*q.v.*]. It served as a significant crossing-place during imperial and other campaigns.

In the 16th century, the population of the town was small and the yield of ordinary taxes modest. Around 1570, the majority of the inhabitants were Muslims, many of whom possessed a vineyard and a piece of arable land, and there was a strong Southern Slav minority and no Hungarians. The number of soldiers in the castle was some 300 to 400 men in peace-time. The sum to be paid from tithes and dues amounted to 3,740 *aḳčes* around 1550, 6,001 *aḳčes* in 1560, 10,001 *aḳčes* around 1570, and 12,425 in 1591. Local people failed to gain *derbenddji* status in compensation for their work at the landing-place and for the upkeep of the temporary bridges there. However, they were granted certain immunities including payment in kind. Ships owned by Muslim merchants in Waradīn appear with various goods, mainly cereals, in Buda in 1571-3.

In 1687 Waradīn, together with several strongholds in the vicinity, was taken by the forces of the Christian allies. Ottoman attempts in 1694 and 1716 at regaining it ended with failure. In the second battle for it, even the Grand Vizier died. This decisive defeat, as well as the loss of Temeshwār [*q.v.*] and Belgrade [*q.v.*] led to the 1718 peace of Požarevac [see PASAROFČA] when the border was drawn far below Waradīn.

WARAḲA B. NAWFAL, an early Arabian monotheist and contemporary of the Prophet.

Biographical details concerning Waraḳa are few in number and legendary in character, since in one way or another they all relate to his kerygmatic role in the narrative of Muḥammad's earliest revelation. Waraḳa was the son of Nawfal b. Asad b. ʿAbd al-ʿUzzā b. Ḳuṣayy, who is said to have been killed in the last "Battle of the Sacrilege" (*yawm al-Fidjār al-ākhir*) (Ibn al-Kalbī, *Djamharat al-nasab*, Beirut 1986, 68-9), and of Hind bt. Abī Kathīr. He was thus the cousin of the Prophet's first wife Khadīdja [*q.v.*], but unlike her line (that of Khuwaylid b. Asad b. ʿAbd al-ʿUzzā), his left no descendants of note. According to Ibn Saʿd (*Ṭabaḳāt*, viii, 8; cf. al-Balādhurī, *Ansāb al-ashrāf*, i, Cairo 1959, 407), Khadīdja had been "proposed" (*dhukirat*) to Waraḳa, but the marriage did not take place; and this, at least in part, probably explains the traditionists' occasional sensitivity about their relations (Ibn Saʿd, *Ṭabaḳāt*, i/1, 130). One wonders how this account relates to another, according to which Waraḳa's sister proposed marriage to ʿAbd Allāh, Muḥammad's father.

Frequently mentioned alongside ʿUbayd Allāh b. Djaḥsh, ʿUthmān b. al-Ḥuwayrith (for whom he composed an elegy, *rithāʾ*), and Zayd b. ʿAmr (the latter sometimes called his *nadīm*, or boon companion), Waraḳa is counted among those contemporaries of Muḥammad who abandoned polytheism before his call to prophethood. Like other *ḥanīfs*, Waraḳa not infrequently appears circumambulating the Kaʿba, and for Kaʿba protocol is cited by al-Azraḳī (*Akhbār Makka*, Madrid 1979, i, 175, 182; cf. U. Rubin, Ḥanīfiyya *and Kaʿba: an inquiry into the Arabian pre-Islamic background of* dīn Ibrāhīm, in *JSAI*, xiii [1990], 97). Unlike most other *ḥanīfs*, however, Waraḳa is also said to have converted to Christianity, apparently while travelling through Syria (and elsewhere); it is presumably during these travels that he came to study under "people of the Gospel and Torah", and to learn (written) Arabic and even Hebrew. Whatever truth one attaches to these travel accounts, Waraḳa's knowledge of an Arabic Gospel is almost certainly anachronistic (see

S.H. Griffith, *The Gospel in Arabic. An inquiry into its appearance in the first Abbasid century*, in *Oriens Christianus*, lxix [1985], 144-9), even if his literacy is possible (according to al-Balādhurī, *Ansāb al-ashrāf*, i, 81, Waraḳa's sister also consulted books). Some of the poetry attributed to Waraḳa is occasionally credited to another *ḥanīf*, Umayya b. Abi 'l-Ṣalt [*q.v.*].

Although he is associated with Muḥammad very early on—Waraḳa and an unidentified Ḳurashī are said to have found the young boy, who had strayed from his suckling mother, and returned him to ʿAbd al-Muṭṭalib, an account that implicitly presumes Waraḳa's recognition of Muḥammad's prophecy at the time of his birth (thus Ibn Isḥāḳ, *al-Sīra al-nabawiyya*, i, 167)—it is in connection with accounts of the earliest *āyas* (traditionally XCVI, 1-5) that Waraḳa earned his place in early Islamic history, confirming that Muḥammad's first, tentative, revelation was indeed authentic. "There has come to him," Waraḳa says, "the greatest law (*nāmūs*) that came to Moses" (*nāmūs* being interpreted as the angel Gabriel); "surely he is the prophet of this people" (Ibn Isḥāḳ, i, 238). The exact details are very hard to pin down, however. Sometimes Khadīdja sends Muḥammad to Waraḳa; sometimes she goes alone, and reports his words to the Prophet; sometimes she is accompanied by Abū Bakr; the last of these clearly suggests that the story came to express claims about which Companion had been converted first (noted by M.J. Kister, Al-Taḥannuth. *An inquiry into the meaning of a term*, in *BSOAS*, xxxi [1968], 224 n. 13, with more sources). Aside from the question of who exactly was involved, traditionists were keenly interested in Waraḳa's response. The consensus seems to have been that, having recognised Muḥammad's prophecy, Waraḳa still retained his Christian faith. But confusion about his fate is sometimes acknowledged, some authorities counting him among the *ṣaḥāba*, indeed some even identifying him as the first (male) to convert (e.g. al-Zurḳānī, *Sharḥ ʿalā 'l-mawāhib al-laduniyya*, Būlāḳ 1278, i, 257; al-Diyārbakrī, *Taʾrīkh al-khamīs*, Cairo 1302, i, 323). According to Ibn Ḥadjar, *Iṣāba*, Cairo 1977, x, 304 ff., Waraḳa died before Muḥammad's (public) "call to the people that they convert". The account echoes others that characterise him as old and blind at the time of Muḥammad's first revelation, fits the traditional chronology of revelation, according to which the *fatra*—the suspension of revelation—followed XCVI, 5, and, finally, explains why Waraḳa is given to foretell Muḥammad's persecution at the hand of the Meccans; he himself never lived to see it.

Some say Waraḳa died in Mecca, others in Syria; the second of these occasionally forms part of a different chronology, according to which his death came after the *hidjra*. Since the Prophet is said to have forbidden insulting (the memory of) Waraḳa, and, moreover, to have had a dream of him in heaven, one surmises a lively controversy about his status in the early period. The Syrian connection is also among many features Waraḳa's story shares with the legend(s) of the monk Baḥīrā; and Nöldeke, who adduced some evidence that he was in fact a Jew (*Hatte Muḥammad christliche Lehrer?*, in *ZDMG*, xii [1858], 699 ff.), went so far as to find the origins of these legends in Waraḳa. Here he may have gone astray; but there is no question that the accounts providing monotheist collaboration for Muḥammad's prophecy frequently overlap. Needless to say, all this makes evaluating Waraḳa's significance for the birth of Islam vexing indeed. It is particularly difficult to judge what kind of influence (if any) he exerted on Muḥammad's thought; that he did has been argued in both European and Middle Eastern scholarship alike (thus Abū Mūsā al-Ḥarīrī, *Ḳāṣṣ wa-nabī* (Diyār ʿAḳl 1985).

(C.F. Robinson)

WARĀMĪN, a small town of northern Persia (lat. 35° 19' N., long. 51° 40' E.) lying in the fertile Warāmīn plain, which benefits from a good water supply from the Djādja Rūd and has been much frequented by Turkmen nomads up to modern times.

1. History.

The mediaeval Islamic geographers place it at two stages from al-Rayy (al-Muḳaddasī, 401) or at 30 *mīls* from it (Yāḳūt, *Buldān*, ed. Beirut, v, 370). Already in Būyid times it was a flourishing little town with a bazaar, but it developed especially after the Mongols sacked al-Rayy in 617/1220 and the inhabitants of the ruined city migrated to such nearby places as Warāmīn and Ṭihrān [*q.v.*]. The next two centuries were those of its greatest florescence, when it acquired some fine buildings (see 2. below) and when it was now on the highway from the Il-Khānid capital of Sulṭāniyya to the east; Ḥamd Allāh Mustawfī (740/1339-40) calls it "the administrative centre of the *tūmān* of Ray", producing corn, fruits and cotton, though characterised by a fanatically Shīʿī population (*Nuzhat al-ḳulūb*, 55, tr. 61). It was to some extent a cultural centre. Al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, xiii, 306-7, mentions a well-known *muḥaddith*, ʿAttāb b. Muḥammad al-Rāzī al-Warāmīnī, d. after 310/922-3, and a certain Muḥammad b. Abī Zayd al-Ḥusaynī al-Rāzī al-Warāmīnī began writing his *Aḥsan al-kibār fī maʿrifat al-aʾimma al-athār*, on the merits of the Twelve Imāms, in 739/1338-9 (Storey, i, 211, 1261; Storey-Bregel, i, 621-2). By 1405, however, when Clavijo passed through it, it was still an extensive town but lacked a wall and was showing signs of depopulation (*Embassy to Tamerlane*, tr. Le Strange, London 1928, 306), although it was still of significance in Shāh ʿAbbās I's time (Iskandar Munshī, *Tārīkh-i ʿĀlam-ārā-yi ʿabbāsī*, Tehran 1313-14/1895-7, i, 256). It then began a decline into village status until its revival in

the 20th century with the general development and urbanisation of the whole Tehran region.

The present town of Warāmīn (lat. 35° 19' N., long. 51° 40' E., altitude 922 m/3,026 feet) now has significant industry, having benefited from being a station on the Tehran-Khurāsān railway, completed in the late 1930s. In *ca.* 1950 it still had a population of only 4,522, but this has by now risen considerably, Warāmīn having become part of the conurbation of Tehran.

2. Monuments.

These include several *imām-zādas*, including that of Ḥusayn Riḍā; the tomb tower of ʿAlāʾ al-Dīn, a high, brickwork cylindrical tower with a conical roof and interior dome (688/1289); and the great, square 5th/11th century citadel, the Ḳalʿa-yi Gabr. The especially fine four-*īwān* congregational mosque was built in 722-6/1322-6 during the reign of the Il-Khānid Abū Saʿīd by [Ḥasan b.] Muḥammad b. Muḥammad b. Manṣūr *al-Kūhadhī; some its inscriptions are Shīʿī in tinge although the sultan was a Sunnī. It was rebuilt in 821/1418 in the time of the Tīmūrid Shāh Rukh by the *amīr* Ghiyāth al-Dīn Yūsuf Khʷādja.

WARANGAL, a town of the northeastern Deccan of India (lat. 18° 00' N., long. 79° 35' E.), important in mediaeval times as the centre of a Hindu princedom in the region of Telingāṇa [*q.v.*]. It blocked the way to Muslim expansion from the central Deccan to the Bay of Bengal, hence was frequently involved in warfare during the 8th-9th/14th-15th centuries with the Dihlī Sultanate [*q.v.*] and then the local northern Deccani sultanate of the Bahmanids [*q.v.*].

Warangal lies on the eastern edge of the Deccan plateau some 130 km/70 miles to the southwest of the Godivari river. In mediaeval times, it was a strongly fortified place with two walls; traces of the outer wall remain today plus the four gateways of the inner wall. Sultan ʿAlāʾ al-Dīn Khaldjī first sent an expedition against Warangal via Bengal and Orissa in winter 702/1302-3, apparently unsuccessful; but in winter 709/1309-10 his general Malik Kāfūr [*q.v.*] marched via Devagiri or Deogir [see DAWLATĀBĀD] against Prātaparudra, the Kākatīya ruler of Telingāṇa in his capital of Warangal, and imposed on him peace and the payment of tribute. That continued payment of this tribute depended purely on Muslim coercive power was shown by the fact that in 718/1318 an army from Dihlī en route for Maʿbar [*q.v.*] had to compel the Rādjā in Warangal to resume paying tribute. However, the latter openly threw off the authority of Dihlī when the Sultanate was in 720/1320 plunged into discord with the end of the Khaldjīs and the advent of the Tughluḳids. Hence in 723/1323 Ghiyāth al-Dīn Tughluḳ's son Ulugh Khān Djawna, the future Sultan Muḥammad, had to reduce Warangal to obedience, and he may possibly have carried off the Rādjā as a prisoner to Dihlī, though a royal inscription of 1326 shows that by then he was back once more ruling in his capital. Ulugh Khān also, according to Baranī, changed the name of Warangal to Sultānpūr. It seems to have been Muḥammad b. Tughluḳ's [*q.v.*] aim, once he became sultan in 725/1325, to incorporate Telingāṇa into his kingdom rather than leave it as a tributary Hindu state, but this he was unable to secure permanently, for by *ca.* 735/1335 his commander Malik Maḳbūl was forced to relinquish Warangal to its family of local rulers under Kāpaya Nāyaka. Soon afterwards, Muslim authority in the northern Deccan passed to the Bahmanids. In 751/1350 Ḥasan Bahman Shāh led an expedition to Warangal and reimposed tribute on Kāpaya Nāyaka, but it was not until 828/1425 that Aḥmad I Shāh, provoked by an anti-Muslim alliance of the Rādjās of Telingāṇa and Vidjayanagara [*q.v.*], marched on Warangal, defeated and killed Devarāya II, and finally incorporated the city and much of Telingāṇa into the Bahmanid state, appointing the Khān-i Aʿẓam as its governor. Local Hindu rulers still remained significant in the region, and caused trouble for the later Bahmanids and their successors, but Warangal's history was henceforth largely subsumed in that of the Muslim sultanates of the Deccan and their eventual supplanters, the Mughals.

The Muslim monuments of Warangal include a palace, attributed to Shitāb Khān *ca.* 905/1500 [see MAḤALL, at vol. V, 1216b].

In British Indian times, Warangal came within the Niẓām of Ḥaydarābād's dominions. It is now in the northern part of Andhra Pradesh State of the Indian Union, and is a commercial and industrial centre with a population in 1971 of 207,000. It is also the chef-lieu of a District of the same name which extends as far as the Godivari.

WARĀWĪNĪ [see MARZBĀN-NĀMA].

WARD (A., coll., sing. *warda*), *Rosa sp., Rosaceae*, also known as *djull* or *gul* (Persian). Though *ward* can refer to any flower, it generally denotes the rose (Lane). According to Maimonides, it is known to physicians as *djull*, though the Arabs used this name only for the white rose (*Sharḥ*, no. 121); *nisrīn* was the wild rose or Chinese rose (no. 253). Ibn al-Bayṭār in his *Tafsīr* to Dioscorides explains *rūdhā* as *ward*, or as *djull*, of Persian origin; the red variety is called *ḥawdjam*, the white *watīr* (i, 101, 140).

Medicinal use. Ibn Sīnā calls it cold in the first degree, dry in the second; it quietens the yellow bile (*Adwiya mufrada*, 61). Al-Zahrāwī used rose leaves, dried rose, rose water (*māʾ al-ward*) and rose *duhn* (oil), describing the methods for making the latter (105-6) and its uses (117-18). An excellent medicine, moderately cold and astringent: internally, good for the stomach and for cases of tuberculosis; externally, soothing, and included in ointments. It was combined, in small

amounts, with other ingredients. According to Ibn Waḥshiyya, the rose, its petals, leaves, rose water and rose oil, were included in several antidotes to poison. Sābūr b. Sahl in his *Aḳrābādhīn* used rose oil, rose water, dried red rose, and seeds, for a variety of ailments.

Ainslie speaks of *ward* as *Rosa centifolia* (Lin.); he considers this probably the true *gul* of Ḥāfiẓ. *R. gallica* (red rose, in P. *gul-i surkh*) was used as carminative, cephalic and tonic (*Materia Indica*, i, 345). Rose oil (*duhn*) and rose water are produced by distillation from the flowers of some types of rose (Ghaleb, ii, 364-6). Rose water today is a refreshing ingredient in lotions, has a limited medicinal use, and is used in the preparation of food, especially sweets. The dried flowers are included in some versions of the *Arbaʿīn* or "forty" substances sold by *ʿaṭṭārīn* (herbalists).

(Penelope C. Johnstone)

WARDAR, the Ottoman Turkish name for the Vardar, Grk. Axios, a river of the southern Balkans. It rises in the Šar Mountains near where Macedonia, Albania and the region of Kosovo meet, and flows northeastwards and then in a southeastern and south-south-eastern direction through the present (Slavic) Macedonian Republic [see makadūnyā], past Skopje or Üsküb [*q.v.*] and through Greek Macedonia to the Gulf of Salonica. Its length is 420 km/260 miles.

The lower valley of the Vardar probably passed into Ottoman Turkish hands around the time of the first Turkish capture of Salonica in 1387 [see selānīk], soon after which the Byzantine town of Pella in Macedonia was conquered and became for the Turks Wardar Yeñidjesi or Yeñidje-yi Wardar. In *ca.* 1475 there was apparently a separate *sandjak* of Wardar with its chef-lieu at Ḳaraferye or Beroia, but normally, the lower part of the valley came within the *sandjak* of Selānīk. The upper course of the Vardar came under Ottoman control after the defeat of the Serbians at the first battle of Kosovo or Ḳosh-owasi in 791/1389 [see ḳoṣowa, kosovo]. The Vardar valley was settled in early Ottoman times by considerable numbers of Turkmens brought in from Anatolia. It remained under Turkish rule for over five centuries until, after the Balkan War of 1912, it passed to Serbia and Greece, a position confirmed by the Treaty of London of 1913, with the middle and upper reaches of the river after 1918 coming within what was eventually called the kingdom of Yugoslavia.

al-**WARDJLĀNĪ** [see abū zakariyyāʾ al-wardjlānī].

al-**WARGHĪ**, Abū ʿAbd Allāh Muḥammad b. Aḥmad, Tunisian poet and *adīb*, b. *ca.* 1125/1713 at Wargha, a village near Kef, d. 1190/1776 at Tunis.

After study at a Ḳurʾān school in his native village, he went to Tunis in order to continue his studies at the Great Mosque of the Zaytūna [*q.v.*], and subsequently himself gave courses there. His wide learning and gift for writing attracted the attention of the Bey, ʿAlī I Pasha, who made him secretary in his chancery. This Ḥusaynid ruler had just dethroned his uncle al-Ḥusayn and himself assumed power in 1735, but was in turn overthrown in 1756 by his cousin Muḥammad al-Rashīd b. al-Ḥusayn. Since al-Warghī was a fervent partisan of ʿAlī I, and had been richly rewarded by him, he was after 1756 persecuted and imprisoned. Till his death, he never recovered his former privileged position, but gradually contrived to secure a pardon, regain his liberty and acquire authorisation to practise as a notary.

Al-Warghī is known above all as a poet, and especially as a eulogist of ʿAlī I, but his *Dīwān*, published at Tunis in 1975 by ʿAbd al-ʿAzīz al-Kīzānī, contains poems on many other themes, such as descriptions, love poems, petitions, verses on the hazards of fate, etc. Dominating his œuvre is a neo-classicism. He was also the author of three *maḳāmāt*, also published with his *rasāʾil* at Tunis in 1972 by al-Kīzānī, which include several of his own verses. The first, written in 1160/1747, *al-Bāhiyya*, nominally concerns the founder of the *madrasa* of that name, but reading between the lines, contains criticism of what was, according to him, misgovernment of the land by the sons of al-Ḥusayn. The second one, *al-Warghiyya* or *al-Khitāniyya*, was written for the circumcision of the son of the Bey ʿAlī II b. al-Ḥusayn in 1178/1764, and seems to indicate that, after the three years' reign of Muḥammad al-Rashīd, al-Warghī had recovered some of his former favour. A third, *al-Khamriyya*, is a eulogy of ʿAlī II who in 1183/1769 closed down a number of wine shops and taverns in the capital, but in fact contains discreet criticism of the policies of the sons of al-Ḥusayn b. ʿAlī and regrets for the passing of the reign of his old protector ʿAlī I.

WARGLA, conventionally Ouargla, an ancient oasis town of the Algerian Sahara (lat. 31° 58' N., long. 5° 20' E., altitude 290 m/320 feet), situated 160 km/100 miles south-south-west of Tuggurt [*q.v.*] and now the chef-lieu of a *wilāya* or province of the Algerian Republic. It occupies a depression above a sheet of underground water which is fed by the subterranean course of the Wadi Miya and which has, in the past, been tapped by wells, thus permitting vast date palm groves in the oasis (see 2. below).

1. Pre-modern history.

We have no information about Wargla before the Arab conquest. At that time, the land was occupied by Zenāta tribes. According to Ibn Khaldūn, the Banū Wargla (Berber, Urdjelan) came from the northwest along with other Berber elements (Īfran and Maghrāwa [*q.vv.*]) and founded several little towns in these regions which combined to form the town of Wargla. The people adopted Ibāḍī doctrines so thoroughly that, after the destruction of the Rustamid kingdom of Tāhart [*q.v.*] by the Fāṭimids at the beginning of the 10th century A.D., many Khāridjīs came to settle in

Wargla and founded the town of Sedrata, the ruins of which still exist buried under the sands half a day's journey to the southwest. At the same time, Abū Yazīd, the "man with the ass", who had rebelled against the Fāṭimids, recruited many followers in this region. The Ibāḍīs had nevertheless in the 6th/12th century, as a result of conflicts with the orthodox and perhaps under the pressure of Arab elements, to abandon the region of Wargla and migrate to the Tadmayt, where they finally settled and created the oases of the Mzāb [*q.v.*]. Ibāḍism, however, continued to survive at Wargla, where in the 11th/17th century it still had a few representatives.

During this period, Wargla, which according to the traveller al-ʿAyyā<u>sh</u>ī was ruled by the Banū Tū<u>dj</u>īn dynasty, seems to have been a prosperous city enriched by trade with the Sūdān (al-Idrīsī, tr. de Goeje, 141). The Hilālī invasion marked the beginning of a troubled era. In the course of the wars between the Ḥammādīs and the A<u>th</u>bā<u>dj</u>, with whom the people of Wargla had contracted an alliance, the dynasty of the Banū Tū<u>dj</u>īn was overthrown and the town destroyed. Rebuilt a short distance from the original site, it suffered later in the wars between the Almohads and the Banū <u>Gh</u>aniyya. In the 8th/14th century, although under the suzerainty of the Banū Muznī, representatives of the Ḥafṣids in the Zāb [*q.v.*], Wargla was practically independent under the rule of sultans belonging to the family of the Banū Abī <u>Gh</u>abul, of the fraction of the Banū Wagguin or Uggīn (Ibn <u>Kh</u>aldūn, *Histoire des Berbers*, tr. Slane, iii, 286). At the end of the 10th/16th century, these sultans were extremely wealthy, but according to Leo Africanus (ed. Schefer, book vi, vol. iii, 146), they had to pay heavily for the protection of the nomad Arabs. Wargla at this time still preserved the commercial importance that it owed to its situation as a "port of the desert", to use Ibn <u>Kh</u>aldūn's phrase (*loc. cit.*). It was a market where the produce and slaves of the Sūdān were exchanged for the merchandise bought from Tunis and Constantine. Leo Africanus remarks on the beauty of the houses, the number of artisans and the wealth of the merchants. This opulence attracted the attention of the Turks of the Algerian coastlands to Wargla. In 1552 Ṣalāḥ Reʾīs, at the head of an army of Turks and Kabyles, advanced as far as Wargla, the inhabitants of which offered no resistance, and he returned after plundering the town and imposing on the sultan an annual tribute of 30 African slaves.

The expedition of Ṣalāḥ Reʾīs was followed by a new period of troubles which was ended, it seems, at the beginning of the 17th century by the proclamation of a new sultan, Allāhum, to whom local tradition attributes a <u>Sh</u>arīfian origin; his descendants held power down to the middle of the 19th century. But the real masters of the country were the nomad <u>Sh</u>amhaa, Banū Tūr and Sidi ʿOtba, whose continual interference in the quarrels of the two *ṣoffs* or factions [see ṢAFF. 3.] into which the settled population was divided kept up the disorder and made the authority of the sultans illusory. The latter had even to recognise the supremacy of the Banū Babia, hereditary chiefs of the oasis of Ngusa, which they did not cast off till 1841. But ten years later, a new cause of trouble arose. Muḥammad b. ʿAbd Allāh, the *<u>sh</u>arīf* of Wargla, raised the tribes of the Sahara against the French, who entrusted the task of reducing the rebels to the *<u>sh</u>ay<u>kh</u>* of the Ūlād Sīdī <u>Sh</u>ay<u>kh</u>, Sīdī Ḥamza. The latter occupied the town in the name of France in 1853 and was given supreme command of the Sahara tribes. But the participation of the people of Wargla in the rising of the Ūlād Sīdī <u>Sh</u>ay<u>kh</u> in 1854 forced French columns to intervene on several occasions in the region. Another rebel, Ben <u>Sh</u>u<u>sh</u>a, nevertheless succeeded in establishing himself in Wargla in 1871. The suppression of this rebellion resulted in the final establishment of French authority in 1872.

With the suppression of the trans-Saharan slave trade under the French rule and with a French Army fort in the oasis, Bur<u>dj</u> Lutaud, the economic importance of Wargla declined. But it subsequently became the chef-lieu of the Territoire des Oasis Sahariennes, with the municipal status of a *commune indigène*.

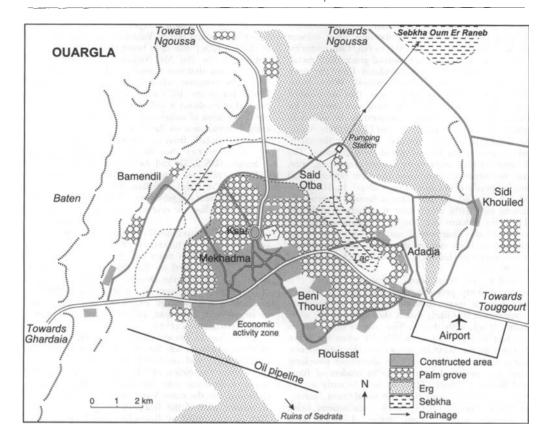
Lethielleux, *Ouargla, cité saharienne, des origines au début de la 20ème siècle*, Paris 1983. (G. YVER*)

2. The modern oasis and town.

Wargla owes both its historical and its present importance to its remarkable position on an isthmus of *terra firma* connecting the north and south Saharas, between the great Eastern Erg and the Great Western Erg. Its position has at all times made it of the greatest significance for trans-Saharan trade; it had relations with Gao and Timbuktu to the south, and was a transit point for the slave trade, what Ibn <u>Kh</u>aldūn called "the gate of the Sūdān".

In the colonial period it was marginalised, with a population only one-half that of Tuggurt's, but it has today surpassed Tuggurt and Ghardaia in importance. It has benefited from the proximity of the oil field of Hassi-Messaoud (Ḥasy Masʿūd) at 80 km/50 miles to the east-south-east, and the Algerian state's decision to make Wargla a Saharan capital, with institutions serving the whole Sahara (a University, a Commission for Development and Land Reclamation, and an Institute for Saharan Agronomy). As a garrison town also, at a crossroads of modern roads, and still with important date palm groves, Wargla has today 120,000 inhabitants.

As noted above, the town lies in a north-south depression within the rims of a calcareous plateau and corresponding to the ancient course of the Wadi Miya. Situated on a low terrace above the palm groves, the town is girt with lakes and salt marshes on three sides. The ensemble has a regular concentric pattern: the *ḳṣar* in the centre, then the modern town, the palm groves, then salt flats and the rising banks of the plateau and several small ergs.

The *ḳṣar*, with its 10,000 inhabitants, is one of the most important in the Sahara. The walls and ditches which still surrounded it in the 19th century have been replaced by a ring road, and recent constructions have marred the centre; nevertheless, the tightly-knit urban structure remains, with its buildings at two levels and its associated structures coming together near the mausoleum of Sīdī al-Warglī. The three communities of the Banū Brāhīm, the Banū Uggīn


and the Banū Sissīn, Berber-speaking Zenāta, dark-skinned from the admixture there of negro blood, share the *ḳṣar* and also the palm groves, though in the urban agglomeration as a whole former Arabic-speaking nomads have become the majority. Around the *ḳṣar* the modern suburbs have developed. The "Green Triangle" of monumental buildings and greenery forms the administrative quarter laid out in the 1930s by Col. Carbillet, a disciple of Lyautey. Quarters of former nomads, now sedentarised, have sprung up in various places, and the urban sprawl has now joined up with peripheral *ḳṣūr* (Rouissat, Adjadja, Bamendil, etc.).

The palm groves, amounting to 550,000 trees, are amongst the most extensive in the Sahara. They are served by the artesian water supplies, formerly tapped by wells but now by bore holes. But the extension of lands suitable for agriculture has now reached its natural limit, stretching across lands that are becoming waterlogged through the rise of the water-table, with a veritable lake formed to the east of the town; hence it has become necessary to construct a drainage network that conveys used water to the Oum er Raneb *sabkha*. But beyond the palm groves, Wargla is becoming a centre for extensive development, thanks to its underground water levels and its alluvial soils, a sector chosen by the Algerian government for the improvement of modern Saharan agriculture; hence along the roads to Hass-Messaoud and Tuggurt stretch numerous modern developments, industrial and agricultural.

Bisson, *Les villes sahariennes*, in *Maghreb-Machreck*, Paris, (1983), 25-41.

(M. Côte)

WARIḲ (a.) "silver money", distinguished from *ʿayn* "gold money", and *nuḳra*, refined silver in bars or ingots.

In the mediaeval Islamic world, as elsewhere before the introduction of central banking, gold and silver money were two separate currencies, with a fluctuating market exchange rate. The unit of silver currency was the dirham [*q.v.*], normally represented by a coin with the same name, or, more strictly speaking, by an amount of current silver money with the weight of a standard dirham; the corresponding unit of gold currency was the dīnār [*q.v.*], with its own weight standard (unminted gold in ingot form was *tibr*). To describe quantities of coins, *ʿayn* and *wariḳ* are used to designate the gold and silver portions of the sum. For example, when the caliph al-Wāt̲h̲iḳ died (227/847), the treasury was inventoried and found to contain *ʿayn*, 5,000,000 dīnārs and *wariḳ*, 15,000,000 dirhams (Ḳāḍī Ibn al-Zubayr (attrib.), *K. al-D̲h̲akh̲āʾir wa ʾl-tuḥaf*, 217-18, tr. Ghāda al-Qaddūmī, *Book of gifts and rarities*, Cambridge, Mass. 1996, 208). On a more humble level, a Geniza letter acknowledges receipt of "10 dīnārs, 7 in *ʿayn*, 3 in *wariḳ*" (Goitein, *A Mediterranean society*, i, 230); that is, a payment with a total value of ten dīnārs was made, of which seven dīnārs were paid in gold coin and the rest in silver coin worth three dīnārs.

In Syria and Egypt, the meanings of the pair *wariḳ/nuḳra* changed as a result of Ṣalāḥ al-Dīn's re-introduction of full-weight pure silver dirhams *ca.* 572/1176-7. Up to that time, *wariḳ* had continued to

mean silver coins, in particular, the increasingly debased dirhams which were the only silver coinage of the region from the 4th/10th to 6th/12th centuries, while *nuḳra* meant pure commercial grade silver metal, or its theoretical price as calculated from the price of a silver coinage of lower fineness. When Ṣalāḥ al-Dīn introduced pure silver coins, they were called *nuḳra* dirhams, while the term *wariḳ* was reserved for the debased coins (which continued to be issued in many places). Ibn Baʿra, a 7th/13th-century writer on the Egyptian mint, describes separately the methods of production for *nuḳra* and *wariḳ* dirhams. The designation *nuḳra* stuck to the former even when, later, they too began to be debased (the term obviously had lost its specific denotation of pure silver). In 815/1412-13, we are told, the last *nuḳra* dirhams, by then containing only 10% silver, were demonetised in Egypt. The *wariḳ* dirhams that had to be distinguished from *nuḳra* had also disappeared, and *wariḳ* resumed its significance of silver coinage in general, although mainly in contexts with historical reference, such as those of *fiḳh* manuals.

Today the term *waraḳ* meaning "money", is recorded. Very probably the significance survives in part from a more common meaning of the word, "paper", but it is likely that it also continues the older usage. *Wariḳ*, with that spelling, occurs only once in the Ḳur'ān (*Sūrat al-Kahf*, XVIII, 19: when the Seven Sleepers awake, they are advised to take their money, *wariḳ*, to town to buy food). An alternative vowelling, *warḳ*, was preferred by the Ḳur'ān readers of Baṣra and Kūfa (al-Ṭabarī, *Tafsīr, ad loc.*). As early as 11/632-3, a versifier puns twice on *waraḳ/wariḳ* "leaves" or "silver money" (l. 1) (both vocalisations being prosodically possible), *waraḳ* "leaves" (l. 4) and *wariḳ* "silver money" (l. 6) (al-Ṭabarī, i, 1907-8; cf. tr. F.M. Donner, *The History of al-Ṭabarī. X. The conquest of Arabia*, Albany 1993, 83-4).

Bibliography: Given in the text.

(M.L. Bates)

al-**WARKĀ'**, Tall, the Arabic name for what is now an archaeological site in the Nāṣiriyya *liwā'* or governorate of ʿIrāḳ (lat. 31° 18' N., long. 45° 40' E.). It is the Sumerian and Babylonian Uruk, Biblical Erech (Gen. x. 10), one of the leading cities and religious centres of ancient Babylonia, first surveyed by W.K. Loftus in the 1850s.

In early Islamic times it seems to have been a minor place in the district of Kaskar, with a reputation in Islamic tradition as being the birthplace of the Patriarch Ibrāhīm or Abraham (although many other places were mentioned for this) (Yāḳūt, *Buldān*, ed. Beirut, iv, 372-3). According to Sayf b. ʿUmar (in *ibid.*, iv, 373, cf. M.G. Morony, *Iraq after the Muslim conquest*, Princeton 1984, 156-7), the first encounter of probing Muslim Arabs under Harmala b. Murayṭa and Salmā b. al-Ḳayn with the Sāsānid forces took place at al-Warkā'.

WARḲĀ' b. **ʿUMAR** b. Kulayb al-Shaybānī al-Kūfī, Abū Bishr, Ḳur'ān interpreter and traditionist who lived in al-Madā'in and died *ca.* 160/776. He is said to have been orthodox (*ṣāḥib sunna*) as well as a Murdji'ī. His *tafsīr* is reported to have been preferred by, amongst others, Yaḥyā b. Maʿīn and Aḥmad b. Ḥanbal [*q.vv.*], this *tafsīr* being one of the three recensions of the Ibn Abī Nadjīḥ transmission of the *tafsīr* tradition that was started by Mudjāhid b. Djabr [*q.v.*]. His recension, which is preserved in the Cairo Dār al-Kutub ms. 1075 *tafsīr*, is related to the other two but often shows a different wording and a different distribution of individual *tafsīrāt*. Al-Ṭabarī apparently set great store on the Warḳā' recension, but only quotes it regularly from sūra XIV onward in his *tafsīr*.

Bibliography: See biographical references in Sezgin, *GAS*, i, 37, and *Ta'rīkh Baghdād*, xii, 515-17. For his *tafsīr*, see mudjāhid b. djabr. The new edition by M. ʿAbd al-Salām Abu 'l-Nīl, *Tafsīr al-imām Mudjāhid b. Djabr*, Cairo (Madīnat Naṣr) 1989, does not follow the original arrangement of the ms.

(F. Leemhuis)

WARNA, conventionally Varna, a town and seaport of northeastern Bulgaria, important in Ottoman Turkish times (lat. 43° 12' N., long. 27° 57' E.). It is situated on the Black Sea coast, on a bay of the Sea near the Devnya lake, with the region of Dobrudja [*q.v.*] to its north. At present, with 400,000 inhabitants, it is the third largest city in Bulgaria and its largest port, with road, rail and ferry connections.

1. Historical survey.

Varna has an ancient history. The Greek colony of Miletus-Odessos was founded on its site in the 6th century B.C., and on the Devnya lake there arose the Roman foundation of Marcianopolis. During the Slavic infiltration into the Balkans, Odessos was destroyed, but the name Varna appears for the region. It became part of the Byzantine empire in the late 10th century, ruled by Byzantium and Bulgaria, and from the 1340s came within the Dobrudja despotate which seceded from the Bulgarian kingdom.

Varna was conquered by the Ottomans in 1388-9, but was probably ceded to Byzantium in 1403 by Süleymān, son of Bāyezīd I. In 1444, in a valley to the west of the town, there took place the celebrated battle of Varna (to figure prominently in Ottoman historiography, with a special *Ghazawāt-nāme* of Sultan Murād II devoted to it). The force of European Crusaders (Hungarians, Poles, Czechs and Vlachs) under the king of Poland and Hungary Wladysław II Jagiełło/Ladislaus I and the Voivode of Transylvania Hunyády János/John Hunyadi, was defeated by Murād's Ottoman army. After the fall of Constantinople, the Ottomans seized the last independent fortresses along the Black Sea coast and confirmed their authority over Varna.

In the early 17th century, Varna suffered from Cossack raids. There were Ottoman-Russian confrontations during the 18th century, and in the war of 1828-9, the Russians captured it after a siege and held it for over two years. During the Crimean War 1853-6, it served as a base for the forces of the English, French and Piedmontese allies, with about 60,000 persons there, but was devastated by cholera and a fire. In 1878 the fortress of Varna surrendered to the Russians without a fight, and was henceforth included within the Bulgarian principality.

2. Varna under the Ottomans.

The town was a port and a fortress in the *sandjak* (from the 17th century, the *beylerbeylik*) of Silistra, and it formed one of the *nāḥiye*s of the extensive Dobrudja region. In the 17th century, Ewliyā Čelebi recorded, amongst the town's officials, a superintendent of the port customs; a commander (*muḥāfiẓ*) of the fortress; a *serdār* of the Janissaries, a *ketkhudā* of the Sipāhīs;

the *odabashî* of the Janissaries; a *muḥtesib*; and a *subashî*. In the 1840s, a *sandjak* and *ḳaḍā* of Varna were set up within the *eyālet* of Silistra, governed by a *müdür*, and there was a *medjlis*, consultative body (whose members included the local Orthodox metropolitan). This same structure was maintained when the region was included in the Ṭuna or Danube *wilāyet* in 1864.

In past times, the port of Varna had been difficult to use without the construction of facilities for ships. Under the Ottomans, it functioned as a transit centre for foodstuffs from Dobrudja exported to Istanbul, and it had a shipyard. Under the Treaty of Küčük Ḳaynardja [*q.v.*] of 1774, the Black Sea was opened up for foreign trade, and agreements for free navigation made with various Western powers, leading to the growth of foreign activities through the Straits and within the Black Sea. Hence by 1841 there were 14 consulates of European countries in Varna; steamships started docking there, and between 1861 and 1867 a railway linked Varna and the town of Russe on the Danube.

Varna forms part of a specific sub-region, a narrow zone along the Black Sea coast differing in demography and relief from its hinterland. The Varna region must have been Orthodox Christian on the eve of the Ottoman conquest, and there may even have been Christian Turks there in the pre-Ottoman period. Notable were the Gagauz [*q.v.*], Turkish-speaking Orthodox Christians using the so-called Karamanlidika, i.e. writing religious works in Turkish language with Greek script. In the 16th century, some 55 Yürük *odjaḳs* are mentioned there, and there were *sürgün* [*q.v.* in Suppl.], i.e. transplanted Shīʿīs from Eastern Anatolia. These deportations may have tipped the religious balance of the region in favour of the Muslims.

The first extant registers concerning the population of Varna date from 1526-7 and 1566-9. The *djemāʿat* of Muslims consisted of 27 households and eight bachelors, plus 29 Muslim *müsellems*, exempt from *ʿawāriḍ* [*q.v.*] because they served in the Varna fortress. These grew into five Muslim *maḥalles*, totalling *ca.* 1,200-1,500 persons. Initially, the non-Muslim population formed nine *maḥalles*, with 352 households, 128 bachelors and 60 widows as well as non-Muslim *müsellems* and builders in the fortress. Ewliyā Čelebi speaks of 4,000 houses, and in 1659 Ph. Stanislavov mentioned 400 houses of Orthodox Christians, totalling 1,700 people, whilst the Muslims had 1,500 houses with 4,000 people. In the subsequent period, Armenian Christians are also mentioned as residents. The Russo-Turkish wars of the late 18th and early 19th centuries forced the non-Muslim population of the region either to migrate across the Danube or to move into the town of Varna, and after the 1828-9 war, when the total population of the town was about 26,000, the town lost nearly all of its non-Muslim population across the Danube or to Russia, and the Christian quarters and their churches suffered especially from the Russian bombardments. The Ottoman government took measures to facilitate the return of the emigrants. The 19th century was notable for the emancipation, and at times, confrontation, of the Greek and Bulgarian communities, with their own religious and cultural lives. They probably absorbed part of the Gagauz community. According to 19th-century observers, the Orthodox used Turkish, and church services in that language are mentioned, leading some authors to conclude that the majority of the Orthodox population were Gagauz.

Tatars settled in the region as early as the 13th century, increasing after Bāyezīd II's annexation of Bessarabia, and in the later 18th century with the population resettlement after Russia took over the Khānate of Crimea [see ḲIRÎM] followed by a particularly large wave *ca.* 1860-2, when a Tatar *maḥalle* emerged in Varna.

After the Crimean War, Varna's population increased rapidly. According to Kanitz, by 1855 there were *ca.* 16,000 inhabitants (8,300 Turks, 6,100 Orthodox, 1,000 Armenians, 30 Jews and 130 Greeks). The 1881 census revealed 24,561 people: 8,903 Turks, 6,721 Bulgarians, 5,367 Greeks, 837 Tatars, 541 Jews, 338 Gypsies and 186 Germans; in 1901 the total had reached 34,922 inhabitants.

The fortress that guarded the town and its port, until it was blown up in 1829 by the Russians, dated from Byzantine times; it had a double wall and towers, an *ič ḳalʿe* large enough to shelter a barracks, a Muslim *maḥalle* and a mosque, and a citadel, *bārūd-khāne*, used as an arsenal (pulled down in 1901). The open city was around the fortress and on the ancient site of the town. The Christians remained in their pre-Ottoman settlement zones, or in parts of them, where lay their churches. By the 17th century, a relatively substantial Armenian colony, with its own church, had been established in Varna. Muslims lived relatively separately, mainly to the west or south-west. Ewliyā mentions several chief mosques (*djāmiʿ*) and 36 *mesdjids*. Many public buildings were built by persons associated with Varna, so that there was an ʿAbd ül-Raḥmān Efendi mosque, *zāwiye* and *maḥalle*, a mosque and *medrese* of Kurd ʿAlī Efendi, a bridge and fountain of Nāʾib Aḥmed Efendi and an *ʿimāret* of Khüsrew Ketkhudā.

Because of Cossack raids and the wars with Russia, the open town was in the 18th century fortified with an earthen rampart surrounding, on the land side, a moat with a guarded road, towers and gates. After the Russian destruction of the Ič Ḳalʿe, the Ottomans started building a new fortress, the Yeñi Ḳalʿe, largely completed in 1851, on the block fortification principle, with a central fortress and outlying forts and, in 1877, a moat. The wars with Russia and the conflagration of 1854 caused the loss of many Muslim public buildings, but many of these were replaced in the course of the 19th century. According to the *Sāl-nāme* of 1872-3, there were in the town 19 mosques, 12 schools, one *medrese* and one *tekke*. That of 1874-5 records 732 shops, 15 tanneries, 14 *khāns*, 252 warehouses, three *ḥammāms*, a clock tower and a *rüshdiyye* school. There were in fact several dervish *tekkes* in the vicinity of Varna, including Bektāshī ones in earlier times, one of the seven tombs of Sarî Saltuḳ [*q.v.*] and tombs of the *shehīds* from the battle of Varna of 1444. A collection of Ottoman inscriptions was gathered together by V. Shkorpil in the Varna Archaeological Museum, inventoried with the help of local Muslims and translated. Some were carried off as trophies of war and are in the St. Petersburg Public Library, such as the inscription with an ode of 75 verses by the poet ʿAynṭābī ʿAynī celebrating Maḥmūd II's visit to Varna in 1837, which decorated a fountain built by the *Mīr-Ākhur* Ṣādîḳ Agha when the town was reconstructed.

3. The post-1878 period.

After the declaration of Bulgaria's independence, many of the Turks of Varna emigrated, but the town remained in close connection with a Muslim-populated hinterland; a *müftülük* was still functioning in the town until the 1960s. Muslims had representatives in the state and local official bodies; and the Muslim community in Varna launched a number of important

initiatives for the maintenance of the Muslim monuments that were not always positively regarded by the local authorities. Among the outstanding local scholars one should mention Osman Nuri Peremeci, the director of the Varna *rüshdiyye* in the 1920s as well as the teacher in French in the Khalīl Bey *rüshdiyye*, who made translations of inscriptions. The Varna *rüshdiyye* was founded in the 19th century by ʿĀshir Bey; 110 students studied in it at the beginning of the 20th century, taught by two teachers. In the 1870s there was a crafts school and a *ķirāʾat-khāne*; a Turkish women's society took care of orphans. There were also a printing house and a Turkish theatre company. By World War I, three Turkish newspapers were published in Varna: *Ḥuķūķ* ("Law"), an organ of the Young Turk Party, edited by Agop Garabedyan, banned for political reasons; *Müwāzene* ("Balance"), published by ʿAlī Fehlī, of which 377 issues came out in the period 1897-1905; *Warna Postasî*, in Bulgarian and Turkish; and, after World War II, a local organ of the Communist Party, *Halk Dâvası* ("The People's Cause").

WARRĀĶ (A.), literally, "producer or seller of leaves, *warak*", in mediaeval Islam the designation for the copyist of manuscripts, paper seller, and also bookseller.

According to al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, xiii, 300, the term was specifically applied to copyists of *maṣāḥif* and *ḥadīth* compilations. The earliest material used must have been parchment and papyrus [see ĶIRṬĀS and RAĶĶ], gradually replaced largely by paper, whose production in Baghdād began in the late 2nd/8th century and early 3rd/9th century [see KĀGHAD]. From this time onwards, paper was available as a relatively cheap writing material, a factor favouring the emergence of *warrāķūn* as a professional group. The earliest known person bearing the designation seems to be a man of Wāsiṭ called Abū ʿAbd Allāh Aṣbagh b. Zayd (or Yazīd) al-Djuhanī al-Warrāķ (d. 195/811) (Bahshal = Aslam b. Sahl al-Razzāz al-Wāsiṭī, *Taʾrīkh Wāsiṭ*, ed. G. ʿAwwād, Baghdād 1967, 91 and n. 16; al-Samʿānī, xiii, 300-1).

Some Arabic literary sources portray a *warrāķ*'s profession as a somewhat reprehensible craft (*ḥirfa madhmūma*) because it did not provide the copyist an adequate income during his lifetime and he had to live in poverty, so much so that he could not afford to leave enough money to buy his shroud (*kafan*). Nevertheless, the *warrāķ* was devoted to his craft and delighted in his work. According to al-Thaʿālibī, "a *warrāķ* was asked, 'What is pleasure?' He replied, 'Parchment, papers, poured ink and a cleft reed pen.'" He often complained about the insecurity of his profession. On being asked about his condition, a *warrāķ* replied that he lived a miserable life, his livelihood being narrower than the ink-pot, his body more slender than a ruler (*misṭara*); his face was darker than glue; his hand was weaker than cane, and misfortune clung to him more than gum (*al-ṣamagh*), etc. Such literary exaggerations aside, some copyists earned a good income. For instance, Abū ʿAlī al-ʿUkbarī (d. 428/1037) boasted that he used to buy paper sheets for five dirhams to make a copy of the *Dīwān* of al-Mutanabbī in three or four nights, earning thereby between 150 and 200 dirhams (cf. Ibn al-Djawzī, *Muntaẓam*, viii, 92). Another *warrāķ* copied ten folios a day and earned 10 dirhams by selling his work thus copied (al-Khaṭīb, *Taʾrīkh Baghdād*, vii, 342). These cases were probably exceptional. Average copyists perhaps earned much less, yet the public regarded them highly because of their association with the literati and intellectuals in society.

It seems that a copyist of the 2nd/8th century earned a tenth of a dirham for copying a single page; but in the 3rd/9th century, a similar copyist earned a fifth of a dirham for the same amount of work. During the 4th/10th century, a *warrāķ* earned one dirham for copying a single page for a customer. Thus the wage of a copyist for copying a page increased between the 2nd/8th and 4th/10th centuries. Some *warrāķūn* became famous because they worked for a famous employer; such was the case with ʿAbd al-Wahhāb b. ʿĪsā al-Warrāķ (d. 319/931), who copied the manuscripts of al-Djāḥiẓ, and similarly, Aḥmad b. Muḥammad b. al-Warrāķ (d. 228/843), who worked for the Barmakid al-Faḍl b. Yaḥyā. It would appear from the statement of al-Yaʿķūbī that the *warrāķūn* as a professional group emerged during the 3rd/9th century, so much so that there were more than one hundred shops or stalls of copyists and paper sellers (*ḥānūt al-warrāķīn*) near the site of Ķaṣr Waḍḍāḥ in Baghdād. Those *warrāķūn* were also described as *aṣḥāb al-kutub* or booksellers (cf. *K. al-Buldān*, 245, tr. Wiet, 24). There were book markets in all major Islamic cities, such as Baghdād, Baṣra, Sāmarrāʾ, Wāsiṭ and Cairo. It is recorded that a manuscript of the *History* of al-Ṭabarī was offered for the price of 100 dīnārs.

The profession of *warrāķ* attracted men of letters of all descriptions, such as poets, theologians, commentators on the Ķurʾān, and traditionists. Some of them had a poor reputation, but many basked in popular esteem. A *warrāķ* such as Shudjāʿ b. Djaʿfar b. Aḥmad al-Warrāķ (d. 353/964) claimed an honourable genealogy from the Prophet's Companion Abū Ayyūb al-Anṣārī, and earned for himself a reputation as a preacher (*wāʿiẓ* [*q.v.*]).

ʿAllān al-Warrāķ, who regarded himself as a man of culture, earned his living as an itinerant copyist who paid visits to his customers rather than the other way round. In some cases a large group of copyists were employed by one man who also provided them board and lodging. The degree of accuracy of knowledge and science available in the ʿAbbāsid Middle East reflected the quality of the copyists' work; a bad copyist was criticised as an embezzler of science and knowledge, as is noted by Abū Bakr al-Khʷārazmī (*Rasāʾil*, ed. al-Khāzin, Beirut 1970, 150).

In the late mediaeval period, especially in Ṣafawid Persia, Ottoman Turkey and pre-modern and early modern Egypt, there existed guilds of various groups involved in the book trade, such as copyists, bookbinders and booksellers.

AL-**WARRĀḲ, ABŪ ʿĪSĀ** [see ABŪ ʿĪSĀ].

AL-**WARRĀḲ**, MAḤMŪD B. (AL-)ḤASAN al-Warrāḳ al-Nakhkhās, poet of the early ʿAbbāsid period. He lived in Baghdād, where he died *ca.* 230/845. As Ibn al-Muʿtazz [*q.v.*] says in his *Ṭabaḳāt al-shuʿarā'* (ed. ʿAbd al-Sattār Aḥmad Farrādj, Cairo n.d., 367), "most of his poetry consists of sententious, gnomic, paraenetic and ethical sayings (*amthāl wa-ḥikam wa-mawāʿiẓ wa-adab*), in which genres he does not fall short of Ṣāliḥ b. ʿAbd al-Ḳuddūs [*q.v.*] and Sābiḳ al-Barbarī". Specialising in epigrams on *zuhd* [*q.v.*] rarely longer than six lines, with an easy diction and almost wholly devoid of striking similes or metaphors, he was not much esteemed by literary critics. He is, however, often quoted by anthologists, notably the Cordovan writer Ibn ʿAbd al-Barr [*q.v.*], whose *Bahdjat al-madjālis* contains more than one hundred of his epigrams. An anecdote (Ibn al-Muʿtazz, *Ṭabaḳāt*, 379-80, *Aghānī*[3], xiv, 197-8) presents him in a less pious and sober guise, involved in a bout of drinking and lechery in the company of the disreputable poet Abu 'l-Shibl al-Burdjumī.

Bibliography: 1. Collected verse. *Dīwān Maḥmūd b. Ḥasan al-Warrāḳ*, ed. ʿAdnān Rāghib al-ʿUbaydī, Baghdād 1979, ed. Muḥammad Zuhdī Yakan, Beirut 1983 (contains less than al-ʿUbaydī's edition). Short notices in al-Khaṭīb al-Baghdādī, *Ta'rīkh Baghdād*, xiii, 87-9, Ibn Shākir al-Kutubī, *Fawāt al-Wafayāt*, ed. ʿAbbās, Beirut 1974, ii, 562-4.

2. Monograph. Muḥammad ʿĀrif Maḥmūd Ḥusayn, *Djawānib al-ʿiẓa wa 'l-ḥikma fī shiʿr Maḥmūd al-Warrāḳ*, Cairo 1988. (G.J.H. VAN GELDER)

AL-**WARRĀḲ**, MUḤAMMAD B. YŪSUF al-Ta'rīkhī, Abū ʿAbd Allāh (b. 292/904-5, d. 363/973-4 at Cordova), Andalusī historian and geographer. He stemmed from a family originally of Guadalajara (Wādī 'l-Ḥidjāra), being born either there or at Ḳayrawān (Ibn al-ʿIdhārī, tr. Fagnan, i, 188, has the latter) where, in any case, he spent his youth. "When he returned to al-Andalus (where he was born, or rather, after one of his travels ?), he became connected with al-Ḥakam (II) b. ʿAbd al-Raḥmān al-Mustanṣir (350-66/961-76 [*q.v.*]), and he wrote for him an extensive work on 'Itineraries and kingdoms' (*al-Masālik wa 'l-mamālik* [*q.v.*])" (al-Ḍabbī; Ibn al-Abbār).

Like another Spanish Muslim geographer, Abū Bakr Aḥmad b. Muḥammad al-Rāzī (d. *ca.* 344/955: Pons Boigues, no. 22; Miquel, i, p. xxix), he is called a "chronicler" (*ta'rīkhī*). We do not know whether he was called *al-warrāḳ* because he was a copyist or a book-seller, or whether this was his father's trade, as the preface to the Arabic text of al-Bakrī might lead one to think (*Description*, 12 n. 3: Ibn al-Warrāḳ), but it is not to be excluded that he may have had the post of a librarian at the caliph al-Ḥakam's court.

Like several other scholars, he left a land occupied by the Fāṭimids and was welcomed by al-Ḥakam II, patron of scholars and littérateurs, but also glad to find in him a competent informant who could prove useful for his North African foreign policy (Brunschwig, 151; Miquel, i, 259-60).

None of his works has come down to us. Apart from his *K. Masālik Ifrīkiya wa-mamālikihā*, he wrote works in the following field: "numerous works on the history of the rulers of Ifrīḳiya, their wars and those who rebelled against them (*kutub djamma fī akhbār mulūkihā wa-ḥurūbihim wa 'l-ḳā'imīn ʿalayhim*), as well as monographs (*tawālīf fī akhbār*) on Tiharat (Tāhart), Wahrān, Tanas, Sidjilmāsa, Nakūr and al-Baṣra (of the Maghrib)" (al-Ḍabbī). He was equally skilled in geneaology, especially that of the Berbers (Ibn Ḥazm, 495 ff.).

He was one of the main sources for Abū ʿUbayd al-Bakrī [*q.v.*] in his *Description of North Africa*, whom he calls Muḥammad b. Yūsuf or Muḥammad (index, at 394a). It is affirmed there that his information was often first-hand, from having visited the places and following the itineraries, e.g. from Sidjilmāsa to Fās (281 ff.), or else was derived from his informants. Having said this, it also happens that he gives false information (30 n. 2). Ibn Ḥayyān [*q.v.*] also combined the fragments of his work in his *History of the scholars of al-Andalus*, and Ibn al-ʿIdhārī [*q.v.*] did the same, to a lesser degree, in his *History of Africa and Spain* (i, 97, 339 ff., ii, 400 ff.).

(CL. GILLIOT)

WARS (A.), a yellow dye from a perennial plant cultivated in Yemen, identified usually as *Memecylon tinctorium, Melastomaceae*, or sometimes *Flemmingia rhodocarpus* BAK, *Leguminosae*.

According to Abū Ḥanīfa al-Dīnawarī's chapter on dyestuffs (165-7), it is found only in Yemen, and there only as a cultivated plant. From various sources, he describes the best *wars* as *bādira*, from a young plant, the other sort being called *ḥabashī* because of some blackness in it; however, the *ḥabashī* gives pure yellow, while *bādira* can contain some redness. Ibn Djuldjul lists it among his medicinal items "which Dioscorides did not mention": it has heads like cotton, and is used for yellow dye, like saffron (Bodleian ms. Hyde 34). Its nature is hot and costive, according to ʿAlī b. Sahl al-Ṭabarī in a chapter on spices and scents (*Firdaws*, 398). Medicinal uses seem to have been insignificant. However, Ibn Ḳayyim al-Djawziyya in *Medicine of the Prophet* gives a *ḥadīth* that the Prophet used to prescribe oil with *wars*, taken internally, for pleurisy (al-Tirmidhī, *Ṭibb*, 28; Ibn Mādja, *Ṭibb*, 17). He also mentions its use as an embrocation for freckles, itching, and some skin problems (Ar. text 444, Eng. 280).

Dyestuffs, once prepared for sale and for use, are not always so easily identified, and it may have been confused at times with *Carthamus tinctorius, Compositae*, the safflower, which also gives yellow and red dye.

WARSH, ʿUTHMĀN B. SAʿĪD b. ʿAbd Allāh al-Ḳurashī al-Miṣrī al-Ḳayrawānī, transmitter of the Ḳurʾān reading of Nāfiʿ al-Laythī [*q.v.*], born in 110/728 in Egypt where he also died in 197/812. A Copt in origin, Warsh was a student of Nāfiʿ and it was from his teacher that he is said to have received his *laḳab*; the name Warsh was given to him either because of his extreme whiteness or because of his similarity to a bird called *warashān*. Warsh taught his transmission of the Ḳurʾān to a number of his Egyptian students, and from there it spread especially through transmitters in Spain. While the Ḳurʾān reading of Ḥafṣ *ʿan* ʿĀṣim is now the most widespread in the Muslim world [see ḲIRĀʾA], the version of Warsh *ʿan* Nāfiʿ is found particularly in West and North-West Africa and has been printed in Saudi Arabia, Cairo and Tunis. The reading system of Nāfiʿ was also maintained by the Zaydiyya [*q.v.*] of the Yemen although no studies have been done to determine if this was the transmission through Ḳālūn (d. 220/835) or Warsh.

(A. RIPPIN)

WARWARĪ ʿALĪ PASHA, Ottoman governor and commander, d. 1058/1648.

He was a native of Warwar or Varvara (lat. 43° 49' N., long. 17° 29' E.) in Bosnia. Details of his career in state service in the first four decades of the 17th century are provided by the Pasha himself in his versified memoirs (*sar gudhasht*). Some of the high points, as he relates them, include his participation in Murād IV's campaign against Eriwan in 1045/1635 as *dümdar* (commander of the army's rear flank), in which he received a cash bonus for exceptional service of four purses (160,000 *aḳčes*) of silver (*Memoirs*, v. 116), and his sustaining of battle wounds during the campaign against Baghdād in 1048/1638, which led to his promotion at the end of Murād's reign to the governorship-general of Rumelia (vv. 135-40). ʿAlī Pasha regarded his appointment to the governorship of Bosnia through the intercession of the Grand Vizier Semīdh Meḥmed Pasha in 1054/1644 as the pinnacle of his career (vv. 168-9, date confirmed in Naʿīmā, *Tārīkh*, iv, 73). However, the insecurity of his position, shared by all provincial governors, is only too apparent from his record of service at the beginning of Ibrāhīm I's reign. In the first four years of that sultan's reign alone, he was appointed in rapid succession to six governorships: Mağnisa, Van, Anatolia, Adana, Diyarbekir and Bolu.

Warwarī ʿAlī Pasha is chiefly remembered for the stance which he took, bravely contradicting current government practice, in support of guaranteed conditions of service for provincial governors and for his opposing, in particular, abuses in the assessment of the appointments' gratuity customarily paid by new incumbents to higher office [see PĪSHKASH]. Uncontrolled increases in these assessments, especially during the reign of Ibrāhīm I, had left many governors in a state of chronic indebtedness. During his tenure as governor of Sivas in 1058/1648, ʿAlī Pasha's opposition took concrete form in rebellion, and during a conflict between government and provincial forces near the central Anatolian town of Čerkes in Rabīʿ II 1058/May 1648 he was captured and executed on the spot [see IPSHIR MUṢṬAFĀ PASHA]. It is ironic that, only four years later, in 1062/1052 Ipshir, clearly inspired by the example of his discredited predecessor, himself backed proposals in favour of a guaranteed three-year minimum term of service for all state appointees (Naʿīmā, v, 199, ll. 2-3). Ottoman political thinkers from the time of Ḳoči Beg [*q.v.*] to Tatardjiḳ ʿAbd Allāh Efendi [see SELĪM III] gave particular emphasis in their writings to the importance of state administrators' immunity from arbitrary

dismissal (see textual refs. in *Bibl.*). Warwarī ʿAlī Pas̲h̲a's sad end after long and loyal service spanning the reigns of six sultans demonstrates just how astute their observations were.

Bibliography: 1. Texts. Naʿīmā, *Tārīk̲h̲*, iv, 227-8, 244-8, 274-9; Ḳara Čelebi-zāde ʿAbd al-ʿAzīz Efendi, *D̲h̲eyl-i Rawḍat ül-ebrār*, ms. Vienna, Österr. Nationalbibliothek, H.O. 76, fols. 9b-11a; Ewliyā Čelebi, *Seyāḥat-nāme*, ms. Topkapı Sarayı, Bağdat Köskü 304, fols. 338a-366a (provides a psychological portrait of Warwarī ʿAlī Pas̲h̲a lacking in other sources).

2. Biographical studies. *SʿO*, iii, 513; Hikmet Ertaylan, *Varvari Ali Paşa*, in *Türk Dili ve Edebiyatı Dergisi*, ii/3-4 (1948), 155-70; Marija Dukanović (ed.), *Rimovana autobiografija Varvari Ali-Paše*, Belgrade 1967 (gives text of his autobiographical poem in 178 rhymed couplets; her numbering of these is followed in the article above).

3. Political treatises. Ḳoči Beg's views on governorship are summarised in a supplementary *telk̲h̲īṣ* of his treatise of 1041/1631; see R. Murphey (ed.), *The Veliyuddin Telhis*, in *Belleten*, xliii, no. 171 (1979), esp. 560 (last 3 ll.) and 561 (first 3 ll.) and abbreviated Eng. tr. on 549. Tatard̲j̲ïḳ ʿAbd Allāh's *lāyiḥa* of 1206/1791 has a long ch. on this theme and recommends a minimum term of office of four to five years; see S̲h̲erīf Meḥmed (ed.), *Sulṭān Selīm-i T̲h̲ālit̲h̲ dewrinde niẓām-i dewlet ḥaḳḳinda muṭālaʿāt*, part 3, in *TOEM*, viii, no. 43 (1333/1917), 15-20, esp. 18 (ll. 13-23). (R. Murphey)

al-**WĀSĀNĪ**, Abu 'l-Ḳāsim al-Ḥusayn b. al-Ḥasan (or al-Ḥusayn) b. Wāsān (or Wāsāna), minor poet of invective and satirical verse. He lived in Damascus in the 4th/10th century and died in 394/1003-4. Very little is known of his life; he or his family may have come originally from Aleppo. Al-T̲h̲aʿālibī (*Yatīmat al-dahr*, Cairo 1947, i, 335) calls him the Ibn al-Rūmī [*q.v.*] of his time, on account of his invective verse [see hid̲j̲āʾ]. It is said that he once lost his job, some kind of official position, as a result of his scurrilous attacks on a certain Manas̲h̲s̲h̲ā (Manasseh) b. Ibrāhīm al-Ḳazzāz. Most of the verse that is preserved (*ca.* 450 lines, including two very long poems, quoted in *Yatīma*, i, 325-55, and Yāḳūt's *Muʿd̲j̲am al-udabāʾ*, Cairo 1936-8, ix, 233-65) is invective of the obscene kind. His longest and best poem is a lively and entertaining description, in a *nūniyya* of 196 lines in *k̲h̲afīf* metre, of a banquet given by him that got out of hand through the guests' misbehaviour; a shortened version (137 lines) is quoted by Yāḳūt.

Bibliography: Given in the article, and see (ʿAbd al-Ḳādir) al-Mag̲h̲ribī, *Walīmat Ibn Wāsāna*, in *RAAD*, x (1930), 641-51, 705-19 (gives only 123 lines of the banquet poem). (G.J.H. van Gelder)

WAṢF (a.), lit. "description".

I. In poetry

1. *Description*

This literary genre, through its dimensions, its significative function and its evolution, has played a role of the greatest importance in the long process of the development of Arabic poetry. By its etymology, the term signifies embellishment (al-D̲j̲awharī, *al-Ṣiḥāḥ*, Beirut 1404/1984, iv, 1438-9; *Tahd̲h̲īb al-lug̲h̲a*, xii, 248a; al-Zamak̲h̲s̲h̲arī, *Asās al-balāg̲h̲a*, 1024a-1025a; *LA*, s.v. *w-ṣ-f*, *waṣafa al-s̲h̲ayʾa ḥallāhu* "he described a thing, meaning that he embellished it"). This sense has been retained by the Ḳurʾān (XVI, 62); it is attested to a quite unexpected degree in poetry throughout the classical period (*al-ʿIḳd al-t̲h̲amīn*, 186, Ṭarafa; ʿĀmir b. al-Ṭufayl, *Dīwān*, 159, l. 13; Ibn His̲h̲ām, *Sīra*, 121, l. 15; *LA*, xix, 134, l. 5; under the Umayyads, *al-Ag̲h̲ānī*, i, 99, l. 13, al-Dārimī; *ibid.*, xi, 373, l. 5, Ismāʿīl b. ʿAmmār al-Asadī; Ibn Ḳutayba, *al-S̲h̲iʿr wa 'l-s̲h̲uʿarāʾ*, 510-11, Abū Nuwās; K̲h̲ālid al-Kātib, §§ 284, 297; Ibn al-Rūmī, ii, 688, *id̲h̲ā mā waṣafta mraʾan li-mriʾin fa-lā tag̲h̲lu fī waṣfihi wa 'ḳṣidi* "when you praise one man to another, do not exaggerate his eulogy; do it with moderation"). In this connection, a verse of the Umayyad poet Waḍḍāḥ al-Yaman establishes an equivalence between *waṣf* and *tas̲h̲bīb* which come to be equated (*al-Ag̲h̲ānī*, vi, 235, l. 2); in fact, the latter refers predominantly to the eulogy addressed to the woman in the context of love poetry.

Under the Umayyads, *waṣf* with the meaning of description gains ground in the texts, although the primary sense is not eclipsed. It is therefore appropriate to stress that it is flattering description that is involved here, the embellishment of reality. *Waṣf* embellishment constitutes the fundamental approach of one of the great descriptive poets of Arabic literature, Ibn K̲h̲afād̲j̲a: because description, he writes in the introduction to his *Dīwān*, is a style of composition which purports to express a representation based on imagery, it follows that the poet is not to be denounced for having lied (i.e. for embellishing reality), nor can he be forced to confine himself to the real (*Dīwān*, 11). All of this runs counter to the assertions of Ḳudāma b. D̲j̲aʿfar (*Naḳd*, 23) and of Ibn Ras̲h̲īḳ al-Ḳayrawānī and of certain supporters of the theory of *ʿamūd al-s̲h̲iʿr*; in their view, the best description is that which adheres to the real, that which transforms words into directly comprehensible images (*al-ʿUmda*, ii, 294; see also 295).

2. *The poetics of* waṣf

A large number of mediaeval theorists have studied two essential tools of the descriptive art, *al-tas̲h̲bīh* (simile) and *al-istiʿāra* (metaphor), which are reckoned to show mutual resemblance. Thus it is that Ibn Abī ʿAwn, in composing the *K. al-Tas̲h̲bīhāt*, and to a lesser degree al-D̲j̲āḥiẓ in *al-Bayān*, devoted most of their attention to cataloguing the system of imagery adopted by poetry; this manner of proceeding exempted them from having to examine the entity known as *waṣf*. At the end of the 3rd/9th and during the 4th/10th centuries, this habit is seen to be perpetuated, with the systematic treatises of Ibn al-Muʿtazz and of Abū Hilāl al-ʿAskarī on the one hand, and the works on *maʿānī*, giving an account of these tropes, on the other. Only a minority of original theorists addressed this art in the context of broad categories, sc. of literary genres. Ḳudāma b. D̲j̲aʿfar, 23, considers *waṣf* one of the six genres most frequently employed by poets. Some of his views on the question have an utterly modern resonance. For him, prefiguring those contemporary theorists for whom all description is narration, description consists in relating a thing on the basis of its various aspects and its successive states. Thus the most gifted descriptive writer is the one who succeeds in combining the greatest number of *maʿānī* and in emphasising those that best characterise the object in question. The most successful description will be that which imitates (*yaḥkī*) the object and renders it perceptible (*yumat̲h̲t̲h̲il*) to the senses (*ibid.*, 62-3). Ibn Ras̲h̲īḳ (d. 456/1063) considers this art a frame broad enough to contain almost the entirety of Arabic poetry; it differs from comparison despite evident analogies, the former being concerned with reality, the latter with an imaged (*tamt̲h̲īl*) and a figurative (*mad̲j̲āz*) representation (*al-ʿUmda*, ii, 294-6).

Ḥāzim al-Ḳarṭād̲j̲annī (d. 684/1285) likewise asserts

that *waṣf* is predominant in rhymed discourse. This being the case, he distinguishes between four poetic genres: description, comparison, wisdom and history. To excel, the poet must be a good observer. He will thereby be capable of grasping the features of resemblance and the similitudes which exist between the afore-mentioned genres; and he will also need to be aware of the attributes (*nuʿūt*) of the notions, events and objects which he will be setting himself to describe. On the level of the treatment of themes and not of forms, al-Ḳarṭādjannī partially revives the division established by Ḳudāma, beginning with *waṣf* and *tas̲h̲bīh*; the latter performs an integration between the sentiments of the poet, the diverse reflections of his nature, of his soul and of the sensibility of the object perceived. In the third place, he cites sapiential themes, including the meditations and the ideas of the poet, the fruit of his experience and of his awareness. The fourth category of poetry, designated by the term *taʾrīk̲h̲*, concerns the role of memorialist, devolved to the poet (Muḥammad Zag̲h̲lūl Sallām, ii, 195-6). In the 8th/14th century, Ibn K̲h̲aldūn (d. 784/1382), defines poetry as "discourse founded on metaphor and descriptions". Everything in the *ḳaṣīda*, he writes, belongs to description, including the *nasīb*, the camel-section and the *ḳaṣd*.

3. *Description in poetry: between theory and practice*

A. Archaic poetry

The pre-Islamic Bedouin poet was a great creator of images. He painted with words numerous details of his life and of his environment, and devoted a major portion of his discourse to serenading the lady whom he loved, and singing the praises of nature and of the animals among which he lived. This characteristic has always drawn the attention of theorists. For Ibn K̲h̲aldūn, description and the archaic *ḳaṣīda* are inseparable. He declares this in a passage devoted to the evocation of major themes in the poem: *wa-yastaṭridu min waṣfi ʾl-baydāʾi wa ʾl-ṭulūli ilā waṣfi ʾl-rikābi awi ʾl-k̲h̲ayli awi ʾl-ṭayfi wa-min waṣfi ʾl-mamdūḥi ilā waṣfi ḳawmihi wa-ʿasākirihi* "through well-arranged transitions, he moves from the description of the desert, of traces and of encampments to that of his caravan or of his horses, or that of the image of the loved one who appears to him in a dream: praise of his patron leads on to that of his people and of his troops" (Ibn K̲h̲aldūn, *Muḳaddima*, iii, 328, tr. De Slane, iii, 366, tr. Rosenthal, iii, 373-4).

Rather than setting out a catalogue of *d̲j̲āhilī* descriptions, it will be more worthwhile to identify the major features.

Major descriptive themes

The bestiary, a multidimensional one, predominates. At the time of the *raḥīl*, the nocturnal journey, the poet confronts a space sown with dangers. In this section, it was accepted that the artist could, if he wished and did not deny himself the opportunity, proceed to descriptive developments. He evoked here the running of his camel, the desert, the darkness, wild animals, maleficent spirits and excesses of the elements (storms and torrential rains: numerous descriptions in ʿAbīd b. al-Abraṣ, *Dīwān*, Cairo 1957, 36-7, 43-4, 75-6 (the storm replacing the *nasīb*), 89-90 (fragment of seven verses in *kāmil muraffal* devoted to this theme), 128-9). In praising his camel, he did not hesitate to compare it to an antelope, or an onager, or both simultaneously, or to an ostrich. He could close this section by returning to his camel. It is worth noting that a certain functional division must have played a part; the description of the camel alone is attested in poems of personal or tribal boasting and in the poetry of war as in the work of ʿAntara, Ṭarafa, al-Mut̲h̲aḳḳab al-ʿAbdī, Imruʾ al-Ḳays, ʿĀmir b. al-Ṭufayl, Bis̲h̲r b. Abī K̲h̲āzim al-Asadī and others. However, it is the multidimensional pattern which prevails. The descriptive deployments attested are as follows: camel–antelope–onager–war-horse–camel, with all possible combinations thereof. Numerous variants and additions are attested. The ostrich can replace the onager or the antelope (for references, see Arazi, *La réalité et la fiction*, 114-18, 130-3, 142-6, 152-3). As for additions, desert and storm seem to have been especially favoured by poets.

Birds, especially birds of prey, and the ibex, etc., are less often present and are retained for their symbolic value: the *ʿuḳāb* or *liḳwa* "eagle" in the works of Imruʾ al-Ḳays (*Dīwān*, Cairo, 1984, 142, vv. 44-5; 226-7, vv. 8-11), but especially in the works of ʿAbīd al-Abraṣ, where it is the poet's sworn enemy (*Dīwān*, 18-20, vv. 39-50, famous description), representing the destiny which swoops and brings death (al-Aʿs̲h̲ā, xvii, vv. 3 ff.; al-Afwah al-Awdī, *Dīwān, al-Ṭarāʾif al-adabiyya*, Cairo 1937, 20; al-Balād̲h̲urī, *Ansāb*, v, Jerusalem 1936, 241; al-Bakrī, *Simṭ al-laʾālī*, Cairo 1936, ii, 965); the ibex means to express the vanity of any creature's attempts to find an impregnable refuge as protection from his destiny.

Tendencies and significations

The audience of the time must have felt overwhelmed by this incessant whirlwind of successive images: barely installed in the world of the camel, the listener finds himself introduced, without warning, to that of the antelope, where he is confronted by a squall of unparallelled violence and forced to take shelter from lightning and from torrential rain; being given no more time, he is made to share the life of an onager, before returning to the point of departure. On more than one occasion, the poet leaves him in suspense, since the loop is not closed and there is no returning to the camel which set this process in motion. Rather than seeing this as punishment which is deserved on account of the poet's obsession with excess, this multiplicity should be regarded as an attempt on the part of the artist to endow his poem with a rapid rhythm and thus gain the approval of the public.

This approval was forthcoming because of the tendency of ancient *waṣf* towards idealisation. The poet aspired to transfigure everything that he had written with the aim of transcending the circumscribed reality of daily life in the desert. The public, clearly, had only to summon a precise portrait of a camel or a horse—emaciated, hungry, thirsty, covered with dust as these creatures generally were—and then call upon the poet to perform a process of sublimation on its behalf. The exemplary case is provided by the portrait of the lady in these texts. The *mīmiyya* of Ḥātim al-Ṭāʾī includes a *nasīb* of eleven verses, six of which evoke an unnamed woman laden with jewellery; her body is of perfect beauty (vv. 6-8) and her teeth "light up my dark tent to the furthest corner, when at night she shows a smile" (*Dīwān*, Cairo 1411/1990, 221). This notion of sparkling teeth shedding light may seem exaggerated, but it does not lack human resonances: by means of poetry, the woman is idealised. The ageing wife, worn out by hard work and frequent confinements, appears in the description as a creature richly endowed, all beauty and grace, thus erasing all the difficulties and compromises of a decidedly monotonous daily life. This tendency was required to respond to the expectation of the public; the best testimony is supplied by the contest in which Imruʾ al-Ḳays

confronted ʿAlḳama, the arbiter being Umm Djundub; both were required to describe a horse. The latter won the day on account of his success in having infused his verse with a perfect exemplar of equine power, according to the judgment of the arbiter. The erstwhile prince of the poets was deposed on account of a fatal error, that of having sinned by excess of realism.

The descriptive register manifests great stability. In other words, it is subject to rigid conventions imposed by the public and fully accepted by the poet on the level of the sign and the signified. Themes, their deployments and tropes of comparison move within clearly defined limits. Thus conceived, this register is distinct from realism, since every convention signifies negation of realism. Of course, this is not a case of make-believe, but rather of a mimetic description. Nevertheless, a willingness is sensed on the part of the describer to restructure and interpret the real. The she-camel of Ṭarafa, given as a model of the genre, has no hump; her udders comprise four teats, but biologically, she can possess only two. Imruʾ al-Ḳays commits the same infraction. The traits retained by Musayyab b. ʿAlas, drawing a sketch of his camel, seem so contrary to reality that Ṭarafa is supposed to have exclaimed *istanwaḳa ʾl-djamalu* "the camel has changed into a she-camel". The intensive use of comparative tropes, also of substantive adjectives, has made it possible to avoid calling animals, feminine anatomy and topographical details, by their names, thus conferring a certain opacity on descriptive passages. The use of metaphor, more frequent than is generally thought, endows these verses with a fine artistic element. The *djāhilī* poet Bishr b. Abī Khāzim, evoking the hills in summer time has recourse to a fine metaphor, "the hills clad in shining jewellery (*lawāmiʿ*)" of which the contextual, not the linguistic meaning, is mirage (Bishr, *Dīwān*, Beirut-Aleppo 1995, 209). However, these codes experience a certain exhaustion on account of the uninterrupted repetition of the same tropes, substantive adjectives and allusive procedures in a fixed context.

Archaic poetry possesses an ambivalent character, being both description and narration. For the *nasīb* [*q.v.*] what is necessary has been said. For the bestiary, the sections dealing with the antelope and the onager are veritable dramas in miniature; the poet steps forward here as a first-rate narrator (examples and bibl. in Arazi, *La réalité*, 160-3).

This poetry, whether it describes nature, encampment remains or the bestiary, has an optimistic flavour. Life, but also the imprint of man, triumphs over all. The desert is traversed by roads and paths, human incisions in the body of this vast expanse of sand. In fact, the route, which is *muʿabbad* (worn down by traffic) *apud* Kaʿb b. Zuhayr, or *lāḥib* (clearly marked) with *ʿulūb* (imprints) that are ineradicable on account of the compression exerted by travellers *apud* ʿAlḳama (*al-ʿIḳd al-thamīn*, 106, vv. 17-9), crosses the desert from one end to the other. Here, the archaic poet uses the term *faḳḳara* "to pierce deeply" to show the extent to which the imprint of man and his agents (beasts of burden) is here ineradicable. Kaʿb b. Zuhayr compares these paths to plaits woven by industrious women (*Dīwān*, Krakow 1950, 21-3, vv. 23-7; 28-31, vv. 14-26, the poet gets the better of the desert; he is accompanied by a wolf and a raven; 51, vv. 12-13; 52-3, vv. 17-8). By virtue of his knowledge, man can pit himself on equal terms with this immensity. In the bestiary, the antelope, the onager and their pregnant partners, bearers of new life, escape death, despite the snares set by hunters, despite hunting dogs and sharpened arrows.

In the archaic period, the existence is noted of two descriptive approaches: dynamic description and static description. Poets of the school of Aws b. Ḥadjar (Zuhayr and his heir al-Ḥuṭayʾa) are particularly distinctive in the first instance. Here, description has the rhythm of a beating drum. Very brief poetic phrases lay out propositions where prominence is given to verbs expressive of movement. There is recourse to an alternation of decelerated or accelerated movements, all in accordance with the requirements of the motif. This has enabled the poet to tackle, on a strongly structured basis, the essence of the *ḳaṣīda*, eulogy, *fakhr*, or *hidjāʾ*. A second descriptive approach is based on the static mode, more precisely on the freezing of movement, prolonged interminably, to the extent of enfolding the entire verse. Was it the poet's intention to contrast movement that is frenetic and thus of limited duration with the stability that is synonymous with durability?

B. Post-*djāhilī* description

With the triumph of Islam, a new dimension is perceptible in *waṣf*: the cosmic dimension. The Ḳurʾān is slow off the mark in evoking the skies, stars, land and rivers as evidence of the power of the Creator and the submission of nature to His will. Naturally, the surviving poets of the *Djāhiliyya*, the *mukhadramūn* [*q.v.*], do not follow the movement, but with their disappearance, a period of transition begins. Over several decades, the mental revolution inspired by Islam becomes ripe in the popular mentality; movements of population with the mass exodus of the Bedouin of Arabia and the establishment of a new landscape, the urban landscape, deal a heavy blow to ancient descriptive art. Certainly, Bedouinising poets and the conservatism inherent in all poetic language perpetuate the images of yesteryear, but this is merely a case of imitation imposed by a traditionalist attitude. The umbilical cord which used to link the public, the poet and descriptive thought together is henceforward severed, except with the *nasīb* and its descriptive extensions. The major victim seems to be the range of animals and birds, and, to a lesser degree, the desert and its thematic developments. The urban poets of Kūfa, al-Uḳayshir, Ḥunayn al-Ḥīrī, ʿAbd Allāh b. al-Zabīr al-Asadī, Ismāʿīl b. ʿAmmār al-Asadī and ʿAmmār Dhū Kināz, introduce images from the hybrid world of the taverns and courtesans of al-Ḥīra. The Ḥidjāzī school offers us a full-blown introduction to the domain of women of high society. On the other hand, poets of the renewal of the 2nd/8th century continued to express the sentiment in their presentations. Muṭīʿ b. Iyās, with the two palm-trees of Ḥilwān, was to blaze a trail that is still being followed by the Arabic poetry of the present day. The 3rd/9th century was to channel this activity and guide it towards a new descriptive art that would be brought to its zenith in the two succeeding centuries. However, attention should be given to the descriptive activity of the Umayyad *ṣaʿālīk* poets [see ṢUʿLŪK].

These highway bandits, members of tribes which maintained their Bedouin character, crowded the Pilgrimage routes. The poets among them, of whom there were many, advanced towards a three-fold description of the desert which they considered a *waṭan* or homeland, a refuge and a place of terror. They were full of nostalgia for their land. They never ceased painting the landscapes of their youth, with their infinite spaces, their caressing winds, and the breeze of early morning; but these are also the places where

tents are buffeted by tempestuous and icy winds in the winter (al-Ḳattāl al-Kilābī, *Dīwān*, Baghdād 1968, 19-27, 33, 41, 45, 51, 68; al-Mubarrad, *al-Kāmil*, ed. Wright, i, 290; ʿAbd al-ʿAzīz al-Ḥalafī, *Udabāʾ al-sudjūn*, Beirut 1963, 42-4, 78-80, 92-3, 96-7, 99-102; ʿAbd al-Muʿīn al-Mallūḥī, *Ashʿār al-luṣūṣ wa-akhbāruhum*, Damascus 1988, 20, 73). Other *ṣaʿālīk* placed emphasis in their verse on the solitude of these places and the wild animals which inhabit them: some portraits in this bestiary rank as genuine bravura pieces (as in ʿUbayd b. Ayyūb al-ʿAnbarī, see Ḥusayn ʿAṭwān, *al-Shuʿarāʾ al-ṣaʿālīk fi ʾl-ʿaṣr al-islāmī*, Beirut 1987, 151-9). Another category of poets, rather more placid and respectful of the law, also sang of the desert landscapes and the loves of youth, in a poetry impregnated with melancholy. There are both poets (al-Ṣimma al-Ḳushayrī, *al-Aghānī*[3], vi, 1-8; Ibn Ḳutayba, *Shiʿr*, 185-6; Abū Tammām, *al-Ḥamāsa*, index) and poetesses (Maysūn bt. Baḥdal, Hind bt. Aʿlam al-Sadūsiyya, Wadjīha bt. Aws al-Ḍabbiyya) producing treatises of *ḥanīn ilā ʾl-awṭān*. Nevertheless, these artists were regarded as marginal and seem to have played only a very limited role in the evolution of descriptive poetry in their time.

New frameworks

Under the ʿAbbāsids, the courtly poet fulfilled certain functions in addition to his role as eulogist. He was obliged to entertain his patron's guests and to commemorate mundane events with a few improvised verses. Patrons seem to have particularly appreciated brief fragments describing a youth, a pool, a villa, a garden, a still-life or whatever might present itself. The artist was required to excel in this area or to risk losing prestige and career. Few poets succeeded in evading this obligation. Biographical notices contain a large number of examples of such descriptions, commissioned and performed forthwith. The results were ambivalent: descriptive poetry was boosted to a certain extent, becoming an integral and essential part of literary activity. These well-crafted and elegantly-delivered improvisations paved the way for the appearance of the great descriptive writers from the second half of the 3rd/9th century onward. Furthermore, it must have encouraged descriptive bouts between poets: in their encounters, there was a fusion of rhymed repartee, in which pleasures were abundantly evoked, with particular insistence on the framework of enchantment expected of them, and with the aim of being capable of inviting everyone to a bacchanalian session. However, it is appropriate to note, with J. Bencheikh, how baneful improvisation proved to be for poetry; the rapidity of the repartee and the spiritual quality of these few rhymed phrases fail to conceal the absence of any personal involvement on the part of their authors. Formal elegance and the interminable repetition of the same hackneyed effects tended to stifle any exercise of considered creation, the one thing capable of creating new combinations and hence original *maʿānī* (Bencheikh, *Poétique*, 68-79). This process, in fact, played a fundamental role with regard to the least gifted poets. Thanks to all this activity, to the dominant mood in favour of this literary genre and contribution of bacchic poetry with the Bohemia of Kūfa, but also thanks to Abū Nuwās, to al-Ḥusayn b. al-Ḍaḥḥāk and to Muslim b. al-Walīd [*q.vv.*], the descriptive act removed at this time one of the most solidly based and most respected bastions of the poetic heritage of the desert, the opening with a *nasīb*; it was replaced in the 3rd/9th century by a *rawḍiyya*, as has been shown by G. Schoeler in a set-piece *ḳaṣīda* of Abū Tammām (Schoeler, 182; Bencheikh, *Poétique*, 143-6).

Abū Tammām's disciple, al-Buḥturī, took a further step on the way of renovation; he devoted an entire *ḳaṣīda* to *waṣf*, the well-known *īwāniyya*; the very detailed description of the palace of Kisrā is conceived as an illustration of universal destruction. The collapse of the poet's ambitions and the destruction of this monument constitute the two faces of a single reality; he concludes with an assertion of impotence: everything in this world is subject to a determinism of annihilation. This experiment combines two levels of description, that of the ruins at the time of the poet's visit, and that of the imagination: a mural sculpture sets in motion a return to the past, as the sculpted scene comes to life and unfolds before our eyes a living and sumptuous spectacle (*Dīwān*, ed. al-Ṣayrafī, Cairo 1963, ii, 1152-62, 58 vv.).

At the same time, Ibn al-Rūmī was gathering together all these novelties and transforming them into systematically-employed poetic procedures. Furthermore, he is credited with two important transformations regarding the fragments and the role of the *waṣf* genre in *ḳaṣīdas*. The former were made to serve in the role of brief portraits, a few features thrown quickly together to give an impression, almost a sketch, of curious people (Ibn al-Rūmī, 608, a fool; 641, the miser who breathes through only one nostril; 682, a glutton in the process of eating; cf. also 747, 762, 815). On the other hand, he replaces the *djāhilī* range of animals and birds with descriptions of nature. In numerous instances, an opening eulogy leads to a long descriptive development on the basis of an analogy established between the patron and nature, in the space formerly reserved for the *raḥīl* (*ibid.*, 489, vv. 31-9; 542-8, vv. 6-9; 604-7, vv. 4-11).

During the 4th/10th century, two eminent descriptive poets, Kushādjim and al-Sarī al-Raffāʾ [*q.vv.*], introduced *radjaz* [*q.v.*] into poems of the genre. The way in which this metre was used by them differed from its use in cynegetic poetry. The latter had imitated in this respect the Umayyad poets al-Kumayt, al-Ṭirimmāḥ, al-ʿAdjdjādj and Ruʾba b. al-ʿAdjdjādj; it opted for the *urdjūza* [see RADJAZ], on account of its aptitude to accommodate rare words and phonemes of equally rare morphological construction (*al-gharīb*). In the work of these two descriptive poets, the *urdjūza*, resuming its role as attested in the improvised fragments (verses preceding contests and lullabies), aspires, by virtue of the facility of terms and the variety of feet (*tafʿīlāt*), to have recourse to a supple and comfortable poetic phrase; they could thus enjoy a liberty without hindrance or resistance; they could then make their verses flow, preoccupied only with the sense. Whatever the case, in the works of Kushādjim there are to be found no fewer than 38 poems and fragments in *radjaz* and in the work of al-Sarī, 19. Some poets produced the finest novelties in this domain.

Themes

The hymn to nature: The poet of this era showed a pronounced inclination towards nature domesticated by man—gardens full of colours, where greenery predominates, flowers and water enclosed in a lake or flowing freely. From the second half of the Umayyad period onward, this was the backdrop for libations evoked in bacchic poems. On the other hand, *ikhwāniyyāt* (poetry singing of friendship), poetical missives often containing an invitation to a bacchic meeting, gave great prominence to the above-mentioned themes. Finally, celebrations of the *nayrūz* [see NAWRŪZ] and *mihradjān* [*q.v.*] festivals, hymns dedicated to the glories of nature implanted in the customs of the time, and for centuries to come, not only a vivid attach-

ment to nature but also an obligation to integrate this love in verse. In these poems, the visual element plays the primary role: to the magic of colours and their blending, *apud* the poets of the 3rd/9th and 4th/10th centuries, are added olfactory and aural elements. In this connection, a fragment of al-Sarī al-Raffāʾ supplies a fine illustration of the use of motifs relating to the integration of these three elements: the quatrain (*Dīwān*, Baghdād 1981, ii, 666) includes an invitation addressed to the *sāḳī* to serve wine to the poet who is seated in a vineyard (*karm^in muʿarrash^in*), soothed by the cooing of doves (*tughannīka wurḳu 'l-ḥamāʾimi*), under a sky of branches (shade) which hides the sun and prevents it from appearing, except in the form of scattered dirhams (*samāʾu ghuṣūn^in taḥdjubu 'l-shamsa an turā ʿalā 'l-arḍi illā mithla 'l-darāhimi*); the last image constitutes a combination of three elements all relating to the visual: the branches filtering the light, the scattered dirhams, and the reflection of the sun through the foliage and the white colour of the silver. It is an image evocative of dreams; it is not lacking in beauty, and indicates a lively attention and an affectionate interest in all things relating to nature (similar cases in *ibid.*, 50-2, 667, 721-2, 762-3, 775). The Andalusian poet Ibn Khafādja seems to have been particularly distinguished in this domain (*Dīwān*, 42-3, vv. 1-20; 116, vv. 5-14; 144, vv. 21-36; 184, vv. 1-4; 250, vv. 1-5; 254, vv. 1-14; 281, vv. 1-7). Ibn Khaldūn informs us in this context that his masters expressed deep reservations regarding the poet on account of this tendency towards excess of *maʿānī* in a single verse, since this is liable to result in a certain obscurity (Ibn Khaldūn, iii, 328-9, tr. Rosenthal, iii, 373-5).

In parallel, these same poets endow nature with a soul, such that it takes on life of its own. Its birth is seen in spring; it is, by turns, impetuous or dormant. Thus for Ibn Rūmī, a garden, at the time of sunset, is an invalid in pain: at twilight, the sun is languid and feeble (*rannaḳa*), it sprinkles (*naffaḍa*, verb of motion) the horizon with yellow; thus it bids farewell to the world below, it is in the process of dying (*wa-wadda'ati 'l-dunyā li-taḳḍiya naḥbahā*); the flowers, suffering on account of the malady that has smitten them, lay their cheeks on the ground, in utter submission; they set themselves to weeping hot tears and staring dejectedly at the sun; green plants cover themselves with a cadaverous yellow colour (*Dīwān*, iv, 1475-6, vv. 23-34; iii, 1418). This has nothing to do with parody. This aspect led Von Grunebaum and Schoeler to detect a tendency towards animism among poets of nature at this time [see ZAHRIYYĀT].

Discovery of the world of objects: People in mediaeval times considered objects of the mundane world as faithful and useful companions. Thus Kushādjim evokes his sadness on the loss of his cup, having carelessly broken it; he describes the débris and evokes the magnificence of the cup at the time when it was intact; it is clearly felt that he valued the object highly (*Dīwān*, 130-2). In the same sphere of ideas, he expresses his deep emotion at the sight of a broken *ʿūd*; it should be noted in this context that the title of the poem speaks of a *marthiya* (*ibid.*, 465-6). Poets have described in independent fragments, setting out from an assiduously-pursued artistic project, a *harīsa* (a dish of meat and of wheat, Ibn al-Rūmī, iii, 1141, § 904), bread (*ibid.*, 1110, § 860), a dīnār (*ibid.*, 1241, § 1018), a pen (*ibid.*, 1659, § 1289), a sealed letter (*ibid.*, 978, § 726), a noria (*ibid.*, 1150, § 926-7), a scarf (Kushādjim, 86-8), a musical instrument (*ibid.*, 73), an ink-pot (*ibid.*, 65-7, 368-9, 433), a Ḳurʾān (*ibid.*, 23-5), a calculating tablet (*ibid.*, 41), an astrolabe (*ibid.*, 127-9), a candle (in a large number of fragments, *ibid.*, 235, 350), an hour-glass (*binkām*, *ibid.*, 143-4), a jug (al-Sarī al-Raffāʾ, ii, 293, 366-7), a cooking pot (*ibid.*, 654-5, excellent specimen) and numerous other objects. Moreover, the whole of this inanimate world may be found in the work of numerous poets. Nothing, it may be said, escapes this voracity for description. Beyond the documentary value of this corpus, it is appropriate to see here the point of departure of the literary project: the mundane possesses a poetic aspect; it is sufficient to glance at it in a new light, to discover it and regard it with love. With this form of description, Arabic poetry, a discourse formerly reserved for the extraordinary, seems to undergo a change of direction, with this willingness to take into account the poetic value of the so-called prosaic world. The "thing" deserves mention. The process of poetisation consists in applying to the object a double, narrative and imaginative, approach, as in the case of al-Sarī al-Raffāʾ, or narrative and emotional in the case of the majority of descriptive writers. For the former, the description of the brazier possesses an exemplary value: the point of departure recounts the story of a group of friends who arrive, one winter night, in an orchard in the outskirts of Mawṣil intending to drink and to enjoy themselves: a tempest springs up, rapidly evoked; the poet resorts to imagining how good it would be to be warmed by a *kānūn* full of glowing embers; then he describes it with economy of space utilised: the whole is recounted in ten verses (al-Sarī al-Raffāʾ, ii, 510).

This poetic interest could arise from rather more prosaic, even mercenary causes: the poet, having received a gift from his patron, sent him a note in which gratitude was blended with a description of the object received. This was a form of eulogy; in effect, the finer and more precious the gift, the more effusive the praise of the one who gave it.

The clear and the hermetic: Von Grunebaum and Schoeler, the two specialists who have left their mark on the study of *wasf*, speak of a baroque aspect of this poetry under the ʿAbbāsids. A large proportion of this corpus could be described as baroque, if by this is meant a text which bows beneath the weight of excess of ornamentation, stylistic hypertrophy and immoderate use of metaphor; this is also the case in the extent to which it extols artifice and mannerism as styles of creation. *Badīʿ* [*q.v.*] also played a considerable role since it involved a quest, knowingly pursued, for the unforeseeable image. *Badīʿ* advocated recourse to an original usage of the tropes of comparison and denied the necessity for the existence of a logical link between the compared and the comparing. To use an expression coined by W. Heinrichs, the poets opted in their descriptions for an imagery utterly divorced from nature; this led to the creation of constructions based on the imaginary, i.e. fantastic creations. Heinrichs gives as an example a description by al-Ṣanawbarī comparing red anemones stirred by the wind to banners made of cut rubies on a background of chrysolites (*Literary theory*, 26). All the describers of this period borrowed this method. Ibn al-Rūmī, for example, describes a bunch of white grapes of the al-Rāziḳī variety as balls of congealed light, transformed into balls of crystal and rose-water on account of their perfume: then, through another mutation, they be-come cloves of musk (iii, 987-9). Other poets acted no differently and their images verge on the surreal (in Kushādjim, 73, the *ʿūd* becomes a hybrid creature equipped with an

eloquent tongue; he is adored by beautiful women who never cease to embrace him; when his pulse is taken, he awakes: 76-7, 78, 235, 254-5, 356). This verbal imagery leads to a hermetic description. This is tolerable so long as the title supplies keys of the code used; otherwise, it remains incomprehensible (al-Sarī al-Raffā', ii, 585, the editor not having seen that it refers to a passive pederast) as is the general case with later poets, the poets of the *Kharīda* of al-ʿImād al-Iṣfahānī. Description thus leads quite naturally to another genre, *uhdjiyya* or *lughz*, enigma, as J. Sadan writes. The only difference is that, with the *ahādjī*, the solution is given to us in an epilogue appended by the poet, while, for description, it figures in the title supplied by the transmitter.

Descriptive poetry continued its headlong progress under the Mamlūks: numerous poets of *wasf* are attested here [see SHIʿR. 1. In Arabic (a), V (1), in Vol. IX, 460].

(A. ARAZI)

II. In law

Here *wasf* means form, external aspects, or incident, each one of these three as opposed to substance (*aṣl*). This Aristotelian dichotomy between form and substance appears frequently in Islamic law in providing solutions to legal problems. Thus a slave, after being sold to a new owner but before his delivery to this new master, injures a limb. Will the delivery of the slave with his injured limb be valid? Al-Sarakhsī [*q.v.*] answers this question in the affirmative: the delivery will be valid because the injury of the limb affects only the *wasf*, meaning here the incident, not the substance (*aṣl*) of the slave, while "the price [of the slave] is for the substance (*aṣl*), not for the incident (*wasf*)" (*Mabsūṭ*, Cairo 1916, xiii, 171, ll. 20-5). However, the same dichotomy is also, and perhaps mainly, used in obfuscating solutions to legal problems. The vitiated (*fāsid* [*q.v.*]) contract is a good example. This contract is non-existent between the parties to it, but quite valid with regard to third parties (Chafik Chehata, *Le système de nullités en droit musulman hanéfite et en droit comparé*, in *Rapports généraux au VI^ème Congrès international de droit comparé, Hambourg 30 juillet-4 août 1962*, ed. J. Lempens, Brussels 1964, 191-203, at 195). For al-Sarakhsī, the vitiated contract is valid in its substance but invalid in its incident (*ibid.*, xiii, 24, ll. 8-10), leaving it unexplained and unclear what are the effects of the contract that belong to the substance (*aṣl*), hence are valid, and what are the effects of the contract that belong to its incident, external aspect or form (*wasf*). Remarkably, this obfuscated definition of the vitiated contract was adopted by the *Medjelle*, the Ottoman re-statement of Islamic law, published during the third quarter of the 19th century [see MADJALLA] (section 109) and later by the 1976 Jordanian Civil Code (section 170) and the 1986 Civil Code of the United Arab Emirates (section 121). The 1951 Iraqi Civil Code, which ignores the vitiated contract, although it is one of the original features of the Islamic law of contract, maintains nevertheless the dichotomy between form and substance in its definitions of the non-existent or invalid (*bāṭil* [*q.v.*]) contract (section 137) and of the valid (*ṣaḥīḥ*) contract (section 133, though the substance there is called *dhāt*, the very term used

previously by section 109 of the *Medjelle*, where both *aṣl* and *dhāt* appear).

Moreover, even where Islamic law does indicate the effects of the contract belonging to its *waṣf*, one may wonder whether they do not actually belong to the *aṣl*. A person buys a book by a certain author, but sees that the book bought is by another author. The sale of the book is valid because the identity of the author is purely incidental, not substantial (*al-Fatāwā al-hindiyya*, Cairo, ed. Maymūniyya, iii, 140-1, as cited by Nayla Comair-Obeid, *Les contrats en droit musulman des affaires*, Paris 1995, 112).

The widespread use of form and substance in Islamic law shows that, in its elements, this law is no different than any other modern system of law. Its specific character, like that of any other system of law, lies in its rearrangement of those elements.

WAṢFĪ al-TALL (1919-71), Jordanian politician and three times prime minister.

He was born in the Kurdish village of Arapkir in modern Turkey. Son of the Jordanian nationalist poet Muṣṭafā Wahbī al-Tall and a Kurdish mother, Waṣfī was raised in his father's native town of Irbid in northern Jordan. He received his secondary education in the town of al-Salṭ, and, upon graduation in 1938, went on to study at the American University of Beirut. He graduated in 1941 in the sciences. Al-Tall joined the British army in Palestine in 1942 and later served in the Arab League sponsored *Djaysh al-Inḳādh* or "Salvation Army" to fight against the partition of Palestine in 1948.

In 1951, al-Tall married Saʿdiyya Djabrī, a native of Aleppo formerly married to Palestinian nationalist Mūsā al-ʿĀlamī. He entered the Jordanian civil service, and became politically engaged. Outspoken in his opposition to Egyptian president Djamāl ʿAbd al-Nāṣir, al-Tall caught the attention of King Ḥusayn's government. In 1959 he was made Director of Broadcasting, where he used the radio effectively to counter ʿAbd al-Nāṣir's propaganda campaign against the Hashemite monarchy.

Al-Tall's first ministerial appointment was as Prime Minister (1962-3). His policies placed a premium on Jordanian sovereignty at a time of Nasserism, Arab nationalism, and Palestinian militancy. King Ḥusayn called upon al-Tall to lead governments to stave off challenges from Egypt and the Palestine Liberation Organisation in 1965-7, and again in October 1970. Accused of master-minding the Jordanian war against Palestinian commando units and their ultimate eviction from Jordanian territory, al-Tall was assassinated in Cairo on 28 November 1971 by members of the Black September organisation, a wing of the Fatah/*Fatḥ* (Palestine Liberation Movement).

WASHḲA (occasionally, Washka), Roman Osca and modern Huesca (capital of the province of the same name), a town of northern Spain. It is located on a hill amidst its *huerta*, irrigated by the Isuela River (Ar., Bansha) and lies among the foothills of the Pyrenees some 50 km/30 miles west of Barbastro (Barbashturu [*q.v.*]) and 70 km/43 miles almost due north of Saragossa (Saraḳusta [*q.v.*]).

The date of Washḳa's conquest cannot be stated with precision, but it appears to have been undertaken by 95/714. According to al-ʿUdhrī's account, after a seven-year siege the defenders were granted *amān* under the condition that they pay the *djizya*. Once conquered, Washḳa became the capital of an *ʿamal* of the *thaghr al-aʿlā* [see al-thughūr. 2.]. Although it was ruled by an appointee of the court at Cordova, its isolated frontier location and a high proportion of indigenous converts ensured that it remained independent in spirit and orientation. Only a short distance separated the outer hamlets and *ḥuṣūn* of Washḳa from the settlements of its Christian neighbours, with the mountains forming a natural frontier. Cross-border raiding was frequent. Up to the 4th/10th century, various governors of Washḳa rebelled and hatched anti-Cordovan alliances with their Christian neighbours. By the early 3rd/9th century the governorship had become essentially hereditary.

Washḳa is said by geographers to have been a centre of manufacturing and trade, producing copperware and weapons. Bananas and sugar-cane were reportedly raised in the densely populated and irrigated *huerta*, and there is evidence of considerable wheat production and viticulture. The strongly-walled town had several gates and was laid out in typical Islamic style; its sizeable extramural suburbs were eventually enclosed by an outer earthen wall. Few Arabs and fewer Berbers settled in Washḳa and, if it was something of a cultural backwater with few notable figures associated with it, the persistence of the Arabic language after the Christian conquest attests to the area's deep Islamisation and Arabisation.

After the dissolution of the Umayyad caliphate and a brief independence, Washḳa came [see hūdids] under the domination of the Banū Hūd, *ṭāʾifa* rulers of Saragossa. On the death of Sulaymān b. Hūd in 438/1046, his son Lubb took control of the city, but Ramiro I of Aragón became a player in the rivalries of the Banū Hūd and helped Aḥmād al-Muḳtadir bi 'llāh of Saragossa take the city from his brother. Under Sancho Ramírez, the Aragonese began to menace Washḳa, attacking various neighbouring territories during the 470s/1080s. In 487/1094 the king laid siege to the city, but this was abandoned following his fatal wounding during a skirmish. The task of conquest fell to his son Pedro I who, on 16 Djumādā I 489/12 May 1096, laid a second siege to the city, now considerably weakened by raids. Responding to its call for help, al-Mustaʿīn of Saragossa sent troops under his command and that of his Christian vassals. On 1 Dhu 'l-Ḥidjdja 489/19 November 1096 the opponents met on the field of Alcoraz just outside the city and the forces of al-Mustaʿīn were routed; three days later the inhabitants sued for peace. With Washḳa fallen, the lands of the upper Ebro lay open to the Aragonese. The conquest of the city did not, however, spell the end of the Islamic presence here, for many of the Andalusī inhabitants remained in the area, a Muslim population surviving in some form until the final expulsion of the Aragonese *mudéjares* [*q.v.*] was undertaken in 1018/1609.

AL-**WASHM** (A.), tattooing.

1. In older Arab society [see Suppl.].

2. In the recent Arab world.

Tattooing has been a long-established practice among women in the countryside and desert regions of the Arab Middle East, noted by many Western travellers from d'Arvieux in 1665 to the present. Its purpose is to enhance feminine beauty; poems quoted in Musil (190-1, 196, 251) comment favourably on tattoos on women's breasts, cheeks and arms. It was the young girls and young married women who sought tattoos.

Tattoos may be decorative in themselves or imitate precious stones, rings, bracelets or belts. Decorative tattoos on the face, neck, chest, stomach, legs and arms are usually in patterns of dots, lines and crosses, although flower motifs and crescent moons are locally common. Motifs used on the back of hands include gazelles, palm trees, swords and twisted braids.

Specialist female practitioners, gypsies or Ṣulayb [*q.v.*] did the best and most elaborate tattoos. The operator has a repertoire of patterns and motifs from which the client chooses, and decides the position of the tattoo. The practitioner pricks out the desired pattern in the skin with a needle. She then dips the needle in dye obtained by burning indigo-dyed material, and goes over the pattern. The area is bandaged or covered with grease, removed after seven days when the skin is washed. If the pricking with the indigo dye is too deep, the pattern fades. In central Jordan, some gypsy women specialists used small wooden blocks to tattoo short words, like the girl's name. Women tattoo each other with simple dots and patterns, using a needle and soot from the baking sheet mixed with butter; the scar is covered with butter mixed with turmeric.

The number of tattoos, their position and favoured motifs are affected by fashion, the availability of practitioners and the ability to pay in cash or to give gifts of wool or butter. Tattooing has become less elaborate and less common since the early to mid-20th century. It has virtually disappeared in villages, and in the *bādiya*, girls have only a line joining the eyebrows, a line down the lower lip and chin, and perhaps a flower on the cheek.

Dickson (164) says that, in the 1920s, every 'Irāḳī tribe had special tattooing patterns that denoted women's tribal membership. Women from Jordanian and northern Saudi tribes in the 1970s said only that different groups preferred different patterns, but this reflected the repertoire of tattooists as well as fashion.

Authorities describe tattooing as varying between groups. Dickson (164), for 'Irāḳī says the practice was less common among Bedouin women than among tribal women, but it is not clear how he distinguishes between these two groups. Bedouin tribeswomen in the north—Syria, Jordan, Palestine and Sinai—were generally tattooed. Further south, tattooing remained common, although those under Wahhābī influence tattooed less. Wellsted, travelling in 'Umān in 1834-5, records tattooing as common among women (1,352). At present, light tattooing is frequent among tribeswomen in the southwestern reaches of the Empty Quarter (Mauger, 89, 97, 99, 109).

Dickson says (164) that men never had tattoos, while Burckhardt (51) records that Syrian tribesmen did. In the northern *bādiya*, men consider tattooing as strengthening body parts after an injury.

(W. and Fidelity Lancaster)

WASHMGĪR B. **ZIYĀR** [see WUSHMGĪR B. ZIYĀR].

AL-**WASHSHĀ'**, Abu 'l-Ṭayyib Muḥammad b. Aḥmad b. Isḥāḳ al-A'rābī, in short al-Washshā' or Ibn al-Washshā' (born *ca.* 255/869 or earlier in Baghdād, died there in 325/937), Arab man of letters, well-versed in grammar and lexicography, widely-read and an authority on good manners.

As a grammarian he was an eclectic, studying with both Tha'lab and al-Mubarrad [*q.vv.*]. Abū 'Aṣīda, a teacher whom he often quotes (Sezgin, *GAS*, ix, 139), was a private tutor of princes. According to some sources, al-Washshā' also taught at the caliphal court. Others call him a schoolteacher, but this humble profession alone cannot account for his familiarity with high life. Besides, the only pupil of his that we know by name was a certain Munya al-Kātiba, a female slave of the caliph al-Mu'tamid.

Lists of his works are mentioned in Sezgin, *GAS*, ix, 165. Apart from a treatise on a question of orthography (*K. al-Mamdūd wa 'l-maḳṣūr*, ed. R. 'Abd al-Tawwāb, Cairo 1979), three books on *adab* have been preserved.

K. al-Fāḍil fī ṣifat al-adab al-kāmil (10 mss., the oldest of which is Vienna, Nationalbibliothek 2014; uncritical ed. Y.Y. Maskūnī, Baghdād 1970-7) is on rhetorics and eloquence. A discussion of the relevant concepts in the first chapter is followed by a collection of anecdotes (*akhbār*), with sermons and speeches, wise dicta, quick-witted repartees and eloquent improvisations both in prose and poetry, all of which are to serve as guidelines for saying the right thing in every situation.

The *K. al-Muwashshā* (ed. from the unique Leiden ms. Or. 1440 by R.E. Brünnow, Leiden 1886; German tr. D. Bellmann, *Ibn al-Waššā', Das Buch des buntbestickten Kleides*, Bremen 1984), is a handbook of the particular attitudes, manners and tastes which are cultivated by refined (*ẓarīf*) people. It deals with the concepts and expressions of civility (*adab*), manliness (*muruwwa*) and refinement (*ẓarf*), which involve such things as eloquence, politeness, seriousness, chivalry, loyalty, piety and discretion. Special emphasis is laid on chaste love, as there is a natural connection between *ẓarf* and unfulfilled passion (text, 47). There is also ample attention for the outward aspects of a refined lifestyle: clothes and perfumes, food and drink, toothpicks, bathing manners, suitable presents, flowers, fruits and correspondence (including love letters written on

apples; cf. A. Schippers, in *JSS*, xxxiii [1988], 221-3).

The author was in direct contact with prominent *ẓurafā'*, such as Nifṭawayh [*q.v.*], whom he frequently quotes, and Ibn Dāwūd al-Iṣbahānī [*q.v.*], from whose *K. al-Zahra* he took over clusters of poetry without acknowledging it, including pieces by the author himself. Some of the maxims used by Ibn Dāwūd as chapter headings appear in *Muw.*, 164, as signet ring inscriptions of the refined. They are reminiscent of the ring inscriptions ascribed to ancient philosophers by Ḥunayn b. Isḥāḳ (*Ādāb al-falāsifa*, ed. A.R. Badawī, Kuwait 1985, 45-7; cf. W. Raven, *Ibn Dāwūd al-Iṣbahānī and his K. al-Zahra*, diss. Leiden 1989, 28-30, 90).

Tafrīdj al-muhadj wa-sabab al-wuṣūl ilā al-faradj (ms. Berlin 8638; ed. Cairo 1900 not seen) is a letter writer for *ẓarīf* lovers, and therefore an important source of knowledge of refined lifestyle. After a description of exquisite writing materials, it offers examples of letter openings which express confessions and complaints of love, requests and reproaches, answers as well as requests for a reply. The larger part of the text contains poetry to be quoted in letters. No names of authors or poets are mentioned.

(W. Raven)

WAṢĪ (A., pls. *awṣiyā'*, *waṣiyyūn*), a theological term in Shī'ism variously rendered as legatee, executor, successor or inheritor.

It was first used to designate 'Alī as the inheritor of Muḥammad's worldly possessions (such as his books and weapons) and of his political and spiritual authority. According to Imāmī doctrine, this inheritance passed on to al-Ḥasan and the other *imāms*, all of whom are *awṣiyā'*. The Imāmiyya hold that legatees existed from the beginning of human history. Their function was to uphold the law laid down by Adam and the five legislator prophets (*ulū 'l-'azm*): Noah, Abraham, Moses, Jesus and Muḥammad. The first *waṣī* is sometimes identified with Hābīl (Abel), but more often with Shīth (Seth) [*q.vv.*]. Lists of legatees are given in a number of 4th/10th-century sources, e.g. the *Ithbāt al-waṣiyya* attributed to al-Mas'ūdī and the *Ikmāl/Kamāl al-dīn* of Ibn Bābawayh. The names of the legatees are for the most part drawn from the Judaeo-Christian tradition, though there are also lists largely made up of names of Muḥammad's Arab ancestors. The total number of legatees is given as 124,000, the same as the total number of prophets. The 8th/14th-century scholar Ḥaydar-i Āmulī [*q.v.* in Suppl.] recognised a special category of legatees: according to his system, Adam and each of the legislator prophets were followed by 12 legatees responsible for explicating the inner aspects (*ta'wīl*) of the law revealed by those prophets. These *awṣiyā'* (72 in all) hold a higher position than the other legatees.

The identity of the 12 legatees who were to succeed Muḥammad was communicated to the Prophet by various means, for instance, by a tablet inscribed with their names and found in Fāṭima's house. According to a widespread account, the Prophet was informed during the *mi'rādj* [*q.v.*] that 'Alī was his *waṣī*. Another version is connected with Ḳur'ān, XXVI, 214 ("And warn your clan, your nearest kin"): after this verse was revealed, Muḥammad summoned the Banū Hāshim and asked who would like to be his *waṣī*; only 'Alī, the youngest person present, replied in the affirmative. The Prophet spat in his mouth and between his shoulders and his breast, filling him with wisdom and knowledge. Muḥammad proclaimed 'Alī as his legatee on various occasions, notably at Ghadīr Khumm [*q.v.*]. He also referred to him as his *wārith* (a term that means much the same as *waṣī*), as his guardian (*walī*), brother and helper (or minister, *wazīr*). In Imāmī tradition, 'Alī is called *sayyid al-awṣiyā'*, *khayr al-awṣiyā'* and *waṣī al-awṣiyā'* (or *al-waṣiyyīn*). The latter appellation was also used by Djābir al-Dju'fī [*q.v.* in Suppl.] when addressing Muḥammad al-Bāḳir [*q.v.*]. The title *khātam al-waṣiyyīn* (seal of the legatees) normally refers to the Twelfth Imām, but is also found as an epithet of 'Alī, presumably recalling his position as successor to Muḥammad, the *khātam al-anbiyā'*.

The doctrine propagated by the early Ismā'īliyya held that each of the seven historical eras was inaugurated by a speaking prophet (*nāṭiḳ*), and that each of the first six *nuṭaḳā'* was succeeded by a legatee (or *ṣāmit* "a silent one"). These legatees were, successively, Shīth, Sām (Shem), Ismā'īl (Ishmael), Hārūn (Aaron) or Yūsha' (Joshua), Sham'ūn al-Ṣafā' (Simon Peter) and 'Alī. The *nāṭiḳ* brought the scripture in its generally accepted meaning (*tanzīl*), while the *waṣī* introduced a systematic interpretation of its inner, esoteric aspects (*ta'wīl*, *ḥaḳīḳa*) and initiated a series of *imāms*, of whom the last became the *nāṭiḳ* of the following era. The *waṣī* is therefore called a founder (*asās*). At times he is described as being himself the first *imām*, while elsewhere the first *imām* is said to follow him. The *imāms* are known as *atimmā'* (sing. *mutimm* "completer"), since they complete the mission of the founder. It is the duty of the believer to show loyalty (*walāya*) to a *waṣī* and to dissociate himself (*barā'a*) from a *mutawaṣṣī* (one who falsely claims to be a *waṣī*).

The term *waṣiyya* (literally "inheritance") also denotes the utterance by which a *waṣī* is appointed and, more generally, an instruction of a legal or moral nature [see waṣiyya].

WĀSIʿ ʿALĪSI (modern Tkish. Vâsi Alîsi), a member of the Ottoman *ʿulamāʾ* and outstanding representative of the *münshī* [see INSHĀʾ] tradition in the period of Süleymān Ḳānūnī [*q.v.*]. He is also referred to as ʿAlī Wāsiʿ, ʿAlī Čelebi, ʿAbd al-Wāsiʿ ʿAlīsi (or Čelebi), Mawlā (or ʿAlāʾ al-Dīn) ʿAlī b. Ṣāliḥ-zāde al-Rūmī (or just Ṣāliḥ-zāde al-Rūmī). Apparently born in Philipoppolis or Filibe (see art. *Vâsi' Alîsi*, in *Yeni Türk Ansiklopedisi*, Istanbul 1985), he died at an advanced age in Bursa in 950/1543-4.

Receiving a basic classical Ottoman education, including the study of calligraphy, he then studied under and served as assistant to ʿAbd al-Wāsiʿ b. Khayr al-Dīn Khiḍr. Under him he reached *mülāzim* [*q.v.*] rank and came to be known as Wāsiʿ ʿAlīsi. He is reported to have had a connection with Prince Ḳorḳud [see ḲORḲŪD B. BĀYAZĪD] and to have been in the retinue travelling to Egypt with him. He taught in various well-known mosques in Bursa, Edirne and Istanbul.

Wāsiʿ's fame rests mainly on his *Humāyūn-nāme*, an Ottoman rhymed prose translation (with interspersed verses) of the Persian Ḥusayn b. ʿAlī al-Wāʿiẓ Kāshifī's [*q.v.*] well-known *Anwār-i Suhaylī* ("Lights of Suhayli"), itself a version of the Arabic *Kalīla wa-Dimna* [*q.v.*]. Dedicating his work to Sultan Süleymān or, as Menzel describes in his *EI*[1] article, to the Grand Vizier Luṭfī Pasha, Wāsiʿ was rewarded by appointment as *ḳāḍī* of Bursa, only to die shortly afterwards.

There are few extant illustrated mss. of Wāsiʿ's work, a fact leading to the suggestion that it had narrow appeal (Esin Atıl, *Kalila wa Dimna. Fables from a fourteenth-century Arabic manuscript*, Washington, D.C. 1981). Indeed, its ultra-elegant style limited the number of those understanding it. Ottoman biographers, however, recognised Wāsiʿ's achievement (see Menzel's listing of the *tedhkere* writers).

A number of Ottoman summaries were produced, and it has been widely translated. The earliest printing was in 1835 at Būlāḳ.

WĀṢIF (?-1221/1806), Ottoman historian and diplomat.

Aḥmed Wāṣif was born in Baghdād, probably in the early 1730s, was educated there and first earned a living as a professional copyist. Entering the service of Gül-zāde Aḥmed Pasha-zāde ʿAlī Pasha (d. 1769) as librarian, Wāṣif accompanied ʿAlī Pasha on the Russian campaign of 1769 and on the latter's death became *mektūbdju*, secretary, to Abāẓa Meḥmed Pasha [*q.v.*] on the Hotin campaign. Captured by the Russians at the siege of Yeñi Ḳalʿe in 1185/1771, Wāṣif was a prisoner of war in St. Petersburg for nine months. Released in order to carry letters of negotiation from Catherine II, which resulted in an initial truce signed at Yergögü in 1186/1772, he was subsequently employed by both the grand vizier Muḥsin-zāde Meḥmed Pasha [*q.v.*] and the *reʾīs ül-küttāb* [*q.v.*] ʿAbd al-Rezzāḳ Efendi as diplomatic envoy in the negotiations leading to the treaty of Küčük Kaynardja [*q.v.*] (1188/1774), and in discussions which continued until 1779 over the status of the Crimean Tatars.

In 1197/1783 Wāṣif was appointed to succeed Enwerī [*q.v.*] as *waḳʿa-nüwīs* [*q.v.*] or official historian. Relinquishing this post during his embassy to Spain to secure an anti-Russian naval agreement (1201-2/1787-8), he was re-appointed *waḳʿa-nüwīs* on the accession of Selīm III [*q.v.*] in 1203/1789. Relieved of the post in 1206/1791 when appointed to the negotiations leading to the treaty of Zishtowa (Sistova) with Austria, he was re-appointed in 1207/1793 for a third tenure. Dismissed again in 1209/1794, as a result of rivalry with the *reʾīs ül-küttāb* Meḥmed Rāshid Efendi, and exiled to Midilli, he was pardoned shortly thereafter, and appointed *waḳʿa-nüwīs* a fourth time in 1213/1799 (until 1219/1805). During his career, Wāṣif also held various administrative posts in the Ottoman central bureaucracy both in between and concurrently with his periods of office as *waḳʿa-nüwīs*, culminating in his promotion to *reʾīs ül-küttāb* in 1219/1805. Wāṣif died in Shaʿbān 1221/December 1806. (For detailed biography and references, see Mücteba İlgürel, art. *Vasıf*, in *İA*, xiii, 214-17; also Virginia H. Aksan, *An Ottoman statesman in war and peace: Ahmed Resmi Efendi 1700-1783*, Leiden 1995, 111-14 and *passim*.)

Wāṣif's principal work as *waḳʿa-nüwīs*, prepared during his final tenure of the post, is *Meḥāsin ül-āthār we ḥaḳāʾiḳ ül-akhbār*, a detailed chronicle of events from Muḥarrem 1166/January 1752 to Redjeb 1188/September 1774 (published Istanbul 1219/1804, Būlāḳ 1243/1827 and 1246/1831). This work incorporated the unpublished histories, much reworked, of Wāṣif's predecessors Meḥmed Ḥākim, Česmī-zāde [*q.vv.*], Mūsā-zāde, Behdjetī and, particularly, Enwerī, with additional material of his own for the period of the Ottoman-Russian war 1768-74. Although commissioned by Selīm III to maintain the history up to 1217/1802, coverage of the period after 1774 is apparently incomplete and the textual history confusing. There exists an unpublished continuation covering the five years to 1193/1779 (Topkapı Sarayı ms. Hazine 1406); a published history of events during Wāṣif's first period as *waḳʿa-nüwīs*, 1197/1783-1201/1787 (ed. İlgürel, Istanbul 1978, also under the title *Meḥāsin ül-āthār*); several manuscripts and notes for subsequent years (see İlgürel, *op. cit.*, pp. xl-xlii). Wāṣif was considered a good critical historian

whose work went beyond detailed chronological narrative; his manuscripts were a principal source for Aḥmed Djewdet Pasha [*q.v.*]. He also compiled an account of his embassy to Spain, *Ispanya sefāretnamesi*, French tr. Barbier de Meynard, *Ambassade de l'historien turc Vasif Efendi en Espagne, 1787-1788*, in *JA*, ser. 5, vol. xix [1862], 507-23.

Bibliography: See that in the *İA* art., and in the edition of İlgürel, *Mehâsinü 'l-âsâr ve hak'âikü 'l-ahbâr*, see also Babinger, *GOW*, 335-7; B. Kütükoğlu, art. *Vekâyinüvis*, in *İA*, xiii, 278-80.

(CHRISTINE WOODHEAD)

WĀṢIF ENDERŪNĪ, ʿOTHMĀN, Ottoman poet, born at an unknown date, d. in 1824.

As his name implies, he was educated in the *Enderūn* or Palace School, his mother being a niece of the commander of the Bostāndjīs [*q.v.*], Khalīl Pasha, who became Grand Vizier to Aḥmed III. His life was spent filling various court offices, including for Selīm III, to whom various of his poems are dedicated. At the accession of Muṣṭafā IV in 1807, he was promoted to the service of the Royal Chamber. In 1818 he retired from palace service and became administrator of the *wakf* of Süleymān Pasha at Bolayir, dying at Istanbul; his fellow-poet ʿIzzet Mollā [*q.v.*] wrote the epitaph on his gravestone.

Wāṣif seems to have been a bon viveur, with an amusing, jolly character. He was one of the pre-*Tanẓīmāt* [*q.v.*] poets who endeavoured to break away from the rigid rules and conventions of classical Ottoman poetry, writing instead in a simpler and more natural manner, successfully incorporating elements of colloquial language and dialect into his poems. His *sharkīs* [*q.v.*] form the most important section of his poetic work, being written in short metres and on his favourite subjects of love and beauty, but he also wrote *ghazels*, *kaṣīdes* and chronograms. His poetry was criticised by more traditional scholars of classical Ottoman poetry, *inter alia* for its technical failings and shallowness, but his work could be original, and it provides glimpses of daily life in Istanbul, where he often refers to the military exercises and sports of the Janissaries. Two unique poems in his *dīwān* set forth a dialogue between a mother and daughter in the Istanbul colloquial of what are apparently lower middle-class women. His poetry, set to music by his brother Saʿd Allāh Efendi and by Zekāʾī Dede, both distinguished musicians, is still sung.

Wāṣif left behind a single *dīwān*, and rumour had it that he burnt the more racy of his poems before he died. There are two mss. of the *dīwān* in Istanbul University Library, one of them (TY 9865) complete, with over 5,000 lines. The *dīwān* was printed at Būlāḳ (*Dīwān-gülshen-i afkār-i Wāṣif-i Enderūnī*, 1257/1841) and subsequently at Istanbul (1285/1868-9).

AL-WAṢĪFĪ, IBRĀHĪM B. WAṢĪF SHĀH or Ibn Waṣīf al-Ṣābiʾ, an authority much quoted by Arab historians from about 330/941-2 onward for a host of otherwise unknown materials on the history of ancient Egypt from its first settlements up to the time of Moses' Pharaoh. From among the few quotations relating to Islamic Egypt, the latest concern the period of time between 355/965 and 358/969 (*apud* Ibn Iyās, d. *ca.* 930/1524 [*q.v.*]).

As already made known by D. Chwolson, from a St. Petersburg manuscript dated 607/1211, an Ibrāhīm b. Waṣīf Shāh was the author of a *Kitāb al-ʿAdjāʾib al-kabīr*... *fī ʿadjāʾib al-arḍ wa 'l-biḥār*, the second part of which contains material about the history of Egypt up to the time of Exodus. On the basis of further Paris manuscripts, sometimes attributed to al-Masʿūdī (d. 345/956 [*q.v.*]), Carra de Vaux produced his translation *L'Abrégé des merveilles* (with introd. and index, Paris 1898; repr. Frankfurt 1994; new ed. without index, Paris 1984, with preface by A. Miquel). ʿAbd Allāh al-Ṣāwī did an Arabic edition with the title *Akhbār al-zamān* (Cairo 1938, several reprints), which is mostly quoted as "Pseudo-al-Masʿūdī", because the authorship and identity of Ibrāhīm b. Waṣīf Shāh remained open to debate. While this form of his name can be found *inter alia* in al-Maḳrīzī's (d. 845/1442 [*q.v.*]) *Khiṭaṭ* and *Ighāthat al-umma*, and in Ibn Iyās' *Badāʾiʿ*, the form al-Waṣīfī is found in Ṣāʿid al-Andalusī's (d. 462/1070 [*q.v.*]) *Ṭabaḳāt al-umam* and Muḥammad b. al-Ḳāsim al-Nuwayrī's (d. 8th/14th century [*q.v.*]) *K. al-Ilmām*.

Opinions on the value of the book and the identification of its author have diverged widely in recent years. By some it is thought to be a "Hermetic history" rather than the national history of the Copts in early Islamic Egypt and the "picturesque 'Ibrāhīm b. Waṣīf Shāh'" is suspected to be "in fact a fanciful improvement of the more prosaic 'Waṣīfī'" (cf. M. Cook, *Pharaonic history in medieval Egypt*, in *SI*, lvii [1983], 67-103; G. Schoeler, *Verzeichnis der orientalischen Handschriften in Deutschland*, Band XVII, Reihe B. *Arabische Handschriften*, Teil II, Stuttgart 1990, 364-70). Even the very historicity of Ibn Waṣīf Shāh/al-Waṣīfī is debated (cf. U. Haarmann, *Das Pyramidenbuch des Abū Ǧaʿfar al-Idrīsī*, Beirut 1991, preface, p. vii) and the *Akhbār al-zamān* are considered to be a mystification of Spanish provenance, consciously created around the year 1000 (cf. idem, *Das pharaonische Ägypten bei islamischen Autoren des Mittelalters*, in *Orbis Biblicus et Orientalis*, xlv [1990], 48).

As for the name, the *ism* Ibrāhīm may derive from Ibrāhīm b. al-Ḳāsim al-Kātib (d. after 418/1027-8 [see IBN AL-RAḲĪḲ]), who made a *mukhtaṣar* of the *K. al-ʿAdjāʾib al-kabīr* of one Ibrāhīm b. Waṣīf Shāh, mentioned in al-Nuwayrī's (d. 733/1333 [*q.v.*]) *Nihāyat al-arab*, with ample quotations from the book. "Shāh" [*q.v.*] may indicate high esteem for a person thought to hail from the northern parts of the caliphate. The true name of our author would thus be "Ibn Waṣīf", which is corroborated by the *nisba* "al-Waṣīfī". On this person Abū ʿUbayd al-Bakrī's (d. 487/1094 [*q.v.*]) *al-Masālik wa 'l-mamālik* (ed. A.P. van Leeuwen and A. Ferré, Tunis 1992) gives somewhat more detailed information; he is quoted in direct speech on his visits to Egypt, where he tested the magical efficacy of images and statues in temples and interviewed the locals (§§ 895, 905-6, 908-13). The same is indicated by Abū Djaʿfar al-Idrīsī (d. 649/1251 [see AL-IDRĪSĪ]), when he says that al-Waṣīfī was an outstanding natural philosopher and an historian who had investigated the secrets of the temples and the knowledge of the ancient Egyptian natural philosophers (cf. Haarmann, *Pyramidenbuch*, 99 [Arabic], 82 [German]). Ibn Waṣīf's excerpt from a *K. al-Maṭālāṭīs* of a certain Kīnās al-Ḥakīm (cf. Sezgin, *GAS*, vii, 66) deals with talismans.

A Ṣābian origin is likely for a scholar with such interests, since for them Egypt continued to have a religious meaning even in Islamic times (cf. D. Chwolson, *Die Ssabier und der Ssabismus*, St. Petersburg 1856, repr.

Amsterdam 1965, index). Given the likely lifetime of our author, he might reasonably be identified with the Baghdād ophthalmologist (Aḥmad?) Ibn Waṣīf al-Ṣābiʾ, who was active beyond the middle of the 4th century of the Hidjra (A.D. 970 at the latest) (cf. Ibn Djuldjul [*q.v.*], *Ṭabaḳāt al-aṭibbāʾ*, Cairo 1955, 81-2; composed in 377/987). Between 330/941-2 and 340/951-2 he taught students of Ḥarrānian descent hailing from Spain. For this reason, he became well known in Spain early on, as a physician named Ibn Waṣīf, and as an authority on ancient Egypt, quoted as al-Waṣīfī. He is quoted without attribution by the author of the *Picatrix* (composed between 443/1051-2 and 448/1056, cf. Sezgin, *GAS*, iv, 295, and AL-MADJRĪṬĪ).

Ibn Waṣīf's books have not been preserved independently and their precise titles are unknown. The relevant manuscripts represent (a) a longer version, which has been shown to be two parts of [*K. Akhbār al-zamān wa-huwa*] *al-Kitāb al-Awsaṭ* (composed before 332/943) by al-Masʿūdī, who lifted large sections dealing with ancient Egypt from Ibn Waṣīf, and (b) a shorter version (*mukhtaṣar*) also attributable to al-Masʿūdī, entitled *K. al-ʿAdjāʾib*, which is the version edited by al-Ṣāwī. Carra de Vaux' translation contains sections from both versions (cf. Ursula Sezgin, *Al-Masʿūdī, Ibrāhīm b. Waṣīfšāh und das Kitāb al-ʿAǧāʾib*, in *ZGAIW*, viii [1993], 1-70; eadem, *Pharaonische Wunderwerke bei Ibn Waṣīf aṣ-Ṣābiʾ und al-Masʿūdī, I*, in *ZGAIW*, ix [1994], 229-43).

Although the Egyptologist G. Maspéro, on the basis of Carra de Vaux' translation as well, had written in 1899 that the text contained memories of all stages of Egyptian history after the downfall of its indigenous dynasties, the study of its contents and its place within the intellectual history of its time is still at its beginning.

In 1899 M. Berthelot, on the basis of Carra de Vaux' translation, had shown that several of the *ʿadjāʾib*, apparently magical objects, mentioned were traceable to the work of Alexandrian scholars. With the help of sources and studies in the history of technology (sometimes by assuming a Syriac intermediary source) and furthermore with pictorial representations and archaeological finds, it was possible to garner detailed evidence that these wondrous and miraculous objects were trick vessels, waterclocks and the like. They form a link in a tradition that straddles different linguistic and cultural areas, and they live on in mediaeval Western literature and, as display-pieces, in the cabinets of curiosities of pre-modern princes. In the al-Waṣīfī corpus, however, they were meant to serve the posthumous glory of Egyptian rulers; in this context traditions of Greek and Coptic provenance can be discerned (cf. U. Sezgin, *Pharaonische Wunderwerke, I* [and] *II*, in *ZGAIW*, ix [1994], 229-91, xi [1997] 189-249; *III* and *Addenda*, in preparation).

Judging by the detailed and scarcely exploited quotations in Abū ʿUbayd al-Bakrī, with all their clearly gnostic elements of Coptic provenance, one can guess how severe the loss of Ibn Waṣīf's extensive writings is for the intellectual and religious history of Egypt in the last centuries before and the first centuries after the rise of Islam. They enjoyed wider distribution and availability obviously only as excerpts and quotations in the works of other historians.

Bibliography (in addition to references given in the article): G. Wiet, *Introduction* to Vattier's *L'Egypte de Murtadi*, Paris 1953, 1-114. (URSULA SEZGIN)

WĀṢIL B. ʿAṬĀʾ, early theologian and ascetic who died in 131/748-9, shortly before the final success of the ʿAbbāsid revolution, probably as a victim of the plague which raged at Baṣra during the same year.

Further information about him is scarce and not always beyond suspicion. In a polemical letter of unknown origin addressed to ʿAmr b. ʿUbayd [*q.v.*], Wāṣil is supposed to have been present, as a rather prominent disciple, at one of the courses given by al-Ḥasan al-Baṣrī [*q.v.*] during a visit to Medina some time before 110/728. Whether at that moment he lived in the Ḥidjāz or had instead accompanied al-Ḥasan from Baṣra is not clear. He entertained relations with the ʿAlids who lived in Medina, and he may even have attended the meeting at Abwāʾ [*q.v.*] where, shortly after the assassination of al-Walīd II in 126/744, the Hāshimites tried to decide who should lead the Islamic community after the expected collapse of the Umayyad régime. Yet at approximately the same time, we also find him in ʿIrāḳ, as the member of a Baṣran delegation that had come to Wāsiṭ in order to welcome ʿAbd Allāh b. ʿUmar b. ʿAbd al-ʿAzīz [*q.v.*] who had been nominated as the new governor by al-Walīd II's opponent and successor Yazīd III. Wāṣil was probably not the most prominent among the notables who had come; he was only a *mawlā*, and the speeches were given by two professional *khaṭībs* who were of Arabian stock. But the governor, quite unexpectedly, asked him to say a few words, and he responded with an improvised allocution of pietist character. The event seems to presuppose that the governor was interested in Wāṣil as the spokesman of a specific element of the Baṣran population on which he wanted to rely: sc. the Ḳadariyya [*q.v.*], which had come to power in Syria with the caliphate of Yazīd III. Wāṣil's performance was praised by poets such as Bashshār b. Burd and, later on, Ṣafwān al-Anṣārī [*q.vv.*]; they were particularly impressed by the fact that Wāṣil had mastered the challenge in spite of a speech defect which prevented him from pronouncing the letter *rāʾ* correctly. But he also attracted their attention by asking the governor, after having refused the usual gift offered to the orator, to promote a public undertaking in the town, probably the canal (*nahr*) named after him.

Wāṣil was a middle-class person; he earned his living by manufacturing yarn for the Baṣran cloth industry. Doctrinally speaking, Ḳadarī ideas were not his main concern; he dealt rather in grass-root politics. He tried to take up, in a new spirit, the enterprise started by al-Ḥasan b. Muḥammad b. al-Ḥanafiyya [*q.v.*] one generation before: finding a way between the conflicting factions of the first civil war, i.e. those who were afterwards to be called Sunnīs and Shīʿīs. But whereas Ibn al-Ḥanafiyya had talked about *irdjāʾ*, "postponing one's judgement", Wāṣil spoke of *iʿtizāl*, using a term that had been brought up by those who had kept aloof from the tensions of the first civil war and that was now revivified during the chaos of the third *fitna* after 126/744 [see MUʿTAZILA]. And whereas the former had acted on private initiative, Wāṣil created an organisation; he sent out propagandists (*duʿāt*) to different areas of the Islamic world, including the Ḥidjāz. His analysis of the situation was much more radical than al-Ḥasan's; though agreeing that, in a way, the community had to postpone its judgement, he left no doubt about one of the two factions having sinned, i.e. committed a crime. His conclusion was that, wherever both of them offered an opinion against each other (which seems to mean: wherever they argued against each other by means of *ḥadīth*), their testimony could not be accepted. In his opinion,

the situation was to be compared to the procedure of *liʿān* [*q.v.*]: when both litigants appear together, the culprit not being known, their *ʿadāla* is suspended.

In promoting these ideas, Wāṣil seems to have used the Baṣran Ḳadariyya as a power-base. He achieved this purpose by winning over ʿAmr b. ʿUbayd, who acted as the successor of al-Ḥasan al-Baṣrī after the death of Ḳatāda b. Diʿāma (*ca.* 117/735 [*q.v.*]). But he had to persuade ʿAmr to accept another one of his basic tenets: the *manzila bayn al-manzilatayn* [*q.v.*]. ʿAmr originally followed the tradition of al-Ḥasan al-Baṣrī, who had said that the grave sinner is a *munāfiḳ* [*q.v.*] who, in spite of having accepted Islam, will end up in Hell. By means of a disputation, Wāṣil managed to demonstrate to him that this word, which had been used all the time in the earlier theological discussions, was now worn out and should be replaced by a new term, namely, *fāsiḳ*, which could equally be found in the Ḳurʾān but allowed much more easily for the conclusion that the grave sinner, even when a Muslim, would be punished in Hell eternally. The opponents of this doctrine suspected that Wāṣil had learned this rigour from the Khāridjites, but it was simply a consequence of his asceticism (which he had in common with ʿAmr b. ʿUbayd and al-Ḥasan al-Baṣrī). His main innovation pertained rather to the level of what was called later on *al-asmāʾ wa ʾl-aḥkām*, sc. the introduction of a third category between believer and unbeliever. The afore-mentioned political attitude, though also representing a "middle-course", has to be clearly differentiated from this.

None of Wāṣil's writings has been preserved, not even in fragments. But several titles are mentioned, though some of them are attributed to his disciples rather than to himself. There was a report about his disputation with ʿAmr b. ʿUbayd, but he is also said to have written separately about his concept of *al-manzila bayn al-manzilatayn*. His *khuṭba* in front of the governor "without the letter *rāʾ*" was obviously circulated already by al-Madāʾinī [*q.v.*], but we now have two completely different versions of it. In a treatise "on penitence" (*fī ʾl-tawba*) Wāṣil may have expounded his idea that repentance has always to be universal in order to be valid. His epistemological criteria are enumerated in two closely-related doxographical summaries; if these ideas really do go back to him, we are dealing with the earliest testimony for the agenda of *uṣūl al-fiḳh*.

Wāṣil's propaganda movement was stopped before it could mature. His untimely death prevents us from knowing whether he intended it as a merely pietistic undertaking of "inner mission" or whether he followed a political programme as did the Ibāḍiyya [*q.v.*] or, at a later period, the Ismāʿīliyya [*q.v.*]. That his expectations would not have been satisfied by the ʿAbbāsid revolution is borne out by the fact that, one decade later, a considerable portion of the Baṣran Muʿtazila supported al-Nafs al-Zakiyya [*q.v.*] who had been foreseen at Abwāʾ as the Mahdī to come. When the rebellion failed, those who survived fled to the Maghrib, where their successors continued to be known as al-Wāṣiliyya.

WĀSIṬ, a city in central ʿIrāḳ during the mediaeval period, the existence of which is attested from the later years of the 1st century/closing years of the 7th century or opening years of the 8th century, until the beginning of the 12th century/turn of the 17th-18th centuries (according to M. Djawād, *Kharāb Wāsiṭ*, in *Lughat al-ʿArab*, x (1931), 617 until ca. 1107/1695-6). From its foundation by the Umayyad governor of ʿIrāḳ, al-Ḥadjdjādj (75-95/694-713 [*q.v.*]), the city was the administrative and political capital of that province under the first Marwānids (65-95 or 65-105/684-713 or 684-723). The Arabs continued their policy of urban experience there which they had begun by founding the two large fortified camps, *amṣār* [see miṣr. B.], of the Sawād, Baṣra and Kūfa [*q.vv.*], which predated it and were its political rivals. On the other hand, its appearance symbolised the desire of the Umayyad power to display its munificence, and thus it served as a prelude in its architectural form to the founding of Baghdād [*q.v.*] by al-Manṣūr in 145-6/762-3 (J. Lassner, *The shaping of the Abbasid rule*, Princeton 1980, 180-1).

1. Situation and site.

Locating the town on the mediaeval course of the Tigris in the ancient Sāsānid province of Sūristān, which was situated in the centre of Lower Mesopotamia or the Sawād, poses one of the most difficult problems of the historical geography of mediaeval Babylonia (M. Streck, *EI*[1] art. *Wāsiṭ*). Indeed, from the middle or the end of the 9th/15th century the branch of the Tigris which crosses Wāsiṭ began gradually to change its course, veering towards its present easterly direction during the 10th/16th and 11th/17th centuries passing through al-Kūt, and then through the town of al-Ḳurna, where it rejoins the waters of the Euphrates to form the estuary of the Shaṭṭ al-ʿArab [*q.v.*]. The location of Wāsiṭ has now been definitively established following an exact geographical position fixed at lat. 32° 11' N. and long. 46° 18' E., partly thanks to the descriptions of the site by European travellers of the 19th-early 20th centuries, and partly to the various archaeological excavations which were carried out from 1936-42 (F. Safar, *Wāsiṭ, the sixth season's excavations*, Cairo 1945, 8-11). The ruins of historic Wāsiṭ are situated today 25 km/15 miles north-east of the town of al-Ḥayy, and about 70 km/45 miles south-east of the town of al-Kūt, where the Tigris branches off to its present-day easterly course. These ruins are known as al-Manāra, referring to a building from the 7th/13th century, of which all that remains is a monumental entrance gate flanked by two minarets on the north-east side of the site (Safar, *op. cit.*, 6). They extend for an area of three km^2 to the east and to the west of the dry bed of the Dudjayla, the principal branch of the mediaeval Tigris, 200 m wide today. Between 1936 and 1942 the Iraq Department of Antiquities conducted six archaeological excavations (K.A.C. Creswell, *Early Muslim architecture*, Oxford 1969, i/2, 132-3), the last of which was directed by F. Safar (*op. cit.*, 33-4) in 1942 and led to the discovery on the west of the site of the mosque of al-Ḥadjdjādj. It was built onto the

south wall of the palace or Dār al-Imāra, constructed in 83/702, and brought confirmation of the existence of three other mosques superimposed on the first; one was probably constructed between 400/1009 and 550/1155 (Mosque II); another around 550/1155 (Mosque III), and a third in the Il-khānid [*q.v.*] period, 656-736/1258-1335 (Mosque IV). The reconstruction and restoration work of the archaeological remains of Wāsiṭ took place from 1937 to 1965, with a view in particular to exploiting tourist interest in this historical site.

Where the city is situated also has semantic significance. The name Wāsiṭ, which is found in mediaeval sources with about twenty other variants (including Wāsiṭ al-Ḥadjdjādj, Wāsiṭ al-ʿUẓmā (Great Wāsiṭ) and Wāsiṭ al-ʿIrāḳ) would have been used to denote the approximate relative position of the town "in the middle" or "centrally" between al-Kūfa, Baṣra, al-Madāʾin (Ctesiphon [*q.v.*]) and al-Ahwāz, the capital of Khūzistān [*q.v.*].

Wāsiṭ was established after the division of the two towns by the Tigris (see below, 2). The site of the town founded by al-Ḥadjdjādj on the west bank was a plain (*sahl*) to the north of the Baṭīḥa [*q.v.*], the marshes where the soil was said to be saline (*arḍ sābikha*) and the land was easily subject to flooding, composed of alternating steppes and reed-beds (*ḳaṣab*, from which was derived another name, Wāsiṭ al-Ḳaṣab). To the west, *al-gharb*, the site opened out broadly on to an arid zone, half steppe and half desert, known in 6th-century A.D. sources as the desert of Kaskar, qualified by *barriyya* or *faḍāʾ*. This situation perhaps justified the description of the climate of Wāsiṭ as healthy, *ṣaḥīḥ*, as the town was at some distance from the Baṭīḥa, which was humid and hot and infested with mosquitoes. The climate of Wāsiṭ was also described as being like that of Baṣra, capricious and changeable, *munḳalib*, as the site lay in the path of the burning winds, *samūm*, coming from the Persian Gulf to the south, and those from the north which tempered the effect.

2. Foundation.

The date of the foundation of Wāsiṭ is a matter of some debate among scholars because of the disparate traditions. The oldest of these, cited by Baḥshal (d. between 288-92/901-4 [*q.v.*]) in his *Taʾrīkh Wāsiṭ* (Baghdād 1387/1967, 43) goes back to Sulaymān b. al-Ḥakam b. ʿAwāna al-Kalbī (2nd/8th century) and is revived by Ibn al-Djawzī, al-Dhahabī and Ibn Taghrībirdī. This places the foundation of Wāsiṭ between 75/694 and 78/697, but does not tally with the course of events during the governorship of al-Ḥadjdjādj in ʿIrāḳ. The chronological details available on Wāsiṭ place the beginning of the building of the principal monuments of the town (the palace-mosque complex, the town's battlements) in 83/702 or 84/703, after the revolt by Ibn al-Ashʿath (82-3/701-2 [*q.v.*]) had been quelled, and the completion of the *tamṣīr* in 86/705. On the other hand, Wāsiṭ had been established right from its foundation as a double city. The new town, al-Madīna al-Gharbiyya, created by al-Ḥadjdjādj on the west bank of the Tigris, was juxtaposed to a pre-existing town on the east bank, al-Madīna al-Sharḳiyya, called Kaskar or Kashkar [*q.v.*]. The two towns, connected as they were from the outset by a bridge of boats (*djisr*), finished by forming two parts of the same city, where the new Wāsiṭ progressively absorbed the ancient Kaskar and gave it its name.

3. Wāsiṭ through the centuries.

Up to the death of al-Ḥadjdjādj in 95/713, Wāsiṭ remained the seat of Umayyad government in ʿIrāḳ, but from 97/715 onwards the town ceased to be the residence of the governor of this province, who was obliged to transfer to Khurāsān [*q.v.*], incorporated by the caliph Sulaymān (96-9/715-17) into ʿIrāḳ. ʿUmar II (99-101/717-20) divided this vast territory into three governorates, Kūfa, Baṣra and Khurāsān, all with separate governors; and at the same time he demilitarised Wāsiṭ, which was emptied of its Syrian occupation forces (M.A. Shaban, *Islamic history. A new interpretation*, Cambridge 1971, i, 132-3). This was returned to Wāsiṭ during the short reign of Yazīd II (101-5/719-23) under the governorships of Maslama b. ʿAbd al-Malik (102/720), and then of ʿUmar b. Hubayra (103-5/721-3). From the rule of the latter to that of Yazīd b. ʿUmar b. Hubayra (129-32/746-50), Wāsiṭ was no longer the exclusive seat of government or residence of the Umayyad governors of ʿIrāḳ, who moved between Wāsiṭ, Kūfa and al-Ḥīra [*q.v.*] (H. Djaït, *Al-Kūfa, naissance de la ville islamique*, Paris 1986, 271), in particular under Yūsuf b. ʿUmar (120-6/737-43), and from the creation of autonomous power for the Mashriḳ (Khurāsān) by the caliph Hishām (105-25/724-43). The town survived the revolt stirred up by Yazīd b. al-Muhallab, the governor of ʿIrāḳ after al-Ḥadjdjādj, in 102/721, and played a political role in the Shīʿī revolt of Zayd b. ʿAlī (122/739), who found partisans there. The troubles that marked the end of the Umayyad period in ʿIrāḳ, on account of the struggles between the governors to assert their power as well as the unrest among the Khāridjite Shurāt, took place principally at Wāsiṭ. The town was exhausted and numbed and the last Umayyad governor of ʿIrāḳ, Yazīd b. ʿUmar b. Hubayra, reconquered it in 129/746 at the expense of ʿAbd Allāh b. ʿUmar II, the *ʿāmil* of the Khāridjites. Soon afterwards, in 132/750, it had to suffer the trials of a siege by the ʿAbbāsids. The governorship of Khālid al-Ḳasrī (105-20/723-37) marked an upsurge in the economy and an expansion in the agriculture of the Sawād to what it had been in the time of al-Ḥadjdjādj. This change came about in Wāsiṭ by a modification in urban fabric. The territory of Wāsiṭ, corresponding to the *kūra* [*q.v.*] (district) of Kaskar in the administrative division of Lower ʿIrāḳ, kept its autonomy from earliest times throughout the Umayyad period in regard to the Sawād of Kūfa and of Baṣra (Kuwar Didjla and Kūrat Maysān), from the time of its foundation by al-Ḥadjdjādj. From then to the end of Umayyad power, Wāsiṭ also remained one of the most important centres for issuing the coinage of the empire, as witnessed by the collections preserved by numerous museums across the world (U.S.L. Welin, *Wāsiṭ the mint town*, in *Bulletin de la Société Royale des Lettres de Lund* [1954-5], 127-69, and 4. below).

At the time of the conquest of ʿIrāḳ by the ʿAbbāsids in 132/750, Wāsiṭ was besieged by them. It symbolised the last pocket of resistance of ʿIrāḳ to the new power. In a final convulsion, it supported the Ḥasanid revolt of 145/762. The establishment of the ʿAbbāsid régime and the founding of Baghdād reduced Baṣra, Kūfa and Wāsiṭ to an inferior rank. Wāsiṭ, which was demilitarised, became nothing more than a local administrative centre.

The new dynasty inherited Umayyad landed property in Wāsiṭ and the surrounding region, and, particularly under al-Manṣūr (136-58/754-75) and al-Mahdī (158-69/775-85), attracted much agricultural development, as happened also around Baṣra, Baghdād and Anbār. The *kharādj* [*q.v.*] of the *kūra* of Kaskar, already specified in the first fiscal inventory available to us referring to the year 172/788, reveals the prosperity of the region of Wāsiṭ during the reign of al-Rashīd

(170-93/786-808), which was characterised by a favourable combination of circumstances, due in part to demographic growth from the middle of the 2nd/8th century onwards.

The progressive disintegration of the ʿAbbāsid state in the course of the second half of the 3rd/9th and in the 4th/10th centuries was marked by the weakening of agricultural production in ʿIrāḳ, the central province of the empire, and also by a diminution of the fiscal returns and an increase in the power of military elements after the reign of al-Maʾmūn (198-218/813-33). Consequently, because of its resources and tax income, Wāsiṭ and its surrounding region acquired particular importance for the power of Baghdād, which explains the appearance under al-Muʿtaṣim (218-27/833-42) in the district of Kaskar of the *iḳṭāʿ* [*q.v.*], which assigned to the army generals the levying of fiscal rights of the state on the land. However, the region of Wāsiṭ suffered pillaging by the Zuṭṭ [*q.v.*] from the Sind who revolted in 219/834 against the ʿAbbāsids. After the revolt of the Zandj slaves [*q.v.*] in the vast domains of southern ʿIrāḳ (255-70/869-83) these acts of destruction recommenced. Wāsiṭ had already been decimated by an epidemic in 258/871, when in 264/877 it suffered the destruction carried out by the Zandj, especially on its eastern side. This situation did not prevent the growth of tax-farming, *ḍamān*, and the extension of the *iḳṭāʿ* in the region of Wāsiṭ/Kaskar during the reigns of al-Muʿtaḍid (279-89/892-902) and of al-Muḳtadir (295-320/908-32). From that time onwards, the rich region of Wāsiṭ played a decisive role in supplying food to Baghdād, despite serious flooding in the town in 292/904, which caused severe destruction of its monuments. In 310/922 there followed even more serious floods. It was therefore because of this dependence by the rulers of Baghdād on resources coming from Wāsiṭ, among other regions, that al-Rāḍī (322-9/934-40) in 324/936 promoted the governor of Wāsiṭ, Ibn Rāʾiḳ [*q.v.*], to the office of *amīr al-umarāʾ* [*q.v.*], and he became in practice the holder of sovereignty.

In the course of the decade 324-34/936-46, which ended with the arrival of the Buwayhids (334-447/945-1055 [*q.v.*]), Wāsiṭ was coveted, because of its farming and resources, by the Bāridīs, governors of al-Ahwāz (Khūzistān), the various *amīr al-umarāʾ*, and the Būyids, who sought power in Baghdād.

From 338/949 until 361/971 the town served for the *amīrs* Muʿizz al-Dawla and his successor Bakhtiyār as a base for military operations against ʿImrān b. Shāhīn [*q.v.*], the lord of the Baṭīḥa, who rebelled in the south of ʿIrāḳ, threatening the authority of the Būyids. While economic decline and depopulation were on the increase in ʿIrāḳ, Wāsiṭ continued to be a source of food supplies for Baghdād.

When al-Muḳaddasī visited Wāsiṭ in 375/985 it was again demonstrating some resilience, as compared to Baṣra, Kūfa, Sāmarrāʾ, Anbār, Baghdād and even to the villages in its own territory, which were in a state of dilapidation. The political unrest at the end of the Būyid period aroused the ambitions of the Mazyadids of Ḥilla regarding Wāsiṭ. They had gained power in the region, as had al-Basāsīrī [*q.v.*], who was acting on behalf of the Fāṭimids of Egypt. When their propaganda had won over many of the *amīrs* from ʿIrāḳ and the Djazīra, the governor of Wāsiṭ, Ibn Fasāndjis, in 448/1056 declared the *khuṭba* there in the name of the Fāṭimid al-Mustanṣir. At the same time he had the principal mosque painted white, the symbolic colour of the Shīʿīs of Egypt. The Saldjūḳs [*q.v.*] had attacked ʿIrāḳ in December 447/1055. They established their authority over Wāsiṭ, crushing Ibn Fasāndjis in 449/1057 after an exhausting siege. In 451/1059, the year of the great drought and deadly famine, the adventures of al-Basāsīrī, who had briefly recaptured the town, came to an end.

The period of instability and of the weakening of the authority of the Saldjūḳs following the death of Malik Shāh (465-85/1063-92) was characterised by economic and social depression, a decline in the towns of ʿIrāḳ and its depopulation. The tax-farming of Wāsiṭ and the *iḳṭāʿ* of the whole region became the subject of fratricidal quarrels among the princes of the Saldjūḳ family on the one hand, and aroused the jealousy of the Mazyadid princes of Ḥilla on the other. The town continued until 501/1107 to be a permanent *iḳṭāʿ* of these last, granted by the sultan Muḥammad (498-511/1105-18).

During the period of the renaissance of the caliphate, which was inaugurated by al-Mustarshid (512-29/1118-35) in order to throw off the tutelage of the Saldjūḳs, Wāsiṭ underwent numerous sieges in the struggles between the caliphs and the Saldjūḳs, whose control over ʿIrāḳ at that time hardly extended beyond the central and southern regions because of the power of the Mazyadids of Ḥilla.

The attempts by the caliphs al-Rāshid (529-30/1135-6) and al-Muḳtafī (530-55/1136-60) [*q.vv.*] to extend their power over Wāsiṭ by defying the weakened authority of the sultans brought on the town much pillaging and destruction (535/1140, 549/1154, 551/1156 and 553/1158). From that time onwards, Lower ʿIrāḳ became the caliphs' domain and their firm territorial base. Wāsiṭ seems to have enjoyed relative peace and to have preserved the traces of its former prosperity when Yāḳūt visited it (622/1225). The period after the Saldjūḳs, which extended from the reign of al-Nāṣir (575-622/1180-1225) to that of the last caliph al-Mustʿaṣim (640-56/1242-58), was a time of new and rapid expansion in Wāsiṭ. Nearly a century of peace had restored life to the town, and al-Mustaʿṣim made an excursion there (*nuzha*) in 646/1248, a decade before the Mongol invasion.

Hūlākū (Hülegü) appeared outside Wāsiṭ on 17 Ṣafar, after his entry into Baghdād on 4 Ṣafar 656/10 February 1058. The town put up some resistance, as seen in the loss of about 40,000 inhabitants (probably an overestimate) and by the destruction suffered. This was the beginning of the power of the Il-Khānids (656-736/1258-1335), who annexed Wāsiṭ to Baghdād, which was governed by ʿAṭāʾ Malik al-Djuwaynī (657-81/1258-82). He was represented locally by the *Ṣadr* Madjd al-Dīn Ṣalāḥ. Under the Il-Khānids, the town had relative prosperity and was partly reconstructed. Its urban framework underwent modifications, including the total ruin or disappearance of the eastern side as a result of the Mongol raids.

Under the Djalāyirids (740-813/1339-1410 [*q.v.*]), Wāsiṭ continued to figrre among the centres where coins were minted. Its strategic importance was evident in the campaigns of Tīmūr, who placed a powerful garrison there in 787/1385 and 808/1405. Wāsiṭ began its slow agony under the Turcoman Ḳara Ḳoyunlu (813-72/1410-67 [*q.v.*]), especially because of the blows struck by the Shīʿī movement of the Mushaʿshaʿ [*q.v.*]. The founder of this movement, Sayyid Muḥammad b. Falāḥ, attacked the town after 842/1438, and again in 844/1440 and 846/1442.

The attack led by his son and successor ʿAlī in 857/1453 or 858/1454 completed the ruin of the town, when it was abandoned by its inhabitants. The death of ʿAlī al-Mushaʿshaʿ in 861/1456 allowed

the fugitives from Wāsiṭ to go back to their decimated town. Some of them probably settled in the hamlet (the second Wāsiṭ) which they founded not far from the historic city. This latter city did not disappear, for its existence on the banks of the Tigris, which still ran through it, is attested in 941/1534, the year it was taken by the Ottomans, and even as late as 961/1553. Wāsiṭ was described in the middle of the 11th/17th century by Ḥādjdjī Khalīfa as being situated on a dry river bed (the Dudjayla) in the middle of the desert. The Tigris had just abandoned its mediaeval course for the present one, which is situated further east. The town of al-Ḥadjdjādj had disappeared.

Bibliography: See the references given in the article. There is no special monograph on Wāsiṭ nor any interest on the part of the *akhbāriyyūn*. The material for its history remains very scattered and heterogeneous.

1. The historical and topographical introd. of the *Taʾrīkh Wāsiṭ* of Aslam b. Sahl al-Razzāz al-Wāsiṭī, called Baḥshal, ed. Kūrkīs ʿAwwād, Baghdād 1387/1967, cited in the article, remains basic. The sources which flesh out this work, cited by the editor (introd., 11-12) are all lost: Ibn al-Maghāzilī al-Djullābī (d. 483/1090), *al-Dhayl ʿalā Taʾrīkh Wāsiṭ*; al-Dubaythī (d. 637/1239), *Taʾrīkh Wāsiṭ*; al-Djaʿfarī, (beginning of 10th/16th century or even before), *Taʾrīkh Wāsiṭ*; and Ibn al-Muhadhdhab, *ʿAdjāʾib Wāsiṭ*.

2. The standard histories include Khalīfa b. Khayyāṭ, *Taʾrīkh*; Balādhurī, *Futūḥ and Ansāb al-ashrāf*, ed. S. Zakkār, Beirut 1996 (errors); Dīnawarī, *al-Akhbār al-ṭiwāl*; Yaʿḳūbī, *Taʾrīkh* and *Buldān*; Ṭabarī, *Taʾrīkh*; Ibn Aʿtham al-Kūfī, *Futūḥ*, Beirut 1986, 4 vols.; Ṣūlī, *Akhbār al-Rāḍī wa ʾl-Muttaḳī bi ʾllāh*, Cairo 1935, tr. Canard, Algiers 1946-50; Masʿūdī, *Murūdj* and *Tanbīh*; anon., *al-ʿUyūn wa ʾl-ḥadāʾiḳ*, iii, ed. de Goeje and P. de Jong, Leiden 1869, iv/1, Nadjaf 1972, iv/2, Baghdād 1973; Ibn al-Djawzī, *al-Muntaẓam*, Ḥaydarābād 1357-9/1938-40, 6 vols. (useful for the period 257-574/871-1179); Sibṭ Ibn al-Djawzī, *Mirʾāt al-zamān* (useful but limited to the years 495-653/1101-1255); Ibn al-Fuwaṭī, *al-Ḥawādith al-djāmiʿa*, Baghdād 1932/1351 (useful for the period 626-700/1228-1301); Ibn Kathīr, *al-Bidāya wa ʾl-nihāya*. Biographical and hagiographical sources. Ibn al-Kalbī, *Djamharat al-nasab*, 3 vols. Damascus 1982; idem, *Nasab Maʿadd wa ʾl-Yaman*, 3 vols. Damascus 1988; Ibn Saʿd, *Ṭabaḳāt*, Beirut (vol. vii for Wāsiṭ); Khalīfa b. Khayyāṭ, *Ṭabaḳāt*; Ibn Ḥibbān, *Mashāhīr ʿulamāʾ al-amṣār*, Wiesbaden 1959; Ibn Ḥazm, *Djamhara*; al-Ḥāfiẓ al-Silafī, *Suʾālāt*, Damascus 1983; Ibn al-Djawzī, *Ṣifat al-Ṣafwa*, ii, Ḥaydarābād 1356/758.

3. Geographical sources, *riḥalāt, ziyārāt*. These include the classic works, plus Ibn al-Faḳīh, *Buldān* (new ed. announced by Yūsuf al-Hādī, incorporating the Mashhad ms., in which Wāsiṭ figures); Shābushtī, *Diyārāt*, Baghdād 1951; Mustawfī, *Nuzha*, ed. and tr. G. Lestrange, London 1919.

4. *Adab* works. These are very useful: Djāḥiẓ, *Ḥayawān*; Ibn Ḳutayba, *Maʿārif*, idem, *ʿUyūn al-akhbār*, Ibn ʿAbd Rabbih, *ʿIḳd*, Tanūkhī, *Nishwār al-muḥāḍara*; idem, *al-Faradj baʿd al-shidda*; Iṣfahānī, *Aghānī*; idem, *Maḳātil al-Ṭālibiyyīn*, Beirut n.d. (hagiographical); ʿImād al-Dīn al-Iṣfahānī, *Kharīdat al-ḳaṣr wa-djarīdat al-ʿaṣr* (vol. iv/2, Baghdād 1973, important for Wāsiṭ).

5. *Fiḳh* works, and those on fiscal and administrative history. These include Abū Yūsuf, *K. al-Kharādj*; Abū ʿUbayd b. Sallām, *K. al-Amwāl*; Ḳudāma b. Djaʿfar, *K. al-Kharādj*.

6. Studies. M.G. Morony, *Iraq after the Muslim conquest*, Princeton 1982. Further, M. Streck, *Die alte Landschaft Babylonien nach den arabischen Geographen*, Leiden 1900-01, ii, 318-38 (material on important sources for Wāsiṭ, but without any interpretation); J. Périer, *Vie d'al-Ḥadjdjādj Ibn Yousof*, Paris 1904, still useful; Le Strange, *Lands of the Eastern caliphate*, Cambridge 1905; H.H. Schaeder, *Ḥasan al-Baṣrī. (MONDHER SAKLY)

4. The mint.

Today virtually nothing remains of the city of Wāsiṭ, but its name lives on in the abundant Umayyad reform-style dirhams bearing its name. These outnumber by far all the other dirhams struck in more than eighty other mints operated by the Umayyads. Many of them are found in museums that contain Islamic coins, and new collectors of the series find them the easiest and least expensive way to learn about the early coinage of Islam.

Their abundance is due to the work of two men: the caliph ʿAbd al-Malik who, ruling in Damascus, introduced the purely epigraphic Islamic dīnār [*q.v.*] in the year 77/696-7, and the governor of ʿIrāḳ, Khurāsān and Sidjistān, al-Ḥadjdjādj b. Yūsuf [*q.v.*] who introduced a similarly epigraphic dirham [*q.v.*] in the following year, 78/697-8. Al-Ḥadjdjādj's original plan was to bring a uniform, high quality silver coinage to ʿIrāḳ and Persia by opening mints in a number of strategic locations throughout the area where stocks of the former Sāsānid and Arab Sāsānid coinages could be withdrawn from circulation and restruck on the new model. Chief among these mints were al-Kūfa, his seat of government, al-Baṣra, al-Rayy, Hamadhān, Shaḳḳ al-Taymara, Djayy, Sābūr and Marw. Many lesser known mints, such as Kaskar, Mihrdjanḳudhaḳ, Arḍ and ʿUmān, were open only briefly and are known today by no more than one or two specimens.

The military revolt of ʿAbd al-Raḥmān b. al-Ashʿath, which came to a head in 82/701 [see IBN AL-ASHʿATH] caused, among other things, his decentralised strategy of coinage production. ʿAbd al-Malik had already centralised the striking of gold and silver in Damascus, and when al-Ḥadjdjādj moved his seat of government

to Wāsiṭ in 83/702, he closed all the other mints under his control. Between the years 84/703 and 89/708 all the coinage in the east was confined to Wāsiṭ. The minting monopoly granted to Wāsiṭ gave al-Ḥadjdjādj control over the money supply, a valuable advantage at a time of political unrest. However, after 85/704, when al-Ḥadjdjādj became full master over Khurāsān, this monopoly and the consequent shortage of cash probably acted as a severe brake on trade and commercial activity.

In 90/709 al-Ḥadjdjādj reversed his centralisation of financial control by re-opening mints in Khūzistān, Djibāl, Fārs, Khurāsān and Sidjistān while maintaining Wāsiṭ as the main mint in ʿIrāḳ. After his death in Ramaḍān 95/June 714, there was a brief flurry of renewed minting activity in ʿIrāḳ, but this ended early in the reign of the caliph Sulaymān. During the years 98/716-17 and 99/717-18, the mints in Khūzistān, Djibāl and Fārs were closed down once again. While minting activity continued for a time in Khurāsān, this wholesale closure effectively restored Wāsiṭ's monopoly of coinage in the east.

Upon his accession as caliph in 99/717, ʿUmar II repudiated the administrative legacy of al-Ḥadjdjādj by appointing governors to both al-Kūfa and al-Baṣra, re-opening their mints and closing that of Wāsiṭ. No coinage is known to have been struck there in the year 100/718-19. After Yazīd II became caliph in 101, the Wāsiṭ mint was briefly re-opened, but it is not known to have produced any coinage in 102. From the following year, 103/721-2, until the downfall of the Umayyad dynasty in 132/750, the Wāsiṭ mint continued, year by year, to supply most of the dirham coinage for the east. Elsewhere in the Umayyad state, dirham mints were active in Spain (*al-Andalus*), North Africa (*Ifrīḳiya*), Syria (*Dimashk*), the North (*Armīniya, Ādharbāydjān* and *al-Bāb* (Darband)) and Khurāsān (*Balkh, Balkh al-Bayḍā'* and *al-Mubāraka*).

The most useful research on the Umayyad mint of Wāsiṭ was published by DeShazo and Bates in *The Umayyad Governors of al-ʿIrāq and the changing annulet patterns on their dirhams.* Here the authors point out that the annulet patterns of the dirhams change when the provincial governors change, and each pattern is, in general, characteristic for a single governor. They then provide a table listing the governors and their associated annulet patterns from 99 until 132. The significant fact which emerges from this study is that the annulet patterns are related to governors rather than to caliphs. Control of the coinage in ʿIrāḳ thus lay in the hands of its governors rather than any centralised mint administration under direct caliphal control. Presumably the annulet patterns were placed on the coins for ease of identification at a time when few could read the unpointed Kufic script with which they were inscribed. The placing of coinage under gubernatorial control was established by al-Ḥadjdjādj b. Yūsuf and continued until the end of Umayyad rule.

Marcel Jungfleisch tells a curious tale of the Wāsiṭ mint in his *Conjectures* about how Byzantine mints frequently struck coinages for one another. He states that coinages from the Constantinian and post-Constantinian eras bore mint signatures such as ALE and ANT which did not necessarily imply that they were actually struck in Alexandria or Antioch, but "pour le compte" of these mints. He then goes on to offer, as evidence for the same practice in the Muslim world, de Morgan's excavations at Wāsiṭ. When digging up the former Arab mint, de Morgan reportedly found a considerable number of newly-struck dirhams ready to be placed in circulation bearing the inscriptions *ḍuriba bi 'l-Andalus* and *ḍuriba bi-Ifrīḳiya*. Jungfleisch adds that these coins probably bore distinguishing marks proper to the mint of Wāsiṭ.

Commenting on this report, G.C. Miles stated, "I have not been able to locate de Morgan's account of this very interesting discovery, nor is the reference available in Jungfleisch". He concludes by saying, "I have often suspected that the manufacture of many Umayyad dies was centralized, but the actual striking of *al-Andalus* dirhams in southern Iraq would seem an extraordinary phenomenon". Concerning an excavation report prepared by M. Fuad Safar in 1945 in *Wāsit, the mint-town*, Ulla Linder Welin stated that "nothing is told of this previous excursion of M. de Morgan or of the supposed or excavated site of the workshop of the Wasit mint", and she provided a table listing all the dates, with references, for the coinage struck in Wāsiṭ. The present author agrees with Miles' judgement that Wāsiṭ was a likely centre for Umayyad die production, in particular after 103 when the same crisp, elegant calligraphy of the Wāsiṭ mint is encountered elsewhere, e.g. on the coinages of al-Bāb and al-Mubāraka. In conclusion, it is true to say that the Umayyad mint of Wāsiṭ was one of the most prolific the Islamic world has ever seen and its presence was felt throughout the Islamic world years after its closure.

The fall of the Umayyads brought about the immediate end of the Wāsiṭ mint and the re-opening of those of al-Kūfa in 132/750 and al-Baṣra one year later. These towns continued to be the main centres of coinage production in ʿIrāḳ until the ʿAbbāsid mints of Madīnat al-Salām and al-Muḥammadiyya became fully operational in 148/765. This division of mint production continued substantially unchanged until the struggle for power between al-Amīn and al-Ma'mūn affected the entire functioning of the ʿAbbāsid state. In the aftermath of al-Amīn's defeat in Baghdād in 198/813 and during the subsequent revolts in ʿIrāḳ, the Wāsiṭ mint was briefly re-opened for the second time in 200 with a dirham citing al-Ḥasan (b. Sahl) and Dhu 'l-Riyāsatayn, followed by a second dirham issue dated 203 citing al-ʿIrāḳ and Dhu 'l-Riyāsatayn. Both coins are notably rare, which suggests that the mint may have been reactivated in these years to make emergency payments to the caliphal army commanded by al-Ḥasan b. Sahl, the brother and deputy of al-Faḍl b. Sahl, Dhu 'l-Riyāsatayn, the vizier of al-Ma'mūn. By the time this conflict had ended, the concept of one or two pre-eminent mints had vanished, leaving a system of several regional mints in their place. The number of these mints gradually increased during the caliphates of al-Muʿtaṣim, al-Wāthiḳ and al-Mutawakkil, and during the reign of al-Muʿtazz the mint of Wāsiṭ was re-opened for the third time. It is known to have struck its first dirhams in 253/867 and dīnārs followed in 254. For the next century, the Wāsiṭ mint reflected the town's prosperity and was one of the more active in ʿIrāḳ, striking both dirhams and occasional dīnārs on standard ʿAbbāsid and Būyid patterns. After the Būyids seized control of ʿIrāḳ in 334/945, the coinage records become increasingly irregular and gradually draw to a close in the 360s and 370s with the rise in importance of the trading cities of al-Baṣra and Sūḳ al-Ahwāz. Finally, the Wāsiṭ mint ceased activity and went into a sleep which lasted for over three hundred years.

Wāsiṭ's fourth and last period of coinage activity began after Rashīd al-Dīn [*q.v.*], Ghazan's *wazīr*, brought about the reform of the Il-Khānid coinage

in 698/1298-9. The Il-Khānids re-opened several ʿIrāḳī mints, including Wāsiṭ, Ḥilla and al-Baṣra, while Baghdād retained its traditional position as the main mint of the province. Wāsiṭ and Baghdād, however, shared the distinction of being the only ʿIrāḳī mints to issue silver dīnārs valued at six dirhams. The dīnār was the apex of the Il-Khānid monetary system, with 10,000 forming the tūmān [*q.v.*], the Il-Khānid unit of account. It is possible that the elaborately decorated dies for these large coins were prepared at the instigation of Rashīd al-Dīn, in his role as a historian, to acknowledge the importance enjoyed by both Wāsiṭ and Madīnat al-Salām/Baghdād in the history of Islamic coinage production (see *B.M. cat.*, vi, 129).

Wāsiṭ thus became part of the extensive Il-Khānid mint system under Ghazan, Öldjeytü and Abū Saʿīd, and its position was maintained by the later Il-Khānids and the Djalāyirids, their successors in ʿIrāḳ. The political disorders which followed Tīmūr's invasion and occupation of ʿIrāḳ *ca.* 787-808/1385-1405, probably brought an end to minting activity in Wāsiṭ, as no coins are known from that time onwards. The demise of the city itself, brought about by the shifting of the course of the Tigris during the 9th/15th century, has precluded any revival of its former importance.

(R. Darley-Doran)

WĀSIṬA (a.), a Fāṭimid administrative term. It denoted an intermediary between the Fāṭimid ruler—the Imām—and the ruling establishment and people. The title of *wāsiṭa* conferred on chief administrators implied more limited powers and lower rank than that of vizier. The terms *wāsiṭa/wasāṭa* are attested in 5th/11th-century literary and documentary sources. The first person upon whom it was bestowed was the Kutāmī chief Ibn ʿAmmār, at the time of al-Ḥākim's coronation. Several administrators during the rule of al-Ḥākim (386-411/996-1021) and al-Ẓāhir (411-27/1021-36) [*q.vv.*] were appointed as *wāsiṭas*. However, the term disappears from the historical records around the second half of the 5th/11th century, following the militarisation of Fāṭimid politics and the rise of military viziers who wielded absolute political power in the state.

Sanders, *Ritual, politics, and the city in Fatimid Cairo*, Albany 1994, 23, 142. (Y. Lev)

WAṢIYYA (a.), in Islamic law, bequest, last will and testament.

In *fiḳh*, *waṣiyya* refers to two related notions: (1) that of bequest or legacy (defined as the transfer of the corpus or the usufruct (*manfaʿa*) of a thing after one's death without a consideration); and (2) that of appointing a testamentary executor or guardian over minor children. The term *waṣiyya* is sometimes translated as last will or testament, since for both legal acts a testamentary disposition is required.

1. *Historical background*

Several Ḳurʾānic verses mention or refer to bequests. From XXXVI, 50, it appears that making a bequest was usual among the Meccan merchants. In II, 180, those who have property are ordered to make bequests to their parents and close relatives. Making a provision to widows by bequest is commanded in II, 240. Finally, V, 106, requires the presence of witnesses when making a bequest. From these verses and other sources it is clear that the *waṣiyya* was known in pre-Islamic Arabia and was used to give the spouse relict and non-agnatic relatives a part of the estate at the expense of the male agnates. II, 180 and II, 240, are traditionally seen as the beginning of the Islamic law of succession, since they command the making of bequests, without limitations, to close relatives and spouses, who would be excluded under the pre-Islamic rules of agnatic succession. However, around the year 3/625 these verses are supposed to have been abrogated by the verses of inheritance (IV, 11, 12 and 176) that assign precise fractional shares to some of these relatives and to the spouse relict, whereas at the same time the Prophetic Sunna imposed two important restrictions, namely, that bequests were limited to one-third of the estate and that they could not be made in favour of existing heirs.

Recently, D.S. Powers (*Studies*, 143-89) has proposed a new theory on the development of the *waṣiyya*. He argues that the abrogation of the bequest verses did not become the accepted doctrine until some time after Muḥammad's death. During the first stage of the development of the Islamic law of succession there was much freedom in testation. A person could designate close relatives as heirs. If the testator chose to designate affinal relatives (wife, daughter-in-law) as such, certain relatives who would have inherited in the absence of such a provision were compensated with a share in the estate. Finally, one could make bequests, but not exceeding the value of one-third of the estate. Only later, during the 1st century A.H., was the classical doctrine generally accepted. Although Powers' theory is attractive, since it offers some explanations to certain issues that are as yet unclear, it is not uncontested. His main argument is a new and controversial vocalisation and reading of Ḳurʾān, IV, 12. Further, he maintains that of the two basic restrictions on making bequests, both laid down in *ḥadīths*, one, the limitation to one-third of the estate, dates from the Prophet's lifetime, whereas the other, the nullity of bequests to heirs, is of much later date.

2. *Classical legal doctrine*

(a) Bequests. In Islamic law, it is only possible to designate an heir by testament in the exceptional case that one does not have other heirs. Otherwise, testaments can only be used for the transfer of property by way of bequest or legacy. There are no formal requirements for the making of a bequest: it may be done in writing, but also orally or even through intelligible signs. In both cases witnesses must be present

in order to prove it. The testator, of course, must be of full legal capacity. The making of a bequest is regarded as an offer, which needs to be accepted in order to become binding and irrevocable. Since a basic principle of the law of bequests is that the testator can revoke a bequest during his lifetime, acceptance cannot take place before the testator's death. The Shīʿa hold that bequests can only be revoked expressly. According to the Sunnī law schools, implied revocation, for instance if the testator alienates or destroys the property bequeathed, is also valid. If after the testator's decease the legatee dies before having declared his acceptance or refusal, the right to accept passes to his heirs. After the testator's death, the ownership of the property is suspended until acceptance by the legatee. There is some difference of opinion about when exactly the ownership is transferred. According to most legal schools, the ownership is regarded to have been passed retroactively to the legatee from the moment of the testator's death. The Mālikīs and Ḥanbalīs, however, hold that the ownership is transferred at the moment of acceptance.

For a bequest to a specific person to be valid, he must be alive at the time of making the bequest and of the testator's death. The first condition, however, does not apply if the legatees are generic, e.g. the children of X. If the legatee predeceases the testator, the bequest fails. Under Shīʿī law, however, it is valid and devolves to the legatee's heirs. If the testator and legatee die in the same event, the rules with regard to inheritance apply. Contrary to intestate succession, difference of religion constitutes no bar for bequests, except, under Ḥanafī and Shīʿī law, if the legatee lives outside the *Dār al-Islām*. With regard to the case in which the legatee has killed the testator, opinions differ. The Ḥanafīs and Shīʿīs compare bequests with succession and, consequently, consider such killing an impediment. The other law schools regard bequests more like gifts, for which no such bar exists.

The object of a bequest can be specific or generic. Specific bequests are gifts of the corpus or the usufruct of particular items of property or the manumission of a slave. Such bequests are only valid if these items are owned by the testator at the time of his making the bequest. Generic bequests are gifts of certain quantities of fungible goods or of money, or gifts of a share of the testator's property. Regarding this type, it is not necessary that the testator should own the goods bequeathed at the time of making the bequest.

Bequests are subject to two restrictions: together they may not exceed one-third of the value of the estate and they may not be made in favour of an existing heir. Bequests made contrary to these rules are *ultra vires* and null unless they are ratified (*idjāza*) by the heirs, but only after the testator's death. If some heirs approve and others do not, the ratification holds good proportionally to the shares of the heirs who have approved.

With regard to the restriction to one-third of the estate, opinions differ as to when the value of the estate must be calculated. Most legal schools take the moment of the testator's death as the crucial time. The Ḥanafīs and Mālikīs, however, calculate the value of the estate at the moment the bequest becomes complete and binding, i.e. at the moment of acceptance for the Mālikīs and of actual transfer of ownership for the Ḥanafīs. This is, of course, important in cases when the value of the estate has changed after the testator's death. If a bequest exceeds the value of one-third of the estate, it is valid for the part not exceeding this limit but fails for the surplus. If there are more bequests, together taking up more than the third of the estate, the situation becomes more complicated. The Sunnī law schools apply a *pro rata* abatement, whereas the Shīʿīs use chronology as a yardstick: the earlier bequests have priority over the more recent ones. If there are no heirs, bequests may exceed one-third of the estate, except according to the Mālikīs, because they regard the Public Treasury as an heir whose interests are protected in the same way as the other heirs. The second restriction operating with regard to bequests is the provision that bequests may not be made in favour of an existing heir. This rule is not accepted by the Shīʿīs. The moment for determining who counts as an heir is, of course, the moment of the testator's death.

(b) Last illness (*maraḍ al-mawt*). Although a person is free during his or her lifetime to dispose of his or her property as he or she pleases, this freedom ends as soon as the process of dying sets in. During the last illness, or under comparable circumstances in which death seems imminent (e.g. a shipwreck, a flood or a fire) a person is put under a limited interdiction (*ḥadjr*) in order to protect the interests of his or her heirs: by any dispositions—liberal acts such as gifts, *waḳf*s, manumission, suretyship, or generosity in trade or hiring—such a person may not diminish the value of his or her estate for more than one-third of the property. Under these circumstances, such acts are equated with bequests. Disadvantageous dispositions exceeding the limit of one-third of the estate may therefore be nullified by the heirs after the testator's death.

The last illness, in order to be invoked by the heirs, must have effectively ended with death. Establishing whether a certain legal act was performed during one's last illness is a retrospective activity. There are three criteria for determining whether an illness or certain circumstances can count as the last illness. (1) Was the gravity of the condition or circumstances sufficiently serious for apprehending death?. (2) Was the apprehension of impending death uninterrupted? (3) Was the death the result of the illness or circumstances?

(c) Appointment of a testamentary executor or guardian. One may appoint by testament an executor (*waṣiyy*) to take care, after one's death, of the settlement and the recovery of debts, the payment of bequests and the division of the estate among the heirs or a guardian (also called *waṣiyy*) over minor children. If the deceased has failed to do so, the *ḳāḍī* must appoint an executor to administer and liquidate the estate if the value of the debts exceeds the value of the estate, or if there are minors or missing persons among the heirs.

3. *Recent developments*

For recent reforms in the law of bequests, see MĪRĀTH. 2.

WAṢL (A.), a term of Arabic grammar broadly denoting juncture, i.e. a syntactic or phonological "connecting"; it is thus the antonym of both interruption (*ḳaṭʿ* [*q.v.*]) and pause (*waḳf* [*q.v.*]).

Its origin is probably in Ḳur'ān recitation, where the choice of proceeding to the next word without a break depends mainly on syntactic or semantic considerations, the text being marked accordingly with signs for optional, preferable or compulsory *waṣl.*

The term occurs most commonly in the phrase *alif al-waṣl*, alternatively, but less transparently, *hamzat al-waṣl*, referring to the prosthetic *alif* found before word-initial consonant clusters and creating an artificial syllable (*'a-*, *'i-* or *'u-*, according to context), whose purpose is to split the consonant cluster and thereby avoid a non-canonical syllable beginning with two consonants, hence **ktul* (CCVC) becomes *'uk-tul* (CVC-CVC) etc. (In foreign loan words and names, this same process leads to *hamzat al-ḳaṭ'*, e.g. Plato > *'Aflāṭūn*, Aram. *Klīlā* > *'iklīl* "crown".) Although this feature of Arabic is well known, the rationale behind the term *hamzat al-waṣl* is obscure (a mere formal contrast with *hamzat al-ḳaṭ'* in writing?), since the true consonantal *hamza* [*q.v.*] is unaffected by *waṣl.*

The *alif al-waṣl* arose orthographically, when words were dictated slowly enough to be spelt as if in isolation, with the *alif* still having its historical value of *hamzat al-ḳaṭ'*. In juncture this *hamza* is elided, for which situation the *waṣla* sign was later invented, viz. a small *ṣād* (from the root *waṣala*) over the *alif* indicating that it was to be ignored. Interestingly, this *alif* and the *waṣla* sign are retained after prefixes such as *wa-*, *fa-*, *bi-* (but not *li-* before the definite article, perhaps for aesthetic reasons), suggesting that in dictation the *hamzat al-ḳaṭ'* was preserved even here, e.g. **wa 'uktul* for *wa-ktul* (but note the exceptional phonetic spelling in such very common phrases as *bismi llāhi* etc.). The same spelling convention implies that the definite article *'al*, whose first letter is itself an *alif al-waṣl*, was also dictated as if in isolation before words already beginning with *alif al-waṣl*, e.g. **'al 'ikhtilāf*, not *'alikhtilāf.* The grammarians claim that *alif al-waṣl* is basically a property of verbs, though undoubtedly it is most frequently seen with the definite article. Apart from the *maṣdars* of stems VII and higher, several relatively common nouns also have it, e.g. *ism, ibn, imra'a, ist* and *ithnān.*

By definition, the *hamzat al-waṣl* cannot be realised as a *hamzat al-ḳaṭ'* within a word, and therefore should never be written as one, yet this is now clearly an accepted modern spelling, e.g. *al-'ikhtilāf* (curiously, the definite article does not acquire *hamzat al-ḳaṭ'*). In mediaeval poetry, the *hamzat al-waṣl* sometimes becomes *hamzat al-ḳaṭ'* for metrical reasons, but it is too early to say whether the new spelling will prevail in the surviving classical metres, in which case contemporary and mediaeval prosody will become incompatible on that point.

The notion of *waṣl* in syntax is less well defined. Various forms of stems I and IV of the root *w-ṣ-l* are used by Sībawayhi [*q.v.*] to represent the connection between verbs and their objects (Troupeau, entries rendered "parvenir à"), and *waṣl* is an occasional synonym of *ṣila* [*q.v.*] (appended clause, especially relative clause). We may also include here the cognate *wuṣla*, one of a group of terms for referential and copulative elements mostly called *'ā'id* but also *rābiṭ(a)* and *rādji'*. Finally, stem VIII provides a term for such widely differing phenomena as bound pronouns (*ḍamīr muttaṣil*: opposite, *ḍamīr munfaṣil* "separate, independent pronoun") and exceptive sentences of the type *(mā) ḳāma l-ḳawmu 'illā zayd^{an} (zayd^{un})* (*istithnā' muttaṣil*: opposite, *istithnā' munḳaṭi'*, e.g. *mā djā'anī aḥad^{un} illā ḥimār^{an}*).

WASM (a.), pl. *wusūm*, brand. Bedouins have branded their camels since ancient times (G. Jacob, *Altarabisches Beduinenleben*, Berlin 1897, 71). A Bedouin will normally be able to identify each of his camels without the aid of a brand; but the brand is helpful when camels belonging to many different owners are gathered in one place (e.g. at a water-source). Camels often stray and sometimes are stolen; a branded camel can usually be described so fully by its owner that another Bedouin will be able to identify it with assurance on the basis of the description alone (author's observations in Sinai; cf. F. Beslay, *Les Réguibats*, Paris 1984, 58).

One *wasm* is distinguished from another not only by its appearance but also by its location on the animal's body (e.g. right cheek). The signs that make up the brand have individual names, e.g. *maṭraḳ* "stick", *hilāl* "crescent". Such arbitrary signs are used throughout the Arab world; but in North Africa some tribes, especially maraboutic ones, instead use letters or even whole words, e.g. Muḥammad, Allāh, Makka (P. Kahle, *Die Aulād-'Ali-Beduinen der Libyschen Wüste*, in *Isl.*, iv [1913], 367; Le Borgne, *Vocabulaire technique du chameau en Mauritanie (dialecte hassanya)*, in *BIFAO*, xv [1953], 365).

The several signs making up a brand may signify respectively the tribe, a group within the tribe, and even a sub-group of that group. Among the Rashā'ida of the Sudan, each man adds his own individual sign to the mark of the group (W.C. Young, *The Rashaayda Bedouin*, Fort Worth, Texas 1996, 86-8); much more commonly, however, a group shares a brand, though where this is the general practice men of great wealth may still have their individual *wusūm* (H.R.P. Dickson, *The Arab of the desert*, London 1951, 420-1).

Brands are sometimes placed on animals other than camels, e.g. cattle, water-buffalo, donkeys (but not horses), and even sheep (though ear-clipping is a more usual way of marking small stock). *Wusūm* also often appear on things other than animals, e.g. tombs, rocks, wells or trees. Sometimes, at least, they indicate that the object so marked is in the territory of, or is protected by, the group whose sign it bears. The Muzayna of Sinai place the *wasm* of their descent group "on hut doors for good luck and on storage boxes for identification"; and sometimes they tattoo their brand on members of the group—on the foreheads of women, and on the backs of the hands of both men and women (Smadar Lavie, *The poetics of military occupation*, Berkeley 1990, 14-15). In northern Palestine, in contrast, tribesmen used to mark a cattle thief by burning their *wasm* on his thigh (J. Sonnen, *Die Beduinen am See Genesareth*, Cologne 1952, 162).

Bibliography: The only general study is the excellent, though now rather outdated, article by A. van Gennep, *Les "wasm", ou marques de propriété des arabes*, in *Internationales Archiv für Ethnographie*, xv (1902), 85-98. WAṢṢĀF (in full, Waṣṣāf al-Ḥaḍrat "the court panegyrist"), *nom-de-plume* of S̲h̲ihāb al-Dīn ʿAbd Allāh b. ʿIzz al-Dīn Faḍl Allāh S̲h̲īrāzī, chronicler and poet of Mongol Persia in the early 8th/14th century. He was the author of the *Tārīk̲h̲-i Waṣṣāf* (more precisely, *Tad̲j̲ziyat al-amṣār wa-tazd̲j̲iyat al-aʿṣār* "The allocation of cities and the propulsion of epochs"), a history of the Il-K̲h̲āns [*q.v.*] from 658/1260 in five volumes, designed as a sequel to the *Tārīk̲h̲-i D̲j̲ahān-gus̲h̲ā* of D̲j̲uwaynī [*q.v.*]. The preface is dated S̲h̲aʿbān 699/April-May 1300 (*Tārīk̲h̲-i Waṣṣāf*, 6). Through the instrumentality of the viziers Ras̲h̲īd al-Dīn Faḍl Allāh [*q.v.*] and Saʿd al-Dīn, the author and his historical work were presented at ʿĀna on 13 Rad̲j̲ab 702/3 March 1303 to the Il-K̲h̲ān G̲h̲azan [*q.v.*], who showed him great favour and allotted him a pension (*ibid.*, 405-7). Four volumes were completed by 24 Muḥarram 712/1 June 1312, when his patron Ras̲h̲īd al-Dīn enabled Waṣṣāf to submit them in person to G̲h̲azan's successor Öld̲j̲eytü [*q.v.*] (Ūld̲j̲āītū; *ibid.*, 544). The fifth volume was finished much later, the current year being variously given as 727 and 728 (see Barthold, *Turkestan*[3], 49 n. 2).

Waṣṣāf did not merely emulate D̲j̲uwaynī's florid and bombastic style but perpetrated even greater excesses, which were in turn to provide a model for subsequent Persian historiography. Although the two viziers allegedly praised the *Tārīk̲h̲* and declared that no finer combination of Persian and Arabic had ever been achieved in any historical work, Öld̲j̲eytü was unable to understand a word of the passage which Waṣṣāf read to him (*Tārīk̲h̲-i Waṣṣāf*, 405). Modern historians have often shared the Il-K̲h̲ān's incomprehension, a circumstance which is all the more regrettable in view of the valuable material contained in the *Tārīk̲h̲*. Its importance for Il-K̲h̲ānid history is that it is completely independent of our other principal source, Ras̲h̲īd al-Dīn's encyclopaedic *D̲j̲āmiʿ al-tawārīk̲h̲*, and provides us with a quite different perspective. Waṣṣāf, who describes himself (*ibid.*, 626) as a client of the Salg̲h̲ūrids [*q.v.*], the former ruling dynasty of Fārs, was for some years employed in the financial administration of that province, and under Öld̲j̲eytü's son and successor Abū Saʿīd, he was put in charge of revenue collection in the districts of Fīrūzābād, Ḳīr and Kārzīn (*ibid.*, 653; cf. also 630, 632-3; and for these localities, see Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, ed. G. Le Strange, Leiden and London 1915, 118). He is therefore particularly informative on fiscal affairs and on the history of the dynasties of southern Persia that were subordinate to the Il-K̲h̲āns. But he also furnishes valuable data on the history of the Mongols elsewhere, notably those of China and of the Čag̲h̲atay k̲h̲ānate [*q.v.*] and the Mongol state in Central Asia ruled by Ḳaydu [*q.v.*]. In addition, the *Tārīk̲h̲* includes two valuable notices on the Dihlī Sultanate [*q.v.*], of which the first was incorporated by Ras̲h̲īd al-Dīn in 702/1303 into the section on India in his own work (ed. K. Jahn, *Die Indiengeschichte des Rašīd ad-Dīn*, Vienna 1980, 9).

WAṬAN (a.), "homeland, fatherland", an Arabic near-equivalent of the term *patria* of the Latin Middle Ages in most of its shades. As we learn from normative lexicographical entries and actual usage in literary and historical texts alike, *waṭan* or *mawṭin* was, in the beginning, a wholly apolitical term denoting simply the place of birth or stay (*LʿA*, Beirut ed., xiii, 451a, l. 8). In al-S̲h̲arīf al-D̲j̲urd̲j̲ānī's (d. 816/1413) *Book of definitions* (*Kitāb al-taʿrīfāt*, 237, ll. 18-20) we find the meaning of *waṭan* split into "permanent residence" and "temporary and transitory sojourn (of at least a fortnight)". The Indian encyclopaedist Muḥammad b. ʿAlāʾ al-Tahānawī (18th century) differentiates between the place of origin in whose selection one does not have any influence (*al-waṭan al-aṣlī, al-waṭan al-ahlī*), and a chosen place of stay of a shorter or longer duration (*waṭan al-fiṭra wa ʾl-ḳarār, waṭan al-iḳāma wa ʾl-safar*) (*Kas̲h̲s̲h̲āf iṣṭilāḥāt al-funūn*, ed. A. Sprenger, ii, 1519-20). In Prophetic tradition, *waṭan* stands side-by-side—and thus in rough equivalence—with the general terms *dār* "house" and *bilād* "land". Elsewhere we find it used in the restricted sense of *mawḍiʿ* equalling *mas̲h̲had* "battlefield" (*LʿA*, xiii, 451b, ll. 3 ff.), i.e. of the place where the collective self is defended against outsiders. Battles are known to have served as important focuses of national sentiment also in the mediaeval West.

Fidelity to one's *mawṭin* in the sense of home is axiomatic. Every human is imbued with it. According to al-D̲j̲āḥiẓ, it is the ambience, i.e. for all practical purposes what is meant by *waṭan*, that shapes man. The sentiment of longing for the homeland (*al-ḥanīn ilā ʾl-awṭān*), also the title of one of al-D̲j̲āḥiẓ's famous short epistles (ed. ʿAbd al-Salām Hārūn, in *Rasāʾil*, ii, Cairo 1384/1964, 383-412), encompasses also, and even with particular intensity, the itinerant nomadic tribesman who roams around in the steppes and who—in spite of or even because of his lifestyle—feels so strongly attached to his home sites. Al-D̲j̲āḥiẓ's treatise on the merits of the Turks (*Risāla ilā ʾl-Fatḥ b. K̲h̲āḳān fī manāḳib al-Turk wa-ʿāmmat d̲j̲und al-k̲h̲ilāfa*, in *Rasāʾil*, i, 5-86) abundantly testifies to this philosophy. "The country of a man is his wetnurse and his house is his cradle" (*al-Ḥanīn*, 386, l. 3), "The nature of man is kneaded from love for one's homeland" (*ibid.*, 387, l. 5), and "If a bird longs for his nest, how much more is man entitled to yearn for his homeland" (*ibid.*, 386, ll. 7-8), are some of al-D̲j̲āḥiẓ's patent sayings on the natural attachment of man to his home. The Western equivalent to this primordial sentiment is the *amor soli naturalis* which we find invoked by the Dominican master Humbert of Romans (d. 1277) as a lamentable impediment to the Crusading spirit.

Like the Latin *dulcis patria*, *waṭan* (or *mawṭin*) has also a more abstract, figurative meaning that sheds the distinctly local connotations by signifying the place where one comes to rest. *Waṭan* shares this metonymic meaning with *al-aṭlāl* ("traces of an abandoned encampment") and *al-manāzil wa ʾl-diyār* ("camp sites and houses"). For Averroes (d. 1198), who had long enough struggled with the boring details of Mālikī law, philosophy became the *waṭan* proper of the intellect. The mystics, in particular, liked the term *waṭan* and implemented it in various meanings. For the anonymous author of the Ṣūfī manual *Adab al-mulūk* of the

4th/10th century, the "houses of God", i.e. the mosques, were the real home (ed. B. Radtke, Beirut and Stuttgart 1991, 60-1, § 22). Other Ṣūfīs gave a spiritual meaning to the term *waṭan*. The mystic al-Sarrādj (d. 378/988), in his list of difficult mystic terms (The *Kitáb al-Lumaʿ fi ʾl-Taṣawwuf of Abú Naṣr ʿAbdalláh b. ʿAlí al-Sarráj al-Ṭúsí*, ed. R. Nicholson, 369, ll. 1-12), defines it as the locality "where man is led by his state and where he settles down" (*waṭan al-ʿabd ḥaythu ʾntahā bihi ʾl-ḥāl wa ʾstaḳarra bihi ʾl-ḳarār*). That is, *waṭan* is no longer a point of departure but rather a destination for man's activities and movements. An older Ṣūfī authority quoted by al-Sarrādj, Abū Sulaymān al-Dārānī (d. 215/830; on him, see R. Gramlich in *Oriens*, xxxiii [1992], 22-85), even uses the plural *waṭanāt* (here, probably the pl. of the *nomen vicis waṭna*) in the very general meaning of solid and unimpeachable foundations, and contrasts them with the *khaṭarāt* denoting furtiveness, casualness, and lack of reliability (*Lumaʿ*, 369, ll. 9-10). Finally, in the biographies of mystics collected by al-Sulamī (d. 412/1021), the notions of "silence" (*ṣamt*), i.e. of concentrating one's thoughts on God, as well as of *ṣidḳ* "truthfulness", are related to *waṭan* (*Ṭabaḳāt al-ṣūfiyya*, ed. Nūr al-Dīn Sharība, Cairo 1406/1986, 478, 747).

The Prophet Muḥammad is credited with the famous saying, "Love of the homeland is a sign of belief" (*ḥubb al-waṭan min al-īmān*), a proposition that was to have a great impact also on modern nationalist thought. This tenet predicated on the notion of *waṭan* was also adopted by the Ṣūfīs. When an adept of the 8th/14th century *shaykh* Ṣafī al-Dīn of Ardabīl, the eponym of the Ṣafawid order and state, wondered how love for a piece of land—a natural sentiment shared by many unbelievers such as the Christians of Europe—could possibly be declared proof of proper belief, the *shaykh* responded that *waṭan* did not simply mean a geographically-definable territory but rather the heavenly kingdom for which the seeker of truth is obliged to strive (Ibn-i Bazzāz, *Ṣafwat al-ṣafā*, quoted by A.K.S. Lambton, in ḲAWMIYYA. iii, at Vol. IV, 785b).

Haarmann, *Glaubensvolk und Nation im islamischen und lateinischen Mittelalter*, in *Berlin-Brandenburgische Akademie der Wissenschaften. Berichte und Abhandlungen*, ii (1996), 161-99, esp. 165-9.

(U. HAARMANN)

WAṬANIYYA (A.), nationalism, patriotism, civic pride, in all the modern applications of these terms. The word appeared at the end of the 19th century, in the context of the extension to the field of state politics of *waṭan* (pl. *awṭān*) "homeland", hitherto applied to place of birth or of residence. The noun-adjective *waṭanī* refers to the same sectors of meaning (autochthonous, national, patriotic), while the noun *muwāṭin* denotes a compatriot or fellow-citizen.

A pioneering role in the inculcation of these notions is to be credited to Rifāʿa Rāfiʿ al-Ṭahṭāwī [*q.v.*]. "Love of country" (*ḥubb al-waṭan*), in the modern sense of the term, spans his entire corpus, but he provides a more detailed analysis of the subject in a preface to *Manāhidj al-albāb al-miṣriyya fī mabāhidj al-ādāb al-ʿaṣriyya* (1869) and in a long section of *al-Murshid al-amīn li ʾl-banāt wa ʾl-banīn* (1873). He starts with *milla*, in the politico-administrative extensions that it acquired in the Ottoman empire [see MILLET], beyond its initial application to a religious community, since it also denotes territorial communities: *al-ahālī* (indigenous, autochthonous peoples), *al-raʿiyya* (subjects), *al-djins* (race, ethnic group) and *abnāʾ al-waṭan* (inhabitants, natives, compatriots). It is to these last—whether the reference is to established populations or to those who have come in search of refuge and subsequently settled in the locality—that the qualificatives *baladī*/*waṭanī* (compatriot/fellow-citizen) are applied. They are part of a "patriotic brotherhood", "over and above religious brotherhood", and share the same pride in common patrimony, implanted in this case in Egyptian pre-Islam. But it is the values of "civic pride" that are denoted by *waṭaniyya* when the context is the obligations required by "patriotism": contributing to anything which has the potential to promote the glory of the common homeland, guaranteeing its prosperity through the development of public utilities and accepting the laws of the country as incarnated in the person of its sovereign.

A transference of the principal connotation to that of "nationalism" [see ḲAWMIYYA. i] is first observed in resistance to the financial and political control exercised by the European creditors of the Egyptian debt (1876-82). Egyptian officers of established local families (*waṭaniyyūn*), opposed from the outset to the ascendancy of Turko-Circassians, sought to operate in conjunction with constitutionalist elements. A *Djamʿiyya Waṭaniyya* (later known as the National Party) represented their claims, from April 1879 onwards. Composite and unwieldy, this movement was part of the episode known as "the ʿUrābī Pasha [*q.v.*] revolution". Its defeat was sealed by the British military occupation of Egypt.

For decades to come, *waṭaniyya* was applied to the nationalist form of Egyptian patriotism, in the sense of a demand for return of Egypt to the Egyptians, a national movement for liberation from British domination. This found its expression in political platforms, the subject of competition; for example, before the First World War, the "national" Party (*al-Ḥizb al-Waṭanī*), was the rival of *Ḥizb al-Umma* ("party of the nation").

Elsewhere, in the Mashriḳ as in the Maghrib, while trade union and other organisations describe themselves as national (*waṭaniyya*), in reference to territory produced by colonial dismemberment, *waṭaniyya* denotes the conceptual and practical aspects of what was known since the 1920s as *ḥarakat al-taḥrīr al-waṭanī* ("movement of national liberation"). It is most often applied to a particular, limited territory, but sometimes enlarged to encompass the Arab world (*niḍāl al-ʿarab al-waṭanī, ḥurriyyāt al-ʿarab al-waṭaniyya*, in the context of their struggle or their freedom). But both the adjective and the substantive can denote the positive sense and the pejorative sense of the term, for example, *al-waṭaniyya al-fāshistiyya* and *al-waṭaniyya al-istiʿmāriyya* (fascist nationalism, colonialist nationalism). It is not until the eve of the Second World War that a precise distinction is drawn, in ideological terms, between *waṭaniyya* and *ḳawmiyya*. The first refers to a territory, the second to the inhabitants of the latter, to the people, with the same convergent nuance as is attested elsewhere. Thus in 1936, in reference to the national sentiment of Abyssinians confronted by the Italian conquest, the expression *shuʿūr waṭanī ḳawmī* is encountered. But it is not always a case of redundancy, or of distinguishing oneself, as in Morocco, by using a term equivalent to that retained by an adversary or competitor. After 1933, but especially from 1936 onwards, in the columns of the Libano-Syrian journal *al-Ṭalīʿa* (a platform shared by the various branches of the Eastern national movement), although less common than *waṭaniyya* and its derivatives, *ḳawmiyya*

and its derivatives made their appearance and their meaning is made precise, independently of territorial, national or regional extension, by reference to the German concept of *Volkstum*; rather than the concept of territory, it is that of the people, in the ethno-racial sense, in the blood line, that holds sway.

Differences are to be noted from the 1940s onwards. Begun by Syria and Lebanon, accession to political independence without limitations imposed by treaty became the norm. The formation of the League of Arab States (1945) gave credibility to elements favouring Arab unity, the successors of those who in the 1920s had opposed the Anglo-French partition of "natural" Syria. The party of Arab rebirth, *Ḥizb al-Baʿth al-ʿArabī*, the proponents of Nasserism, then the movement of Arab nationalists (*ḥarakat al-ḳawmiyyīn al-ʿarab*) drew a clear distinction between *ḳawmiyya* (Arab nationalism, Pan-Arabism) and *waṭaniyya*, the latter being out of favour as denoting narrow, national patriotism. Baʿthist ideology developed the terms *iḳlīmiyya/ḳuṭriyya* "regionalism" as a means of denouncing these tendencies. Marxist tendencies were most often the target, at the very time when the *ḳawmiyyūn* were professing an "Arab socialism". Their reference to *umamiyya* (the equivalent here of "internationalism") is criticised as a consequence of their *waṭaniyya/ḳuṭriyya*, limited to "class" and irrespective of the Arab *umma*. Lexical and conceptual analysis of the principal charters and of the congresses of the 1960s and the 1970s of the Arab world (an exercise previously in progress, in academic studies and in seminars under the present writer's supervision) reveals, however, a preponderance in this field for derivatives of the root *w-ṭ-n* over derivatives of the root *ḳ-w-m*.

In fact, successive failures of experiments aimed at Arab unity, in whatever form, have placed the *ḳawmiyyūn* on the "territorial" plain where they criticised the *waṭaniyyūn* for their self-cantonisation, and recent debates. In particular, an inter-Arab seminar held in Damascus at the end of 1996, made it clear that, despite the need to display realism and commitment to the preservation of the democratic achievements of each country, these *waṭaniyyūn* have not neglected to adopt a position favourable to the notion of Arab unity, on the basis of shared patrimony and shared destiny.

Lewis, *The political language of Islam*, Chicago 1988, 40-1. (J. COULAND)

WATHANIYYA (A.), idolatry. In classical Arabic it is the phrase *ʿibādat al-aṣnām* (or *al-awthān*) that denotes idolatry, while idolaters are called *ʿabadat al-aṣnām* (or *al-awthān*). The term *wathaniyya*, still absent from the *Lisān al-ʿArab* of Ibn Manẓūr (d. 711/1311), figures in the *Kashshāf* (1516), compiled in 1158/1745 by al-Tahānawī. According to him, the term denotes: "A group of unbelievers who worship idols while asserting that God is one. They are counted among the associators because they profess the plurality of that which deserves to be worshipped, not because they profess the plurality of the Necessary Being in itself; they do not give idols the attributes of divinity, although they apply the name to them. In fact, they take them to be the statues of prophets, ascetics, angels or stars that are taken as objects of veneration, with the aim of approaching through them that which is a god in reality (*tawaṣṣul^an^ bihā ilā mā huwa ilāh^un^ ḥaḳīḳat^an^*). This is the meaning that is conveyed by the *Sharḥ al-Mawāḳif* (of al-Djurdjānī, d. 816/1413) and the gloss on it supplied by [Ḥasan] al-Čelebī in the study of *tawḥīd*."

It is appropriate to examine (1) the vocabulary of idols in the Ḳurʾān and in *ḥadīth*; (2) the various categories of idolaters known to Muslims; (3) opinions regarding the origin of idolatry; and (4) idolatry in the context of *tawḥīd* (and its refutation).

In the Ḳurʾān, idols are explicitly mentioned with the use of two words: *ṣanam* [*q.v.*], five times, always in the plural *aṣnām*, and *wathan*, three times, always in the plural *awthān*. Of these eight instances, six relate to Abraham, while VII, 138 (*aṣnām*) anticipates a passage dealing with the Golden Calf, and XXII, 30 warns against defilement by idols (*awthān*) of the pre-Islamic pilgrimage. Scholars are divided as to the difference in meaning between the two terms. Al-Ṭabarī, xiii, 228 (*ad* Ḳurʾān, XIV, 35) cites Mudjāhid, according to whom the *ṣanam* is "a fashioned similitude" (*al-timthāl al-muṣawwar*) which would distinguish it from the simple *wathan*. The same direction is followed by Ibn al-Kalbī (d. *ca.* 204/820), *al-Aṣnām*, 47d (cf. 29d): "If it is worked in wood, in gold or in silver in the likeness of man, it is a *ṣanam*." But according to one of the views conveyed by the *LA* in its two entries (and followed by al-Tahānawī, *loc. cit.*), on the contrary, it is the *wathan* which is characterised by the representation of a body (*djuththa*); in fact, in the Ḳurʾān, two instances of *awthān* refer to the idols smashed by Abraham, which are clearly statues (*tamāthīl*, according to XXI, 52). In another passage of al-Ṭabarī, vii, 244 (*ad* Ḳurʾān, VI, 74), the two words seem to be regarded as equivalents. Among many authors, they are interchangeable. This seems already to be the case in canonical *ḥadīth*s, where one or the other term is used quite regularly.

Alongside these idols, i.e. tri-dimensional representations of animate beings addressed by a cult, there were also sacred stones [see NUṢUB]. These are mentioned three times in the Ḳurʾān, in V, 3, in LXX, 43 and (in the plural *anṣāb*) in V, 90, and there are several other references in the canonical traditions.

These fundamental texts, when they are not speaking of biblical characters, attribute idolatry to the pre-Islamic Arabs. The Muslim authors who follow echo this trend, and many of them devote long articles, or entire works, to the subject. Thus Ibn al-Kalbī, not only in his well-known *al-Aṣnām*, but also in his lost book *Adyān al-ʿArab* and doubtless in *Mathālib al-ʿArab*, which survives in manuscript form. Al-Djāḥiẓ, for his part, wrote an *Adyān al-ʿArab* and an *al-Aṣnām*. Unfortunately they are lost, as is a work by ʿAlī b. al-Ḥusayn b. Fuḍayl (end of 3rd/9th century), *al-Aṣnām wa-mā kānat al-ʿArab wa ʾl-ʿAdjam taʿbudu min dūni ʾllāh* (according to *Fihrist*, ed. Tadjaddud, Tehran 1391 A.H./1350 A.H.S./1971, 138). Such writings give information, which can be checked and complemented by other means, regarding the traditional religion of Central Arabia and its divinities [see HUBAL; ISĀF WA-NĀʾILA; AL-LĀT].

But Islam, born in the midst of idolaters, soon encountered others in India, whose immense numbers and intense fervour intrigued writers such as al-Djāḥiẓ or Abū Zayd al-Balkhī. The Hindu cult of images could not fail to strike, and to offend, Muslims with its sumptuousness and alien nature. These "idols" were described in the *Kitāb fīhi milal al-Hind wa-adyānuhā*, composed as early as 180/800, on his return from India, by an envoy of the vizier Yaḥyā b. Khālid al-Barmakī.

The work is lost, but is said to be the basis of all subsequent works. The latter often mention the *bidada* (plural of *budd*), i.e. statues of Buddha (or of Bodhisattva). For while Buddhism had virtually disappeared from the Indian subcontinent, it had taken firm root in the eastern half of the Iranian world and was present there on the arrival of Islam [see SUMANIYYA].

On the other hand, Muslim authors drew attention to accounts available to them concerning the idols of ancient Persia before the introduction of the cult of fire (*Murūdj*, ed. Pellat, §§ 1373, 1400, 1403; al-Shahrastānī, *Milal*, ii, 1224, tr. ii, 494). They were even more interested in the intriguing "Sabians" who are mentioned three times in the Ḳur'ān, and whose name the inhabitants of Ḥarrān appropriated, in 218/993 or just before, in order to benefit from the *djizya* [see ṢĀBI'A]. These last-named followers of Hellenistic cults are persistently credited by the Muslims with a veneration of the stars that would finally be corrupted into the worship of idols. The most remarkable presentation and refutation of this real or alleged religion are to be found in the *Milal* of al-Shahrastānī. According to him, the "primitive Sabians" addressed their cult only to the Spiritual beings (*rūḥāniyyāt*) as the natural intercessors in the presence of the Lord of lords, but the need of visible intermediaries subsequently introduced the cult of stars as Dwellings (*hayākil*) of the Spiritual beings, then of idols as representations (*ashkhāṣ*) of these Dwellings.

Furthermore, African cults are occasionally mentioned by Arab geographers and historians. Fetishes first appear in the work of Ibn Ḥazm with the name *dakḳūr*, pl. *daḳāḳira*, then in the work of others in the form *dakkūr*, pl. *dakākīr* (cf. Monnot 1986, 115).

Over and above the strangeness and the provocation inherent in the idolatrous cults, these posed a problem for the doctrine of Islam according to which monotheism is inherent in the original nature (*fiṭra* [*q.v.*]) of man, that is, in the disposition imprinted upon him by the Creator. How then did idolatry come into being? The most thorough answer is proposed by Abū Zayd al-Balkhī (d. 322/934) in *al-Radd ʿalā ʿabadat al-aṣnām*. This refutation of idolaters is lost, but fortunately a long quotation from it has been preserved by al-Rāzī in his *Tafsīr*, xxx, 143 (tr. Monnot, 1986, 215-18). As for the origins of idolatry in the world, Abū Zayd offers no fewer than seven possibilities.

According to the first, "Idolatry is nothing other than a consequence of the doctrine according to which God is a localised entity"; the *tadjsīm* of God and of His angels is responsible for it. This explanation (reproduced for example in al-Masʿūdī, *Murūdj*, § 1370) is explicitly attributed to Abū Maʿshar, as is confirmed by other authors (cf. Monnot, 1986, 226). The second interpretation is that the Sabians "introduced the cult of idols with the aim of establishing a cult for the stars" (cf. *Murūdj*, *loc. cit.*): this is the most widely held view. The third reckons to have found the origin of talismans in judicial astrology. The fourth interpretation is that idols were initially the statues of righteous individuals, venerated for having won the favour of God in their lifetimes. The fifth interpretation, closely related to the previous one, consists in what is known in the West as euhemerism: the desire to preserve the memory and a sense of presence of great ancestors degenerating into worship of their images. The five Noachic idols of Ḳur'ān, LXXI, 23-4, are thus said to have originally represented five sons of Adam (cf., in a similar sense, al-Bukhārī, *Ṣaḥīḥ*, *tafsīr*, lxxi). The sixth interpretation is that the existence of extraordinary properties in a body is explained by the inherence (*ḥulūl*) of a god in it. Finally, according to the seventh interpretation, idols are said simply to serve as a *miḥrāb* for the worship of God.

In al-Rāzī, xiii, 36 (revised and abridged by al-Tahānawī, 771), the first two general interpretations are found in reverse order, complemented by a third, this being that idols represent the angels appointed by God to govern various elements and phenomena of nature. As for the introduction of idolatry among the Arabs, the explanation currently in favour places the responsibility on ʿAmr b. Luḥayy; he allegedly brought back to Mecca from al-Balḳā', in Syria, an idol of Hubal.

Ḳur'ān, VI, 81, or XXII, 30, accuse the idolaters of giving associates to God [see SHIRK], and Muslims like al-Rāzī (ii, 112; xiii, 35) make them one of the four or five categories of associators. However, according to Abū Zayd and others following his lead, idolatry is not directly opposed to *tawḥīd*, since no-one would be stupid enough to identify the Creator with a piece of wood. But the error of the idolaters, motivated by the desire for a presence (cf. *Milal*, 129), is twofold. First, they suppose that God has a form, which enables them to make an image of Him; this amounts to assimilation (*tashbīh*; on the prohibition of images of animate beings, see ṢŪRA). Furthermore, they imagine that they can address their appeals to these objects, whether through attributing to them the role of intermediary (see *Milal*, 770-2) or at the very least through directing prayer physically towards them (see Abū Zayd, seventh interpretation; *Mughnī*, v, 158; *Milal*, 655). This is inadmissible without revealed indication (*Milal*, 1295), and the worship of intermediaries is even contrary to reason, according to ʿAbd al-Djabbār (*Mughnī*, v, 158). In any case, the fundamental argument, even when it is left implicit, is without doubt that of the Ḳur'ān (XXI, 66; cf. VI, 74; XXVI, 72), amply propounded by al-Shahrastānī in his refutation of the Sabians: idols, which neither benefit nor cause harm, are powerless and pointless.

(G. MONNOT)

AL-WĀTHIḲ BI 'LLĀH, ABŪ DJAʿFAR HĀRŪN B. AL-MUʿTAṢIM, ʿAbbāsid caliph. He was given the name Hārūn after his grandfather Hārūn al-Rashīd; his mother was a Greek slave called Ḳarāṭīs.

On the day that his father al-Muʿtaṣim bi 'llāh [*q.v.*] died (18 Rabīʿ I 227/5 January 842), al-Wāthiḳ was proclaimed his successor. Before al-Muʿtaṣim's death, an alleged descendant of the Umayyads, named Abū Ḥarb, usually called al-Mubarḳaʿ [*q.v.*] "the veiled one" from the veil that he always wore, had provoked a dangerous rising in Palestine, and Radjā' b. Ayyūb al-Ḥiḍārī, whom al-Muʿtaṣim sent against him, could at first make no progress. Soon after the accession of al-Wāthik, Damascus also became the scene of a great rising; the rebels shut the governor up in the citadel and encamped on the plain of Mardj Rāhiṭ not far east of the town, but they were very soon routed by Radjā' who had been recalled from Palestine to meet the danger. He next turned his attention to al-Mubarḳaʿ. After a section of the latter's followers had left him because the sowing season was approaching, Radjā' succeeded in defeating and capturing him.

The Bedouin around Medina also gave the caliph trouble. When the Banū Sulaym plundered the market places of the Ḥidjāz, the governor of Medina sent a large army under Ḥammād b. Djarīr al-Ṭabarī against them; but he was defeated and slain, so that al-Wāthiḳ had to turn to the tried general Bugha al-Kabīr [*q.v.*]. In Shaʿbān 230/April-May 845, Bugha entered Medina and, after defeating the Banū Sulaym and taking the prisoners back to Medina, performed the Pilgrimage to Mecca, and then turned his attention to the Banū Hilāl, who had also taken part in the uprising. The most guilty were imprisoned in Medina and the others pardoned. Bugha now marched against the Banū Murra and the Banū Fazāra, who had seized the town of Fadak [*q.v.*], but as soon as he appeared they abandoned the town and took flight (231/845-6). In the meanwhile, the prisoners escaped from Medina and killed their warders, but were cut down by the citizens of the town with the help of the many black slaves in Medina. In the following year, Bugha had also to fight against the Banū Numayr in al-Yamāma and only subdued them after much difficulty. There were also troubles among the Khāridjīs and the Kurds. The *Sīrat al-mudjāhidīn* mentions that al-Wāthiḳ, meanwhile, meditated an expedition against Constantinople [see DHU 'L-HIMMA].

Al-Wāthiḳ died on 23 Dhu 'l-Ḥidjdja 232/10 August 847 at the age of 32, or according to others, 34 or 36. He had not the gifts of a great ruler, and his brief reign was not distinguished by remarkable events. The caliph's character also was not such as to make him beloved. It is true that he was conventionally liberal to the poor in Mecca and Medina, and he also treated the ʿAlids with great benevolence and took a considerable interest in poetry and singing, being a musician and composer himself. He favoured the singer Mukhāriḳ [*q.v.*], but was disappointed when the latter altered the notes of songs. For the rest, he is described as covetous, intolerant and devoted to sensual pleasures. At his accession, he confirmed the Baṣran profligate poet al-Ḍaḥḥāk al-Bāhilī [*q.v.*], nicknamed *al-Khalīʿ* "the debauched one", as court poet. He also extorted huge sums of money from high officials. Al-Wāthiḳ was also an ardent Muʿtazilī. The well-respected Aḥmad b. Naṣr b. Mālik al-Khuzāʿī prepared a plot to dethrone the caliph and put a check on the arrogance of his Turkish commanders. By accident, the signal was given too soon (Shaʿbān 231/April 856), so that the authorities were able to uncover the conspiracy without difficulty. When brought before the caliph, Aḥmad b. Naṣr was questioned not about the plot but about the Ḳur'ān. His answers enraged the caliph to such an extent that the latter personally oversaw al-Khuzāʿī's decapitation. Later, however, al-Wāthiḳ's original enthusiasm for the Muʿtazila seems to have evaporated.

The vizier all through al-Wāthiḳ's reign was Ibn al-Zayyāt, against whom al-Wāthiḳ had sworn vengeance during his father's reign; but once acceded to power, he seems to have found him indispensable. The period of Ibn al-Zayyāt's second vizierate thus began, in which he showed himself cruel and avaricious, inventing a spiked iron cylinder (*tannūr*) for torturing his victims, in which however he was himself to die when al-Mutawakkil came to the throne in 232/847 [see IBN AL-ZAYYĀT]. Ibn al-Zayyāt had quarrelled with the Chief Ḳāḍī Aḥmad b. Abī Du'ād [*q.v.*], but had attempted to restrain the ambitions of Turkish generals like Aytākh [see AYTĀKH AL-TURKĪ, in Suppl.]. In general, one can say that the administrative and religious policies of the previous reign were continued with little change.

Interesting episodes reported from al-Wāthiḳ's reign relate to his apparent intellectual curiosity. In 225/840 the Turkish people of the Ḳirgiz [*q.v.*], who nomadised to the north of Lake Baikal, attacked the Uyghurs [*q.v.*] and drove them from the region of the Orkhon and Selenga rivers in Mongolia into eastern Turkestan (the later Chinese province of Sinkiang [*q.v.*]) (see W. Samolin, *East Turkistan to the twelfth century. A political history*, The Hague 1964, 69-70). These population movements in Inner Asia may have caused al-Wāthiḳ to "dream" that the barrier (*sadd*) of Dhu 'l-Ḳarnayn [see ISKANDAR] had been breached. Ibn Khurradādhbih, 162 ff., relates that Sallām al-Tardjumān was sent by the caliph to investigate the story of Dhu 'l-Ḳarnayn's barrier and that Sallām told him about his adventures in search of it and showed him the report which he had drawn up for the caliph [see SALLĀM AL-TARDJUMĀN, in Suppl.]. Ibn Khurradādhbih also relates (106-7) that al-Wāthiḳ sent the celebrated astronomer and mathematician Muḥammad b. Mūsā al-Khʷārazmī [*q.v.*] to the land of Rūm in order to investigate the story of the "Men of al-Raḳīm", i.e. the Seven Sleepers [see AṢḤĀB AL-KAHF].

(K.V. ZETTERSTÉEN-[C.E. BOSWORTH and E. VAN DONZEL])

WATHĪḲA (A.), pl. *wathā'iḳ*, from the verb *wathuka* "to be firm, assured", hence a document that certifies the commission of a promise or legal act, such as a covenant, contract, etc., or the appointment of a person to an office. It thus becomes a general term for an official or legal document or formulary; see for these, DIPLOMATIC. i, and on the general usage of the term, Dozy, *Supplément*, ii, 780. In modern Arabic usage, *wathā'iḳ* is often used in the sense of "official records, archives", housed in a *dār al-wathā'iḳ*.

(ED.)

AL-**WĀTHIĶĪ**, ABŪ MUḤAMMAD ʿABD ALLĀH b. ʿUthmān, poet and political claimant of the second half of the 4th/10th and the first years of the 5th/11th centuries, who claimed descent from the ʿAbbāsid caliph al-Wāthiķ [*q.v.*].

His younger contemporary al-Thaʿālibi gives specimens of his verses plus biographical information (*Yatīma*, ed. ʿAbd al-Ḥamīd, iv, 192-3). Al-Wāthiķī began his career in ʿIrāķ and al-Djazīra as a court witness and preacher, but became involved in political intrigues. He fled eastwards to the Transoxanian lands of the Ķarakhānids [see ILEK-KHĀNS], where he produced for the Khān a forged document stating that the caliph al-Ķādir [*q.v.*] had appointed him as his *walī al-ʿahd* or heir, and he subsequently expressed intentions of marching on Baghdād to claim his rights to the throne. His schemes were unsuccessful and were related to the caliph (who cannot have taken them very seriously!). Al-Wāthiķī had to flee again, and ended up at the court of Maḥmūd of Ghazna, who imprisoned him till he died.

Bibliography: The main sources are Thaʿālibī (see above) and the extant fragment of Hilāl al-Ṣābiʾ's history. These are used in C.E. Bosworth, *Notes on the lives of some ʿAbbāsid princes and descendants*, in *The Maghreb Review*, xix/3-4 (1994) (= *Homage à André Miquel*), 281-2 (also in *The Arabs, Byzantium and Iran. Studies in early Islamic history and culture*, Variorum, London 1996, no. V); cf. also Barthold, *Turkestan down to the Mongol invasion*[3], 258.

(C.E. BOSWORTH)

WATHĪMA B. **MŪSĀ** b. al-Furāt al-Fārisī al-Fasawī (in addition, in the heading of his book, al-Azhar al-Ghanī), Muslim historian and trader in silk, of Persian origin and a resident of Fusṭāṭ. The date of his birth is unknown, but he hailed from a Persian town renowned for the commerce of silk (on Fasā, see Yāķūt, *Buldān*, Beirut 1374-6/1955-7, iv, 260-1). To this natal milieu, Wathīma owed his profession, which adhered to his own name in the form of a nickname: al-Washshāʾ or trader in embroideries. He left the town of his birth for Baṣra, then Egypt and al-Andalus, but for how long is unknown. What is certain is that he returned to Egypt, settling in Fusṭāṭ where he remained until his death on 10 Djumādā II 237/9 December 851.

Alongside his trade, Wathīma gained a reputation as a specialist in the Islamic tradition, as is attested by certain sources including Ibn al-Faraḍī, *Taʾrīkh*, ii, 36, where he writes *expressis verbis* that the author "has departed for the Maghrib or al-Andalus, having devoted himself to the transmission of *ḥadīth*". Furthermore, several sources mention two of his works:

(1) *K. fī Akhbār al-ridda* (sometimes without *fī*), of which Ibn Khallikān in particular (ed. ʿAbbās, vi, 12, cf. others such as Ibn Shākir al-Kutubī, ii, 625, and Yāķūt, *Irshād*, vii, 226) has described the contents: "He has put into writing a book telling the story of the *ridda*, with the vicissitudes of the tribes who repudiated Islam after the death of the Prophet, the campaigns conducted against them by Abū Bakr, the battles that took place between them, and the names of those who returned to Islam, as well as those who opposed the *zakāt* and other details concerning Khālid b. al-Walīd al-Makhzūmī and his struggle against Mālik b. Nuwayra al-Yarbūʿī whom he killed in 12/634, the funeral elegy of (delivered by?) the latter's brother Mutammim, and what other poets had to say on the subject." Ibn Ḥadjar al-ʿAsķalānī apparently still had the manuscript in his possession, since he often cites it in his *Iṣāba*. Hoenerbach, 39, collected these quotations, 110 passages in total, classified and translated them into German; the impression gained from his work is that Ibn Khallikān, in his aforementioned analysis, did not follow the genuine order of the book, which was most probably arranged in historical, geographical and chronological fashion, as is observed in his second book on biblical history, and perhaps also by tribes, as may be supposed on the basis of his treatment of the *ridda* of the Banū Rabīʿa. In any case, all that remain are a few fragments which do not give a comprehensive idea of the work, which was very highly regarded by the bio-bibliographers and, according to Ibn al-ʿImād, *Shadharat al-dhahāb*, ii, 89, was not only very well written but also, and most importantly, far-reaching. Other manuscripts, yet to be properly exploited, could yield further quotations, such as *al-Iktifāʾ* of al-Kalāʿī, see below Fariq, *A valuable historical ms.*, 164, and *Taʾrīkh al-Ridda*, 109, 116, 145, 146.

(2) *K. Badʾ al-khalķ wa-ķiṣaṣ al-anbiyāʾ*, which is not mentioned by sources as e.g. Ibn Khallikān, *Wafayāt, loc. cit.*, and Ibn Shākir al-Kutubī, *Fawāt al-Wafayāt*, 626. However Ibn ʿAbd al-Ḥakam quotes Wathīma, as does, naturally, a specialised source like Ibn Hishām al-Ḥadjarī, 108, 110, 127, 153; but it is Ibn Ḥadjar al-ʿAsķalānī, *Lisān al-mīzān*, vi, 217, who is the closest to the historical reality, also in terms of the grandeur of the work: *Taṣnīf kabīr fī ʾl-mubtadaʾ wa-ķiṣaṣ al-anbiyāʾ*, in two volumes, and after him al-Sakhāwī, *al-Iʿlān*, 171. The manuscript of one of the two volumes is in fact to be found in the Vatican Library, specifically the second part, which begins with al-Khiḍr and Moses and ends with the advent of the Prophet Muḥammad; the first, covering the period between the earliest creation and this point, being lost. Wathīma refers to numerous authors, principally Wahb b. Munabbih, and others, whose material he would have found mainly in Egypt, specifically in the private library of the judge of the country, ʿAbd Allāh b. Lahīʿa. Since those involved were Egyptian informants, disciples of the judge or settlers in Egypt, they conveyed primary information to Wathīma in a very accurate fashion, and he supplemented it with other data in such a way that we have primary sources, such as those of Wahb b. Munabbih, which can be reconstructed almost entirely by these means (with successive additions being closely followed; see an edition of this text, with a monograph analysing all the strata of *isnāds* in the book, in R.G. Khoury, *Les legendes prophétiques dans l'Islam*, 158 ff.). This accuracy of the written transmission has made it possible to obtain a complete version of the damaged pages of Wahb's *Ḥadīth Dāwūd* "Story of David", of which there were only fragments, sometimes just a few lines or words, as the papyrus edition of Wahb, 34 ff., shows very clearly (see Khoury, *Les légendes prophétiques*, 164 and n. 289, and WAHB B. MUNABBIH).

Thus the *K. Badʾ al-khalķ* assumes a capital importance and remains, despite some criticism directed at Wathīma the *muḥaddith*, "the best that has ever been composed in this discipline", *min aṣlaḥ mā ṣunnifa fī dhālika ʾl-fann* (Ibn Ḥadjar, *Lisān al-mīzān*, vi, 217), since it dates back to the first sources and thus rescues from oblivion the most ancient versions of biblical or prophetic stories in Islam. It enlarges the primary data, such as that contained in the Heidelberg papyrus on David, but without altering the originals which it conserves very accurately. Hence its immense value for the study of the archaic literature of the three first centuries of the Hidjra.

(R.G. Khoury)

WATHTHĀB b. SĀBIḲ al-NUMAYRĪ, head of the section of the Banū Numayr [*q.v.*] dominating part of Diyār Muḍar and the town of Ḥarrān, d. 410/1019 (Ibn al-Athīr, ix, 312, 413, 443, x, 443). The texts give few details on his origins and most do not even give his father's name; nevertheless, his descendants can clearly be pinpointed in northern Syria and Diyār Muḍar and played an important role. It is this line which is mainly dealt with here.

Some of the Numayr are already mentioned in central Syria around Damascus at the time of the great revolt of Abu 'l-Haytham in the time of Hārūn al-Rashīd (Ibn 'Asākir, *T. Dimashḳ*, *'Āṣim-'Ā'id*, ed. Shukrī Fayṣal, Damascus 1977, 402) At the opening of the 4th/10th century they were among the tribes accompanying the Carmathians in the attack on the *Mardj* of Damascus. In the middle of the century they were in the regions of Sindjār and Mawṣil, opposing, in company with other tribes such as the Kilāb, Ḳushayr, 'Uḳayl, Hilāl, Sulaym and Ḳays 'Aylān, the two Ḥamdānid princes [see ḤAMDĀNIDS] Nāṣir al-Dawla (attack on Mawṣil, 359/970) and Sayf al-Dawla of Aleppo. Less vigorous than the Kilāb, they were expelled from Diyār Rabī'a towards the Syrian Desert and thence by Sayf al-Dawla north of the Euphrates into Diyār Muḍar. In 380/990, being largely Shī'ī in faith, they supported an abortive attempt to restore the Ḥamdānids in Mawṣil. In 395/1005, several thousand cavalrymen of Numayr and Kilāb, led by the ruler in Sarūdj, Waththāb b. Dja'far (perhaps = Waththāb b. Sābiḳ al-Numayrī) supported the *ghāzī* Aṣfar of Taghlib against the Byzantines (for details of all these, see Th. Bianquis, *Damas et la Syrie sous la domination fāṭimide*, Damascus 1987, i, 310 n. 1). At the end of the century, the Numayr of Waththāb b. Sābiḳ constituted a principality in Diyār Muḍar around Ḥarrān [*q.v.*]. Like the Kilāb in northern Syria, the Marwānids in Diyār Bakr and the 'Uḳaylids in Diyār Rabī'a, they chose to protect and administer for their own advantage the sedentary lands and towns rather than to pillage them, as did at this time the Banu 'l-Djarrāḥ, a Transjordanian section of the Yamanī Ṭayyi'. Depending on events, they also held other towns of the region such as Sarūdj, al-Ruhā/Edessa, Raḳḳa and Rāfiḳa. Having gathered together "Arabs", Waththāb sought Byzantine help in order to attack the Kurd Naṣr al-Dawla Ibn Marwān [*q.v.*] in Diyār Bakr, which he raided and then pillaged.

The latter, with help from his 'Uḳaylid ally, the *amīr* of Mawṣil Ḳirwāsh b. Muḳallad, repelled him and obtained apologies from the Byzantines (H. Kennedy, *The 'Uqaylids of Mosul ...*, in *Actas del XII Congresso de la U.E.A.I*, Malaga n.d.). On Waththāb's death in 410/1019, his son Shabīb succeeded him, and his descendants, the Banū Waththāb, continued to hold the region. In 417-22/1026-31 there was a fresh conflict with Naṣr al-Dawla Ibn Marwān over Edessa. Each clan chief of the Numayr formed a mini-principality around a stronghold rather than in the main town, leaving this last to be governed by a deputy. There was much internecine strife amongst these clans. Thus e.g. the lord of Edessa, 'Uṭayr al-Numayrī, refused to reside there but left it to a deputy, whose assassination he eventually procured and then was in turn himself killed. The two main Arabic sources, Yaḥyā al-Anṭākī, *Dhayl*, tr. F. Micheau and G. Troupeau, in *PO*, xlviii/4, no. 212, iii [151], Tournai 1997, and Ibn al-Athīr, see index), recount these events differently, notably the actions of the *sharīfs* and *aḥdāth* of the city and the lengthy internal combats of Muslims and Christians fortified within the towers and religious buildings of Edessa (for an account, based on Byzantine sources, see AL-RUHĀ). The Numayr resorted to arbitration by the Kilāb of Aleppo, and Ṣāliḥ b. Mirdās divided the city between the two Numayrīs Ibn 'Uṭayr and Ibn Shibl, each holding a tower in the city. The Byzantines in the end seized the city, and the Emperor Romanus III is said to have bought Ibn 'Uṭayr's share and access to his tower for 20,000 dīnārs and a certain number of villages. Shibl's forces took to flight, the Muslim inhabitants were reportedly killed and the mosques razed. On the other hand, in 421/1030 a clan of the Numayr, Ḳaṭan, inflicted a terrible defeat on the Byzantines at 'Azāz and gained a great booty in gold coinage. But after the Byzantine riposte under the eunuch Nicetas in 423/1032, the Numayr led by Shabīb rallied to the Byzantines, and both sides accepted a delineation of the frontier leaving Edessa to the Greeks and Diyār Muḍar to its south to the Numayr. These last took part, with all the princes of the region, in the general negotiations at Constantinople to define the Graeco-Muslim frontiers in northern Syria and in al-Djazīra, negotiations which went on until Romanus III's death in 425/1034, leaving a result still imprecise, since the end of Yaḥyā's manuscript has not survived. The two Numayrī chiefs Shabīb and Ibn 'Uṭayr, former ruler of Edessa, attacked the Byzantines there in 427-9/1037-9, but after some successes, they ended in abandoning the city to the Byzantines. This check is explicable by the feebleness of their ally, the Kilābī principality of

Aleppo. Shabīb's sister, the very beautiful and intelligent al-Sayyida al-ʿAlawiyya, had married the Kilābī prince there, Naṣr b. Ṣāliḥ b. Mirdās, who was killed by the Fāṭimid army of al-Dizbirī in 429/1038. This Turkish general, the Fāṭimid governor in Syria, managed to occupy Aleppo and eject Naṣr's brother Thimāl and his brother-in-law Shabīb, but could not conquer Raḳḳa and Raḥba in the eastern part of the principality. On Shabīb's death, his brother Muṭāʿin succeeded him and took over the principality except for Raḳḳa and Raḥba, left to al-Sayyida al-ʿAlawiyya. The latter, now a widow, married her dead husband's brother Thimāl. Al-Dizbirī endeavoured to make a military and matrimonial alliance with the Marwānid Naṣr al-Dawla against the Numayr-Kilāb alliance which controlled all northern Syria and much of western al-Djazīra. However, the Fāṭimid authorities in Cairo were suspicious of al-Dizbirī's too personal policy in Syria, and he was brutally dismissed and died in humiliating circumstances in the citadel of Aleppo in 433/1042. Thimāl was able to return to Aleppo with his Numayrī spouse, who was to play on various occasions an important role in the politics of the city [see MIRDĀS, BANŪ]. The Numayr now made a rapprochement with Naṣr al-Dawla Ibn Marwān, and *ca.* 439/1048 they both countered the efforts of a *ghāzī* of the same name as that of a half-century before, Aṣfar al-Taghlibī.

In 452/1061 the then master of Ḥarrān, Mānīʿ b. Shabīb b. Waththāb, grandson of the founder, went to help his maternal nephew Maḥmūd b. Ṣāliḥ b. Mirdās of Aleppo, engaged in a struggle with his uncle Thimāl, who ruled over the eastern Mirdāsid lands along the Euphrates. After some fighting amongst Kilābī groups, punctuated by truces, al-Sayyida al-ʿAlawiyya brought peace by reconciling Mānīʿ and Thimāl. She accompanied her husband to Aleppo, where his sovereignty was once more made firm, then left with her young son Waththāb b. Thimāl for Cairo in order to negotiate a reconciliation with the caliph al-Mustanṣir [*q.v.*]. The rapprochement between the Banū Waththāb of Numayr and the Banū Mirdās of Kilāb is seen in the number of identical *isms* found in children on both sides, such as Waththāb, Muḳallad, Mānīʿ, Shabīb and Sābiḳ, some of these also found among the ʿUḳaylids, increasing even further the historians' confusion. In 462/1070, in dramatic circumstances, the Shīʿī princess again intervened personally to deflect the Sunnī Saldjūḳ sultan Alp Arslan from his siege of Aleppo and to try to avoid the humiliation of her son there, Maḥmūd, having to kiss the sultan's carpet. But she could achieve nothing, and the overwhelming defeat of the Byzantines at Mantzikert [see MALĀZGIRD] a few months later definitively deprived the Numayr and Kilāb of Byzantine protection.

In 471/1079 a coalition of Arabs, including the Numayr, and led by the ʿUḳaylid ruler of Mawṣil, Sharaf al-Dawla Muslim b. Ḳuraysh, defeated a Turkmen force, but in the following months the Saldjūḳ prince Tutush [*q.v.*] and his Turkmens ravaged all northern Syria. Three years later, Sharaf al-Dawla had to intervene in Aleppo, where the last three Kilābī princes Sābiḳ, Waththāb and Shabīb, sons of Maḥmūd, ended up losing their power through drunkenness and political incapacity. In 476/1083 Muslim b. Ḳuraysh, now ruler of Mawṣil and Aleppo, formed a coalition of several Ḳaysī and Yamanī tribes of Syria, including the Numayr, against the Kurds of al-Djazīra and other Arab tribal groups, including other clans of Numayr and ʿUḳayl. Thanks to support from Yaḥyā b. al-Shāṭir, a retainer of Ibn ʿUṭayr who administered the town for a child, ʿAlī b. Waththāb, Sharaf al-Dawla Muslim had occupied Ḥarrān in 474/1081 and installed a governor, Djaʿfar al-ʿUḳaylī, who promoted Shīʿism there. Whilst Muslim besieged Damascus in 476, Ḥarrān was retaken by a Ḥanbalī *ḳāḍī*, Abū Djalaba, who wished to hand over the town to Yaḥyā and the former Waththābī control. The town was taken over by Yaḥyā and Ibn ʿAṭiyya al-Numayrī, but retaken in the same year by Muslim, who executed the *ḳāḍī* and his sons and over a hundred of the citizens who had received *amān* (Sibṭ Ibn al-Djawzī, cited in Ibn al-Ḳalānisī, *Dhayl*, ed. Amedroz, n. at 116; Ibn al-ʿAdīm, *Zubda*, ed. Dahhān, ii, 81-3). In 478/1085, Muslim was in turn killed by the Turkmen Sulaymān b. Ḳutulmish [*q.v.*], the new master of Antioch. The Arab powers of northern Syria and al-Djazīra successively went down before newly-arriving Turks. The Banū Numayr contrived, however, to remain in the region since, when in 512/1118 the Franks seized the fortress of al-Sinn near ʿAzāz, they killed there Mānīʿ b. ʿUṭayr al-Numayrī (al-ʿAẓīmī, *Taʾrīkh Ḥalab*, ed. Ibrāhīm Zaʿrūr, Damascus 1984, 369).

(TH. BIANQUIS)

WATID (A.), also pronounced popularly (and also in Persian) as *watad*, pl. *awtād*, literally "tent peg", an element of scansion in *ʿarūḍ* [*q.v.*] (Arabic prosody), in which each foot has one *watid* and either one or two *sababs* [*q.v.*]. Four types occur: (1) *watid madjmūʿ*: a sequence of two vowelled letters/consonants and one vowelless letter, paradigmatically represented as *faʿal*, translatable into syllables as ⏑ — , also called *watid maḳrūn*, e.g. in *TA*, ii, 521; (2) *watid mafrūḳ*: one vowelless letter between two vowelled letters (*faʿla*, — ⏑); (3) *watid mufrad*, defined by al-Fārābī, 1078, as "a *sabab khafīf* + one vowelless letter" (as in pausal *ḳāl*). (This is called *sabab mutawāl*^{in} in al-Ḳarṭādjannī, 236, and *sabab mutawassiṭ* in Khānlarī, 94 n. 2); (4) *watid mutaḍāʿif*, defined by al-Ḳarṭādjannī, 236, as two vowelled + two vowelless letters (as in pausal *maḳāl*), called *watad-i kathrat* in Khānlarī, *loc. cit.* Types 3 and 4 are outside traditional *ʿarūḍ*.

In *ʿarūḍ* theory, the stability of the *watid* is contrasted with the variable quantity of the *sabab*, which is liable to the change known as *ziḥāf* [*q.v.*]. In practice, however, many supposedly variable positions are stable. According to Weil [see ʿARŪḌ], the stability of the *watid* is concomitant with a stress on its long syllable, and to him the *watid* functions as the rhythmical core of the foot. For a different view, see Stoetzer, 110-20.

For *watad* in mysticism, see AWTĀD.

(W. STOETZER)

WAṬṬĀSIDS, BANŪ WAṬṬĀS, a Moroccan dynasty which reigned in the 9th/15th and 10th/16th centuries. The Banū Waṭṭās, Zanāta Berbers, were a branch of the Banū Marīn, descendants of the Banū Wasīn [see MARĪNIDS]. Initially nomadic horsemen, the Banū Waṭṭās left the Zāb [*q.v.*] and the highlands of the central Maghrib, reaching the Maghrib al-Aḳṣā in the early years of the 5th/11th century and occupying

part of the Moroccan Rīf. In 622/1293, during the reign of the Marīnid Abū Ya'ḳūb Yūsuf, their chief 'Umar b. Yaḥyā b. al-Wazīr took temporary control of the fortress of Tazūta which belonged to the Marīnids; however, this did not prevent the Banū Waṭṭās from occupying posts and enjoying privileges in the administration of the ruling Banū Marīn. Thus it was that on the death of the Marīnid sultan Abū 'Inān in 795/1358, effective power was exercised by various members of the Banū Waṭṭās. When the sultan Abū Sa'īd 'Uthmān was assassinated in 823/1420, the Waṭṭāsid Abū Zakariyyā' Yaḥyā, already ḳā'id of Salé, secured the throne for Abū Muḥammad 'Abd al-Ḥaḳḳ, the son of the deceased but still a minor, and ruled the country with the title of vizier; the reigu of the Banū Waṭṭās had thus begun.

Abū Zakariyyā' Yaḥyā I (Abū Zekrī) had to confront anarchy which had become rife throughout Morocco: the marabouts were calling for a *djihād* against the Portuguese who had occupied Ceuta [see SABTA] in 1415, in the countryside the Arabs were agitating and taking to pillage, and the Ḥafṣid sultan of Tunis even invaded, reaching as far as Fās. As a result of the efforts of the young sultan 'Abd al-Ḥaḳḳ, the Portuguese were unable to take Tangier [see ṬANDJA] in 1437 and forced to leave the *infante* Don Fernando as a hostage in Fās against a hypothetical restitution of Ceuta, which did not in fact take place; the *infante* died in 1443, still a captive.

Abū Zakariyyā' was assassinated in 852/1448 by Arabs whose rebellion he had suppressed. He was succeeded in the vizierate, or rather in the regency, by one of his kinsmen, 'Alī b. Yūsuf, who died ten years later in 863/1458-9, likewise in the process of suppressing an Arab revolt. The Marīnid sultan 'Abd al-Ḥaḳḳ had long since attained the age of majority, and when a third Waṭṭāsid, Yaḥyā II, son of Abū Zakariyyā', succeeded 'Alī b. Yūsuf, 'Abd al-Ḥaḳḳ had him assassinated with all the members of his family. Fās was virtually immune from the authority of the sultan, and the city was ruled by Idrīsī *Shorfā'* [see SHURAFĀ']; one of them, Abū 'Abd Allāh Muḥammad al-Djūṭī, was proclaimed sovereign in 869/1465. He captured 'Abd al-Ḥaḳḳ and had him killed, thereby putting an end to the Marīnid dynasty.

Two brothers of the vizier Yaḥyā II had succeeded in escaping the massacre of the Banū Waṭṭās. One of them, Muḥammad al-Shaykh, took refuge at Arzila. He was unable to prevent the Portuguese occupying the city in 1471 (a twenty-years' truce was signed), and then Tangier in the same year. In 1472, after a long siege, Fās capitulated, the Idrīsid *sharīf* al-Djūṭī fled to Tunis and Muḥammad al-Shaykh was able to enter Fās, where he was proclaimed sovereign, thus inaugurating the rule of the Banū Waṭṭās.

The reign of the new sultan lasted until 909/1502 (or 912/1505); his foreign policy was dominated by his struggle against the intrigues of the Portuguese on the Atlantic coast of Morocco. Although he was unable to prevent their installation at Safi, Azemmour and Mazagan, he succeeded in forcing them to abandon Graciosa, a fortress which they had begun to build on an island of the Loukkos; a treaty was signed at Tchemmich on 26 Djumādā I 894/27 April 1489.

Muḥammad al-Shaykh was far from being recognised as sovereign throughout Morocco: in the north, Chechaouen (Shafshāwan) and Tetouan (Tiṭṭāwīn) were virtually independent principalities, whilst in the south the Hintāta *amīrs* were masters of Marrakech (Marrākush), and at Debdou a Marīnid amīrate had been constituted. The Waṭṭāsid sultan was in fact only the "king" of Fās. The successor to Muḥammad al-Shaykh was his son Muḥammad al-Burtuḳālī (he had been sent to Portugal in 1471), who attempted to pursue his father's policy against the Portuguese. But in the south a new power had emerged, that of the Sa'dian Shorfā'. Al-Burtuḳālī invited to his court two of the sons of the *sharīf* Abū 'Abd Allāh Muḥammad, but being soon recalled by their father, the two princes returned to the south, and in 1522 took control of Marrakech; a kingdom distinct from that of Fās was thus constituted.

In Sha'bān 932/May 1526 al-Burtuḳālī was succeeded by his brother 'Alī Abū Ḥassūn, and in September of the same year the latter was deposed by his nephew Aḥmad al-Waṭṭāsī, whose policy differed fundamentally from that of his predecessors. The enemy to be fought was not the Portuguese, but the new arrivals on the scene, the Sa'dians [see SA'DIDS], who, for their part, sought to oppose the Christian invaders and in addition to subdue the Banū Waṭṭās of northern Morocco. And when in 952/1545, the sultan of Fās was captured near Wadi Derna by the Sa'dian *sharīf* Muḥammad al-Shaykh al-Mahdī, he was obliged to cede to him Meknès and the Gharb in order to secure his liberation two years later. In 956/1549 Fās was seized by the same *sharīf*, and Aḥmad al-Waṭṭāsī was captured for the second time. Taken to Marrakech, he was executed in 1551. His son Muḥammad al-Ḳasrī, who had held power during his father's first period of imprisonment, suffered the same fate.

The only remaining claimant to the throne of Fās was 'Alī Abū Ḥassūn, the temporary sultan of 932/1526, who had withdrawn to Velez de la Gomera. After the capture of Fās, he made his way to Spain, where he had an audience with the Emperor Charles V and appealed for the support of the king of Portugal in his bid to return to Morocco; he even went to Algiers in the quest for military assistance from the Turkish Pasha, which in fact enabled him to take control of Fās on 9 January 1554. His second reign was as brief as his first since, in the course of his campaign against the *sharīf*, he was killed on 21 September at Musallama. His sons sought refuge in Spain. One of them, al-Nāṣir, succeeded in returning to Morocco and rallying a few partisans, but to no avail. Numerous Waṭṭāsid princes remained in Spain, their haven of refuge, some even converting to Christianity. Thus the Banū Waṭṭās came to an end in 961/1554, and the last Berber monarchy of Morocco had disappeared. With the Sa'dians, a new history began in the Maghrib al-Aḳṣā and the Shorfā' succeeded in an objective which had eluded the Banū Waṭṭās, sc. the ejection of the Portuguese from Morocco.

(CHANTAL DE LA VÉRONNE)

WAṬWĀṬ (A., pls. *waṭāwīṭ, waṭāyīṭ*), a synonym for *khuffāsh*, pl. *khafāfīsh*, denoting all cheiropters or bats, without distinction of families (sc. the rhinolophids, vespertilionids and molossids) or species. The bat is also called *ṭā'ir al-layl* "the bird of the night", *khushshāf* and *khuṭṭāf* by comparison with the swallow. The names *saḥāt, ṭurmūḳ, ṭumrūḳ* and *ʿashraf* are also found.

In general, in the Arabic lands the bat is assimilated to a bird but one without a beak or feathers. Amongst the ancient Arabic writers on zoology, virtually only al-Djāḥiẓ provided a fairly extensive chapter on the bat in his *Ḥayawān*. He states that it flies neither in the middle of the night nor in broad daylight, but requires the half-light of the dawn and evening for searching out its diet of small flying insects. It may also happen to gobble up eggs from nests, and in the nesting season, the female vulture takes care to line her eyrie with plane-tree leaves, since the bat dislikes their smell.

According to Islamic law, it is forbidden to kill bats and eat their flesh. The bat has certain qualities. Thus, to put a bat's head on one's ear prevents sleep, and if it is boiled up in a copper or iron pot with lilac oil (*duhn al-zanbaḳ*), it yields a lotion good for painting, as a wash, or on limbs afflicted by gout, rheumatism or swelling. A bat's heart grilled in one piece can be used as a fumigation for effectively driving away all snakes and scorpions. Its gall rubbed on the sexual organs of a pregnant woman causes immediate delivery, and it is also good for stopping incontinence of urine. The blood, mixed with milk, can be spread on the skin and removes all hair. Finally, its dung used as an unguent, removes scurfy skin.

In oneiromancy, seeing a bat in a dream is an auspicious sign which drives away all fear from a pious man and facilitates, for a pregnant woman, a smooth birth.

WAṬWĀṬ [see RASHĪD AL-DĪN].

WĀW, the 27th letter of the Arabic alphabet (or the 26th, if *hā'* is placed after *wāw*), with the numerical value 6. It has two principal functions in Arabic orthography, standing either for the semivowel *w* or for the long vowel *ū*. Traditional Arabic grammar reduces these two functions to one by analysing *ū* as short *u* (*ḍamma*) plus *wāw*. *Wāw* also serves (like *alif* and *yā'*) as a "support" for medial or final *hamza* [*q.v.*], reflecting, according to the most commonly held view, the situation in the ancient dialect of Mecca, where ʾ appears to have shifted to *w* in certain positions. In the words *ulā'ika* (أولئك) and *ulū* (أولو), *wāw* stands, exceptionally, for short *u*. On the other hand, the shortening of final *-ū* before *hamzat al-waṣl* is a regular phonetic feature; at a phonological level it should still be analysed as *-ū*. This goes also for *-ā* and *-ī* in the same position.

In the orthography of the Ḳur'ān, and in general in old manuscripts, long *ā* is represented by the letter *wāw* in the words *ṣalāt, zakāt, ḥayāt, nadjāt, ghadāt* (perhaps better read as *ghudwa*, an existing *ḳirā'a*), *mishkāt* and in the name of the goddess Manāt [*q.v.*] (who occurs also in Nabataean-Aramaic inscriptions as *mnwtw*, with *-w-*). Similarly ربوا *riban*, and الربوا for the determined *al-ribā*. Sībawayh (ed. Derenbourg, ii, 452) says that the first three of these words, at least, in the dialect of Ḥidjāz were pronounced with *alif al-tafkhīm*, that is to say, a sound intermediate between *alif* and *wāw* (presumably some sort of *ō*), but some of the later grammarians express doubts as to whether these spellings really represent a phonetic, and not merely an orthographic feature. Modern scholars have noted that some of these words are borrowings, e.g. *ṣalāt* from Aramaic *ṣlōthā*, where the Arabic spelling with *wāw* might be regarded as having been influenced by Aramaic orthography, but this does not account for all of the mentioned words. It seems thus that some dialects of ancient Arabic really did have an *ō*-like allophone not only in certain loanwords, but also in some Arabic derivates of roots with *w* as their third radical.

The personal name ʿAmr is written عمرو in the nominative (ʿAmr^un^) and genitive (ʿAmr^in^), and عمرا or عمروا in the accusative (ʿAmr^an^), retaining a spelling convention of the Arabic names in Nabataean Aramaic, thus preventing confusion with the name ʿUmar عمر. For a discussion, see most recently de Blois, *Who is King Amarō?*, in *Arabian Archaeology and Epigraphy*, vi (1995), 196-8.

In Persian, *wāw* has all of these same uses in Arabic loanwords. In native words it stands (in classical Persian) for the semivowel *w*, and for two different long vowels, *ū* and *ō*, which the indigenous lexicographers distinguish as *wāw-i maʿrūf* ("the *wāw* known [in Arabic]"), and *wāw-i madjhūl* ("unknown *wāw*") respectively. Classical poets generally avoid rhymes between *ū* and *ō*, but in modern Western Persian classical *ū* and *ō* merge as [u], and classical *w* is realised as a fricative [v], except in the diphthong *aw*, which is realised as [o^u^]. The older pronunciation of these phonemes is retained, however, in many dialects of Afghānistān and Tādjīkistān. The digraph خو stands (in classical Persian) for the labialised consonant *kh*^w^, which has merged with *kh* in Western Persian, but is partially retained in Afghānistān.

Wāw stands ostensibly for short *u* in *du* ("two"), *tu* ("thou") and the postclitic particle *-u* ("and"), but in early Persian they could also be pronounced as *dō, tō* and *-ū*, and it is these that are represented by the orthography.

In Urdu *wāw* stands for the consonant *v*, the vowels *ū* and *ō* and the ex-diphthong *aw* (= Sanskrit *au*, but in Urdu realised as /ɔ/). In Turkic languages it is used for the consonant variously realised as *v* or *w*, and for the vowels *o, u, ö* and *ü*.

(F.C. de Blois)

al-**WAʾWĀʾ** al-**DIMASHḲĪ**, Abu ʾl-Faradj Muḥammad b. Aḥmad (or Muḥammad) al-Ghassānī, 4th/10th century Syrian poet, d. between 370/980-1 and 390/1000. Originally a fruit-seller in the market-place at Damascus, he may have acquired there his nickname ("the Crier" or "Howler"). His reputation as a poet was established after he was "discovered" by the *sharīf* Abu ʾl-Ḳāsim al-ʿAḳīḳī, on whom he had made an ode. He addressed some panegyric poems to Sayf al-Dawla [*q.v.*], but he is better known for his short poems in the more lyric genres: love, wine and nature. In some of these (e.g. *Dīwān*, ed. Kratschkowsky, nos. 14, 220, 238) he turns the traditional opening motif of the "abandoned encampment" into a metaphor, speaking of, or addressing, the desolate abode of his love or of his suffering. His verse is mostly smooth, polished and, the longer panegyrical poems excepted, easy of diction. A certain impersonality is partly the result of the absence of personal names and of descriptions of specific incidents, but this enhances the quotability. Particularly famous and admired by critics (first by Abū Hilāl al-ʿAskarī, *al-Ṣināʿatayn*, Cairo 1971, 257) for its condensed series of metaphors, or rather comparisons according to many rhetoricians, is a line on a weeping girl (*Dīwān*, ed. Kratschkowsky, 47): "She let pearls <tears> rain from narcissi <eyes>, watered the roses <cheeks>, and bit on jujubes <henna-stained fingers> with hailstones <teeth>"; see e.g. al-Ḥarīrī's *Maḳāma Ḥulwāniyya* and ʿAbd al-Ḳāhir al-Djurdjānī, *Dalāʾil al-iʿdjāz*, Cairo 1984, 449-51, where the literary history of this motif is sketched.

(G.J.H. van Gelder)

WAYHIND, the form found in mediaeval Indo-Muslim sources for a town of northwestern India, in the 12th century geography of Kashmīr by Kalhaṇa called Udabhānda, now marked by the settlement of Hund some 9 km/15 miles north-east of Attock [see aṭak] in Pakistan.

It was the capital of the powerful Hindū-Shāhī dynasty of Indian princes who opposed Sebüktigin and his son Maḥmūd of Ghazna in the late 4th/10th and early 5th/11th centuries, until Maḥmūd finally vanquished Rādjā Djaypāl; for further details, see hindū-shāhīs.

Bibliography: See that for hindu-shāhīs, to which should be added C.E. Bosworth, *The later Ghaznavids*, index.

(Ed.)

WAẒĪFA (a.), pl. *waẓāʾif*, literally "task, charge, impose obligation" (see Dozy, *Supplément*, ii, 820-1).

1. As an administrative term.

In the early Islamic period, the form II verb *waẓẓafa* and the noun *waẓīfa* are used as administrative-fiscal terms with the sense of imposing a financial burden or tax, e.g. of paying the *kharādj*, *ʿushr* or *djizya* [*q.vv.*], cf. al-Balādhurī, *Futūḥ*, 73, 193 (the *waẓāʾif* of the provinces of al-Urdunn, Filasṭīn, Dimashḳ, Ḥimṣ, etc.) and other references given in the *Glossarium*, 108. But as well as this loose sense, *waẓīfa* had a more specific one, as set forth by al-Khʷārazmī, *Mafātīḥ al-ʿulūm*, 62, cf. 59, that of an extra, fixed payment, made by the *ʿāmil* or tax collector, on top of the land-tax collected; Løkkegaard compared it to the Hellenistic-Roman *annona* and the *ekstraordinaria* of the Egyptian papyri (*Islamic taxation in the classic period*, Copenhagen 1950, 126-8; C.E. Bosworth, *Abū ʿAbdallāh al-Khwārazmī on the technical terms of the secretary's art*, in *JESHO*, xii [1969], 132, 139).

Waẓīfa also came subsequently to mean the "financial allowance, stipend" paid to an official or as a reward for someone who had pleased a ruler or governor, such as a panegyric poet, and, by extension, the official post or function itself (see the examples in Dozy, *op. cit.*, ii, 821), a meaning which it retains in modern Arabic (and cf. *muwaẓẓaf* "official employee").

Bibliography: Given in the article.

(C.E. Bosworth)

2. As a term of Islamic mysticism.

In this context, *waẓīfa* is a devotional text or litany recited by the members of some Ṣūfī orders as one of the elements of their assignment of daily devotions, and also as part of the liturgy of a *ḥaḍra* [*q.v.*] or communal *dhikr* ritual. A *waẓīfa* normally consists of a sequence of prayer formulas, invocations, and verses from the Ḳurʾān. Contents differ according to Ṣūfī order, and are often explained or justified in conjunction with Prophetic traditions or special events in the life of the composer of the *waẓīfa*. The recitation of a *waẓīfa* is always prescribed for specific times of the day (generally in conjunction with the *fadjr* and *maghrib* prayers), and is governed by special conditions, such as ritual purity, and facing the *ḳibla*. In some of the commentaries on *waẓāʾif*, or in the instructions for recitation in the published versions of the various *waẓāʾif*, the text is endowed with protective qualities and recommended for reading in times of danger or distress. In some orders, the term *waẓīfa* is used to denote devotional texts or phrase-patterned devotions, which are known as *ḥizb* and *wird* [*q.vv.*] in other orders. Use of these three terms as synonyms is not uncommon, and is understandable in view of the fact that the text of an order's *waẓīfa* may overlap with or be part of its *wird* and *ḥizb*, whereas *wird* and *ḥizb* are a *waẓīfa* in the literal sense of "a duty".

An example of a *waẓīfa* as a devotional text in its own right, and never part of *aḥzāb* or *awrād*, is the *Waẓīfat al-Mashīshiyya*, also known as *al-Ṣalawāt al-Mashīshiyya*, after ʿAbd al-Salām b. Mashīsh [*q.v.*]. This text, which is in fact identical with the longer version of *Ṣalawāt Ibn Mashīsh* (numerous editions; for an accurate one, see e.g. ʿAbd al-Ḳādir Zakī, *K. al-Nafḥa al-ʿaliyya fī awrād al-Shādhiliyya*, Cairo 1321, 18 ff.), is widely known and recited by the members of many of the branches of the Shādhiliyya. The fact that so many of these have the recitation of this text as part of their daily devotions may explain why it has simply become known as *al-Waẓīfa al-Shādhiliyya*. The name of its composer is not mentioned any more in some of the manuals of present-day Shādhiliyya branches, and awareness of the author's identity seems to be disappearing. Many orders prescribe their members to recite this *waẓīfa* at least once daily, and at the beginning of the *ḥaḍra*.

Another example of a *waẓīfa* as a text in its own right is the *Waẓīfat al-Zarrūḳiyya*, known after Aḥmad

b. Zarrūḳ to whom it was allegedly dictated by the Prophet when Aḥmad was sitting on Muḥammad's tomb at Medina, and widely known and recited by many branches of the Shādhiliyya; for an English translation, see Ali F. Khusaim, *Zarrūq the Ṣūfī. A guide in the Way and a leader to the Truth. A biographical and critical study of a mystic from North Africa*, Tripoli (Libya) 1976, 134-8.

The *waẓīfa* of the Tidjāniyya [*q.v.*] order is an example of a text which incorporates much of its own *wird*, combining phrase-patterned devotions with a core text, known as the *Ṣalāt al-fātiḥ*, and another devotional text of the order, the *Djawharat al-kamāl* (see Jamil M. Abun-Nasr, *The Tijaniyya. A Sufi order in the modern world*, Oxford 1965, 187, and 51-2 for the Arabic text and an English tr.). The *Ṣalāt al-fātiḥ* is said to have been delivered to Aḥmad al-Tidjānī from Heaven on a tablet of light, whilst Aḥmad claimed that the Prophet taught him the *Djawharat al-kamāl* directly. Tidjānī adherents have to recite the *waẓīfa* at least once every day, either individually or communally. Conflicting opinions concerning the number of times the *Djawharat al-kamāl* should be recited contributed to the emergence of the schismatic movement of the Ḥamālliyya or Ḥamāliyya [*q.v.*] in West Africa.

(F. de Jong)

WAZĪR (a.), vizier or chief minister.

I. In the Arab World

1. The ʿAbbāsids.

Etymology

The term *wazīr* occurs in the Ḳur'ān (XXV, 35: "We gave Moses the book and made his brother Aaron a *wazīr* with him"), where it has the sense of "helper", a meaning well attested in early Islamic poetry (for examples, see Goitein, *The origin of the vizierate*, 170-1). Though several scholars have proposed Persian origins for the term and for the institution, there is no compelling reason to doubt the Arabic provenance of the term or an Arab-Islamic origin and evolution of the institution of the *wazīr* (cf. Goitein, *op. cit.*; Sourdel, *Vizirat*, i, 40-61). The use of the term *wazīr* in the sense of "helper" is well illustrated in the early Shīʿī revolt of al-Mukhtār [*q.v.*] in Kūfa. Claiming to be acting on behalf of Muḥammad Ibn al-Ḥanafiyya [*q.v.*], a son of ʿAlī Ibn Abī Ṭālib, al-Mukhtār had styled himself the "helper of the family of Muḥammad" (*wazīr āl Muḥammad*) (Goitein, *op. cit., Appendix*, 194-6). The same title was later to be adopted by Abū Salama [*q.v.*], the leader of the clandestine Shīʿī movement in Kūfa at the time of the fall of the Umayyad dynasty (al-Djahshiyārī, 84-7). From its original meaning of "helper", the term *wazīr* came to acquire the sense of "representative" or "deputy", and, under the ʿAbbāsids, designated the highest-ranking civil functionary of the state next to the caliph.

History of the institution

The institution of the *wazīr* seems to have its origins both in the position of the secretary (*kātib* [*q.v.*]) as well as in that of the royal counsellor, as pointed out by Goitein (*Origin*, 175 ff.). At least some of the officials of the early ʿAbbāsid administration who are characterised as *wazīrs* in the Arabic historical sources are likely only to have been especially influential counsellors rather than the holders of a position with a more distinct institutional identity. Such an institutional identity may, however, have developed by the time of the caliph al-Mahdī (58-69/775-85). *Inter alia*, this development is suggested by a list of secretaries in al-Ṭabarī's *Ta'rīkh*, in which Yaʿḳūb b. Dāwūd, who served under the caliph al-Mahdī, is the first to be characterised as a *wazīr* (ii, 836-43, esp. 841; cf. Goitein, *Origin*, 181-2). It is worth noting, however, that even in later years an especially close adviser to the caliph might still be called a *wazīr* without, however, necessarily holding a corresponding office (cf. al-Ṭabarī, iii, 1139, for al-Ma'mūn's reference to his erstwhile *ḳāḍī* of Baghdād Yaḥyā b. Aktham as *wazīr*, though Yaḥyā does not appear to have held that office at any point; cf. Sourdel, i, 238-9).

The most famous family of secretaries and *wazīrs* under the early ʿAbbāsids were the Barmakids, who served in the ʿAbbāsid administration until their dramatic fall from favour during the reign of Hārūn al-Rashīd [see barāmika]. Khālid b. Barmak had participated in the ʿAbbāsid revolution and later served the caliphs al-Saffāḥ and al-Manṣūr as adviser, secretary and governor. His son Yaḥyā served as the tutor of Hārūn and later as his *wazīr*. According to al-Djahshiyārī, Yaḥyā was the first *wazīr* to be also given the military rank of *amīr* (*al-Wuzarā' wa 'l-kuttāb*, 177). Yaḥyā's son al-Faḍl also served as Hārūn's *wazīr*, for some time apparently together with his father. The ascendancy of the Barmakids (their *dawla* and *sulṭān*, as al-Masʿūdī puts it, *Murūdj*, ed. Pellat, iv, 252, § 2602) continued for more than seventeen years, during which time they enjoyed unprecedented power and distinguished themselves as much for their administration as for their splendour, generosity and the scale of their patronage. As the caliph asserted greater personal control over the administration in his later years, their influence seems to have begun to decline. But their downfall was dramatic: Yaḥyā's son Djaʿfar, a close companion and confidant of the caliph was executed in 187/803 while Yaḥyā and al-Faḍl were imprisoned, and their property was confiscated. The circumstances behind this tragic end have attracted much comment from both mediaeval and modern historians, and there is little agreement on precisely what precipitated it. The caliph's perception that his power was overshadowed by that of the Barmakids may have had some role to play in bringing about their end, and, as Kennedy has suggested, the caliph may have wanted to ensure a smoother succession for his elder son Muḥammad (al-Amīn) by eliminating a family too closely tied in its interests with the other son, the future al-Ma'mūn (H. Kennedy, *The Prophet and the age of the Caliphates*, London 1986, 143-4).

Wazīrs played an important role during the struggle for power and the civil war between Hārūn's sons al-Amīn and al-Ma'mūn. Al-Faḍl b. Rabīʿ [*q.v.*], the *wazīr* of Hārūn after the fall of the Barmakids and later the *wazīr* of al-Amīn, was influential in persuading al-Amīn to contravene the terms of succession stipulated by Hārūn and to remove al-Ma'mūn as his heir-apparent. This measure precipitated the civil war between the two brothers, which culminated in the death of al-Amīn. Al-Ma'mūn, who then acceded to the caliphate, was for his part greatly assisted during the course of this struggle by his *wazīr* al-Faḍl b. Sahl [*q.v.*], who had been a protégé of the Barmakids and had converted from Zoroastrianism to Islam at the hands of al-Ma'mūn (al-Djahshiyārī, 230-1). On al-Ma'mūn's accession, al-Faḍl was given the title *Dhu 'l-Ri'āsatayn* "the person with the two headships", which appeared on coins and which signalled his control of both the civil and the military administrations under the caliph.

The extent of the power which had been wielded by the Barmakids, and later by al-Faḍl b. Sahl until

his assassination in 202/818, was not enjoyed by the latter's successors. Indeed, in his last testament, in a somewhat ambiguous reference to his sometime *ḳāḍī* and adviser Yaḥyā b. Akt͟ham [*q.v.*], al-Ma'mūn instructed his successor al-Mu'taṣim to follow the advice of the chief *ḳāḍī* Aḥmad b. Abī Du'ād [*q.v.*] rather than that of any *wazīr* (al-Ṭabarī, iii, 1139; cf. Sourdel, i, 238-9). During the period of the *Miḥna* [*q.v.*], the inquisition which was instituted towards the end of al-Ma'mūn's caliphate on the doctrine of the createdness of the Ḳur'ān and which remained in effect during the reigns of his two successors, the chief *ḳāḍī* exercised unprecedented influence over the 'Abbāsid administration. The *wazīrs* of this time, in particular Muḥammad b. 'Abd al-Malik b. al-Zayyāt [see IBN AL-ZAYYĀT], were hardly inconsequential figures, though they had to share their power with that of the chief *ḳāḍī*, which often led to considerable rivalry between the two (cf. Sourdel, i, 245-70).

As the Turkish troops grew in influence during the Sāmarrā' period of 'Abbāsid history (218-47/833-61), and as the financial difficulties of the empire multiplied, there were frequent struggles between Turkish troops and 'Abbāsid *wazīrs* over the exercise of power and, especially, over the control of the revenues. On occasion, Turkish generals themselves served as *wazīrs*, though the position was more commonly held by individuals with a secretarial background and with greater expertise in matters of financial administration (for an outline of the events of this chaotic period, see Kennedy, *op. cit.*, 158-99). The financial straits of the empire led eventually to the rise of two distinguished families of secretaries and *wazīrs*, the Banu 'l-Furāt and the Banu 'l-D̲j̲arrāḥ, who dominated the 'Abbāsid administration from 296/908 until the emergence of the new position of the *amīr al-umarā'* [*q.v.*] in 324/936. Unlike the preceding decades, the *wazīrs* enjoyed very considerable power and prominence during these years, a period which Sourdel calls the "grande époque" in the history of the vizierate (Sourdel, i, 375, 387 ff.).

The most famous member of the Banu 'l-Furāt was Abu 'l-Ḥasan 'Alī b. Muḥammad b. al-Furāt [see IBN AL-FURĀT], who served as *wazīr* three times during the caliphate of al-Muḳtadir (295-320/908-32). Entrusted with the task of rescuing the 'Abbāsid administration from its fiscal troubles, Ibn al-Furāt's own reputation for financial corruption, together with his failure to deal effectively with the military challenges facing the state (in particular the depredations of the Ḳarmaṭīs [see ḲARMAṬĪ]) plus an increasingly brutal and extortionate style of administration, led eventually to his execution in 312/924. The great rival of the Banu 'l-Furāt were the Banu 'l-D̲j̲arrāḥ, whose most distinguished member was 'Alī b. 'Īsā [*q.v.*]. These two families had, in fact, become the symbols of two factions in the 'Abbāsid bureaucracy, and the ascendancy or fall of a *wazīr* from one family signalled the downfall of practically all the lesser secretaries associated with the faction he represented. The downfall of a faction also meant the systematic and brutal effort, on the part of the dominant faction, to extort money from members of the fallen group [see MUṢĀDARA. 2.]. Unlike Ibn al-Furāt, however, 'Alī b. 'Īsā's image in the Arabic historical tradition is a largely positive one; he is remembered as "the good vizier" (he served in this capacity on two occasions) who strove mightily, but ultimately unsuccessfully, to reduce expenditure, reform the finances and restore order in the realm.

The rivalry of the Banu 'l-Furāt and the Banu 'l-D̲j̲arrāḥ was not, however, merely over the control of lucrative positions and the consequent ability to squeeze out wealth from the other faction. Notwithstanding the many shared interests of the secretarial classes (cf. R.P. Mottahedeh, *Loyalty and leadership in an early Islamic society*, Princeton 1980, 108 ff.), this rivalry was apparently also based on differences of ideology and policy. The Banu 'l-Furāt were S̲h̲ī'ī while the Banu 'l-D̲j̲arrāḥ were Sunnī, a fact which may also have been involved in the positive image of 'Alī b. 'Īsā. As a Sunnī, 'Alī probably had a greater stake in the effort to reform and sustain the 'Abbāsid empire. The gradual decline in agricultural revenues, the excessive expenditure on the royal household and the army and the military challenges confronting the state all imposed severe constraints on the ability of any *wazīr* effectively to overhaul the administration of the state. The situation was greatly aggravated by the notorious corruption of many officials in the administration and the extortionate practices of the rival bureaucratic factions (on the financial state of the empire at this time, see Kennedy, *op. cit.*, 186 ff.). All this led not only to the severe weakening of the 'Abbāsid state but also to the eclipse of the 'Abbāsid *wizāra* as well.

In 324/936, the caliph al-Rāḍī's appointment of Muḥammad b. Rā'iḳ [see IBN RĀ'IḲ] as the *amīr al-umarā'* or the military overlord, whose position combined the powers of the *wazīr* with those of military commander, marked the effective end of the *wazīr* as the leading official of the 'Abbāsid administration. When the Būyids entered Bag̲h̲dād in 334/945, the caliph conferred the title of the *amīr al-umarā'* on Aḥmad b. Būya Mu'izz al-Dawla. Henceforward, it was the *wazīrs* of the Būyids, and later of the Sald̲j̲ūḳs, who played important roles in the administration of the state. The history of these officials, among the most distinguished of whom were such Būyid *wazīrs* as Abu 'l-Faḍl b. al-'Amīd and the Ṣāḥib Ismā'īl Ibn 'Abbād, and the Sald̲j̲ūḳ *wazīr* Niẓām al-Mulk [*q.vv.*], falls outside the scope of this article. The 'Abbāsids did continue to have their own *wazīrs*, and when the authority of the Sald̲j̲ūḳ sultans in 'Irāḳ began to wane after Malik S̲h̲āh's death, a limited but distinct revival of the caliphs' political and military authority took place, at least within the circumscribed region of 'Irāḳ and, at times, in western Persia. Concomitant with this was the rise of certain influential *wazīrs* in the course of the 6th/12th century, such as 'Awn al-Dīn Ibn Hubayra [*q.v.*], who served al-Muḳtafī and al-Mustand̲j̲id in the middle decades of the century, and his son 'Izz al-Dīn, *wazīr* to the latter caliph also. Towards the end of the century, circumstances enabled the caliph al-Nāṣir (r. 575-622/1180-1225 [*q.v.*]) to achieve a prestige and authority unequalled by any caliph for some three centuries, but among his many viziers, only Nāṣir al-Dīn Nāṣir b. Mahdī al-'Alawī, who held office 592-604/1195-1207, had serious ambitions to rule and made himself an effective force in the state (see H. Mason, *Two statesmen of mediaeval Islam, Vizir Ibn Hubayra (499-560 AH/1105-1165 AD) and Caliph an-Nāṣir li Dīn Allāh (553-622 AH/1158-1125 AD)*, The Hague and Paris, 1972).

The wazīr *in constitutional theory*

Al-Aḥkām al-sulṭāniyya of the S̲h̲āfi'ī jurist al-Māwardī (d. 450/1058) as well as the similarly-entitled work of the Ḥanbalī Abū Ya'lā Ibn al-Farrā' (d. 458/1065) give considerable attention to the types, qualifications and functions of the *wazīr*. Al-Māwardī also devoted a separate work, the *Adab al-wazīr*, to this institution. The *wazīr al-tafwīḍ*, one of the two kinds he delineates, is described as the holder of extensive civil and military powers delegated (*mufawwaḍ*) to him by the caliph. These

powers and functions are similar to the caliph's own, except that the *wazīr* cannot remove the caliph, nor appoint a successor to the caliph, nor even remove an official appointed by the caliph (al-Māwardī, *Aḥkām*, 24). In view of the scope of his powers and the importance of his position, the qualifications for this office are said to be the same as those for the position of the caliph itself, with the exception of membership in the tribe of Ḳuraysh which is required for the latter but not for the former. A *wazīr al-tafwīḍ* must be a free, male Muslim and he must be well versed in the *Sharīʿa* to the extent of being a *mudjtahid* (al-Māwardī, *Aḥkām*, 21, 26). Besides other civil and military functions, al-Māwardī assigns to the *wazīr al-tafwīḍ* the function of presiding over the *maẓālim* [*q.v.*] courts (*ibid.*, 21, 73), a function well attested by the ʿAbbāsid chronicles (cf. Tyan, *Histoire de l'organisation judiciare*, 481-2; Massignon, *Passion*, i, 386 ff.; Sourdel, ii, 640 ff.).

The functions of the *wazīr al-tanfīdh*, on the other hand, were limited only to the implementation (*tanfīdh*) of specific policies of the caliph. Unlike a *wazīr al-tafwīḍ*, a person who was neither free nor even a Muslim could be appointed a *wazīr al-tanfīdh*, though women were expressly excluded from this position (al-Māwardī, *Aḥkām*, 26). The highly delimited position of the *wazīr al-tanfīdh* seems to be a juristic rationalisation of a situation in which the *wazīrs* of the ʿAbbāsid caliphs had lost much of their power and prestige to the military overlords who controlled the realm and who, under the Būyids and later the Saldjūḳs, had their own powerful *wazīrs* (cf. Sourdel, ii, 714-15).

The wazīr *as patron of religion and culture*

The role of the *wazīr* in the religious and cultural history of the ʿAbbāsid times is yet to be systematically studied. The secretaries, from whose ranks the *wazīrs* were usually drawn, were among the most culturally sophisticated of the ʿAbbāsid élite, combining Islamic with "secular" learning and acting as the patrons of both. The Barmakids patronised debates among scholars of different persuasions (al-Masʿūdī, *Murūdj*, iv, 236 ff., §§ 2565 ff.) and commissioned the translation of Greek as well as Indian works into Arabic (Gutas, *Greek thought, Arabic culture*, 128-9); Ibn al-Zayyāt, *wazīr* under al-Muʿtaṣim, al-Wāthiḳ, and al-Mutawakkil, was among the patrons of the Nestorian translator Ḥunayn b. Isḥāḳ (*ibid.*, 130-1); and several members of the Djarrāḥid family of secretaries and *wazīrs*, themselves converts from Nestorian Christianity, took a strong interest in the ancient sciences (*ibid.*, 132). Under the Būyids, the patronage of such *wazīrs* as Ibn al-ʿAmīd and the Ṣāḥib Ibn ʿAbbād contributed to an extremely rich age of cultural efflorescence (see Kraemer, *Humanism*, 241-72 and *passim*).

The non-Arab origin of most *wazīrs*, and their interest in and patronage of Greek and other ancient learning, combined with political resentments and rivalries, often led to accusations of a certain lack of commitment to Islam on their part. There are echoes of such suspicions about the Barmakids (see M. Chokr, *Zandaqa et zindiqs en Islam au second siècle de l'hégire* Damascus 1993, 24-5, 85-6), as well as about their protégé al-Faḍl b. Sahl (cf. al-Djahshiyārī, 316). Many secretaries and *wazīrs*, but in particular the Banu 'l-Furāt, had Shīʿī leanings and may have been somewhat suspect for that reason; but even the Shāfiʿī *wazīr* ʿAlī b. ʿĪsā was accused of secret dealings with the reviled and much dreaded Ḳarāmiṭa.

Such accusations and suspicions notwithstanding (and they seem to have usually been unfounded or exaggerated, as Sourdel, ii, 565 ff. has suggested) the *wazīrs* often played important roles in shaping or carrying out the religious policies of the state; indeed, such accusations may even have prompted certain *wazīrs* to emphasise their religious commitments more emphatically. For instance, it was on al-Faḍl b. Sahl's initiative that al-Maʾmūn, while he was pitted in a struggle over the caliphate against his brother, publicly proclaimed his commitment to upholding and acting according to the stipulations of "the Ḳurʾān and the *sunna* of the Prophet" (cf. al-Djahshiyārī, 278-9; for al-Maʾmūn's public recognition of al-Faḍl's own services to him, see Madelung, *New documents*). *Wazīrs* not only presided over the *maẓālim* courts, as already noted, but they also contributed to shaping the legal practice of the realm by their influence on, and often sole responsibility for, the appointment of the *ḳāḍīs*. They were also among important patrons of jurists and the schools of law, and some of them were jurists in their own right. For instance, Ibn Hubayra (d. 560/1165 [*q.v.*]), who, as noted above, served as *wazīr* under al-Muḳtafī and al-Mustandjid, was himself a scholar of Ḥanbalī law, as well as the author of a multi-volume commentary on the *Ṣaḥīḥ ḥadīth* collections of al-Bukhārī and Muslim.

The position of the *wazīr* was one of the most important and powerful offices of the ʿAbbāsid administration. Though theoretically subservient to the caliph and only continuing in office at the latter's good pleasure, the power of the *wazīr* could, at times, rival and even surpass that of the caliph. But even when neither the ʿAbbāsid caliph nor his *wazīr* any longer enjoyed much effective political power, the caliph's *wazīr* often continued to play a considerable role as a patron of culture and of intellectual and religious life in the ʿAbbāsid realm.

Bibliography: 1. Sources. All major chronicles of the ʿAbbāsid period contain important information on individual *wazīrs*, their actions and political fortunes. Major biographical dictionaries also devote notices to prominent *wazīrs* in addition to much incidental information. A number of works specifically about the *wazīrs* were also written during the ʿAbbāsid period, but most of these are not extant (on these works, see Ibn al-Nadīm, *al-Fihrist*, ed. R. Tadjaddud, Beirut 1988, 142, 143, 150, 168. Two major authors whose works on the *wizāra* have, however, come down to us are al-Djahshiyārī and Hilāl al-Ṣābiʾ. See al-Djahshiyārī, *al-Wuzarāʾ wa 'l-kuttāb*, ed. M. al-Saḳḳā *et al.*, Cairo 1938; *Nuṣūṣ ḍāʾiʿa min kitāb al-wuzarāʾ wa 'l-kuttāb li-Muḥammad b. ʿAbdūs al-Djahshiyārī*, ed. M. ʿAwwād, Beirut 1964; al-Ṣābiʾ, *al-Wuzarāʾ aw tuḥfat al-umarāʾ fī taʾrīkh al-wuzarāʾ*, ed. ʿAbd al-Sattār Aḥmad Farrādj, Cairo 1958; idem, *Rusūm dār al-khilāfa*, ed. M. ʿAwwād, Baghdād 1964. On the position of the *wazīr* in juridical theory, see al-Māwardī, *al-Aḥkām al-sulṭāniyya*, Cairo 1298/1881, Eng. tr. Wafaa H. Wahba, *The ordinances of government*, Reading 1996; idem, *Adab al-wazīr*, Cairo 1929; Abū Yaʿlā Muḥammad b. al-Ḥusayn al-Farrāʾ, *al-Aḥkām al-sulṭāniyya*, ed. Muḥammad Ḥāmid al-Fiḳī, Cairo 1357.

2. Studies. The most important work on the *wazīrs* of the pre-Būyid period is D. Sourdel, *Le vizirat ʿabbāside de 479 à 936 (132 à 324 de l'hégire)*, 2 vols. Damascus 1959-60. Other works which shed light on various aspects of the history of the *wazīrs* under the ʿAbbāsids include: S.D. Goitein, *The origin of the vizierate and its true character*, in idem, *Studies in Islamic history and institutions*, Leiden 1968, 168-91, and *Appendix. On the origin of the term vizier*, in *ibid.*, 194-96; R.A. Kimber, *The early Abbasid vizierate*,

in *JSS*, xxxvii (1992), 65-85; *EIr*, art. *Barmakids* (I. Abbas); W. Madelung, *New documents concerning al-Ma'mūn, al-Faḍl b. Sahl and ʿAlī al-Riḍā*, in Wadād al-Qāḍī (ed.), *Studia arabica et islamica*, Beirut 1981, 333-46; H. Kennedy, *The Prophet and the age of the Caliphates*, London 1986; H. Bowen, *The life and times of ʿAlí ibn ʿÍsà, "The Good Vizier"*, Cambridge 1928; L. Massignon, *The Passion of al-Hallaj*, tr. H. Mason, Princeton 1982; J.L. (MUHAMMAD QASIM ZAMAN)

2. The Fāṭimid caliphate.

Here, the office was created for Yūsuf b. Killis, probably in 368/979, and apart from a few interruptions, there were holders of the office until Ṣalāḥ al-Dīn [*q.v.*], the last vizier, who ended the dynasty in 567/1171. The *wazīr* directed the civil administration directly under the caliph's authority until 466/1074; the supreme dignity continued to belong to the caliph after that date, but it was a military man, the commander-in-chief (*amīr al-djuyūsh*), generally also bearing the title of vizier, who held the reality of political decision-making.

The events, personalities and institutions of the Fāṭimid caliphate from 297/909-10 to 567/1171 have been covered in detail in the article FĀṬIMIDS and in the individual articles on prominent persons [see the Index]. Here, only the main features of the vizier's functioning and the variations over the course of time in its responsibilities, will be treated. A large part of what has been written on the functioning of the vizierate in the eastern lands of the Islamic world, under the ʿAbbāsids, Būyids and Saldjūḳs, is equally valid for the Fāṭimid vizierate (see D. Sourdel, *Le vizirat ʿabbāside*..., 2 vols. Damascus 1959-60; Y. Essid, *al-Tadbīr/Oikonomia, une critique des origines de la pensée économique arabo-musulmane*, Tunis 1993, Eng. tr., idem, *A critique of the origins of Islamic economic thought*, Leiden 1995). On the opposition between *ḥādjib* and *wazīr*, see J.-Cl. Garcin *et alii*, *États, sociétés et cultures du monde musulman médiéval, Xᵉ-XVᵉ siècle*, ii, Paris 2000. For the Fāṭimid vizierate, the main source remains Ibn al-Ṣayrafī, *al-Ishāra ilā man nāla al-wizāra*, ed. ʿA.A. Mukhliṣ, Cairo 1923, 49-111; of modern studies, see G. Wiet, *L'Égypte arabe. Histoire de la nation égyptienne*, iv, Paris 1937, 179-310; M.H. al-Mināwī, *al-Wizāra wa 'l-wuzarā' fi 'l-ʿaṣr al-fāṭimī*, Cairo 1970. For a description of the institution and a complete bibl. of the sources, see A.F. Sayyid, *al-Dawla al-fāṭimiyya fī Miṣr, tafsīr djadīd*, Beirut 1413/1992, 250-4, 433-54. See also Garcin, *op. cit.*, i, Paris 1995, Bibl. on the Fāṭimids at pp. XCIII-L, events 81-117; *Camb. hist. of Egypt*, forthcoming. For everything concerning coinage, tax systems, customs duties and the financial organisation of agriculture, see Cl. Cahen, *Makhzūmiyyāt. Études sur l'histoire économique et financière de l'Égypte médiévale*, Leiden 1977). A list of Fāṭimid viziers is difficult to establish with precision, since some persons only held office for a few days, whilst others were appointed and re-appointed on various occasions (a useful list, despite some errors of detail, can be found in L.S. Imad, *The Fatimid vizierate, 969-1172*, Berlin 1990, 164-70).

The successive stages of the stripping of the caliphs' power

During the reigns of the dynasty's first century, from the rise to power of al-Mahdī in Ifrīḳiya in 297/910, till the disappearance of al-Ḥākim in 411/1021, the caliphs involved themselves personally in the direction of politics and administrative matters. In the succeeding century, the son and grandson of al-Ḥākim, al-Ẓāhir (d. 427/1035-6) and al-Mustanṣir (d. 487/1094 [*q.vv.*]) in the first half of his reign, still played a certain political role, albeit within a system that they no longer controlled. It was during the reign of the latter, in 466/1074, that the civilian vizierate was replaced by a military one, concentrating all political power within the hands of the *amīr al-djuyūsh* Badr al-Djamālī. After al-Mustanṣir's death, the Fāṭimid caliphs of the 6th/12th century, with the sole exception of al-Ḥāfiẓ, all raised to the imāmate whilst still children, were only puppets manipulated by their entourages. Parallel to this decline of the *imāms*, the influence of the *amīr al-djuyūsh* grew notably; also bearing the title of *wazīr*, when such a person existed, he himself alone exercised the reality of power.

The tradition of the vizier in Egypt

The sources as preserved seem to show that the office of vizier did not exist amongst the Fāṭimids in Ifrīḳiya before 362/973, nor in Egypt before the accession to the imāmate of the fifth caliph al-ʿAzīz, the second to have reigned in Cairo. Probably under the influence of local tradition, with viziers in effect often existing at Miṣr-Fusṭāṭ since Aḥmad b. Ṭūlūn [*q.v.*], al-ʿAzīz appointed to this office, apparently in 368/979 (on the dates, variously given in the sources, see Th. Bianquis, *Damas et la Syrie sous la domination fāṭimide*, Damascus 1987-9, i, 168), Yūsuf b. Killis [*q.v.*], al-Muʿizz's main tax-farmer since 364/974. The new vizier, following in the previous administrative tradition, which had fallen into bad ways at the time of the disorders at the end of Kāfūr's [*q.v.*] time, re-organised an agrarian tax policy and an efficient artisanate. Likewise, two centuries later, al-Ḳāḍī al-Fāḍil [*q.v.*], who had entered the Fāṭimid *dīwān al-inshā'* in 544/1149 and had been secretary successively to the Fāṭimid viziers Ṭalā'iʿ b. Ruzzīḳ, Shāwar and Shīrkūh [*q.vv.*], remained after 567/1171 in Ṣalāḥ al-Dīn's service and then in that of the Ayyūbids, for whom, after finishing his missions in Syria, he re-organised the civil administration in Egypt on the Fāṭimid model, retiring in 591/1195. The continuity in administration during a period when political life was fluid, makes medieval Egypt a special case in the Islamic East.

Public administration and private interests

The first Fāṭimid *wazīr*, Ibn Killis, of ʿIrāḳī Jewish origin, had a long career of private and public service behind him when he was appointed. After failing as a private commercial agent in Palestine, he entered the service of the master of Egypt, Kāfūr, as director of the latter's personal estates in Syria and Egypt, and then with the task of overseeing the public finances. He made a public conversion to Sunnī Islam, but his hopes of becoming vizier were at that time unrealised. After Kāfūr's death, he became an Ismāʿīlī and in Ifrīḳiya joined al-Muʿizz, who was preparing for the invasion of Egypt, and placed at the Imām's disposal his perfect knowledge of the fiscal system of that country, notably of the cadastral survey of agricultural land and of the territorial basis of the tax burden which he had to recalculate precisely on the alluvial soil left each year after the Nile waters had subsided. Having returned to Egypt with his master, he was then the main architect of fiscal

and administrative continuity between the régimes of the Ikhshīdids and Kāfūr and the Fāṭimids. At the same time as dealing with the state's finances, Ibn Killis always pursued important personal financial interests, in Egypt as well as in Syria. He strengthened a method of procedure, already begun under his predecessors, which was to be perpetuated by his successors. The main *dīwāns* of the state were traditionally headed by civilian officials who were at the same time powerful private financiers, whether as tax-farmers or as high-level merchants (see A.L. Udovitch, *Merchants and amirs. Government and trade in eleventh century Egypt*, in *Asian and African Studies*, xxii [1988], 53-72; Y. Lev, *State and society in Fatimid Egypt*, Leiden 1991; Bianquis, *op. cit.*, i, 103, 156-71; idem, *Le fonctionnement financier des dīwāns centraux fāṭimides au début de V^e/XI^e siècle*, in *AI*, xxvi [1992], 46-61).

The vizierate's field of action

Ibn Killis was a great statesman in the various aspects of his duties, tax policies, modernisation of the army through the purchase of Turkish *ghulāms* and prudent actions in Syria in face of the Byzantines. During his lifetime, he was an adviser to whom the caliph always listened, even if his personal greed led to his being mulcted in 373/983-4 of 100,000 or 500,000 dīnārs, arrested and dismissed, all three penalties reversed shortly afterwards. However, the caliph al-ʿAzīz, who was so attached to his vizier, abandoned his wise counsels in favour of a foreign policy in northern Syria, about which Ibn Killis complained on his deathbed. Al-Ḥākim, al-ʿAzīz's son and successor, created a gap in the vizierate, probably in 409/1018, and replaced it by the *wasāṭa*, a function which involved interposing and interceding between the Imām and the ethnic factions of the palace and the army, and by the *sifāra*, an office in which all these groups were represented, two institutions which the caliph had created at the beginning of his reign. During the reign of his son al-Ẓāhir, the vizierate was re-established in 418/1027 for the ʿIrāḳī *kātib* Abu 'l-Ḳāsim al-Djardjarāʾī [see AL-DJARDJARĀʾĪ. 4.], representing the interests of the merchant importers (Bianquis, *Damas et la Syrie*, ii, 393-7, 791, index s.v. *vizir*). The offices of the *wasāṭa* and the *sifāra* continued to be filled irregularly till the end of the dynasty by persons with a lower rank than that of the vizier, sometimes by someone who later became a vizier (Ibn Ẓāfir, *Akhbār al-duwal al-munḳaṭiʿa*, ed. A. Ferré, Cairo 1972, 88). The civilian successors of Ibn Killis were often Sunnīs, Jews or Christians, converted to a more or less sincere degree of Ismāʿīlism and often from ʿIrāḳ or Syria, provinces which enjoyed, at that time, a higher cultural level than Egypt. With the exception of al-Djardjarāʾī, the best civilian vizier of the dynasty, they were generally mediocre.

The need for economy, distrust of the ambitions of commanders stationed in Damascus and the fear of getting the Fāṭimid army too deeply engaged in continental Syria, marked the actions of the civilian viziers and the ensemble of the financial *dīwāns* until the final loss of the Syrian territories in 468/1076. Conscious of the feebleness of the Fāṭimid army *vis-à-vis* the Turkmens and Saldjūḳs, it was the first military vizier, Badr al-Djamālī, who had to decide on the abandoning of the Syrian interior, whose importance had been preached in vain by most of his civilian predecessors; he retained within the province only ports, places where customs dues were levied and a coastal band of territory (Garcin, *op. cit.*, i, 94-5, 107-9; M. Yared-Riachi, *La politique extérieure de la principauté de Damas, 1075-1154*, Damascus 1997, 87-8).

Unlike the ʿAbbāsid vizier or that of the Saldjūḳs in ʿIrāḳ and Persia, the vizier in Cairo often exercised, after 440/1050, other functions in parallel. As supreme judge, *ḳāḍī al-ḳuḍāt*, he appointed judges and pronounced the law in cases of last resort, and as chief missionary for the Fāṭimid doctrine, *dāʿī al-duʿāt*, he watched over the training of the Ismāʿīlī missionaries sent all over the Islamic world, keeping up a continued correspondence with each of them. In Cairo, the Fāṭimid vizier drew his legitimacy from the divine light, *nūr Allāh*, which, since the time of Muḥammad and ʿAlī, had perpetually illuminated the Imām; arising from this fact, the distinction between the military, political, administrative, judicial and ideological domains was less obvious than in an ʿIrāḳī Sunnī context, which was under the guiding principle of the memory of the foundations, both in Holy Writ and also transmitted orally, of *fiḳh*, a guidance exercised by the *ʿulamāʾ*.

The installation of the military vizierate

The main break in the continuity of the institution comes from the time of al-Mustanṣir, son of al-Ẓāhir. In order to end the very serious crisis which had been threatening the very existence of the régime since 457/1065, the caliph in 464/1072-3 appealed to a general of Armenian origin, Badr al-Djamālī, governor of Acre in Syria. On arrival in Egypt, Badr, henceforth called *amīr al-djuyūsh* and *wazīr*, was accorded full powers, which he exercised till his death. The civilian vizierate of execution, *tanfīdh*, in which the political conduct of affairs was the responsibility of the caliph who put his decisions into action through his vizier, became transformed into a military vizierate of delegation, *tafwīḍ*, in which a great military officer, here the commander-in-chief, legitimised by a real or fictitious act of delegation from the caliph, now exercised supreme political and military authority (al-Maḳrīzī, *Ittiʿāẓ*, ed. M.Ḥ.M. Aḥmad, Cairo 1971, ii, 329-30; see in al-Imad, *op. cit.*, 61-8, the theoretical texts of al-Māwardī, describing the situation in ʿIrāḳ but applicable here also). Born on the occasion of this crisis, the system became self-perpetuating until the end of the Fāṭimid power in 1171 by the last military vizier of the dynasty, the Sunnī Kurd Ṣalāḥ al-Dīn.

A reform and a complete updating of the cadaster and the taxation system were achieved, under the stimulus of the future vizier al-Baṭāʾiḥī, by al-Afḍal, acting on behalf of his father, the *wazīr* and *amīr al-djuyūsh* Badr, thereby assuring the Fāṭimid state of revenues at a higher level at the end of the 5th/11th century and during the next than had obtained in the time of the civilian vizierate (Cahen, *op. cit.*, 165-7, 174). The personal enrichment of the military viziers was, moreover, on a greater scale than under their civilian predecessors (an extraordinary inventory of al-Afḍal's possessions, made after his death, without taking into account six million dīnārs, is given in Ibn Ẓāfir, *op. cit.*, 91-2; see also ṬALĀʾIʿ B. RUZZĪK).

During this second period of about a century, the title of *amīr al-djuyūsh* was most often placed before that of *wazīr*, which usage was even omitted on various occasions (al-Imad, *op. cit.*, 169). This military title is to be considered in parallel to those borne by the military *amīrs* of the second period of the ʿAbbāsid caliphate. The first, Ibn Rāʾiḳ [*q.v.*], was in 324/936 appointed in Baghdād by the caliph al-Rāḍī as *amīr al-umarāʾ*, a title resumed by the Būyids in 334/945 under al-Mustakfī, who had lost all personal authority, but the Būyid *amīr al-umarāʾ* was now enriched by *laḳabs* and the Arabo-Persian titles of *malik*, *shāh*

or *shāhanshāh*, which one finds as a regnal name under the Saldjūḳs. After 447/1055, when Ṭoghrïl Beg had taken the caliph al-Ḳā'im under his protection, the Saldjūḳs consolidated their pre-eminence by using the Arabic title *sulṭān* [*q.v.*]. The Arab caliph, as a civilian, retained only his moral authority, and he shrank into the background everywhere, to the profit of a military direction within the state, with supreme political authority in future held by a great commander who was a non-Arab (see al-Subkī, *Ṭabaḳāt al-shāfiʿiyya*, v, 314-16).

In practice, the sphere of competence of the military vizier, the *amīr al-djuyūsh*, who appeared in Cairo less than twenty years after the proclamation of the Saldjūḳ sultanate in Baghdād, was much wider than that of his civilian predecessors, notably in the domains of application of the law and the execution of justice, as well as the defence and the diffusion of Fāṭimid doctrine. Now most of Badr's successors were not Ismāʿīlīs; amongst them were several Sunnīs and Twelver Shīʿīs and even one or two Christians. It is easy to understand how, in the 6th/12th century, the Yemeni Ṭayyibī subsect and the Persian and Syrian Nizārīs [*q.vv.*] spread more successfully than the Fāṭimid Ismāʿīlism of Cairo.

With the exception of al-Afḍal [*q.v.*], Badr's son and successor, an active personality but brutal and clumsy, and involuntarily responsible for the great Nizārī schism with its bloody consequences extending over a century and a half, and of another vizier of Armenian origin, Ṭalāʾiʿ b. Ruzzīk [*q.v.*], the *amīr al-djuyūsh* were in general mediocre and opportunist persons who were only able to uphold the régime thanks to the unbelievable agricultural and artisanal richness of the land and the income from customs duties there, to the restructuring of the cadaster and the taxation system brought about by Badr, to the quality of the navy (see Lev, *op. cit.*) and, above all, to a skilful political game played between the Frankish states in Palestine, the Sunnī Muslim régimes of the Syrian interior and the Byzantine empire.

3. The Ayyūbids.

In theory, the vizierate here did not differ much from that of their ʿAbbāsid, Fāṭimid and Saldjūḳ predecessors. Appointed by the ruler, the vizier headed the administration and the *dīwāns*. With the Ayyūbid confederation, the two states of Egypt and Syria each had in principle its own vizier, but the office's importance varied much, according to the region and the rulers. Ṣalāḥ al-Dīn, himself vizier to the last Fāṭimid caliph 1169-71, never had a vizier. The excessive power which certain Fāṭimid viziers had enjoyed and his own experience in the office, probably led him not to follow this way, and even his chancellor and closest adviser, al-Ḳāḍī al-Fāḍil [*q.v.*], never had the title of vizier officially.

In Egypt likewise, the Ayyūbid sultans often did without a vizier. The most important, and the only one to exercise the office of a classic vizier, was Ṣafī al-Dīn ʿAbd Allāh Ibn Shukr (b. in the Delta 548/1153, d. in Cairo 622/1225; the most detailed biography in al-Maḳrīzī, *al-Muḳaffā*, iv, Cairo 1991, 595-602). Whilst in the service of al-ʿĀdil (596-615/1200-18 [*q.v.*]), his extortions and tyrannical methods caused numerous officials and notables to flee, including Ibn Mammātī [*q.v.*], head of the financial office, and Ibn Abi 'l-Ḥadjdjādj, head of the army office, who went to the court at Aleppo of al-Ẓāhir Ghāzī [*q.v.*]. Al-ʿĀdil ended by exiling him in 608/1212-13, replacing him by his father-in-law Fakhr al-Dīn Ibn Shukr, and the fallen vizier went off to settle at Āmid. Later, al-Kāmil (615-35/1218-38 [*q.v.*]), after assuming power in difficult circumstances, recalled Ibn Shukr in order to refill the state's coffers. Although the latter had become blind, he took up office in Cairo in 617/1220-1 and held it till his death four years later. Al-Kāmil then decided to do without a vizier, preferring to control the administration himself; this is the situation reflected in the administrative treatise of ʿUthmān al-Nābulusī, one of al-Kāmil's high officials, in which the name of vizier is never mentioned.

A little later, Muʿīn al-Dīn Ibn al-Shaykh (d. 643/1246), youngest of the Awlād al-Shaykh brothers [*q.v.*], entered al-Kāmil's service, becoming "deputy of the vizier" (*nāʾib al-wizāra*), and it was not till the coming of al-Ṣāliḥ Ayyūb (637-47/1240-9) that he was appointed vizier. More than just head of the administration, Muʿīn al-Dīn was an army commander, and it was he who was charged with the conquest of Damascus in 642-3/1245.

In Damascus, Ḍiyāʾ al-Dīn Ibn al-Athīr [*q.v.*] was al-Afḍal's vizier from 589/1193 to 592/1196. Al-Afḍal placed complete confidence in him, but very soon both of them became enemies of Ṣalāḥ al-Dīn's former supporters, who fled to Cairo or Aleppo in large numbers. Later, under al-Muʿaẓẓam (615-24/1218-27 [*q.v.*]), no vizier is mentioned by the sources. When al-Ashraf (626-35/1229-37) reigned in Damascus, he had as his vizier for some time Falak al-Dīn Ibn Masīrī (d. 643/1245), a man of mediocre talent, according to al-Maḳrīzī (*op. cit.*, iv, 84-7), and he was dismissed in 634/1236-7. More important was the next figure, Djamāl al-Dīn Ibn Maṭrūḥ (d. 649/1251), who served al-Ṣāliḥ Ayyūb in Damascus 644-7/1246-9. After an earlier career in the provincial administration of Egypt, Ibn Maṭrūḥ followed al-Ṣāliḥ Ayyūb to al-Djazīra in 629/1232. At Damascus, he not only directed the administration but also shared executive power with the *amīr* Shihāb al-Dīn Rashīd al-Kabīr. He was replaced by the *ḳāḍī* al-Asʿad Sharaf al-Dīn al-Fāʾizī, who was shortly afterwards appointed vizier in Cairo to al-Muʿaẓẓam Tūrānshāh [*q.v.*].

It was finally at Aleppo that the vizierate enjoyed the greatest continuity in the Ayyūbid period, with six viziers succeeding almost without interruption in the years 592-658/1196-1260. The most important was Djamāl al-Dīn Ibn al-Ḳifṭī [*q.v.*], appointed *ca.* 614/1217-18; a man of great culture and deep piety, he left behind the reputation of a very good administrator. Al-ʿAzīz b. al-Ẓāhir in 628/1231 replaced him by one of his intimates, whose tenure of power turned out to be disastrous, so that Ibn al-Ḳifṭī was recalled in 634/1236, serving till his death in 646/1248 and then replaced by his brother Muʾayyid al-Dīn, who remained in post at Aleppo till the Mongol invasion of 658/1260.

The geographical origins of these viziers varied according to the regions. In Egypt, they tended to be locally recruited, but in Aleppo, the influences of the lands further east (ʿIrāḳ and Persia), which were the origin of three out of six viziers, plus that of Egypt (the Banu 'l-Ḳifṭī), stamped the administration there with a double tradition, ʿAbbāsid-Saldjūḳid and Fāṭimid. Although less important than in the past, the influence of Christian and Jewish milieux was still at times felt. Thus al-ʿĀdil, right at the beginning of his reign, appointed a Christian convert called al-Ṣanīʿa Ibn al-Naḥḥāl. Al-Amdjad Bahrāmshāh (578-627/1182-1230) at Baalbek had a Samaritan vizier whose nephew Amīn al-Dawla al-Sāmirī (d. 648/1250), converted in

his youth to Islam, was subsequently vizier to al-Ṣāliḥ Ismāʿīl at Damascus 637-43/1239-45. His excessive power, his network of spies and his financial extortions earned him the hostility of the Damascenes.

There was no specific, theoretical training for the post of vizier. Family tradition was important for most official positions. There were families of officials and even of viziers, but more often, the viziers learned on the job. They began as secretaries, accountants (*mustawfī*) and inspectors of finances (*nāẓir*) in the capital or the provinces before heading the administration. Most of them had a literary and legal-theological education. Djamāl al-Dīn Ibn al-Ḳifṭī is the best example of this, but Ibn Shukr was an authority on traditions and Mālikī law. We know little about their financial remuneration. They probably drew a salary like other officials. Some received grants of lands, and more rarely, of *iḳṭāʿ*s (Ibn Maṭrūḥ); others enriched themselves by more or less legal means, and the leading viziers thus acquired large fortunes (Ibn Shukr, Ibn al-Ḳifṭī).

The vizier's main function was to oversee the *dīwāns* and their personnel. Sometimes, in the absence of a head of chancery or chief of the army department, he guided the secretaries directly. His financial skills were the most important ones. The vizier also supervised provincial administration, above all, the collection of taxes which was the responsibility of the provincial governors, themselves appointed by the sultan and, occasionally, as at Aleppo, by the vizier. Nevertheless, in the financial sphere, some activities remained the prerogative of the ruler, such as the application or suppression of taxes, especially non-canonical ones, *mukūs* [see MAKS].

The vizier also had an important political role, often being part of regency councils and acting as the ruler's adviser, over whom he could have a wide influence. Certain of them even tried to replace one princely heir by another, as when the vizier of Ḥamāt, Zayn al-Dīn Ibn Furaydj, invited al-Nāṣir, the younger son of al-Manṣūr [*q.v.*], to seize power at the expense of his elder brother al-Muẓaffar. Sometimes the sultan deputed the vizier to oversee personally important projects. Thus al-ʿĀdil asked Ibn Shukr to supervise work at Damascus on the Umayyad Mosque and the *muṣallā*. Ibn Shukr also financed on his own account the building or restoring of two important mosques in the suburbs of Damascus and founded a Mālikī *madrasa*, the Ṣāḥibiyya, at Cairo.

In practice, the prestige and power of viziers depended a lot upon their own personality and on the ruler's authority. Not all were as highly respected as Djamāl al-Dīn Ibn al-Ḳifṭī or had as much power as Ibn Shukr. In 604/1207, the caliph al-Nāṣir li-Dīn Allāh [*q.v.*] sent a robe of honour (*khilʿa*) to this last as well as to the Ayyūbid princes. In Aleppo, after the sultan had in 648/1250 left to take up residence in Damascus, the vizier Muʾayyid al-Dīn Ibn al-Ḳifṭī had the *ghāshiya* [*q.v.*], one of the insignia of royalty, carried before him. Certain viziers, on the other hand, remained obscure persons, and in any case, their power always remained subordinate to that of the sultan, who could dismiss them at any time; it was indeed rare for viziers, even the most important, not to suffer dismissal, exile or imprisonment.

4. Muslim Spain.

In al-Andalus in the Umayyad period, every sovereign surrounded himself with various numbers of *wuzarāʾ*. Their purpose was not merely to be a source of advice and information for him but also to carry out in his name military missions as well as political and diplomatic assignments. Usually, there were no more than ten *wuzarāʾ* at any one time, though the *amīr* ʿAbd Allāh b. Muḥammad [*q.v.*] once had up to thirteen, and there were possibly as many as sixteen by the time of ʿAbd al-Raḥmān III [*q.v.*]. The appointment and dismissal of *wuzarāʾ* was particularly frequent during the government of the latter, who had a total of 46 ministers, a much higher number than any of his predecessors had had. It was only in the later years of the Umayyad dynasty that the number of these dignitaries rose. In 399/1008, at the time of the ceremony for the acclamation of ʿAbd al-Raḥmān b. Abī ʿĀmir [*q.v.*] as the successor to Hishām II [*q.v.*], there were 29 *wuzarāʾ* present.

The office of *wizāra* was a paid function. ʿAbd al-Raḥmān II arranged a salary (*rizḳ*) of 300 dīnārs for his ministers. But this office did not exclude all other work; indeed, it was usual that the bearer would hold office along with other functions, such as those of *kātib, ḳāʾid, ṣāḥib al-madīna* [*q.vv.*] etc. Up to the beginning of the 5th/11th centuries, the period when Abu ʾl-ʿAbbās Ibn Dhakwān [*q.v.*] and Abu ʾl-Muṭarrif Ibn Fuṭays (d. 402/1012) held the plural offices of *ḳāḍī* and *wazīr*, it had never been the case that anyone had at one and the same time been a religious magistrate and a vizier; but from then onwards this became a frequent practice.

The office of vizier was often held by the most influential families (*buyūtāt*), united by their ties of clientage (*walāʾ*) with the Marwānids. Even after the Umayyad period these lineages were made up of long series of viziers, among whom the most conspicuous were the Banū Abī ʿAbda, the Banū Shuhayd and the Banū Fuṭays. It was exceptional for a member of the reigning family to occupy the post of *wazīr*, but the sovereigns took good care that representation of the other aristocratic Arab families was balanced proportionally. The case cited in the period of the *amīr* ʿAbd Allāh, of four viziers who belonged to the same clan of the Banū Abī ʿAbda, was considered unusual. This was also the *amīr* who for the first time decided to seat a person who did not belong to the Arab aristocracy among his ministers, his *fatā* [*q.v.*] Badr. The viziers in al-Andalus were always Muslim up to the period of the *mulūk al-ṭawāʾif* [*q.v.*], when there were also a few Jewish viziers, the most famous of whom was Ibn al-Naghrālla from Granada (d. 448/1056-7).

The rank of vizier was superior to any other civil servant except that of *ḥādjib* [*q.v.*]. In principle, the appointment to the office of vizier did not entail the responsibility of a department or duty to the government of the state. However, during the amīrate of ʿAbd Allāh, a vizier is mentioned who was invested specifically to direct one of the sectors of state administration (*idārāt*); and when in 344/955 the caliph ʿAbd al-Raḥmān reorganised state administration and divided the tasks of government into at least four sections, he placed a *wazīr* at the head of each one.

After the time of ʿAbd al-Raḥmān II, the viziers

had a room for private consultation and assembly (*bayt al-wizāra*) in the palace. The position of the viziers in this room conveyed the fact that all the dignitaries did not have the same rank; it was the *amīr* Muḥammad I (d. 273/886) who decided that the *wuzarā'* of eastern origin, called *shāmiyyūn*, should take precedence over the others, the *baladiyyūn*, and that consequently they should sit on the highest platforms. This priority was maintained by his successors, despite the conflict which it generated with several important *baladiyyūn*.

The honorary title of *dhu 'l-wizāratayn* appeared in al-Andalus in 327/939, during the caliphate of ʿAbd al-Raḥmān III, who copied the title which Ibn Makhlad [*q.v.*] had received from the ʿAbbāsid caliph in 269/882 (see Hilāl al-Ṣābi', *Rusūm dār al-khilāfa*, ed. M. ʿAwwād, Beirut n.d., 127). The first person to bear this title in Cordova was Abū ʿUmar Ibn Shuhayd, and his rank was superior to that of the other *wuzarā'*, for the name of the bearer of this title appears at the top of the list of viziers and he was paid the equivalent of the salaries of two ministers.

In the reign of al-Ḥakam II [*q.v.*] this title disappeared, but then there appears the title of *wazīr al-dawla*; it was given to al-Muṣḥafī (d. 372/982) before he was called *ḥādjib* on the day following the death of the caliph. During the first caliphate of his successor, Hishām II, the title of *dhu 'l-wizāratayn* reappeared, and subsequently it was conferred on a child, the son of the *ḥādjib* ʿAbd al-Malik b. Abī ʿĀmir al-Muẓaffar [*q.v.*], under whose government the title *wazīr al-dawla* was again used to honour Ibn al-Ḳaṭṭāʿ al-Yaḥṣubī [*q.v.*].

In the period of the *Taifas*, quite a number of sovereigns assumed the title of *ḥādjib*, for the reason that this term had acquired such prestige under the Marwānid dynasty and also as an indication that they merely considered themselves as representatives of the caliph. These *mulūk al-ṭawā'if* generalised the high position of vizier by applying it to all the people who were frequenting the court and whom they wished to honour; and from this period onwards there were also many persons in al-Andalus who were decorated with the title of *dhu 'l-wizāratayn*.

The institution of the *wizāra* was so characteristic of Andalusī administration that the word *alguacil* (from Arabic *al-wazīr*) was very quickly integrated into the Castilian language. But the fact that this Arabism did not only signify "minister, counsellor or lieutenant of the sovereign", but that it was used to designate other duties or offices as well, seems to indicate that the word *wazīr* was eventually applied to different categories of public office in al-Andalus.

One of the meanings of the Castilian vocable *alguacil* in the Middle Ages was that of "governor, or lord of a city or a region, who was entrusted with civil and criminal jurisdiction" (*Diccionario histórico*, s.v.). This meaning corresponds to the expression "vizier of a district" which is frequently found in Andalusī texts from the 5th/11th century onwards and which conveys the fact that, from the period of ʿAbd al-Raḥmān III, the viziers began to fill permanent positions outside Cordova, chiefly those of governor and chief of the military region. This happened to such an extent that, at the end of the Naṣrid sultanate in Granada, the one who represented authority in each of the localities of the amīrate was given the title of *wazīr*.

After the occupation of the territory of Granada, the Castilians revived this institution and knew the member of the local community responsible for civil and fiscal matters and the representative of his fellow-citizens as *alguacil*.

II. In Persia

The *wazīr* was the head of the supreme *dīwān*, the *dīwān-i aʿlā* [see DĪWĀN. iv. Iran] and as such was the head of the bureaucracy. He had under him numerous subordinates. The heads of some branches of the administration under him were also called *wazīrs*, such as the *wazīr-i lashkar* and the *wazīrs* in charge of the finances of the provinces. The term *wazīr* was also sometimes applied to the head of the personal establishment of provincial governors, important *amīrs* and royal princes and princesses. This article will be concerned with the *wazīr* as head of the supreme *dīwān*.

The *wazīr* belonged to the "men of the pen" as opposed to the "men of the sword" and was usually of Persian rather than Turkish extraction. A common feature of society was the existence of influential bureaucratic families, such as the Djayhānīs [see AL-DJAYHĀNĪ, in Suppl.], the Balʿamīs [see BALʿAMĪ] and ʿUtbīs; [see ʿUTBĪ]; in the Saldjūḳ period the family of Niẓām al-Mulk [*q.v.*]; and under the Īlkhāns the Djuwaynīs and the family of Rashīd al-Dīn Faḍl Allāh Hamadānī [see RASHĪD AL-DĪN ṬABĪB].

Under the Īlkhāns, and sometimes in later times also, the *wazīr* had the title *ṣāḥib dīwān*. The Ṣafawid shah ʿAbbās I [*q.v.*], gave the *wazīr* the titles *Iʿtimād al-Dawla* and *Ṣadr-i Aʿẓam*, by which title he was also known in the Ḳādjār period.

The insignia of the *wazīr* was an inkpot, usually golden, which he was given on appointment together with a diploma (*manshūr*), and a robe of honour. Ṣadr al-Dīn Khālidī, when appointed *ṣāḥib dīwān* by Gaykhātū [*q.v.*] in 691/1292 was given the *laḳab* of Ṣadr-i Djahān, a gold seal, a horse-tail standard, a war trumpet and a *tūmān* [*q.v.*] of soldiers. In the late Īlkhānid period the insignia of the *wazīr* appear to have been a golden inkpot, a jewelled belt, a royal seal (*āl*), and banner (*sandjaḳ*), a standard (*ʿalam*) and the right to kettle-drums (*ṭabl, naḳḳāra* [*q.v.*] (Lambton, *Continuity and change in medieval Persia*, 56). Under the Ṣafawids, his insignia were a jewelled pen and inkstand. On appointment he was given robes of honour, a headdress (*tādj u hādj*) with a plume (*djiḳa*) and a *tūmār* (Muḥammad Taḳī Dānishpazhūh, *Dastūr al-mulūk-i Mīrzā Rafīʿā wa tadhkirat al-mulūk-i Mīrzā Samīʿa*, in *Madjalla-yi dānishkada-yi adabiyyāt wa ʿulūm-i insānī*, Tehran, xvi/1-2 [1968], 77).

The *wazīr* was not the servant of the state but of the ruler, by whom he was directly appointed. He was a member of the court (*dargāh*) and accompanied the ruler on military expeditions and on his

perambulations around the empire. Because of the element of personal service involved, the power and influence of the *wazīr* underwent many vicissitudes with the rise and fall of successive dynasties and rulers.

Although the *wazīr* had general supervision over the administration, his fundamental and most important duty was to oversee the finances of the state. He was usually paid by assignments on the revenue; in addition, he received various fees and allowances, the number of which increased over the years, especially under the Ṣafawids. The sources of profit open to him were many and some *wazīrs* accumulated much wealth. This enabled them to gather followers but it also made them the object of the jealousy of their peers and the suspicion of the ruler, who sometimes sought to limit their potential power by the appointment of joint *wazīrs*. These dual appointments were occasionally found under the Būyids and K͟hʷārazm S͟hāhs, notably under the Īlk͟hāns, and at least once under the Ḳād͟jārs [see ḲĀD͟JĀR at Vol. IV, 394a]. In this the Īlk͟hāns may have been influenced by Chinese administrative practice. Tension between the *wazīr* and the military was a perennial feature of most reigns. Although the assignments and pay of the military went, at least in theory, through the office of the *wazīr*, only the strongest *wazīrs* could hope to maintain the pre-eminence of the bureaucracy over the military.

The office of *wazīr* was a precarious one. Its holder had no security of tenure and was subject to arbitrary dismissal and was often, after his fall, mulcted, and sometimes physically punished and murdered. Of the six men who held the office of *wazīr* under Maḥmūd of G͟hazna [*q.v.*], three were dismissed and died violently; a fourth suffered disgrace and prolonged imprisonment; a fifth fell from favour and was mulcted and a sixth was executed by Masʿūd b. Maḥmūd shortly after he succeeded Maḥmūd (C.E. Bosworth, *The Ghaznavids*, Edinburgh 1963, 70-1). The situation did not materially alter in later periods. Several Sald͟jūḳ *wazīrs* suffered violent ends (Lambton, *op. cit.*, 46-7); and Ḥamd Allāh Mustawfī states that Tād͟j al-Dīn ʿAlī S͟hāh was the only Īlk͟hānid *wazīr* to die a natural death (*Tārīk͟h-i guzīda*, ed. ʿAbd al-Ḥusayn Nawāʾī, Tehran AHS 1336-9/1958-61, 616). Dismissal followed by mulcting, imprisonment and death was a fact of frequent occurrence up to and including the 19th century.

Under the Sāmānids the *wazīr*, known as the K͟hʷād͟ja Buzurg, was the head of a well-developed bureaucratic system, divided into a number of separate *dīwāns* (Barthold, *Turkestan*, 229), but towards the end of the 4th/10th century, power began to pass into the hands of the military. The historian al-ʿUtbī states that the last Sāmānid *wazīrs* had no power to restore order: "Dominion passed into the hands of the Turks and the decrees of the *wazīrs* lost their force" (quoted by Barthold, *op. cit.*, 253). Meanwhile in the western provinces the *wazīrs* under Būyid rule no longer enjoyed prestige as had the Barmakids [see AL-BARĀMIKA] under the caliphs. Their function was mainly to provide money for the military forces of the ruler. Some, however, acquired considerable power, notably al-Ṣāḥib Ibn ʿAbbād [*q.v.*], *wazīr* to Fak͟hr al-Dawla and Muʾayyid al-Dawla, and Abū ʿAlī b. Ismāʿīl al-Muwaffaḳ, appointed *wazīr* by Bahāʾ al-Dawla in 388/998 [see BAHĀʾ AL-DAWLA, in Suppl., at 118b].

The vizierate reached its apogee under Niẓām al-Mulk [*q.v.*], *wazīr* to the Sald͟jūḳ sultans Alp Arslān and Maliks͟hāh. He supervised the general conduct of affairs on behalf of the sultan. He also had general supervision of the religious institution, and as the personal representative of the sultan he conducted relations with the caliph and other rulers. He even on occasion conducted military expeditions (Lambton, *op. cit.*, 18 ff.). The rewards of office were great but its expenses heavy. The *wazīr* was expected to maintain a large household, including armed retainers. Niẓām al-Mulk, for example, had a private army of military slaves. Custom demanded that the *wazīr* should be accessible, and his court was accordingly thronged with petitioners. The distinction between his private funds and what he expended as *wazīr* on behalf of the sultan or in the general interest is not easily made. In the late Sald͟jūḳ period, the vizierate declined, not only because of a lack of effective controls throughout the administration but also because of the fragmentation of the Sald͟jūḳ empire. Under the K͟hʷārazm S͟hāhs, the *wazīr* temporarily regained some of his former importance (*ibid.*, 49).

In the early years of Mongol dominion in Persia, there was an ill-defined dual system: the *wazīrs* acted mainly as finance ministers alongside the Mongol governors of the provinces, though what their relationship was to the *ulug͟h bitikčis* (or chief secretaries) of the Mongol governors, whose functions appear to have been primarily the keeping of tax records and the imposition and collection of taxes, is not clear. Bahāʾ al-Dīn D͟juwaynī was confirmed as *ṣāḥib dīwān* to Čin-Temür, the governor of K͟hurāsān, by Ögedey and was later successively *ṣāḥib dīwān* to Korgüz and Arg͟hūn, both of whom were governors of K͟hurāsān. On the succession of Möngke, he was confirmed as *ṣāḥib dīwān* and sent with the Mongol *amīr* Naymatay to Persian ʿIrāḳ and Yazd, but died en route to his new post. S͟hams al-Dīn D͟juwaynī became chief minister and *ṣāḥib dīwān* to Hülegü in 661/1262-3, which post he also held under Hülegü's successor, Abāḳā, and attained a position of great personal influence. From 678/1279 Mad͟jd al-Mulk Yazdī, the *mus͟hrif al-mamālik*, held office beside him and signed documents on the left while S͟hams al-Dīn signed on the right. Saʿd al-Dawla, *ṣāḥib dīwān* to Arg͟hūn, and Ṣadr al-Dīn Aḥmad K͟hālidī, appointed *ṣāḥib dīwān* by Gayk͟hātū in 691/1292, both exercised wide-ranging power. The most influential Īlk͟hānid *wazīr* was probably Ras͟hīd al-Dīn Faḍl Allāh Hamadānī, who held office under G͟hāzān and Öld͟jeytü. His position was not entirely secure, however, and eventually he fell from office and was mulcted and killed. In the reign of G͟hāzān he had alongside him Saʿd al-Dīn Muḥammad Sāwad͟jī as joint *wazīr* and Tād͟j al-Dīn ʿAlī S͟hāh in the reign of Öld͟jeytü.

Under Tīmūr there was a decline in the position of the *wazīr*. Power was in the hands of the military. Similarly, under the Ḳara Ḳoyunlu and the Aḳ Ḳoyunlu the *wazīr*'s power was circumscribed and confined mainly to financial affairs.

In the early Ṣafawid period, the administration of the state was fairly fluid and at times the *amīrs*, especially the *amīr al-umarāʾ*, and to a lesser extent the *ṣadr* (the chief religious official), encroached upon the powers of the *wazīr*. Shah Ismāʿīl I tended to delegate power to a chief minister, known as the *wakīl*, whose functions, if not his title, had existed under the late Aḳ Ḳoyunlu rulers (J. Aubin, *L'avènement des Safavides*, in *Moyen Orient et Océan Indien*, v [1988], 112). He was in effect the *wazīr*, and this was still the official term for the chief minister of the shah. The term *wakīl* does not appear in the official titulary in archival documents so far as is known (*ibid.*, 113-14. This corrects the statement in the art. DĪWĀN at Vol. IV,

334b, which differentiates wrongly *wakīl* from *wazīr*). Political and financial affairs (*umūr-i mālī wa umūr-i mulkī*) were delegated to him but he had no authority over the religious institution, though he did sometimes intervene in the nomination of the *ṣadr* (*ibid.*, 115-66).

From the reign of ʿAbbās I (995-1038/1587-1629), an elaborate administrative system evolved, at the head of which stood the *wazīr*. He was a member of the council of state (*djānkī*); at court he stood at the shah's right hand, while the *wāḳiʿa-nuwīs*, the official historiographer, stood on the left and was sometimes called the *wazīr-i čap* (R.M. Savory, *The Safavid administrative system*, in *Camb. hist. of Iran*, vi, *The Timurid and Safavid periods*, Cambridge 1986, 353).

The *Dastūr al-mulūk* of Mīrzā Rafīʿā and the *Tadhkirat al-mulūk* [of Mīrzā Samīʿā] (Persian text in facs., tr. and explained by V. Minorsky, London, 1943) describe the office of the *wazīr* of the supreme *dīwān*. The former states that his office was the greatest of all offices and that he was the most important of all the pillars of the state; the collection and expenditure of the revenue were made with his knowledge, approval and signature; subordinate *wazīrs* and other officials of the *dīwān* and the agents of the *dīwān* in the provinces were appointed by him. It was his duty to restrain unlawful acts, but if the offender was a powerful governor, he was to refer the case to the shah. The *wazīr* was to come daily to the guard-house at the gate of the *dīwān* to hear the petitions of the people (ed. Dānish-pazhūh, 75-7). He had no wages (*mawādjib*) but had the right to numerous dues, fees and allowances. At the New Year he had to give a present [see PĪSHKASH] to the shah of 1,000 *ashrafīs* and twelve stallions and mares (*ibid.*, 77).

Under Fatḥ ʿAlī Shāh (1797-1834), the functions of the *wazīr* were probably not very different from the late Ṣafavid period; but in the mid-19th century, political and administrative changes began to take place [see DUSTŪR. iv; ḲĀDJĀR]. Mīrzā Taḳī Khān Amīr Niẓām [see AMĪR KABĪR in Suppl.], chief minister (*ṣadr-i aʿẓam*) to Nāṣir al-Dīn Shāh from 1848 to 1852 and Mīrzā Ḥusayn Khān Sipahsālār Mushīr al-Dawla, who was appointed in 1871, both attempted to introduce far-reaching reforms but with little success; both were dismissed and the former murdered. Mīrzā Āḳā Khān Nūrī, Mīrzā Taḳī Khān's successor, was dismissed in 1858, and for some years the shah sought to rule without a chief minister. The experiment was not successful, though the shah repeated it again in 1873. In the 1880s, chief ministers were again appointed.

Documents for the *wazīr* are to be found in the following collections: Bahāʾ al-Dīn Baghdādī, *al-Tawassul ilā ʾl-tarassul*, ed. Aḥmad Bahmanyār, Tehran AHS 1315/1936-7; Muntadjab al-Dīn Badīʿ al-Kātib al-Djuwaynī, *ʿAtabat al-kataba*, ed. ʿAbbās Iḳbāl, Tehran AHS 1329/1951; ʿAbd Allāh b. Muḥammad b. Kiyā Māzandarānī, *Die resāla-ye falakiyya*, ed. W. Hinz, Wiesbaden 1952; H. Horst, *Die Staatsverwaltung der Grosselǧūqen und Ḫōrazmšāhs*, Wiesbaden 1964; Muḥammad b. Hindūshāh Nakhdjiwānī, *Dastūr al-kātib fī taʿyīn al-marātib*, ed. A.A. Alizade, Moscow i, 1964, i/2, 1971, ii, 1976; see also B.G. Fragner, *Repertorium persischer Herrscherurkunden*, Freiburg im Breisgau 1980. Much material on the holders of the office of *wazīr* is to be found in chronicles and historical works, some of which give lists of *wazīrs* under the reigns of individual rulers or dynasties, and in biographical dictionaries.

(ANN K.S. LAMBTON)

III. IN THE OTTOMAN EMPIRE

Here, synonyms for the *wezīr* were such varied terms as *pasha*, *ṣāḥib*, *āṣaf*, *wekīl*, *nāẓir* and *lala*, with the Grand Vizier also known as the *ṣadr-i aʿẓam* [*q.v.*], the First *Wezīr* in the imperial *dīwān*, with the lesser *wezīrs* as his advisers.

Background and evolution of the office

During the 8th/14th century, the Ottoman rulers appear to have chosen their *wezīrs* mostly from among the *ʿulemāʾ*-bureaucrats or *ḳāḍīs*. In Orkhan's *temlīknāme* of Rabīʿ II 749/June 1348 (*Topkapı Sarayı arşiv kılavuzu*, i, Istanbul 1938, facsimile I) Ḥādjdjī Pasha, mentioned first among the witnesses, is obviously the *wezīr*. Evidently, it was because of their expert knowledge in Islamic jurisprudence and institutions, considered of vital importance in organising the new Ottoman amīrate, that *wezīrs* were chosen from the *ʿulemāʾ* class. The first identified *wezīrs* were ʿAlāʾ al-Dīn ʿAlī Pasha (723/1323), Aḥmad b. Maḥmūd (741/1340), Ḥādjdjī Pasha (towards 749/1348) and Sinān al-Dīn Yūsuf (after 749/1348). ʿAlāʾ al-Dīn Pasha, who is believed to have been the first *wezīr* in Ottoman history, was definitely of the *ʿulemāʾ* class (see Hüsameddin, 43) and not the brother of Sulṭan Orkhan, as claimed in Ottoman annals. Before Čandarli̊ Khayr al-Dīn Ḳara Khalīl, a chief *ḳāḍī*, was made Grand Vizier with full powers in 787/1385 or a little later, six *wezīrs* have been identified by Hüsameddin (*ibid.*). In the period 1385-1453 the Čandarli̊ family provided the Ottoman state with *wezīrs* and Grand Viziers, all serving as *ḳāḍī* in their earlier career. Some of the members of the family served only as simple *wezīrs* or *ḳāḍī-ʿaskers*

in the imperial *dīwān* (see Uzunçarşılı, *Çandarlı vezir ailesi*).

Early popular *ghāzī* tradition (see Giese, *Chroniken*) reflects ever-present rivalry between the *wezīrs* of military background and those from the *ʿulemāʾ*. The *beylerbeyis* of Rumeli and Anadolu [*q.vv.*], as well as *wezīrs* of military background, sat in the imperial *dīwān* in this early period. The most spectacular show of rivalry between the two groups occurred between Čandarli̊ Khalīl and Shihāb al-Dīn Pasha in the period 1440-53, ending with the fall of Khalīl (see İnalcık, *Fatih devri*, 1-53).

A revolutionary change occurred in 857/1453 when the over-mighty Grand Vizier Čandarli̊ Khalīl, arrested and executed by Meḥemmed II, was replaced by *wezīrs* from amongst the military men of *ḳul* [see GHULĀM. iv] origin, although bureaucrats or *ʿulemāʾ* with expertise in finance or chancery correspondence continued to be employed as *wezīrs*. One from the latter category, Nishāndji̊ Meḥmed of Ḳaramān, holding the position of Grand Vizier, was murdered by the Janissaries on the death of Meḥemmed II in 886/1481. His rival *wezīrs* Isḥāḳ and Gedik Aḥmed [*q.v.*], military men, replaced him in the government, and all *wezīrs* from *ʿulemāʾ* or from *küttāb* or secretarial origin were dismissed. The insurgent Janissaries demanded that from then onwards, the sultan should choose his *wezīrs* exclusively from among the *ḳul* element.

However, Bāyezīd II rehabilitated the Čandarli̊ family to the vizierate and, being concerned for his security on the throne against his brother Djem [*q.v.*], he often entrusted the position to the eunuch *ḳapi̊-agha* [*q.v.*] or other trusted servants of the palace.

Consequently, in the classical age (1453-1600), the *wezīrs* were mostly men of military background. Ibn Khaldūn noted the replacement of the *arbāb al-ḳalam* by the *arbāb al-sayf* under the Mamlūk Sultans in Egypt also. It was the Grand Vizier's exclusive right to recommend to the sultan the appointment or promotion of a *wezīr*. Of course, in reality people close to the sultan, such as the *ḳapi̊-agha*, the sultan's mother or the *muṣāḥib*, a favourite adviser of the sultan, often played a role in the final decision. Appointment of the *wezīrs* was to be made directly by the sultan himself with a *khaṭṭ-i̊ hümāyūn* [*q.v.*]. In choosing a *wezīr*, his expert knowledge in a special area was also taken into account. Maḥmūd Pasha was deliberately chosen for Meḥemmed II's plans for Serbia, and Ibrāhīm Pasha for Süleymān I's campaigns in Europe. *Wezīrs* of military origin multiplied in wartime.

Wezīrs coming from among the professional secretaries, as had been the rule formerly in the ʿAbbāsid, Saldjūḳid and Ilkhānid states, were mostly to be found in the Ottoman government in the second half of the 9th/15th century when a highly developed Ottoman bureaucracy evolved. Then, most of the *wezīrs* of *küttāb* origin belonged to the literati or to *ʿulemāʾ* families. Djazarī Ḳāsi̊m Pasha from Persia, who supposedly founded the Ottoman chancery or *inshāʾ* style and who was second *wezīr* and candidate for the Grand Vizierate under Bāyezīd II, was exiled under pressure from the military *wezīrs*. In any case, state secretaries specialising in such areas as finances and chancery correspondence rose in the hierarchy to become *wezīrs* and Grand Viziers.

In the chaotic conditions of the end of the 10th/16th century, the rule that the second *wezīr* would be promoted to the Grand Vizierate was often disregarded, and the third or fourth *wezīr*, or even a governor or Janissary *agha* or *silāḥdār* outside the *dīwān*, could be appointed to the position.

As for the ethnic origins of the *wezīrs*, most of them in the classical age were of slave, *ḳul*, origin. We find, for example, a comparatively great number of *wezīrs* and Grand Viziers of Albanian and Slavic origin in the period 1430-1550 because of the fact that there were frequent expeditions in Albania, and the *devshirme* [*q.v.*] was regularly practised in the poor mountainous regions of the Balkans during this period (see Jorga, *GOR*, iii, 162-89). For the same reason, towards 983/1575 *wezīrs* were mostly of Croatian, Hungarian or Austrian origin. Passing through the palace services and provincial hierarchy, the most successful of these came back as *wezīrs* to the imperial *dīwān*. At palace schools, some gifted ones such as Luṭfī Pasha [*q.v.*] gained a good Ottoman Turkish education, while most of them acquired only martial skills, but some were illiterate and hardly able to speak Turkish. They had to rely on people in their *ḳapu* [*q.v.*], including advisers and secretaries who were responsible for their correspondence.

The accession of a new sultan to the throne meant a radical change in the *dīwān*, since the personnel which had served him in the period of his governorship expected to replace the *wezīrs* and other dignitaries of the previous sultan. The rivalry and plots of the newcomers to gain full control of the government often caused serious crises in administration, as witnessed at the accessions of Meḥemmed II, Bāyezīd II, Selīm I, Selīm II and Murād III. When the practice of the princes' governorship was abandoned under Meḥemmed III [*q.v.*], palace factions mostly determined who was to become the new sultan and his *wezīrs*. Under the sultans who were minors, in the 11th/17th century *wālide sulṭāns* [*q.v.*] became responsible for choosing the *wezīrs*.

Under the long period of regency of the *Wālide* Māhpeyker [see KÖSEM WĀLIDE], who was acting in alliance with the Janissary corps, dismissals became very frequent as a result of favouritism, clientship and bribery. Contemporary critics (see ʿĀlī, *Nuzha*; Ḳoči Bey, *Risāle*) stress that it was the loss of vizierial authority that was responsible for the anarchical conditions in the period.

At an unusually critical point in 1066/1656, the palace saw that it was indispensable to restore the vizierial authority in the person of Meḥmed Köprülü [see KÖPRÜLÜ], to whom dictatorial powers were assigned. Meḥmed, his son and relatives retained power for almost half a century, often allying with the *ʿulemāʾ* to neutralise rivals.

The character of the Ottoman vizierate and the origins of the *wezīrs* again changed radically in the period following the peace of Carlowitz [see KARLOVČA] in 1109/1698-9. During the war of 1683-99, the Ottoman army and government collapsed, and the palace had to call upon the Djelālī [*q.v.* in Suppl.] leaders of Anatolia. One of them, Boynu-Yarali̊ Meḥmed, a Turcoman, became Grand Vizier (Naʿīmā, vi, 197; Silāḥdār, i, 410). After the war, the palace brought to power the architect of the peace treaty, the *reʾīs al-küttāb* [*q.v.*], Rāmī Meḥmed, head of the Grand Vizier's chancery responsible for foreign affairs. The Ottomans now believed that some sort of diplomatic service was becoming crucial for the existence of the empire, so that many of the *wezīrs* were now chosen from among the *reʾīs al-küttāb* class in the 18th century (Nishāndji̊ Ismāʿīl, Meḥmed Emīn, Abū Bekr, Muḥsin-zāde, Khalīl Ḥāmid). However, in the period following the 1730 revolution, meetings of the imperial *dīwān* became obsolete. The powerful black eunuch *aghas* of the imperial harem became responsible for the choice of

the *wezīrs* and Grand Viziers. Later, in the second half of the century, bureaucrats, such as Rāghib Pasha [*q.v.*], succeeded in asserting vizieral power and independence, and the Grand Vizier's *kapu* [see BĀB-I ʿĀLĪ] became the centre of all governmental affairs. In this century also, Janissary *aghas* or *kapudān-i deryās* [*q.v.*] or governors were directly chosen for the Grand Vizierate, whilst most of the *wezīrs* and the Grand Viziers came from the Turkish families whose sons were clients of the high dignitaries or servants in the imperial palace. *Intisāb*, patronage and clientship thus played a major role in the choice of *wezīrs*, so that Georgian and Circassian slaves belonging to the households of dignitaries reached this exalted position during this period (Siyāwush, Kara Ibrāhīm, ʿAlī, Kodja Yūsuf, Ḥasan and Kör Yūsuf). The *ṣadr-i aʿẓam*'s assistants in his household, the *ketkhudā* and the *mektūbdju*, assumed the role of the *wezīrs*. In 1795 an attempt was made to reform the vizierate by restricting the title only to governors.

Bureaucratic control became more pronounced in the 19th century. In 1836, with the establishment of *neẓārets*, ministeries each under a *nāẓir* or *wekīl*, the title of *wezīr* and *pasha* was then kept only as a ceremonial title for *nāẓirs*.

The Grand Vizier then bore the title of *bash-wekīl*, losing much of a Grand Vizier's responsibility (see Akyıldız, 25-35). During the *Tanẓīmāt* [*q.v.*] period (1839-76), reformist bureaucrats and diplomats such as Muṣṭafā Reshīd, ʿĀlī and Fu'ād, succeeded each other in government, while they intermittently had to leave power to the generals or palace favourites. But, in general, it was the bureaucrats specialising in foreign affairs who alone had the power to attempt to disentangle the state from the complications of the so-called Eastern Question (see Findley).

Functions

In earlier Islamic states, *wezīrs*, as the heads of the separate *dīwāns* or bureaux, appear to have had a kind of autonomy. In the Ottoman state, however, all of the *erkān-i dewlet*, that is the *wezīrs* in the first place, and *defterdārs*, *nishāndjīs* and *kāḍī-ʿaskers* [*q.vv.*], assembled together in the *dīwān-i hümāyūn* [*q.v.*], the imperial council, theoretically under the sultan himself, but in practice under his *wekīl-i muṭlak*, the first *wezīr* or Grand Vizier [see ṢADR-I AʿẒAM].

Since the unity of the sultan's authority was the paramount principle of Ottoman government, state powers were to be exercised directly and exclusively by the first *wezīr*, other *wezīrs* acting mainly as his advisers. Potentially, however, each *wezīr* was considered to have the same powers as the first *wezīr*. A regulation of the vizierate (*MTM*, iii, 498-500) stipulates that when a *wezīr* was appointed as *kā'im-makām*, [*q.v.*] or as *serdār*, army commander, or as a *müfettish*, general inspector, he became superior in status to other *wezīrs*. When he was appointed a *serdār* or a *kā'im-makām*, he automatically acquired "exactly the same powers as the Grand Vizier, administering all sorts of *sharʿī* and *ʿurfī* affairs and the state laws and regulations, sending imperial orders in the name of the sultan (*fermān buyurmak*), making all appointments, and taking decisions in all kinds of affairs." But in fact many *kā'im-makām pashas* with such sweeping powers were tempted to replace the absent Grand Vizier. Also, a *wezīr* who was appointed governor to an *eyālet* or province or a *serdār* "was authorised on the way to his destination to hold a *dīwān* of his own to hear suits and issue *buyuruldus* or vizieral orders to prevent or correct unjust acts against the sultan's subjects". A *mufettish wezīr* had the power to dismiss or appoint local office-holders as the situation required. Even when he was dismissed from the mission, he could exercise the same powers on his way back to Istanbul.

At his appointment a *wezīr* received gifts, including a *dawāt* or *diwīt*, an ink-case which was traditionally the symbol of viziership, in all Islamic states. When on campaign, a *wezīr* carried three *tughs* [*q.v.*], used a large tent of three poles, the so-called shadow-hanging or, *sāyebān*, and had a gallery lit with candles, *kandilli sokak* (for other ceremonial distinctions, see *MTM*, iii, 498-500). Viziers of this category were distinguished as *üč-tughlu wezīr* and *ṣāḥib-i ṭughrā wezīr*. In a political treatise of around 1640 (*Ḥirz al-mulūk*, fols. 5a-10b) an ideal *wezīr* is described as being pious, just and honest, not greedy, and capable of solving problems by referring to the authoritative sources in Arabic and Persian. A Grand Vizier should, in addition, always consult other *wezīrs* before taking a decision. The author also underlines that the Grand Vizier should always be on the side of the powerless *reʿāyā* [*q.v.*], careful not to take bribes, not to attempt to get possession of public lands, and not to favour his clients for public offices. A Grand Vizier should, in the *dīwān* meetings, send most of the plaintiffs to the second *wezīr* for an impartial treatment.

The meeting days of the *dīwān* were four, from Saturday to Tuesday and the *ʿarḍ*, audience days with the sultan, two, sc. Sunday and Tuesday. In the late 11th/17th century, *dīwān* days were restricted to the *ʿarḍ* days.

In the *dīwān* meetings, *wezīrs* sat on the right-hand of the Grand Vizier in order of their seniority in the office. As advisers to the Grand Vizier, they discussed state affairs with him. The Grand Vizier Ibrāhīm, executed in 1536, was accused of neglecting consultation with the *wezīrs*. They accompanied the Grand Vizier on his audience days with the sultan. In the audience, the Grand Vizier alone spoke and made a report on affairs. A *wezīr* could make a written report to the sultan only through the Grand Vizier. Complaints by people against a *wezīr* were seen and judged in a special committee composed of the Grand Vizier, the *shaykh al-islām* [*q.v.*] and two *kāḍī-ʿaskers*.

Besides the *dīwān-i hümāyūn*, the Grand Vizier held a *dīwān* in his own residence called the *ikindi dīwānī*, the afternoon *dīwān*, to take care of lesser affairs. This residence, called *Pasha-kapīsī* or *Bāb-i ʿĀlī*, became the main *dīwān* for government affairs in the second half of the 11th/17th century.

One of the privileges of a *wezīr* was to assist the Grand Vizier and the *nishāndjī* in drawing the *ṭughrā* [*q.v.*], or sultan's seal, on the *firmāns*, a privilege for which they were called *wezīr-i ṣāḥib-i ṭughrā*. Putting the *ṭughrā* meant the validation of the sultan's order, thus making *wezīrs* the authorised agents of the ruler. Before the Ottomans, the *wizāret-i ṭughrā* was one of the highest positions in a Saldjūkid administration.

Customarily, the second *wezīr* was the prime candidate for the Grand Vizierate, although for practical reasons the sultan could choose a *wezīr* of lower rank for the post. Breach of this rule rarely caused a political crisis [see AḤMAD PASHA, KHĀ'IN].

The number of *wezīrs* sitting at the imperial *dīwān* was customarily restricted to four in the classical period, a mystical figure representing the four corners of the world, or the four Rightly-Guided Caliphs. Under certain circumstances, however, the number might be increased to more than four. For a better consultation the increased number was recommended (*Ḥirz al-mulūk*, fols. 26b-30b). In the 10th/16th century, governors of the large distant provinces, Egypt, Baghdād,

Ḥabes̲h̲ (Abyssinia), Yemen and Buda bore the title of *wezīr*, enabling them to act independently as circumstances required. Then, the number of seven became the norm. Over the course of time, two categories of *wezīrs* appeared, those sitting in the imperial *dīwān* in Istanbul, called *dāk̲h̲il*, or of the *ḳubbe*, and those of the provinces called *k̲h̲āridj̲* or of "the *eyālet*". During the long Persian campaigns from 1587 onwards, the number of the *ḳubbe wezīrs* was increased to nine, and those of the *k̲h̲āridj̲* to sixteen. The sensitive distant frontier provinces of Tabrīz, S̲h̲īrwān, Erzurūm, and Anatolia in the east, and those of Buda, Bosna and Belgrade in the west, were put under *wezīr*-governors with full authority. A *wezīr*-governor had the authority to summon the neighbouring governors under his command in an emergency.

The navy assuming a crucial importance under Süleymān I, the grand admiral or *ḳapūdān-i deryā* was chosen from among the *ḳubbe wezīrs*, or the actual head of the navy was given the title. Also in the 10th/16th century, the title of *wezīr* began to be employed for other important office-holders such as *defterdār*, *nis̲h̲āndj̲ï* or *ag̲h̲a* of the Janissaries. In the early 18th century, *ḳoltuḳ* or candidate *wezīrs* appeared, since the title was used for the principal palace *ag̲h̲as* such as the *silāḥdār* [*q.v.*], *rikābdār* or *čawus̲h̲-bas̲h̲ï*. At any rate, in this period the title lost its original lofty meaning, being conferred as an honorific title even on provincial magnates.

A *wezīr*'s chance for promotion depended much on the strength of his *ḳapu*, a household retinue numbering hundreds; *wezīrs* maintained large palaces comparable in their organisation to those of the sultan. *Wezīrs* were the richest members of Ottoman society. The basic salary of a *wezīr* came from his *k̲h̲āṣṣ* [see TĪMĀR] revenues in the provinces, which was doubled by other sources of revenues including substantial gifts and bribes. A *wezīr*'s annual revenue was estimated between 16,000 and 18,000 gold ducats, while the Grand Vizier's amounted to twice as much in the 10th/16th century. In 1525, the second *wezīr* Muṣṭafā's possessions included 700 *ḳuls* and 70,000 gold ducats, whilst those of the third *wezīr* Ayās included 600 *ḳuls* and 60,000 gold ducats.

In the 1580s, a retired *wezīr* received a pension called *arpaliḳ* [*q.v.*], ranging from 200,000 to 300,000 *aḳčes*, whilst a Grand Vizier received as much as half a million *aḳčes*, or about 8,300 gold ducats. The estate of a *wezīr* of *ḳul* origin without an heir belonged to the sultan's treasury.

AL-WAZĪR AL-MAG̲H̲RIBĪ [see AL-MAG̲H̲RIBĪ. 4].

AL-WAZĪR AL-ṢAG̲H̲ĪR (A.), a term of Fāṭimid administrative usage, also called the *Ṣāḥib al-Bāb*, i.e. head chamberlain. He was equal in status to the *Isfahsālār* or *Muḳaddam al-ʿAskar*, the commander-in-chief of the army, and the two of them settled all matters of military organisation. According to al-Ḳalḳas̲h̲andī, *Ṣubḥ*, iii, 483, vi, 7-8, he was second in the civilian administrative hierarchy after the *wazīr* himself and could hear *maẓālim* [*q.v.*] when the *wazīr* was pre-occupied.

WAZĪRĪS and **WAZĪRISTĀN**, the name of a Pas̲h̲tūn tribe and their region, essentially in the North-West Frontier region of present-day Pakistan.

Wazīristān, the region, lies on Pakistan's western frontier between the Kuṙam river in the north, the Gūmal in the south, and the western boundaries of the administered districts of Bannū and Dēra Ismāʿīl K̲h̲ān to the east. The western boundary of Wazīristān is roughly indicated by the international frontier with Afg̲h̲ānistān (the Durand Line) but the region extends into Afg̲h̲ānistān in Birmal and at other points. The region is a tangled mass of hills, valleys and plains and it is inhabited mainly by the Pas̲h̲tūn tribesmen from whom it takes its name, that is to say, the Wazīrīs, who trace their descent to a supposed common ancestor, Wazīr. In the central part of southern Wazīristān the Maḥsūds [*q.v.*] predominate. By origin Wazīrīs, the Maḥsūds are now regarded as a separate tribe. Elsewhere in Wazīristān are the Darwēs̲h̲ K̲h̲ēl Wazīrīs, now commonly known simply as Wazīrīs. In northern Wazīristān the ʿUt̲h̲mānzay branch are the principal inhabitants and in the southern, western and northern parts of southern Wazīristān (including the large plain of Wānā) live the Aḥmadzay branch. The eastern borders of Wazīristān are inhabited by Biṭanīs and parts of the Tōčī valley by the Dawrs. The principal occupations of the Wazīrī tribes have been agriculture and pastoralism, supplemented by trade, mining, a little manufacturing and raiding.

About the early history of Wazīristān and its inhabitants little is known. There are references in the memoirs of Bābur and in 18th-century documents from the time of Aḥmad S̲h̲āh Durrānī [*q.v.*], but most information is derived from British sources, especially from 1265/1849 onwards when British power in India was extended up to the borders of Wazīristān. To the British the Wazīrīs, especially the Maḥsūds, presented a major security problem, which they sought

to solve by various devices: punitive expeditions, blockades, fines, hostages, the encouragement of settlement, the garrisoning of strategic positions and the development of roads, but none of these availed and Wazīristān remained the most disturbed area of the North-West Frontier. The demarcation of the frontier with Afghānistān in 1312/1894 coincided with a new British initiative aimed at controlling the region through garrisons (notably at Wānā) and allowances to chiefs. The Dawrs of the Tōčī valley were brought under British protection and two political agencies were created: North Wazīristān (1895) and South Wazīristān (1896). These measures provoked still more vigorous resistance led by a Maḥsūd religious figure, Mullā Muḥyī al-Dīn (d. 1913), better known as the Mullā Pōwindā, and the chiefs were abandoned in favour of dealing with the generality of tribesmen and eventually with the Mullā Pōwindā himself. These efforts were unsuccessful, and during the Third Anglo-Afghān war (1919) Britain lost control over all of Wazīristān outside the Tōčī valley. There followed a major campaign in Wazīristān (1919-23) and a new plan for roads and military garrisons, notably at Razmak in North Wazīristān, but this plan involved the defence of long lines of communication and led to further fighting. From 1936 the two most prominent leaders of Wazīrī resistance were the Darwēsh Khēl *imām*, Ḥādjdjī Mīrzā ʿAlī Khān, the Faḳīr of Ipī (*ca.* 1890-1960 [*q.v.* in Suppl.]), and (from 1938) Saʿīd al-Gīlānī, the so-called Shāmī Pīr.

The creation of Pakistan witnessed the implementation of a new policy in Wazīristān: military garrisons were withdrawn leaving only the militias (in a restricted role) and *khāṣṣadārs* to support the political agents; new services were supplied including irrigation, schools and hospitals; and tribesmen were encouraged to settle and to develop economic and political links with Pakistan. Many, especially the Maḥsūds, worked as labourers, in transport and in light engineering in Pakistan. There are no reliable series of population statistics for Wazīristān but it is evident that the population grew rapidly in the second half of the 20th century and pressures were felt particularly by the Maḥsūds who encroached on the lands of the Aḥmadzay Darwēsh Khēl Wazīrīs in southern Wazīristān and even moved into northern Wazīristān around Razmak. Aḥmadzay resentment was articulated during the 1970s by Mullā Nūr Muḥammad of Wānā, who proclaimed a *djihād* against the Maḥsūds, leading to fighting and in 1976 the intervention of government forces to quell Aḥmadzay resistance.

Their proximity to the Afghān frontier and their links with Kābul have led to various Wazīrī interventions in Afghānistān since the early 19th century. In more recent times, Wazīrīs played a vital role in the conquest of Kābul by Nādir Khān in 1929, attacked Khōst in 1933, took an important part in the Kashmīrī *djihād* of 1947, and were drawn into the Afghān civil war after 1979.

WAZN (A.), lit. "the act of weighing", from *wazana* to weigh, to balance, cf. also *mīzān* [*q.v.*], a balance, scales; and for weights in general, see MAKĀZĪL and MAWĀZĪN.

1. As a term of numismatics.

Until the 20th century, when metallic currencies were supplanted by fiduciary money and other forms of monetary instruments, the Islamic world used gold and silver as their common medium of exchange and copper as a largely token currency.

The two intrinsic qualities that governed the value of these metals as coins were the purity of their alloys and the weights at which they were struck. When ʿAbd al-Malik b. Marwān carried out his monetary reform between 77 and 79/696-98, he introduced a gold coin based on the Byzantine solidus, *ca.* 4.40 gr., but somewhat lighter, *ca.* 4.25 gr., called the dīnār [*q.v.*] and a silver coin, the dirham [*q.v.*] modelled on the Sāsānid drachm, but struck at seven-tenths the latter's weight, 2.87 gr. Both coins were made from virtually pure metal and were intended to circulate by tale, i.e. prices were established and transactions concluded in a fixed number of coins of a known standard of weight and fineness. In everyday use, a fixed ratio between the prices of gold and silver could not be established and maintained because the purchasing power of both metals depended on their local supply and demand. For taxation purposes, however, provincial governments frequently fixed an exchange rate between the two which would serve their own revenue needs. Gold and silver were refined and struck at mints under caliphal control, but copper was manufactured into *fals* [*q.v.*] under the supervision of the local authorities and sold to the public in return for dīnārs and dirhams to support commerce and raise local revenues.

At the start of the ʿAbbāsid era, the weight of the dirham appears to have been raised from 2.87 to 2.97 gr., thus establishing the well-known ratio of seven coinage dīnārs or *mithḳāls* being equal in weight to ten dirhams. This move brought into being the so-called canonical dīnār and dirham which became enshrined in the *Sharīʿa* [*q.v.*] as the official weight of the coinage *mithḳāl* and dirham, regardless of the actual weight of the coins themselves. From the accession of al-Saffāḥ in 132/749 until the death of al-Mahdī in 169/785, this seven to ten ratio was occasionally observed in the more important mints under direct caliphal control. During the reign of al-Rashīd, however, the centralised coinage system began to disintegrate in the western regions of the Islamic world. Umayyad Spain, not surprisingly, made no effort to adhere to the ʿAbbāsid weight standard, with the average dirham from the al-Andalus mint weighing 3 to 4 tenths of a gramme less than its eastern cousins. Lightweight dirhams were also produced in mints from Morocco to Egypt, large numbers of which have been found in eastern hoards. This leads one to conclude that as long as the dirham was accepted by tale rather than weight, the western regions had discovered a simple and effective means of lightening their tax burdens. Lightweight Maghribī dirhams began to appear

in quantity in eastern hoards at this time, and the Yemen also adopted a light dirham standard for its own coinage in the 170s/780s-790s and 180s/790s-800s. Struck at the weight of a half, or even quarter dirham, these coins were obviously intended for circulation only within the province itself.

As the dirham standard became widely flouted, the integrity of the dīnār was also compromised through clipping or paring small slivers of gold from its circumference. While the mints continued to strike dīnārs at the usual 4.25 gr., the majority of these coins, when weighed today, are no more than 3.80 and 4.10 gr., a loss of up to 10% of their value. This would have been a tempting return for those who could avoid detection and arrest. This process probably accelerated during the civil war between al-Amīn and al-Ma'mūn and continued for a few years into the first decade of al-Ma'mūn's undisputed rule.

The widespread tampering with the weight of coins may well have provided al-Ma'mūn with the economic motive for introducing his reform style coinage in 198/813. Unlike ʿAbd al-Malik's reform, which was effected within a three-year period, that of al-Ma'mūn came about gradually, spreading from his residence in Marw in K͟hurāsān to the other mint towns which recognised ʿAlī al-Riḍā as heir between 202/817-18 and 204/819-20. In the latter year the new style was adopted by the capital mint, Madīnat al-Salām, and 206/821-2 witnessed the striking of the first mintless reform-style dīnārs and mint-bearing dirhams whose inscriptions were written in a distinctive, rounded and much more legible Kūfic script. Al-Ma'mūn's reform coinage added a second, outside marginal legend (Sūra XXX, 3-4), which is thought to be a coded reference to the inevitability of al-Ma'mūn's victory over al-Amīn, and removed the names of all officials from the field legends, returning the coinage to its original Umayyad anonymity. The addition of this marginal legend may have been intended to act as a safeguard against the clipping of coins, which would have necessitated the defacement of a Ḳur'ānic legend, an act that no pious Muslim could countenance.

The new coinage could be distinguished from the old at a glance. Both dīnārs and dirhams, now identical in design, were distinguished from one another only by their metals and the word *dīnār* or *dirham* in their inner marginal legends. These words had, however, lost their original meanings because the new coinage was no longer struck to fixed weight standards and thus could pass only by weight rather than by tale. In effect they lost their status as specie, i.e. coin money, and became bullion, no more than stamped ingots whose inscriptions were a guarantee of the purity of their metal. From then onwards, the coinage of the caliphate and all the states from Egypt to Central Asia which owed the ʿAbbāsids real or nominal allegiance calculated payments by weight of metal, with a premium for coins known to be of good alloy and a discount for those of rulers who debased their precious metal content.

It is interesting to note that in the Mag͟hrib the Ag͟hlabids chose to retain the style and weight of the traditional ʿAbbāsid dīnār for their gold coinage while adopting a new silver coinage based on the half dirham weight, and their successors, the Fāṭimids, Midrārids and Almoravids, continued to use coinages that could still pass by tale because of the accuracy of their weight. This tradition continued and was strengthened under the Almohads, Ḥafṣids, Marīnids and Naṣrids, whose coinages were very carefully struck to the weight of the standard, or non-coinage *mit͟hḳāl* of 4.68-4.72 gr. Their square *naṣrī* silver was emitted at the weight of the half dirham, *ca.* 1.40-1.50 gr.

Very little fine silver coinage was issued in the central Islamic lands between 450 and 570/1058-1174. Its place was taken by an abundant coinage in very debased billon in Afg͟hānistān and copper in Egypt, Syria and ʿIrāḳ, which had to be weighed out to determine its value against pure gold and silver for all substantial payments. Of course, every city had its own system of weights and measures, and the values of gold and silver fluctuated independently according to the local supply and demand for these metals.

The earliest fine silver coinage to appear in quantity in the third quarter of the 6th/12th century was struck by the Mahdids [*q.v.*] in the Yemen and that was followed soon after by the dirhams of the Zangid of Aleppo, al-Malik al-Ṣāliḥ Ismāʿīl b. Maḥmūd. The latter were issued at the canonical weight of 2.97 gr. and provided the foundation for the silver currency in both Rūm Sald͟jūḳ Anatolia and Ayyūbid Syria. The dirhams of Ayyūbid and Rasūlid Yemen weighed about 2.00-2.20 gr. which was sufficiently accurate for them to pass by tale.

Ayyūbid Egypt inherited the Fāṭimid monetary system, whose principal metal was gold that, because of its irregular weight, would have passed by weight. This was supplemented by so-called black dirhams (*dirham aswad* or *dirham waraḳ*), which Balog describes as "rough, uneven, small rectangles or squares of low silver content, the weight of which depended on the haphazard way the cold chisel of the flan cutter fell". A small number of fine silver dirhams was, however, struck under both the later Fāṭimids for presentation purposes and by al-Malik al-Nāṣir Yūsuf I, in an unsuccessful attempt to bring the debased Egyptian coinage into line with the high-quality Syrian one. By 622/1225, al-Malik al-Kāmil Muḥammad [*q.v.*], apparently acting under public pressure, felt the need to reform the silver coinage. In the event, it was no more than a cosmetic move, involving a less laborious way of flan manufacture than chiselling out irregular bits of metal. The still molten and debased alloy was poured over a cone of charcoal into a vat of water, and the spattering metal yielded lumps of variable size and weight which were then struck into coin. As Balog records, "instead of being an irregular square or rectangle, it was round, oval, or with one or two protuberances at the edge." In the 620s/1220s and 630s/1230s the production of good silver dirhams in Syria spread eastwards across al-D͟jazīra as far as Bag͟hdād where, starting in 632/1334, a dirham of canonical weight was struck for the first time in centuries. Before then, the need for small change was probably met by taking the contemporary broad, thin-flan ʿAbbāsid dīnārs, cutting them up into small pieces of gold of varying weight and selling them at the prevailing rate for silver or copper.

In the 8th/14th century a bi-metallic gold and silver currency was accepted in tale in Spain and the Mag͟hrib, a debased silver and copper currency of irregular weight, supplemented by stamped gold ingots, was current in Mamlūk Egypt, a lightweight silver coinage in Anatolia, analogous to the silver penny of Western Europe, a continuously depreciating silver coinage, also supplemented by stamped gold ingots, in ʿIrāḳ and Persia, and in Muslim India gold and silver tankas [*q.v.*] of stable weight and alloy that could also be accepted by tale.

A decisive shift in monetary policy took place in the 9th/15th century. Burd͟jī Mamlūk Egypt, Ottoman Turkey, and Aḳ Ḳoyunlu and then Ṣafawid Persia

adapted the weight of their gold currency to that of the Venetian sequin or ducat. This famous gold trade coin had a nominal weight of 3.50-3.55 gr. while the Islamic equivalents were, like the original Umayyad dīnār, slightly lighter in weight, usually around 3.40-3.45 gr. The silver coinage, likewise, was no longer linked to the weight of the canonical dirham and both weight and alloy could be reduced whenever economic pressures forced this expedient on governments. Details of these debasements are recorded in ʿOTHMĀNLĪ. IX. Numismatics, and TŪMĀN. 2.

The more recent centuries are basically a chronicle of increasing European influence on Islamic coinages. European economic and military pressures impoverished the Muslim world. The usual response lay in depreciating the currency through enforced devaluations. European governments whose traders were inconvenienced by the resulting monetary chaos demanded an end to systematic coinage manipulation. One by one the Muslim states were forced to adopt European-style coinages which they pledged not to debase. Because the introduction of the new bi-metallic currencies was not backed up by sufficient quantities of bullion to drive European currencies out of circulation, and because Muslim governments did not possess the necessary fiscal skills and discipline to deal successfully with European bankers and financiers, it was not long before unfavourable international loan agreements led to bankruptcy and, all too often, to colonial rule. The new colonial currencies, strong at first, shared the fate of those of the European powers in the aftermath of the World Wars of the 20th century. Decolonisation established national currencies in every Muslim country, but today their value, once determined by weight and fineness of metal, is governed by the respect they enjoy within the international financial system.

Bibliography: The literature on *wazn* begins with those coin catalogues and inventories which record the weight of the individual coin described. See the catalogues of the collections of Islamic coins in the major European and Middle Eastern museums. More detailed studies are contained in works devoted to the coinages of individual dynasties, e.g. P. Balog, *The coinage of the Ayyubids*, London 1980. Metallurgical analyses are also useful, as are studies of Islamic weights, e.g. G.C. Miles, *Early Arabic glass weights and stamps*, New York 1948. For a description of individual Islamic weights, see M.H. Sauvaire, *Matériaux pour servir à l'histoire de la numismatique et de la métrologie musulmanes*, Paris 1887. For some valuable recent observations on Islamic metrology, see the introduction by L. Ilisch to *The Turath collection. Coins of the Islamic world*, Auction Leu 64, Zurich 1996.

(R.E. DARLEY-DORAN)

2. In language and literature.

Here, *wazn* "the act of weighing" means the establishing of a pattern in morphology (*taṣrīf*) or in prosody (*ʿarūḍ*) [*q.vv.*]. Prosodical weighing or scanning is also called *taḳṭīʿ* or *tafʿīl*. As a concrete noun, *wazn* (pl. *awzān*) denotes the resulting word form or metre. A morphological *wazn* is also called *bināʾ*, pl. *abniya*.

In the *wazn* of nouns and verbs, the root consonants are replaced with *fāʾ*, *ʿayn* and *lām* (and another *lām* in case of a fourth radical), whereas auxiliary consonants (*zawāʾid*, sing. *zāʾid*) and vowels remain unchanged, e.g. *fāʿil*, *mafʿūl*, *infaʿalat* and *mutafaʿlil* for *kātib*, *maktūb*, *inkatabat* and *mutafalsif*.

The *wazn* or metre of a line of verse is expressed through paradigms such as, *inter alia*, *faʿūlun*, *mafāʿīlun*, *mustafʿilun*, formed with letters from the series *alif*, *t*, *s*, *ʿ*, *f*, *l*, *m*, *n*, *w* and *y*, contained in the mnemonic *lamaʿat suyūfunā* ("our swords flashed"). The prosodical quantity of the paradigms equals the quantity of the corresponding segment of the line, but no distinction between radicals and auxiliary letters is made in this case. A line whose *wazn* coincides with a recognised *ʿarūḍ*-pattern is *mawzūn* "metrical". Metricality (*wazn*) is said by Ibn Rashīḳ, i, 134, to be the main pillar (*rukn*) in the definition of poetry.

Whereas *wazn* may refer to any metrical pattern that arises in practice, Arabic theory also recognises fifteen or sixteen ideal patterns called *buḥūr*, sing. *baḥr* [see ʿARŪḌ].

(W. STOETZER)

WAZZĀN, conventionally OUEZZANE, a town of the northwesternmost part of Morocco (lat. 34° 52' N., long. 5° 35' W., altitude 357 m/1,050 feet) and one of the holy cities of Morocco, its development being bound up with that of the Wazzānī Ṣūfī order and its *zāwiya* there [see WAZZĀNIYYA]. The history of the town involves hagiographic elements which are difficult to separate from the purely historical facts, so that the historian is confronted with mythical narratives, often handed down orally, all aimed at giving the Wazzānī *shurafāʾ* an aura of sanctity.

Until the second quarter of the 11th/17th century, the small village at Wazzān had no special distinction, but in the 1630s the Idrīsid *sharīf* Mawlāy ʿAbd Allāh b. Ibrāhīm chose the place as the site for his *zāwiya*. Wazzān was in a position of strategic significance, in the foothills of the Djbāla country which gives passage between the mountains to the east and the plains of the Gharb to the west and south; it lay on the borders between the open lands where *Makhzen* authority could be enforced and mountains difficult of access, so that the town and its region were to play a role in *Makhzen* politics; and it was a region where the tribal territories of four groups, the Massara, the Maṣmūda, the Ghazāwa and the Rahūna, met.

The *zāwiya* speedily attracted adepts and visitors at its *mawsim*, hence became significant during Mawlāy ʿAbd Allāh's lifetime, but the settlement of Wazzān remained essentially a village till the time of the third Wazzānī *shaykh*, Mawlāy al-Ṭayyib (d. 1767), after a period of calamitous civil warfare and famine in the late 1720s and 1730s. In the conditions of insecurity of the countryside, wealthy landowners and *ḳāʾids* established themselves in the town, and Mawlāy al-Ṭayyib now built the great mosque and its *madrasa* and set up specialised markets and *funduḳs*. (For the religious development of the town, see WAZZĀNIYYA.) It developed further under Sīdī ʿAlī b. Aḥmad (d. 1811), who made Wazzān and its hinterland a virtual principality, boosting commercial activity by inviting Jewish merchants to settle in the holy town, although these last did not live in a *mellāḥ* [see MALLĀḤ], as in other Moroccan towns, but in *funduḳs*, paying rent to *shurafāʾ* owners; only at the end of the 19th century, when in 1883 the Wazzānī *shurafāʾ* became protégés of the French, were some wealthy Jewish merchants allowed to build private houses.

Wazzān functioned at this time as a market centre for both the plains and the mountains and their products, and also attracted imports for the *shurafāʾ* class, this import trade being mainly controlled by traders from Fās and Jewish merchants. Its main

industrial activity was the processing of local commodities like olives, tobacco and wool, with the woollen industry employing both sexes and persons from all social strata, including *sharīfas*. Its coarse woollen cloth was much used for making *djellābas*, the hooded cloak worn by the male population of Morocco. There was also a significant leather-working industry, now largely ended. The *shurafā'*, in particular, grew rich from donations and endowments of the shrine, so that they became major landowners, especially in the rich lands of the Gharb plain but also in regions as far away as Tuwāt [*q.v.*] in Algeria; they also enjoyed favours from the state, such as tax-farming concessions.

In general, the 'Alawī sultans sought Wazzānī support in an area where they encountered a great deal of resistance to their new régime, whilst the Wazzānī *shurafā'* were content to assert their power essentially within the religious domain. Hence there existed an implicit agreement whereby the *shurafā'* furthered *Makhzen* policy in the region in return for administrative concessions, never clearly defined but at certain times, such as the later part of the 18th century, allowing considerable Wazzānī control over the Gharb and southern Djbāla. In the later 19th century, however, relations between the *Makhzen* and the *shurafā'* deteriorated as a result of the latter's pro-French attitude. Hence a dual system was imposed, with a Wazzānī *nakīb* over the *shurafā'* and a *Makhzen kā'id* over the common people, and this lasted until 1920.

By this time, Wazzān was expanding westwards, and had a population estimated at 11,000. When occupied by the French army in 1920 it was made into a municipality, and under the Protectorate served as an administrative centre for the Gharb and the southern Djbāla tribes falling within the French zone. For some time, the Wazzānī *shurafā'* took part in the administration of the town, but in 1937 a rural *kā'id* from the neighbouring Banū Massāra was appointed head of the town's urban administration, contributing to the marginalisation of the Wazzānī élite and reinforcing the rural aspect of the town within its tribal surroundings. It did not have any significant industrial growth during the Protectorate period, hence remained only a modest goal for rural emigration. This has continued to be the case after independence in 1956, and the town at best provides a stopping-place for Djbālī migrants on their way to more attractive urban centres. Wazzān's population in *ca.* 1940 had been 16,440 (14,300 Muslims, 1,670 Jews and 475 Europeans); in 1994 it was *ca.* 52,000, hardly five times the 1900 figure, whereas the urban population of Morocco as a whole jumped from an estimate of less than half a million in 1900 to over 13 million today. Administratively, Wazzān has remained a modest centre falling within the governorship successively of Kenitra (Ḳunayṭira) and then Sidi Kacem (Sīdī Ḳāsim), and both the town and the *zāwiya* have not completely thrown off the effects of discrimination resulting from the post-1883 co-operation with the French authorities.

AL-WAZZĀN, AL-ḤASAN B. MUḤAMMAD [see LEO AFRICANUS].

WAZZĀNIYYA, a Moroccan Ṣūfī brotherhood, founded by the Idrīsid *sharīf* Mawlāy 'Abd Allāh b. Ibrāhīm (d. 1678).

Born at Tazrūt, Mawlāy 'Abd Allāh was initiated into the Shādhilī-Djazūlī *silsila*, the most widespread and prestigious of the Maghribī *ṭuruḳ* [see SHĀDHILIYYA], by Sīdī 'Alī b. Aḥmad al-Gurftī. On the latter's death in 1628, 'Abd Allāh aimed at expanding his master's spiritual influence and sought a site for a *zāwiya* of his own, lighting on Wazzān [*q.v.*]. The *zāwiya* had an immediate success in attracting adepts, with numbers estimated at 20,000 attending its *mawsim* during his own lifetime. In the mid-18th century it spread into Algeria, becoming known there as the Ṭayyibiyya. In the later 19th century, European observers estimated the *zāwiya*'s following at half or more of the total Moroccan population, though this is impossible to verify.

The Sharīfian genealogy of the Wazzānīs was much used by them at a time when Sharīfism was being consecrated as a determining principle of social and political legitimacy, and veneration of *sharīfī* descent came to be the dominant feature of the *ṭarīḳa*, weakening its genuinely mystical content. Sīdī Muḥammad, 'Abd Allāh's eldest son and successor, made the Wazzānī *zāwiya* into the "house of warranty" (*dār al-ḍamāna*), meaning that the *baraka* of the *shurafā'* was sufficient to save any sinner at the Last Judgement. The relationship of the *shurafā'* and their followers tended to become more like that of a clientèle, with the *khuddām* replacing *murīds* or spiritual disciples, since as these last swelled to tens of thousands, personal spiritual guidance became impossible and the Wazzānī *shaykhs* became largely dispensers of *baraka* at the annual *mawsim*.

Parallel to this process, the *zāwiya* developed important material interests. The third *shaykh*, Mawlāy al-Tuhāmī, encouraged his sons to acquire property and wealth on the grounds that wealth deterred from greed and covetousness. Soon the *zāwiya* had much property, not only in Morocco but also in other parts of the Maghrib, and the *muḳaddams* or deputies of the *shaykh*, who were supposed to look after the Ṣūfī guidance of devotees, ended up largely as intendants and managers of the *zāwiya*'s material resources.

The gap between Ṣūfī ideals and material concerns grew wider in the 19th century, especially as the French presence in Algeria, where the *ṭarīḳa* had considerable interests, imposed some kind of accommodation with the colonial authorities there. In the second half of the century, the private lifestyle of the *shaykh* of the *zāwiya*, al-Ḥādjdj 'Abd al-Salām (d. 1892), did much to lower the order's prestige, since he chose to spend much of his time in the Europeanised city of Tangier [see ṬANDJA] and married an English lady there, and in 1883 placed himself and the order under French protection. Subsequent relations with the *Makhzen* deteriorated, and, in the 20th century, Salafī

nationalists [see SALAFIYYA. 1] were able to make much of the position of the Wazzāniyya in their denunciation of the collaborationist stance of the *ṭuruḳ* in general and their betrayal of authentic Islam.

(MOHAMED EL MANSOUR)

WEDJĪHĪ, Ottoman historian and poet (1031?-1071/1620?-1661).

He was born in Baghče Saray [*q.v.*], capital of the khānate of the Crimea, the son of a certain ʿAbd Allāh ʿĀrif al-Rūmī. According to Ottoman sources, his given name was Ḥasan (though Ḥüseyin sometimes occurs in later European works). His date of birth is calculated as around 1031/1620, based on a statement in his poetic *dīwān* that he was entering his fortieth year in 1070/1659. In 1624-5 his family moved to Istanbul, where he received a good secretarial and literary education. Taken into the household of the *ḳapudan-i deryā* [*q.v.*] Kemānkesh Ḳara Muṣṭafā Pasha in 1046/1636 as *mühürdār* or private secretary, he accompanied the latter on the Baghdād campaign of 1638-9 and remained in his service until the Pasha's execution whilst Grand Vizier in 1053/1644. He appears subsequently to have become a *kātib* in the *dīwān-i hümāyūn*, the Ottoman central chancery, where he remained until his death from tuberculosis in 1071/1661.

Wedjīhī's principal work is a history of the Ottoman state from 1047/1637 to 1071/1661, known generally as *Taʾrīkh-i Wedjīhī*. Although his coverage of events is relatively brief, Wedjīhī was well placed to be a close observer of Ottoman politics, particularly during the reigns of Ibrāhīm (1640-8) and of Meḥemmed IV [*q.vv.*] to 1661. His account includes a significant amount of information not given by contemporaries such as Kātib Čelebi, Meḥmed Khalīfe and Ḳara-Čelebi-zāde [*q.vv.*], particularly on events relating to the Crimea, and is notable for its open criticism of the governmental system. It was an important source for later historians such as Naʿīmā and Silāḥdār [*q.vv.*], and in its coverage of the years 1070-1/1660-1 helps fill the brief gap between the histories of Naʿīmā and Rāshid [*q.v.*]. A facsimile edition of one of the several manuscripts of the *Taʾrīkh-i Wedjīhī* was published in B. Atsız, *Das Osmanische Reich um die Mitte des 17. Jahrhunderts nach den Chroniken des Vecihi (1637-1660) und des Mehmed Halifa (1633-1660)* (Munich 1977). Wedjīhī also compiled a *dīwān* (several mss. extant, unpubl.).

Bibliography: For references and detailed bibl., see Ö.F. Akün, *İA* art. *Vecîhî*, of which the above is a summary. (CHRISTINE WOODHEAD)

WEHBĪ [see SÜNBÜL-ZĀDE WEHBĪ].

WEHBĪ SAYYIDĪ, ḤUSAYN (modern Tkish., Seyit Vehbi, Hüseyin), also known as Wehbī-yi Ḳadīm or Wehbī-yi Ewwel, Ottoman Turkish poet (1085?-1149/1674?-1736). He is not to be confused with Sünbül-zāde Wehbī [*q.v.*].

He was a native of Istanbul, court poet and prose writer, and member of the Ottoman *ʿIlmiyye* [*q.v.*] during the Lāle Dewrī [*q.v.*]. In his early years Wehbī used the pen-name Ḥüsāmi, reflecting family claims to descent from the Prophet (see Gibb, *HOP*, iii, 107-8, and Hamit Dikmen, *Seyyid Vehbi ve divanının karşılaştırmalı metni*, doctoral diss., Ankara Univ. 1991, 16-19). With a *medrese* education, Wehbī won *müderris* status in 1123/1711, served as a *ḳāḍī* and reached *mewlewiyyet* [*q.v.*] rank, aided by the patronage of Aḥmed III and the Grand Vizier Ibrāhīm Pasha (Newshehirli) [*q.vv.*]. Among his best-known poems is a *ḳaṣīda* marking completion of the Aḥmed III fountain in Istanbul, inscribed in gold on the structure (see *EI*[1] art. *Wahbī*; also Dikmen, *op. cit.*, 50-1).

Among Wehbī's works are a translation of the *Ḥadīth-i erbaʿīn* ("Forty Sayings of the Prophet") of al-Nawawī, and a short *Ṣulḥiyye* (poem in praise of peace), marking the Treaty of Passarovitz (1135/1718 [see PASAROFČA]). He is credited also with completing an unfinished *Laylā ü Madjnūn*, a *mathnawī* by Ḳāf-zāde Fāʾizī (d. 1031/1621-2), but no mss. have been discovered (see Dikmen, 33). His best-known works are:

(1) An extensive *dīwān* showing the influence of Nābī, Nedīm and (especially in *ḳaṣīdas*) Nefʿī [*q.vv.*], with good imagery, some use of simple language and local colour. Well-regarded during his lifetime, he has been criticised since for weaknesses such as lack of originality of ideas and of feeling (Seyit Kemal Karaalioğlu, *Türk edebiyatı tarihi*, i, Istanbul 1973, 705).

(2) A prose *Sūr-nāme* ("Book of the Festival") with verse prologue, giving a detailed, eye-witness account of the fifteen-days' festivities celebrating the circumcision of Sultan Aḥmed's four sons (1132/1720). An excellent source on contemporary Ottoman life (see A. Bombaci, *Storia della letteratura turca*, Florence and Milan 1969, 408-12), it was vividly illustrated by the famous miniaturist Lewnī [*q.v.*] (see E. Atıl, *Surnâme-i Vehbi, an eighteenth-century Ottoman Book of Festivals*, diss. Univ. of Michigan, Ann Arbor 1969, University Microfilms 1973).

Bibliography: Given in the article; see also *İA* art. *Seyyid Vehbi.* (KATHLEEN R.F. BURRILL)

WENEDIK, the Ottoman Turkish form for the name of the Italian city of Venice, in earlier Arabic usage, however, there appears Bunduḳiya and similar forms.

1. In earlier Islamic times.

The city was known to early Arabic geographers, such as Ibn Rusta, Ibn Ḥawḳal, etc., and these geographers had a fair knowledge of the names of many of the Italian cities and towns of the Lombard and Carolingian periods; the knowledge of later writers like al-Idrīsī was *a fortiori* much profounder after some three centuries during which the Arabs had controlled Sicily [see SIḲILLIYA] and, at times, Calabria [see ḲILLAWRIYA] and other coastal regions of the southern Italian peninsula [see, in general, ĪṬALIYA].

Ibn Rusta, 128, tr. Wiet, 143, quotes the captive of the Byzantines Hārūn b. Yaḥyā for details of the itinerary Constantinople-Rome via Salonica, Venice (*B.nd.kīs*) and Pavia (see on this itinerary, the detailed study of Marquart in his *Streifzüge*, 237-59). It is, in fact, various forms like this one of Bunduḳiya which appear in Arabic sources dealing with the commercial relations of the Italian merchant cities with the Islamic powers in the Levant (see on these, below, section 2). Thus al-Ḳalḳashandī furnishes a description of the *mamlakat al-Banādiḳa*, with its capital Bunduḳiya and its head the *Dūk* or Doge and its currency the ducat (*dūkāt*) (*Ṣubḥ al-aʿshā*, v, 404-5; in viii, 47-8, is given the text of the reply to a letter from the *Dūdj* or *Dūk*—described as "not exactly a king"—of 767/1366).

Bibliography: Given in the article.

(C.E. BOSWORTH)

2. Venetian relations with the Mamlūks and Ottomans.

Venice's history was deeply marked by its long and complex relationship with the Muslim world. As early as the 10th century, Popes and Emperors alike condemned the Republic for selling slaves to the Infidel. It was primarily Venice's special connection with Byzantium that launched it on the path toward an enduring

domination of the eastern Mediterranean, one which was subsequently to entail extensive relations with the most important Muslim Mediterranean powers, the Mamlūks and the Ottomans [*q.vv.*].

The decline of Byzantine naval power, beginning in the 10th century, allowed Venice to take over the defence, first of the Adriatic and then of points further east. As a reward for their military support, Byzantium gave the Venetians special trading privileges with the Empire. An early example of this was the Golden Bull of 1082, issued by the Emperor Alexius I, which granted an exemption from tolls, as well as extensive trading privileges, this being Venice's compensation for having helped Alexius against the Normans of southern Italy.

It was the Fourth Crusade in 1204, however, that established Venice as the pre-eminent naval and commercial power of the eastern Mediterranean, a position that it would maintain—although not without challengers—until the end of the 16th century; Frederic Lane has called it "a turning point in Venetian history". Venetian involvement began with the agreement to provide transportation to the Holy Land for a large number of French Crusaders under the command of Geoffrey de Villehardouin. As is well known, the Fourth Crusade ended up not at the gates of Jerusalem but at the walls of Constantinople. Although Venice does not seem to have been the originator of the idea, it was willing to go along with this change of plan. Byzantine-Venetian relations had soured considerably over the course of the 11th century and Venice was angered by the Empire's willingness to extend trading privileges to the Genoese and the Pisans.

Venice's considerable territorial gains in the wake of the Fourth Crusade were expressed in the new phrase added to the Doge's title: "Lord of One Quarter and One Half [of a quarter] of the Empire of Romania". In addition to the gains in Constantinople, Venice established itself directly in Crete, Negroponte and Corfu (although Corfu was subsequently lost). Venice also extended its territorial holdings to Modon and Coron at the southern tip of mainland Greece in the Peloponnesus. These last two places became known as "the two eyes of the Republic" because all vessels returning from the Levant were ordered to stop there and give news of pirates and convoys.

At around the time that Venice was establishing itself as the most formidable Christian power in the eastern Mediterranean, the Mamlūks were establishing their power in Egypt and Syria, and by the end of the 13th century Baybars and his successors had put an end to the last remaining Crusader footholds on the Levant coast. Whereas in 1204, when Venice realised the gains of the Fourth Crusade, the region was divided into a bewildering multiplicity of states, she now at the beginning of the 14th century faced a strong and united Muslim state along the southern shores of the Levant. It is this fact—plus the disintegration of the Great Mongol successor k͟hānates in the mid-14th century—which explains the importance of the Venetian-Mamlūk relationship. If Venice hoped to continue its lucrative role as an intermediary between East and West, it had to deal with the Mamlūks into whose ports the luxury goods from the East arrived. As for the Mamlūks, they relied on Venetian commercial and naval power to provide a ready market for these goods. By the end of the 14th century, the Venetian fleet was calling regularly at Alexandria as well as the Syrian ports, and Venice's two warehouse-palaces (*funduk, fondaco*) were among the handsomest structures in Alexandria.

Although the Venetians and the Mamlūk Sultans were often at loggerheads over the price of pepper, the essential commonality of their interests is shown by the fact that, when the Portuguese threatened to disrupt the spice trade in the opening years of the 16th century, the Venetians urged the Sultan to put pressure on the rulers in South India to refuse spices to the newcomers, again demonstrating Venice's sometimes uncomfortably close relationship with the Muslim world as a result of her commercial interests. The Republic's enemies in Europe accordingly accused Venice of furnishing the Mamlūks with materials and skilled shipwrights in order to fight Christians in India.

The reasonably peaceful state of affairs between Venice and the Mamlūks was not to be duplicated in its relations with the Ottoman Empire. Although their long co-existence in the eastern Mediterranean was necessarily marked by extended periods of peace, as well as a striking capacity to resolve routine problems, the two adversaries fought six major wars between the 15th and the 18th centuries. The Ottomans, unlike the Mamlūks, aimed to unite the eastern Mediterranean under their rule, and this ambition inevitably led them to challenge Venetian territorial holdings in the area. Over the course of more than three centuries the Ottomans were so successful in driving the Venetians out of the Aegean that, by 1128/1715, the republic's holdings were reduced to the Ionian islands.

In the first Ottoman-Venetian war of 868-84/1463-79, Venice lost the Negroponte, its main base in the northern Aegean region. In 906/1499, taking advantage of the difficulties caused by the French invasion of northern Italy, the Ottomans sent their fleet into the Ionian Sea. During the course of that war (906-9/1499-1503) the Sultan's troops wrested away most of Venice's holdings in Greece, including Modon [*q.v.*] and Coron [see ḲORON]. Ottoman cavalry raided so far into northern Italy that the smoke from the burning villages could be seen from the bell tower in Saint Mark's square. Venice was only able to bring that war to a conclusion by surrendering claims to many cities in Albania and Greece.

In the next two wars against the Ottomans, Venice fought as part of a Western crusading alliance led by the Spanish Hapsburgs, who saw themselves as the leaders of the Christian world, bound by duty to combat the Islamic empire at the other end of the Mediterranean. Both of these conflicts ended badly for Venice. In the war of 944-7/1537-40, the Christian fleet had to retreat in disorder and confusion at the battle of Prevese on the coast of southern Epirus (945/1538) [see PREVEZE] and, by the time the Spaniards sailed home, the Venetians had lost almost all of their holdings in the Aegean. Although the battle of Lepanto (979/1571) [see AYNABAK͟HTĪ] was a great victory for Christendom, and was celebrated as such throughout Europe, Venice had already lost Cyprus the year before as part of the preliminary Ottoman response to the formation of yet another crusading league against her.

Venetian losses in these two wars, plus the fact that on both occasions Venice felt compelled to seek a separate peace with the Ottomans in order to preserve her commerce in the East (actions for which it was roundly condemned in the West), underlines the peculiar position of Venice, squeezed as she was between East and West. Venice was not opposed to joining with the Hapsburgs and others in attacks upon the Ottomans, since she hoped by so doing to gain

some advantage for herself, but she knew full well that the Spaniards, in particular, wanted to defeat the Ottomans without increasing Venetian power in the eastern Mediterranean. In the wake of Lepanto, for instance, Philip II refused to pursue the Ottoman fleet further east precisely for this reason, and similar Venetian-Hapsburg tensions characterised the 944-7/1537-40 war as well. As the front-line state, Venice had the most to gain, but also the most to lose, from the wars of the 16th century.

During the Cyprus war, French merchants largely replaced the Venetians in the Levant and the Ottomans granted the French special trading privileges in order to have them as allies against the Hapsburgs [see IMTIYĀZĀT]. This ominous development was indicative of things to come. Venice became increasingly less important to the Ottomans as they discovered that there were other Western powers—principally, but not only, France—that could lend commercial, and even, on occasion, military assistance.

A long period of peace followed the loss of Cyprus. Although the Ottomans certainly wanted to wrest Crete from the Venetians, they did not find the strength to launch another naval war against the Republic until 1054/1644, when Maltese pirates captured an Ottoman ship with many notables aboard heading for Egypt from Istanbul. The Ottomans, having recently concluded a long war with Ṣafawid Persia, decided to use this incident as reason to finally try and dislodge the Venetians from Crete. The war that followed was extraordinarily long (1055-80/1645-69) and costly, but in the end the Ottomans were triumphant. The last Venetian soldiers left the island in Rabīʿ II 1080/ September 1669, and thus the Ottomans brought to an end almost half a millennium of Venetian rule on Crete [see ḲANDIYA]. In the course of a joint Western attack on the Ottomans following the second failed siege of Vienna (1095-1111/1684-99), the Venetians were able to regain the Morea but then lost it again—as well as all remaining territory east of the Ionian islands—in the last Ottoman-Venetian war (1126-30/ 1714-18) [see MORA].

Despite the long centuries of Ottoman-Venetian hostility, Venice remained a cosmopolitan city that was open to Muslims in a way that other European cities were not. Envoys sent by the Sultan were a common sight in the city, as were Muslim merchants, particularly in the 16th century. Venetian painting in the early modern period testifies to this unique quality: oriental figures are commonplace, whereas they are largely absent from the art of northern Europe in the same period. And of course, it was from Venice that Sultan Meḥemmed II summoned Gentile Bellini to paint his portrait.

WEYSĪ, the pen-name (*makhlaṣ*) used by Üweys b. Meḥmed, renowned Ottoman man of letters and poet (969-1037/1561 or 1562-1628).

Born in Alashehir as the son of a *ḳāḍī* and the nephew of the poet Maḳālī (Muṣṭafā Beg; cf. the *tedhkire* of Riyāḍī), he finished his *medrese* education in Istanbul under the *ʿulemāʾ* Ṣāliḥ Efendi and Aḥmed Efendi, and then had a career as *ḳāḍī*. Apart from serving as army judge (*ordu-yi hümāyūn ḳāḍīsi*) during the Hungarian campaign under the command of the Wezīr ʿAlī Pasha, he was *ḳāḍī* in various locations in the Ottoman empire (Reshīd in Egypt, Akhiṣār, Tire, Alashehir, Sīrōz, Rodosdjuḳ, Gümüldjine, Tirḥala, and Üsküb) and, for a time, financial inspector (*emwāl müfettishi*) in Aydîn, Ṣarukhān, Inebakhtî and Eghriboz. He died in Üsküb, after he had served his seventh term there as *ḳāḍī*, on 14 Dhu 'l-Ḥidjdja 1037/15 August 1628.

Weysī's prose was greatly admired in his day. As his style is heavily laden with loan-words and rhetorical devices (though not in the same degree as that of his contemporary Nergisī [*q.v.*]), he is, on the whole, not easy to understand. ʿAṭāʾī [*q.v.*] considers his prose to be superior to his poetry (*Dheyl-i Shaḳāʾiḳ*, i, 715) and it is true that Weysī owes his fame to his prose works rather than to his poetry.

Weysī wrote a considerable number of prose works in various fields. Best known are the following two: (1) *Dürret al-tādj fī sīret ṣāḥib al-miʿrādj*, generally referred to as *Siyer-i Weysī*; it is incomplete, containing the *Sīrat al-Nabī* up to the battle of Badr. *Dheyls* to it were written by ʿAṭāʾī, Nābī [*q.v.*] (who, after an interval of about twenty years, wrote a second *Dheyl*, the *Dheyl-i dheyl-i Nābī*), and Naẓmī-zāde Baghdādī. The *Siyer-i Weysī* was printed together with Nābī's *Dheyl* in 1245 at Būlāḳ and as part of Weysī's collected works in 1286 at Istanbul. (2) *Khʷāb-nāme*, also known as *Wāḳiʿa-nāme*. It is written in somewhat simpler language than the *Siyer-i Weysī* and is a conversation between Aḥmed I and Alexander the Great, wherein the evil deeds that have occurred in the world through the ages are recounted. As it involves a comparison of the old and new orders, it represents a critique of the time. It has been printed several times (Būlāḳ 1252, Istanbul 1263, 1293 and, in the collected works, 1286). The text was also published together with a translation by H.F. von Diez, in *Fundgruben des Orients* (Vienna), iii (1811), 249-74, and separately, Berlin 1811, as *Ermahnung an Islambol oder Strafgericht des türkischen Dichters Uweissi über die Ausartung der Osmanen, übersetzt und erläutert und mit dem türkischen Text herausgegeben*, as well as ed. and tr. F.A. Salimzyanova, *Vejsi. Khab-name* ("*Kniga snovideniya*"), Moscow 1977.

His *Düstūr al-ʿamel*, also known as *Shehādet-nāme*, which treats of various religious themes in prose, was also printed (Istanbul 1283 and, as part of his collected works, Istanbul 1286), as were some of his letters, *Münsheʾāt* (in his collected works, Istanbul 1286).

The remainder of his works have not been published. The better-known among these are: his *Dīwān* (ms. in Topkapı Sarayı, Revan Kütüphanesi, no. 776), his poems being written in simpler language than his prose; *Tewbe-nāme*, a study in verse on the wise words of Zayn al-Dīn Khāfī, the *pīr* of the Zayniyya order in Anatolia; *Maradj al-baḥrayn fī adjwiba ʿalā iʿtirāḍāt al-Djawharī*, in Arabic (autograph in Ragıp Paşa Kütüphanesi, no. 1239/1415); *Risāle-yi ʿAmr b. al-ʿĀṣ*, on the conquest of Egypt; *Futūḥ-i Miṣr*, incomplete, on the history of the conquests of Egypt; the commentary on Sūra CX, *Ghurret al-ʿaṣr fī tefsīr sūret al-Naṣr*; and *Hediyyet al-mukhliṣīn we-tedhkiret al-muḥsinīn* on questions of morality.

(Th. Menzel-[Edith G. Ambros])

WEZĪR KÖPRÜ, modern Vezirköprü, a small town of northern Anatolia, situated 35 km/21 miles north of Merzifon [see MERZIFŪN] and 18 km/12 miles south of the lowest stretch of the Kızıl Irmak [see ḲIZIL-IRMĀḲ] (lat. 41° 09' N, long. 35° 27' E). There was apparently a town there or nearby, in classical times, in what was then southern Pamphylia, and in Byzantine times, the town of Gedegara (in Kātib Čelebi's *Djihān-nümā*, Kedeghara). In high Ottoman times, from the 10th/16th century onwards, it came within the *sandjak* of Amasya in the *eyālet* of Sivas. Ewliyā Čelebi visited it in 1057/1647, and described its citadel as in ruins (*Seyāḥet-nāme*, Istanbul 1314/1896-7, ii, 400 ff.). Originally simply called Köprü, the famous 11th/17th century statesman Köprülü Meḥmed Pasha, subsequently Grand Vizier, had in his early career held an administrative post in the town, and thereafter the name acquired its *wezīr* element [see KÖPRÜLÜ, at the beginning]. In modern Turkey, Vezirköprü is the chef-lieu of an *ilce* or district in the *il* or province of Samsun [*q.v.*]; in 1975 the population of the town was 11,705 and of the *ilce* 67,468.

(C.E. Bosworth)

WIDIN, conventionally Vidin, a town of northwestern Bulgaria and a port on the River Danube (lat. 44° 00' N., long. 22° 50' E.).

The low bank (30-37 m high) has been reinforced with dykes; in the past the town used to remain an island in the marshes created during the spring floods of the Danube. It emerged as the Roman fortress of Bononia on the foundations of a Thracian settlement at Kaleto, a place where the flood does not reach. In the Middle Ages, under the name of Bdin, it was the centre of a bishopric in the Bulgarian state, and from the second half of the 14th century, of an appanage principality. After 1371, it was the centre of the independent state of Tsar Ivan Sratsimir. In 1365-9 it was conquered by the Hungarians and ruled as a Banate, with *ca.* 200,000 Orthodox Christians being forced to convert to Catholicism. As Ottoman vassal, Ivan Sratsimir surrendered Vidin to the Crusaders of Sigismund III in 1396, and the Ottoman garrison was exterminated; however, Bāyezīd routed the Crusaders at Nicopolis and gained back the city.

Today this town, with about 50,000 inhabitants, has no Muslim population, but its history, its Ottoman architectural monuments, archives and manuscripts make it important for the study of Ottoman urban and cultural history in the Balkans.

The Vidin kingdom was transformed into the Vidin *sandjak* (covering territory in both the Bulgaria and Serbia of today) within the Rumeli *beylerbeylik*. A *Ḳānūn-nāme* of 1542 and a set of 19 local laws of 1586 have been preserved, regulating the administration of the *sandjak*, which consisted of 9 *nāḥiyes* and 6 fortresses. Until the mid-16th century, the *sandjak* was part of the Ottoman frontier line, the *serḥadd*, against Transylvania, the Banat, Wallachia and Hungary, and from the 17th century onwards (when it was attacked, taken and destroyed), against Austria and Serbia. During the war with the Holy League, the Austrians captured the city on 13 October 1689 and held it for 10 months. Under the peace treaty of Passarowitz in 1718 [see PASAROFČA] the Ottoman empire lost the northwestern parts of the Vidin *sandjak*, sc. the *ḳaḍās* of Feth ül-Islam and Krayna. Vidin became again part of the *serḥadd*. Towards the end of the 18th century Vidin became the seat of 'Othmān Pazwandoghlu and the centre of one of the most important secession movements and *a'yān* rule in Rumeli. In 1864, it was a *sandjak* in the Ṭuna [*q.v.*] *wilāyet* administered by a *mutaṣarrif* and a *dīwān*, divided into *ḳaḍās*. Under the San Stefano preliminary treaty of 1878, Vidin surrendered without a fight and was included in the Bulgarian state.

The *serḥadd* in the Vidin area consisted of the fortress and garrison in Vidin, the river fleet and considerable groups of local population, including non-Muslims. Vlachs stand out among them, these being nomad Christians used by the Ottoman state as a paramilitary group paying only the *filur* tax. With the move of the *serḥadd* to the west after 1541, the state *ca.* 1560 deprived them of their paramilitary status, but the area of Vidin remained the Ottoman rear for the conquest of Central Europe, with local non-Muslims serving in the fortress. Likewise, *khāṣṣ*es, and 12 *ze'āmet*s and *tīmār*s of *sipahī*s, but mainly of the fortress guards (about 10-15 persons in Vidin in mid-15th century, and 65 in 1560), were established, while a considerable part of the Muslim *re'āyā* were registered as members of the *aḳindjī* [*q.v.*] troops. The role of the *sipāhī* troops in the area was reduced at the expense of the rise of the Janissaries and the local troops, which *ca.* 1750 numbered 5,500, more than in any other Ottoman city of the Balkans.

The sultanal *khāṣṣ* in the Vidin area expanded quickly at the expense of the Vlach villages and the *tīmār* lands, and soon turned into the largest in the Balkans. As a result, by the 18th century there was no *mīrī* land with *tīmār*s and *ze'āmet*s in the region, and the process of establishment of the *gospodarlïḳ*s began (possessions of local notables and Janissaries), catalysed by the war with the Holy League and the secession of 'Othmān Pazwandoghlu. The 19th-century agrarian reforms in the Ottoman empire were not introduced in the Vidin area. Villagers were deprived of any property rights over the land and were placed in the position of tenants of the *agha*s from Vidin, who claimed that only Muslims could possess land in this border *sandjak*. This régime provoked riots and uprisings in the 1830s to 1850s which, together with the Serbian uprising (1804-13), forced the Porte to solve the problem in favour of the villagers in 1863.

From the 15th century onwards, Vidin was a *ḳaḍā* with a *ḳāḍī* and, at least from the 17th century, with a *müftī* also. At least from mid-15th century, the local fleet and ship-building were administered by a *ḳapudan* who from *ca.* 1700 was subordinate to the Danube *ḳapudan* based in Ruse.

Vidin was the main border customs post and the largest port in this part of the Danube, with an enormous income from the state monopoly on the salt imports from Wallachia and the state fisheries organised by the *emīn* of the port. The rise in the town's

population by over 25% in the 18th century was directly related to its economic role.

In the Middle Ages, the lands along the Danube banks formed a region which brought together Turks, Bulgarians, Serbs, Vlachs, Hungarians and Jews. The problem of the Turkish population in the Vidin area has been discussed extensively, and its archaic dialect has been studied as an element of the Turkish Balkan dialects. Apart from settlement of military and administrative bodies in the town, the classical Ottoman type of colonisation cannot be detected here. The Muslim population was concentrated in Vidin and a few fortresses, but was entirely absent from the rural areas of the province. Muslims rose in number through the slow infiltration of Muslim population from the upper Danubian lands during the Ottoman retreat from Hungary and Serbia after the 16th century, and it was in this way that Vidin was maintained as a predominantly Muslim city. At the same time, the numbers of Janissaries within the Muslim community in Vidin rose, and it could safely be called a Janissary town. We find Janissaries in all spheres of public life, beginning with the economy and the craftsmen's guilds and ending with the professional witnesses in the courts. All this, together with the peasant uprisings in the region and the Serbian revolt, reinforced local Muslim fanaticism against the reforms in the Ottoman empire. At the beginning of the 1860s, Tatars and Circassians from Russia were settled in the region, a small part of them being in Vidin proper. Hence there was a Tatar *maḥalle* with a mosque and a school. The number of Muslims in the town cannot be established with certainty since soldiers were not included in the registers of taxpayers, according to which in the 1520-30s there were 356 Muslim households with 10 religious functionaries (*imāms* and *mü'edhdhins*); at the same time, 225 *sipāhīs* lived in the town and the *ḳaḍā* as well as 251 members of the fortress garrison. In 1571-80, these numbered 1,207, while 2,152 households altogether were registered in the town, or nearly 11,000 inhabitants. Ewliyā Čelebi speaks of 4,700 houses or over 20,000 inhabitants of Vidin. European estimates of Vidin as a predominantly Muslim town, with between 15 and 30,000 inhabitants at the beginning of the 19th century, made it one of the most significant towns in Rumeli. According to Ottoman censuses of *ca.* 1866, there were 7,664 taxpayers (more than 23,000 inhabitants), 3,954 Muslim taxpayers included. Immediately after Bulgaria gained independence, a large part of the Muslims moved out, and by the beginning of the 20th century Vidin was no longer predominantly Muslim. According to the 1893 census, there were 2,729 Turks and 1,540 Jews among the 14,500 inhabitants of the town.

The development of the fortification system of Vidin had a major role in the development of the urban architecture. According to some data, the Roman fortification (an irregular tetragon) survived as an earthen mound until the Ottoman conquest. During the 12th-14th centuries, in the northern part of the Kaleto hill, the fortified castle of Baba Vida was built. This citadel with a moat and a draw-bridge was renewed during the rule of Bāyezīd II (1481-1512) and reconstructed with regard to the use of firearms; the first mosque and the garrison, forming a *maḥalle* with about 50 inhabitants, the house of the *muḥāfiẓ* of the fortress and the seat of the *sandjaḳ bey*, were all in it. In the mid-19th century, Sāmī Pasha established a sort of a military museum in the now largely useless citadel, which was dispersed during or shortly after the Russo-Turkish War of 1877-8.

The outer part of the town spread to the south and southwest of Baba Vida on the terrain of the Kaleto hill, where in 1523-37 there were 9 Muslim *maḥalles* with 2 mosques, 8 *mesdjids*, 4 *zāwiyes*, 2 *ḥammāms*, a candle workshop and a *bozakhāne*. Ewliyā speaks of 4 Christian, one Jewish and 19 Muslim *maḥalles*, with 24 mosques having leaden or tiled roofs with 10 minarets; he mentions also 10 *mesdjids* with wooden minarets, 7 *medreses*, 11 *mekteb*s and 7 *tekkes*. Religious buildings and the economic and communal infrastructure for maintaining them were built by leading functionaries of the Vidin *serḥadd*, the *sandjaḳ beys* of the 15th century, such as Mezīd Bey, 'Alī Bey Mikhāloghlu, the *dizdār* of Florentin, Aḥmed Ḥadjdj, and the Rumeli *beylerbey* Meḥmed Ṣoḳollu [*q.v.*]. The *Negotin čarshî*, a crossroads of seven streets, was the core of the entire urban network of Kaleto, with trade and craft functions, and a mosque; the Mosluk place, with the churches of St. Petka and St. Panteleimon was nearby. There was a natural process of confessional mixing of the population in the outer town, in the Ottoman documents of the 17th century this was called the *warosh*; the term was also used to designate the Christian community in the town and the nearby *čiftliks* (see below).

The Austrian occupation caused changes in the continuity of life in Vidin. A new fortification following the Vauban system was constructed (its beginning is attributed to the Austrians) and by 1722 was finished by the Ottomans. The semicircular fortress overlooking the river consisted of two parallel walls 6 m high and a mound between them; among the seven chordes there were eight hexagonal bastions with heavy garrison artillery; four gates; a moat filled with water from the Danube; the fortress fence along the Danube with broken-line contours consisted of two parallel, double stone walls and a mound between them; there were five gates open at the river.

These fortifications guarded the town from the spring tide and are almost entirely preserved. The fortress was dismantled under the terms of the Berlin Congress peace treaty. Part of the defences and of the gates have been preserved (seven of the inscriptions are built into the walls of the Public Library in St. Petersburg; all have *taḥrīrs* with the construction date and the names of the architects or of the overseers for the period between 1721 and 1835). The inscription compiled by the poet Behdjetī in 1735 at *Stambol ḳapî*, which was built by Aḥmed Pasha and the architect Muṣṭafā Ḳulu, has been preserved in Vidin. With its 200 guns turned at the mainland and twelve ships equipped with guns on the Danube, Vidin became an important fortress. Thus the fortified *warosh* came into existence, while the new living quarters, naturally separated from each other, emerged in the place of the former *čiftliks*. Muslims and non-Muslims, gypsies and Tatars lived separately but also in mixed *maḥalles*. It is particularly in connection with the construction of the modern *ḳale* that an exclusively Vidin phenomenon emerged related to the general framework of *dhimmī* status within the Ottoman empire. In 1718 the central authorities were approached by the local Janissaries demanding on the grounds of "*ḳānūn-i serḥadd*" that Christians should leave the (newly) fortified part of the town, after selling their properties to Muslims at appropriate prices, and settle in the unfortified part, i.e. in the emerging "outer" *warosh* of Vidin. The two main religious communities in Vidin were territorially separated (Jews remained in the fortified part). The development of the two parts of the town began—the fortified one with the semicircular

fortress or *kale*, and the outer *warosh* with its *mahalles*, mosques and *mesdjids*. In the southern part, around the *Stambol kapî*, the *wakîf* of Muṣṭafā Pasha, *muḥāfiẓ* of Vidin, permitted construction activities, as did that of the vizier, *muḥāfiẓ* of Belgrade and *wālī* of Vidin, ʿOthmān, *kaṣṣāb bashî* in the capital, and Yaḥyā Pasha, with a mosque to which Rüstem Agha added a *mekteb*.

Even before the emergence of the new fortress, to the north, on the dryest and, because of this, least protected territory, a large quarter developed, populated mainly by non-Muslims. The new outer quarter was fortified, too, in the 19th century. According to Kanitz, in the 1870s there were 12 mosques and 17 *mahalles* (compared to the 15 *mahalles* and mosques in the inner fortification); according to C. Jirecek, there were 32 mosques in the town. The florescence of Vidin as a centre of Islamic culture was closely related to ʿOthmān Pazwandoghlu. Documents, manuscripts and architectural monuments preserved in the National Library in Sofia and in Vidin proper reveal the sources of Pazwandoghlu's wealth and his "civil policy" in the town. He tried to modernise the Vidin fortress after the European model. He built the Square barracks (today a museum); repaired the four main roads going out of Vidin and regulated the city street network; provided the town with *česhmes* or fountains, as well as a *mosluk* and *sebīl* with an ice-house (a *wakîf-name* of 1807); and founded a library (see below). In accordance with the Ottoman tradition, he also built a mosque, which has an inscription of 1800-1 with a dedication (still existing today) to his father ʿÖmer, and a stone tomb of the local hero of local Turkish folklore, Ṣalāḥeddīn Baba, with a Bektāshī *tekke* in the village of Sheykh Čiftlik, at the place where the *baba* perished, leading an Ottoman detachment out of the fortress against the Austrian siege in 1689. The library of ʿOthmān has a construction inscription with a chronogram 1217 (1802-3) and containing the name of the poet-compiler Māhir (also author of the inscription at the mosque of ʿOthmān of 1802, and most probably the poet Sherīf Ibrāhīm Māhir Efendi, who was secretary to the *wālī* of Vidin Ḥāfiẓ ʿAlī Pasha in 1812, and is known for his Turkish adaptation of *Kalīla wa-Dimna*). The library and the mosque of ʿOthmān form an architectural compound (still existing), next to a now-disappeared *medrese*. According to M. Staynova, this construction activity reveals an elaborate combination of Bektāshism and the European Enlightenment and laïcism, untypical of Ottoman classicism and the baroque forms of the *Lāle dewri* [*q.v.*].

The 18th century witnessed considerable intellectual life in Rumeli initiated by local officials. Some data confirm that there were private libraries in Vidin at this time. The Pazwandoghlu library was in fact a public library containing the Oriental books accumulated in the town. Its core was a donation by the Pazwandoghlu family; most of the books bear the seals of ʿÖmer Agha and of Rukiyye Khātūn, the father and mother of ʿOthmān. Around 1879 it was moved to Sofia; in 1887 it was checked by an international commission, including Meḥmed Nedīm, and about 2,000 volumes were ceded to the Ottoman authorities; it seems that earlier some of the most precious manuscripts were taken by the Russians as trophies of war. The criteria for the selection of the books are unknown, as likewise their fate in both Russia and Turkey. Today about 650 volumes in Arabic, Persian and Ottoman are preserved in the National Library in Sofia; a manuscript with 18 miniatures of the *Kiṣaṣ al-anbiyāʾ* ("Tales of the Prophets") stands out among them, donated by Ḥāfiẓ ʿAlī Pasha. The library contained the greater part of the works on history and geography printed at the Müteferrika Press [see MAṬBAʿA. B.2]; at the present moment, a manuscript catalogue of the Vidin Library of 1837, kept in the Sofia National Library, is the only one to give a relatively full idea of its content.

As well as Ṣalāḥeddīn, a famous Muslim saint and hero related to Vidin is Karlî Bashe, buried by the Florentin or *Karlî Bashe kapî*. According to legend, in 1737, during the siege of the town by the Austrians, the Ottomans attacked and Karlî Bashe was the first to lead the defenders out. The governor of the *sandjak*, Hüseyn Pasha (who later finished the fortification works on the new fortress in 1835) began administrative reforms along the lines of the Gülkhāne *khaṭṭ-î sherīf*, breaking down Janissary opposition.

Intellectual figures connected with the town include the mathematician and teacher in military schools Widinli Hüseyn Tewfīk Pasha (d. 1894); Widinli Muṣṭafā Efendi, a well-known teacher and publisher (d. 1855); ʿAlī Shukrī Efendi (*fl.* in the mid-19th century); Ḥāsib Ṣaffeti (Aytuna) Widinli, who contributed to the development of Ottoman education before and after the Russo-Turkish War of 1877-8; and Čorbadjîzāde Meḥmed, son of Hüseyn Efendi Widinli, who, as *müftī* in Rusčuk, wrote in 1699 his *Zeyn ül-ʿakāʾid* in Turkish.

In the 19th century Vidin developed as an important economic centre stimulated by navigation on the Danube; French, Austrian and Russian trading consulates were opened. According to Ottoman censuses of 1872-4 there were 1,610 *dükkāns*, 11 *debbāghkhānes*, 14 *khāns*, 135 storehouses, 5 *ḥammāms*, one telegraph office, 6 churches and synagogues, one clocktower; one *rüshdiyye*, two *medreses*, one *iṣlāḥ-khāne* where girls were also taught; 7 *tekkes* (in the town and suburbs), 24 mosques and two hospitals.

After the Russo-Turkish War of 1877-8, the Muslim monuments were first regulated by the *Wakîf Board* headed by patriotic Turks who wished to preserve them; there were also cultural, educational and sports organisations in Vidin, including the Turkish gymnastic society *Tūrān*, the charitable and educational club *Tenwīr-i Efkār* and the reading room *Shefket*. Until World War I, there was a district *müftülük*.

(Svetlana Ivanova)

WILĀYA (a.), a noun form from the root *w-l-y* "to be near, adjacent, contiguous to" [someone or something] and a term with a range of meaning in the political, religious and legal spheres. For the legal meaning, see 1. below. In the political and religious spheres, *wilāya* denotes "the exercise of authority", whether temporal or spiritual, or a combination of both; hence by extension, it comes to mean the government or administration of a region or province under the supreme overlordship of a caliph, sultan or *amīr* [see wālī], or the spiritual authority and charisma of a particularly spiritually-gifted person like a Ṣūfī saint or ascetic [see walī]. Among the Shīʿa, however, the slightly different vocalisation *walāya* conveys a special sense of devotion for and closeness and allegiance to the *Imāms* on the part of their followers; for this sense, see 2. below.

1. In Islamic law.

Here, it indicates representation, which signifies the power of an individual to personally initiate an action. It is seen as a legal authority (*sulṭa sharʿiyya*) by which an individual can initiate contracts (*ʿuḳūd*) and actions (*taṣarrufāt*) and actuate their effects (*āthār*). When a person acts on behalf of others, *wilāya* is more often termed *niyāba*.

Wilāya and *ahliyya* [see shakhṣ] are the two main requirements for any proper contract, *ʿaḳd ṣaḥīḥ*. *Ahliyya* represents the individual qualification to undertake an action. This requires sanity (*ʿaḳl*), adulthood (*bulūgh*) and, often, in family-related matters, profession of Islam. *Wilāya*, on the contrary, is the "authorised" ability to perform an action. A contract in which one of its contractors is not able (*ghayr walī*) or unqualified (*ghayr ahl*) is considered null (*bāṭil*). A qualified person who performed a legal contract without authority is considered as intrusive (*fuḍūlī*) and the contract will only become valid if approved by the persons concerned.

Technically, *wilāya* can be either optional (*ikhtiyāriyya*), when entered into by personal choice, such as *wakāla* [*q.v.*], or compulsory (*idjbāriyya*). However, in practice *wilāya* is a term used only to describe the latter, namely, *idjbāriyya*, which is determined by legal rule or judicial order. This can be divided into the following categories: the custody of infants (*ḥaḍānat al-ṣaghīr*) and the custody of a person (*wilāyat al-nafs*) requiring care for a child who has passed the age of infancy or for an insane person. It also includes the marriage custody of a virgin girl. Financial custody may cover all young persons, the insane, and those with proven impediments to the exercise of normal free will.

The requirement of a *walī*, in addition to being suitable (*ahl*), is to be of the same religion, of a creditable character (*ʿadl*) and honest (*amīn*). The state is expected to oversee the *walī* in all its forms. If the *walī* behaves in an inappropriate manner, then the judge can appoint another *walī* to share responsibility. The procedure for overseeing the *walī* is, like many judicial supervisory responsibilities, not clearly defined or codified. However, some modern legal systems imply such procedures within their legislation, such as the Syrian Law of personal status which requires the permission of the judge before selling or mortgaging the property of a person under guardianship (*ḳāṣir*).

The limitation of the *walī*'s responsibility is to act as if he is acting for his own business. The example of this cited by Ibn Ḳudāma is the orphan's guardian, who may trade using the orphan's money, avoiding any loss, while all the profits will go to the orphan.

The government or its representative, such as a judge, has the final right of *wilāya* when no eligible relative is available. They also have the right of appointing an alternative *walī* if those named are proved to be corrupt.

Two forms of *wilāya*, whether personal (*ʿalā al-nafs*) or financial (*ʿalā al-māl*), were defined by the Egyptian Law nos. 118, 119/1952 to give more control to the criminal and personal status courts.

The question whether a *walī* can appoint another person in the case of a marriage is a famous case of disagreement (*khilāf*) among jurists. According to the Shāfiʿīs, this is not permitted because even a father requires the consent of his daughter for the person chosen for her. However, Ibn Ḳudāma refuted this claim on the grounds that the *wilāya* was granted by the law and has nothing to do with the woman's consent, which is purely concerned with the final choice of husband. He also states that the Prophet married two of his daughters in this way. This kind of debate is important today with the increasing numbers of cases of women asking for equal rights in Muslim society. It is relevant to add here that the woman's *wilāya* in civil contracts is completely free, unlike that of her *wilāya* in marriage contracts, possibly attributable to the sensitivity of the Islamic legal system to the issue of sexual morality.

Since *wilāya* involves a legal representation, it can, like *wakāla*, involve all aspects and forms of personalities whether real (*shakhṣiyya ḥaḳīḳiyya*) or unreal (*iʿtibāriyya*). In both cases (*nafs* and *māl*) the *wilāya* is given to the closest member of the family. In marriage, the *wilāya* lies with the father, followed by the grandfather. Ibn Ḳudāma provided a summary of the views of various scholars such as al-Shāfiʿī, who confirmed the prerogative of the grandfather in *wilāya* over the son and brother. He also cited the view of Mālik, who prefers the son to the grandfather, basing his preference on the fact that the latter is only a second degree relative while the son is a direct relative. He also cited Ibn Ḥanbal's view that the grandfather and brother are in fact equal in the right of *wilāya* because of their equality of inheritance by male relationship (*taʿṣīb*). Ibn Ḳudāma refutes these views on the grounds of three analogies. He states that the grandfather has the right of *wilāya* before the son and brother because of his birthright as well as *taʿṣīb* like the father. Moreover, he is treated like the father should he steal his granddaughter's property, for a grandfather does not have his hand amputated. Finally, in inheritance he has stronger rights than those of a son or brother.

2. In Shīʿism.

For the Shīʿa, *wilāya* applies also to the position

of ʿAlī b. Abī Ṭālib as the single, explicitly designated heir and successor to Muḥammad in whom all responsibility for the guidance of the Muslims was subsequently vested. Not to acknowledge ʿAlī's *wilāya* was and is tantamount to apostasy. According to the Shīʿa, the Prophet proclaimed ʿAlī's elevation to this status at Ghadīr Khumm [*q.v.*] when he uttered the famous declaration "Of whomever I am the master (*mawlā*), ʿAlī is his master". Although the Sunnīs generally admit the validity of this *ḥadīth* (especially after it was accepted by Aḥmad b. Ḥanbal), they interpret the term *mawlā* or its equivalent here, *walī*, as meaning simply "friend" and not "master" or "guardian". By contrast, for the Shīʿa, ʿAlī was, by this pronouncement, made the guardian of the community, acting on behalf of God Himself. ʿAlī had become God's divinely chosen *walī* in a way similar to the Prophet having been God's apostle, His *rasūl*.

This doctrinal creed, which is the very core and bedrock of Shīʿism, is most succinctly expressed by successively attesting to the oneness of God, the apostleship of Muḥammad, and the guardianship of ʿAlī: *lā ilāh illā Allāh, Muḥammad rasūl Allāh, ʿAlī walī Allāh*, and this is the proper *shahāda* in use by the Shīʿīs throughout Shīʿa-dominated lands. This form of the *wilāyat ʿAlī* normally appears on Shīʿī official proclamations, coinage, the *ṭirāz*, and other examples of written and inscribed materials. It appears on all Fāṭimid coinage after the year 386/996 (other Shīʿī phrases were used earlier) and on the Shīʿī coins issued by Öldjeytü, to cite two fairly early examples. But, although admitted to be a proper, even essential, expression of Shīʿī piety by all mainstream authorities, it was not allowed as a component of the *adhān* [*q.v.*] until Ṣafawid times when this popular practice was ultimately formally accepted and declared to be *sunna*. It is now a standard part of the call to prayer among the Twelver Shīʿa.

Following the reign of ʿAlī, the *wilāya* resided in the *imāms* one after the other by virtue of designation, *naṣṣ*. The previous *imām* thereby passed it unerringly to his divinely chosen successor. Each *imām*, in turn, thus held exclusive spiritual authority over all Muslims. The *imāms* are those having power of command and whose leadership must be recognised as the *ulu 'l-amr* according to Ḳurʾān IV, 59. The adherents who recognise him and accept his guidance owe him in return the obligation of *walāya*—a term often taken as the equivalent or simply an alternate vocalisation of *wilāya* but which bears, in Shīʿī usage, the specific meaning of "devotion" and denotes the loyalty and support that is due the *imām* from his followers.

Even in classical lexicography, some authorities considered *walāya* to be the verbal noun meaning, for example, *nuṣra* "support", whereas *wilāya* is the name of the office. For the Shīʿa, this distinction attained the status of doctrine, and *walāya* is regarded as one of the pillars of Islam. Al-Kulaynī in his chapter on the *daʿāʾim* (pillars) in his *Kāfī* cites a number of *ḥadīths* wherein the *imāms* have enumerated these pillars—usually four, including prayer, alms, fasting, pilgrimage, plus *walāya*—and have singled out *walāya* as especially important. In the near-contemporary *Daʿāʾim al-islām* by the Ismāʿīlī jurist al-Ḳāḍī al-Nuʿmān, the author put his section on *walāya* prior to those on purity (*ṭahāra*), prayer, alms, fasting, pilgrimage, and *djihād*, the other six that he included.

In recent times, in the apparent absence of the true *imām*, the term *wilāya* in its Shīʿī sense has also come to apply by a series of extensions and modifications to the *wilāyat al-faḳīh* ("the guardianship of the jurist"), which is the position of the supreme leader in modern Iran. Acting as a surrogate, he holds powers similar in many respects but not exactly equivalent to those of the *imām*.

(P.E. Walker)

WIRD (A., pl. *awrād*), denotes set, supererogatory personal devotions observed at specific times, usually at least once during the day and once again at night. Abū Ḥāmid al-Ghazālī (d. 505/1111 [*q.v.*]), writing shortly before the establishment of formal Ṣūfī orders, desiguated as *awrād* seven divisions of the day and five of the night for the performance of devotions (both obligatory and supererogatory) by any pious Muslim (*Iḥyāʾ ʿulūm al-dīn*, Book X, *Kitāb tartīb al-awrād wa-tafṣīl iḥyāʾ al-layl*, Cairo 1358/1939, i, 339-73). The term often has referred to Ṣūfī devotions, where a *wird* is an arrangement of standard litanies and repeated formulae (e.g. *takbīr, tahlīl, tasbīḥ, taṣliya*) beginning with Ḳurʾān recitation. In this sense, the term may be compared to *dhikr* and to *ḥizb*, but a distinctive aspect of *wird* is its close association with a particular spiritual guide to whom it is attributed as well as the set times for its observance. Ṣūfī *shaykhs* have sometimes claimed to have received their *wirds* from prophets or saints in spiritual encounters or in dreams.

J.S. Trimingham's examination of the term's origins and development within Ṣūfī contexts stipulates that *wird* has at least three different senses: (1) the *ṭarīḳa* itself; (2) "a special prayer or litany"; and (3) the "office" of the *ṭarīḳa*, meaning its distinctive doctrines and devotional-meditative discipline (*The Sufi orders in Islam*, Oxford 1971, 214). "Each *ṭarīḳa* and each order derivative has its own *awrād* composed by its leaders. These form the 'theme' of the order" (*ibid.*, 215). A Ṣūfī novice typically starts out with an assigued simple, secret *wird* and progressively is introduced to more demanding ones until, when fully initiated by "taking the *wird*" (*akhdh al-wird*), he or she essentially has mastered the complete system of the order.

V. Hoffman's field-based research on contemporary Ṣūfī practices in Egypt includes valuable information about *awrād* and the ways in which they are viewed by masters and disciples in various orders. She reports, for example, that it is imperative for a person to have the permission of a *shaykh* before reciting an order's *awrād*, because they are "believed to be so spiritually powerful that a person could go mad from reciting them without proper spiritual protection and preparation" (*Sufism, mystics and saints in modern Egypt*, Columbia, S.C. 1995, 132-3). The regular recitation of *awrād*, according to Hoffman's informants, leads to "visions and other forms of spiritual revelation and [the disciple] will develop the gift of spiritual discernment that borders on clairvoyance" (133). Communal *wird* is preferred over solitary observance. Hence if one performs one's *wird* by oneself in the morning, a communal *wird* is encouraged after the evening *ṣalāt* (*ibid.*).

There is much traditional wordplay concerning the term, because of the root *w-r-d*'s range of meanings and associations, e.g. "watering place", "access, arrival"

at specified times for devotion to God, and "rose". (For more on this aspect, as well as numerous translated passages from traditional *awrād*, see Constance Padwick, *Muslim devotions, prayer-manuals in common use*, London 1961, 20-2, *et passim.*)

Bibliography: In addition to works cited in the text, L. Massignon's art. s.v. in *EI*[1] remains valuable, particularly its listing of collections and manuals of *awrād* since the 8th/14th century. Massignon considered "the essential work" to be ʿAbd al-Ḥayy al-Kattānī, *Fihris al-fahāris*, 2 vols. Fās 1346.

(F.M. Denny)

WĪS u RĀMĪN, a long narrative poem in Persian by Fak͟hr al-Dīn Asʿad Gurgānī [*q.v.*], written not long after 441/1050 and dedicated to Abū Naṣr b. Manṣūr, the governor of Iṣfahān on behalf of the Sald͟jūḳids. The story, which is set in the distant and unspecified past, deals with the love affair between Wīs, the wife of King Mōbad of Marw, and Rāmīn, her husband's younger brother. It tells of how the two lovers meet, how they are eventually discovered, and how Rāmīn rises in rebellion against his brother, in the end seizing the throne and making the widowed Wīs his queen. In the opening section, Gurgānī says that he had found the story in a book in Pahlawī, which he put into Persian verse at the request of his patron. The existence of an older Iranian poetical version of the story would seem to be confirmed by a verse by the much earlier Arabic poet Abū Nuwās referring to *fird͟jardāt Rāmīn wa-Wīs*, whereby, according to the commentary by Ḥamza al-Iṣfahānī, "*fird͟jardāt* are like poems (*ka 'l-ḳaṣā'id*)". (For the poem by Abū Nuwās, and Ḥamza's commentary, not yet in Wagner's edition, see M. Mīnuwī, *Yak-ī az fārsiyyāt-i Abū Nuwās*, in *Mad͟jalla-yi Dānis͟hkada-yi Adabiyyāt-i Tihrān*, i/3 [1333 *s͟h*./1954], 62-77). It is evidently an Arabic spelling of Middle Persian *fragard*, "chapter, section".

On the basis of the proper names, and in particular the topographical framework of Gurgānī's poem, Minorsky has argued that the origin of the story lay in Arsacid Parthia. Gurgānī has largely resisted the temptation to adapt the story to his Islamic environment and it retains a strong Zoroastrian flavour. It exerted considerable influence on the development of the Persian romantic epic, but later fell out of favour, in part, doubtless, because of its relatively simple style, but mainly because it was considered immoral, not so much on account of the fairly explicit erotic episodes (which are not exceptional by Persian standards) but because it appears to condone adultery on the part of a woman. Copies are thus rare. Gurgānī's work was translated into Georgian, apparently in the 12th century A.D. Several scholars have claimed a decisive influence of the Persian story on the Celtic tale of Tristan and Iseult, but it is difficult to see by what paths the legend might have migrated to Europe.

Bibliography (in addition to that cited under GURGĀNĪ): The older editions of the Persian text have been superseded by the critical edition by M.A. Todua and A.A. Gwakharia, Tehran 1349 *s͟h*./1970; the same scholars have also re-edited the Georgian translation, Tiflis 1962. Additional translations: *Vis and Ramin*, tr. G. Morrison, New York and London 1972; *Vis i Ramin*, tr. S. Lipkin, Moscow 1963. V. Minorsky's fundamental study *Vīs u Rāmīn. A Parthian romance*, in *BSOAS*, xi (1946), 741-63, xii (1947), 20-35, xvi (1954), 91-2, xxv (1962), 275-86, was reprinted, with considerable revision, in his *Iranica, bīst maḳāla*, Tehran 1964, 151-99. For further literature, mss., etc. see de Blois, *Persian literature*, v, 161-7.

(F.C. de Blois)

WIṢĀL (A.), or less frequently *muwāṣala* "maintaining an amorous relationship, chaste or otherwise" (*LʿA*), a technical term of Ṣūfism. *Waṣl* is employed in the same sense, with the antonym *had͟jr* or *hid͟jrān* (shunning, evasion) or even *faṣl* (separation). *Wuṣla* "amorous connection" is also recorded by the *Lisān* as an equivalent of *ittiṣāl* "the act of forming an amorous relationship".

Nascent Ṣūfism borrowed these terms from romantic poetry and integrated them into its own poetic production as well as into its doctrinal literature. Even with a poet such as ʿUmar Ibn Abī Rabīʿa [*q.v.*], *wiṣāl* or *waṣl* signifies an amorous relationship which one accuses the other of not respecting rather than a union as such (cf. *Dīwān*, Cairo 1978, 77, 168, 176). In the poetry attributed to Rābiʿa al-ʿAdawiyya [*q.v.*], the opposition between *waṣl* and *had͟jr* is encountered: "I have shunned (*had͟jartu*) all creatures in the hope of a union on Your part, my greatest desire" (quoted by ʿAbd al-Raḥmān Badawī, *S͟hahīdat al-ʿis͟hḳ al-ilāhī*, Cairo n.d., 163). The use by the Ṣūfīs of these terms continues to bear the mark of their origin: *wiṣāl* never signifies love in itself, but a link that is always fragile, liable to be broken or outgrown. It is not found in the lists of stages of love, borrowed from works dealing with profane love (cf. C. Ernst, *The stages of love in early Persian Sufism*, in *Classical Persian Sufism from its origins to Rumi*, ed. L. Lewisohn, London-New York 1993, 435-55). No equivalent is to be found in Ṣūfism to the lyricism of Ibn Ḥazm on *waṣl*, although in his works, the inexpressible and paradisiacal nature of the union could be considered a transition between profane love and sacred love (cf. *Ṭawḳ al-ḥamāma*, Fr. tr. L. Bercher, *Le collier du pigeon*, Algiers 1949, 152-3, Eng. tr. A.J. Arberry, *The ring of the dove*, London 1953, 118).

For al-Muḥāsibī (d. 243/857 [*q.v.*]), while love cannot be described, it nonetheless leaves behind it indubitable traces on lovers "on account of the constancy of their link with their Beloved (*li-dawām ittiṣālihim bi-ḥabībihim*), since God, in manifesting His love to them, instructs them (*id͟hā waṣalahum afādahum*)" (Abū Nuʿaym, *Ḥilya*, x, 79; cf. J. van Ess, *Die Gedankenwelt des Ḥārit͟ al-Muḥāsibī*, Bonn 1961, 224). Through *wiṣāl* and its equivalents, the expression of divine love has from the outset taken two directions. One of them is poetic and based on imagery, expressing intense desire for union with, or proximity to God. D͟hu 'l-Nūn (d. 246/861 [*q.v.*]) thus says of Muḥammad that he was the first of the prophets to arrive in "the garden of union" (*rawḍat al-wiṣāl*) (cf. Ibn al-ʿArabī, tr. R. Deladrière, *La vie merveilleuse de Dhu l-Nun l'Égyptien*, Paris 1988, 166; see also *Ḥilya*, ix, 375). The joy shown by al-Ḥallād͟j [*q.v.*] immediately before his execution, emanates, he declares, "from the coquetry of His beauty, which draws the elect towards union (*wiṣāl*)" (al-Munāwī, *al-Kawākib al-durriyya*, Cairo 1994, i, 545; *Passion*, i, 635, refers in error to *Ak͟hbār*, no. 16). The second, more doctrinal direction seeks to determine the reality of the union. In the abridged version of his *Ḥaḳā'iḳ*, al-Sulamī quotes, with *isnād*, the interpretation by D͟jaʿfar al-Ṣādiḳ of Ḳur'ān, VII, 143, when Moses asks to see God "in language of humility on the carpet of union (*bisāṭ al-wiṣāl*) in the shade of Majesty" (ed. G. Böwering, *The minor Qur'ān Commentary of Sulamī*, Beirut 1995, 146). Regarding God's reply "you shall not see Me", D͟jaʿfar speaks further of *wuṣla* and of *muwāṣala*, impossible to realise fully with God in this world (cf. P. Nwyia, *Le tafsir mystique de Djaʿfar al-Sadiq*, in *MUSJ*, xliii [1968], 18-19). Al-Ḥakīm al-Tirmid͟hī (d. between 295 and 300/905-10

[*q.v.*]) does not hesitate, however, to speak of *ittiṣāl* in regard to the saints closest to God (*Sīrat* [or *Khatm*] *al-awliyā'*, ed. B. Radtke, in idem, *Drei Schriften des Theosophen von Tirmidh*, Beirut 1992, 65-6, 181). Sahl al-Tustarī (d. 283/896 [*q.v.*]) interprets the light of the lamp in the Verse of Light (Ḳur'ān, XXIV, 35) as that of union with God (*nūr al-ittiṣāl*) (*Tafsīr*, Cairo 1329/1911, 68), but also guards against a too literal understanding of this term (cf. Böwering, *The mystical vision of existence in Classical Islam. The Qur'anic hermeneutics of Sahl al-Tustarī*, Berlin-New York 1980, 208, 218). This reservation is explained thus by Abū Bakr al-Wāsiṭī (d. after 320/932) in his commentary on the formula "God is great": "You are too mighty to be joined (*tuwāṣalu*) through prayer and separated (*tufāṣalu*) through its neglect, for separation and union are not movements, but that which has been determined from all eternity" (al-Kalābādhī, *Ta'arruf*, ed. 'Abd al-Ḥalīm Maḥmūd, Cairo 1960, 142, ch. 64). Poetry and doctrine are in no way incompatible. In the process of defining *waṣl* and *faṣl*, al-Sarrādj relates that al-Shiblī (d. 334/945) went into a state of ecstasy (*tawādjada*) when he heard this verse of al-'Abbās b. al-Aḥnaf: "Your union (*waṣl*) is shunning (*hadjr*), your friendship is ill-treatment, your proximity is distance and your peace is war" (*Luma'*, 364, 433, tr. R. Gramlich, *Schlaglichter über das Sufitum*, Stuttgart 1990, 495). Samnūn, also known as al-Muḥibb (d. *ca.* 300/912) offers one of the best examples of amorous lament addressed to God, in union as in denial (cf. al-Sulamī, *Ṭabaḳāt al-ṣūfiyya*, ed. Nūr al-Dīn Shurayba, Cairo 1969, 198; Abu Nu'aym, *Ḥilya*, x, 310-11: M. Lings, ch. *Mystical poetry*, in *Camb. hist. of Arabic lit.*, ii, *'Abbasid belles-lettres*, Cambridge 1990, 243).

The general sense of union or of love which God manifests to those who remain faithfully and amorously attached to Him often means that *waṣl* or *wiṣāl* are not found in the technical lexicon of *taṣawwuf*, except in the case of some authors (see below). 'Amr b. 'Uthmān al-Makkī (d. 297/909) appears to be such an exception. Al-Hudjwirī quotes his *K. al-Maḥabba*, where *waṣl* is placed above proximity (*ḳurb*) and intimacy (*uns*) and associated with the most intimate part of being (*sirr*) (cf. *Kashf al-maḥdjūb*, Eng. tr. R.A. Nicholson, 309, Fr. tr. Djamshid Mortazavi, *Somme spirituelle*, Paris 1988, 355). *Ittiṣāl*, on the other hand, is more problematical, being open to various interpretations. In accordance with his method in the *Manāzil al-sā'irīn*, al-Anṣārī identifies three degrees of *ittiṣāl* and likewise of its corollary *infiṣāl* "necessary condition or surpassing of union", according to its degree (ed. and Fr. tr. S. Laugier de Beaurecueil, Cairo 1962, 99-101). In the *Iḥyā'*, al-Ghazālī stands out from his predecessors in insisting on the correspondence between sexual and spiritual union (*waṣl*), as a way of underlining its delicious and ineffable character (Beirut, iv, 311-2). It would be natural to expect to find in a text such as the *'Abhar al-'āshiḳīn* of Rūzbihān al-Baḳlī (d. 606/1209 [*q.v.*]) frequent mention of the union-separation pairing, but in fact it rarely appears except in reference to the alternating states through which the soul passes in its relationship to God (*Le Jardin des fidèles d'amour*, ed. H. Corbin and M. Mo'in, Tehran-Paris 1958, 76, 127, Fr. tr. Corbin, Lagrasse 1971, 155, 244). On the other hand, this same author makes frequent reference to union in his Ḳur'ānic commentary, the *'Arā'is al-bayān* (Indian lith. 1315/1897-8). The same observation may be applied to his predecessor, al-Ḳushayrī (d. 465/1072), who interprets the verse of the *Fātiḥa* "Guide us on the straight path" as "Divert our intimate thoughts away from vision of the other, make the risings of lights shine in our hearts ... raise us above the domains of research and demonstration, towards the esplanades of proximity and of union" (*Laṭā'if al-ishārāt*, ed. Ibrāhīm Basyūnī, Cairo n.d., 61-2). In these two commentaries, the constant evocation of *wiṣāl* suggests what the predisposition of the heart should be in order to hear and to understand the Word of the Beloved.

Towards the end of the 6th/12th and during the 7th/13th centuries, the period of the great doctrinal syntheses, poetical expression of union lost nothing of its potency, as is shown by a well-known poem of Shihāb al-Dīn Yaḥyā al-Suhrawardī of Aleppo (d. 587/1191 [*q.v.*]) still recited today (quoted by Yūsuf Zaydān in *Shu'arā' al-ṣūfiyya al-madjhūlūn*, Beirut 1996, 31-2). An author such as Nadjm al-Dīn Kubrā [*q.v.*] accentuates in particular the dynamic of union/disunion: union with Him and separation from the other are two alternate and indissoluble phases, like *fanā'* and *baḳā'*, knowledge and love (cf. *Fawā'iḥ al-djamāl wa-fawātiḥ al-djalāl*, ed. F. Meier, Wiesbaden 1957, 47). In a detailed passage, 'Umar al-Suhrawardī (d. 632/1234 [*q.v.*]) develops the idea that to each of the degrees of union (*ittiṣāl* and *muwāṣala*) corresponds a certain "arrival" in God (*wuṣūl*), a term which does not by any means signify that the journey towards God has come to an end (cf. *'Awārif al-ma'ārif*, Beirut 1966, 516-17). Others insist on the need to move beyond such a notion. For Ibn al-Fāriḍ, union is a veil which must be lifted, since reality lies beyond it (cf. *al-Tā'iyya al-kubrā*, in *Dīwān*, Cairo 1956, 52, and tr. Nicholson, in *Studies in Islamic mysticism*, Cambridge 1921, 197, v. 441). In accordance with his unitive vision of Being, Ibn al-'Arabī (d. 638/1240 [*q.v.*]) applies to man the union/separation polarity: "You claim union (*wuṣla*) and reunion, but I fear that your union is through you alone, not through Him. You declare 'I am united' (or, have arrived, *waṣaltu*), while you are in separation!" (*Tadjalliyāt*, with commentary of Ibn Sawdakīn, ed. Osman Yahya, Tehran 1988, 247-8). Taking as a starting-point the definitions of al-Sarrādj in his *Lumā'*, he assigns to the terms *faṣl*, *waṣl* and *ittiṣāl* exceedingly precise senses as phases of spiritual progression (cf. *Iṣṭilāḥāt al-ṣūfiyya*, Ḥaydarābād 1943, 8, 12, 13, and *Futūḥāt*, Beirut, ii, 131-2). But he also brings union back to its divine principle; the verse LVII, 4, "And He is with you wherever you are" signifies that God remains with His creatures forever in a state of union (*ḥāl al-waṣl*) (cf. *Futūḥāt*, ii, 480, chs. 200, 201, on *waṣl* and *faṣl*). The genuine lover "makes no distinction between union and separation, occupied as he is with his Beloved, the object of his contemplation" (*Futūḥāt*, ii, 360 ch. 178 on love, Fr. tr. M. Gloton, *Traité de l'amour*, Paris 1986, 253). 'Abd al-Karīm al-Djīlī (d. 826/1423) recognises the validity of the term *wiṣāl* when it signifies the uninterrupted reception of theophanies, while drawing attention to the difficulty that it raises: the *wāṣil*, he who enters into ties of love or who arrives at God is in a veil, since according to Reality, no sooner has arrival taken place than there is separation. In effect, *wiṣāl* implies duality and, from this point of view, its opposite, *fiṣāl*, overtakes it and is superior to it (*al-Manāẓir al-ilāhiyya*, ed. Nadjāḥ al-Ghunaymī, Cairo 1987, 160-1). 'Abd al-Razzāḳ al-Ḳāshānī (d. *ca.* 735/1334) in his *Iṣṭilāḥāt al-ṣūfiyya*, ed. M. Kamāl Dja'far, Cairo 1981, 24, 51-2, and the other two lexicons of technical terms of Ṣūfism attributed to al-Ḳāshānī both continue the work of Ibn al-'Arabī and develop original definitions of *ittiṣāl*, *waṣl*, *waṣl al-faṣl*

and *waṣl al-waṣl* (cf. *Rashḥ al-zulāl fī sharḥ al-alfāẓ al-mutadāwala bayna arbāb al-adhwāḳ wa 'l-aḥwāl*, ed. Saʿīd ʿAbd al-Fattāḥ, Cairo 1995, 121, and *Laṭāʾif al-iʿlām fī ishārāt ahl al-ilhām*, ed. ʿAbd al-Fattāḥ, Cairo 1996, ii, 389-91.

Other nuances in the work of later writers can also be found. The joy of union and the sadness of separation or their simultaneous acceptance have continued to inspire Ṣūfī poets throughout the Muslim world (Annemarie Schimmel gives examples in her *Mystical dimensions of Islam*, Chapel Hill 1975, index s.v. *unio mystica*, Fr. tr. *Le soufisme ou les dimensions mystiques de l'Islam*, Paris 1976, 353, 431, 433). In poems intended to enliven sessions of *samāʿ* and of *dhikr* and to raise the aspirations of disciples, teachers have continued to use these terms, *waṣl* or *wiṣāl*, to inspire in their listeners the desire for God (cf. the Algerian *shaykh* Aḥmad Ibn ʿAlīwā (d. 1934) in the first poem of his *Dīwān*, Damascus 1963, 3-4, 8, Eng. tr. M. Lings, in *A Sufi saint of the twentieth century*, Cambridge 1971, 214-20, Fr. tr., *Un saint musulman du vingtième siècle*, Paris 1973, 247-54).

(D. GRIL)

WISĀM (A., pl. *awsima*), in modern Arabic usage a decoration, order, medal or badge of honour.

The roots *w-s-m* and *w-sh-m* mean basically "to mark, brand [an animal]", an important feature of nomadic life when ownership of beasts like horses and camels had to be determinable. For this idea of branding, marking, in Arabic desert life, see WASM. In the old Turkish nomadic society, *tamgha* had a similar sense of "tribal mark or emblem". In the modern Turkish pronunciation *damga* it is used for government revenue stamps, ministerial seals for validating government documents, cancelling postage stamps, etc. [see TAMGHA, and on personal seals and stamps in Islamic society in general, KHĀTAM]. *Washm* was used in Bedouin and succeeding Arab societies for tattoos and other decorative marks on the faces of both sexes but especially as beauty marks on women; see for this WASHM. The connection of both *wasm* and *washm* with the general sense of "to mark" > "to beautify" has yielded in Classical Arabic the adjective *wasīm* "having a comely face" and the noun *wasāma* "beauty".

Wisām tends now to be the standard Arabic word for "decoration, order, etc.", but when European-type orders were first imitated in 19th century Persia and the Ottoman empire, the term used was Perso-Turkish *nishān* [*q.v.*]. (ED.)

AL-**WISYĀNĪ**, the *nisba* of a number of Wahbī (pro-Rustamid) Ibāḍī scholars and leaders of the Banū Wisyān (Wāsīn) branch of Zanāta Berbers. Several of them originated from the town of al-Ḥāmma (El Hamma) near Tawzar (Tozeur) in the Shaṭṭ al-Djarīd [*q.v.*] region of western Tunisia.

1. ABŪ KHAZAR YAGHLĀ B. ZALTAF, Ibāḍī *mutakallim* and military leader, d. 380/990.

Of a modest background, Abū Khazar studied with Sulaymān b. Zarkūn al-Nafūsī at Tābidyūt, together with Abu 'l-Ḳāsim Yazīd b. Makhlad al-Wisyānī. Both students became well known for their scholarship and were members of the circle of notable scholars (*ḥalka* [*q.v.*]). The murder of Abu 'l-Ḳāsim on the order of the Fāṭimid ruler of Ḳayrawān, Abū Tamīm al-Muʿizz li-Dīn Allāh [*q.v.*], led to an Ibāḍī revolt under the leadership of Abū Khazar. The revolt, launched in 358/968-9, found support in Tripolitania, Djabal Nafūsa, and the regions of Zāb, Rīgh and Wardjlān. It was based in particular on the Mazāta Zanāta, who alone were said to muster 12,000 horsemen. However, the Ibāḍī forces were routed by the Fāṭimids at Bāghāya, west of Ḳayrawān, thus ending the last major Ibāḍī challenge to Fāṭimid rule, sixty years after the fall of Tāhart.

Abū Khazar fled to Djabal Nafūsa. With the mediation of his supporter Abū Nūḥ Saʿīd b. Zanghīl, he received an *amān* from al-Muʿizz the following year. Al-Muʿizz kept both Ibāḍī leaders under close control in Ḳayrawān, and when he moved to Egypt three years later, he ordered both to accompany him. Abū Nūḥ managed to escape, but Abū Khazar went with al-Muʿizz to Cairo and remained there for the rest of his life. He was given a pension and apparently retired to a life of scholarship, teaching several renowned students. One anecdote relates of an occasion when a Muʿtazilī scholar came to Cairo some time after al-Muʿizz's death in 364/975, and the only man in Cairo who could defeat him in debate was Abū Khazar.

He wrote *al-Radd ʿalā al-mukhālifīn* in refutation of various sects that opposed the Wahbiyya, including the Muʿtazila. A copy of this work exists on the island of Djerba, Tunisia (A.K. Ennami, *A description of new Ibāḍī manuscripts from North Africa*, in *JSS*, xv [1970], 82).

Bibliography: Abū Zakariyyāʾ Yaḥyā b. Abī Bakr al-Wardjlānī, *Chronique d'Abou Zakaria*, tr. É. Masqueray, Algiers 1878, 288-310; Aḥmad b. Saʿīd al-Dardjīnī, *K. Lewicki, *La répartition géographique des groupements ibāḍites dans l'Afrique du nord au moyen-âge*, in *RO*, xxi (1957), 350; idem, *Ibāḍitica II*, in *RO*, xxvi (1962) 102-3; U. Rebstock, *Die Ibāḍiten im Maġrib (2./8.-4./10. Jh.)*, Berlin 1983, 197, 313.

2. ABŪ MŪSĀ HĀRŪN B. ABĪ ʿIMRĀN AL-ḤĀMMĪ, Ibāḍī trader and scholar, native of al-Ḥammā, who travelled to Ghāna and died there in the late 4th/10th century.

Hārūn was undoubtedly inspired by his kinsman, Tamlā al-Wisyānī, who was said to have left the Djarīd as a pauper, travelling to Tādmekka on the Niger bend. Here he amassed a great fortune and annually sent home 4,000 dīnārs to be distributed among the poor, out of piety to the Ibāḍī community of his home and to its famous son, the Ibāḍī leader Abū Khazar al-Wisyānī (above, 1.). The community notable who received the gifts was Abū ʿImrān Mūsā b. Sudrīn al-Wisyānī, Hārūn's father and in his own right one of the well-known scholars of the region. Hārūn left al-Ḥāmma for Wardjlān, at the time one of the few independent strongholds of the Ibāḍī community. He became known as a scholar, and asked the head of the oasis, Abū Ṣāliḥ b. Djannūn, for permission to set up a study circle, *ḥalka*. When this was refused, he decided instead to take up the profession of merchant, and travelled across the Sahara to Ghāna. There he settled in the town of Ghiyāra, probably on the Senegal river, in a region populated by non-Muslims, where he stayed until his death.

To Hārūn are ascribed unnamed works of *tawḥīd*; some, written at the request of Abū Ṣāliḥ, remained unfinished.

3. ABŪ RABĪʿ SULAYMĀN B. ʿABD AL-SALĀM, Ibāḍī-Wahbī scholar of the 6th/12th-century, and author

of one of their best-known biographical works, the *Kitāb al-Siyar*.

Abū Rabī'"s family was from the Djarīd, but he spent his youth in Adjlū in the Wādī Rīgh region. We know very little of his life, but he is said to have built up his reputation through extensive travels. His main teacher was Abū Muḥammad 'Abd Allāh b. Muḥammad al-Lawātī [*q.v.*], originally from Cyrenaica, who had come to Adjlū in 450/1058-9. Among the important authorities from whom Abū Rabī' learnt was another Wisyānī, Abū Muḥammad Māksan b. Khayr. Abū Rabī' may also have studied with Abū Zakariyyā' Yaḥyā b. Abī Bakr al-Wardjlānī [*q.v.*]. Upon al-Lawātī's death in 528/1133-4, Abū Rabī' gathered numerous students around himself. His major work is the *K. al-Siyar*, a collection of biographical notices organised geographically, centering on his own southern Tunisian region but also including anecdotes from a wider range. It was widely used by later Ibāḍī historians, such as al-Dardjīnī. It has not been printed, but copies exist in Djerba, Beni Isguen (Mzāb, Algeria), Cairo and Cracow.

Abū Rabī'"s date of death is not known. It must have been after 528/1134, but probably before 557/1161-2, the earliest date of a work written by an anonymous student of his.

(K.S. Vikør)

WITR (A.), also *watr*, a term found in *ḥadīth* and *fiḳh* in connection with performance of the *ṣalāt* or worship and concerned with the odd number of *rak'as* which are performed at night.

Witr does not occur in this sense in the Ḳur'ān, but frequently in *ḥadīth*, which in this case also discloses to us a part of the history of the institution in three stages, itself probably a continuation of the history of the fixing of the daily *ṣalāts*, as the traditions on *witr* presuppose the five daily *ṣalāts*. Some traditions even go so far as to call *witr* an additional *ṣalāt* of an obligatory nature (see also below). When Mu'ādh b. Djabal, upon his arrival in Syria, perceived that the people of this country did not perform the *witr*, he spoke to Mu'āwiya on this subject. When the latter asked him: Is then this *ṣalāt* obligatory? Mu'ādh answered: Yes, the Apostle of God said: My Lord has added a *ṣalāt* to those prescribed to me, namely *witr*, its time is between *'ishā'* [see MĪḲĀT] and daybreak (Aḥmad b. Ḥanbal, *Musnad*, v, 242). In accordance with this tradition, it is reported that when *witr* had been forgotten or neglected, it had to be performed (Aḥmad b. Ḥanbal, ii, 206; Ibn Mādja, *Iḳāma*, *bāb* 122). 'Ubāda b. al-Ṣāmit, on the other hand, denied the obligatory character of *witr* on account of a different tradition (Aḥmad b. Ḥanbal, v, 315-16, 319).

The second stage in the position of *witr* is expressed in those traditions in which Muḥammad admonishes his people to perform *witr*, "for God is *witr* (viz. One), and He loves *witr*" (e.g. Aḥmad b. Ḥanbal, i, 110).

The third stage of *ḥadīth*, which was to become the point of view of all *madhhabs* with one exception, the Ḥanafī school, is represented in those traditions which call this *ṣalāt* a *sunna*. Many traditions of this kind expressly deny its obligatory character and are consequently of a polemical nature; they are frequently ascribed to 'Alī (e.g. Aḥmad b. Ḥanbal, i, 86, 98, 100, 115, 120, 145, 148, etc.). It may be that this question, like other ceremonial points, belonged to the polemical repertory of the early Shī'īs.

The time of *witr* is mentioned in *ḥadīth* in connection with different parts of the night. "*Witr* consists of pairs of *rak'as*; whosoever fears *ṣubḥ* must add a *rak'a* in order to make the total number odd" (Aḥmad b. Ḥanbal, ii, 5, 9, 10, 75). In other traditions, three *rak'as* are mentioned in order to avoid the *ṣubḥ* (*fa-bādir al-ṣubḥ bi-rak'atayn*, e.g. Aḥmad b. Ḥanbal, ii, 71). The number of thirteen *rak'as* occurs also (al-Tirmidhī, *Witr*, *bāb* 4), and in general, *witr* is supposed not to be allowed after *ṣalāt al-ṣubḥ* (cf. Mālik, *Muwaṭṭa'*, *Witr*, trads. 24-8, and al-Ṭayālisī, no. 2192: "No *witr* for him who has not performed it before *ṣubḥ*").

Witr is also frequently mentioned in connection with the first part of the night (cf. below). Abū Hurayra performed it before going to sleep, on Muḥammad's order (al-Tirmidhī, *Witr*, *bāb* 3). Muḥammad himself is said to have performed this *ṣalāt* in any part of the night (e.g. al-Tirmidhī, *Witr*, *bāb* 4). The time between *'ishā'* and daybreak appears as the largest space accorded to *witr* in *ḥadīth* (Aḥmad b. Ḥanbal, v, 242). It is prohibited to perform more than one *witr-ṣalāt* in one night (Aḥmad b. Ḥanbal, iv, 23 *bis*).

Tradition frequently mentions the *rak'as*, prayers, invocations and formulas by which *witr* used to be followed (e.g. al-Nasā'ī, *Ḳiyām al-layl*, *bābs* 51, 54; Aḥmad b. Ḥanbal, i, 199, 350).

The chief regulations of *witr* as fixed by the different *madhhabs* show insignificant divergencies only (see al-Sha'rānī, 198 ff.), with the single exception that the Ḥanafīs declare it to be obligatory. As an example, one may cite the rules of the Shāfi'ī school: the number of *rak'as* may vary between the odd numbers from one to eleven; the *niyya* [*q.v.*] is required; after every two *rak'as* and after the last a *salām* or *tashahhud* is performed. The best time is immediately after *tahadjdjud* [*q.v.*] for those who do not perform this *ṣalāt* in the first third of the night. In the second half of Ramaḍān [see TARĀWĪḤ], *witr* is prolonged by *ḳunūt* [*q.v.*].

WIZE, modern Vize, a small town of Eastern Thrace, now in European Turkey (lat. 41° 34' N.,

long. 37° 45' E.). It lies below the southwestern slopes of the Istranca Dağları on the road connecting Kırklareli [see ḲÎRḲ KILISE] with Silivri and the Sea of Marmara coast.

The Byzantine town and fortress of Bizyē (Βιζύη), Byzus of the Latins, was a bishopric by 431 and a metropolitan see by the 14th century. It was apparently first taken by the Ottomans just after the middle of the 8th/14th century; the poet Aḥmedī attributes this occupation to Süleymān, eldest son of Orkhan, who is said to have died in 1357. But this must have been only a temporary event, and according to the Byzantine chronicler Ducas, it was not until March 1453, just before the fall of Constantinople, that Meḥemmed Fātiḥ's commander Ḳaradja Beg conquered Bizyē definitively, with its two churches of St. Sophia and St. Nicholas transformed into mosques. *Yürüks* [*q.v.*] were settled in this frontier region and Wize became a *sandjak* of Rūmeli. Subsequently, it came within the province of Özü or Silistra. By 1846 it was included in the province of Edirne [*q.v.*] as the *sandjak* of Tekfürdaghî or Tekirdaghî [*q.v.*], coming within the *sandjak* of Ḳîrḳ Kilise in 1879. It had been briefly occupied by the Bulgarians in the spring of 1878. During the Balkan War of 1912-13 it was again occupied by the Bulgarians, and by Greek forces in 1920-2. With the Treaty of Lausanne, the town's Greek population, who had formed the majority of the town's 3,380 inhabitants, was resettled within Greece. In Republican Turkey, it is now within the *il* of Kırklareli.

(C.E. BOSWORTH and A. SAVVIDES)

WODINA, VODINA, the Ottoman Turkish name for the Greek town of Edessa on the Via Egnatia in western Macedonia, lying to the northwest of Thessalonica [see SELĀNIK] (lat. 40° 48' N., long. 22° 03' E.). The name Vodina goes back to Slavonic *voda* "water" because of the abundance of water in the vicinity of the town.

In mediaeval times it was contested by Byzantines, Bulgarians, Serbs and Normans (see J. Perluga, in *Lexikon des Mittelalters*, iii/7, Munich-Zürich 1985, cols. 1565-7; R. Browning and A. Kazhdan, in *Oxford dict. of Byzantium*, New York-Oxford 1991, 2185). In the late 14th century it was ruled by Greek-Serbian toparchs, until the town's initial conquest by the Ottoman commander Ewrenos Beg [*q.v.*], effected by the treason of the local archon Kel Petros and variously dated by Greek and Turkish sources (Neshrī, Saʿd al-Dīn, Ewliyā Čelebi) to between 774-6/1372-4, together with Beroia [see KARAFERYE], and dates in the 1380s (see C. Seybold, *Neschri's Notiz über die Eroberung von Vodena-Edessa ... durch Bajezid I. Jildirim, 1389*, in *ZDMG*, lxxiv [1920], 291; P. Wittek, in *BSOAS*, xiv [1952], 661 n. 3; D.E. Pitcher, *An historical geography of the Ottoman empire*, Leiden 1972, map XXVI; P. Schreiner, *Byzantinischen Kleinchroniken*, ii, Vienna 1977, 358; Stalides, i, 95-125 for details).

Definitively captured *ca.* 833/1430, Vodina became part of the *sandjak* of Selānik, internally administered by local archons (*demogērontes*). Its fortifications and products were described by Kātib Čelebi (Ger. tr. J. von Hammer, *Rumeli und Bosna*, Vienna 1812, 87) and by Ewliyā Čelebi in 1668, the latter mentioning 100 houses, 30 shops, ten *khāns* and seven Orthodox churches functioning also as schools for the Greek population (see D. Demetriades, *Central and western Macedonia according to Ewliyā Čelebi* [in Greek], Thessalonica 1973, 235, 241-2). In the 19th century, it was visited by various Western travellers, e.g. W.M. Leake in 1808 (*Travels in northern Greece*, iii, London 1835, 275-6). Edessans participated in the 1770 Russian-inspired Orlov revolt and the Greek War of Independence, whilst between 1798 and 1822 the town experienced the rule of ʿAlī Pasha Tepedelenli [*q.v.*] of Albania. Bulgarian claims on the area began in the 1860s, but the town's eventual annexation to the kingdom of Greece was effected on 18 October 1912, at which time the town had a population of 4,000 Greeks, 1,530 Bulgarians, 46 Turks and a few Serbs (see J. Sarres, in *Megale Hellenike Enkyklopaideia*², ix, Athens 1964, 706-7). The town's fine 15th century mosque now houses its archaeological museum.

(A. SAVVIDES)

WOLOF [see SENEGAL].

WOLOS [see ḲULUZ, in Suppl.].

WOYNUḲ (T.), a term of Ottoman military and administrative usage which denoted a particular category of troops amongst other Balkan Christian landholding or tax-exempt groups employed by the sultans to perform specific combat and other militarily-related tasks (for other groups, see EFLĀḲ and MARTOLOS). The term stems from the Slavonic root meaning "war", "warrior", which appears also in the office of Voywoda [*q.v.*], likewise found in Ottoman usage.

The *woynuḳs* were especially useful to the sultans before the Ottoman state developed a fully-centralised, multi-functional military apparatus of its own. In newly-conquered lands along the empire's expanding Albanian and northern Balkan frontiers during the late 9th/15th and early 10th/16th centuries, *woynuḳs* provided an essential complement to the timariots [see TĪMĀR] whose numbers were still insufficient to perform both offensive and defensive military functions. An idea of the numerical importance of *woynuḳs* can be gained when we consider that in the Vidin region during the time of Meḥemmed II Fātiḥ, for example, *woynuḳs* still outnumbered timariots by a significant margin (İnalcık, *Fatih devri*, table on p. 165 showing 231 registered *woynuḳs* as against 188 *tīmār* holders). By means of the *woynuḳ* organisation, the Ottomans were able to secure the loyalty and co-operation of members of existing local landed military élites by confirming a kind of limited title to their own hereditary lands called *bashtine*. One limit was the satisfactory performance of the military duties assigned to them by the Ottomans. Having thus neutralised them, the Ottomans

could then turn to the *woynuḳs* to give support services essential to further military advance. The *woynuḳs* were often employed in the first period of Ottoman expansion as guardians of the frontier and as supplementary garrison forces who assumed responsibility for protecting the hinterland as the Turks advanced towards and eventually (after the fall of Belgrade in 1521) beyond the natural boundary formed by the Danube. The provincial law codes for Bosnia in the early 10th/16th century contain explicit reference to the use of *woynuḳs* in unsettled regions of the frontier (*iḥtiyāṭlu yerler*): as guardians of the roads and passes and as defenders of minor strongholds set up in vulnerable or strategically important sectors of the frontier and its immediate hinterland (see refs. in the law codes dated 922/1516 and 937/1530 in the *Bibl.*). In time, the *woynuḳs* of some regions, especially in the area between the Danube and the Balkan range that, after the Ottomans' permanent establishment in Hungary in 948/1541, lost its strategic importance, lost their combat functions but kept their tax-exempt status by performing auxiliary services. Pastoralist *woynuḳs* were employed in large numbers for the breeding, grazing and general care of the horses belonging to the imperial stables [see MĪR-ĀKHŪR]. They also accompanied regular army units on campaign, with responsibility for the care and protection of the mounts belonging to the imperial herd. Such *woynuḳs* were attached to the imperial stables and governed by their own regulations (see the law code published by Y. Ercan, *Bulgarlar ve Voynuklar*, 114-16). They managed to preserve their place as a distinct element within the complex Ottoman court and military organisational structure until the time of the Russo-Ottoman war of 1877-8 (Uzunçarşılı, *Saray teşkilâtı*, 504).

(R. MURPHEY)

WOYWODA, a term derived from the Slavic root *vojn* that signifies pertinence to the military or the sphere of war. In mediaeval Serbia it denoted a high-ranking commander and, on the eve of the Ottoman conquest, the governor of a military district (N. Radojčić, ed., *Zakonik tsara Stefana Dushana 1349 i 1354*, Belgrade 1960, 65, 67; C. Jireček, *Staat und Gesellschaft im mittelalterlichen Serbien*, Part IV, Vienna 1919, 25-6). In early Ottoman sources the term appears in reference to former Christian lords (N. Beldiceanu, *Les Actes des premiers sultans conservés dans les manuscrits turcs de la Bibl. nationale à Paris*, Paris 1964, ii, 56-7). Soon it began to designate agents in charge of revenues from domains which enjoyed full immunity (*serbest*), i.e. the imperial demesne as well as the *khāṣṣ* fiefs granted to viziers, provincial governors and other dignitaries (İ.H. Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâtı*, [2]Ankara 1984, 164-5, 321; M. Akdağ, *Türkiye'nin iktisadî ve içtimaî tarihi*, ii, [2]Istanbul 1974, 89, 377-8, 382-4, 455).

With the expansion of the *muḳāṭaʿa* [*q.v.*] system since the 11th/17th century, many *ḳaḍā*'s and even *sandjaḳs* were administered by *woywodas* (Y. Özkaya, *XVIII. yüzyılda Osmanlı kurumları ve Osmanlı toplum yaşantısı*, Ankara 1985, 21, 200-2; Y. Cezar, *Osmanlı maliyesinde bunalım ve değişim dönemi*, Istanbul 1986, 65, 144; L.T. Darling, *Revenue-raising and legitimacy. Tax collection and finance administration in the Ottoman Empire 1560-1660*, Leiden 1996, 129). Their role was further enhanced as a result of efforts to settle the nomads as peasants and the consequent revivification of deserted areas (C. Orhonlu, *Osmanlı imparatorluğunda aşiretleri iskân teşebbüsü, 1691-1696*, Istanbul 1963, 14, 18, 44).

On the whole, *woywodas* exerted, along with economic power, considerable political authority, since they were responsible also for public order, policing the countryside accompanied by numerous armed men. Not least for this reason they were the cause of frequent complaints (H. İnalcık, *Adaletnameler*, in *Belgeler*, ii/3-4 [1965], 49-165). The central government was hard pressed to find suitable persons for this job, i.e. persons who were acceptable also to regional interests. More often than not, local notables succeeded in controlling the *woywoda* posts in their province until the institution was abolished during the early *Tanẓīmāt* (M. Çadırcı, *Tanzimat döneminde Anadolu kentlerinin sosyal ve ekonomik yapıları*, Ankara 1991, 29-32).

(F. ADANIR)

WU MA "the Five Mas", the group of five Muslim warlord-governors dominating Northwest China in the Republican period (1911-49).

By the turn of the 20th century, three grand Muslim clans of Ma from Ho-chou district in Kansu, led by Ma Ch'ien-ling (1826-1910), Ma Chan-ao (1830-86) and Ma Hai-yen (1837-1900) respectively, rose up to consolidate their military power. Later their descendants came to be known as "Hsi-pei Ma-chia-chun" ("the Northwestern Muslim Warlords of the Ma clans"). The five best known of them were: Ma An-liang (1844-1918), Ma T'ing-hsiang (1889-1929) (of the Ma Chan-ao clan), Ma Fu-hsiang (1876-1932) (of the Ma Ch'ien-ling clan), Ma Ch'i (1869-1931) and Ma Lin (1873-1945) (of the Ma Hai-yen clan). They were called "Lao Wu Ma" ("The Old Five Mas") distinguished from another group of five called "Hsiao Wu Ma" ("The Young Five Mas"), comprising Ma Hung-pin (1884-1960), Ma Hung-k'ui (1892-1970) (of the Ma Ch'ian-ling clan), Ma Pu-ch'ing (1901-77), Ma Pu-fang (1902-75), and Ma Chung-ying (1909-? [*q.v.*]) (of the Ma Hai-yen clan). The old and young Mas were related to each other either by blood or marriage. According to the area of their dominance, they were also known as "Ch'ing Ma", the group that controlled mainly the Ch'ing-Hai region, and "Ning Ma", which controlled mainly the Ning-hsia [*q.v.*] region. The former were led by Ma Ch'i (*r.* 1929-31), Ma Lin (*r.* 1931-38) and Ma Pu-fang (*r.* 1938-49); the latter were led by Ma Fu-hsiang (*r.* 1913-20), Ma

Hung-pin (*r.* 1921-28 and 1931-33), and Ma Hung-k'ui (*r.* 1933-49).

Most of the Ma warlords were Old Teaching (Lao Chiao) traditionalists who were more sinicised than the New Teaching (Hsin Chiao) reformists. They always complied with the central government's Han-centric policies, so that their rule was not particulary motivated by Islam. Amongst them Ma Fu-hsiang and Ma Hon-k'ui, father and son, claimed by some authorities as neo-Confucianists, made efforts to incorporate Confucianism into Muslim school curricula. In order to echo the central government's policy of modernisation, they also introduced Western sciences into Muslim education. Ma Fu-hsiang used to urge Muslim associations to reprint Han-language Muslim classics of a Confucian-Islamic synthesis in order to stimulate Muslim integration into Han society. As a result, Islam in Northwest China underwent further assimilation, and the Salafiyya [*q.v.*] reform movement there was held back. The rule of the Ma warlords had a significant impact on the Muslim communities in Northwest China. Because of their Sino-nationalist stance, the Northwestern Han-speaking Muslims' cultural identity within the universal *umma* was superseded by an identification with the Chinese motherland. The tendency of anti-acculturation and secession from China, which had burned during the second half of the 19th century, was thus momentarily stilled.

WUDJŪD (A.), verbal noun from *w-dj-d* "to find".

1. In philosophy.

Here, it is one of the main words used to represent "being" in Arabic renderings of Greek ontological expressions, based on the present passive *yūdjadu*, with the past passive *wudjida*, leading to the nominal form *mawdjūd*. *Al-mawdjūd* means "what is found" or "what exists", and the *maṣdar*, *wudjūd*, is used as the abstract noun representing existence. *Wudjūd* and its related terms are frequently used to represent the copula (*al-rābiṭa*), sc. the English word "is", in addition to being used to represent existence. Many philosophers writing in Arabic and Persian spend some time discussing the repertoire of terms, technical and familiar, which might be used to represent the sorts of ontological and logical points which are made in Greek philosophy. In this context, *wudjūd* tends to be identified with terms such as *anniyya*, *huwiyya* [*q.vv.*] and the verb *kāna*, by contrast with terms representing being in the sense of essence such as *māhiyya*, *ḥaḳīḳa*, *dhāt* [*q.vv.*] and in Persian usage, *djawhar*, *dhāt*. The ambiguity between *wudjūd* as the copula and as representing existence is well noted by al-Fārābī [*q.v.*], who points out that the statement *Zayd yūdjadu ʿādil*[an] ("Zayd is just") can be understood purely syntactically without having any implication that Zayd actually exists. In his Commentary on the *De Interpretatione*, *Sharḥ al-ʿIbāra*, he refers to the use of *wudjūd* as though it were an attribute and used to make an existential claim. But he is generally clear that existence is not part of the essence of a thing, and it is not implied by its essence either. Existence is never anything more than an accident. When he discusses Aristotle's logical terms in the latter's *Prior analytics*, the expression *ḳiyās wudjūdī* is used to represent the Aristotelian hyparctic or assertoric syllogism.

A crucial distinction made by Ibn Sīnā [*q.v.*] is between *wudjūd* and *māhiyya*, where the former represents being and existence and the latter essence or quiddity. He spoke of God as the *wādjib al-wudjūd*, the only being whose essence is to exist, in contrast with everything else which is contingent. The realm of existence can be divided up into the *wādjib al-wudjūd bi-dhātihi*, necessary being in itself, and everything else which follows from it. The idea that there are essences or concepts that need something to bring them into existence was readily adopted by many of the *mutakallimūn*, and they discussed the particular kind of existence which is appropriate to God, a very different kind than that which is applicable to His creatures.

Ibn Rushd [*q.v.*] is more explicit on the function of *wudjūd* as indicating a truth claim. Existence may be understood as attributing a predicate to a subject, an accident being applied to the substance which serves as the subject of the statement. Arguing that existence has priority over essence, he formalised a powerful line of opposition to Ibn Sīnā's views on being, however. He accepted the logical distinction between existence and essence, but criticised its application to ontology. It is not just a matter of existence being brought to an essence that allows us to talk of the essence as being actualised, since the real existence of the essence is part of the meaning of the name, and is thus a condition of our use of the essence in the first place. If the existence of a thing depended on the addition of an accident to it, then precisely the same would be the case for existence itself, leading to an infinite regress.

Manuals of logic from the 4th/10th century regarded *wudjūd* as possessing an essence that the mind can comprehend without apprehension. This point is developed at great length by Shihāb al-Dīn al-Suhrawardī [*q.v.*], who argues that the immediacy of existence represents unmediated knowledge of reality. Al-Suhrawardī took this to show that essence is prior, since if existence were a predicate of essence, essence has to exist itself before any further question of existence can be raised. In his *ishrāḳī* [see ISHRĀḲ] approach, existence is nothing more than an idea, and one can describe reality in terms of lights with different intensities, ignoring existence altogether.

Mullā Ṣadrā Shīrāzī [*q.v.*] rejected this argument and replaced it with *aṣālat al-wudjūd*, the priority of existence. He argued that existence is accidental to essence in the sense that existence is not a part of essence. But there is no problem in understanding how existence can itself exist as more than a thought, since existence is an essential feature of actuality itself, and so no regress is involved. A development of the concept is provided by Mullā Ṣadrā, who uses the term *wudjūdiyya*. He argues that the *wudjūd* in everything is real, except for the abstract notion of being where this is an entirely mental abstraction. It provides scope for making a more abstract reference to *wudjūd*, as in the expression *mawdjūdiyyat al-wudjūd*, but he maintains the distinction between the *wudjūd* which is a mental abstraction and the *wudjūd* which is real. The former tends to be identified with the notion of universality, and when *wudjūd* is used in its widest

sense Mullā Ṣadrā claims that it is used *bi 'l-tashkīk*, not in a univocal manner. Everything which exists has something in common, since otherwise we should say that they do not exist, and what they have in common is not exactly the same attribute, but something that they share analogously. By contrast to al-Suhrawardī, what everything shares is some degree of existence rather than some degree of light. Like his predecessors, he distinguishes between the copulative use of *wudjūd* (*al-wudjūd al-rābiṭ*) and real being (*al-wudjūd al-ḥakk*). In the case of the former, what is connected by *wudjūd* are ideas in the mind, not necessarily anything real. What is it, then, that the different uses of *wudjūd* have in common, which manages to distinguish them from claims concerning non-existence? The answer for Mullā Ṣadrā is that all uses of *wudjūd* imply either mental or real existence.

He argues that existence is the basic notion of metaphysics, not essence. He accepts that we can think of a concept existing in reality, and only existing in our minds, but this does not show that existence is merely an attribute which is tacked on to the concept's essence in the case where it actually exists. When something exists and yet we think of it as not existing, we are thinking of the same thing; our name refers to the same object, and so existence comes first, and its precise characterisation later. Even things that only exist in our minds are existing things, and we then need to say what they are like. These arguments over the relative priority of existence and essence played a leading role in the structure of Islamic philosophy.

2. In mysticism.

As a technical term of classical Ṣūfism, *wudjūd* is used primarily, though by no means exclusively, as a verbal noun derived, like *wadjd* and *widjdān*, from *wadjada*, "to find" or "to experience". The term already occurs in several meanings in the prose writings of such prominent Baghdādī Ṣūfīs as al-Kharrāz (d. 277/890-91 [*q.v.*]), *Rasā'il*, ed. Ḳāsim al-Sāmarrā'ī, Baghdād 1387/1967, 26, 28, 30, 39) and al-Djunayd (d. 298/910-11 [*q.v.*]), *Rasā'il*, ed. Ali Hassan Abdel-Kader, *The life, personality and writings of al-Junayd*, GMS, N.S. xxii, London 1962, Arabic text 32-3, 35-6, 51-2, 56-7), as well as in a well-known *ḳaṣīda* generally attributed to al-Ḥallādj (d. 309/922), *Le Dîwân d'al-Hallâj*, ed. Massignon, Paris 1955², 28-9), whereas it seems to be altogether absent from the technical vocabulary of their Eastern contemporary, the "thinker" al-Tirmidhī *al-ḥakīm* (d. *ca.* 300/912-13 or later [*q.v.*]). Al-Djunayd's peculiar usage of the formula *wudjūdihi lahum*, referring to God's "finding" or "realising" the spirits at the primordial Covenant (*al-mīthāḳ* [*q.v.*]), implies a kind of "existence" prior to existence in this world. Applied to the experience of the mystic, *wudjūd* is frequently juxtaposed with *shuhūd* "witnessing" or "presence", and/or *wadjd*, a crucial Ṣūfī term which, though usually translated as "ecstasy", is more precisely defined as an indescribable "encounter of the unseen with the unseen" (*muṣādafat al-ghayb bi 'l-ghayb*; cf. *Adab al-mulūk*, ed. B. Radtke, Beirut 1991, Arabic, 68, German tr., 31) and plays a key role in discussions of the Ṣūfī practice *par excellence*, "listening to music" (*samā'* [*q.v.*]). Opinions appear to have been at variance with regard to the hierarchy, if any, of the above three values; but al-Ḳushayrī in his authoritative *Risāla* (written 437-8/1045-6) clearly opts for the superiority of *wudjūd*, by which he means the realisation of divine [?] "existence" in such a way that everything else is totally "wiped out" (*istihlāk*; cf. R. Gramlich, *Das Sendschreiben al-Qušayrīs über das Sufitum*, Stuttgart-Wiesbaden 1989, 115 ff., 123, 431, and the review by Landolt in *Bull. Critique des Annales Islamologiques*, vii [1990], 39-41). In a more imaginative way, Nadjm al-Dīn al-Kubrā (d. 618/1221 [*q.v.*]) in his *Fawā'iḥ al-djamāl wa-fawātiḥ al-djalāl*, ed. F. Meier, Wiesbaden 1957, Arabic text nos. 18, 41, 118, 119) speaks of an "exchange of existence" (*tabdīl al-wudjūd*) and describes this experience as a kind of ascent through the seven "categories of being" (*anwā' al-wudjūd*) until one reaches "divine existence" (*wudjūd al-ḥakk*). It may also be noted here that in the Ṣūfī *Tract on listening to music* traditionally attributed to Aḥmad al-Ghazālī (*Bawāriḳ al-ilmā' fi 'l-radd 'alā man yuḥarrim al-samā'*, ed. J. Robson, London 1938, Arabic text 157-8, tr. 98-9), but which is more likely the work of a 13th-century Aḥmad b. Muḥammad al-Ṭūsī (cf. Aḥmad Mudjāhid, *Samā' wa futuwwat*, Tehran 1360/1981, Persian text, 9), the skin stretched over the drum is said to symbolise "absolute being" (*al-wudjūd al-muṭlaḳ*).

Philosophical speculations about "absolute being" probably played a significant role in the development of Ṣūfī thought from the times of Ibn Sīnā at least; but the question as to whether or not *al-wudjūd al-muṭlaḳ* should be identified with God became a serious issue only as a result of the impact of the "new" doctrine of Ibn al-'Arabī (d. 638/1240 [*q.v.*]), who became famous with followers and opponents alike as the greatest spokesman for the "unity of being" (*waḥdat al-wudjūd*). It should be noted, however, that the latter expression has not been traced to the writings of Ibn al-'Arabī himself, whereas the 13th-century Persian thinker 'Azīz-i Nasafī already distinguishes systematically between two different kinds of *waḥdat-i wudjūd* without attributing any of them directly to Ibn al-'Arabī [see WAḤDAT AL-SHUHŪD]. According to 'Alā' al-Dawla al-Simnānī (d. 736/1336), an influential Ṣūfī critic of Ibn al-'Arabī, *al-wudjūd al-muṭlaḳ* is applicable not to God's own existence, but only to his creative "act of bringing-into-existence (*fi'l al-īdjād*), even though al-Simnānī himself accepts the validity of ontological *tawḥīd* in the formula "there is nothing in Being but God" (*laysa-fi 'l-wudjūd siwā 'llāh*), which he ascribes to the classical Ṣūfī al-Djunayd. Partly based on al-Simnānī's critique, but also as a means to assert their

own identity as Muslims against a certain Indo-Muslim syncretism of their own times, later Ṣūfīs such as Gīsūdirāz (d. 825/1422) and especially the celebrated Aḥmad Sirhindī (d. 1034/1624 [*q.v.*]) laid claim to an even higher form of mystical experience than the one associated with Ibn al-ʿArabī. Their doctrine, as distinct from *waḥdat al-wudjūd*, is generally referred to as *waḥdat al-shuhūd*. On the other hand, the doctrine of *waḥdat al-wudjūd* as elaborated by Ibn al-ʿArabī's immediate followers such as Ṣadr al-Dīn al-Ḳūnawī (d. 673/1274) was vigorously defended by Nūr al-Dīn ʿAbd al-Raḥmān al-Djāmī (d. 898/1492), particularly in his scholastic treatise, *al-Durra al-fākhira fī taḥḳīḳ madhhab al-ṣūfiyya wa 'l-mutakallimīn wa 'l-ḥukamāʾ al-mutaḳaddimīn* (ed. N. Heer, Tehran 1358/1980, idem, *The Precious Pearl*, Albany 1979); and this intellectual Ṣūfī tradition in turn exercised a strong influence on the formation of a new philosophy of the "primacy of existence" (*aṣālat al-wudjūd*), as opposed to the more traditional philosophy of the "primacy of quiddity" (*aṣālat al-māhiyya*), with Ṣadr al-Dīn al-Shīrāzī (d. 1050/1640).

WUḌŪʾ (A.), lit. "cleansing", the minor ablution, purification from a minor source of impurity (*ḥadath*), obligatorily required for the performing of certain acts of the Islamic religion, including worship [see ṢALĀT]. For the major ablution, see GHUSL.

Together with worship, almsgiving, fasting and pilgrimage, purification (*ṭahāra*), or the fact of putting oneself in a state of purity (*ṭuhr*), is one of the five cultic acts (*ʿibādāt*) that make up, according to the religious lawyers, the bases (*uṣūl*) of Islam (see Abū Muḥammad al-Djuwaynī, *Tabṣira*, Beirut 1994, 20). The enormous mass of Prophetic traditions concerning purity, the lengthy developments of the topic in the *fiḳh* treatises and the interminable legal controversies that it generated concerning the tiniest details, bear witness to its importance for the Muslim mind.

The obligation to purify oneself before embarking on the worship, already present in Jewish ritual, is clearly set out, in a fairly detailed way, in Ḳurʾān, V, 6: "... when you get ready for the worship, wash your faces and hands up to the elbows..."), this being considered a Medinan verse (as likewise IV, 43). A consensus was thus established that a performance of the worship without being in a state of purity was invalid (see Ibn al-Mundhir, *Idjmāʿ*, Beirut 1986, 17). Furthermore, the questions of detail concerning purification gave rise to numerous controversies, on one side, between Sunnī and Shīʿī legists, and on the other, between members of the different legal schools within Sunnism (in particular, between Ḥanafīs and Shāfiʿīs).

Minor ablutions are necessary when a person's state of impurity comes from a "minor impurity" (*al-ḥadath al-aṣghar*) and when there is available a liquid considered as suitable for purification at hand for this (if not, dry ablutions, *tayammum* [*q.v.*] are permissible). The state of minor impurity has as its main effect, universally recognised, to render invalid performance of the worship. The prohibition of touching or handling a copy of the Ḳurʾān (following LVI, 77-9) or of making the *ṭawāf* [*q.v.*] in the course of the Pilgrimage are, however, subjects of controversy.

Minor impurities invalidating the state of ritual impurity are equally the subjects of controversy. According to the Shāfiʿīs, there are five causes of this state: 1. "Everything which comes forth from the two natural orifices" (except the urine of suckling infants); 2. sleep (there is discussion about a light amount of this); 3. loss of reason; 4. touching a person of the other sex with or without "passionate" intention; and 5. touching the genitalia or anus in certain conditions (see al-Shīrāzī, *Muhadhdhab*, Damascus-Beirut 1992, i, 95-100). The Ḥanbalīs add to this list apostasy and consuming camel's meat, and consider that physical contact with a member of the opposite sex must have a carnal intention to bring about impurity (see *Le précis de droit d'Ibn Qudāma*, tr. H. Laoust, Beirut 1950, 6). The Ḥanafīs retain only nos. 4 and 5, but they consider that a bout of uncontrollable mirth (*ḳahḳaha*) during the worship invalidates the state of purity, necessitating fresh ablutions and beginning the act of worship in question once more (see al-Ḳaffāl al-Shāshī, *Ḥilyat al-ʿulamāʾ*, Beirut-ʿAmmān 1980, i, 143-55; for the Mālikī doctrine, Ibn Abī Zayd al-Ḳayrawānī, *La Risâla*, tr. L. Bercher, Algiers 1975, 28-31).

Rainwater, based on Ḳurʾān, V, 11 and XXV, 48, is the purifying element (*al-waḍūʾ*) par excellence. Even on this point, there were numerous discussions: What quality of water purifies? How does one distinguish pure from impure water? What other liquids can be assimilated here to water? (see al-Ṣaymarī, *Talkhīṣ al-khilāf*, Ḳum 1987, i, 21-3).

Regarding the ways of accomplishing *wuḍūʾ*, the question of preliminary intention (*niyya* [*q.v.*]) of purifying oneself has always been a subject of debate amongst the jurists of the Ḥanafī and those of other schools. For the latter, express intention is vital, if the ablutions in question are not to be rendered invalid, following the Prophet's famous saying, "Actions are only valid according to the intention". The Ḥanafīs, however, hold that, for purifications in general, only those made with a solid substance (such as in *tayammum*) necessitate it. At the heart of Sunnism, the question has assumed such importance that it clearly constitutes one of the signs of adhesion to one or another legal school.

The acts making up *wuḍūʾ*, known from Ḳurʾān, V, 6, and numerous Prophetic traditions (sometimes contradictory), are traditionally divided into "obligatory" and "recommended". In their details, the doctrines here are so divergent that it does not seem worth going into detail. One may merely observe that the divergences are most often engendered by different interpretations of the vocabulary of purifications, e.g. regarding "rubbing the head" (*masḥ al-raʾs*), what is meant by "rubbing" and how to define "the head"? On such questions, the jurists use linguistic argumentation

ad lib. Thus the Shāfiʿī Abū Ḥāmid al-Ghazālī considers that six acts are necessary for simple ablutions: 1. expression of intention; 2. washing the face (*ghusl al-wadjh*); 3. washing the two hands (*ghusl al-yadayn*); 4. rubbing the head; 5. washing the two feet (*ghusl al-ridjlayn*); and 6. respecting the order of performing these procedures (*al-tartīb*). He then mentions 18 elements simply "recommended", such as rinsing the mouth, washing the ears, etc. (*al-Wadjīz*, Beirut 1994, 10-13).

Cleaning the teeth with an *arāk* stick (*siwāk* [*q.v.*]) is treated separately in the legal treatises, probably because it was the particular object of a saying by the Prophet ("Were it not for my desire not to burden my community, I would have ordered them to clean the teeth before every act of worship"). Following this saying, the jurists consider this to be strongly recommended but not obligatory.

A topic which divides Sunnīs from Shīʿīs is that of "rubbing one's shoes": Is it permissible to replace washing one's feet by rubbing one's footwear, opposed categorically by the latter but accepted by the Sunnīs under certain conditions. See al-Ḳaffāl al-Shāshī, *op. cit.*, i, 130-42, and AL-MASḤ ʿALĀ ʾL-KHUFFAYN.

The principle according to which a doubt (*shakk*) cannot damage a certainty (*yaḳīn*) is often invoked as a criterion for a person to determine his own state and thus know whether he should proceed to make his ablutions. A person who is doubtful in knowing whether he has been exposed to an impurity can legitimately consider himself in a state of purity; if, however, it is his state of purity which is the subject of doubt, he can be considered as a *muḥdith* (a person in a state of impurity) and should accomplish the *wuḍūʾ* (see al-Shīrāzī, *op. cit.*, i, 102-3).

(E. CHAUMONT)

WUFŪD (A., sing. *wafd*) delegations.

1. In the time of the Prophet.

In the biography of the Prophet Muḥammad [see SĪRA] this term designates the mainly tribal deputations which came to him in Medina, mainly during the ninth year of the Islamic era known as "the Year of Delegations". They started arriving during Shawwāl 8 A.H., after the abortive siege of al-Ṭāʾif [*q.v.*] or, according to another version, after Muḥammad's return from Tabūk [*q.v.*] (Shaʿbān or Ramaḍān 9 A.H.). Earlier visits to the Prophet are also reported. Some tribesmen are said to have come to him when he was still in Mecca. The Djuhayna delegation [see ḲUḌĀʿA, at Vol. V, 315b-316a] is supposed to have arrived at Medina shortly after the Hidjra [*q.v.*], while the Muzayna [*q.v.*] are said to have come in 5 A.H. The last delegation was that of the Nakhaʿ, which came in mid-Muḥarram 11 A.H.

The abundant source material about the delegations often reveals typical features of the visitors, such as hairstyles, clothes and tribal dialects. Strange and uncommon words that an eloquent leader included in his ceremonial address sometimes account for the preserving of the whole report (cf. Madjd al-Dīn Ibn al-Athīr, *Manāl al-ṭālib fī sharḥ ṭiwāl al-gharāʾib*, ed. M.M. al-Ṭanāḥī, Mecca [1399/1979], *passim*). Most if not all of the source material was transmitted in the early days of Islamic historiography by descendants of the Prophet's Companions (or alleged Companions) wishing to secure for their ancestors a place in the sacred history of the Prophet. Indeed, in many reports about visitors—it is often difficult to tell a visitor who came on his own initiative from a tribal delegation—one finds the fingerprints of the party concerned. For example, the leader of the ʿAbd al-Ḳays [*q.v.*] delegation puts—in first person—his own praise in the Prophet's mouth; and one of the reports on the Kinda [*q.v.*, at Vol. V, 119b] delegation is specifically said to go back to al-Ashʿath [*q.v.*] b. Ḳays. In one version of Ibn Isḥāḳ's biography of Muḥammad there is a long account on al-Ṭufayl b. ʿAmr al-Dawsī with an *isnād* or chain of authorities going back to al-Ṭufayl himself. (In the other versions of the same biography the report appears without an *isnād*.)

Elders (*mashyakha, ashyākh*) also figure prominently as transmitters of reports on tribal delegations. There is evidence of written records in the "pre-historiographical" phase. Al-Wāḳidī quotes (through one intermediary) an informant of the ʿUdhra [*q.v.*] who, with regard to his tribe's delegation, quotes "the book of his ancestors" (*kitāb ābāʾī*).

Sometimes accounts on a delegation exist both as "general history" and as family history. Ibn Isḥāḳ's report on the Hawāzin [*q.v.*] delegation, the protagonist of which is Zuhayr b. Ṣurad al-Djushamī of the Hawāzin, has an *isnād* going back to ʿAbd Allāh b. ʿAmr b. al-ʿĀṣ. However, a similar (though not identical) report on this delegation exists with a family *isnād* going back to Zuhayr himself. The family account persisted well into the 3rd/9th century, and in 274/887-8 it was transmitted to the fourteen-year old al-Ṭabarānī [*q.v.*].

Monographs on the delegations were compiled by al-Wāḳidī [*q.v.*], Ibn al-Kalbī [see AL-KALBĪ, section II], al-Madāʾinī [*q.v.*] and al-Haytham b. ʿAdī [*q.v.*]. Al-Madāʾinī's monograph is said to have included the delegations of the Yaman, the Muḍar and the Rabīʿa [see RABĪʿA AND MUḌAR], which no doubt reflects its internal division. The lost monographs only comprised part of the large source material about delegations scattered throughout the Islamic literature.

In addition to tribal delegations, there was one of Ethiopians, another of Persian Abnāʾ [*q.v.*, no. II] and yet another of *Ahl al-Kitāb* [*q.v.*] (who in this case were the Jews). The Nadjrān [*q.v.*] delegation was made up of Christians and that of the Taghlib [*q.v.*] comprised both Christians and Muslims. The Nadjrānīs and the Christian Taghlibīs did not convert to Islam, unlike the Christian members in the delegations of the ʿAbd al-Ḳays, the Nakhaʿ, the Ḥanīfa [see ḤANĪFA B. LUDJAYM] and the Ṭayyiʾ. Also the *djinn* [*q.v.*] and predatory beasts reportedly sent delegations to the Prophet.

The arrival of the Thaḳīf [*q.v.*] delegation, which was a turning point in Muḥammad's career, was brought about by military pressure applied by the Hawāzin leader, Mālik b. ʿAwf [*q.v.*]. Muḥammad managed to lure him out of al-Ṭāʾif, depriving the Thaḳīf of their main Bedouin ally. Mālik's harassment of his former allies pushed them to the inevitable negotiations in Medina in which Muḥammad adopted a fairly flexible attitude (M.J. Kister, *Some reports concerning al-Ṭāʾif*, in *JSAI*, i [1979], 1-18). Similar tactics were used with regard to the South Arabian town of Djurash. Having visited Muḥammad in 10 A.H., the Azd [*q.v.*] leader Ṣurad b. ʿAbd Allāh besieged Djurash, compelling its inhabitants to dispatch a delegation to Medina. In both cases Muḥammad employed the nomads to subdue the settled.

In the short term, Muḥammad's tribal tactics were divisive. Farwa b. Musayk al-Murādī was given control

over fellow tribesmen who followed him, and was instructed to fight other tribesmen who turned away from him. A combination of diplomacy and military pressure is also evident elsewhere. An imminent Muslim attack brought to Medina the Ṣudā' delegation, and the Numayr came under similar circumstances. The taking of Tamīmī captives was behind the arrival of the Tamīm [*q.v.*] delegation (E. Landau-Tasseron, *Process of redaction: the case of the Tamīmite delegation to the Prophet Muḥammad*, in *BSOAS*, xlix [1986], 253-70).

While most tribal visitors came to declare their loyalty to the new religion and its founder, some of them considered succumbing to Muḥammad's authority (which in their view was a form of Ḳurashī expansionism) as a relinquishment of their own political ambitions. ʿĀmir b. al-Ṭufayl [*q.v.*], who led the ʿĀmir b. Ṣaʿṣaʿa [*q.v.*] delegation, suggested that power be divided between him and Muḥammad, or that he become the latter's heir. Also, Musaylima [*q.v.*] reportedly demanded to succeed the Prophet.

The Prophet's recognition of tribal rights to land and water resources appears in many of the letters given to the delegations. Ownership of these resources was often disputed, and some visitors made claims to land which was not theirs (on al-Dahnā' [*q.v.*], see Kister, *Land property and Jihād*, in *JESHO*, xxxiv [1991], 270-311, at 305; cf. M. Lecker, *The Banū Sulaym*, Jerusalem 1989, 174-5).

2. In the early caliphate.

During the time of the Rightly-Guided Caliphs, delegations continued to arrive at the caliphal court, usually headed by leaders and chiefs from outlying districts; to be sent as a member of such a mission, as a *wāfid* or *muwaffad*, was regarded as prestigious and a reward for great eloquence. Thus Ibn ʿAbd Rabbihi, in his section on delegations, the *kitāb al-djumāna fi 'l-wufūd*, ed. Aḥmad Amīn *et alii*, Cairo 1940-53, ii, 3-121, lists delegations from such groups as the people of al-Yamāma to Abū Bakr, and from Djabala b. Ayham, al-Aḥnaf b. Ḳays [*q.vv.*] and ʿAmr b. Maʿdīkarib to ʿUmar b. al-Khaṭṭāb. But the institution is particularly well documented in regard to the Umayyads, with the Sufyānid Muʿāwiya I [*q.v.*], as much in his role as *sayyid*, supreme tribal leader of the Arabs, as that of Islamic caliph, on various occasions inviting *wufūd* of powerful tribal chiefs who upheld the Umayyad cause in Syria and elsewhere but also of potential rivals and opponents, in order to consult and seek agreement on certain contentious issues (see below).

Provincial governors and local leaders would send delegations to the caliph in order to affirm their loyalty, normally receiving in return subsidies or allocations of taxation, as ʿAmr b. al-ʿĀṣ [*q.v.*] received the *kharādj* of Egypt for his loyalty to Muʿāwiya. Poets would come as *wuffād* seeking largesse from the caliph, in return for which support would be expected in their verses for the ruler and his policies (cf. *ʿIḳd*, ii, 82 ff.: Djarīr to ʿAbd al-Malik, al-Aḥwaṣ to ʿUmar b. ʿAbd al-ʿAzīz, etc.).

Some of the *wufūd* invited by Muʿāwiya dealt with highly important and delicate issues. This was clearly the case when, towards the end of his reign, in the later 670s, the caliph wished to secure the succession of his son Yazīd after his own death, a novelty in Arab ruling practice, since ʿAlī had failed to secure a lasting succession for his son al-Ḥasan. Delegations were summoned to Damascus both from the loyal Syrian chiefs and commanders and also from potentially hostile groups like the army in ʿIrāḳ and the Anṣār, although neither al-Ḥusayn b. ʿAlī nor ʿAbd Allāh b. al-Zubayr [*q.vv.*], both of whom regarded themselves as having strong claims to succeed, was present. In an opening speech, Muʿāwiya expatiated on the qualities of Yazīd for the succession, and the leader of the Ḳays in northern Syria and the Djazīra, al-Ḍaḥḥāk b. Ḳays al-Fihrī [*q.v.*], proposed Yazīd's candidature, supported by others of Muʿāwiya's partisans like ʿAbd al-Raḥmān b. ʿUthmān al-Thaḳafī, combatting arguments of the opposition. The leader of the ʿIrāḳī Arabs, al-Aḥnaf b. Ḳays [*q.v.*], was eventually won over by a substantial monetary payment (see al-Masʿūdī, *Murūdj*, v, 69-73 = §§ 1827-30, and cf. Wellhausen, *The Arab kingdom and its fall*, Eng. tr. Calcutta 1927, 141-3).

Bibliography (in addition to references given in the article): H. Lammens, *Etudes sur le règne du calife omaiyade Moʿâwia Ier*, Paris 1908, 61-2; idem, *Le califat de Yazîd Ier*, Beirut 1921, 103-6. (C.E. BOSWORTH)

AL-**WUḲŪF** (A.), lit. place of standing, station, for prayer and thanksgiving on the plain of ʿArafa [*q.v.*] or ʿArafāt, some 20 km/12 miles to the east of Mecca, the culminating rite of the Meccan Pilgrimage [see HADJDJ].

A rite of *wuḳūf* existed there in pre-Islamic times and seems to have constituted a main element of the pagan *ḥadjdj*, independent moreover of that in the *ḥaram* of Mecca. The pilgrims arrived in their tribes at Dhu 'l-Madjāz, assumed a state of sacralisation and accomplished there various devotions before going down again by running towards Muzdalifa. Wellhausen suggested that it may have involved an autumn ritual linked with the trials of the end of summer and the expectation of rains, but it is impossible for us now to reconstitute with any certainty the details and the meaning of this rite for the pagan Arabs. Whatever the case, Muḥammad knew how to confer on it an eminently monotheistic dimension. He showed to the faithful the details of the ritual, henceforth Muslim, at the time of the Farewell Pilgrimage of 10/632. The pilgrims perform it on 9 Dhu 'l-Ḥidjdja. For preference, they pass the night of the 8th-9th at Minā, 6 km/4 miles from Mecca, but it is allowable to come to ʿArafāt on the evening of the 8th. The *sunna* requires a person to be there just after midday. Slightly outside the sacred area, a brief sermon is given, following the Prophet's example, and the *ẓuhr* and *ʿaṣr* worships are performed conjointly and in an abridged form. The rite proper then begins, according to modalities reduced to the most abbreviated form. ʿArafāt appears as an immense desert plain fringed with rocky hills, with no building on it except for the mosque of al-Namira; tents are merely erected to protect the pilgrims from the sun. These last perform very modest rites. No special gesture is required; the pilgrims can be seated, standing, mounted on an animal or, at the present time, in a vehicle. They turn in the direction of the *ḳibla*, and may draw near, as did the Prophet, to the hill called the hill of mercy (*djabal al-raḥma*), if possible standing without stopping in prayer

to God. The text of these prayers is in one part fixed by tradition. First of all, the *talbiya* [*q.v.*] is pronounced ("Here I am, O Lord . . .") and various supplications, often attributed to the Prophet; but it is equally allowable to make personal prayers, for oneself or for absent ones. To ask pardon for one's sins is prescribed, for everyone will be pardoned on that particular day: "The gravest of sins for the pilgrim at ʿArafāt is to believe that God will not pardon him" (al-Ghazālī, *Iḥyāʾ*, i.7, 3). Finally, after sunset, the pilgrims go down en masse in the direction of Muzdalifa, where they spend the night. The pre-Islamic tradition of going forward precipitatedly and making as much noise as possible (an act of sympathetic magic to induce storms and rain?) was denounced by the Prophet, but it persisted, curiously, during mediaeval times and till today.

One should note that a second *wuḳūf* takes place at Muzdalifa in the morning of 10 Dhu 'l-Ḥidjdja, just after the dawn worship, an attenuated memory of the corresponding pre-Islamic ceremony dedicated to the god of thunder Ḳuzaḥ, whose mountain overhangs the place. This second standing session is not obligatory, and the crowd movements of recent decades caused by increased numbers of pilgrims make it in practice almost impossible to realise collectively. In differentiation from the rites at Mecca and Minā, those of the *wuḳūf* have not acquired an "Abrahamic" sense, perhaps because of their clearly observable religious significance.

The spiritual significance of the *wuḳūf* is immense. It forms the very heart of the *ḥadjdj*. To stand at ʿArafāt is obligatory, if only for a short instant, between the afternoon and dawn of 10 Dhu 'l-Ḥidjdja. Without it, the whole of the Pilgrimage is invalid and cannot be compensated by other sacrifices, as is the case with the omission of certain other rites. The *wuḳūf* constitutes, as attest those who have given an account of their own Pilgrimage, the most concentrated and most emotional moment of the *ḥadjdj*. In it, the Islamic community discerns its unity and its immediate, direct contact with God. This gathering together is often viewed as prefiguring the eschatological one of the Resurrection, each believer being dressed in his *iḥrām* garment as in a shroud. It is in any case the most specifically monotheistic ritual manifestation that the Muslim ritual set up or retained from pre-Islamic practice.

Bibliography: For the general significance of the rite within the Pilgrimage, see ḤADJDJ. The pre-Islamic rites evoked by Azraḳī, *Akhbār Makka*, Ibn al-Kalbī, *K. al-Aṣnām*, Ibn Saʿd, *Ṭabaḳāt*, and Ṭabarī, *Taʾrīkh*, have been gathered together and analysed by C. Snouck Hurgronje, *Het Mekkaansche feest*, Leiden 1880; J. Wellhausen, *Reste arabischen Heidentums*, 2Berlin 1897; and M. Gaudefroy-Demombynes, *Le pèlerinage à la Mecque*, Paris 1923. The details of the ritual are given in the *ḥadīth* collections under the sections called *kitāb al-ḥadjdj*. Information on mediaeval practice comes from the great travellers, e.g. Ibn Djubayr and Ibn Baṭṭūṭa. Recent practice for the *wuḳūf* is evoked in 19th and 20th century travellers' accounts, *inter alia*, those of Sir Richard Burton, *Personal narrative of a pilgrimage to el-Medinah and Meccah*, London 1859; Snouck Hurgronje, *op. cit.*; T.F. Keane, *Six months in Meccah*, London 1881; M.L. al-Batanūnī, *al-Riḥla al-ḥidjāziyya*, Cairo 1911; E. Dinet and S. Baâmer, *Le Pèlerinage à la maison sacrée d'Allah*, Paris 1930; A. Kamal, *The sacred journey, being Pilgrimage to Mecca*, New York 1961; A.M. Turki and H.R. Souami, *Récits de pèlerinage à la Mekke*, Paris 1979. (P. LORY)

WUSHMGĪR B. **ZIYĀR**, ẒAHĪR AL-DAWLA, the second ruler of the Daylamī dynasty of the Ziyārids [*q.v.*] of northern Persia, *r.* 323-56/935-67. *Wushmgīr* is said to have meant "quail-catcher", according to al-Masʿūdī, *Murūdj*, ix, 30 = § 3603, cf. Justi, *Iranisches Namenbuch*, 359.

Wushmgīr was the lieutenant of his brother Mardāwīdj [*q.v.*], and after his death was hailed at Rayy as his successor by the Daylamī troops. Until *ca.* 328/940 he held on to his brother's conquests in northern Persia, but thereafter was drawn into warfare, in alliance with another Daylamī soldier of fortune, Mākān b. Kākī [*q.v.*], with the Sāmānids, who had ambitions in northern Persia. Wushmgīr lost Iṣfahān and Rayy to the Būyid brothers ʿAlī and Ḥasan (sc. ʿImād al-Dawla and Rukn al-Dawla [*q.vv.*]), and retrenched himself in the Caspian provinces of Gurgān and Ṭabaristān. Very soon he became willy-nilly a client of the Sāmānids, receiving support from Sāmānid armies on various occasions when the Būyids drove him out of Ṭabaristān (333/945, 335/947, etc.) and twice when he vainly attempted to regain and hold Rayy (331/943, 347/958). In 356/967 the Sāmānid general Muḥammad b. Ibrāhīm Sīmdjūrī [see SĪMDJŪRIDS] and Wushmgīr came together in Gurgān in order to launch an attack on Rukn al-Dawla, but this was aborted by Wushmgīr's death whilst hunting on 1 Muḥarram 357/7 December 967 (thus in Miskawayh, *Tadjārib*, ii, 233, tr. v, 247).

He was succeeded as ruler of the Ziyārid amīrate by his son Bīsutūn, whose rule was, however, challenged by another son, Ḳābūs [*q.v.*], who eventually secured the throne for himself. The Ziyārids were able to survive for more than a century further, but only as a local Caspian power.

(C.E. BOSWORTH)

WUTHŪḲ AL-DAWLA, Mīrzā Ḥasan Khān, Persian statesman, belle-lettrist, several times cabinet member and twice prime minister, b. in Tehran April 1875, to a prominent landowning family, and d. there February 1951. His paternal grandfather, Mīrzā Muḥammad Ḳawām al-Dawla held, among other positions, the governorship of Khurāsān in 1855 and Iṣfahān in 1872, and his maternal uncle was the reformist-minded constitutionalist Mīrzā ʿAlī Khān Amīn al-Dawla (1844-1904), chief minister to Muẓaffar al-Dīn Shāh Ḳādjār [*q.v.*]. Wuthūḳ al-Dawla's younger brother Ḳawām al-Salṭana (1876-1954) was several times prime minister, and proved instrumental in arranging for the withdrawal of Soviet troops from Ādharbāydjān in the aftermath of the Second World War; his cousin Muḥammad Muṣaddiḳ al-Salṭana [*q.v.*] was prime minister during the tumultuous years of the nationalisation of Persian oil in the early 1950s.

Mīrzā Ḥasan Khān held his first official appointment at the age of twenty as governor of Ādharbāydjān,

conferred upon him, along with the title of Wuthūḳ al-Dawla, by Nāṣir al-Dīn Shāh [*q.v.*], who was impressed by his exceptional aptitude and capability. With the rise of the constitutionalist movement [see DUSTŪR. iv] in Persia in the first decade of the 20th century, Wuthūḳ al-Dawla, a strong advocate of limited monarchism, entered the first parliament in 1906 as representative of the merchant's guild. After a series of key cabinet posts in critical times, Wuthūḳ al-Dawla held the premiership for a couple of months in 1916-17, a tenure paralysed by political chaos and internal rebellion. In that brief period he collaborated with his brother-in-law, then minister of education, to establish a dozen girls' schools in the capital.

Persia withstood several partition plans in the first two decades of the twentieth century, and when Wuthūḳ al-Dawla was made prime minister again in 1918, separatist pro-Bolshevik groups, including the well-known Djangalī movement (1915-21 [*q.v.*]) led by Mīrzā Kūčīk Khān, sought to establish autonomous republics along the northern borders of Persia. The first year of Wuthūḳ's second premiership then was spent in quelling riots and restoring the rule of law and order, with British help, taking advantage of an over-arching British sentiment to thwart the Bolshevik threat in the region. In 1919, in an attempt to centralise civil administration and the army, and to ensure a complete modernisation of the bureaucratic and financial sectors along western lines, he signed the provisional Anglo-Persian Agreement of 1919 with Sir Percy Cox, the British minister in Persia. The agreement which intended—in lieu of placing Persian financial and military administration under British control—to replicate western-style civil institutions in Persia, was met with opposition from the parliament and other members of the Persian court and aristocracy, as well as the Russian, French and American legations in Tehran. The controversial agreement, which did little more than recognise *de facto* British control over Persian affairs, led to Wuthūḳ al-Dawla's dismissal in 1920, and was subsequently annulled by the fourth Persian parliament. The prime minister was not only accused of forfeiting Persia's sovereignty but also of taking a bribe from the British government. In that same year, he was made a Knight of the Grand Order of Bath (Overseas List) by the British crown.

Although Wuthūḳ al-Dawla resumed limited political activity after spending a few years abroad, as minister of finance and then justice in 1926, and member of parliament in 1930, the rest of his political career was diminished both as a result of the highly unpopular agreement as well as the change of dynasty in 1925.

A poet of considerable renown, translator of Kant and Rousseau, and essayist, Wuthūḳ al-Dawla earned the respect of leading Persian intellectuals of his period. Particularly noteworthy in this regard are his *Dīwān*, with an introduction by the laureate Malik al-Shuʿarāʾ Bahār [*q.v.*], and an early lucid, and surprisingly modernist essay on the emancipation of women, written after Riḍā Shāh Pahlavī's [*q.v.*] unpopular policy of forbidding Persian women to appear veiled in public. After his retirement from political affairs, Wuthūḳ al-Dawla directed the newly-established Language Academy, the *Farhangistān-i Īrān*, for three years from 1936.

(NEGUIN YAVARI)

Y

YĀʾ, the 28th letter of the Arabic alphabet, with the numerical value 10. It stands for the semivowel *y* and for the long vowel *ī*, which the grammarians analyse as short *i* (*kasra*) plus *yāʾ*. For the shortening of final -*ī* before *hamzat al-waṣl*, see WĀW. *Yāʾ* is also used, like *alif* and *wāw*, as a "support" for medial or final *hamza* [*q.v.*], reflecting presumably the ancient Ḥidjāzī dialect loss of *hamza* in certain positions with concomitant glides.

In word-final position, *alif maḳṣūra* (that is to say: long *ā* not followed by *hamza*) is written sometimes with *alif* and sometimes with *yāʾ*. In the latter case, it can be transliterated as *à*; in manuscripts it is often noted as *yāʾ* with a small superscript *alif*. The rules for the distribution of the two spellings are complicated and there is much fluctuation in manuscripts; in general, the spelling with *à* is preferred in words with third radical *y* (e.g. *banà*), but also in words with third radical *w* if other forms of the same stem have *yāʾ* (e.g. *tadāʿà*, by analogy to the second person *tadāʿayta*). The position is similar regarding the particles *ilà*, *ʿalà* and *ladà*, because of forms with suffixes like *ilayhi*. In Ḳurʾānic orthography, the spelling with *yāʾ* is retained before pronominal suffixes, but the modern convention is to replace it by *alif* in non-final positions. Otherwise, non-final *ā* is written with *yāʾ* only in the loan word *tawrāt* (تورية, alongside the regular توراة), which was perhaps not borrowed directly from Hebrew *tōrāh* but from some Aramaic form with -*y*-. For a classic formulation of these rules see, for example, Ibn Ḳutayba, *Adab al-kātib*, ed. Grünert, 278-84. There is good reason to think that originally these spellings had a phonetic rationale, namely, that *yāʾ* was used to represent a final *ā* affected by "inclination" (*imāla* [*q.v.*]), that is to say, pronounced as [ē] or [ǣ]. Bergsträsser noted that in the Ḳurʾān *à* does not

normally rhyme with *ā*. However, the distribution of the "inclining" and "non-inclining" allophones of *ā* must have altered after the time when the orthography of the Ḳurʾān was established. In many cases, the Kūfan school of Ḳurʾān readers still prescribed the "inclining" pronunciation in words written with *à*, and the "non-inclining" one in those with final *alif*, but the Baṣran school regarded *imāla* to be independent of the orthography and conditional on the phonetic environment.

Modern books printed in Egypt generally omit the two dots of the final form of *yāʾ* when it stands for *y* or *ī*, but set them if it stands for *à*, but printers in Syria and Lebanon follow exactly the opposite convention. Mediaeval pointed manuscripts either always omit the dots, or always set them, or use both pointings indiscriminately; a case can be made for always omitting them. Moreover, manuscripts often retain the points of the medial *yāʾ* that stands for *hamza* (adding, or not adding, the *hamza* sign above the letter), but the modern convention is to write this *yāʾ* without dots.

Classical Persian generally follows the Arabic conventions for writing Arabic loanwords, apart from the fact that Persian sometimes uses *yāʾ* also for non-final "inclining" *ā*, e.g. in ليكن, in Arabic *lākin*, for which the older Persian pronunciation was *lēkin*. In native words *yāʾ* stands for the semivowel *y* and for the long vowels *ī* and *ē* (called *yāʾ-i maʿrūf* and *yāʾ-i madjhūl* respectively; cf. WĀW). In good poets, Persian *ē* does not rhyme with Persian or Arabic *ī*, but it can rhyme with Arabic "inclining" *ā*. E.g. Persian *sēb* "apple" can rhyme with the loanword *rikēb* (Arabic *rikāb*), but not with *ʿadjīb*. In modern Western Persian, old *ī* and *ē* merge as [i], and *ay* is pronounced [e^i], but the old pronunciations are retained in most dialects of Afghānistān and Tādjīkistān and in the traditional Persian pronunciation in India. Thus Afghānīs still distinguish between *shīr* "milk" and *shēr* "lion", but Persians now pronounce both words as *shīr*.

Urdū generally follows the scribal conventions of classical Persian, but distinguishes in final position between undotted ى for *y* or *ī* and ے for *ē*. Turkic languages can use *yāʾ* for *y*, *i*, *e* or *ı̇*.

AL-YĀBĀNĪ, the modern Arabic term for a person of Japanese descent.

1. Islam in Modern Japan. The Japanese began to receive information about the Islamic world through Chinese sources beginning in the 8th century. However, it was not until the early 18th century that a substantial introduction to the Middle East and Islam was written in Japanese by a Confucian intellectual and politician, Arai Hakuseki (1657-1725), mainly based on questions asked of the Italian Jesuit missionary Giovanni Battista Sidotti. From the Meiji Restoration (1868) and the emergence of modern Japan onwards, Japanese were allowed to travel and emigrate abroad, and some found their way to the Middle East and South Asia as travellers and immigrant workers. Japanese converts to Islam began to appear among them after the turn of the century. Also around that time, Tatar refugees fleeing to Japan from oppression in Imperial Russia and then the Soviet Union were influential in attracting Japanese to Islam. The Japanese Muslims, some of whom made pilgrimages to Mecca and wrote about their travels, constructed three mosques during the 1930s in the cities of Tokyo, Nagoya and Kobe. At the same time, both Muslim and non-Muslim scholars in Japan began to form various research associations and institutions to study Islamic civilisation; and under the then government's imperialist policies they were mobilised by the military in gaining the support of Asian Muslims in Japan's expansionist activities during World War II (H. Kobayashi, *Nihon Isurāmu-shi*). Today, there are about 2,000 Japanese Muslims practising in Japan, while Muslim immigrants from such countries as Iran, Pakistan, Bangladesh, Indonesia and Malaysia number roughly 75,000. Scholarly interest in Islam has gradually broadened from the pre-war concern with current affairs to a deeper analysis of the historical foundations of Muslim society and culture. On Japanese translations of the Ḳurʾān, see AL-ḲURʾĀN. 9. Translations, 4.

2. Japan in early Arab geographers. It was after the 18th century that the Arabs began to call the Japanese *al-Yābānī* on the basis of European sources. Before that time, 3rd/9th and 4th/10th century Arab geographers may have been aware of the existence of Japan through Chinese sources. There was confusion with regard to a place called Wāḳwāḳ [*q.v.*]: "To the east of China lies Wāḳwāḳ, where gold is abundant to the extent that people use gold chains and collars for their dogs and monkeys" (Ibn Khurradādhbih, 69); "behind China lives a nation called Wāḳwāḳ" (Ibn al-Faḳīh, 3); "Kankdiz is the remotest town in the east, situated at the extremity of China and of Wāḳwāḳ" (al-Khʷārazmī, *Mafātīḥ al-ʿulūm*, 217); "the sea of Fārs is a gulf of *al-Baḥr al-Muḥīṭ* stretching to the border of China and Wāḳwāḳ" (al-Iṣṭakhrī, 122; Ibn Ḥawḳal, 276). The "Wāḳwāḳ of China" is clearly different from the "Wāḳwāḳ of Yemen" (Ibn al-Faḳīh, 7) which may be identified with the Wāḳwāḳ cited by other Arab geographers (al-Yaʿḳūbī, i, 207; Masʿūdī, *Murūdj*, i, 233, iii, 6-7; al-Idrīsī, *Nuzhat al-mushtāḳ* = *Opus geographicum*, 9, 87, 91-2). Later, non-Arab scholars debated the actual location of Wāḳwāḳ, both arguing that it was actually Japan, which was called *Wākwak* ("kingdom of Wa") by the Chinese (de Goeje) and tracing it as far as Sumatra (Ferrand). In Japan, J. Kuwabara upheld De Goeje's opinion with confidence in 1935, while in the post-war period, H. Sugita, after attempting to separate fact from fantasy, has more cautiously attested to the possibility. (For all the complexities of the problem, see WĀḲWĀḲ. 1(b).) Some Turkish scholars regard Djābarḳā as Japan, based on Maḥmūd al-Kāshgharī's description in the 5th/11th century: "The language of Djābarḳā is unknown, due to its remoteness and its separation from China by the Great Sea" (*Dīwān lughāt al-turk*, facs. fol. 12b). However, the scientific basis for such an opinion is yet unclear.

YABGHU (t.) (perhaps also Yavghu, the Old Turkish so-called "runic" alphabet not differentiating *b* and *v*), an ancient Turkish title, found in the Orkhon [*q.v.*] inscriptions to denote an office or rank in the administrative hierarchy below the Kaghan.

The latter normally conferred it on his close relatives, with the duty of administering part of his dominions. It was thus analogous to the title Shadh, whom the Yabghu preceded in the early Türk empire [see turks. I. History. 1. The pre-Islamic period]. It seems to have lost some importance after this time (8th century), since Maḥmūd al-Kāshgharī, reflecting the position in Ḳarakhānid times, says that the Yabghu ranks below the Yughrush or vizier, who himself came after the Kaghan and the Tigin [*q.v.*] (*Dīwān lughāt al-turk*, Tkish. tr. Atalay, iii, 32: *yafghu* for *yaβghu*) (the Shadh seems to have by now dropped out here).

In the period of the decline of the Hephthalites in northern Afghānistān and the extension of Arab control into the region (early 2nd/8th century), the title was borne by Turkish princes of the upper Oxus principalities such as Ṭukhāristān and Khuttal(ān) [*q.vv.*]. It appears on Hephthalite coins as *Iapgu* in the local Hephthalite version of the Greek alphabet, and in the Arabic historical sources in an Arabo-Persian form as *djabbūya, djabghūya*, e.g. in al-Ṭabarī, ii, 1204, 1224, 1547, 1604, 1612, etc. Al-Kāshgharī correctly connected the title also with the Ḳarluḳ and the Oghuz. The caliph al-Mahdī received the submission of the Yabghu of the Ḳarluḳ amongst several other Transoxanian and steppe potentates (al-Ya'ḳūbī, *Ta'rīkh*, ii, 479; cf. Barthold, *Turkestan down to the Mongol invasion*[3], 202). At the opening of the 5th/11th century, Yabghu was the title of the Oghuz ruler on the lower Syr Darya with his capital at Djand [*q.v.* in Suppl.]; the holder of the title in the 1030s and early 1040s, Shāh Malik, was at odds with the Saldjūḳ family [see saldjūḳids. II.]. Yabghu nevertheless occurs within the Saldjūḳ family also, though exactly what functions, if any, Mūsā Yabghu, son of Saldjūḳ b. Duḳāḳ, exercised is unknown (see *ibid.*). The title still had significance in later Saldjūḳ times, since, according to Gordlevskiy, in the military organisation of the Rūm Saldjūḳs of Konya, the Yabghu as representative of the Khān/Sultan commanded the left wing of the army (cited by Doerfer, iv, 127); but after this time seems to fall out of use.

The origins and etymology of the term have excited much speculation. It seems certain that it is not a native Turkish term. It may appear in pre-Islamic, pre-Türk empire times amongst such peoples of Inner Asia as the Huns and the (?) Indo-European Wusun of eastern Turkestan, and there exist Chinese transcriptions of it. It may well be ultimately an Indo-European word, either "Tokharian" or Iranian. See the extensive discussions in G. Doerfer, *Türkische und mongolische elemente im Neupersischen*, iv, Wiesbaden 1975, 124-36 n. 1825; Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, Oxford 1972, 873.

YĀBISA, the mediaeval Arabic name for Ibiza (Catalan, Eivissa), an island in the western Mediterranean, part of *al-Djazā'ir al-sharḳiyya* "the Eastern islands" [of al-Andalus], sc. the Balearics [see mayūrḳa; minūrḳa and their *Bibls.*], and also the name of its chief town and port. Ibiza is the smallest of the trio (area 572 km²), and lies 85 km to the southwest of Mallorca halfway to the Spanish coast (at Cabo de la Nao, with Denia nearby). It is flanked by the still smaller island of Formentera 4 km to its south, and the name Pityusic Islands, applied to these two in Antiquity is still used today, implying a certain distinctiveness to them within the Balearic group. The name Ibiza (Greek form Ebousos) is believed to derive from Phoenician [']*ybšm*, either *'ī brōšīm* "island of pines" or *'ī bōšem* "island of fragrance" (cf. A. Dietrich, *Phönizische Ortsnamen in Spanien*, Abh. für die Kunde des Morgenlandes, xxi/2, Leipzig 1936, 29-30), with the Greek translation Pityousai. The explanation of Yāḳūt, in his *Buldān*, Beirut, v, 424, "the dry island", is clearly folk etymology. Ibiza lies close to the shipping lanes connecting the eastern Mediterranean with the Iberian and Maghribī Mediterranean coastlands, and this position has made it a favourite way station from Phoenician times onwards. The chief town and port, acquired by colonists from Cadiz in 653 B.C., has an excellent navigational and strategic location on the southeastern coast of the island. It came under Carthaginian control a century later, and eventually had a Punic or Phoenicised population, perhaps of considerable size (some 4,000 tombs have been found in the cemetery of Puig des Molins).

The Arab conquest of Spain reached Ibiza in the course of the 2nd/8th century. There followed over four centuries of Islamic rule; after recognising the authority of the Umayyad governors and then of the caliphs of Cordova, Ibiza had close ties with the Taifa of Denia [see dāniya; mudjāhid] until the Reconquista in 1235. Arab authors refer to Ibiza as "the daughter" (*bint*) of Mallorca, and define its location at one day's sailing from Denia to the west and an equal distance from Mallorca to the northeast. The island was noted both as a port of call (with the port city itself, there were ten harbours, *marāsī*) and for its shipbuilding activity, benefiting from fine stands of pine trees, which were also a source of wood for charcoal burning. They praise Ibiza's fruits, vineyards, grapes and raisins, as well as the "inexhaustible" salt of its salt pans (al-Ḥimyarī, *Rawḍ al-mi'ṭār*, text 198, tr. 240; al-Ḳazwīnī, *Āthār al-bilād*, Beirut 1960, 282). Peaceful pursuits and commerce precluded neither piracy on both sides nor attacks by Christian powers (a Pisano-Catalan expedition, 1116). This motivated the construction of still stronger fortification walls, which have recently been the object of excavations and publications (A. Costa Ramon, *La triple murada de l'Eivissa àrab*, (Ibiza 1985). Meanwhile, Arab culture on Ibiza flourished, as witnessed by the mention of two of its poets in Yāḳūt's description of the island.

Ibiza's economic and maritime role continued after 1235, and relations with the Maghrib remained lively. The island's conqueror and subsequent feudal lord, the archbishop of Tarragona, strove to carry on the crusading spirit in the form of naval raids, but commerce asserted itself, especially as the exportation of the prized salt of Ibiza included North African ports among its destinations. Its salt flats, already praised by the Arabs (and still active today), gained primacy at this period, and between the 13th and 17th centuries they made the island one of the principal sources of salt in the Mediterranean. Thus Pīrī Re'īs states in his *Kitāb-i baḥriyye* (932/1526; ed. Ankara 1935, 542) that as many as 50-60 *barčas* dock annually at the *iskele* of the island's *tuzla* to load salt, and that the largest number of Arab and Turkish captives held in the kingdom of Catalonia work on these salt pans (see also J.-Cl. Hocquet, *Voiliers et commerce en Méditerranée, 1200-1650* = vol. ii of his *Le sel et la fortune de Venise*, 1978-9; idem, *Ibiza, carrefour du commerce maritime*

et témoin d'une conjoncture méditerranéenne, 1250-1650, in *Studi in memoria di Federigo Melis*, Naples 1978, i, 493-526). Fear of Ottoman Turkish assault appears to have motivated the construction (1554-85) of impressive new fortification walls, still standing today, around the city of Ibiza.

Bibliography: Given in the article; see also F. Retamero, *Moneda i monedes àrabs a l'illa d'Eivissa*, Ibiza 1995; B. Joan i Marí, *Historia d'Eivissa*, Ibiza 1997. (S. Soucek)

YABRĪN, a sandy region of Eastern Arabia belonging to Banū Saʿd. It is situated within the area of al-Baḥrayn [*q.v.*], three stages from al-Faladj and two stages from al-Aḥsāʾ [*q.v.*] and Ḥadjr (Yāḳūt, *Buldān*, ed. Beirut, v, 427). The editors of al-Ḥasan b. ʿAbd Allāh al-Iṣfahānī, *Bilād al-ʿarab*, Riyāḍ 1968, 276 n. 3, sc. Ḥamad al-Djāsir and Ṣāliḥ al-ʿAlī, state that Yabrīn is still known as an area in the west of al-Aḥsāʾ and the name is corrupted (or more probably, hypercorrected, since *dj* > *y* in the speech of that area) in modern works to Djabrīn. It does not, however, appear on modern maps. It is mentioned incidentally in the early Islamic histories such as al-Wāḳidī's *K. al-Maghāzī* (ed. Marsden Jones, iii, London 1966, 974) and al-Ṭabarī, iii, 1163, in the latter and in Yāḳūt, v, 427, disparagingly in a poem of the Umayyad poet Djarīr [*q.v.*], "How far is Yabrīn from the gate of Paradise (*min bāb al-farādīs*)!" Al-Hamdānī, *Ṣifa*, 137, describes Yabrīn as a palm-grove, a collection of fortress houses (*ḥuṣūn*), springs—some flowing, others not—and salt marshes (*sibākh*). He also places the area on the ʿUmān pilgrimage route (149). This statement is repeated at 145, and he adds the following details. It is situated in the east of al-Yamāma [*q.v.*]. Between Yabrīn and Ḥaḍramawt [*q.v.*] lies an extensive area called al-ʿIdjam which is impassable. Between Yabrīn and the sea lie sands. It has a road leading into al-Yamāma and al-Baḥrayn. It is an area cut off among the sands with palm-groves and a little cultivation. The original Arab inhabitants were expelled by the Banū Ḳushayr, who were in their turn expelled by the Ḳarāmiṭa [*q.v.*]. Yāḳūt, v, 427, also mentions a Yabrīn in Syria, "one of the villages of Aleppo". There is further a Yabrīn/Djabrīn near Bahlā in ʿUmān, built by the Yaʿrubids [*q.v.*].

Bibliography: Given in the text.

(G.R. Smith)

YABRŪḤ (A.), Mandragora, the Mandrake, *Mandragora officinarum, Solanaceae*; also called *Atropa mandragora L.* and *M. officinarum Mill* (Moldenke); Hebr., *dūdāʾīm* or *yabrūaḥ*.

A perennial herbaceous plant common in the Mediterranean region, its dark green leaves, about one foot long, spread out at ground level; the flowers are purplish or whiteish-green, and the fruit are small globular berries, orange to red in colour. Its root is often forked, and is the part known as *yabrūḥ*, while the plant itself is generally called *luffāḥ*.

Ibn al-Bayṭār explains *mandrāghūras* of Dioscorides as *yabrūḥ*, also known as *sābīzak*, *shābīzadj*, *tuffāḥ al-djinn*, or in *Laṭīnī* as *ardjubalīṭa* (*Tafsīr*, iv, 69, 298). Ibn Samadjūn gives the same names; Maimonides says the *ʿadjamiyyat al-Andalus* name is *ablīṭa*, presumably meaning *ardjbalīṭa* (*Sharḥ*, no. 179).

Its nature was considered very cold and dry. It was used with caution, externally for skin complaints; it was known to be able to cause weakness and deafness. Ibn Waḥshiyya calls it poisonous, causing death through its extreme cold quality (88), while Djābir says that it causes sleep and death, working in the same way as opium (*Gifte*, 106, 187). Al-Rāzī, quoted by Ibn Samadjūn, observed women who had used it suffering from redness and swelling of the face and body. More important than emetic or purgative properties, which it shared with other plants, was its use as a soporific and anaesthetic. It was administered, generally in a drink, before surgery or cautery (Ibn Samadjūn and Ibn al-Bayṭār, quoting Dioscorides).

The root was often thought to resemble the human form, which gave rise to legends and superstitions, already in ancient times and in the Middle Ages. The Biblical account concerning Rachel and Leah (Gen. xxx. 14-15) presumably refers to the plant's supposed fertility-inducing qualities. Such beliefs were dismissed by Gerard in his *Herbal* of 1597 (cf. Moldenke), and are not mentioned by Culpeper (1616-54). The mandrake is still known in Arabic as *tuffāḥ al-djinn*. In one Palestinian village in the 1970s the berries were called *tuffāḥ indjān*, and said to encourage broodiness in chickens. The plant is today an object of interest rather than fear.

(Penelope C. Johnstone)

YĀBURA, the Arabic name of the modern town of Evora in southern Portugal.

The Liberalitas Julia of the Roman period had become Elbora or Erbora in the time of the Visigoths, a name revived unchanged, in the form of Yābura, by Arab authors. The history of the Arab town poses numerous enigmas.

Very little is known of its history from the time of the Arab conquest to the beginning of the 10th century. Ibn al-Faraḍī makes it the seat of a *ḳāḍī*, and the city was located in the district of Beja, capital of a *djund* and seat of a governor since the conquest. Al-Rāzī alludes to its importance in the 4th/10th century, noting the existence of several cantons dependent on the town. However, it seems to have remained a locality of secondary importance during this period, which accounts for the fact that a writer such as Ibn Ḥawḳal makes no mention of it. The first known documentary reference confirms this secondary status: Ibn Ḥayyān and the anonymous chronicle of al-Nāṣir, quoted by the Christian chronicle known as *Crónica Leónesa y Nájarense*, record the attack led by the future sovereign Ordoño II in 301/913 and draw attention to the dilapidated state of the perimeter wall and of the defences which enabled the Christians to take possession of the town. On this occasion, the population figure given is approximately 5,000 inhabitants. Subsequently, the town was caught up in the turmoil of struggles between "local lords" during the *fitna* of the early 4th/10th century. The town, depopulated by the Christians, was besieged by allies of the ruler of Badajoz, ʿAbd Allāh Ibn Marwān al-Djillīḳī, and, with the aid of another Muwallad leader, Masʿūd al-

Surunbākī, repopulated to prevent the Berbers of the region from settling there.

The town enjoyed more tangible prosperity in the 5th/11th century, becoming the second city of the amīrate of the Afṭasids [*q.v.*] of Badajoz; the governors appointed were second-ranking officers of the amīrate such as ʿUbayd Allāh al-Djarrāz, cousin of al-Muẓaffar, killed fighting the ʿAbbādids in 442/1051; al-Mutawakkil, the last Afṭasid sovereign, served his apprenticeship as a governor there while his brother ruled in Badajoz. This information is supplied by al-Idrīsī who, in his two surviving works, evokes the prosperity of the region, on the road from Badajoz to Alcácer do Sal (Ḳaṣr Abī Dānis), the principal port of the amīrate.

Evora prospered until the capture of the city by the Portuguese warlord Giraldo Sempavor in 556/1161, as is proved by the presence of prestigious Muslim families like the Banū Wazīr who played an important part in the *fitna* which accompanied the decline of the Almoravids. Arab biographical authors and the geographer Yāḳūt underline the intellectual dynamism of the city during the 5th/11th and 6th/12th centuries; Ibn ʿAbdūn al-Yāburī (d. 528/1134) was one of its most distinguished representatives.

The perimeter wall, privileged witness of this Arab history, poses problems of dating. García y Bellido has detected, on the line of the Roman wall, an "ancient" installation and construction of the wall. A double-sided inscription, discovered outside the site, evokes two phases of construction: that of the 4th/10th century, following the sacking of the city by the Galicians, and that of the restoration of the wall by Sidray b. Wazīr between 541/1147 and 546/1151. The discovery of an elaborate installation, at the base of the curtain, in tile and brick, traversing a Roman villa of the *rua* of Burgos, as well as the general arrangement of the wall, seem to confirm construction in the Umayyad period and subsequent revival and restoration. The restoration of the 7th/13th century also corresponds to the last phase of the Islamic history of Evora, associated with a new period of autonomy under the government of Sidray b. Wazīr who minted coins in 540-1/1146.

(CH. PICARD)

YADA TASH (T.), lit. rain stone, in Arabic texts appearing as *ḥadjar al-maṭar*, this being a magical stone by means of which rain, snow, fog, etc., could be conjured up by its holder(s). In particular, knowledge and use of such stones has been widespread until very recent times in Inner Asia.

Belief in the existence of stones and other means of controlling the weather has been widespread throughout both the Old and New Worlds (see Sir J.G. Frazer, *The golden bough, a study in magic and religion*, abridged ed., London 1922, 75-8). Belief in a stone seems to have been general amongst the early mediaeval Altaic peoples of Inner Asia, or at least, it is imputed to them by early Chinese sources and by Muslim writers on the early Turks; it may, accordingly, have been part of the Turks' ancient shamanistic beliefs. Several Islamic writers on the Turks mention it from the early 3rd/9th century onwards. The early traveller in Central Asia Tamīm b. Baḥr [*q.v.*] gives it as one of the wonders of the Turks, the stone being held by the king of the Toghuzghuz [*q.v.*] and no-one else (cited in Ibn al-Faḳīh, 329, Fr. tr. Massé, 388-9; also in V. Minorsky, *Tamīm ibn Baḥr's journey to the Uyghurs*, in *BSOAS*, xii [1947-8], 285). A certain Abu 'l-ʿAbbās ʿĪsā b. Muḥammad al-Marwazī related from the Sāmānid *amīr* Ismāʿīl b. Aḥmad [*q.v.*] that infidel Turks used the rain stone to bring down darkness and hailstones against the Sāmānid army (cited in Yāḳūt, *Buldān*, ed. Beirut, ii, 24-6, s.v. *Turkistān*). Abū Dulaf in his *First Risāla* attributes to the Kimäk [*q.v.*] a stone which attracts water (Ger. tr. A. von Rohr-Sauer, *Des Abû Dulaf Bericht über seine Reise nach Turkestân, China und Indien neu übersetzt und untersucht*, Bonn 1939, 21, 50). Gardīzī retails the story that the stone went back to Japhet, son of Noah, and was subsequently inherited by Turkish peoples like the Oghuz, Ḳarluḳ and Khazar (*Zayn al-akhbār*, ed. Ḥabībī, Tehran 1347/1968, 256). Maḥmūd Kāshgharī says that he witnessed its use as part of a magical ceremony (*kahāna*) amongst the Yaghma [*q.v.*] in Semireč'e (*Dīwān lughāt al-turk*, Tkish. tr. Atalay, iii, 3, 159, s.v. *yat*).

Belief in the rain stone's powers apparently passed from the early Turks to the Mongols (with the original *yat/yad* appearing in Mongolian as *djada*). Its use appears, e.g. in the story of Čingiz's rise to power, when the son of Čingiz's then ally Wang Khān used it for bringing down snow on their Nayman enemies (*Secret history of the Mongols*, Ger. tr. E. Haenisch, *Die Geheime Geschichte der Mongolen*, [2]Leipzig 1948, 43), and Čingiz's son Toluy employed the services of a shaman from the Turkish tribe of the Ḳanghlï [*q.v.*] to conjure up snow and icy weather against the Tungusic Djürčen in northern China some thirty years later (Rashīd al-Dīn, tr. J.A. Boyle, *The successors of Genghis Khan*, New York 1971, 36-7). Such practices have lasted amongst Mongol peoples almost to modern times, being attested amongst *inter alios* the Kalmucks, the Buryats and, in the early 20th century, the Khalkha of the Ordos in Inner Mongolia (Mostaert). Information about beliefs of this kind seems to have reached Marco Polo, where in his travel narrative he mentions the "devilish enchantments" of the Turco-Mongol Ḳara'unas/Caraonas in bringing down darkness upon their enemies, and the magical powers of Kashmīrī and Tibetan shamans in the circle of the Great Khān Ḳubilay at his palace of Shan-tu in northern China (Yule-Cordier, *The Book of Ser Marco Polo*, [3]London 1902, i, 98, 105, 166, 168, 301, 309-11; and cf. also *The*

mission of Friar William of Rubruck, Eng. tr. P. Jackson, London 1990, 244). The use of the bezoar (see below) as a rainstone had, in fact, been known also to the Chinese since T'ang times (see B. Laufer, *Sino-Iranica. Chinese contributions to the history of civilization in ancient Iran*, repr. Taipei 1967, 525-8).

The rain stone was identified by such 19th century writers as Grigoriev and Tomaschek with nephrite, found in the valleys of the rivers running down from the Kun-lun Mountains to the Tarim basin and in the region of Lake Baikal (cf. Marquart, *Streifzüge*, 79), but it seems more likely that the original rain stone was the bezoar (Pers. *pād-zahr*), which is a calculus or concretion formed in the alimentary tract of certain animals, mainly ruminants (see Laufer, *loc. cit.*). The origin of the Turkish word *yada* is unclear, but it is improbable that it has any connection with the precious mineral jade (Ar. *yas̲h̲m* [*q.v.*]) or—at least directly—with Pers. *d̲j̲ādū* "magic". W.B. Henning cited a Sogdian word *čdy* with a possible meaning "rain stone", and the origin of *yada* may well be ultimately Iranian. See the extensive discussions in G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, Wiesbaden 1963-75, i, 286-9 no. 157, iv, 123 no. 1822; Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 881a; Molnár, *Weather magic in Inner Asia*, 104-16.

Beliefs in the rain stone have been attested amongst Turkic and Mongolian peoples of the Volga basin, Central Asia, Siberia and Mongolia by travellers in these regions during the 19th and early 20th centuries; see the material brought together by Molnár, *op. cit.*, 70-101.

Finally, one might note a curious mention, in Ibn al-ʿAdīm's account of al-Mutanabbī's [*q.v.*] alleged youthful claim to prophethood, of a "rain bead" (*sadhat al-maṭar*), utilised by Arab tribes accounted of South Arabian or Yemeni genealogy, which could direct rain away from a particular spot, i.e. prevent rain from falling rather than attracting it (see W.P. Heinrichs, *The meaning of* Mutanabbī, in J.L. Kugel (ed.), *Poetry and prophecy*, Ithaca and London 1990, 137-9).

Boyle, *Turkish and Mongol shamanism in the Middle Ages*, in *Folklore*, lxxxiii (1972), 184-93 (repr. in *The Mongol world empire, 1206-1370*, Variorum, London 1977, no. XXII), and the recent comprehensive work on the rain stone, A. Molnár, *Weather magic in Inner Asia*, Bloomington, Ind. 1994.

(C.E. BOSWORTH)

AL-**YADĀLĪ** (1096-1166/1685-1753), the cognomen of Muḥammad b. al-Mukhtār b. Muḥammad (Maḥamm) Saʿīd b. al-Mukhtār b. ʿUmar b. ʿAlī b. Yaḥyā b. Yiddād̲j̲ Igd̲h̲aburg̲h̲a b. Yad̲h̲rinan Tag̲s̲h̲umt (Aḥsanuhum Bas̲h̲arat[an]), Mauritanian scholar. His *nisba* shows his ethnic affiliation to one of the Zawāyā tribes forming the pentarchical alliance of the Tas̲h̲ums̲h̲a: the group of the Īdāw-dāy (eponymous founder Yiddād̲j̲ = D̲j̲addu ʿAlī).

He was born and died at Tandagsammi, in the heart of the Gibla (south-eastern Mauritania) in the region of Iguidi; his tomb is situated near the wells of Intawfokt (D̲h̲āt al-S̲h̲ams).

Renowned as he was as a polygraph in the fields of exegesis, mysticism, history and poetry, very little information is available concerning his youth and his education. At the most, the names of some of his teachers are known: these included the Alfag̲h̲a Minnaḥna b. Mūdī Mālik (d. 1151/1738), with whom he was closely associated, as well as the Alfag̲h̲a ʿAbd Allāh b. Aʿmar Agdawḳob, who initiated him into *tad̲j̲wīd*. In the sphere of *taṣawwuf*, the *wird* of the S̲h̲ād̲h̲iliyya brotherhood (Nāṣiriyya branch of Tamgrūt) is said to have been transmitted to him by his paternal cousin Nekhtāro b. al-Muṣṭafā b. Maḥamm-Saʿīd al-Yadālī, who in turn was said to have received it from Aḥmad al-Ḥabīb al-Sid̲j̲ilmāsī. As for travels, only two journeys are attributed to him: a tour of the north, in the region of Agādīr-Dūm (the Banks of Arguin), and the other, shorter one (*s̲h̲ayfara*), to a section of the Īdāybusāt, whose pastures were adjacent to his own region.

Besides the *Dīwān* of his numerous poems (essentially on themes of *zuhd, madīḥ, tahniʾa* and *rit̲h̲āʾ*), al-Yadālī is the author of some thirty works, of which only three are reckoned to be irrevocably lost. Legal writings were predominant in the Sahelian region at the time, and al-Yadālī produced four responses (*nuḳal*) to questions of *fiḳh: Risāla fī Masālik al-ʿilla* (invalidity of marriage due to *nus̲h̲ūz*, i.e. recalcitrance by the wife or ill-treatment by the husband); *Risālat al-Lafʿa* (branding of animals with red-hot irons, *mīsām*) an issue on which he differed from his master Muḥammad b. Alfag̲h̲a Minnaḥna; *Nuḳla fī ḍamān mā akalathu al-mawās̲h̲i min al-ḥirāt̲h̲a* (compensation for damage caused by animal herds grazing over cultivated fields); and *Nuḳla fī tasrīḥ al-ṣibyān ayyām ʿuṭalihim* (responsibility in regard to a child not yet socially mature).

Regarding the history of the region, it is principally by virtue of two accounts by al-Yadālī that the story is known of the war of S̲h̲urbubba (1664-77), sc. his *S̲h̲iyam al-zawāyā* and *Amr al-walī Nāṣir al-Dīn*, now published in one volume. This is essentially a frank apology for the "Messianic" cause (*mahdawiyya*) of Nāṣir al-Dīn, the loser in this war. Besides information of a geographical and chronological nature, it offers the reader a kind of martyrology, commemorating the blood spilled by the Zawāyā, especially those of the Daymānī faction of the Ahl Ōwbak, who were slaughtered at the battle of Tirtillās (1673).

In doctrine, al-Yadālī first composed a very condensed *ʿaḳīda: Ḳawāʿid al-ʿaḳāʾid* (verse abridgement by al-Mukhtār Wuld D̲j̲engī, d. 1321/1903-4). He subsequently developed it into a voluminous commentary, *Farāʾid al-fawāʾid fī s̲h̲arḥ ḳawāʿid al-ʿaḳāʾid* (ms., 273 fols.). The subjects tackled here go beyond the normal themes of a doctrinal treatise, and include e.g. the problem of validation of saints in Islam, Aristotelian notions of astrology, esoteric passages regarding al-Būnī's science of letters, the fundamental differences between rival bodies of philosophers and *mutakallima*, an apparent gloss on the *ʿAḳīda al-sanūsiyya al-ṣug̲h̲rā* by ʿĪsā b. ʿAbd al-Raḥmān al-Suktānī, etc. This varied compilation has the merit of enshrining the names of writers who would otherwise be virtually unknown, such as the Moroccan exegete ʿAbd al-Raḥmān al-Figīgī (d. 1514).

In the field of *taṣawwuf*, al-Yadālī proceeded in the same manner. A relatively short letter (19 lines), *K̲h̲ātimat al-taṣawwuf*, is the object of a lengthy commentary in the *S̲h̲arḥ al-K̲h̲ātima*. These two texts, together, are reputed to have served, in the lands north of the Senegal River, as a source of inspiration for the *Masālik al-d̲j̲inān* of Aḥmadu Bamba, the founder of the *murīdiyya* [*q.v.*]. The general tone of the work recalls the *Ḳawāʿid al-taṣawwuf* of Zarrūḳ al-Barnuṣī, in that it associates a strictly initiatory content with a permanent re-evaluation of the discourse in terms of Sunnī orthodoxy.

The most voluminous work left by al-Yadālī to posterity is his complete exegesis of the Ḳurʾān (ms., 1558 fols): *al-D̲h̲ahab al-ibrīz fī tafsīr Kitāb Allāh al-ʿazīz*.

This work also presents, for essentially didactic reasons, a very composite structure. All the modes of exegesis are deployed here (*maʾthūr, iʿdjāz, aḥkām* and *ishāra*), but without any element of disorder. The sequence and the thread of the text are rapidly apparent to the reader in the systematic correlation which the author establishes between the exoteric and esoteric planes. Extensive contributions from the sources of mystical exegesis are then exacted: al-Ḳushayrī here comes close to Ibn al-ʿArabī (through the influence of al-Shaʿrānī) and Ibn ʿAṭāʾ Allāh (whose *ḥikam* are subjected here to commentary by the Egyptian scholar al-Munawī [*q.v.*]). The *Dhahab* is also accompanied by literary digressions such as would not primarily be expected in a work of *tafsīr*, such as those from al-Ṣafadī and al-Maḳḳarī for *adab*, al-Damīrī for zoology (theriomorphic psychology), al-Taftazānī for logic, and Ibn Khallikān and al-Ghubrīnī for biographical notices.

Bibliography: The mss. of the works of al-Yadālī cited in the article are all preserved at Nouakchott, in the private libraries of Rādjil Wuld Aḥmad Sālim and Muḥammad Sālim Wuld Maḥbūbī. See also the resources of the IMRS for partial copies of the *Dhahab* (nos. 149, 2176, 2791, 2836). For his poetical *Dīwān*, see the critical edition by A. Wuld Äkkāh, *Dīwān shiʿr Muḥammad al-Yadālī*, DES, Rabat 1989. On the author's life and the intellectual history of the Bilād Shinḳīṭ in the 18th century, see, in addition to the art. MŪRĪTĀNIYĀ: Aḥmad b. al-Amīn al-Shinkīṭī, *al-Wasīṭ fī tarādjim udabāʾ Shinkīt*, Cairo 1989; M. Wuld Babbāh, *al-Shaykh Muḥammad al-Yadālī*, three original texts concerning the history of Mauritania, Carthage 1990; M. Wuld Babbāh, Nouakchott 1995; F. Leconte, *Une exégèse mystique du Coran au XVIII^e siècle dans le sud-ouest de la Mauritanie (al-Gibla)*, Aix-en-Provence 1995. (F. LECONTE)

YĀDGĀR (P.), lit. "a souvenir, a keepsake" and, by extension, in numismatics any special issue of coins struck for a variety of non-currency purposes. In Islamic history the striking of coins was a special responsibility and prerogative of the ruler [see SIKKA] together with having his name mentioned in the Friday bidding prayer [see KHUṬBA].

In general, coinage serves two major purposes. Primarily it is a medium of exchange between a government and its people, i.e. to facilitate taxation payments or to support internal and international commerce. Governments therefore generally try to provide coinages of consistent design and quality that will be familiar to their users and thus readily acceptable as legal tender.

Coinage has also traditionally been used for a variety of secondary purposes. Through their very nature coins are precious objects identified with the authority that issued them. Because of its intrinsic metallic value and officially guaranteed prestige, coinage is ideally suited as an outward and tangible sign of royal favour, its distribution being seen as a useful and eagerly-awaited feature of ceremonies of all kinds, both official and private. For a description of when coins might be used on special occasions, see MARĀSIM (official court ceremonies); MAWĀKIB (processions); NITHĀR.

One of the features of *marāsim* were the regular donative payments made to the army, civil service and court officials [see also INʿĀM]. These could take the form of bags of coins given to the troops to recognise their services and ensure their loyalty. Since these were expected to be spent by their recipients, it would be normal for the mint to strike currency coins for this purpose. Donations were regularly provided on the accession of a new sovereign when fresh coins would be issued bearing his name and titles. Moving up in the social hierarchy, however, the emphasis on the receipt of crude cash payments gives way to the desire for donations of a more ceremonial and symbolic nature, which usually involved the striking of specially designed coins. These pieces could take several forms. Some would be larger and heavier than normal, either struck as gold or silver medals of special design and iconography, with arbitrary weights bearing no relation to the standard currency, or as multiple weight dīnārs and dirhams [*q.vv.*] which, more often than not, would bear conventional legends to demonstrate their affinity with the regular coinage. Others would be of normal size and weight, but with special designs and legends which might indicate the purpose for which they were struck. Thirdly, fractional denominations of lighter weight and special design could be issued to display the riches and generosity of the donor to his subjects. The smaller size of these pieces would permit the striking of more coins from a given weight of metal and have the incidental advantage of being less likely to cause injury to those over whom they were thrown or tossed.

As a general rule, far more "souvenir" issues were produced during periods of peace and prosperity than in times of war and economic dislocation. For obvious reasons, relatively few of these special issues have survived from the time in which they were struck. Currency coins were issued in large quantities and held by a great variety of people: soldiers, merchants, townspeople and travellers. Those that have survived were concealed in hoards, either buried in the ground or hidden in the walls of buildings. Those that remained in circulation, however, would, when they became obsolete, be returned to the mint and melted down for conversion into new coin or, as today, sold to scrap metal merchants for conversion into tableware and jewellery. Special coins, *yādgār, danānīr al-ṣila*, i.e. presentation issues, were struck in much smaller quantities and were nearly always saved, but mounted for suspension and converted into jewellery. When they became worn or a better use was found for their metal, they could either be exchanged for current coin, returned to the mint for restriking or sold to a scrap metal dealer.

Thus while numismatists have a clear picture of the history of currency coins in Islam they have only a fragmentary knowledge of presentation issues. Historians mention that coins were given away or scattered on ceremonial occasions, but only rarely make any record of what these pieces actually looked like. As a result, the rôle played by the few survivors in the daily life of the states that struck them can only be guessed at. This is particularly true of issues from the earlier centuries of Islam. Later, when European travellers started to publish their memoirs of the Ottoman, Ṣafawid and Mughal courts, a much clearer pattern emerges. Our understanding of the subject is further enhanced by surviving local histories and court records. Beginning in the 11th/17th century, states began to issue regular ornamental coinages which could be classified as stamped fixed weight ingots. These have largely been employed as an adjunct to domestic saving, an important function that has certainly

contributed to the continued striking of gold and silver coins at a time when precious metals have entirely lost their monetary rôle. Thus while court ceremonial has largely disappeared from the Islamic world, commemorative coins and medals continue to play a popular part in daily life. This article cannot accommodate a detailed history of Islamic donative and largesse coinages, but a summary of some of the more interesting issues known from individual dynasties will give a flavour of the subject.

There is little evidence of donative or largesse issues during the Umayyad period. The design of the standard dīnārs and dirhams was invariable and was only very rarely modified. The only variations known have the additional mint name *Maʿdin Amīr al-Muʾminīn* ("Mine of the Commander of the Faithful"), from the years 89, 90 and 91, and *Maʿdin Amīr al-Muʾminīn bi 'l-Ḥidjāz* struck in 105. There has been a good deal of conjecture about these coins, because the extant writings of Islamic historians provide no clues as to their actual place of origin or to their distinctive purpose. It is thought that the metal from which they were struck probably came from the caliphal mines in the Ḥidjāz and that they may have been minted at the site. Michael Bates of the American Numismatic Society has established a die linkage between the 105 A.H. issue and a contemporary coinage struck, presumably, in Dimashk. It is possible that the metal was presented at a special ceremony as tribute to the caliph, who may then have shared the dīnārs among his courtiers.

The first period ʿAbbāsid coinage, struck *ca.* 132-218/750-833, was of largely standard design until the accession of the caliph Hārūn al-Rashīd [*q.v.*] in 170/786. During his reign the earliest special issues began to appear, but all are extremely rare, being known from only one or two examples. They appear to have been associated with events in the caliphal family and may have been used in court ceremonies to mark those events. It was said that gold coins bearing verses and weighing 101 *mithkāls* (*ca.* 429 gr) were struck for Hārūn's *wazīr* Djaʿfar al-Barmakī [see AL-BARĀMIKA], and that 4,000 of them were found in his palace at the time of his downfall. Arab historians have mentioned *danānīr al-ṣila* weighing as much as 1,000 *mithkāls*, but as yet the largest piece actually known is no more than 10 *mithkāls*. It is likely that if these gigantic coins ever did exist they were cast as ingots rather than struck as coins, because the technology of the time did not permit the use of dies large or strong enough for the purpose.

Coinage certainly played a significant rôle in the rivalry between al-Amīn and al-Maʾmūn, and the political messages contained in the legends on the reverse of the dirhams were an important item in the propaganda war between the contending parties. Through his coinage reform in 206/821-2, however, al-Maʾmūn largely put an end to this propaganda activity by ordering the mints to strip all political information from the coin legends.

The second period ʿAbbāsid coinage (*ca.* 218-334/833-946) saw, however, the introduction of a true system of donative coinage which took several forms. The first were standard silver dirhams and gold dīnārs of careful manufacture, whose dies took up the entire face of the blank. The caliph al-Mutawakkil then introduced broad, thin-flan coins, usually struck at his court in Sāmarrāʾ/Surra man raʾā. These bore standard legends, executed in superior calligraphy, struck in the centre of the flans, but leaving a broad empty outer margin. They were probably distributed as special donative payments to troops and civil servants. While their broad outer margins made them easy to convert into jewellery without defacing the legends, their thin flans made them particularly vulnerable to wear and damage. This special medallion style of coinage was widely copied by other dynasties and is frequently found in today's collections.

The next category could be termed the court coinage on which the names and titles of the caliph became the main focus of the legends, with the *kalima*, denomination and date relegated to the single outer margins. The name of the mint usually did not appear, an absence which is not readily explicable. These coins were issued in both gold and silver and were distinguished by calligraphy of the highest quality. The blanks were prepared in a variety of sizes and weights—small and thick, broad and thick or broad and thin—and their weights often varied widely within the same year. It is assumed that these pieces were distributed at important ceremonies in the caliphal court and that they were not intended for circulation.

The third type of donative is the rarest of all. This author knows of only two examples, both of which are more in the nature of family medallions than donative coins. The first is a dirham of al-Mutawakkil with a portrait of a facing male figure on the obverse and the caliph's name in the margin, and on the reverse a camel being led by its driver with the name of the caliph's heir al-Muʿtazz and the date 241. The second is an unpublished type with a man on horseback on the obverse and the name of the caliph al-Muʿtamid in the margin; on the reverse is an elephant with the name of the caliph's son Djaʿfar al-Mufawwaḍ and the date 258 in the margin. These two unique examples cannot conjure up an entire world of private figural medallic coinage struck for the pleasure of the caliphal house, but if further examples come to light a clearer picture of these family commemorative issues should emerge.

A number of exceptional pieces bearing the name of al-Muḳtadir are known, the most frequently encountered being copies of Hindūshāhī [see HINDŪ-SHĀHĪS] issues. On these, one side shows to the right a horseman riding with the inscription *li 'llāh Djaʿfar* (the caliph's personal name) and on the other a Brahmin bull to the left with *al-Muḳtadir bi 'llāh* above. Another issue depicts a rabbit within an octagram on both faces. Al-Rāḍī also had a magnificent five-dirham weight silver piece with a handsome cloud-like pattern in the centre of the reverse field.

Very few special issues are known from Spain and North Africa. A magnificent 10-*mithkāl*'s weight dīnār of the Almohad ruler Abū Ḥafṣ ʿUmar was published by Brèthes, a photograph of which appears on the cover of his catalogue, and multiple dīnārs are also known from the time of the Saʿdian Sharīfs. The high standard of coinage design and careful manufacture maintained by the North African dynasties may well have made the regular preparation of medallic issues unnecessary. The Fāṭimids are known to have struck very few special issues, although the quarter dīnārs and one-sixteenth dirhams would have been an ideal size to use as largesse coins.

In the east, the successors to the ʿAbbāsids prepared a series of marvellous gold medals showing figures of men, as well as lions attacking antelopes or birds of prey attacking animals on both obverse and reverse. These were clearly not intended for circulation. This author, however, once saw a 10-*mithkāl*'s weight dīnār of ʿAḍud al-Dawla which was probably used at the time of his coronation in Madīnat

al-Salām in 367/977. Many other such pieces may have been struck for court ceremonies, but their identity will be forever hidden because they were probably melted down for other uses in times of financial stringency. Some of the survivors appear to have been strongly influenced by the Būyids' interest in their supposed Sāsānid heritage and depict the ruler in the guise of a Sāsānid monarch. The Būyids Fakhr al-Dawla of Rayy and his successor Madjd al-Dawla also struck handsome epigraphic multiple dirhams on broad thin flans with extended legends in al-Muḥammadiyya (i.e. Rayy) which were probably used as donatives for their troops.

The Great Saldjūḳs Alp Arslan, Malik Shāh and later rulers also struck a number of dīnārs with extended Ḳur'ānic legends inscribed in tiny calligraphy on both faces, probably used as amulets by the pious as they are usually found mounted for suspension. The Istanbul Archaeological Museum possesses a multiple-weight presentation dīnār weighing 30 *mithḳāls* struck by the Rūm Saldjūḳ Kaykhusraw II in Dār al-Mulk Ḳūnya in 635 A.H. The Il-Khānid rulers Maḥmūd Ghazan, Öldjeytü and Abū Sa'īd, issued a variety of multiple-weight gold and silver coins bearing extended legends which could have been used as impressive ornaments. Elsewhere in the east, many other medallic pieces of varying quality bearing symbols of people and/or animals were manufactured for a similar purpose. While the official issues were usually struck, many were cast and still others were light-weight sandwiches of thin uniface flans stuck together to make a showy but inexpensive amulet.

In addition, these dynasties all struck tiny coins, fractions of both the dirham and dīnār, which were used for showering guests at important audiences, or brides at wedding ceremonies, or for presenting to newly-circumcised boys, or for throwing into the crowds of excited spectators watching public audiences or ceremonial processions. In more recent times, the tiny silver *aḳče* [*q.v.*] of the Ottomans was ideally suited for scattering in this way because of its small size and light weight. Specially struck Ottoman presentation coins made a relatively late appearance in the late 11th/17th century when the standard gold coin, the *sulṭānī*, began to be struck on broad thin flans for use as jewellery. Multiple examples of the standard Ottoman gold of the time, but at a slightly lighter weight, were regularly issued by all the later rulers beginning with Süleymān II. Aside from their use as donatives, they were also available for sale to the public in return for the heavier, normal weight coins for conversion into jewellery. This custom became institutionalised during the reign of 'Abd al-Ḥamīd II [*q.v.*], when the imperial mint in Istanbul manufactured the so-called *zīnet altun*. The proceeds from their sale were applied to support the state pension fund, and these ornamented broad-flan coins are still manufactured by the Turkish Republic. In Ottoman Egypt, under the Khedive Ismā'īl Pasha [*q.v.*] the government issued small quantities of 500-piastre presentation gold and regular issues of tiny 10 and 5 *ḳurūsh*/piastre largesse gold and similar 20 and 10 *para* largesse silver coins. These were specifically used to enhance wedding celebrations.

In Ṣafawid and post-Ṣafawid Persia, the distribution of multiple weight gold *tūmāns* [*q.v.*] and silver *shāhīs* [*q.v.*] was a feature of court ceremonies such as the Nawrūz [*q.v.*] celebrations, and they are usually found pierced or mounted for use as jewellery. A very rare insight into the functioning of the Persian treasury came about when Fatḥ 'Alī Shāh Ḳādjār was compelled, under the terms of the Treaty of Türkmen Čay [*q.v.*], to ship an enormous treasure to St. Petersburg. It is said that the Emperor Nicholas I was so interested in the beautiful designs on the coin ingots that made up the shipment that he spared a few sets from re-melting to donate to the Imperial Museums and members of his family. Several examples of these subsequently passed into the public domain. It is clear that the Ḳādjārs, like many other treasuries, would have found it more convenient to retain their bullion in the form of thousands of large coins rather than millions of small ones.

This is particularly borne out when we turn to India, which was famous for the magnificence of its coinage. The Ghūrid conqueror Mu'izz al-Dīn Muḥammad b. Sām, is known to have struck the 10-*mithḳāl* presentation coins in the year 598. His successors in the Sub-continent, the Dihlī Sulṭāns and their contemporaries, also struck the occasional multiple-weight gold and silver tankas. However, it was the Mughals who really transformed their coinage into works of art. The treasury regularly stored its precious metal in the form of gigantic coins, most of which have now perished. Their exotic nature and extreme rarity was emphasised when the largest coin in the world, a giant 1000-tola weight piece which was probably valued at 10,000 silver rupiya, together with the second largest, a 100 mohur, were offered for auction in Geneva in November 1987. (These appeared subsequent to the article MOHUR.) The first was struck by the Emperor Djahāngīr in Āgrā in 1022 A.H. in his eighth regnal year, weighing 11,935.8 gr with a diameter of 210 mm. The second was struck by Shāh Djahān I in Lāhawr in 1048 in his twelfth regnal year weighing 1,094.5 gr with a diameter of 96 mm. The intent behind the striking of this is clearly expressed in its legends: "When Shāh Djahān became ruler of the world in generosity he gave away treasures in a single moment. So that he could bestow one hundred mohurs instead of one, he commanded one hundred mohurs to be made into one mohur." Aside from their use as treasury reserves, they were occasionally brought out to be presented as gifts to members of the royal family, high-ranking courtiers, ambassadors or important visitors from foreign countries. It is likely that financial need on the part of the recipients made them return these coins to the mint to be exchanged for their equivalent value in currency mohurs or rupiya as the need arose. In his first regnal year, the Emperor Djahāngīr defied Islamic convention by striking a mohur bearing a sensitive portrait of his father Akbar in old age, and in his sixth to ninth regnal years he distributed a series of his own portrait mohurs as a special mark of favour to his boon companions. All of these extraordinary coins are described in Hodivala's *Historical studies in Mughal numismatics*. For the use of the specially struck *nithārs* in Mughal India, see NITHĀR. Beginning in the reign of Shāh Djahān I, it became usual to manufacture blanks that were of full weight and standard alloy but smaller than the dies with which they were struck, so that frequently a third or more of the legends were "off flan". The resulting coins did not do justice to the die-sinker's work, but on occasion special efforts were made to cut blanks to their correct size so that they could receive the full impression of the dies. These were known as *nazarāna* mohurs or rupiya. As the Mughal state became poorer, *nazarāna* coins were produced with greater regularity because gigantic coins were no longer given away, and thus the need for low-value donatives increased.

Today the use of coins as regal largesse has virtually died out. The last state to employ them was the Sultanate of ʿUmān, whose rulers, Saʿīd b. Taymūr and Ḳābūs b. Saʿīd regularly had offstrikes of their currency coins struck in gold for distribution to members of their courts. ʿUmān and nearly all other Muslim countries now follow the modern custom of striking a bewildering variety of bullion commemorative coins in both gold and silver. These have largely lost any ceremonial purpose and are sold by their governments as a way of satisfying the ever-present need for modern collector issues. The tradition of private largesse at weddings and other family occasions, however, lives on today in the custom of scattering small coin-like objects over the heads of brides at weddings, pinning bank notes to their dresses, giving gold pieces for engagements and circumcisions and, particularly in Persia, giving presents to children at Nawrūz.

Bibliography: There is no general comprehensive study of donative and largesse coins. For the early period see L. Ilisch's series of four articles on donative coins *Münzgeschenke und Geschenkmünzen in der mittelalterlichen islamischen Welt*, in *Münstersche numismatische Zeitung*, June 1984 (which includes an extensive bibl.), September 1984, December 1984 and April 1985; for North Africa, J.D. Brèthes, *Contribution à l'histoire du Maroc par les recherches numismatiques*, Casablanca 1939; for the Ottomans, N. Pere, *Osmanlılarda madeni paralar*, Istanbul 1968; for the Ṣafawids, H.L. Rabino di Borgomale, ed. M. Mochiri, *Album of coins, medals and seals of the Shahs of Iran (1500-1948)*, Tehran 1974; for the Mug͟hals, S.H. Hodivala, *Historical studies in Mughal numismatics*, Calcutta 1923; for the two large Mug͟hal coins, see Habsburg Feldman S.A., *Sale of two giant gold mohur coins*, Geneva 1987. There are scattered publications that occasionally illustrate presentation coins amongst the great museum catalogues. See S. Lane Poole, *Catalogue of oriental coins in the British Museum*, 10 vols., London 1875-90; H. Lavoix, *Catalogue des monnaies musulmanes de la Bibliothèque Nationale*, 3 vols, reprs. of 1887-96 edition, Bologna 1977, and G. Hennequin, iv, Paris 1985; İ. and C. Artuk, *İstanbul Arkeoloji Müzeleri teşhirdeki islamı sikkeler kataloğu*, 2 vols., Istanbul 1971; N.D. Nicol, R. el-Nabaraway and J.L. Bacharach, *Catalogue of the Islamic coins, glass weights, dies and medals in the Egyptian National Library*, Cairo 1982; M.F. al-ʿUsh, *Arab Islamic coins preserved in the National Museum of Qatar*, i, Doha 1984, and Ibrāhīm D͟jābir, ii, 1992. For the many recent discoveries, the reader is directed to the coin auction catalogues of Baldwin (London and Dubai), Hess (Lucerne), Bank Leu (Zurich), Münzen und Medaillen (Basel), Peus (Frankfurt), Sotheby's (London) and Spink (London and Zurich). (R.E. Darley-Doran)

YĀD͟JŪD͟J wa-**MĀD͟JŪD͟J**, sc. Gog and Magog, the names of apocalyptic peoples known from biblical (Ezekiel xxxviii, xxxix, Apocalypse, xx. 7-10) and Ḳurʾānic eschatology. Ḳurʾān, XVIII, 93-8, refers to D͟hu 'l-Ḳarnayn erecting a barrier/rampart (*sadd/radm*) against them, which, at the end of time, God Himself will raze. Ḳurʾān, XXI, 96, is an apocalyptic metaphor: "Till, when Gog and Magog are unloosed, and they slide down (*yansilūna*) out of every slope" (tr. A.J. Arberry).

Names. The reading *Yād͟jūd͟j wa-Mād͟jūd͟j* (without *hamza*) was preferred by most of the Ḥid͟jāzī and ʿIrāḳī *ḳurrāʾ*, while ʿĀṣim [*q.v.*] and al-Aʿrad͟j read *Yaʾd͟jūd͟j wa-Maʾd͟jūd͟j* (al-Ṭabarī, *Tafsīr*, viii, 279; Ibn Ḥad͟jar, xvi, 221). The reading *Ād͟jūd͟j wa-Mād͟jūd͟j* (or *Maʾd͟jūd͟j*) is also recorded (al-Zamak͟hs͟harī, 498, 584; Fak͟hr al-Dīn al-Rāzī, iv, 349; Ibn Ḥad͟jar, *loc. cit.*). This reading bears great resemblance to the Syriac *Agog wa Magog* as found in the Song of Alexander, which in turn renders Hebrew equivalents of *Gog* and *Magog*. Arabic etymology explains the names as *yafʿūl* and *mafʿūl* forms of *ad͟jd͟ja*, lit. "to blaze fiercely", "to be intensive", and also "to make a rustling noise by running", because Yād͟jūd͟j and Mād͟jūd͟j move so swiftly or powerfully, see e.g. Fak͟hr al-Dīn al-Rāzī, iv, 349, who gives other explanations as well (Lane, *Lexicon*, s.v. *ad͟jd͟ja*). Others see them as *fāʿūl* forms of *yad͟jd͟ja* and *mad͟jd͟ja*, with the second component derived from *mād͟ja* "to be agitated with waves" following Ḳurʾān, XVIII, 99: "On that day We shall leave them surging (*yamūd͟ju*) against each other". Still others hold that the names are of non-Arabic (*aʿd͟jamī*) origin (cf. Jeffery, *Foreign vocabulary*, 288-9). The two names form an onomastic rhymed pair, like Hārūt and Mārūt, Hābīl and Ḳābīl [*q.vv.*] (see also below, and cf. Miquel, *Géographie*, ii, 508).

Origin, number and appearance. The traditions around Yād͟jūd͟j and Mād͟jūd͟j, as found in the Islamic sources, are very heterogeneous. Sometimes they are considered as children of Adam but not of Eve, for they are said to originate from Adam's nocturnal emission of semen mixed with earth (Kaʿb al-Aḥbār, quoted by Ibn Ḥad͟jar, xvi, 221). The *Sīrat al-Iskandar* holds that only Yād͟jūd͟j descends from Adam, whereas Mād͟jūd͟j is an offspring of Eve's menstrual blood (ms. Aya Sofya 4004, fol. 152a). According to Wahb b. Munabbih, they are neither *ins* (human) nor *d͟jinn* (al-Ṭabarī, *Tafsīr*, viii, 280), but other traditions say that they are the offspring of Yaphet (*ibid.*, ix, 83; cf. Gen. x. 2).

Yād͟jūd͟j and Mād͟jūd͟j are many peoples, each of them counting 400,000 (al-Ṭabarī, *loc. cit.*, ix, 83), or they are nine times as numerous as human beings (*ibid.*, ix, 85), while al-Ḳazwīnī says that only God can count them (*ʿAd͟jāʾib*, 448). According to Ibn ʿAbbās, five of the six parts (*ad͟jzāʾ*) of the world belong to Yād͟jūd͟j and Mād͟jūd͟j and only one part to the other beings (*al-k͟halaf*) (Ibn al-Faḳīh, 300).

Al-Ṭabarī reports that Yād͟jūd͟j and Mād͟jūd͟j exist in three kinds: the first are as tall as a cedar, the second as broad as they are tall, the third can cover their body with one ear and lie down on the other (*Tafsīr*, viii, 283; cf. al-Ḳazwīnī, *ʿAd͟jāʾib*, 448). For al-Zamak͟hs͟harī there are only two kinds: one extremely tall, the other extremely short, while for al-Ḳazwīnī (*loc. cit.*) they have the stature of a middle-sized man (*rad͟jul marbūʿ*). Al-Ṭabarī also reports that D͟hu 'l-Ḳarnayn explored their country and saw that their length is half that of an average man but that males and females are equally tall. Instead of fingernails they have claws, their teeth are like those of predators, their gums are strong as a camel's and they grind their teeth when chewing. They foresee their own death; no male will die before having fathered one thousand children, and no female before having given birth to the same number; they mate like animals. Their food consists of the *tinnīn* [*q.v.*] which in spring falls down from Heaven. If they do not get it, they become barren (al-Ṭabarī, *Tafsīr*, viii, 281 f.; cf. al-Masʿūdī, *Murūd͟j*, ed. Pellat, i, 144). According to other traditions, they are cannibals (al-Ṭabarī, *Tafsīr*, viii, 279). (For further details on their physique, see Miquel, *Géographie*, ii, 509.) However, Yād͟jūd͟j and Mād͟jūd͟j are not always represented as fabulous creatures (see below).

Eschatological role. In Islam, their eschatological role is directly connected with the barrier which Dhu 'l-Ḳarnayn/al-Iskandar (Alexander the Great [see AL-KHAḌIR]) erected against them. According to the Ḳur'ān, Yādjūdj and Mādjūdj will be held back by the barrier until the end of time. Their coming is one of the "signs of the Hour" (*āyāt al-sā'a*, see SĀ'A. 3; for a classification of these signs, esp. that of al-Barzandjī (d. 1103/1691; Brockelmann, S II, 529), see Attema, 164-6; cf. Kaptein, 58, 60). Yādjūdj and Mādjūdj, before Dhu 'l-Ḳarnayn built the barrier, used to come out every spring in order to eat all that is green and to carry away all that is dry (cf. al-Zamakhsharī, 498 ff.). Al-Ṭabarī describes the eschatological scenario as follows: every day Yādjūdj and Mādjūdj scrape the barrier until they can almost see the sun shining through it or, as Ka'b al-Aḥbār relates, until the sound of their axes can be heard by their neighbours on the other side. When they are about to break through, their foreman tells them to go back and finish the work on the next day. But every night, after they have left, God restores the barrier so that it becomes stronger than it was before. Only when their foreman adds *in shā' allāh*, are they able to dig their way through. In a tradition recorded in Dienné [*q.v.*], *Inshallāh* is a young man who, when his name is pronounced by his father, will eat away what remains of Madjūdjū's barrier (Mommersteeg, *In de stad van de Marabouts*, 87-8). After that, Yādjūdj and Mādjūdj spread over the earth. When on the march, their vanguard is in Syria and their rear in 'Irāḳ. They cover the earth, eat everything they can find and drink the waters of the Euphrates, the Tigris and the Lake of Tiberias. According to Abū Sa'īd, they also kill human beings. Man and beast take refuge in fortresses. Having reached Jerusalem, they think they have exterminated life on earth. They then shoot arrows against the sky and when these fall back stained with blood, they believe they have destroyed Heaven as well. Then God, at the intercession of Jesus, sends down worms (*naghaf*) which penetrate their noses and ears, come out at their necks and kill them. Their corpses are eaten by the beasts or, according to other traditions, are carried away to the sea by rain which purifies the earth (al-Ṭabarī, *Tafsīr*, viii, 283, 289, ix, 83-5). But according to al-Zamakhsharī, 500, they cannot reach Mecca, Medina and Jerusalem. Al-Ḳazwīnī, *'Adjā'ib*, 488, on the other hand, describes "living creatures" (*ḥayawānāt*) who apparently have nothing human about them, who dwell on some mountains near the barrier of al-Iskandar and are short-sized (five spans high), broad-faced, and black skinned with white spots, who climb trees and do not associate with human beings.

The traditions regarding Yādjūdj and Mādjūdj, as found in the canonical *ḥadīth* works, were collected by Attema, 134 ff. He distinguishes three groups: traditions according to which people thought that the Hour was imminent and that Yādjūdj and Mādjūdj had already begun to make a breach in the barrier during the lifetime of the Prophet (al-Bukhārī, 61.25, trad. 27; Muslim, 52.1, 3; al-Tirmidhī, 31.23; Ibn Mādja, 36.9, trad. 3; Abū Dāwūd, 34.1; Aḥmad b. Ḥanbal, ii, 341, 529, vi, 428, 429); traditions which say that Yādjūdj and Mādjūdj were met when the Muslim armies, during the conquests in the east, had come in contact with peoples "with broad faces, small eyes, gray mops, running down from every hill (cf. Ḳur'ān, XXI, 96), their faces like shields covered with leather" (Aḥmad b. Ḥanbal, v, 271; see also below); and traditions according to which Yādjūdj and Mādjūdj are continuously trying to break through the barrier in the way described above (Ibn Mādja, 36.33, trad. 10; Aḥmad b. Ḥanbal, iii, 77).

The eschatological role of Yādjūdj and Mādjūdj in Islam has parallels in Jewish and Christian traditions, cf. Lust in *Bibl.* The Biblical data on Gog and Magog were popular themes in the sermons of the Syrian Christian Church (e.g. Ephrem Syrus, *Hymni*, iii, 194-213). Ps.-Methodios, *Apokalypse*, 14-5, gives a vivid description of these impure and deformed descendants of Yaphet.

Location and identification. The barrier built by Dhu 'l-Ḳarnayn against Yādjūdj and Mādjūdj fills the gap between two mountains (cf. Ḳur'ān, XVIII, 93: *al-saddān*, XVIII, 96: *al-ṣadafān*). Ḳur'ān commentators think that these mountains are those of Armenia and Ādharbāydjān (al-Ṭabarī, *Tafsīr*, viii, 278; al-Bayḍāwī, 573), that they lie between these two regions, or that they are situated in the furthest north (Fakhr al-Dīn al-Rāzī, 348; al-Bayḍāwī, 573) or in the most eastern part of the land of the Turks (al-Ṭabarī, viii, 281). Thus the barrier was located in the Caucasus, in the north in general or in the east. Geographers writing after Ibn Khurradādhbih (see below) concentrate on the far east. Ibn al-Faḳīh, 298, 300, writing in the 3rd/9th century, says that the distance between the land of the Khazar and the place of the barrier is two months, and that Dhu 'l-Ḳarnayn measured the width of the gorge between the two mountains, this being the dividing line between the land of the Turks and the regions to the east of them. According to Ibn Ḥawḳal, 482, Rūs and Khwārazmian merchants used to import silk and skins from the regions (*nawāḥī*) of Yādjūdj and Mādjūdj (cf. Miquel, *Géographie*, ii, 507). In the traditional division of the world into seven climes [see IḲLĪM], the lands of Yādjūdj and Mādjūdj are located, with variations, between the fifth and seventh climes. In al-Ya'ḳūbī's (d. 284/897) chronicle, they are located in the sixth clime (*Ta'rīkh*, 93). Al-Iṣṭakhrī (d. 339/950), who gives a larger number of climes, says (9) that they are found in a northern direction if one traverses the land between the Saḳāliba [*q.v.*] and the Kīmākiyya [see KIMÄK]. Al-Idrīsī (d. 565/1120) divides the climes into ten parts, the tenth lying in the extreme east of each clime. He charts Dhu 'l-Ḳarnayn's barrier in the ninth part of the sixth clime (*Opus Geographicum*, 934, 938; Idrīsī-Jaubert, 416, 420). It also comprises the land of the Khifshākh [see ḲIPČAK] and that of the Türgesh, which has much rain and snow. To the south, according to some geographers, the lands of Yādjūdj and Mādjūdj are adjacent to China [see AL-ṢĪN]. For the differences in view between Ibn Rusta (d. *ca.* 300/ 912-3) and al-Mas'ūdī (d. 345/956) on the location of Yādjūdj and Mādjūdj, see *ibid.*, cols. 618b-619a. In the neighbourhood of Yādjūdj and Mādjūdj other peoples are found who are mentioned in the Bible as offspring of Yaphet (Gen. x. 2), namely, Tārīs, Mansak (Manshak, Mashak) and Kumāra (Kumārā) (cf. al-Dīnawarī, *al-Akhbār al-ṭiwāl*, 2; cf. al-Ḳazwīnī, *'Adjā'ib*, 448, who mentions only the Mansak).

By an often-used play of words based on Arabic *taraka* "to leave, leave out", the Turks are said to belong to the peoples of Yādjūdj and Mādjūdj. Originally, the latter were twenty-four peoples. When Dhu 'l-Ḳarnayn locked them up behind the barrier, one people were absent and thus were left out (*turika*), either because they were away on a raid (Ibn al-Faḳīh, 299), or because they believed in God (cf. Ibn Hishām, *K. al-Tīdjān*, ed. in Lidzbarski, 302). In a tradition transmitted by al-Bukhārī (*K. al-manāḳib*,

61.25), the Turks are explicitly connected with the end of the world: "The Hour will not come before you have fought a people whose footwear is made of hair, and who fought the Turks who have small eyes, a ruddy face (*ḥumr al-wudjūh*), a small and finely chiselled nose (*dhulf al-unūf*), whereas their faces are rough and broad (*ka-anna wudjūhahum al-madjānn^u al-muṭraḳa*; cf. Lane, *Lexicon*, s.v. *ṭrḳ*, 1850, and above). Another frequently reported tradition says that Yādjūdj are Turks and Mādjūdj are Djīl and Daylam (Ibn Ḥadjar, xvi, 221).

The 20th century Indian politician and theologian Abu 'l-Kalām Āzād [see ĀZĀD, in Suppl.] argues that Yādjūdj and Mādjūdj are identical, first, with the Scythians, then with the Huns, and then with the Mongols (*wa-yas'alūnaka 'an Dhi 'l-Karnayn*, 162-81). This view is elaborated by al-Shāfi' al-Māḥī Aḥmad in his recent *Ya'djūdj wa-Ma'djūdj*. Throughout history, the raids of the above-mentioned peoples are recorded as seven "burstings-out" (*khurūdj*) of Yādjūdj and Mādjūdj, perhaps to be followed in the future by an eighth and/or ninth *khurūdj* before their final *khurūdj* at the end of time. At present, Aḥmad maintains, the Chinese part of Mongolia forms the last refuge of Yādjūdj and Mādjūdj. Sa'fān, *al-Sā'a*, identifies Yādjūdj and Mādjūdj with the Khazar [*q.v.*] who were converted to Judaism, with the Ashkenazi Jews in Eastern Europe and then in Israel, and with the Freemasons [see FARMĀSŪNIYYA, in Suppl.].

Yādjūdj and Mādjūdj in Arabic literature. Arabic poetry and *adab* literature use Yādjūdj and Mādjūdj as a metaphor for great numbers, e.g. "hungry soldiers as numerous as Yādjūdj and Mādjūdj" (al-Farazdaḳ (d. *ca.* 110/728), *Dīwān*, 396, quoted frequently), or for destructive power, e.g. "as if, in wickedness (*fasād*), they were Yādjūdj" (Sibṭ Ibn al-Ta'āwīdhī (d. 584/1188 [*q.v.*]), *Dīwān*, 75). The barrier serves as a metaphor for impenetrability: "If I were to give you a single dirham, I would open a door to my possessions which neither mountains nor sands could dam, even if I were able to build before them a barrier like the barrier of Yādjūdj and Mādjūdj" (al-Djāḥiẓ, *K. al-Bukhalā'*, 208); "O, if only the barrier of Yādjūdj were between you and me" (Abu 'l-'Atāhiya (d. 210/825 [*q.v.*]), *Dīwān*, Appx. no. 216, 4). Their lands are the farthermost imaginable place on earth: "Send me to Ḳāf [*q.v.*], and behind the rampart (*radm*), and to the barrier (*sadd*), and to Yādjūdj and Mādjūdj, to a place even Dhu 'l-Ḳarnayn did not reach and al-Khaḍir never knew about" (Abū Ḥayyān al-Tawḥīdī (d. 414/1023 [*q.v.*]), *Baṣā'ir*, iv, 158). The paired names of Yādjūdj and Mādjūdj are the subject of several anecdotes. At a funeral, a stupid person confuses their names with those of Munkar and Nakīr [*q.v.*] (Abū Sa'īd Manṣūr al-Ābī (d. 421/1030: Brockelmann, I, 351), *K. Nathr al-durar*, iv, 284; Abū Isḥāḳ Ibrāhīm al-Ḥuṣrī (d. 413/1022 [*q.v.*]), *Djam' al-djawāhir*, 250), or with those of Hārūt and Mārūt (cf. Marzolph, *Arabia ridens*, ii, no. 510). Another confused person insists that "Munkar is better than Nakīr, that Yādjūdj is better than Mādjūdj, and that Hārūt is better than Mārūt" (Abū Ḥayyān al-Tawḥīdī, *op. cit.*, iii, 133). Al-Ḥuṣrī, *Djam' al-djawāhir*, 338, reports that a tall man, who was beaten by a short soldier, exclaimed: "I wish you were shorter than Yādjūdj and Mādjūdj". This anecdote refers to a tradition, ascribed to Ibn 'Abbās, according to which Yādjūdj and Mādjūdj are three spans (*thalāthat ashbār* = 27 inches) tall (Ibn Ḥadjar al-'Asḳalānī, *Fatḥ al-bārī*, xvi, 222 l. 19).

Yādjūdj and Mādjūdj play a more prominent role in two early poems, one by Ḥassān b. Thābit (d. 40/659 [*q.v.*]) (ed. 'Arafat, 471-3, tr. Nicholson, 18), and the other by 'Alḳama b. Dhī Djadan (2nd/8th century) (see on him al-Hamdānī, *Iklīl*, ii, 300-1; Löfgren, *'Alqama b. ḏi Ǧadan*). Both describe how al-Iskandar built the barrier (Von Kremer, *Über die südarabische Sage*, 71 ff.; idem, *Altarabische Gedichte*, 16). Yādjūdj and Mādjūdj are also mentioned in an eschatological *urdjūza* [see RADJAZ] by 'Abd Allāh b. Ru'ba al-'Adjdjādj (d. 97/715) (ed. Beirut, 345-6), as well as in several *radjaz* verses by 'Abd Allāh's son Ru'ba (d. 145/762 [*q.v.*]) (ed. Ahlwardt, nos. 19, 33, 55), in which the coming of Yādjūdj and Mādjūdj is mentioned as an apocalyptical phenomenon, also connected with the peoples of 'Ād and Tubba' [*q.vv.*].

In the legendary literature on al-Iskandar [see AL-KHAḌIR; ISKANDAR-NĀMA; *Sīrat Iskandar*, in SĪRA SHA'BIYYA], Yādjūdj and Mādjūdj are in general described along the same lines as in *tafsīr* and *ḥadīth* (see above). A remarkable exception is ms. Aya Sofya 4004, in which Yādjūdj and Mādjūdj appear more humanlike. The storyteller is aware of the fact that the frequent contacts between the "Muslims" and individual "Yādjūdjīs", and the diplomatic exchanges between al-Iskandar and Yādjūdj and Mādjūdj took place during the *millat Ibrāhīm* period, i.e. in pre-Islamic times. The language of Yādjūdj and Mādjūdj, described as "the inaccessible language of the Turks, which is incomprehensible" (*lughat al-Turk al-mughlaḳa wa-hiya lā tufham; ibid.*, fol. 154 l. 2), is translated into Arabic by al-Khaḍir. In this manuscript, the king of Yādjūdj and Mādjūdj is called Ḳānūn, their religion qualified as worship of sun and moon, and their dwelling-place is said to consist of seven *wādīs*. Twice a year they make raids on the neighbouring town of Asāṭīn (fol. 151 l. 3), whose king Watīd Ḳanāṭīr asks al-Iskandar to erect a barrier against them. He only starts doing this after Gabriel has revealed to al-Khaḍir God's eschatological plan concerning Yādjūdj and Mādjūdj.

(E. VAN DONZEL and CLAUDIA OTT)

YĀFĀ, YĀFA, conventionally Jaffa, older Joppa, a port on the Palestinian seaboard, in pre-modern times the port of entry for Jerusalem, since 1950 part of the municipality of Tel Aviv-Yafo in the State of Israel (lat. 32° 05' N., long. 34° 46' E.).

Situated on a 30 m/100 feet-high promontory on the otherwise straight coastline of central Palestine, Jaffa is a very ancient town. Thutmosis III's forces seized the Canaanite town of *Y-pw* in the 15th century B.C. and it became a provincial capital during the Egyptian New Kingdom; since the 1950s, archaeological excavations have revealed the monumental gateway of the Egyptian citadel. It passed to the Philistines, and appears in Phoenician texts as *Y.p.y.* Jaffa was the port of entry for the timber floated down from Tyre by king Aḥiram for Solomon to use for the Temple in Jerusalem (II Chron. ii. 16). The Apostle Peter stayed at Jaffa in the house of Simon the Tanner (Acts ix. 42), but in Roman times its value as a port declined in favour of Caesarea. In Byzantine times, Ἰόπη or Ἰόππη was the seat of a bishopric.

In the year 15/636 'Amr b. al-'Āṣī (according to others, Mu'āwiya) took the town (al-Balādhurī, *Futūḥ*, 138). The importance of the old port for Jerusalem further increased when the Umayyad Sulaymān b. 'Abd al-Malik founded the new capital of *Djund Filasṭīn*, al-Ramla [*q.v.*], some 14 miles south-east of Yāfā. Yāfā, with the rest of Filasṭīn, passed in 264/878 into the hands of Aḥmad b. Ṭūlūn [*q.v.*] and remained under the rule of the Ṭūlūnids of Egypt until in 292/905 it passed to the 'Abbāsid caliph al-Muktafī. After Dja'far b. Fallāḥ had conquered Syria for the Fāṭimid al-Mu'izz [*q.v.*] in 359/969, the Ḳarmaṭians penetrated in 360/971 under Ḥasan al-A'ṣam as far as Yāfā, inside which the troops (11,000 men) sent to Syria by Djawhar b. 'Abd Allāh were blockaded. After the Ḳarmaṭians had been driven out of Egypt in 362, Yāfā was relieved and the garrison brought back to Egypt. The Turkish *amīr* Atsiz b. Abaḳ took al-Ramla in 463/1071, but Yāfā and 'Asḳalān did not come into his power.

The possession of the town was hotly disputed during the Crusades. The Franks, who made it a vassal duchy of the kingdom of Jerusalem, were able to hold it until the Third Crusade (1099-1187). The Fāṭimid vizier al-Afḍal sought in vain to take it from them in 1101, 1105, 1113 and 1115. After his murder, the caliph al-Āmir besieged the town in 1122 but was driven back, and again in 1123 as a result of the destruction of his fleet by the Venetians. After the battle of Ḥaṭṭīn (583/1187 [see ḤIṬṬĪN]) most of the coast towns surrendered to Ṣalāḥ al-Dīn, and Yāfā to his brother al-Malik al-'Ādil. Richard Coeur-de-Lion recaptured it for the Crusaders in 587/1191. Ṣalāḥ al-Dīn besieged it in 1192 and regained it for the Saracens; he could not, however, take the citadel, and Richard, who hurried to the help of its garrison, drove the Ayyūbid troops out of the town and refortified it. At the truce of al-Ramla, the Christians were confirmed in possession of Yāfā.

By 593/1197, however, al-Malik al-'Ādil had again taken Yāfā, destroying the fortifications and, it is said, killing 20,000 Christians in the fighting. In the following year, Saxon and Brabantine troops temporarily occupied the town, but abandoned it again in 595/1199, whereupon al-'Ādil regained it by a coup-de-main. After the Fourth Crusade (1204), the town was again in the hands of the Franks. The Emperor Frederick II restored the fortifications in 1228, as did Louis IX in 1250 after his release.

In the Mamlūk period, Yāfā belonged to the district of al-Ramla, one of the four districts of the coast, which were part of the *mamlaka* of Dimashḳ; for a time, however (under Ṣalāḥ al-Dīn's successors), it was under that of Ghazza (al-Dimashḳī, ed. Mehren, 230).

The Mamlūk sultan Baybars attacked the town unexpectedly on 20 Djumādā II 666/8 March 1268, and took it and its citadel in one or two days (inscription on the White Mosque at Ramla, ed. van Berchem, *Inscriptions Arabes de Syrie*, Cairo 1897, 57-64). He destroyed the town with all its houses, walls and the citadel. A certain *amīr* Djamāl al-Dīn ... b. Isḥāḳ, according to an inscription preserved in Yāfā, built there in 736/1335 the sanctuary of Ḳubbat Shaykh Murād which is still in existence (Clermont-Ganneau, *Matériaux inédits pour servir à l'histoire des Croisades*, Paris 1876; idem, *Archæological researches in Palestine during the years 1873-1894*, ii, London 1896, 154). When the kings of England and France were planning a new crusade in 1336, al-Nāṣir had the harbour of Yāfā

destroyed to make it impossible for the Franks to land there. For the same reason, the town as well as the harbour, was destroyed in 746/1345 (Tolkowsky, in *Journ. Pal. Orient. Soc.*, v [1925], 82-4).

The Arab geographers describe Yāfā as a small, strongly fortified coast town which, as the port of Jerusalem and al-Ramla, enjoyed thriving trade and busy markets in times of peace. In times of war it was greatly exposed to enemy raids, in the first centuries of Islam, for example, to attacks by the Byzantine fleet, the Mardaites and the Cibyrraiotes. To protect the coast against these raids, watch-towers (*ribāṭ* [*q.v.*]) were built, like those of Byzantium from Luʾluʾa to Constantinople, from which was signalled, by smoke or fire to the capital al-Ramla, the approach of Byzantine ships, which also used to visit the ports from G͟hazza to Arsūf to ransom prisoners (al-Muḳaddasī, 177).

After the battle of Mard͟j Dābiḳ [*q.v.*] in 922/1516, the whole of Syria passed to the Ottomans. Yāfā, which was in ruins, only began to revive gradually in the second half of the 17th century, especially after its quays were built. From 1770 onwards, the Pas͟ha of Dimas͟hḳ fought for several years with ʿAlī Bey and his followers for the town, in which the Mamlūks perpetrated a frightful massacre on 19 May 1776. The French behaved even worse after the capture of the town by Napoleon (6 March 1799); 4,000 prisoners were shot on the shore. Immediately after the entry of the garrison, plague broke out in the French army which suffered heavily. Ibrāhīm Pas͟ha, son of Meḥemmed ʿAlī, occupied Yāfā in 1831, which reverted to the Turks in 1840. An earthquake in 1838 destroyed many houses and a portion of the defences.

Jaffa was always the port of entry for Christian pilgrims to Jerusalem, and it had many hospices to accommodate the new arrivals. In the late 19th century, two colonies of the Protestant German Tempelgesellschaft from Württemburg were founded at Wilhelma and Sarona to the north of Jaffa (1870-1), whilst there were Jewish agricultural colonies to its south. Under a concession from the Ottomans, in 1890-2 a metre-gauge railway was constructed by a French company from Jaffa to Lydda and Jerusalem (widened to standard-gauge by the British authorities after the occupation of 1917 and after). In 1909 the Jewish garden suburb of Tel Aviv ("Hill of Spring") was founded adjacent to Jaffa. During the First World War, the Ottomans deported the whole population of Jaffa-Tel Aviv out of fear that they would help advancing Allied troops; but the British forces of General Allenby entered Jaffa unopposed on 16 November 1917, and the population gradually returned thereafter. Anti-Jewish riots broke out at Jaffa in May 1921, the most serious of these in the early years of the British Mandate of Palestine [see MANDATES], and soon afterwards, Tel Aviv was separated from Jaffa with its own municipal status.

In the inter-war period, the port of Jaffa was adversely affected by the development of that of Haifa [see ḤAYFĀ] (1933) and further declined after the Arab political strike of 1936 closed it for almost a year, during which goods for Tel Aviv began to be landed by lighter. The better-off Jewish population began to move into Tel Aviv, leaving Jaffa with a poorer, predominantly Arab population. After 1948, almost the entire Arab element, which in 1941 had numbered 62,000, fled, and the largely deserted town was two years later incorporated into the municipality of Tel Aviv-Yafo in Israel. The decayed and inadequate port of Jaffa was shut down in 1965, superseded by the modern port of Ashdod further south. Tel Aviv-Yafo now has a population (1994 estimate) of 355,200.

(F. BUHL-[C.E. BOSWORTH])

YĀFIʿ, an ancient and important collection of tribes of the Yemen who established themselves in the lofty mountain ranges in Sarw Ḥimyar to the north and north-east of Aden [see ʿADAN], about 120 km/75 miles distant.

Yāfiʿ is divided into the Upper and Lower Sultanates (see map of Serjeant, in *Yāfiʿ*, 84), with al-Maḥd͟jaba the capital of the former and al-Ḳāra, the old capital of the sultans of the Banū Ḳāsid, that of the latter. The former has five tribes: Kaladī, Saʿdī, Yazīdī, Yaharī and Nāk͟hibī. The latter also has five: Muflaḥī, Mawsaṭī, Ẓabī, Buʿsī and Ḥaḍramī.

They were certainly pre-Islamic in origin and the Old South Arabian inscription *RES* 4613 contains the form *yfʿm*. The Yāfiʿ, who were agriculturalists and figure prominently as mercenaries, are mentioned also in the 4th/10th-century *Ṣifat D͟jazīrat al-ʿArab* of al-Hamdānī (ed. Müller, 89, 95, 98). Inhabiting such inaccessible country, the Yāfiʿ were seldom completely controlled by any central authority. They served the Rasūlids [*q.v.*] as mercenaries, though they did not pay them taxes (Serjeant, *Yāfiʿ*, 83). They travelled in numbers to Ḥaḍramawt [*q.v.*] in the 11th-12th/17th-18th centuries, originally as mercenaries, although they eventually wielded some independent power there. Indeed, in the early 12th/18th century rival contestants for the Kat͟hīrī sultanate in Ḥaḍramawt called in Yāfiʿ tribesmen to assist them. Many were employed in the same way in India also, notably in Ḥaydarābād. In 1903, the British Government of India entered into a series of treaties with various sections of the Yāfiʿ in exchange for stipends (*Arab tribes*, 205-15), although it was reported in 1909 (*ibid.*, 63) that the Aden Residency had little contact with Upper Yāfiʿ. It was only after the Second World War that the government in Aden was able to develop their relations with the Yāfiʿ, and then almost exclusively with the Lower Yāfiʿ, some of whose territory was in the fertile cotton-growing area of Abyan [*q.v.*] and whose sultanate later became a member state of the Federation of South Arabia.

al-**YĀFIʿĪ**, Abū ʿAbd Allāh b. Asʿad, Abu 'l-Saʿāda ʿAfīf al-Dīn (b. in Yemen *ca.* 698/1298, d. at Mecca 768/1367), scholar and Ṣūfī. His father, impressed by his son's intellectual and spiritual precociousness, sent him to study at Aden. After his first Pilgrimage in 712/1313, he returned to Yemen, taking up life as an ascetic and anchorite and becoming a disciple of the Ṣūfī master ʿAlī al-Ṭawās̲h̲ī, to whom he remained close until the latter's death. In 718/1319 he moved to Mecca and completed his education in the Islamic sciences with the judge there, Raḍī al-Dīn al-Ṭabarī. Renouncing a marriage he had made, he went to live as an ascetic by the two *ḥarams* of Mecca and Medina. In 734/1335 he travelled to Palestine and Egypt, meeting there famed local Ṣūfīs.

He himself was mainly affiliated to the Ḳādiriyya [*q.v.*], of which he founded a branch, the Yāfiʿiyya, still existing in Yemen today (J.S. Trimingham, *The Sufi orders*, Oxford 1971, 273). He also received initiation into the Adhamiyya (al-Zabīdī, *Itḥāf al-aṣfiyā'*, ms. from 1329/1911, private coll., fol. 5; Massignon, *La passion de Ḥallāj*, ²Paris 1975, i, 85), but his relations with the S̲h̲ād̲h̲iliyya are problematical (A. ʿAmmār, *Abu 'l-Ḥasan al-S̲h̲ād̲h̲ilī*, Cairo 1952, ii, 185-7).

When he was travelling in the Near East, his fame was already great since the sources indicate that he tried to keep himself incognito in Egypt. He acquired great prestige at Mecca, where he settled on his return and remarried. He was sought out for his knowledge but above all for his spiritual direction; among his many disciples were S̲h̲āh Niʿmat Allāh (d. 834/1431) (see T. Graham, *Shāh Niʿmatullāh Walī, founder of the Niʿmatullāhī Sufi order*, in L. Lewisohn (ed.), *The legacy of mediaeval Persian Sufism*, London-New York 1992, 173-4; and niʿmat-allāhiyya). Although he lived in penury, his *baraka* was sought, and he seems to have acted as an arbiter in Mecca on several occasions. He made only one brief further trip to Yemen in 738/1337 to see his master al-Ṭawās̲h̲ī, and died at Mecca on 20 D̲j̲umādā II 768/22 February 1367. His aura of sanctity was such that his modest clothes were sold as relics (al-Isnawī, *Ṭabaḳāt al-s̲h̲āfiʿiyya*, Bag̲h̲dād 1391/1971, ii, 582).

As an *ʿālim*, al-Yāfiʿī above all taught *ḥadīth*. As a fervent As̲h̲ʿarī, he combatted both Muʿtazilī rationalism and Ibn Taymiyya's anthropomorphism (his main polemical and apologetic work was *Marham al-ʿilal al-muʿḍila fi 'l-radd ʿalā a'immat al-muʿtazila*, Calcutta 1910). He well embodied the ideal of the scholar-Ṣūfī, so prized in mediaeval Islam, and was described by al-S̲h̲ard̲j̲ī as "master of the two ways" (sc. exoteric and esoteric). Like al-Suyūṭī, who often cited him, al-Yāfiʿī used his fame for mounting a defence of Ṣūfism, seen in his best-known works: *Nas̲h̲r al-maḥāsin al-g̲h̲āliya fī faḍl al-mas̲h̲āyik̲h̲ al-ṣūfiyya* (Cairo 1961), and above all, his *Rawḍ al-rayāḥīn fī ḥikāyāt al-ṣāliḥīn* (many eds., inc. Cairo 1989, and Cyprus n.d.), which give edifying stories of the saints whilst including the doctrinal elements belonging to Ṣūfism. The *Rawḍ* was much used by later authors writing on stories of the saints. In the field of hagiography, he wrote an *Asnā al-mafāk̲h̲ir fī manāḳib al-s̲h̲ayk̲h̲ ʿAbd al-Ḳādir [al-D̲j̲īlānī]*. He also courageously upheld the sanctity of al-Ḥallād̲j̲ and Ibn al-ʿArabī (al-Suyūṭī, *Ta'yīd*, 71; Massignon, *op. cit.*, ii, 41, 46, 309-10), and it was not surprising that his disciple S̲h̲āh Niʿmat Allāh should translate into Persian and write commentaries on the works of Ibn al-ʿArabī.

It would be an abuse of language to call al-Yāfiʿī an historian, since his *Mir'āt al-d̲j̲anān wa-ʿibrat al-yaḳẓān* (Ḥaydarābād 1339/1920) is mainly a compilation drawn from Ibn al-At̲h̲īr, Ibn K̲h̲allikān and al-D̲h̲ahabī. He wrote many mystical poems (especially on the Prophet, whom he claimed often to see in dreams or in night vigils), but very few of these have been published.

Bibliography: The work of al-Isnawī (d. 772/1370) cited above is the essential source on al-Yāfiʿī's life; all later authors draw on it. There are, however, original items in Taḳī al-Dīn al-Fāsī, *al-ʿIḳd al-t̲h̲amīn*, Cairo 1966, v, 104-15 and Ibn Ḥad̲j̲ar, *al-Durar al-kāmina*, Beirut n.d., ii, 247-9. Al-S̲h̲ard̲j̲ī's notice of him, in *Ṭabaḳāt al-k̲h̲awāṣṣ*, Cairo 1321/1903, 67, is hagiographical. See also Subkī, *Ṭabaḳāt al-s̲h̲āfiʿiyya al-kubrā*, Cairo 1964, x, 33; Ibn al-Mulaḳḳin, *Ṭabaḳāt al-awliyā'*, Beirut 1986, 555-6; Brockelmann, ²II, 226-8, S II, 227-8.

(E. Geoffroy)

YĀFIT̲H̲, the Japheth of the Bible.

He is not mentioned by name in the Ḳur'ān (although he is alluded to in VII, 64, X, 73, XI, 40, XXIII, 27 and XXVI, 119), but the exegetes are familiar with all the sons of Noah [see nūḥ]: Ḥām, Sām [*q.vv.*] and Yāfit̲h̲ (the pronunciation Yāfit is mentioned as possible in al-Ṭabarī, i, 222). The Biblical story (Gen. ix. 20-7) of Ḥām's sin and punishment and the blessing given to Sām and Yāfit̲h̲ is known in Muslim legend, but it is silent about Noah's planting the vine and becoming intoxicated. Al-Kisā'ī totally transforms the story: in the Ark, Noah could not sleep from anxiety, so when he came out of the boat, he fell asleep on Sām's chest. The wind revealed his nakedness, Sām and Yāfit̲h̲ covered him up and Ḥām laughed so loudly that Nūḥ was awakened. As a result, he uttered the following curse: prophets shall be born descendants of Sām, kings and heroes of Yāfit̲h̲ and black slaves of Ḥām. However, Ḥām's descendants intermarried with Yāfit̲h̲'s family such that the Abyssinians, Hind and Sind were born to Kūs̲h̲ b. Ḥām, and the Copts were the descendants of a union between Ḳūt b. Ḥām and a descendant of Yāfit̲h̲.

Yāfit̲h̲'s descendants are variously given, sometimes according to the biblical tradition (al-Ṭabarī, i, 217), sometimes with variations (al-Kisā'ī, i, 101). He is usually regarded as the ancestor of Yād̲j̲ūd̲j̲ and Mād̲j̲ūd̲j̲ [*q.v.*] often of the Turks and the K̲h̲azars, more rarely of the Slavs [see ṣaḳāliba]. Persia and Rūm are sometimes traced to Sām but sometimes to Yāfit̲h̲. To Yāfit̲h̲ is also attributed Cyrus, who killed Belshazzar, son of Evilmerodach, son of Nebuchadnezzar, and Yazdagird. In sum, Sām is the father of the Arabs, Yāfit̲h̲ of Rūm, and Ḥām of the Sūdān. Of the three, the Semitic tradition naturally prefers Sām. Yāfit̲h̲ is only rarely spoken of unfavourably, as he is in the case of al-Ṭabarī, i, 223, where we are told nothing good comes from Yāfit̲h̲ and his descendants are deformed. On the other hand, the 72 languages of the world are divided as follows: 18 to Sām, 18 to Ḥām and 36 to Yāfit̲h̲. He is the blessed son of Noah.

YAʿFURIDS [see yuʿfirids].

YĀGHISTĀN (p.), lit. "the land of the rebels", (*yāghī* "rebel", *istān* "region") referred to different sanctuaries used by Mudjāhidūn [see mudjāhid] against the British authorities in the 19th and early 20th centuries, in the various independent tribal areas, mainly inhabited by the Pakhtūns, in the hinterland of what became the North-West Frontier Province (NWFP) of British India such as the Mohmand Agency, Bunēr, Dīr, Swāt, Kohistān, Hazāra and Čamarkand (extending into the Kunār province of Afghānistān and Badjawr in NWFP). A popular term rather than a formally recognised one, the name was in use long before the British colonial period, historically referred to as Yāghistān al-ḳadīm, and sometimes as Riyāsat-hā'i-Yāghistān.

Though Yāghistān comprised mainly mountainous terrain, the Mudjāhidūn carefully selected their centres around fertile valleys, lakes and rivers in order to be self-reliant as regards agricultural products and to find hideouts to support their guerilla warfare. With the rise of Muslim resistance, first to Sikh rule in Pandjāb and Kashmīr and then to the gradual British colonial expansion in South Asia, the Mudjāhidūn from different regions started gathering in Yāghistān. In spite of their initial success under the charismatic leadership of Sayyid Aḥmad Brēlwī [*q.v.*], the movement suffered a setback at Bālākōt on 6 May 1831 in which Aḥmad Brēlwī and most of his companions were killed by the Sikhs. During the first Afghan-British war (1839-42), the Mudjāhidūn leader Mawlawī Naṣīr al-Dīn sided with Dūst Muḥammad [*q.v.*] by sending a contingent of fighters from Yāghistān to Kābul and Ghazna. After him, the leadership of the Mudjāhidūn gradually passed first to Mawlānā Wilāyat ʿAlī (d. 1852) and then to his younger brother Mawlānā ʿInāyat ʿAlī (1858). Through an effective network of devotees, which extended as far as Bengal, the Mudjāhidūn regularly received fresh recruits, money and moral support in their frequently-changing centres in Yāghistān, such as Sitāna, Mulka and Ambīla. The Yāghistānī Mudjāhidūn always kept in close contact with their supporters, and at times used secret messages in code. Though most of the *djihād* centres in Yāghistān were attacked and destroyed by British Indian forces during the second half of the 19th century, the resistance of the Mudjāhidūn continued under such leaders as Nadjm al-Dīn Hadda Mullā (d. 1902) and Saʿd Allah Khān Mullā Mastān (branded as the Mad Mulla by his opponents; d. 1916).

In 1902, the Mudjāhidūn leader ʿAbd al-Karīm b. Wilāyat ʿAlī chose Asmast in Būnēr near Swāt valley as his headquarters. During the First World War, a rival centre slowly grew up and prospered in the Afghān part of Čamarkand, where leaders such as Mawlāna Muḥammad ʿAlī Ḳaṣūrī (see his *Mushāhidāt-i-Kābul wa Yāghistān*, Lahore 1986), Mawlawī ʿAbd al-Karīm Ḳannawdjī (d. 1922), Mawlawī Muḥammad Bashīr (d. 1934), Ḥādjdjī Tarangza'ī (d. 1937) and Mawlawī Faḍl Ilāhī Wazīrābādī (d. 1951; see his *Kawā'if-i Yāghistān*, Gujranwala 1981) led a number of skirmishes against the imperial army in Shabḳadar, Čakda, Mohmand Agency and many other places in NWFP. At times, the Yāghistānī Mudjāhidūn also developed alliances with a number of other anti-colonial movements such as Ḥizb Allāh, Djunūd Rabbāniyya, Ḥukūmat-i Muwaḳḳata-yi Hind and Djamʿiyyat al-Anṣār.

With the independence of Pakistan in 1947, Yāghistān gradually became part of the historical past. The original Djihād movement also lost its impetus, although the independent character of certain Pakhtūn tribes (e.g. the Afrīdīs) and their systems (e.g. the *djirga* [*q.v.*, in Suppl.]) in these areas is still recognised by Pakistan. Many tribal Mudjāhidūn and the activists of the Djihād movement took part in the struggle of the Kashmīrī Muslims against India in 1948 and thereafter, and subsequently in the popular Afghān uprising against the Soviet Russian-supported communist régime in Kābul in the 1980s.

(Mohammad Yusuf Siddiq)

YAGHMA, in Arabic orthography Yaghmā, a Turkish tribe of Central Asia mentioned in accounts of the early Turks and their component tribal groups. P. Pelliot thought that the Chinese *Yang-mo* presupposed a nasalised form **Yangma* (*Notes sur le "Turkestan" de M.W. Barthold*, in *T'oung-Pao*, xxvii [1930], 17).

There are sections on the Yaghma in *Ḥudūd al-ʿālam*, tr. 95-6 § 13, cf. comm. 277-81, and Gardīzī, *Zayn al-akhbār*, ed. Ḥabībī, Tehran 1347/1968, 260. Abū Dulaf does not mention them by name in his *First Risāla*, but Marquart thought that his Bughrādj tribe referred to the Yaghma and that his mention of the place al-Khargāh (lit. "tent" = Ordu-kand "army camp") referred to their centre of Kāshghar (cf. A. von Rohr-Sauer, *Des Abû Dulaf Bericht über seine Reise nach Turkestân, China und Indien neu übersetzt und untersucht*, Bonn 1939, 18, 19-20). Gardīzī makes Yaghma originally a chief of the Toghuzghuz [*q.v.*], hence the Yaghma would appear to have been associated, at some early date, with the latter tribe. The *Ḥudūd al-ʿālam* states that the ruler of the Yaghma was indeed from the princely line of the Toghuzghuz, and has information on the two locations of the Yaghma, this division being perhaps the result of a tribal split. The first, most important location, spanned the central and western T'ien-Shan range, from the Naryn river in eastern Farghāna across the mountains to Kāshghar [*q.v.*] in eastern Turkestan, possession of which town was at some point disputed by both the Yaghma and Ḳarluḳ. The second location was in Semirečʾe [see yeti su], in the Ili valley and around the Issiḳ Kol, where Maḥmūd al-Kāshgharī, *Dīwān lughāt al-turk*, Tkish. tr. Atalay, i, 92, places them alongside the Čigil and Tukhsi (cf. also Barthold, *Zwölf Vorlesungen über die Geschichte der Türken Mittelasiens*, Berlin 1935, 75-6, on these locations).

The anonymous *Mudjmal al-tawārīkh*, ed. Bahār, Tehran 1318/1939, 421, calls the ruler of the Yaghma Bughra Khān (cf. the Bughrādj of Abū Dulaf), and the appearance of this *oughun* or totemistic title amongst the early Ḳarakhānids [see ilek-khāns] has led to suggestions that the latter dynasty arose from the Yaghma, especially as early centres of the Ḳarakhānids were at Kāshghar and Özkend [*q.v.*] in eastern Farghāna. O. Pritsak, in a series of studies, has averred that the Ḳarakhānids stemmed from the ruling clan of the Ḳarluḳ, with the Yaghma and Čigil as the two most

important tribal elements of the Ḳarluḳ confederation; see the discussion of these views by P.B. Golden, in D. Sinor (ed.), *The Cambridge history of early Inner Asia*, Cambridge 1990, 355-7, see also Golden, *An introduction to the history of the Turkic peoples. Ethnogenesis and state-formation in medieval and early modern Eurasia and the Middle East*, Wiesbaden 1992, 201. The Yag͟hma would have still remained a distinct body within the Ḳarluḳ Ḳag͟hanate, although Golden notes that it is somewhat strange that al-Kās͟hg͟harī, himself writing under the Ḳarak͟hānids (and frequently mentioning the Yag͟hma in other connections) nowhere links the rulers of the Ḳarak͟hānids specifically with the Yag͟hma or Ḳarluḳ.

After the Ḳarak͟hānid and Sald͟jūḳ periods, the Yag͟hma seem to drop out of historical mention.

Bibliography: In addition to references given in the article, see J. Marquart, *Über das Volkstum der Komanen*, in *Abh. Akad. der Wiss. in Göttingen*, philos.-hist. Kl., N.F. xiii, no. 1, Berlin 1914, 93-5.

(C.E. Bosworth)

YAG͟HMĀ D͟JANDAḲĪ, the *tak͟hallus* or pen-name of the Persian poet Mīrzā Abu 'l-Ḥasan Raḥīm (*ca.* 1196-1276/*ca.* 1782-1859), often called by his fellow-poets *Ḳaḥba-zan* "whore" from the expression repeated monotonously in his obscene verse.

He was born at K͟hūr in the D͟jandaḳ oasis in the central desert of the Das͟ht-i Kawīr, roughly half-way between Yazd and Simnān. He began his life as a camel-herd but by the age of seven his natural gifts had been noticed by the owner of the oasis, Ismā'īl K͟hān 'Arab-i 'Āmirī, whose secretary (*muns͟hī-bās͟hī*) he ultimately became. His first nom-de-plume was Mad͟jnūn. In 1216/1802 Ismā'īl K͟hān, after a rising against the government, had to flee to K͟hurāsān, while D͟jandaḳ was occupied by D͟hu 'l-Fiḳār K͟hān, representative of the governor of Simnān and Dāmg͟hān. Yag͟hmā was forcibly conscripted as an ordinary soldier but at Simnān his gifts obtained him the post of secretary to the governor. In 1223/1808 as a result of a false charge, the poet received the bastinado and his property was handed over as plunder (*yag͟hmā*) by the soldiery. The poet's innocence was proved and he regained his freedom but the act of injustice had embittered him. He then assumed the pen-name of Yag͟hmā and composed a scurrilous satire, *Sardāriyya*, on D͟hu 'l-Fiḳār K͟hān. Exiled, he wandered in Persia and via Bag͟hdād and Yazd reached Tehran, where fortune shone upon him again and he gained the good graces of Ḥād͟jd͟jī Mīrzā Aḳāsī, the first minister of Muḥammad S͟hāh Ḳād͟jār. Yag͟hmā was appointed *wazīr* to the governor of Kās͟hān, but a new satire (*K͟hulāsat al-iftiḍāḥ*) against a family of Kās͟hān notables caused him to be ostracised again and he was denounced as a *kāfir* from the pulpit of the mosque. His wandering life was resumed. We know that he accompanied Muḥammad S͟hāh to Harāt. He only returned to his native land as an octogenarian to die at K͟hūr on 16 Rabī' II 1276/16 Nov. 1859 and was buried near the tomb of Sayyid Dāwūd.

Yag͟hmā's works in prose and verse were collected in his *Kulliyyāt* and published at Tehran (?) in 1283/1866 with a preface by Ḥād͟jd͟jī Muḥammad Ismā'īl (389 fol. pp.).

Yag͟hmā practised all varieties of verse, and his poems (*g͟hazal, rit͟hā', ḳiṭ'a, tard͟jī'-band*) show a great mastery of language and form. The most original part perhaps of his work is in the field of funeral chants (*nawḥa-yi sīna-zanī*) which he invented. They were obviously intended for the public lamentations in Muḥarram [see TA'ZIYA]. They are in the form of a *mustazād* in which each line is prolonged by a refrain which the audience is intended to murmur as a spontaneous echo. These *nawḥas* are composed in simple and unaffected language. E.G. Browne, *LHP*, iv, 340, mentions the popularity of this genre among the poems of the constitutional period (1905-11).

Probably not well acquainted with Arabic as a result of his defective education, Yag͟hmā employed in his prose letters a simple Persian style (*fārsī-nigārī*) with a minimum of Arabic loan words; he is thus a precursor of 20th-century attempts, especially under the Pahlawīs, at evolving a Persian purged of extraneous elements. He also extensively annotated his personal copy of the *Burhān-i ḳāṭi'* dictionary, the ms. of which was handed down to his family. Yag͟hmā's most characteristic work however, was his satirical, slanderous and obscene poetry, his *hazliyyāt*. They have been viewed as denunciations of contemporary society, but other critics have merely seen them as expressions of personal grievances. In his mixture of ribaldry and simple piety, as expressed in his *nawḥas*, Browne suggested Verlaine as a modern European parallel. Yag͟hmā also wrote verses in his native dialect of K͟hūr.

Bibliography: 1. Works. In addition to the *editio princeps* of 1283/1866, repr. Tehran 1339/1960, the *G͟hazaliyyāt* and *Sardāriyya* were ed. Muḥ. Ḥusayn Ṭabarī, Tehran 1337/1958.

2. Studies. Riḍā Ḳulī K͟hān, *Mad͟jma' al-fuṣaḥā'*, ii, 580; Ḥabīb Yag͟hmā'ī (grandson), *S͟harḥ-i ḥāl-i Yag͟hmā*, Tehran n.d. (*ca.* 1927?) (originally publ. in the journal *Armag͟hān*, v); Browne, *LHP*, iv, 337-44; Rypka *et alii*, *History of Iranian literatures*, Dordrecht 1968, 333-4.

(V. Minorsky*)

YAG͟HMĀ'Ī, Ḥabīb (b. K͟hūr, 17 December 1898, d. Tehran, 14 May 1984), Persian poet and literary editor.

A descendant of the early Ḳād͟jār poet Yag͟hmā D͟jandaḳī [*q.v.*], Ḥabīb Yag͟hmā'ī was born in the small town of K͟hūr near D͟jandaḳ and Bīyābānak in the central desert of Persia. He first studied with his father, Ḥād͟jd͟j Asad Allāh Muntak͟hab al-Sādāt K͟hūrī, and subsequently left K͟hūr in 1916-17 for the nearby towns of Dāmg͟hān and S͟hāhrūd in order to pursue his education. In Dāmg͟hān he studied at the Nāẓimiyya school founded by 'Abd Allāh Yāsā'ī in 1917. In 1921 he went to Tehran and enrolled first in the Alliance school and, a year later, in the Teachers' Training College (Dār al-Mu'allimīn-i 'Ālī). This period is further marked by Yag͟hmā'ī's entry into Tehran literary circles. In 1923 he joined the Literary Society of Iran (*And͟juman-i Adabī-yi Īrān*) and in the following year he began his collaborations with the literary section of the radical paper *Ṭūfān* published in Tehran by Muḥammad Farruk͟hī Yazdī [*q.v.*]. In 1927-28 Yag͟hmā'ī studied at the School of Law and Political Science (later a Faculty of Tehran University). He returned to K͟hūr in 1928 as the head of the Birth Registry Office there; in the same year he took charge of the Office of Education and Endowments (*Awḳāf*) of Simnān. In 1930 Yag͟hmā'ī began teaching Persian literature at different high schools in Tehran, including the Dār al-Funūn. In 1934 he joined the Publication Department of the Ministry of Education. From 1943 to 1946 he was the editor of *Nāma-yi Farhangistān*, the organ of the Iranian Academy, and in 1944 he became an editor (for volumes 14, 15, and 23) of *Āmūzis͟h wa Parwaris͟h*, a cultural and educational journal. In 1948 he launched his own literary and historical journal, *Yag͟hmā*, which was published regularly for thirty years (1948-79). In the same year

he also served for a few months as the head of the local office of the Ministry of Education in the city of Kirmān. In 1949 he returned to Tehran as an Inspector of the Ministry of Education, and he also acted as head of the Publication Department of the Ministry of Culture in 1952. In 1962-3 Yag͟hmāʾī taught at the Teachers' Training College and at the College of Foreign Languages and Literatures, receiving in 1976 an Honorary Doctorate of Literature and Humanities from Tehran University.

Yag͟hmāʾī belonged to a generation of Persian literary scholars who, though conservative in their preference for literary style and diction, contributed significantly to the development of Persian literary education and scholarship in the 20th century. In its entire thirty-year period, the journal *Yag͟hmā* served as a forum for literary and historical studies. In addition to his own writings, such as an earlier historical romance (*Dak͟hma-yi Arg͟hūn*) (Tehran 1933, [2]1957) and a collection of poems (*Sarniwis͟ht*, Tehran 1972), Yag͟hmāʾī compiled several historical and literary surveys and also edited a number of texts, including the *Gars͟hāsb-nāma* of Asadī Ṭūsī (Tehran 1936, [2]1975) and the Persian translation of the *Tafsīr* of al-Ṭabarī (Tehran 1960-65, 7 vols.).

(Ali Gheissari)

YAG͟HMURĀSAN b. Zayyān b. T͟hābit, Abū Yaḥyā, *s͟hayk͟h* of the Banū ʿAbd al-Wād, a branch of the Zanāta [*q.v.*] Berbers, who lived in the region of Tlemcen [see tilimsān] under the suzerainty of the Almohad sultans of Morocco, and who was the founder of the independent dynasty of the Zayyānids or ʿAbd al-Wādids [*q.v.*] of Tlemcen, d. 681/1283. Born in 603/1206-7 or 605/1208-9, he succeeded his brother Abū ʿUzza Zaydān as head of the ʿAbd al-Wādids in 633/1236, but not till 637/1239-40 was he formally invested by the Almohad sultan ʿAbd al-Wāḥid al-Ras͟hīd. The power of the Moroccan sultans became so weakened that the ʿAbd al-Wādids assumed their own independence.

Yag͟hmurāsan thus became ruler in Tlemcen, and had first of all to fight against the Ḥafṣid *amīr* of Tunis Abū Zakariyyāʾ, who in 640/1242 or five years later, managed to penetrate into the town of Tlemcen. Yag͟hmurāsan, who had fled to the Banū Urnīd, was summoned by Abū Zakariyyāʾ to govern the town. The two *amīrs* made an alliance against the Almohad sultan Saʿīd, who in turn attacked Tlemcen, and then Tamazdig͟ht, where Yag͟hmurāsan had taken refuge; in the battle which followed, Saʿīd was killed (646/1248). A large part of his reign was now taken up with fighting against various Arab tribes of the Sahara, against the Tūd͟jīn and Mag͟hrāwa, etc., and above all, against the Marīnids [*q.v.*] of Fās; Yag͟hmurāsan even allied with Alfonso X of Castile to prevent the Marīnids making incursions into Spain. In 656/1257 the Zayyānid *amīr* besieged Sid͟jilmāsa, but did not capture it until 662/1264. He remained on good terms with the Ḥafṣids, and it was whilst going forth to meet a princess of Tunis as bride for his son ʿUt͟hmān that he died near Miliana in 681/1283. Yag͟hmurāsan left behind the reputation of a prudent and brave prince, the patron of scholars and littérateurs, and he built the minarets of the great mosques of Agādir (at Tlemcen) and Tāgrārt. Between the Marīnids to his west, and the Ḥafṣids to his east, he was able to preserve his own kingdom's independence.

(Chantal de La Veronne)

YAHŪD, the common collective (sing. *Yahūdī*) in Arabic for "Jews". A less common plural *Hūd* is also used (e.g. Ḳurʾān, II, 111, 135, 140). The word is borrowed from Aram. *Yahūd*, and ultimately from late bibl. Heb. *yehūdīm*, "Judaeans", the latter itself derived from members of the tribe of Judah). The Ḳurʾān also uses a stative verb *hāda*, "to be Jewish" or "to practice Judaism".

1. In the D͟jāhiliyya.

Jews had lived in various parts of the Arabian Peninsula since Antiquity, and the numbers of those living in northwestern Arabia must have been swelled by refugees from Judaea when the great rebellions against Rome were suppressed in A.D. 70 and 135. By the late D͟jāhilī period, the Jews of the peninsula spoke Arabic, were organised into clans and tribes, and were generally highly assimilated into Arab society. Their numbers probably also included a greater or lesser number of indigenous Arabs who accepted Judaism. However, in spite of their overall acculturation, they were nonetheless viewed as a separate group with their own peculiar customs. Jews and some of their distinctive practices are occasionally mentioned in pre-Islamic Arabic poetry (for examples, see D.S. Margoliouth, *The relations between Arabs and Israelites prior to the rise of Islam*, London 1924, 73; I. Lichtenstädter, *Some references to Jews in pre-Islamic Arabic literature*, in *PAAJR*, x [1940], 185-94; J. Horovitz, *Koranische Untersuchungen*, Berlin and Leipzig 1926, 144 ff. and 153 ff.; and Hirschberg, *Yisrāʾēl ba-ʿArav*, 112-16).

Not only were the pre-Islamic Arabs familiar with Jews and Jewish religious practices, Jewish religious ideas, ethical concepts and homiletic lore, but even some Aramaic and Hebrew terms were absorbed among those Arabs who came into close contact with Jews, just as Christian ideas and elements of vocabulary were also subconsciously assimilated (see e.g. S. Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, Leiden 1886; and A. Jeffery, *The foreign vocabulary of the Qurʾān*, Baroda 1938). Because of the admixture of Aramaic and Hebrew in the everyday language of the Arabian Jews, the pagan Arabs perceived it to

be a distinct Jewish dialect which they referred to as *al-yahūdiyya* (see Ibn Saʿd, ii/2, 66; al-Wāḳidī, *Kitāb al-Maghāzī*, ed. M. Jones, London 1966, i, 392; and G.D. Newby, *Observations about an early Judaeo-Arabic?*, in *JQR*, N.S., xli [1970], 212-21). Thus, there was a considerable degree of awareness of Jews and Judaism, as there was of Christians and Christianity, in the society into which the Prophet Muḥammad was born.

2. In the Ḳurʾān.

Despite the general Arabian familiarity with Jews and Judaism and despite the traditions that Muḥammad himself had met Jews prior to his theophany, there is no specific mention of *Yahūd* (or *Naṣārā*, Christians, or any other non-pagan religious group for that matter) in the revelations from the Meccan period. Only the term *Banū Isrāʾīl* [*q.v.*] (the Children of Israel), which is not found in what can be identified as genuine pre-Islamic poetry (Horovitz, *Koranische Untersuchungen*, 91), appears in the Meccan sūras. Most of these references are to the biblical Israelites, although a few clearly are to contemporary Jews (e.g. XXVI, 197; XVII, 101). In some Meccan and Medinan sūras (e.g. XLIII, 59; LXI, 14), *Banū Isrāʾīl* refers to both Jews and Christians of the time of Jesus, with allusions perhaps to some remnants of Judaeo-Christians, such as the Ebionites or the Elchasaites, who may still have existed in Muḥammad's own days (concerning the latter, cf. P. Crone, *Islam, Judeo-Christianity and Byzantine iconoclasm*, in *JSAI*, ii, [1980], 59-95, and J. Danielou, *Christianity as a Jewish sect*, in *The crucible of Christianity*, ed. A. Toynbee, London 1969, 282).

As noted above, the words *Yahūd, Yahūdī*, and *Hūd* first appear in the Medinan sūras—albeit a total of fifteen times, compared with the forty-three specific mentions of the *Banū Isrāʾīl* throughout the entire Ḳurʾān (the verbal form [*alladhīna*] *hādū*—"those who are Jewish"—appears ten times.) During this fateful time, fraught with tension after the Hidjra, when Muḥammad encountered contradiction, ridicule and rejection from the Jewish scholars in Medina, he came to adopt a radically more negative view of the people of the Book who had received earlier scriptures. This attitude was already evolving in the third Meccan period as the Prophet became more aware of the antipathy between Jews and Christians and the disagreements and strife amongst members of the same religion. The Ḳurʾān at this time claims that it will "relate [correctly] to the Children of Israel most of that about which they differ" (XXVII, 76).

Whereas the term *Banū Isrāʾīl* appears in the Ḳurʾān in both positive and negative contexts, the term *Yahūd* is most frequently negative. The *Yahūd* are associated with interconfessional strife and rivalry (II, 113). They believe that they alone are beloved of God (V, 18), and only they will achieve salvation (II, 111). They blasphemously claim that Ezra is the son of God, as Christians claim Jesus is (IX, 30) and that God's hand is fettered (V, 64). Together with the polytheists, Jews are "the most vehement of men in enmity to those who believe" (V, 82). Some of those who are Jews (*min alladhīna hādū*) "pervert words from their meanings" (IV, 44), have committed wrongdoing, for which God has "forbidden some good things that were previously permitted them" (IV, 160), they listen for the sake of mendacity (V, 41), and some of them have taken usury and will receive "a painful doom" (IV, 161).

3. In the *Ḥadīth* and early traditional literature.

The Jews are mentioned frequently in the canonical traditions, the *Sīra*, and the early literature about the Prophet's struggles (*maghāzī*) and the lives of his companions (*ṭabaḳāt al-ṣaḥāba*), as well as in Ḳurʾānic exegesis (*tafsīr*).

As in the Ḳurʾān, both the terms *Banū Isrāʾīl* and *Yahūd* continue to be used in the traditional literature, with the former having the broader meanings of both ancient Israelites and contemporary Jews (and again, even sometimes Jews and Christians, i.e. *ahl al-kitāb*). However, the designation *Yahūd* now becomes very common, and frequently the term *Yahūd* appears in contexts that are most frequently negative, as in Muḥammad's encounters with the Jewish tribes in Medina (the Banū Ḳaynuḳāʿ, al-Naḍīr and Ḳurayẓa [*q.vv.*]) and with the inhabitants of the oasis of Khaybar, all of which are related in the greatest of detail in the *Sīra* and the *Maghāzī*. For example, the rabbis of the Jews in Medina are singled out as "men whose malice and enmity was aimed at the Apostle of God" (Ibn Hishām, *Sīra*, Cairo, 1955, i, 516; *hāʾulāʾi aḥbār al-Yahūd, ahl al-shurūr wa ʾl-ʿadāwa li-Rasūl Allāh*). The *Yahūd* in this literature appear not only as malicious, but also deceitful (e.g. al-Wāḳidi, *Maghāzī*, i, 363 ff.), cowardly (Ibn Hishām, ii, 57) and totally lacking resolve (*ibid.*, 236). However, they have none of the demonic qualities attributed to them in mediaeval Christian literature, neither is there anything comparable to the overwhelming preoccupation with Jews and Judaism (except perhaps in the narratives on Muḥammad's encounters with Medinan Jewry) in Muslim traditional literature. Except for a few notable exceptions, such as Ḥuyayy b. Akhṭab, a leader of the Banu ʾl-Naḍīr, and the Ḳuraẓī chieftain Kaʿb al-Asad, the Jews in the *Sīra* and the *Maghāzī* are even heroic villains. Their ignominy stands in marked contrast to Muslim heroism, and in general, conforms to the Ḳurʾānic image of "wretchedness and baseness stamped upon them" (II, 61).

In the *Ḥadīth*, the *Yahūd* are mentioned most often in traditions that emphasise the differences between Muslims and non-Muslims, as for example with regard to sexual mores, purity laws, and various customs and practices (cf. Abū Dāwūd, *Sunan*, *k. al-nikāḥ, bāb* xlviii; Muslim, *Ṣaḥīḥ, ḳ. al-ḥayḍ, bāb* xvi; and especially al-Bukhārī, *Ṣaḥīḥ, k. al-anbiyāʾ, bāb* 1, 2-10) and that express disapproval of non-Muslim practices (cf. *ibid.*, *k. al-ṣalāt, bāb* xlviii). In traditions, dealing with the proper ways of interacting with non-Muslim monotheists—as for example in the case of how to salute members of the *ahl al-dhimma*—the Jews are specifically mentioned because of their malicious punning on the *taslīm* with *al-sām ʿalayk* instead of *al-salām ʿalayk*, to which a Muslim should respond *wa-ʿalayk* or *wa-ʿalaykum* (cf. e.g. al-Bukhārī, *k. al-istiʾdhān, bāb* xxii). By contrast, when the tradition allows for a more positive, or at least neutral, identification with Jews (and perhaps Jews and Christians generally), the term *Banū Isrāʾīl* is more likely to be used, as in the well-known *ḥadīth* that it is not a transgression to relate traditions on the authority of the Children of Israel (al-Bukhārī, *k. al-anbiyāʾ, bāb* 1, 9: *ḥaddithū ʿan Banī Isrāʾīl wa-lā ḥaradja*).

4. In mediaeval Islamic law, literature and society.

Because of the decidedly more negative connotations of the term *Yahūd*, as opposed to *Banū Isrāʾīl*, the latter increasingly became the polite usage in Arabic when referring to Jews (in a semantic parallel to early modern French usages *juif* versus *israélite*). *Al-Isrāʾīlī* was the usual *nisba* for distinguished Jews, such as Mūsā b. Maymūn al-Isrāʾīlī al-Andalusī (Ibn al-Ḳifṭī, *Ḥukamāʾ*, ed. Lippert, 317) as well as for Jewish converts to Islam, such as the poet Abū Isḥāḳ

b. Sahl al-Isrā'īlī [*q.v.*]. This use of the term *Banū Isrā'īl* as more euphemistic than *Yahūd* was merely a tendency, particularly in religious literature and was by no means consistent in any case. Mediaeval Arab historians and geographers on the whole referred to Jews as such without either a negative or positive connotation. Thus for example, Ibn Khurradādhbih refers to Radhanite Jewish merchants as *tudjdjār al-yahūd al-rādhāniyya* (*Masālik*, 153), while al-Mas'ūdī refers to the Jews of 'Irāḳ as *Banū Isrā'īl* and as *Yahūd* (*Tanbīh*, 79 and 113). Naturally, *Yahūd* is invariably used when authors make a distinction from Christians or specify them alongside Christians, as does, for example, al-Muḳaddasī when describing the population of Jerusalem (167).

The perception of Jews in the Middle Ages was on the whole even more condescending than that of Christians. In fact, the great 3rd/9th century essayist al-Djāḥiẓ notes that the Muslim masses perceived the Christians as being "more sincere than the Jews, closer in affection, less treacherous, less unbelieving, and deserving of a lighter punishment [on Judgment Day]". He goes on to analyse the historical and sociological reasons for this popular preference, namely, that the Jews had opposed the Prophet in Medina and generally belonged to a lower socio-economic stratum of society than either the Christians or Zoroastrians (*K. al-Radd 'alā 'l-Naṣārā*, ed. J. Finkel, Cairo 1926, 13-14; see also Wasserstrom, *Between Muslim and Jew*, 19-46).

Despite what may have been the greater social prejudice in early Islam towards the *Yahūd*, Islamic law made no distinction between Jews and other tolerated non-Muslims. Administrative decrees meant to interpret, amplify, and execute the *Sharī'a* rules of *ghiyār* [*q.v.* and see also LIBĀS] sometimes made differentiation as to the badge or garment colour for members of each of the various *dhimmī* communities. But from a strictly constitutional point of view, all were subsumed under the same legal category of *ahl al-dhimma* [*q.v.*], or protégés of the *umma*. The fact that the Jews shared their *dhimmī* status with the far more numerous and conspicuous Christians and Zoroastrians mitigated and diffused any specifically anti-Jewish sentiments into a broader prejudice against the *ahl al-dhimma*. Furthermore, Jews did not have to bear the onus of suspicion that was harboured toward some of the Christian communities and that grew from the period of the Crusades onward, that they were friendly toward the European powers and a potential fifth column.

Only when a Jew was perceived to have egregiously transgressed the bounds of proper conduct as stipulated in the theoretical contract of protection (*dhimma* or *amān*) with the Islamic state by rising too high in the bureaucracy and not conducting himself in an appropriately humble manner, could specifically anti-Jewish sentiments be stirred up and given voice in satires aimed at the Jews. Such satires about the *Yahūd* circulated when the Tustarīs were at the height of their power and influence in Fāṭimid Egypt, the Ibn Naghrelas held the vizierate in Zīrid Granada, and Sa'd al-Dawla was vizier to the Il-Khānid ruler of 'Irāḳ and Persia (Ibn Muyassar, *Ta'rīkh Miṣr*, ed. H. Massé, Cairo 1919; Dozy, *Recherches*[3], pp. lxii-lxvii; al-Waṣṣāf, *Ta'rīkh-i Waṣṣāf*, BL ms. Add. 23517, fol. 202a, cited in Fischel, *Jews*, 111; see also Stillman, *Jews of Arab lands*, 51, 59, 214-16). In these and similar cases, as for example the rioting that followed the downfall of the Jewish vizier Hārūn b. Baṭash in Marīnid Fās ('Abd al-Bāsiṭ b. Khalīl, *al-Rawḍ al-bāsim*, ed. R. Brunschvig, Paris 1936, 49-55, tr. in Stillman, *Jews of Arab lands*, 281-6), popular animus could overflow into violence not only against the individual Jewish official, but against the entire Jewish community as well. However, such specifically anti-Jewish manifestations were exceptional. The Geniza documents show that mediaeval Jews were aware of hostility towards their community specifically as Jews and referred to it by the Judaeo-Arabic word *sin'ūth* (Goitein, *Med. soc.* ii, 278).

Mediaeval Muslim theologians devoted only a very small part of their polemics against other religions and doctrines to Judaism. There is nothing in Islam comparable in quantity and rarely in sheer vitriol to the *Adversus Judaeos* literature of the Church. With the exception of Ibn Ḥazm's *Risāla fī 'l-radd 'alā Ibn al-Naghrīla al-Yahūdī* (*Rasā'il Ibn Ḥazm*, ed. I. 'Abbās, Beirut 1981, 41-70), which is prompted more by the sentiments stirred up by Jews holding high office than by specific theological questions, there are relatively few independent exposés of the falseness of Judaism. Most of the latter seem to have been written by Jewish converts to Islam anxious to prove their neophyte zeal by exposing the errors of their former faith. Among the best-known of such works are al-Samaw'al al-Maghribī's *Ifḥām al-Yahūd* (ed. and tr. M. Perlmann, New York 1964 [= *PAAJR*, xxxii]), Sa'īd b. Ḥasan's *Kitāb Masālik al-naẓar* (ed. and tr. S.A. Weston, in *JAOS*, xxiii [1904], 312-83), and 'Abd al-Ḥaḳḳ al-Islāmī's *al-Sayf al-mamdūd fī 'l-radd 'alā aḥbār al-Yahūd* (ed. and tr. E. Alfonso, Madrid 1998). All three of these treatises are rather late, dating from the 6th-8th/12th-14th centuries. Earlier anti-Jewish treatises did exist, but none prior to Ibn Ḥazm's from the 5th/11th century has survived. In marked contrast to these militant polemics are the admirably academic and dispassionate descriptions of Jews and Judaism in the histories and compendia of religions and beliefs, such as al-Bīrūnī's *al-Āthār al-bāḳiya 'an al-ḳurūn al-khāliya* (ed. E. Sachau, Leipzig 1878) and especially al-Shahrastānī's *al-Milal wa 'l-niḥal* (ed. W. Cureton, London 1842-46 and numerous other editions).

5. In folklore.

Jews are occasionally depicted in Arabic folktales or mentioned in popular proverbs, but once again, neither quantitatively nor qualitatively comparable to their place in the folklore of western Christendom. The *Alf layla wa-layla* contains, in addition to pious tales belonging to the *isrā'īliyyāt* [*q.v.*] genre in which the principal characters are called Israelites (see the examples cited in M. Gerhardt, *The art of story-telling*, Leiden 1963, 365-69), some isolated Jewish individuals who are identified as Jews simply to provide colour and spice to an ethnic mosaic of characters, such as the Jewish doctor in the Hunchback cycle of tales (ed. M. Mahdi, i, Leiden 1984, 280-379).

Overall, Jews are mentioned only peripherally in later Arabic folklore, although perhaps somewhat more in the Maghrib than in the Levant, since no indigenous Christians remained in North Africa after the Almohad period. Proverbs and folktales stereotypically portray the *Yahūdī* as sly, untrustworthy and occasionally malevolent (E. Westermarck, *Wit and wisdom in Morocco*, London 1930, 130-1, nos. 468-73). However, there are also examples of more positive images in which the Jews are depicted as useful and even better than a vile Muslim (*ibid.*, 131, nos. 474-6).

6. In the modern era.

Increased European commercial, missionary and imperialist activities within the Muslim world during the 19th and 20th centuries introduced anti-Semitic ideas and literature into the region. At first these prejudices only found a reception among Arabic-speaking Christian protégés of the Europeans in Syria, Lebanon

and Egypt and were too new and too palpably foreign for any widespread acceptance among Muslims. However, with the ever-increasing conflict between Arabs and Jews in Palestine during the period of the British Mandate, the language and imagery of European anti-Semitism began to appear in political polemics both in the nationalist press and in books (Stillman, *New attitudes toward the Jew in the Arab world*, in *Jewish Social Studies*, xxxvii [1975], 197-204; idem, *Antisemitism in the contemporary Arab world*, in *Antisemitism in the contemporary world*, ed. M. Curtis, Boulder and London 1986, 70-85). For more than two decades following 1948, this trend increased greatly, but peaked by the 1970s, and declined somewhat as the slow process of rapprochement between the Arab world and the state of Israel evolved in the 1980s and 1990s; it remains to be seen how the tensions arising in 2000 will affect the trend.

YAḤYĀ B. **ʿABD ALLĀH** B. AL-ḤASAN B. AL-ḤASAN b. ʿAlī, Medinan ʿAlid leader of a revolt in Daylam and Zaydī *imām*. His mother was Ḳurayba bt. Rukayḥ b. Abī ʿUbayda b. ʿAbd Allāh b. Zamʿa b. al-Aswad, niece of the mother of his paternal brothers Muḥammad al-Nafs al-Zakiyya [*q.v.*] and Ibrāhīm, leaders of the Ḥasanid revolt against the caliph al-Manṣūr in 145/762. As a much younger brother, born perhaps around 128/745-6, he did not participate in that revolt. He was partly brought up and taught by the Imāmī Shīʿī *imām* Djaʿfar al-Ṣādiḳ [*q.v.*], presumably after the imprisonment of his father in 140/758, and Djaʿfar (d. 148/765) made him one of his legatees. Yaḥyā seems to have revered him. He followed him in his ritual practice and transmitted legal doctrine mainly from him. He appears in Imāmī books as a transmitter from Djaʿfar.

Yaḥyā took a prominent part in the revolt of the Ḥasanid al-Ḥusayn b. ʿAlī Ṣāḥib Fakhkh [*q.v.*] in Medina in 169/786. After the collapse of the revolt he, his brother Idrīs [see IDRĪS I], and some others found shelter with a tribesman of Khuzāʿa who aided them to escape by boat to Abyssinia. There they stayed some time with the king. After returning to Arabia, the two brothers met with a group of loyal supporters at Shiʿb al-Ḥaḍārima near Mecca. They agreed that Ibrāhīm should seek support in the Maghrib, while Yaḥyā first went to Yemen. The sources give different accounts about his peregrinations during the following years. According to the best one, he went from Yemen to Upper Mesopotamia, Armenia, and then to Baghdād. Having been discovered, he fled again to Yemen and stayed for eight months in Ṣanʿāʾ with a man of the Abnāʾ. It was at this time, perhaps in 174/790-1, that al-Shāfiʿī [*q.v.*] studied with him and became one of his supporters. He then went on to Khurāsān and wrote, probably just after the murder by poison of his brother Idrīs by an agent of the caliph Hārūn al-Rashīd, to Sharwīn b. Surkhāb, the Bāwandid ruler of Fīrīm in the mountains of Ṭabaristān, requesting asylum for three years. Sharwīn responded positively but guided him to Djustān, king of Daylam, who would be in a better position to protect him. That he, in accordance with another account, also travelled to Djūzdjān, Balkh, Transoxania and stayed with an unidentified "Khāḳān of the Turks" (perhaps the Afshīn of Ushrūsana), is more doubtful. It is to be noted, however, that al-Faḍl b. Yaḥyā al-Barmakī, when sent to capture him, first defeated the Khāḳān, who had intruded deeply into the territory of Islam. This is confirmed by two lines of contemporary poetry by Abū Thumāma al-Khaṭīb.

Yaḥyā arrived in Daylam in 175/791-2 and was soon joined by a substantial number of supporters. In 176/792 he proclaimed his rising against the caliph. Al-Rashīd was deeply alarmed and sent al-Faḍl b. Yaḥyā as governor of Djibāl, Rayy, Djurdjān, Ṭabaristān, Ḳūmis, Dunbāwand and Rūyān with an army of 50,000 and much money to meet the challenge. Al-Faḍl took al-Ṭālaḳān, and set himself up nearby at Ashhab in the Elburz mountains from where he sent letters to Yaḥyā and Djustān offering pardon to the former and a million dirhams to the king. A report that al-Faḍl had earlier advised and helped Yaḥyā to seek refuge in Daylam and that al-Rashīd, informed of his treason, sent him against the ʿAlid in order to test him, is hardly credible. Yaḥyā eventually accepted an ironclad letter of amnesty and safety for himself and seventy followers, formulated by himself and handwritten by the caliph and endorsed by legal scholars, judges, and prominent ʿAbbāsids, together with lavish gifts. He obtained a further letter of safety from al-Faḍl and then surrendered. Later, he explained that he surrendered because the wife of the king of Daylam pressed the latter to accept al-Faḍl's offers out of greed and because there was discord between himself and some of his Kūfan followers who would not heed his Shīʿī prohibition of *masḥ ʿalā ʾl-khuffayn* [*q.v.*] and drinking of date wine. The son of the Kūfan Batrī leader al-Ḥasan b. Ṣāliḥ b. Ḥayy on one occasion led the prayer of his followers without waiting for Yaḥyā, who then performed his prayer separately, knowing that al-Ḥasan's son practiced *masḥ*. The latter remarked to his companions, Why should they allow themselves to be killed for a man who did not consider prayer with them licit?

Yaḥyā was received by the caliph in Baghdād with great honours, and the event was celebrated as signifying a reconciliation between ʿAbbāsids and ʿAlids. He is said to have received gifts of 200,000 or 400,000 dīnārs from both al-Rashīd and al-Faḍl. The caliph, however, sought to keep him under supervision in Baghdād, against the letter of pardon which guaranteed him the right of free movement anywhere. Yaḥyā participated in a pilgrimage to Mecca and then was allowed by al-Faḍl, without the caliph's knowledge, to move to his family estate Athyab outside Suwayḳa near Medina. The caliph asked al-Faḍl to bring him back, but the latter evidently insisted on keeping the terms of the pardon. Yaḥyā now used the money he had been given to pay the debts of the Ṣāḥib Fakhkh and support needy ʿAlids. There is no evidence that he had any seditious designs, but the caliph remained

deeply suspicious. He appointed two members of the fiercely anti-ʿAlid family of al-Zubayr as governors of Medina, first ʿAbd Allāh b. Muṣʿab b. Thābit (180/796-7) and then his son Bakkār (181-93/797-809). Soon after his accession, Bakkār complained to al-Rashīd that Yaḥyā was behaving like a second caliph and was venerated by the people, who visited him from everywhere. He insinuated that the ʿAlid was engaged in treason and advised the caliph to recall him in order to forestall a major rebellion. Al-Rashīd ordered Yaḥyā to be sent back to Baghdād.

There are numerous reports, partly of a legendary character and contradictory, about the vicious treatment of Yaḥyā by the caliph after his recall. It is clear that Yaḥyā was confined, rather than kept in prison, for part of the time. One well-informed account speaks of three occasions on which he was imprisoned (al-Ṭabarī, iii, 624). In 184/800 ʿAbd Allāh b. Muṣʿab, now at the caliphal court, told al-Rashīd that he had received a call (*daʿwa*) from Yaḥyā to back his seditious aspirations. He suggested that, given the enmity between Zubayrids and ʿAlids, Yaḥyā must have already received the backing of everybody at court for his designs and that the caliph thus could not trust anyone of his wives, servants, and army leaders. Al-Rashīd confronted him with Yaḥyā, who denied the accusation and demanded that the truth be established by an oath of *mubāhala* [*q.v.*] between himself and his opponent. This was done, and ʿAbd Allāh b. Muṣʿab, according to the account, died on the same day. His death (27 Rabīʿ I 184/29 March 800) was, in any case, accepted by the caliph as a vindication of Yaḥyā.

Al-Rashīd felt, however, increasingly frustrated by his letter of pardon. He was particularly infuriated by Yaḥyā's refusal to identify his seventy supporters protected by the pardon and accused him of protecting all his Shīʿī followers by claiming, whenever one of them was caught, that he belonged to those granted amnesty. He convened a group of legal scholars, among them the Ḥanafī Muḥammad b. al-Ḥasan al-Shaybānī, and prominent men to have the letter declared invalid. When al-Shaybānī categorically stated that the letter was valid and inviolable, al-Rashīd in his anger hit his head with an inkstand. Abu 'l-Bakhtarī Wahb b. Wahb then declared the letter invalid and cut it up with a knife. According to one account, al-Rashīd on that occasion set up Yaḥyā b. Khālid al-Barmakī to testify that Yaḥyā b. ʿAbd Allāh had secretly sent his propagandists who had obtained the pledge of allegiance of the common people of Baghdād for him and that a man had been apprehended on the way to Balkh with letters summoning the people of Khurāsān to rebellion. Such a role of Yaḥyā b. Khālid is not implausible since he had in 183/799 undertaken to have the Shīʿī Imām Mūsā al-Kāẓim [*q.v.*] murdered in order to protect his son al-Faḍl, who had aroused the caliph's anger by failing to carry out his order to kill him.

Al-Rashīd, however, still had scruples to execute Yaḥyā in public. He handed him over to the Barmakid Djaʿfar b. Yaḥyā, indicating to him that he wanted him dead. Djaʿfar is said to have been ready to carry out the caliph's wishes, but then was persuaded by Yaḥyā to let him escape on a commitment that he would immediately leave for Byzantine territory and stay there as long as al-Rashīd was alive. Yaḥyā was apprehended at Maṣṣīṣa and was brought before Muḥammad b. Khālid b. Barmak, governor of the border towns, who recognised him. Realising that the fate of the Barmakids would be sealed if the caliph learned of Yaḥyā's liberation by Djaʿfar, Muḥammad hastened to inform the caliph secretly during his pilgrimage to Mecca in 186/802. Al-Rashīd concealed the matter until his return from the pilgrimage, when he ordered the execution of Djaʿfar and the arrest of the other Barmakids and confiscation of their property with the exception of Muḥammad b. Khālid. That Djaʿfar's brutal execution was caused by his release of Yaḥyā is categorically affirmed in another account by Abū Muḥammad al-Yazīdī, who, according to al-Ṭabarī, was said to have had the most intimate knowledge of the affairs of the Barmakids.

Yaḥyā was now handed over to al-Sindī b. Shāhak, police prefect of Baghdād, who had three years before brought about the death of Mūsā al-Kāẓim in prison. Yaḥyā also died in his prison, most likely in 187/803. According to his grandson Idrīs b. Muḥammad, he was killed in prison by starvation and thirst. Reports that he was either buried alive in a village near Rayy during al-Rashīd's campaign there in 189/805 or escaped are unreliable.

Yaḥyā's revolt paved the way for the spread of Zaydī Shīʿism among the Daylamīs and in Ṭabaristān and Gīlān. A number of Daylamīs were converted by him to Islam and are said to have built his house and mosque in their country. They later used to call themselves "helpers of the Mahdī (*anṣār al-mahdī*)".

(W. Madelung)

YAḤYĀ b. **ĀDAM** b. Sulaymān, Abū Zakariyyāʾ al-Kūfī, Ḳurʾān, *ḥadīth* and *fiḳh* scholar, d. 203/818. He had the *nisba*s al-Ḳurashī and al-Umawī because, through his father Ādam who was probably of Persian origin, he was a client (*mawlā*) of a certain Khālid b. Khālid b. ʿUmāra b. al-Walīd b. ʿUḳba b. Abī Muʿayṭ al-Umawī, also al-Makhzūmī (e.g. in al-Nawawī, but according to Schacht in *EI*[1], this is a mistake), and the *laḳab* is al-Aḥwal (Sezgin, i, 520; Shākir, 8). His biography as transmitted is very sparse.

Born after 130/747-8, probably *ca.* 140/757-8, he grew up and for the most part lived in al-Kūfa, as the *nisba* al-Kūfī seems to indicate. He possibly lost his father, also a traditionist, before he was born (al-Dhahabī, *Siyar*, 1982). Almost nothing is known about his life. It is said that he visited the caliph Hārūn al-Rashīd in al-Ḥīra, together with his teacher Abū Bakr b. ʿAyyāsh (d. 193/809) (Sezgin, i, 520, after Yāḳūt, *Irshād*), but it is not clear whether such information permits us to conclude that he was a "distinguished" man. His good reputation, if not his renown, is supported by the fact that the Persian secretary, ʿIrāḳī governor and father-in-law of al-Maʾmūn, al-Ḥasan b. Sahl [*q.v.*], prayed over Yaḥyā when he died around the middle of Rabīʿ I 203/21 September 818 at Fam al-Ṣilḥ, not far from Wāsiṭ. Al-Ḥasan, shocked by the murder, perpetrated in 202/818 near Sarakhs [*q.v.*],

of his famous brother, the pro-Iranian vizier and former Barmakid pupil al-Faḍl b. Sahl [*q.v.*], performed this ceremony at the place where he possessed an estate and where he later had his refuge (Ibn Ḳutayba, *Maʿārif*).

In spite of this, the deceased was apparently considered as a foreigner at this place; perhaps he had fled there from the restlessness of al-Kūfa in those days, unless al-Ḥasan had ordered him to come, alone or together with others, on his own behalf or in the name of the ruler, in order to benefit from his spiritual and moral authority. Yaḥyā's life span comprised six caliphates, apparently without him having entered the services of any caliph or having held public posts in the juridical, political or administrative fields (as did his colleagues Abū Yūsuf and Abū ʿUbayd [*q.vv.*]). It is as if he lived only for the acquisition and transmission of learning; he never became dependent and kept out of everyday disputes on religion and politics while sharing this abstention from politics with other conscientious men of his time (S̲h̲ākir, 11-12). From the spirit of his way of working and the reports about him, it seems that he grew up in the austere style of early Islam, that he was marked by a profound study of the *Sīra* and Sunna of the Prophet and the *salaf* [*q.v.*], by piety, honesty and a conciliatory character, and that he was led by well-grounded principles of religious law which he intended to transmit faithfully; he thus probably aimed at an ideal harmonising of the so-called *ʿibādāt* and *muʿāmalāt* [*q.vv.*] on the basis of Ḳurʾān, Sunna and *fiḳh*. In doing this he found himself in a relatively independent and uncommitted legal position within a juridical system that, moreover, had not yet solidified. His contemporaries and the authors of *rid̲j̲āl* [*q.v.*] works considered him, among other things, as a leader in Ḳurʾānic, *ḥadīt̲h̲* and legal disciplines, highly trustworthy and reliable, an outstanding figure in his fields of knowledge, and one of the *imāms* and highlights of Islamic scholarship and traditionalism, as if the accumulated knowledge of preceding great men had come together in his esteemed personality, described as almost perfect (al-D̲h̲ahabī, *Siyar*, 1982, 522-9; idem, *Tad̲h̲kirat al-ḥuffāẓ*, 327-8; Ibn al-ʿImād, *S̲h̲ad̲h̲arāt*, 8; al-Dāraḳuṭnī, 405; Ibn Ḥad̲j̲ar, *Tahd̲h̲īb*, 175; al-Nawawī, *Tahd̲h̲īb*, 150).

Among his teachers one finds such illustrious names as al-Ḥasan b. Ṣāliḥ b. ʿAyyās̲h̲ and his brother Abū Bakr b. ʿAyyās̲h̲, Sufyān al-T̲h̲awrī, Sufyān b. ʿUyayna, S̲h̲arīk b. ʿAbd Allāh al-Nak̲h̲aʿī, Ibn al-Mubārak, Wakīʿ and Ḥammād b. Salama; among his students were Aḥmad b. Ḥanbal, Ibn Abī S̲h̲ayba and Yaḥyā b. Maʿīn (lists in al-D̲h̲ahabī, *Siyar*, ix, 523; idem, *Tad̲h̲kirat al-ḥuffāẓ*, 327-8; Ibn al-ʿImād, ii, 8; Ibn Ḥad̲j̲ar, xi, 175; al-Nawawī, *Tad̲h̲kirat al-asmāʾ wa ʾl-lug̲h̲āt*, ii, 150).

Ḳurʾānic studies were apparently an important part of his activity. The author of the *Fihrist* ascribes two works to him: a *K. al-Ḳirāʾāt* and a *K. Mud̲j̲arrad aḥkām al-Ḳurʾān* (35, 38). The latter, however, belongs rather to *fiḳh*. As a Ḳurʾān teacher with his own pupils, Yaḥyā stands less in the Kūfan tradition of al-Kisāʾī [*q.v.*] than in that of ʿĀṣim (d. 127-8/745), whose *tad̲j̲wīd* and *ḥurūf* he took over through the *rāwī* Abū Bakr b. ʿAyyās̲h̲ and whose lectures he wrote down "letter by letter" in a note-book which he carried with him for decades (al-D̲h̲ahabī, *Siyar*, ix, 527). On the other hand, it is said that Yaḥyā did not meet S̲h̲uʿba (b. ʿAyyās̲h̲), the other *rāwī* of ʿĀṣim (*ibid.*, ix, 523). If it is correct that he also transmitted readings of al-Kisāʾī; even if only a few, this would indicate a certain independence in the field of *ḳirāʾāt*.

Three other works which the *Fihrist* ascribes to Yaḥyā point to his scholarship as that of a traditional jurist: a *K. al-Farāʾiḍ*, a *K. al-Zawāl*, and *K. al-K̲h̲arād̲j̲*, a work on the land tax that so far has survived in only one manuscript. This last has been judged variously. Schacht was of the opinion that it was a refutation of a book of the same name by Abū Yūsuf, but this seems unlikely. In Yaḥyā's work there is no trace of any feeling against Abū Yūsuf, rather, it is complementary to the latter's transmission of materials (*Taxation*, 17). A refutation would contain something polemical, and would hold one's own better judgement against the opponents. Of this, however, nothing can be detected. Brockelmann's judgement (I, 192), that Yaḥyā was a scholar of *ḥadīt̲h̲*, mainly occupied with juridical questions without following one particular school, is certainly close to the truth. Ben Shemesh keeps Yaḥyā out of the "controversies and disputes of his time", and does not classify him in any juridical current of opinion (*Taxation*, 2). He traces his neutral position here to the fact that the differences between the schools were not yet distinctly marked, and that his peaceful mind "prevented him from attacking higher-placed persons" (*Taxation*, 3; cf. Ibn Ḥad̲j̲ar, *Tahd̲h̲īb*, xi, 176). He could, as it were, take from everybody without being a follower. He was certainly quite close to his most important teacher and informant, the pious Kūfan *faḳīh*, Zaydī theologian and co-founder of the Ṣāliḥiyya, al-Ḥasan b. Ṣāliḥ b. Ḥayy (d. 167/784 [*q.v.*]), but without being a full-fledged adherent of his way of thinking, nor was he a real Zaydī (*pace* Van Ess, *Theologie*, i, 246-7). It is not surprising that his *Kitāb al-K̲h̲arād̲j̲* "was above all passed on in Ḥanbalī circles" (Van Ess, *ibid.*); his neutral stance and in, particular, his orthodox traditionalism must have appealed to the Ḥanbalīs, as is clear from the listeners' certificates in the manuscript studied by Ben Shemesh. The *Kitāb al-K̲h̲arād̲j̲* is mainly a compilation of traditions (probably collected for his students in the first place) referring to the usual procedures regarding the land tax and its various types as practised by Muslims and *D̲h̲immīs*. According to Ben Shemesh, the work adds few explanations by Yaḥyā himself, and offers a rigid model which, because of its lack of variability and creativity, can hardly be harmonised with the actual circumstances as they were developing in landed property and land matters, and with the administration of the estates and fixed property of the *futūḥ* in general (*Taxation*, 6-7). It would seem that many of Yaḥyā's explanations for the statements of the traditions, strung together according to topoi, are of a remarkably realistic and pragmatic nature, competent, clever, displaying his experience, but always somewhat old-fashioned; moreover, the work deals in particular with the Sawād [*q.v.*] (of Kūfa), with Western Persia and with the Arabian Peninsula. The weakness of the work affects more or less all *k̲h̲arād̲j̲* books, in particular those focussing on traditions, such as the *K. al-Amwāl* of Abū ʿUbayd.

Wherever possible, the book is based on the Ḳurʾānic model and the earliest juridical practice, (allegedly) used during the *mag̲h̲āzī* and the *futūḥ* by the Prophet, the *ṣaḥāba* (in particular the "Rightly-Guided Caliphs") and the Successors, or by individual persons such as ʿUmar b. ʿAbd al-ʿAzīz. The work also preserves older types of (Arab and to a lesser extent, Sāsānid) landed property, poll tax, taxes on land and property in their dependence on the status of the land, on conquest vs. capitulation, on the various kinds of yield, income and also irrigation [see K̲H̲ARĀD̲J̲, D̲J̲IZYA, ʿUS̲H̲R, ZAKĀT], of modalities of pur-

chase and lease, etc. The book puts a high value on authentic tradition whose timeless model character it upholds, but does not go much into the practical applicability in real-life land taxation. None of the *kutub al-kharādj* was likely to be satisfactory in real life. But Yaḥyā also left some "lee-way": adaptations to new situations, should they become necessary, could always be done by caliphal fiat.

YAḤYĀ B. ʿADĪ, Christian Arab philosopher and theologian, translator and commentator of the works of Aristotle. Coming from the Christian town of Takrīt on the Tigris (but given a Persian genealogy in some of the manuscripts), he spent his active life in Baghdād, where he earned his living as a copyist and bookseller (*warrāḳ*); this activity is recorded by his contemporary Ibn al-Nadīm (d. 380/990 [*q.v.*]), who drew extensively on Yaḥyā's library for information on the Greek philosophers and their Arabic transmitters (*Fihrist*, 264, cf. 246, 250-3). There he died on 21 Dhu 'l-Ḳaʿda 363/13 August 974 at the age of 81 years.

Ibn ʿAdī was recognised by his contemporaries as master of the *falāsifa* in his time. He took the teaching of Aristotelian philosophy from the Nestorian translator Abū Bishr Mattā b. Yūnus (d. 328/940 [*q.v.*]) and from the latter's most eminent Muslim student, Abū Naṣr al-Fārābī (d. 339/950 [*q.v.*]). Following Mattā's tradition, he translated (from the Syriac) and annotated parts of the *Organon* of logic and of Aristotle's physical and metaphysical work. Al-Fārābī's concept of philosophy as demonstrative science, where absolute knowledge is based on the principles established in Aristotle's *Analytica posteriora* (the *K. al-Burhān*) is upheld by Ibn ʿAdī as the universal foundation of sound thinking and righteous action.

The greater part of his extant philosophical work is devoted to logic and epistemology. The parts of Aristotle's *Organon* of logic, translated or re-translated by Isḥāḳ b. Ḥunayn, Abū ʿUthmān al-Dimashḳī and Mattā b. Yūnus [*q.vv.*], and his own version of the *Sophistici elenchi* (combined with two alternative versions), compiled and annotated by himself and his school, were copied from his holograph by his students and successors, ʿĪsā b. Zurʿa (d. 398/1008) and al-Ḥasan b. Suwār (d. after 407/1017), in the Paris manuscript, B.N. ar. 2346—an impressive document of the extent and standard of Aristotle reading in his school (cf. H. Hugonnard-Roche, *Une ancienne «édition» arabe de l'Organon d'Aristote: problèmes de traduction et de transmission*, in *Les problèmes posés par l'édition critique des textes anciens et médiévaux*, Louvain-la-Neuve 1992, 139-57). Apart from that on logic, he translated other works of Aristotle and his ancient commentators (e.g. parts of the *Physics* and *Metaphysics*; only his translation of Themistius' paraphrase of Aristotle's *De caelo* has survived in a Hebrew version). His own contributions are devoted to the traditional topics of introduction to the study of logic and philosophical method: a commentary of the book *Alpha minor* of Aristotle's *Metaphysics*, and numerous *quaestiones* and lecture notes on the elements of epistemology, the categories and the syllogism, and theoretical physics. A popular compendium of ethics, called *Tahdhīb al-akhlāḳ* "The refinement of character" (like that of his contemporary, Miskawayh [*q.v.*]), is founded on the Platonic tripartition of the soul (appetitive, spiritual, rational); after giving a catalogue of the virtues and vices of each part, the author shows the way to perfection under the rule of reason (see Khalil Samir, in *Arabica*, xxi [1974], 111-38, xxvi [1979], 158-78; the latest of several editions by Djād Ḥātim, Beirut 1985).

Most significant as a philosophic statement in the context of Muslim Arab society are his treatises on topics discussed in Islamic theology, not in a theological discourse, but by applying the tools of demonstrative logic to various concepts of *kalām*. Such diatribes are devoted to (1) the meaning of *tawḥīd*, the unicity of God (ed. Khalīl Samīr, *Maḳālat al-tawḥīd*, Jounieh 1980); (2) the establishment of contingent being (ed. C.-R. Ehrig-Eggert, *Die Abhandlung über den Nachweis der Natur des Möglichen von Yaḥyā ibn ʿAdī*, Frankfurt am Main 1990, Ar. text ed. by idem, in *ZGAIW*, v [1989], [Arabic part] 63-97); (3) the refutation of atomism (ed. G. Endress, in *ZGAIW*, i [1984], 155-79); (4) the concept of "acquisition" (*iktisāb*) by man of the acts created by God, current in contemporary Ashʿarism (ed. and tr. S. Pines and M. Schwarz, *Yaḥyā ibn ʿAdī's refutation of the doctrine of acquisition*, in *Studia Orientalia memoriae D.H. Baneth dedicata*, Jerusalem 1979); and in the same vein, (5) he established, against the claims of the Arab grammarians, philosophical logic as the universal tool to control correct reasoning (defending the position taken by Abū Bishr Mattā, "On the difference between the arts of philosophical logic and Arabic grammar", ed. Endress, in *Jnal. for the Hist. of Arab Science*, ii [Aleppo 1978], 38-50, 156; Ger. tr. and comm. by idem, *Grammatik und Logik: arabische Philologie und griechische Philosophie im Widerstreit*, in B. Mojsisch (ed.), *Sprachphilosophie in Antike und Mittelalter*, Amsterdam 1986, 163-299).

As a Christian theologian, Yaḥyā b. ʿAdī defended the Monophysite concept of the Incarnation against Nestorianism, and made use of the same theological-philosophical model for his apology for the Christian faith, notably the dogma of the Triune God, against Muslim polemical arguments. God is one in substance, but constituted of three essential attributes (*ṣifāt*) called *personae* (hypostases, *aḳānīm*): goodness (*djūd*), wisdom (*ḥikma*), and might (*ḳudra*). This interpretation of the Trinity reflects the primary divine triad of Neoplatonic theology (Christianised by Ps.-Dionysius Areopagita), and in the philosophical model of Ibn ʿAdī, is considered equivalent to the three aspects of the divine intellect thinking itself: absolute intellect (*ʿaḳl*), intelligence (*ʿāḳil*, thinking its own essence), and intelligible (*maʿḳūl*, being its own primary object of knowledge). These essences—the Father, the Son, and the Spirit, in the language of religion—are perceived separately, but are inseparable from the divine substance. Incarnation is the conjunction of the divine *logos*—which

is one substance—with a human nature, of which the Virgin Mary is the material cause.

Both in philosophy and theology, his teaching was continued by his Christian disciples, among whom ʿĪsā b. Zurʿa was the most prominent. But his influence went well beyond this circle, and through Muslim philosophers and intellectuals like Abū Sulaymān al-Sid̲j̲istānī and Abū Ḥayyān al-Tawḥīdī [*q.vv.*], over the following generations he reached a wide readership of courtiers, scientists, and even *mutakallimūn*.

YAḤYĀ b. **AKTHAM**, Abū Muḥammad al-Marwazī al-Tamīmī, *faḳīh* who had been a pupil of al-S̲h̲āfiʿī, judge and counsellor of ʿAbbāsid caliphs, d. 242/857.

A native of Marw, he became Grand Judge (*ḳāḍī ʾl-ḳuḍāt*) of Bag̲h̲dād after having been being appointed judge in Baṣra by al-Ḥasan b. Sahl [*q.v.*] in 202/817-18. He soon became a member of al-Maʾmūn's court circle as an adviser and boon-companion, thus exemplifying a trend under this caliph to take legal scholars rather than administrators as political counsellors. He accompanied al-Maʾmūn to Syria and Egypt and on the campaign against Byzantium of 216/831 (al-Ṭabarī, iii, 1104). There were persistent accusations against him of pederasty, and on al-Maʾmūn's death he fell from power. Re-appointed Grand Judge under al-Mutawakkil during the years 237-40/851-5, he again fell into disgrace, departed for the Pilgrimage but died at al-Rabad̲h̲a near Medina at an advanced age on 15 D̲h̲u ʾl-Ḥid̲j̲d̲j̲a 242/14 April 857. He is said to have been the author of various works on *fiḳh*, none of which has survived.

Bibliography: See D. Sourdel, *Le vizirat ʿabbāside*, i, 238-9, and Pellat's ed. of Masʿūdī, *Murūd̲j̲*, index, vii, 763-4, detailing the primary sources for Yaḥyā's life, and also Ziriklī, *Aʿlām*, ix, 167. Al-K̲h̲aṭīb al-Bag̲h̲dādī, *Taʾrīk̲h̲ Bag̲h̲dād*, xiv, 191-204 no. 7489, and Ibn K̲h̲allikān, ed. ʿAbbās, vi, 147-65, tr. de Slane, iv, 33-51, have substantial biographical entries on him. (C.E. Bosworth)

YAḤYĀ b. **ʿALĪ** [see munad̲j̲d̲j̲im, banu ʾl-. 4].

YAḤYĀ (or Yuḥannā) b. al-**BIṬRĪḲ**, Abū Zakariyyāʾ, scholar, who was probably a Mālikī, famed for his translations from Greek into Arabic, *fl.* in the first part of the 3rd/9th century.

Although the Arabic biographers (Ibn al-Nadim, Ibn D̲j̲uld̲j̲ul, Ibn al-Ḳifṭī and Ibn Abī Uṣaybiʿa) devote to him short notices, his life is almost wholly unknown. His father al-Biṭrīḳ was himself a translator in the time of al-Manṣūr (136-58/754-75 [*q.v.*]). The author of the *Fihrist* states that he was part of the entourage of the vizier al-Ḥasan b. Sahl [*q.v.*] and that he was part of a delegation sent by the caliph to the Byzantine lands in order to collect manuscripts. Ibn D̲j̲ud̲j̲ul, repeated by Ibn al-Ḳifṭī, calls him Yuḥannā and makes him a *mawlā* of al-Maʾmūn (198-218/813-33 [*q.v.*]), adding that he was a faithful translator but with a faulty knowledge of Arabic, and that he was more philosopher than physician. Ibn Abī Uṣaybiʿa writes, rather curiously, that he knew Arabic and Greek badly, since, being a Latin (*laṭīnī*), he knew the language and literature of the Rūm of his time.

According to the Arabic biographers and to mentions in the introductions of manuscripts, a dozen or so works are attributable to him: Of Plato, the Timaeus (*K. Ṭimāʾus*). Of Aristotle, his Meteorology (*al-Āt̲h̲ār al-ʿulwiyya*, ed. Badawī, Cairo 1961, ed. Petraits, Beirut 1967; On the heavens and the earth (*K. al-Samāʾ wa ʾl-ʿālam*; Book of animals (*K. al-Ḥayawān*, ed. Brugman and Drossaart Lulofs, Leiden 1971, ed. Badawī, Kuwait 1977-8); *First analytics* and a compendium of the *De anima* (*D̲j̲awāmiʿ kitāb al-nafs*). Of Galen, the Theriac of Piso (*K. al-Tiryāḳ ilā Bīsan*). Of Alexander of Tralles, a treatise on pleurisy (*K. al-Birsām*). Finally, attributed to Hippocrates is a *K. fī ʾl-but̲h̲ūr* or *Fī ʾl-mawt*. The *Fihrist* further attributes to him two original works on pharmacology, the one on poisons, *K. al-Sumūmāt* (partly extant), and the other on insects, *K. Ad̲j̲nās al-ḥas̲h̲arāt*.

Yaḥyā b. al-Biṭrīḳ is also given as the translator of the *Secretum secretorum* (*Sirr al-asrār* or *K. al-Siyāsa fī tadbīr al-riyāsa*), the famous pseudo-Aristotelian treatise, which had a great renown in the Islamic world as also in the Christian West. The attribution of the Arabic version to Yaḥyā is based on the preface (cited by Ibn D̲j̲uld̲j̲ul), in which the translator relates how he allegedly procured the work and then transposed it from the Greek into *rūmī* and Arabic. Nevertheless, it seems now established that this treatise is an Arabic apocryphal work written towards the middle of the 4th/10th century, and that the preface belongs to the realm of literary fiction (M. Grignaschi, *L'origine et les métamorphoses du* Sirr al-ʾasrār (*Secretum secretorum*), in *Archives d'Histoire Doctrinale et Littéraire du Moyen Age* [1976], 7-112).

(Françoise Micheau)

YAḤYĀ b. **ḤAMZA** al-**ʿALAWĪ**, rhetorician, Zaydī scholar and *imām* (669-745/1270-1344; a death date of 749/1348 is also mentioned).

Yaḥyā b. Ḥamza b. ʿAlī b. Ibrāhīm al-Ḥusaynī al-ʿAlawī al-Ṭālibī, a versatile and prolific Yemeni scholar, was descended from ʿAlī b. Abī Ṭālib and the *imām* ʿAlī al-Riḍā [*q.vv.*]. He was born in Ṣanʿāʾ and played a role in politics, for after the death of al-Mahdī Muḥammad b. al-Muṭahhar in 729/1329 he ruled over part of Yemen as Zaydī *imām* under the name al-Muʾayyad bi ʾllāh until his death. It is said that the number of quires (*karārīs*) written by him equalled the number of days in his life, together forming some hundred volumes. He wrote works on Zaydī theology and law, such as *al-S̲h̲āmil* and *al-ʿUmda* (on law,

in six volumes), *al-Ḥāwī* (on *uṣūl al-fiḳh*, in three volumes), *Ṭawḳ al-ḥamāma* (on the imāmate), *al-Intiṣār ʿalā ʿulamāʾ al-amṣār* (18 volumes), *Mishkāt al-anwār* (against the Bāṭiniyya) and *al-Risāla al-Wāziʿa li ʾl-umma ʿan al-iʿtirāḍ ʿalā ʾl-aʾimma* (ed. Gīza 1409/1989, with an extensive commentary warning against its Shīʿī and Muʿtazilī elements by Muḳbil b. Hādī al-Wādiʿī). Whereas most Zaydīs based themselves on the Muʿtazilī theology according to ʿAbd al-Djabbār [*q.v.*], he preferred that of Abu ʾl-Ḥusayn al-Baṣrī [*q.v.* in Suppl.]. Works on grammar are *al-Ḥāṣir* (a commentary on the *Muḳaddima* of Ibn Bābashādh) and *al-Muḥaṣṣal* (commentary on *al-Mufaṣṣal* by al-Zamakhsharī [*q.v.*]). His three-volume *al-Ṭirāz al-mutaḍammin li-asrār al-balāgha wa-ʿulūm ḥaḳāʾiḳ al-iʿdjāz* (ed. Cairo 1332/1914) is an interesting, intricately subdivided and voluminous work (more than 1,300 printed pages) on rhetoric, the third of whose three main sections (*funūn*) is devoted to *iʿdjāz al-Ḳurʾān* [*q.v.*] (for an evaluation and brief discussion of its sources, see al-maʿānī wa ʾl-bayān. 1. In Arabic). The inspiration for the book, as the author says (i, 5) was reading al-Zamakhsharī's commentary on the Ḳurʾān, *al-Kashshāf*. He sees himself as writing in the tradition of ʿAbd al-Ḳāhir al-Djurdjānī [*q.v.* in Suppl.], even though he knew the latter's two seminal works *Dalāʾil al-iʿdjāz* and *Asrār al-balāgha* only from quotations.

Bibliography: Shawkānī, *al-Badr al-ṭāliʿ*, Cairo 1348, ii, 331-3; ʿAbd al-Wāsiʿ b. Yaḥyā al-Wāsiʿī, *Furdjat al-humūm* (*Taʾrīkh al-Yaman*), Cairo 1346, 35-7; Ḥusayn b. YAḤYĀ b. **KHĀLID** [see al-barāmika].

YAḤYĀ b. **MAʿĪN** b. ʿAwn al-Murrī al-Ghaṭafānī al-Baghdādī, Abū Zakariyyāʾ, traditionist, b. 158/775 near al-Anbār, d. 233/847 on pilgrimage in Medina. A client (*mawlā*) of al-Djunayd b. ʿAbd al-Raḥmān al-Murrī, he inherited considerable wealth from his father and is reported to have spent it all on the acquisition of *ḥadīth*. Among his teachers were Sufyān b. ʿUyayna and Ibn al-Mubārak [*q.vv.*]. Authorities like Aḥmad b. Ḥanbal, al-Bukhārī and Ibn Saʿd are reported to have been among his pupils. Together with Ibn Saʿd and five others, he was ordered in 218/833 by al-Maʾmūn to profess the createdness of the Ḳurʾān. Threatened with death, they complied and the event was well publicised (al-Ṭabarī, iii, 1116). Ibn Ḥanbal never spoke to them subsequently. He reputedly exposed many traditions as false and is regarded as one of the most critical early experts on *ridjāl* [*q.v.*]. He reportedly left behind a huge library. Some of his works have been recently published.

Bibliography: See references in Sezgin, *GAS*, i, 107. Printed works. *Maʿrifat al-ridjāl*, ed. M. Kāmil al-Ḳassār, M. Muṭīʿ al-Ḥāfiẓ and Ghazwa Budayr, 2 vols. Damascus 1985; *Suʾālāt Ibn al-Djunayd*, ed. Aḥmad M. Nūr Sayf, Medina 1988, and further editions of *ridjāl* works by Nūr Sayf, Damascus-Beirut 1980; W.M. Patton, *Aḥmed ibn Ḥanbal and the Miḥna*, Leiden 1897, index. (F. Leemhuis)

YAḤYĀ b. **MUḤAMMAD**, al-Manṣūr al-Mutawakkil, of the Ḥamīd al-Dīn family, from the Ḳāsimī branch, Zaydī Imām and first ruler of the Mutawakkilī Kingdom of Yemen, b. *ca.* 1869, d. 1948.

On the death in June 1904 of his father Muḥammad b. Yaḥyā Ḥamīd al-Dīn, who had in 1891 rebelled against the Ottomans, Yaḥyā obtained the *bayʿa* of most of the tribes and *sayyid* clans of Yemen and assumed the *laḳab* of al-Mutawakkil ʿalā ʾllāh. Rejecting, like his predecessors, the authority of the Porte, he rose against the Turks and in April 1905 captured the capital Ṣanʿāʾ and several other towns. Ottoman reinforcements allowed Aḥmed Feyḍī to drive him out, but faced with guerilla warfare, the Turks came to an understanding with Yaḥyā, conceding *inter alia* the application of *Sharīʿa* law. Yaḥyā raised a further revolt in 1911, in concert with the *Amīr* of ʿAsīr, Muḥammad b. ʿAlī al-Idrīsī, whilst the Turks were preoccupied with events in the Balkans and Libya, besieging Ṣanʿāʾ and attacking other towns. The commander Aḥmed ʿIzzet Pasha relieved the capital but, wishing to have his hands free to deal with ʿAsīr, came to a treaty agreement with Yaḥyā in October 1911 at Daʿʿān. Yaḥyā accepted the suzerainty of the Porte in exchange for Ottoman recognition of his authority over the Zaydī parts of Yemen, and this was confirmed by an imperial *fermān* of 22 September 1913; the modern Yemeni state was thus born.

Yaḥyā remained loyal to the Turks until the end of the War in 1918, but after the Mudros armistice he took control of Ṣanʿāʾ and the whole country; some Turkish officials and soldiers remained in his service, including the last Ottoman *wālī*, Maḥmūd Nedīm Pasha. Thus what might be considered as a first "Arab revolt" left Yemen as the first independent Arab state. He now tried to build up his state as a sovereign one, with its "historic frontiers", creating a militia and an army, enforcing the *Sharīʿa* in its Zaydī interpretation, and in 1920 changing the Zaydī Imāmate into the "Mutawakkilī Kingdom of Yemen". Nevertheless, wishing to remain accessible to all Yemenis, he delegated none of his power, governing from his palace, which housed the administration, with a modest life-style. Hostile to all *bidaʿ*, he honestly believed that all progress was inimical to his people, hence he isolated the country from foreign influences as much as possible, so that his rule inevitably became tyrannical and obscurantist.

The first difficulties that he had were with the tribes, hostile to all state control and avid for subsidies. In 1922-3 his armies campaigned in the Djawf and in 1929 warfare was carried on by the Crown Prince Aḥmad against the Shāfiʿī Zarāniḳ of the Tihāma. After this, Yaḥyā took numerous hostages from leading families to ensure their fidelity. With dreams of establishing a "Greater Yemen" that would include the ancient kingdom of Ḥimyar, from ʿAsīr to ʿUmān, Yaḥyā stirred up strife against the British along the eastern frontiers of his land, but with less success than against the Turks; reprisals led to the bombing of Taʿizz in 1928. A third enemy also appeared for Yaḥyā in the shape of the Suʿūdī family, who had conquered ʿAsīr in 1920 and were now pressing southwards towards the Nadjrān oasis [*q.v.*]. Despite British attempts to restrain the Suʿūdīs, the latter occupied Nadjrān by 1934; but the question remained unsettled legally and remains a cause of discord to the present day.

Yaḥyā's policy of isolation was incompatible with his aims of independence and expansionism, which required a modern army and arms, necessitating recourse to outside powers. In 1931 he established links with ʿIrāḳ, which became fully independent the following year, and sent persons for military education there, an experiment speedily terminated when these last

became infected with modernist ideas. But this was too late. Opposition grew from such modernists; from certain tribes, especially the Shāfiʿī, anti-Zaydī ones chafing at commercial restrictions imposed on them; from émigrés and refugees in Aden; and even from *sayyids* and *ʿulamāʾ* hostile to Yaḥyā's requirement of *bayʿa* in 1938-9 to his son Sayf al-Islām Aḥmad's eventual succession. A Movement of Free Yemenis (*al-Aḥrār al-Yamaniyyūn*) became active in Yemen in the mid-1940s. Yaḥyā sent Aḥmad to Aden in 1946 in an attempt at conciliation, promising some reforms and measures to open up the country. He had already joined the Arab League in 1945 and secured the admission of Yemen to the United Nations in September 1947.

However, an opposition plot had already taken shape, under the inspiration of an Algerian nationalist, al-Fāḍil al-Warṯilānī, a disciple of Ibn Bādīs with close links with the Muslim Brotherhood, and led by an ʿIrāḳī officer in Yemen, Djamāl Djamīl. ʿAbd Allāh b. Aḥmad al-Wazīr was designated as future *Imām*. A first attack on Yaḥyā in January 1948 failed, but before he could call up help from his son Aḥmad, governor of Taʿizz, a second assassination attempt succeeded on 17 February. The plot to seize power nevertheless failed through Aḥmad's success in rallying loyal tribes, but after his death in September 1962, his son and successor Muḥammad al-Badr was overthrown within a few days by Nasserist officers under Col. ʿAbd Allāh al-Sallāl. A "Yemeni Arab Republic" eventually emerged, which in May 1990 achieved Yaḥyā's dream of an enlarged, united Yemen.

YAḤYĀ B. PĪR ʿALĪ [see NEWʿĪ].

YAḤYĀ B. SAʿDŪN [see AL-ḲURṬUBĪ].

YAḤYĀ B. YAḤYĀ AL-LAYTHĪ (d. 234/848), Cordovan *faḳīh*, descendant of a Berber (Maṣmūda) soldier who entered the Peninsula at the time of the conquest. His family, known as the Banū Abī ʿĪsā, was always closely connected to the Umayyad family whom they served with the pen and the sword. Yaḥyā b. Yaḥyā was the first member of the family to devote himself to religious knowledge (*ʿilm*). He took part in movements of opposition against the Umayyad *amīr* al-Ḥakam I, being mentioned among the participants in the famous Revolt of the Arrabal (al-Rabaḍ). He had to flee Cordova, unsuccessfully looking for refuge among his fellow tribesmen, but receiving it in Toledo. Once he obtained the pardon of the *amīr*, Yaḥyā exercised great influence in religious and intellectual life during the reign of ʿAbd al-Raḥmān II. According to the sources, this *amīr* did not appoint any judge without consulting Yaḥyā, and their relationship is described as the ideal that should exist between the ruler and the scholar: the latter teaches the former, advises him and legitimises his rule before the people, whilst the ruler solicits the scholar's advice. For example, ʿAbd al-Raḥmān II is said to have accepted a heavy expiation dictated by Yaḥyā for having broken his fast during Ramaḍān.

The figure of Yaḥyā b. Yaḥyā is of great relevance for the study of a crucial phase in the formation of al-Andalus, the phase of the reception of the Mālikī school of law and of the appearance and consolidation of the scholars as a group.

As regards the first aspect, Yaḥyā is considered to have introduced Mālik's *Muwaṭṭaʾ* in al-Andalus. His transmission of this work became canonical in the Islamic West and was also widely diffused in the East. This role of introducer of the *Muwaṭṭaʾ* has been challenged by N. Calder, whose conclusions, however, cannot be accepted. It is true that there is ground to doubt that a direct relationship between Yaḥyā b. Yaḥyā and Mālik b. Anas existed, but the Cordovan was undoubtedly the pupil of Mālik's pupils such as the Egyptians Ibn Wahb (d. 197/812) and Ibn al-Ḳāsim (d. 191/806) [*q.vv.*]. It is also without doubt that Yaḥyā transmitted Mālik's *Muwaṭṭaʾ*, as well as al-Layth b. Saʿd's *ḥadīth*. He also transmitted *masāʾil* from Ibn al-Ḳāsim that were compiled into ten books known as *ʿAsharat Yaḥyā*; its diffusion can be attested until the 6th/12th century. Yaḥyā had a decisive role in the Andalusī preference for Ibn al-Ḳāsim's opinions over those of other pupils of Mālik. He was also the introducer of customs and doctrines that took root in al-Andalus, such as abandoning the Ḳurʾānic precept of two arbiters sent to the house of a husband and wife to solve their marital problems, and substituting for it the practice of sending the couple to the house of a trusted man (*dār amīn*).

As regards the second aspect, Ibn Ḥazm stated that there were two legal schools that became established thanks to *riyāsa* and *sulṭa*: Abū Ḥanīfa's school, and that of Mālik b. Anas in al-Andalus. Yaḥyā b. Yaḥyā was consulted by the *amīr* on the nomination of judges, and he indicated only the names of his own companions and of those who followed his *madhhab*. Not every judge appointed by ʿAbd al-Raḥmān II, however, was a protégé of Yaḥyā, as there were other rival factions, the most important being that of ʿAbd al-Malik b. Ḥabīb [*q.v.*]. Yaḥyā himself is said to have refused to be appointed judge, arguing that the *amīr* would be unable to find someone with greater authority than his to deal with complaints against the judges. He represents in fact a phase in which political power needed a new type of expert for the administration of justice, not only for technical reasons (given the development of *fiḳh*), but also for reasons of religious legitimacy. His fame is directly related to the large number of his pupils, a number due to the influence he had with the *amīr*, and also to his longevity. Yaḥyā b. Yaḥyā's influence can be explained, apart from his training, also by his family connections and his intellectual abilities. He had an acute intelligence (he was known as *ʿāḳil al-Andalus*), great discerning power, ability for textual interpretation, a sense of opportunity and a realist understanding common to men far from religious extremism. He strove and succeeded in establishing in al-Andalus the model of scholarly behaviour that he had witnessed in the East, in order that scholars should be treated with the same respect, awe and reverence that his Eastern teachers enjoyed.

onomástico-biográficos de al-Andalus. VIII, ed. M.L. Avila and M. Marín, Madrid 1997, 269-344.

(MARIBEL FIERRO)

YAḤYĀ B. **ZAKARIYYĀ'**, the New Testament John the Baptist, mentioned by name five times in the Ḳur'ān. The spelling of the name is evidenced from pre-Islamic times and is probably derived from Christian Arabic usage (see J. Horovitz, *Koranische Untersuchungen*, Berlin 1926, 151-2; A. Jeffery, *Foreign vocabulary of the Quran*, Baroda 1938, 290-1); Muslim exegetes frequently trace the name from a root sense of "to quicken" or "to make alive" in reference to John's mother's barrenness and his people's absence of faith. In Ḳur'ān, III, 39, John is spoken of as noble, chaste and a prophet who will "witness the truth of a word from God", that is, Jesus. VI, 85 speaks of John along with Zechariah, Jesus and Elias as being of the "righteous". XIX, 7 gives the announcement of the forthcoming birth of John to Zechariah with the note that this name was used for the first time (or that this was the first prophet by that name; cf. Luke, i. 59-63 for the likely background to this verse. Also see Ibn Kat̲h̲īr, *Tafsīr*, Cairo (Ḥalabī) n.d., iii, 112 and Muḳātil b. Sulaymān, *Tafsīr*, Cairo 1983, ii, 621: this is the first time a child had been named Yaḥyā, and that he had the name because he was the first child ever born to an aged father and a barren mother). XIX, 12, conveys the command to John to be a prophet with a book (usually taken by Muslim exegetes to mean that John confirms the Torah, not that he brought a new scripture); and in XXI, 90, John's birth is explained as a response to Zechariah's request, his wife's barrenness being cured for the occasion.

The details of the story of John in the Ḳur'ān are few, but even those slight references have given rise to a number of extended discussions throughout Muslim history. For example, the idea that John was "chaste" (*ḥaṣūr*) provoked a good deal of debate. In their discussions of Ḳur'ān, III, 39, some exegetes, such as al-Ṭabarī, considered this word to be intended in its sexual sense of being incapable of coitus ("he had a penis no bigger than this piece of straw", al-Ṭabarī, *Tafsīr*, vi, 377, a prophetic *ḥadīt̲h̲* on the authority of Sa'īd b. al-Musayyab) or of being abstentious; others, such as Ibn Kat̲h̲īr, *Tafsīr*, ii, 35-6, rejected that view, for it would suggest some sort of imperfection on the part of the prophet if he were unable to have sexual intercourse, and they argued that the word means that John was free from impure actions and thoughts, and that, as such, it does not preclude John having been married and having children. (The material on this word is usefully brought together in M.M. Ayoub, *The Qur'ān and its interpreters. II. The House of 'Imrān*, Albany 1992, 109-12; see also E. Beck, *Das christliche Mönchtum im Koran*, Helsinki 1946, 27.)

The Muslim rendering of the birth, life and death of John have, in some versions, been elaborated on the basis of the Christian accounts. John, it is said, was born six months prior to Jesus (al-Ṭabarī, i, 711); John and Jesus met in the Jordan River when Jesus was 30; and John was killed before Jesus' ascension. The mother of Mary (Hanna) and the mother of John (Elizabeth) were sisters (see MARYAM, at VI, 630a, for tables presenting the Muslim understanding of the genealogical relationships). John became a prophet, travelled to Palestine, met and baptised Jesus and departed with 12 disciples to teach the people (al-Ṭabarī, i, 712). He was put to death by Herod at the instigation of Salome (*ibid.*, i, 719).

However, many of the accounts have become quite confused because of the idea that John lived in the era of Nebuchadnezzar [see BUK̲H̲T-NAṢ[Ṣ]AR]. It is in the stories of John's death (not mentioned in the Ḳur'ān) that the extent of the confusion about him becomes evident. The Israelite king Josiah, it is said, killed John, the son of Zechariah, and Nebuchadnezzar attacked Israel as a result (al-Ṭabarī, i, 657). The cause of this was the king's desire to marry his niece, something of which John disapproved. The conspiracy of the girl's mother then led to the death of John (cf. the story of Salome, Matt., xiv. 1-11, Mark, vi. 16-29). Nebuchadnezzar invaded in order to solve problems that arose as a result of John's death (or God simply inspired him to do so). The source of the confusion here is likely the name Zechariah, a name that had already created mix-ups within the biblical tradition (cf. Matt., xxiii. 35, for the (mis-)identification of the author of the Biblical book of Zechariah with the Zechariah of Isa., vii). The prophet Zechariah of II Chron., xxiv. 22, was killed by King Joash. The Talmud (*Giṭṭin*, 57b) speaks of his "blood bubbling up warm" after his death. Nebuzaradan, Nebuchadnezzar's commander, noticed this and he was told by the inhabitants of Jerusalem that "there was a prophet among us who used to reprove us for our irreligion, and we rose up against him and killed him, and for many years his blood has not rested." Nebuzaradan then said to them, "I will appease him", and proceeded to slaughter many people. It would appear that this legend has become associated in the Muslim tradition with the death of John through the common element of the name Zechariah (see D. Sidersky, *Les origines des légendes musulmanes dans le Coran et dans les vies des prophètes*, Paris 1933, 139-40). Al-Ṭabarī, i, 713, reports that a drop of John's blood fell to the ground when he was killed and kept boiling until Nebuchadnezzar came to destroy Jerusalem; in a slightly different version (al-Ṭabarī, i, 715), John's blood boiled in the pan in which his severed head (which could still talk) had been placed. Al-Ṭabarī, i, 718, also indicates that he is well aware that many hold this story to be not true and to be a historical error, there being 461 years between the lives of Nebuchadnezzar and John the Baptist.

(A. RIPPIN)

YAḤYĀ B. **ZAYD** B. 'ALĪ B. AL-ḤUSAYN, 'Alid fugitive and rebel killed late in 125/summer-autumn 743. His mother was Rayṭa, daughter of Abū Hās̲h̲im [*q.v.*] b. Muḥammad b. al-Ḥanafiyya.

As the eldest son of Zayd b. 'Alī, he participated in Zayd's revolt in Kūfa in Muḥarram 122/end of 739. After his father's death, he escaped, relentlessly sought by Yūsuf b. 'Umar al-T̲h̲aḳafī, governor of 'Irāḳ [*q.v.*] Yaḥyā went first to Nīnawā near Karbalā'. He was then given protection by the Umayyad 'Abd al-Malik b. Bis̲h̲r b. Marwān, who concealed him in a village owned by him that later became Ḳaṣr Ibn Hubayra [*q.v.*]. After a while, he set out for K̲h̲urāsān, stopping first in al-Madā'in. Yūsuf b. 'Umar, learning of his whereabouts, sent a detachment after him, but he

escaped to al-Rayy. From there he moved on via Naysābūr to Sarakhs. There he stayed for six months with Yazīd b. ʿUmar al-Taymī, a Shīʿī and brother of an army leader under Abū Muslim al-Khurāsānī, and began to seek support for armed revolt. A group of Khāridjīs offered their backing, but his host warned him against accepting it. Together with Yazīd he went on to Balkh, where al-Ḥarīsh b. ʿAbd al-Raḥmān al-Shaybānī sheltered him. Yaḥyā sent an appeal in poetry to the Banū Hāshim in Medina, challenging them to avenge his father. The leader of the Hāshimiyya movement in Khurāsān, Bukayr b. Māhān, however, instructed his followers not to rise in support of Yaḥyā since the Imām, Ibrāhīm b. Muḥammad, had predicted Yaḥyā's death.

In 125/743 Yūsuf b. ʿUmar was informed of Yaḥyā's hiding place and asked Naṣr b. Sayyār, governor of Khurāsān, to press al-Ḥarīsh to surrender him. When Naṣr's deputy in Balkh, ʿAḳīl b. Maʿḳil al-Laythī, tortured al-Ḥarīsh, the latter's son betrayed Yaḥyā in order to save his father's life. Yaḥyā and his companions were delivered as captives to Naṣr in Marw, but when Yūsuf b. ʿUmar informed the caliph al-Walīd b. Yazīd, he gave orders to release them. Naṣr provided Yaḥyā with money and two mules, ordering him to proceed to the caliph's court and instructing his district prefects in Sarakhs, Ṭūs, and Naysābūr to make him move on without lingering. When Yaḥyā reached the border of Khurāsān at Bayhaḳ, he decided to turn back, afraid of entering the territory of Yūsuf b. ʿUmar. Joined by seventy supporters, he defeated the superior forces moving against him from Naysābūr, Ṭūs, and Sarakhs at Bushtaniḳān (see Yāḳūt, i, 630), killing the governor of Naysābūr, ʿAmr b. Zurāra al-Ḳushayrī. With the booty, Yaḥyā moved via Harāt to Djūzdjān, where the number of his men swelled to 150. Naṣr now sent a strong army under Salm b. Aḥwaz al-Māzinī in pursuit of him. After three days of fighting at a village called Arghūy(a), Yaḥyā was struck by an arrow in his forehead and died, at the age of 28. Most of his men were also killed. His head was sent to Damascus where the caliph al-Walīd exhibited it in the palace and his body was crucified at the gate of Anbēr (Anbār), the capital of Djūzdjān.

The violent death of Yaḥyā made a deep impression among the Shīʿa in Khurāsān, and revenge for him became a major motive in the ʿAbbāsid revolutionary movement, which had failed to back him before. Among the first measures of Abū Muslim after the rising was to have his body properly buried and to seek out and execute all those involved in his death. Yaḥyā's tomb at or near Anbēr was visited for centuries. The Zaydī Shīʿa count him as one of their *imāms*.

YAḤYĀ AL-ANṬĀKĪ [see AL-ANṬĀKĪ].

YAḤYĀ BEY (Beg) [see TASHLĪDJALĪ YAḤYĀ].

YAḤYĀ ḤAKKĪ, a major figure in the development of modern Egyptian fiction, and also a diplomat, critic, and journalist (1905-92).

He was born into a distinguished Egyptian family in 1905; his uncle was Maḥmūd Ṭāhir Ḥaḳḳī, author of one of the very first experiments in novel writing in Egypt, *ʿAdhrāʾ Dinshawāy* (1906). Like many of his literary contemporaries (for example, Muḥammad Ḥusayn Haykal and Tawfīḳ al-Ḥakīm [*q.vv.*]) Ḥaḳḳī's field of study at university was the law, and he graduated in 1925. For a short period he served the legal system in Manfalūṭ, Upper Egypt, as a *muʿāwin* (adjutant). In 1929, however, he began a diplomatic career and saw service in a number of countries, including Turkey, France and Libya. Later in life, he became editor of the renowned Cairo literary journal, *al-Madjalla*, and in 1969 he was awarded the State Prize for Literature. He retired from public life in 1970 and died in December 1992.

Ḥaḳḳī was not a prolific writer, but his published works of fiction reveal the craft of an early master of its shorter genres. His most famous contribution is, without doubt, *Ḳindīl Umm Hāshim* (1944; Eng. tr., *The saint's lamp*, 1973), a novella that marks a distinct advance over its predecessors in the fictional treatment of the themes of cultural conflict and modernisation. The story concerns a young Egyptian student, Ismāʿīl, who travels to England to obtain a degree in ophthalmology. When the training he has received fails to cure the eye disease of his own fiancée, the ensuing crisis engenders a highly symbolic (and not entirely convincing) conflict between the power of modern science and the more traditional rituals of faith. As with all classic novellas, these large themes—with their many and varied ramifications—are encapsulated in a narrative of great economy and artistry. Here and in other works of fiction, Ḥaḳḳī's skillfully crafted prose possesses an allusive quality that manages to capture the atmosphere of a scene or an entire community by the judicious choice of a word and image. These stylistic traits also contribute, needless to say, to the artistry of Ḥaḳḳī's short stories, of which he produced three collections: *Dimāʾ wa-ṭīn* (1945?), *Umm al-ʿawādjiz* (1955), and *ʿAntar wa-Djuliyāt* (1961?). In many of these stories, Ḥaḳḳī goes back to his experiences in the provinces of Egypt: two of the more famous examples are *al-Bustagī* ("The postman") and *Ḳiṣṣat sidjn* ("Prison story"). Those set in urban environments are more variegated in their subject-matter and explore contrasting patterns of wealth and lifestyle: *Kunnā thalāthat aytām* ("We were three orphans"), for example, about marriage prospects for a brother and two sisters who have lost their parents, and *ʿAntar wa-Djuliyāt*, an engaging story named after two dogs, the life-style of whose owners reflects the glaring contrasts between rich and poor.

Ḥaḳḳī was also a distinguished literary critic, and, with his *Fadjr al-ḳiṣṣa al-miṣriyya* ("Dawn of the Egyptian short story", 1960), the invaluable historian of the school of pioneer Egyptian short-story writers in the 1920s known as the *Djamāʿat al-madrasa al-ḥadītha* "New School Group", of which he himself was a part. Through this and other works of criticism, such as *Khuṭuwwāt fi 'l-naḳd* (1961) and *ʿIṭr al-aḥbab* (1971), Ḥaḳḳī contributed his own brand of methodical opinion to the assessment of modern movements in Egyptian literature, his diplomatic tours abroad permitting him to remain above the fray during some of the more contentious periods and to preserve the quieter, more

detached approach to critical reasoning that he clearly cherished.

YAḤYĀ KEMĀL (with the surname adopted in Republican times of Beyatli), highly renowned Turkish poet and essayist, b. 2 December 1884, d. 1 November 1958.

His given name was Aḥmed Āgāh, and his earliest published poems bear the name Āgāh Kemāl. He was born in Üsküb as the son of Ibrāhīm Nād̲j̲ī Beg, who was mayor of this town, and Naḳiyye K̲h̲ānim, the niece of the poet Lesḳofčali G̲h̲ālib Beg (1828 or 29-1867). He was educated successively in Üsküb, Selānīk, Istanbul and Paris (École Libre des Sciences Politiques), and during his stay of nine years in Paris he frequented literary and political circles there. After his return to Istanbul in 1912, he taught history and literature in several educational institutions (Dār el-S̲h̲afaḳa Mektebi, Medreset el-Wāʿiẓīn, Heybeliada Baḥriyye Mektebi, Dār el-Fünūn Edebiyyāt S̲h̲uʿbesi). From 1923 onwards he held various public offices, serving as a member of parliament for Urfa, Yozgat, Tekirdağ and Istanbul, and as ambassador in Warsaw, Madrid, Lisbon and Karachi. He retired in 1949 to Istanbul; his grave is in the Rumelihisarı cemetery in Istanbul.

Yaḥyā Kemāl was of the opinion that poetry is a kind of music; he developed a personal style in which the prosodic rules of *ʿarūḍ* [*q.v.*] are applied to the educated colloquial Turkish of Istanbul. A further characteristic of his style is that his poems, as well as his essays, reflect his attachment to Ottoman culture and heritage, his interest in history and his love of Istanbul; the main themes of his poetry are indeed love, patriotism, death and Istanbul.

During his lifetime, Yaḥyā Kemāl published his work only in periodicals and newspapers. Starting in 1961, the Yahya Kemal Enstitüsü (founded in the same year) published the collected works (*Yahya Kemal külliyatı*) that comprise four volumes of poetry, namely, *Kendi gök kubbemiz* (1961), *Eski şiirin rüzgârıyle* (1962), *Rubâîler ve Hayyam rubâîlerini Türkçe söyleyiş* (1963) and *Bitmemiş şiirler* (1976); and eight volumes of essays, short stories, recollections and letters, namely, *Aziz İstanbul* (1964), *Eğil dağlar* (1966), *Siyasî hikâyeler* (1968), *Siyasî ve edebî portreler* (1968), *Edebiyata dair* (1971), *Çocukluğum, gençliğim, siyasî ve edebî hâtıralarım* (1973), *Târih musâhabeleri* (1975), and *Mektuplar-Makaleler* (1977).

(Edith G. Ambros)

YAḤYĀ AL-MAKKĪ, Abū ʿUt̲h̲mān Yaḥyā b. Marzūḳ, an honoured court musician in early ʿAbbāsid times and head of a family of court singers.

He was born in Mecca as a *mawlā* of the Banū Umayya, but went to Bag̲h̲dād at the beginning of the reign of al-Mahdī (158/775), and still performed under al-Ma'mūn (198-218/813-33). It is said that he died at the age of 120. He was considered an excellent composer and an expert in the Ḥid̲j̲āzī style of music. Ibn D̲j̲āmiʿ [*q.v.*], and both Ibrāhīm and Isḥāḳ al-Mawṣilī [*q.v.*] were among his disciples. He also composed a "book of songs" (*Kitāb al-Ag̲h̲ānī*), a collection of "classical" compositions, which he dedicated to ʿAbd Allāh b. Ṭāhir [*q.v.*]. The book was criticised, however, for its incorrect attributions (*manḥūlāt*). It was corrected under the title of *Taṣḥīḥ Kitāb al-Ag̲h̲ānī* by his son Abū D̲j̲aʿfar Aḥmad b. Yaḥyā, who followed his father as a court musician from the time of al-Ma'mūn until the beginning of the reign of al-Mustaʿīn (248/862). Yaḥyā's son, Aḥmad b. al-Makkī, dedicated his father's corrected song book, as well as his own voluminous *Kitāb al-Ag̲h̲ānī*, to Muḥammad b. ʿAbd Allāh b. Ṭāhir. Both books are quoted in the *Kitāb al-Ag̲h̲ānī al-kabīr* by Abu 'l-Farad̲j̲ al-Iṣbahānī. In his own compositions, Aḥmad b. al-Makkī favoured verses of his friend, the poet Diʿbil [*q.v.*]. Aḥmad's son Muḥammad, i.e. Yaḥyā's grandson, sang at the court of al-Muʿtamid (256-79/870-92). He was a *murtad̲j̲il* singer who accompanied himself by using the traditional wand (*ḳaḍīb*). Muḥammad's transmission of the *ak̲h̲bār* of the al-Makkī family was used as a biographical source by Abu 'l-Farad̲j̲.

Bibliography: *Ag̲h̲ānī*[3], vi, 173-89, xvi, 311-6 and indices; Nuwayrī, *Nihāyat al-arab*, Cairo 1923 ff., vi, 320-3; Ibn Faḍl Allāh al-ʿUmarī, *Masālik al-abṣār*, facs. ed. YAḤYĀ AL-NAḤWĪ, the name in Arabic sources for Johannes Grammaticus (*ca.* A.D. 490-575), the Alexandrian philologist, commentator on Aristotle, and Jacobite Christian theologian, also known in Greek as Philoponos, lit. "Lover of toil" or "Diligent", referring to a group of Alexandrian Monophysitic lay Christians—the *philoponoi*—active in debating pagan professors of philosophy. In Alexandria, John Philoponus began his career teaching philology and then studied philosophy with Ammonius son of Hermeias, the head of the Neoplatonic school there. Most of Philoponus' commentaries on Aristotle were written early in his career and are based on his master's lectures. In 529 Philoponus published his polemical *Against Proclus on the eternity of the world* (*Contra Proclum*), in which he defended creation *ex nihilo* against Proclus' famous eighteen arguments. He later directed his fire against

Aristotle's notions of infinity in his *Against Aristotle on the eternity of the world* (*Contra Aristotelem*), after which he probably revised his previously written commentary on the *Physics*, arguing now against the eternity of motion.

For these attacks on Proclus and Aristotle, Philoponus was vilified by another student of Ammonius, the pagan Neoplatonist Simplicius (*fl. ca.* A.D. 530), who, by referring to Philoponus as *grammatikos*, i.e. professor of philology (e.g. *in Cael.*, *CAG*, vii, 119,7; *in Phys.*, *CAG*, x, 1129,29), implied that Philoponus had not yet advanced to the stage of *philosophos* (professor of philosophy), and that his attacks on Proclus and Aristotle were therefore precocious and baseless.

The snideness of Simplicius' use of *grammatikos* was lost when the epithet was translated into Arabic as *al-naḥwī*. The bio-bibliographers, citing ʿUbayd Allāh b. Dj̲ibrāʾīl b. Bak̲h̲tīs̲h̲ūʿ, simply list Philoponus' strength in philology alongside his expertise in philosophy and medicine: Ibn al-Ḳiftī, *Taʾrīk̲h̲ al-ḥukamāʾ*, ed. Lippert, 354,15-16, and Ibn Abī Uṣaybiʿa, *ʿUyūn al-anbāʾ*, ed. Müller, 154,12-13.25.

Accounts of Yaḥyā al-Naḥwī's life, including apocryphal events such as a meeting with ʿAmr b. al-ʿĀṣ, are found in Ibn al-Nadīm, *Fihrist*, 254,19-255,5 (= Ḳ 354,3-357,13, and aU 154,3-155,32). The bio-bibliographers list Arabic translations of the following works: *On Aristotle's Categories*: N 248,21 (= Ḳ 35,3, and aU 155,15-16); *On Aristotle's De interpretatione*: N 249,2 (= Ḳ 35,18); *On Aristotle's Prior Analytics* (partial): N 249,9 (= Ḳ 36,8-9, and aU 155,16-17); *On Aristotle's Posterior Analytics*: N 249,13 (= Ḳ 36,14-15, and aU 155,17); *On Aristotle's Topics*: aU 155,17-18; *On Aristotle's Physics*: N 250,18 (= Ḳ 39,14; 245,5, and aU 155,18); *On Aristotle's De generatione et corruptione*: N 251,7 (= Ḳ 40,21, and aU 155,18-19); *On Porphyry's Isagoge*: aU 155,31-32; *Refutation of Proclus on the eternity of the world*: N 252,14 (= Ḳ 89,4-6, 356,5, and aU 155,28); *That the force* (reading *ḳuwwatuhu* with N and aU rather than Ḳ's *mawtuhu*) *of every finite body is finite*: N 254,25-26 (= Ḳ 356,5-6, and aU 155,28-29); *Refutation of Aristotle*: N 254,26 (= Ḳ 356,6-7, and aU 155,29); *Tafsīr mā bāla li-Arisṭūṭālīs*: N 254,26-27 (= Ḳ 356,7, and aU 155,19) (on the identity of this work, as well as two other unidentified treatises, see Steinschneider, 161-3); *Refutation of Nestorius*: N 254,27 (= Ḳ 356,8, and aU 155,28-29).

A number of medical treatises, including a history of medicine (cited by N 286,17; 287,13.22.24; 289,8; 293,7 [= Ḳ. 92,21; 93,1.6-7.14.19; 126,3; 127,17; 183,18-19, and aU 17,21; 22,4-5; 23,11; 33,19; 71,16-17; 76,1]) as well as commentaries on Galen's works (e.g. in *De usu partium*; N 264,26 = Ḳ 246,3, and aU 155,29), are also attributed to Yaḥyā; for a full list and a summary of Meyerhof's objections to their authenticity, see Sezgin, *GAS*, iii, 157-60.

Despite the fact that Philoponus' commentaries on Aristotle were both astute and plentiful, the *falāsifa* mention Philoponus rarely as an authority, at least compared to Alexander of Aphrodisias. Although Averroes does cite Philoponus' infinite force argument in his commentary on *Metaph.*, xii (*Tafsīr mā baʿd al-ṭabīʿa*, ed. M. Bouyges, iii, 1628,10-15), Philoponus received no credit from the *falāsifa* for his theory of impetus, perhaps his most important contribution to later thought. According to Philoponus (e.g. *in Phys.*, *CAG*, xvii, 641,13-642,20) someone who throws an object imparts a force to it that causes its continued motion. This is in contrast to the theory of Aristotle who, wedded to the notion that a moving object requires an external mover, explained projectile motion as resulting from the push given to the object by the following air. In his final discussion of impetus, Philoponus extends the theory to the moving heavens, to which God imparts a kind of dynamic inclination (*De opificio mundi*, ed. W. Reichardt, 29,2-3). Whether Avicenna's apparently similar notion of an inclining force (cf. *K. al-s̲h̲ifāʾ: Ilāhiyyāt*, ed. G. Anawati *et al.*, 383,4-13; *Fī ʾl-samāʾ wa ʾl-ʿālam*, 3,18, and *Fī ʾl-kawn wa ʾl-fasād*, 193,2-194,16, both ed. M. Ḳāsim) resulted from or developed independently of Philoponus' own impetus theory, is a question complicated by Avicenna's lack of attribution. The philosophers' ambivalence about Philoponus may well have arisen from their perception that Philoponus betrayed Aristotle in the *Contra Aristotelem* (see al-Fārābī's counter-refutation, ed. and tr. Mahdi). This betrayal cast Philoponus into the camp of the theologians: Ibn al-Ḳiftī (306,1-2) mentions Philoponus' dialectical style of argumentation, and Averroes groups Philoponus with the Muslim *mutakallimūn* (*Tafsīr mā baʿd al-ṭabīʿa*, iii, 1498,1-7).

On the other hand, Philoponus' well-known involvement in christological and trinitarian debates—the bio-bibliographers even claim (incorrectly) that he was a Bishop (*uskuf* = *episkopos*): N 254,20 (= Ḳ 354,5, and aU 154,5)—may have also inhibited the *mutakallimūn* from openly citing his celebrated arguments (e.g. *in Phys.*, *CAG*, xvi, 428,19-429,20) against Aristotle's notion of infinity. For example, the Muʿtazilī al-K̲h̲ayyāṭ (*K. al-Intiṣār*, ed. H. Nyberg, 35,4-36,3) as well as the As̲h̲ʿarīs al-G̲h̲azālī (*Tahāfut al-falāsifa*, ed. Bouyges, 31,10-32,12) and al-S̲h̲ahrastānī (*Nihāyat al-iḳdām*, ed. A. Guillaume, 29,1-11) all appear to use, without attribution, one of Philoponus' arguments against the world's eternity (Philoponus ap. Simplicium, *In Phys.*, *CAG*, x, 1179,15-27). For whatever reason, the fact remains that Philoponus' influence on mediaeval Muslim intellectuals, while profound, tended to be hidden.

Bibliography: The most complete recent bibliographies are in R. Sorabji (ed.), *Philoponus and the rejection of Aristotelian science*, London 1987; C. Scholten (ed. and tr.), *Johannes Philoponus: De opificio mundi*, Freiburg 1997; and F. de Haas, *John Philoponus' new definition of prime matter*, Leiden 1997. WISNOVSKY)

YAKAN, 'ADLĪ, Egyptian politician (b. Cairo 1864, d. Paris 1933). His father, Khalīl b. Ibrāhīm Yakan, was a grandson of Muhammad 'Alī's sister. The child of a wealthy landed family and educated in part in European and Ottoman schools, 'Adlī was a member of the Turko-Egyptian aristocracy that had emerged in 19th-century Egypt.

He was a leading figure in Egyptian politics from World War I to the early 1930s. He served as Minister of Education in the Cabinets of Husayn Rushdī during the War. In late 1918–early 1919 he engaged, along with Rushdī, in an unsuccessful attempt to form a delegation to go to London to negotiate Egypt's post-war status. As Foreign Minister in 1920, he did proceed to London to discuss the Egyptian question with Lord Milner. Appointed Prime Minister for the first time in March 1921, 'Adlī again went to London to re-negotiate Egypt's status with Lord Curzon. Excluded from the negotiations and suspicious of 'Adlī's more accommodating position, Sa'd Zaghlūl [*q.v.*] and the Wafd denounced the 'Adlī-Curzon negotiations. Faced with Wafdist opposition, the 'Adlī ministry resigned in December 1921 without concluding an agreement.

'Adlī was a founding member of the Liberal Constitutionalist Party in October 1922, serving as the party's president until 1924. He again became Premier in June 1926, in a coalition government with the Wafd. Criticism of his moderate policies by the Wafdist parliamentary majority led to his ministry's resignation in April 1927. In October-December 1929 he led a caretaker ministry charged with supervising parliamentary elections. President of the Senate in 1930, he resigned the post in October 1930 in protest against Ismā'īl Sidkī's abrogation of the Constitution of 1923. Aristocratic and aloof but a man of personal dignity and integrity, 'Adlī ended his political career as a respected elder statesman, dying in 1933.

Cairo 1959; Afaf Lutfi al-Sayyid Marsot, *Egypt's liberal experiment, 1922-1936*, Berkeley, etc. 1977; Marius Deeb, *Party politics in Egypt*, London 1979. (J. JANKOWSKI)

YAKAN, MUHAMMAD WALĪ AL-DĪN, Ottoman-Egyptian liberal spokesman and neoclassicist poet (1873-1921). The son of Hasan Sirrī and the grandson of Ibrāhīm Pasha Yakan, a cousin of Muhammad 'Alī, Walī al-Dīn Yakan was born in Istanbul on 2 March 1873. He was brought to Egypt by his family as a child. Orphaned at six, Walī al-Dīn was raised by his uncle 'Alī Haydar, a high official of the Khedivial establishment, and attended the Princes' School (*Madrasat al-Andjāl*) where children of the dynasty were educated. After graduating, Walī al-Dīn worked briefly in the Public Prosecutor's Office and for Khedive 'Abbās Hilmī II [*q.v.*]. After a visit to Istanbul in 1895, he became a vehement critic of the Ottoman régime of 'Abd al-Hamīd II [*q.v.*]. His short-lived periodical *al-I'timād* was eventually banned by the Ottoman government. Returning to Istanbul, Walī al-Dīn worked in the Customs Service and was eventually made a member of the Supreme Council for Public Instruction. Continued criticism of the Hamīdian régime let to his banishment to Sīwās from 1902 until the Young Turk Revolution in 1908. Walī al-Dīn returned to Egypt shortly after the Young Turk Revolution. He worked in the Justice Ministry until 1914, when Sultan Husayn Kāmil [*q.v.*] made him his Arabic Secretary. Afflicted with asthma, in 1919 Walī al-Dīn retired to Helwan in 1919, and died there on 6 March 1921.

Walī al-Dīn Yakan is best known as a neoclassicist Arabic poet and a champion of liberalism and toleration within the late Ottoman empire. His autobiographical *al-Ma'lūm wa 'l-madjhūl* (1909, 1911) was largely an exposé of Hamīdian despotism. Although originally a supporter of the Young Turk movement, his other pre-World War I works *al-Sahā'if al-sūd* (1910) and *al-Tadjārib* (1913) contained criticisms of the ethnic inclinations of the Unionist régime which succeeded 'Abd al-Hamīd II. More an Ottoman patriot than an Egyptian nationalist, Walī al-Dīn also took a relatively sympathetic view of the British occupation and the British impact upon Egypt. He once described himself as a liberal Ottoman who had become a literary Arab.

Bibliography: Walī al-Dīn Yakan's *Dīwān* was published posthumously, Cairo 1924. Two biographies are Sāmī al-Kayyālī, *Walī al-Dīn Yakan*, Cairo 1960, and 'Alā' al-Dīn Wahīd, *'Āshik al-hurriya, Walī al-Dīn Yakan*, Cairo 1987. Evaluations of his place within modern Egyptian literature may be found in Mounah A. Khouri, *Poetry and the making of modern Egypt, 1882-1922*, Leiden 1971, 111-13, and J. Brugman, *An introduction to the history of modern Arabic literature in Egypt*, Leiden 1984, 54-6. Brief biographical sketches are available in Khayr al-Dīn al-Ziriklī, *al-A'lām*, ⁵Beirut 1980, viii, 118, and A. Goldschmidt, Jr., *Biographical dictionary of modern Egypt*, Boulder 2000, 229-30. (J. JANKOWSKI)

YAKHSHI FAKĪH, Ottoman historian, d. after 816/1413.

Yakhshi Fakīh is the earliest known compiler of *menākib* [see MANĀKIB] or exemplary tales of the Ottoman

dynasty in Ottoman Turkish. However, his compilation has not survived as an independent work, and the only reference to it is that made by ʿĀs̲h̲ıḳpas̲h̲azāde [*q.v.*]. The latter records that in 816/1413, while accompanying Meḥemmed I's army on campaign, he fell ill and "remained behind at Geyve, in the house of Yak̲h̲s̲h̲i Faqīh, the son of Ork̲h̲ān Beg's *imām*... it is on the authority of the son of the *imām* that I relate the *menāqib* of the Ottoman House as far as [Bāyezīd I]" (V.L. Ménage, *The menāqib of Yak̲h̲s̲h̲i Faḳīh*, in *BSOAS*, xxvi [1963], 50; ʿĀs̲h̲ıḳpas̲h̲azāde, *Taʾrīk̲h̲*, ed. ʿĀlī, Istanbul 1332/1914, 84). Ménage suggests that, contrary to previous assumptions, it is not the material that ʿĀs̲h̲ıḳpas̲h̲azāde and the Anonymous Chronicles have in common which derives from Yak̲h̲s̲h̲i Faḳīh but, rather, certain information that is unique to ʿĀs̲h̲ıḳpas̲h̲azāde. According to a variant reading in one manuscript of ʿĀs̲h̲ıḳpas̲h̲azāde's history, Yak̲h̲s̲h̲i Faḳīh had a written (rather than an oral) version of the *menāḳib* that was seen by the younger historian.

Aside from ʿĀs̲h̲ıḳpas̲h̲azāde's statement that Yak̲h̲s̲h̲i Faḳīh was the son of Isḥāḳ Faḳīh, *imām* to sultan Ork̲h̲ān [*q.v.*], no other biographical details are known.

Bibliography: For additional references, see Ménage, *art. cit.*, in *BSOAS*, xxvi (1963), 50-4.

(Christine Woodhead)

YAʿḲŪB, the Arabic name for the Old Testament Patriarch Jacob, son of Isaac, son of Abraham.

Yaʿḳūb is mentioned by name in the Ḳurʾān 16 times in ten sūras. The nature of his appearance tends to be formulaic in that he often appears in reference to other prophets and personages familiar also from the Bible. In what have traditionally been deemed earlier sūras, he appears in the following formula: "We gave [Ibrāhīm] Isḥāḳ and Yaʿḳūb..." (VI, 84; XIX, 49; XXI, 72; XXIX, 27). This has been thought by some scholars to demonstrate that in the early revelations Jacob was considered to be a son of Abraham and not his grandson. This notion might have been corrected in XI, 71, where the divine narrator informs Abraham's unnamed wife: "So We gave her the good news of Isaac, and after Isaac Jacob." Certainly in II, 133, when Jacob on his death bed queries his sons whether they will remain believers, they reply: "We will worship your God, the God of your fathers Abraham, Ishmael and Isaac" (see also XII, 6). In other late sūras (II, 136, 140; III, 84; IV, 163), he appears in a different sequence: "Ibrāhīm, Ismāʿīl, Isḥāḳ, Yaʿḳūb, and the tribes", which seems to correspond more fully with biblical representations. In all of these references, Jacob is portrayed as an ancient and pious biblical prophet, but his character is not developed.

In XIX, 6, Jacob is mentioned in the context of the divine promise to Zakariyyā of the impending birth of Yaḥyā (cf. Luke i. 5-64). Here, the name Jacob carries that of the biblical Israelites as a whole, still without any character development.

We learn slightly more about Jacob in the Joseph sequence of sūra 12. Although mentioned by name only three times, he is referred to indirectly another twenty-five times. Jacob does not trust his sons (XII, 11, 18, 83) and they do not respect their father (XII, 8, 16-17, 95). Jacob's prophetic nature is evident from his knowledge of Joseph's future greatness (XII, 6), his foreboding of and response to the supposed death of Joseph (XII, 13, 18), and in his response to the sons' plight in Egypt (XII, 83, 86-7, 96).

Post-Ḳurʾānic literature, which clarifies the Ḳurʾānic genealogical ambiguity by bringing it in line with that of the Bible, greatly expands the role and character of Jacob, often in parallel with the biblical narrative and Jewish aggadic extensions. Jacob's honorific *laḳab* is *al-ṣafiyy* "the pure". He was to emerge from his mother's womb before his twin, Esau, but after the latter threatened to block his mother's womb and kill her, Jacob gave way. Esau resisted or disobeyed (*ʿaṣā*), so was called ʿAyṣ or ʿAyṣā, while Jacob was born grasping the heel (*ʿaḳib*) of his brother. Jacob is called Isrāʾīl because he is noble in the eyes of God (*sariyy Allāh*) or because he travelled at night (*yasīr fī 'l-layl* or *yasrī bi 'l-layl*) to escape the wrath of Esau. Some exegesis has Jacob marry Leah's sister Rachel only after Leah's death (cf. IV, 23). He knew the truth that the entire family would bow down to Joseph all along (cf. XII, 86).

Jacob is cited in the Ḥadīt̲h̲ as an example of one who is patient and trusting in God in the face of suffering (cf. XII, 18), and suggestions are offered in the exegetical literature as to why he suffered; e.g. he does not insist that his sons feed a poor boy who has come to their door, but years later insists on exceptional behaviour for them because they are a community of prophets.

(R. Firestone)

YAʿḲŪB B. **ʿALĪ S̲H̲ĪR** [see GERMIYĀN-OG̲H̲ULLARĪ].

YAʿḲŪB B. **DĀʾŪD** [see ABŪ ʿABD ALLĀH YAʿḲŪB].

YAʿḲŪB B. **KILLIS** [see IBN KILLIS].

YAʿḲŪB B. **AL-LAYT̲H̲** AL-ṢAFFĀR ("the coppersmith"), Abū Yūsuf, adventurer in Sīstān and founder of the dynasty there of Ṣaffārids [*q.v.*], functioned as *amīr* in Sīstān from 247/861 and then as ruler of an extensive military empire in the eastern Islamic lands until his death in 265/879, in practice independent of the ʿAbbāsid caliphs.

The origins of Yaʿḳūb's family in Sīstān were clearly humble, despite attempts of later historians to elevate his father al-Layt̲h̲ to the status of head of the guild of coppersmiths in the province. He was one of four brothers who were members of local bands of *ʿayyārs* [*q.v.*], in the Sīstān context something between anti-K̲h̲ārid̲j̲ite vigilantes, also called in the sources *muttawwiʿa* "volunteer fighters for the faith", and bands of brigands and rowdies. However, little in Yaʿḳūb's later career shows him as a fervent warrior for the cause of Sunnī orthodoxy, and once in supreme power in Sīstān, he did not hesitate to come to an agreement with the local K̲h̲ārid̲j̲ites and to incorporate many of them in his own army.

Abandoning the trade of coppersmith, Yaʿḳūb rose to power in the capital Zarang [*q.v.*] by first serving under but then setting aside the *ʿayyār* leaders Ṣāliḥ b. al-Naḍr and Dirham b. Naṣr, and was recognised as *amīr* in Sīstān in Muḥarram 247/April 861. He had first to dispose of the threat from the dispossessed Ṣāliḥ, who had fled eastwards to Bust and had sought help from the Zunbīl [*q.v.*], the local ruler in southeastern Afg̲h̲ānistān, the regions of Zamīndāwar

and Zābulistān [*q.vv.*]. Ṣāliḥ was captured and killed by the end of 250/early 865, and the Zunbīl defeated and killed in battle in the region of al-Rukhkhadj [*q.v.*], that of the later Ḳandahār (251/865). A major campaign in 256/869-70 took Yaʿḳūb as far as Kābul, Bāmiyān and Pandjhīr, having marched through Zābulistān via Ghazna, in pursuit of the son of the former Zunbīl. A further campaign into Zābulistān first secured the capture of the Zunbīl's son at the fortress of Nāy Lāmān (nothing more is heard of his fate) and then pushed on northwards to Balkh, where Yaʿḳūb captured the city from its ruler, Dāwūd b. Abī Dāwūd [see BĀNĪDJŪRIDS, in Suppl.]. These conquests also gave Yaʿḳūb temporary control of the silver mines of Pandjhīr and Badakhshān [*q.vv.*], and coins of his were minted there from 259/872-3 to 261/874-5. These Ṣaffārid activities in eastern Afghānistān spelt the end of the dynasty of Zunbīls who had blocked expansion of the Arabs there for some two centuries, and the Islamisation of that region, including the Kābul valley (but not the lands to its north, Kāfiristān [*q.v.*]) now presumably took shape.

Yaʿḳūb was now ready to attack the Ṭāhirids [*q.v.*], nominal suzerains over Sīstān as governors of the East for the ʿAbbāsids, although they had not in fact exercised any control over Sīstān since 239/854. There were clashes in the frontier zone of western Afghānistān where the spheres of Ṣaffārid and Ṭāhirid authority met, possibly over taxation, and in 253/867 Yaʿḳūb attacked Harāt and Pūshang, capturing various of the *Ṭāhiriyya* (members of the family or their partisans?). Negotiations over their release brought Yaʿḳūb into direct contact with the ʿAbbāsid caliphs for the first time, and al-Muʿtazz was compelled to award Yaʿḳūb the governorship of Fārs if he could secure it, explicit recognition for the first time of Yaʿḳūb's rising power in the East. In 259/873, however, Yaʿḳūb was ready for a final onslaught on the Ṭāhirids' capital, Nīshāpūr, at a moment when Ṭāhirid authority was already being weakened in Khurāsān by pressure from the Zaydī Shīʿīs of Ṭabaristān and their Daylamī allies. Yaʿḳūb entered the city in Shawwāl 259/August 873 without striking a blow, captured Muḥammad b. Ṭāhir II b. ʿAbd Allāh [*q.v.*], and advanced into the Caspian coastlands, pursuing the Zaydī Imām al-Ḥasan b. Zayd [*q.v.*]. The ʿAbbāsid caliph protested mildly in that same year at Yaʿḳūb's annexation of Khurāsān, and more vigorously in 261/874, when ʿUbayd Allāh b. ʿAbd Allāh b. Ṭāhir I assembled the pilgrims from northern and eastern Persia at Baghdād, denounced Yaʿḳūb's actions as being without caliphal authority and absolving them from allegiance to him.

Yaʿḳūb's considered response was to spend the next two years consolidating his position in Kirmān, Fārs and Khūzistān in southern Persia, having temporarily taken over Fārs in 255/869 though unable to hold it whilst he was involved with the affairs of Khurāsān and the Caspian provinces. But in 261/875 Yaʿḳūb re-appeared in Fārs, defeated the local chief Muḥammad b. Wāṣil, and moved westwards to Rāmhurmuz and Khūzistān, thereby threatening Lower ʿIrāḳ and making feasible a junction with the Zandj [*q.v.*] rebels there against the caliphate (in practice, Yaʿḳūb rejected overtures from the Zandj leader ʿAlī b. Muḥammad, but the appearance of the Ṣaffārid armies undoubtedly bolstered the Zandj cause indirectly). The panic-stricken caliph al-Muʿtamid offered Yaʿḳūb a vast array of governorships if he would halt his advance, but the latter refused and advanced into ʿIrāḳ. However, in a battle near Dayr al-ʿĀḳūl [*q.v.*] on the Tigris (9 Radjab 262/8 April 876), Yaʿḳūb's army was decisively defeated, abandoning his baggage and allowing various of his captives, including Muḥammad b. Ṭāhir, to escape. The threat to Baghdād was thus lifted. Yaʿḳūb spent the last three years of his life in Khūzistān and Fārs, still spurning an alliance with the Zandj, and died of an abdominal malady in Shawwāl 275/June 879. He was succeeded as ruler over the Ṣaffārid empire by his brother ʿAmr b. al-Layth [*q.v.*].

Yaʿḳūb's meteoric rise and the great empire of military conquest which he assembled mark the first breach in the fabric of the united ʿAbbāsid caliphate, for Yaʿḳūb dismissed the "caliphal fiction" where by all local rulers, however much autonomy they enjoyed in practice, acknowledged their authority as arising from an act of caliphal delegation. The provincial Persian Yaʿḳūb, on the other hand, rejoiced in his plebeian origins, denounced the ʿAbbāsids as usurpers, and regarded both the caliphs and such governors from aristocratic Arab families as the Ṭāhirids with contempt. Frugal in his mode of life and a fearless military commander, Yaʿḳūb was sceptical in questions of inherited power and social prestige, and was an exponent of *Realpolitik*. He cannot have taken seriously the attempts of the eulogists, who inevitably gathered in his entourage, to link the obscure Layth family with the Sāsānid emperors and the mythical first kings of Persia, nor is it at all certain whether we should regard the scraps of verse in New Persian emanating from his circle as showing Sīstān as a cradle of the New Persian literary revival [see MUḤAMMAD B. WAṢĪF].

Bibliography: 1. Sources. The main ones are Yaʿḳūbī, *Taʾrīkh*; Ṭabarī; Ibn (Abī) al-Azhar (in Ibn Khallikān's extensive biography of Yaʿḳūb, ed. ʿAbbās, vi, 402 ff., tr. de Slane, iv, 301 ff.); Masʿūdī, *Murūdj*; Gardīzī and Ibn al-Athīr (both using the lost history of the governors of Khurāsān by Muḥammad al-Sallām [*q.v.*]); Djūzdjānī and, above all, the anonymous local history, the *Tārīkh-i Sīstān*.

2. Studies. The pioneering study was that of Th. Nöldeke, *Yakúb der Kupferschmied und seine Dynastie*, in his *Orientalische Skizzen*, Berlin 1892, 187-217, Eng. tr. *Sketches from oriental history*, London and Edinburgh 1892, 172-206. The early career of Yaʿḳūb is treated in detail by C.E. Bosworth in *Sīstān under the Arabs, from the Islamic conquest to the rise of the Ṣaffārids (30-250/651-864)*, Rome 1968, 109-21, and his career of conquest in idem, *The history of the Saffarids of Sistan and the Maliks of Nimruz (247/861 to 949/1542-3)*, Costa Mesa and New York 1994, 67-180. See also idem, in *Camb. hist. Iran*, iv, 106-16; *The New Islamic dynasties*, Edinburgh 1996, 172-3 no. 84; and ṢAFFĀRIDS.

(C.E. Bosworth)

YAʿḲŪB BEG, Muḥammad, ruler of Kāshghar 1282-94/1865-77.

He was born in 1820, or rather 1826-7, in Pishkend near Tāshkend. His father was Pīr Muḥammad Mīrzā (or Muḥammad Laṭīf), who claimed descent from Tīmūr. Originally from Ḳaratigīn [*q.v.*], he became *ḳāḍī* of Kurama and moved on to Pishkend in 1234/1818. Yaʿḳūb Beg's mother was the sister of the influential Shaykh Niẓām al-Dīn, who tutored Yaʿḳūb Beg in his youth. Traditionally, he should have become a *mullā*, but instead through his brother-in-law, Nūr Muḥammad Khān, governor of Tāshkend, he joined the Khoḳand army, and in 1261-2/1845, with the rank of *ḳosh-begi* [*q.v.*] was entrusted with the defence of Aḳ-Masdjid. Here he married a Ḳipčaḳ woman from Juelik, who bore him his first son, Beg Ḳulī Beg, in 1265/1848. In 1270/1853 he had to abandon

Aḳ-Masdjid to the Russians. When he defended Čimkend in 1281/1864, he again had to retire to Tāshkend, where he joined ʿĀlim Ḳul, *de facto* ruler of Khoḳand. In the same year, to remove a possible rival, he was sent by ʿĀlim Ḳul with 66 followers to support Buzurg Khān's claims as head of the Khʷādja family in Kāshghar [*q.v.*]. He had been recalled by the usurper Ṣiddīḳ Beg to legitimise his rule. Ṣiddīḳ Beg was killed after a bloody feud, and Buzurg Khān recognised the ruler of Khoḳand as his suzerain and appointed Yaʿḳūb Beg *ḳosh-begi*. In 1284/1867 Yaʿḳūb Beg ousted Buzurg Khān. After he was joined by Khoḳand refugees in 1282/1865, Yaʿḳūb Beg managed to lift the Chinese siege of the new town of Kāshghar. In 1283-4/1866-7 he consolidated his rule over the southern part of Eastern Turkistan [see SINKIANG], and the Amīr of Bukhārā conferred upon him the title of *Atalīḳ ghāzī*.

In 1287/1870 Yaʿḳūb defeated the Dungans [see AL-ṢĪN], when he drove them from Urumči. After that, he controlled almost all of Eastern Turkistan except for the Ili valley, occupied by the Russians the same year. In 1293-4/1876-7 the Chinese under Zuo Zongtang reconquered Sinkiang or Xinjiang.

Yaʿḳūb Beg died probably on 16 Djumādā I 1294/29 May 1877 from unknown causes. His son Beg Ḳulī Beg after a short civil war became his legitimate successor, but fled to Khoḳand in Ṣafar 1295/February 1878, from where he tried to enter Kāshghar again until 1299/1881.

His contemporaries were fascinated by Yaʿḳūb Beg's personality and success in state-building. Attributing to him a rather reckless youth, he became in the eyes of his contemporaries the founder of the first quasi-modern state in Central Asia with a seemingly efficient army and a civilian administration based strictly on the *Sharīʿa*. The members of the Forsyth mission in 1289-90/1872-3 found a well-functioning administration, while the Chinese reports from 1294/1877 onwards—from a war-stricken country—paint a different picture. In the Chinese sources, Yaʿḳūb Beg is normally called an adventurer coming from outside Sinkiang and imposing an Islamic rule on a multi-ethnic and multi-religious population [see MASRAḤ]. Buğra, himself from Sinkiang, condemns him for imposing foreign Andidjānī rule on the Muslims in Sinkiang. While Russians and Britains regarded him as a possible and not negligible pawn in the "Great Game", Sāyrāmī and Ottoman sources describe him as a proponent of Muslim unity.

Yaʿḳūb Beg built up his power by trusting almost exclusively his Khoḳandī kin, exceptions being Ḥakīm Khān, descendant of the Khʷādjas, and Niyāz Beg of Khotan. Both of these deserted the toppling Kāshgharī state in the final crisis to become rivals for power. He resorted also to diplomatic means to achieve recognition. Mainly through his most important agent and nephew, Sayyid Muḥammad Yaʿḳūb Khān, he concluded treaties of trade with Russia in 1872 and Britain in 1873, and gained the recognition of the Ottoman empire as Amīr of Kāshghar, receiving a modest amount of military help.

YAʿḲŪB BEY [see GERMIYĀN-OGHULLARĪ].

YAʿḲŪB ČELEBI [see GERMIYĀN-OGHULLARĪ].

YAʿḲŪB ḲADRĪ, ḲARA-ʿOTHMĀNOGHLU, in modern Turkish orthography, Yakub Kadri Karaosmanoğlu, Turkish author, journalist, politician and diplomat (1889-1974).

In 1909, he was a charter member of the literary movement *Fedjr-i Ātī* ("The Dawn of the Future") [*q.v.*], which embraced the motto "Art for art's sake". After becoming conscious of the deleterious effects for Turkey of the Balkan War of 1912, his philosophy of art changed; he now argued that art was first and foremost the expression of a society, of a nation, and of a historical period. Hence all of his nine novels depict a specific period in modern Turkish history. In order of their publication in book form, these novels are: *Kirālīḳ ḳonaḳ* ("Mansion to let", 1922), *Nūr Baba* (1922), *Ḥüküm gedjesi* ("The night of judgement", 1927), *Sodom we Gomōre* ("Sodom and Gomorrah", 1928), *Yaban* ("The stranger", 1932), *Ankara* (1934), *Bir sürgün* ("An exile", 1937), *Panorama* (1953-4), *Hep o şarkı* ("Forever that song", 1956) [see ḲIṢṢA. 3(b)]. The most controversial of these novels were *Nūr Baba* and *Yaban*. *Nūr Baba* was attacked for revealing Bektāshī secrets and presenting a dervish lodge in a negative light. *Yaban* dramatised the alienation of the intellectual from the masses for whom he purported to speak. All of his novels demonstrate his deft use of irony.

He was elected to the Grand National Assembly in 1923, and served as a representative till 1934. In 1932, he started to publish a journal called *Kadro* ("The staff"). Critical reaction from within his party to the journal's ideas led him to be appointed ambassador in 1934. He served as an ambassador in various posts till his retirement in 1955. He recounts his years as a diplomat in his memoir *Zoraki diplomat* ("Forced diplomat", 1955). His other memoirs are: *Anamın kitabı* ("My mother's book", 1957), *Vatan yolunda* ("On the road to and for the nation", 1958), *Politikada 45 yıl* ("Forty-five years in politics", 1958), *Gençlik ve edebiyat hatıraları* ("Memories about youth and literature", 1969).

In 1912, he contracted tuberculosis, from which he suffered all his life. Perhaps because of his frail health, he was of a pessimistic bent, but nevertheless he always remained an idealist. He was a fervent admirer of Atatürk and his ideals, believing that Kemalism was the first humanist reaction to imperialism and as such had a universal dimension. He presents his ideas on Mustafa Kemal in his monograph *Atatürk* (1946).

YAʿḲŪB AL-**MANṢŪR** [see ABŪ YŪSUF YAʿḲŪB AL-MANṢŪR].

YAʿḲŪB PASHA, physician and official for the Ottoman sultan Meḥemmed the Conqueror.

Ottoman, Jewish and Venetian sources provide information about him, called Jacopo or Giacomo in Italian sources, yet due to the possibility that other personalities named Yaʿḳūb or even anonymous ones may have been intended by some of the surviving texts, much of his life remains obscure. He was born around 829-34/1425-30 and came from the Italian town of Gaeta. Of a Jewish family, he remained a Jew through most of his career, but became a Muslim late in life, along with several of his sons, although it is likely that some of his descendants retained their original religion. The date of his conversion is not known, but it must have occurred before Muḥarram 888/February 1483, when a document establishing a pious foundation of his was witnessed by many high-level courtiers, the future Grand Vizier Mesīḥ Pasha among them. No mention of his name later than this date has apparently been located. Thus an older assumption, namely, that Yaʿḳūb Pasha was killed during the disturbances following the demise of Meḥemmed II in 863/1481 cannot be correct. An Istanbul town quarter was apparently named after Yaʿḳūb Pasha's foundation, but by the middle of the 10th/16th century, both these had disappeared.

We do not know where Yaʿḳūb/Giacomo received his medical training, but he appears in the entourage of the young Sultan Meḥemmed II, whom he served not only as a physician but also in administrative capacities, among other things as a *defterdār*. Without stating his sources, Meḥmed Thüreyyā in his *Sidjill-i ʿothmānī* (Istanbul 1308-after 1316/1888-99) claims that he also achieved the titles of *wezīr* and *muṣāḥib* and was highly respected, placing his subject's death in 889/1484. Yaʿḳūb Pasha's descendants may well have received a diploma exempting them from various taxes, the poll-tax (here called *bash kharādjī*) and the *ʿawāriḍ* among them. However, as the relevant diploma is only extant in a rather free translation into Hebrew, which moreover leaves out the name of the beneficiary, it is possible that it was granted not to Yaʿḳūb/Giacomo but to some other, less well-known Jewish medical man of Meḥemmed's.

Writing before 965/1558, Ṭashköprüzāde praises Yaʿḳūb/Giacomo's medical skills and records several anecdotes describing them. These seem to have earned him the sultan's trust throughout the latter's reign; however, during Meḥemmed's last illness, it was not he who treated the ruler but the Persian physician Lārī. Already in 861-2/1457, Giacomo had received a gift of fine red velvet from the Venetian Senate, so that he must have been regarded as an influential figure at court. In 875-6/1471 the Venetian Senate contacted him through intermediaries after an offer on the physician's part to have the sultan murdered, an overture to which the Senate responded positively. However, there is no evidence that Giacomo of Gaeta ever followed up on his promises, nor was he at the Ottoman court ever accused of plotting with Venetians or others. He may in actual fact have been an Ottoman secret agent, exploring Venetian intentions on behalf of the sultan.

(SURAIYA FAROQHI)

AL-**YAʿḲŪBĪ**, early Arab historian and geographer, *fl.* in the second half of the 3rd/9th century.

Life. Abu 'l-Abbās Aḥmad b. Abī Yaʿḳūb b. Djaʿfar b. Wahb b. Wāḍiḥ was born in Baghdād in the 3rd/9th century. Trained as a member of the secretarial class, he went to Armenia as a young man and later served under the Ṭāhirids [*q.v.*] in Khurāsān. After the fall of the Ṭāhirids there in 259/872-3, he settled in Egypt, and died there in the early 4th/10th century, but apparently not before 292/905.

Works. Three of al-Yaʿḳūbī's works have come down to us. The first in importance is the *Ta'rīkh* which, as he himself describes it, is a "concise" account of the origins and history of the world (ii, 2). Published in two volumes, the first part begins with Adam and his descendants (the section dealing with the creation of the world is lost) and includes accounts, *inter alia*, of the Israelites, Assyrians, Babylonians, Indians, Greeks, Romans, Persians, Chinese, Egyptians, Yemenis and Syrians. In his discussion of the Israelites, he frequently quotes from the Hebrew Bible, to which he probably had access in Arabic via versions in Greek and Syriac (Adang, 120), and he cites the New Testament in describing the life of Jesus. Biblical materials are often seamlessly combined in al-Yaʿḳūbī's narrative with *midrashim* and apocrypha, reflecting no doubt the way such materials reached him and other mediaeval Muslim historians (Adang, 117-20 and *passim*). His emphasis throughout is on highlighting the cultural achievements of the peoples he describes, and it is on this same note, with an account of the religious and cultural life in pre-Islamic Arabia, that his first volume ends.

A substantial part of the second volume is devoted to the life of Muḥammad, following which the history of Islam is organised by the reigns of individual caliphs. His history is in fact one of the earliest surviving works to follow this mode of organisation (Noth, 46). The *ayyām* of Abū Bakr, ʿUmar and ʿUthmān are described in sequence before "the caliphate of the commander of the faithful ʿAlī b. Abī Ṭālib" (ii, 206) and of his son al-Ḥasan; the account then proceeds with the *ayyām* of Muʿāwiya b. Abī Sufyān and his Umayyad successors, followed by the ʿAbbāsids, the last of whom to be described is the caliph al-Muʿtamid (d. 279/892 [*q.v.*]). Al-Yaʿḳūbī also gives considerable attention to the Imāmiyya and the travails of their *imāms*, which has led scholars to debate (inconclusively) whether he ought to be considered as a Shīʿī, and if so in what sense. Petersen, *ʿAlī and Muʿāwiya*, 173, sees al-Yaʿḳūbī as trying "to find a compromise between the conflicting views" on the first *fitna*; but al-Yaʿḳūbī's hostile account of the caliphate

of ʿUthmān (ii, 186-206) seems to leave little room for any such compromise. While his hostility towards the Umayyads stands out clearly, as does his proclivity for ʿAlī, the precise character of al-Yaʿḳūbī's religious orientation remains uncertain. His attitude towards the ʿAbbāsids seems, in general, to have been favourable though there are discordant notes. His characterisation of ʿAbbāsid rule as mere *ayyām* rather than as *khilāfa* might suggest some ambivalence in his attitude towards the régime, for instance; and his account of the death of Mūsā al-Kāẓim [*q.v.*], the seventh *imām* in the reckoning of the Twelver Shīʿa, while in custody of Hārūn al-Rashīd (ii, 499-500) is not complimentary to the ʿAbbāsids, even though the caliph is not explicitly blamed for the death. Though al-Yaʿḳūbī does not give *isnāds* for his accounts, some of his information comes from ʿAbbāsid family sources (he himself was a *mawlā* of the ʿAbbāsid family); but it also comes from the ʿAlids (in particular, through Djaʿfar b. Muḥammad [*q.v.*], the sixth *imām*) (ii, 3; cf. also Duri, 67).

Owing perhaps to his secretarial background but, equally, in the interest of narrative embellishment, al-Yaʿḳūbī offers a generous sampling of letters which purport to have been written by some of the individuals who figure prominently in his accounts. He also shows considerable interest in the *awāʾil* [*q.v.*]. Other literary forms such as speeches and lists are common as well in his narratives. One noteworthy instance of the latter is the listing of scholars (usually characterised here as *fuḳahāʾ*) appended to the reigns of individual caliphs. Such lists seem intended to suggest the early origin of religious scholars recognisable as a determinate group—from the time of the Rightly-Guided Caliphs [see AL-KHULAFĀʾ AL-RĀSHIDŪN, in Suppl.] onwards—as well as the continuity of this institution in later generations. Yet it is odd that there are no such lists for the reign of al-Maʾmūn—precisely the caliph who, with the *miḥna* [*q.v.*], inaugurated a strenuous conflict with many of the *ʿulamāʾ*—or, for that matter, for any of his successors. This example may, however, indicate no more than the selective, anthology-like character of al-Yaʿḳūbī's work which belongs, in this as in other respects, firmly to the genre of *adab* [*q.v.*].

Al-Yaʿḳūbī's other major work is the *Kitāb al-Buldān*, which he completed in Egypt in 278/891, and which is an administrative geography of the lands of Islam, of the Turks and of the Nubians; portions describing Byzantium, India and China are no longer extant. Based on al-Yaʿḳūbī's travels in Armenia, Ādharbāydjān, India and North Africa, and, no doubt on his experience in the caliphal administration, this book provides much historical, topographical and statistical information on the regions it describes. Like the *Taʾrīkh*, the *Buldān* is also a work of *adab*. In their interest in the influence of climate on human life and culture (a theme already investigated by al-Djāḥiẓ [*q.v.*]), their celebration of Baghdād as the unique and blessed meeting place of the peoples and cultures of the world (*Buldān*, 233 ff.; Miquel, iv, 225 ff.), and, in general, their concern to provide an abridgement (*mukhtaṣar*) of such knowledge which "one cannot afford to ignore" (233), the *Buldān* and the *Taʾrīkh* evince features common to many a work of the *adab* genre.

Al-Yaʿḳūbī is also the author of a short treatise entitled *Mushākalat al-nās li-zamānihim* in which he shows, in a highly schematic and impressionistic fashion, some of the ways in which the life and tastes of people are modelled on those of the caliphs under whose reign they live (the caliphs are described in chronological sequence, from Abū Bakr to the ʿAbbāsid al-Muʿtaḍid, d. 289/902 [*q.v.*]). In its attention to the supposed origin of particular practices and those who instituted them, as Millward has observed, this work is of interest as an early example of the *awāʾil* genre. More important, however, is this work's testimony to al-Yaʿḳūbī's search for patterns in history, a concern which is occasionally also in evidence in both his *Taʾrīkh* and *Buldān* (cf. Khalidi, *Arabic historical thought*, 124 ff.).

In general, the principal importance of al-Yaʿḳūbī's historical work is threefold. One of the earliest surviving examples of "universal" history in Islam, it is especially noteworthy for its attention to the cultural peculiarities and diversity of the ancient, pre-Islamic nations and cultures it surveys. Also significant in this regard is his unusually extensive use of non-Islamic sources, e.g. biblical, midrashic and apocryphal materials, to provide a detailed account of the beliefs and practices of the peoples he describes (cf. Adang, 38, 71 ff., 117 ff.). Second, though the character of al-Yaʿḳūbī's Shīʿī proclivities remains uncertain and, in any case, almost all classical works of history preserve traditions with many different tendencies (cf. Noth, 9-10 and *passim*), the *Taʾrīkh*, like the work of al-Masʿūdī [*q.v.*], does provide much insight and information on early Shīʿī attitudes and, in so doing, supplements works with a decidedly Sunnī perspective on what we know about the formation of religious identities in the first centuries of Islam. Finally, al-Yaʿḳūbī's work represents, even as it contributed to, the growth of *adab*-historiography, an increasingly ascendant trend which even the massive *Taʾrīkh* of al-Ṭabarī [*q.v.*], based on the methodology of *ḥadīth*-scholarship, could do little to displace.

(MUHAMMAD QASIM ZAMAN)

YAʿḲŪBIYYŪN, YAʿĀḲIBA, YAʿḲŪBIYYA, pls. of Yaʿḳūbī, the Arabic term for the Jacobite Christians.

"Jacobites" is the designation for members of the Syrian Orthodox Church, whose dogmatical position (Christ's divinity and humanity coming together into one nature), known as monophysitism, was thought

to be at variance with the moderate dyophysite christology formulated by the Fourth Ecumenical Council of Chalcedon (451; one divine and one human nature united into one person and hypostasis). Consequently, the "Monophysites" were considered as heretics by the leaders of the Imperial Church. In the aftermath of the Council, the situation in the Patriarchate of Antioch was much confused, with some members of the clergy and the laity professing a monophysite christology, and others, nicknamed *Malkāyē* (Melkites), i.e. followers of the Emperor (*malkā*), supporting the resolutions of Chalcedon. Allegiances, however, could change, and periods of fierce persecution by the imperial authority alternated with attempts at reaching a compromise. A complex mixture of cultural (a certain, but not absolute, opposition Greek-Syriac), nationalistic (erosion of the unitarian ideology of the Roman Empire), socio-economic (recession in Syria connected with social unrest; repression) and theological factors contributed to promoting feelings of a distinct "monophysite" identity. The activity of Jacob Burdʿānā (Arabic: Bardāʿī, also Bardānī, d. A.D. 578), who ordained several bishops and appointed a monophysite Patriarch for the see of Antioch, brought about the result that, along with the Imperial Church, an independent monophysite Church came into being in the Patriarchate of Antioch. Its members were mainly Syriac-speaking, but also included some Arab tribes (G͟hassān, Tag͟hlib [*q.vv.*]) who belonged to the monophysite community and even had their own bishops. Before Jacob's lifetime, the Monophysites had already crossed the classical boundaries of the Antiochian Patriarchate and settled in Sāsānid territory, sc. in ʿIrāḳ, mainly in the region around Takrīt. The name of the Jacobite Church is to be traced back to Jacob Burdʿānā, but the Jacobites consider the christianisation of Edessa [see AL-RUHĀ] as the true beginning of their Church.

Though in the course of history, the term "Jacobites" was currently used by the Jacobites to designate themselves and was also known to Muslim heresiographers, in modern times the name "Syrian Orthodox" or "West Syrian" (the opposite of "East Syrian", i.e. "Nestorians" [see NASṬŪRIYYŪN] and "Chaldaeans") is preferred, with "Syrian Orthodox" as the correct self-designation. In a more general sense, "Jacobites" was also used as synonym for all monophysite Christians, including the Copts (e.g. al-Masʿūdī, *Tanbīh*, 151).

1. The Islamic period.

On account of a lack of contemporary Jacobite sources, it is a matter of discussion whether the advance of the first Islamic troops and their conquest of important centres of Jacobite Christians such as Edessa (16/637) and neighbouring cities in Mesopotamia and Syria were welcomed as a liberation from the persecutions by the Greeks. Echos of this assumption can be found in the writings of later West Syrian historiographers such as the Patriarch Dionysius of Tell Maḥrē (d. 845), the Patriarch Michael the Syrian (d. 1199) or the bishop and scholar Gregory Barhebraeus (d. 1286 [see IBN AL-ʿIBRĪ]). In Persia, the West Syrian Metropolitan of Takrīt, Mārūtā, took the side of the Muslims and opened the gates of the citadel to them (Barhebraeus, *Chron. ecclesiasticum*, ed. J. Abbeloos and Th. Lamy, Louvain 1877, iii, 123-5). On the other hand, the same sources frequently stress the cruelty of the Muslim invaders and seem to consider the consequences of their attacks as a just punishment by God for the sins committed by the Jacobite community.

During the reign of the first Umayyad caliphs, Christians had many opportunities ("as scribes, managers and administrators" according to Dionysius of Tell Maḥrē) to contribute to the development of the new society in Syria. Incidentally, we also know the names of West Syrians holding public functions. One of the best known was al-Ak͟hṭal [*q.v.*], a member of the Banū Tag͟hlib and court poet under ʿAbd al-Malik b. Marwān. The latter also summoned the rich Edessan merchant Athanasius b. Gummāyē to his court and appointed him secretary to his brother ʿAbd al-ʿAzīz, governor of Egypt (Dionysius of Tell Maḥrē, in *Chronique de Michel le Syrien*, ed. J.-B. Chabot, Paris 1899-1910, iv, 447, ii, 474). During the reign of the same caliph, however, the Jacobite Church was also confronted with the problem of apostasy, mainly due to mixed marriages, as we may infer from some ecclesiastical canons issued by bishop Jacob of Edessa (d. 708), but also the first discriminatory measures aimed at Christians played a role here. Patriarch John II (d. 754) was the first to obtain official recognition of his dignity from the caliph himself (Marwān II).

In the ʿAbbāsid period, with the transfer of the seat of government to ʿIrāḳ, most areas populated by Jacobite Christians were situated relatively far from the capital, partly even outside Muslim territory. This situation laid Jacobite church leaders open to the accusation of being on the side of the Byzantines (Fiey, *Abbassides*, 183). This did not prevent Patriarchs regularly undertaking the journey to Bag͟hdād to obtain their investiture diploma, or even to appeal to the caliph against rival candidates or simply to settle matters of church discipline. The institution of the maphrianate (see below) appeared to be a practical solution for the problem of the contacts of the Jacobites with the authorities in Bag͟hdād. In 301/913, a patent delivered by al-Muḳtadir to the East Syrian Catholicos Abraham Abrāzā (d. 937) regulates the official relationship between the Nestorian, Jacobite and Melkite hierarchies and the Muslim authorities, to the advantage of the Nestorians, who became the preferred interlocutors of the court (Fiey, *Abbassides*, 130). Only the Nestorian Catholicos was entitled to have his official residence in the capital. The creation of Crusader states in areas important for the Jacobite community, such as Edessa and Antioch (491/1098) and Jerusalem (492/1099), allowed the West Syrians to develop a cautious openness to the Church of Rome in theological and church political matters, without wishing, however, to submit to papal authority, as this openness was readily interpreted by the Latin clergy in Jerusalem and Antioch.

By the end of the 5th/11th century, much of the power of the ʿAbbāsids was taken over by the Sald͟jūḳ Turks, who settled in the traditional homelands of the Jacobites, including those territories which had so far remained outside Muslim rule. According to Michael the Syrian, the relations between Sald͟jūḳ and Jacobite leaders were, on the whole, relatively good. He praised their tolerant attitude in matters of faith, and he maintained good relations with the Rūm Sald͟jūḳ Ḳilid͟j Arslan II. An entire chapter of his chronicle is devoted to the origin of these "Turkāyē" or "Turḳāyē" (*Chron. Michel Syr.*, iv, 149 ff., 566 ff.).

In the later ʿAbbāsid period, important parts of the Christian population had embraced Islam on account of the growing number of discriminatory measures. The Jacobite church was nevertheless able to maintain an extensive network of metropolitan sees and important monasteries, which, in the 13th century, extended from Acre on the Mediterranean coast to Tabrīz in Ād͟harbāyd͟jān. After the destruction of Bag͟hdād by the Mongols (656/1258), the centre of gravity of power again moved eastward. The first Mongol leaders were initially well disposed towards the Christians, mainly East

Syrians, but the Jacobites also took advantage of this situation. Their Maphrian, Gregory Barhebraeus, frequently stayed in the Il-Khānid capitals of Tabrīz and especially at Marāgha, where he was able to study contemporary Persian accounts of the Mongol invasions such as the *Tārīkh-i Djahān-gushāy* by Djuwaynī. By the end of the 13th century, however, the Mongols proclaimed Islam as the official religion of their empire. The 14th century was a period of decline, not only on account of the changed religious policy of the Mongol leaders, but also due to inner dissensions (see below). The Turco-Mongol incursions by Tīmūr Lang at the turn of the 14th and 15th centuries accelerated this process and brought about the destruction of important Jacobite centres in Āmid (Diyārbakir), Mārdīn and the Ṭūr ʿAbdīn. Thereafter, the West Syrians became almost everywhere a minority, living on the margin of society. Only some isolated villages in the Ṭūr ʿAbdīn [*q.v.*] and northern Mesopotamia remained entirely Jacobite. Their immediate neighbours were mostly Kurdish tribes, whose feudal structure they shared, at least in some regions. In the Ṭūr ʿAbdīn they also kept their own Aramaic language, surviving to the present day [see ṬŪR ʿABDĪN. 4.].

This situation continued during much of the Ottoman period. The position of the Jacobites was still further weakened by the creation of a Uniate Syrian Catholic Church (1662 and, on a permanent basis, from 1783 onwards), to which many important members of the Jacobite community felt attracted. Since the end of the 18th century the Armenian Patriarch in Istanbul had become the sole representative of all monophysite Christians of the empire, a tangible proof of the marginal position of the West Syrians. Only in 1882 was the Jacobite church recognised as an independent *millet* [*q.v.*]. Due to their close ties with the Armenian community, the West Syrians became involved in the Turco-Armenian conflict. During the massacres of 1895-6, the West Syrians succeeded in conveying to the Turks that their community was different from that of the Armenians, hence they generally escaped unharmed; but this distinction from the Armenians (and the Assyrian Christians) was not made in 1915-16, when about one-third of the population of the Ṭūr ʿAbdīn fell victim to the violence of the Ottoman soldiers and their Kurdish allies, amongst many other massacred Christians.

Though in 1923 the Patriarch had been compelled to leave Dayr al-Zaʿfarān, the age-old see of the Patriarchate (see below), the first years of the new Turkey of Muṣṭafā Kemāl were relatively calm due to its non-religious, nationalist orientation. After his death in 1938, the West Syrians had to pay for the fact that the Treaty of Lausanne (1923) only speaks of the religious and cultural rights of non-specified, "non-Islamic minorities". According to the current interpretation by the Turkish authorities, only the Jewish, Greek and Armenian communities are recognised as such, and not the West Syrians.

From the 1960s onwards, many West Syrians from Turkey and the Middle Eastern countries emigrated to Western Europe and North America initially as economic migrants, but since the 1980s also as applicants for political asylum (see further on this emigration; ṬŪR ʿABDĪN. 2).

2. Ecclesiastical structure.

The head of the Syrian Orthodox Church is the Patriarch "of Antioch and all the East", "all the East" referring to a classical Roman administrative division in the region east of Antioch. In the pre-Islamic as well as in the Islamic periods, the Patriarch had no fixed residence, but mainly stayed in important monasteries outside Antioch, and in the Crusader period, also in Antioch itself.

From the 11th century till 1293 he used to reside in the monastery of Mār Barṣawmā near Malaṭya. In 1293 the seat of the Patriarchate was transferred to Dayr al-Zaʿfarān, near Mārdīn, which the Patriarch left only in 1923 for Ḥimṣ (Syria). Since 1959 his residence has been in Damascus, with a recently-erected clerical training school in Maʿarrat-Ṣaydnāyā. Official texts are published in *al-Madjalla al-Baṭriyarkiyya.* The Metropolitan of Takrīt, since the 11th century called *Maphreyānā* or Maphrian, was the official representative of the Patriarch for the eastern dioceses of the West Syrian Church. He had far-reaching powers, such as the right to convene synods and the ordination of metropolitans. Since 1152 his actual place of residence was in Mawṣil or its neighbourhood (monastery of Mār Mattay). In the ʿAbbāsid period, he had to intervene frequently at the court on behalf of his coreligionists. The function was abolished in 1859, but re-established in 1974 for the ancient community of Syrian Orthodox in India. A schismatic patriarchate and maphrianate existed in Ṭūr ʿAbdīn between 1364 and 1495.

3. The Church within the Islamic religious and cultural milieu.

(a) *Apologetic and polemical literature.* It does not seem that in the context of literary contracts with Islam (both in Syriac and Arabic), the Jacobites developed special themes absent from the writings of authors belonging to different Christian communities such as the Melkites or, especially, the Nestorians. Only in the field of christology had the Jacobites to be aware that their emphasis on the unity of the divine and human aspect in Christ was difficult to accept by Muslim thinkers, some of whom felt more sympathy for a "Nestorian" christology, which, by its presumed emphasis on the separation between Christ's divinity and humanity, seemed less to jeopardise God's transcendence. Thus the caliph al-Mahdī agreed with the East Syrian Catholicos Timothy I that the christological position of the West Syrians virtually amounted to theopaschitism. Yaḥyā b. ʿAdī [*q.v.*] took it upon himself to defend the traditional Jacobite christological position against an (otherwise unknown) Muslim thinker, Aḥmad Abu 'l-Ḥusayn al-Miṣrī, who partly supported the Nestorian point of view (E. Platti, *La grande polémique anti-nestorienne de Yahya b. ʿAdi*, CSCO, 427-8, 437-8, Louvain 1981-2).

The oldest example of West Syrian apologetics is the record (in Syriac) of a dispute between Patriarch John I d-Sedraw(hy) (d. 768) and a Muslim *amīr.* Though the dispute itself may have been a historical event which took place as early as 24/644, the record is a literary fiction composed in a much later period (the end of the 7th or beginning of the 8th centuries A.D., see G. Reinink, *The beginnings of Syriac apologetic literature in response to Islam*, in *Oriens Christianus*, lxxvii [1993], 165-87): It deals with issues such as the doctrine of the godhead of Christ, the Trinity, the superiority of Christianity and the presence of legislative texts in Christian scriptures. The language of this dispute is simple and straightforward, and lacks the philosophical terminology, which became characteristic of later West Syrian apologists. Thus the archdeacon Nonnus of Nisibis (middle of the 9th century) defended the Jacobite creed with arguments based on Scripture, but, especially, on discursive reasoning. His work (in Syriac) was mainly directed against Jews and Muslims, but the author clearly expressed his preference for Islam which he considers to be more akin to Christian-

ity than all other outside religions, including Judaism. To substantiate this claim, he adduced what became in later times the classical argument of the Ḳur'ān's recognition of Christ as being born from a Virgin and Christ and as being "the Word and Spirit of God" (A. Van Roey, *Nonnus de Nisibe. Traité apologétique*, Louvain 1948). Nonnus' teacher Ḥabīb b. Khidma Abū Rā'iṭa (first half of the 9th century) was the author of several apologetic treatises, all composed in Arabic. His intention was to present a Christian readership with a solid apologetic argumentation that could help them to formulate adequate answers to Muslim objections and questions. To explain the dogma of the Trinity, he made use of the classical, Islamic method of reasoning by analogy (*ḳiyās*). His efforts to be understandable to Muslims by employing the philosophical and lexical terminology of contemporary Muslim *mutakallimūn* are especially noteworthy. In order to discourage conversion to Islam he analyses the different motives that caused Christians to give up their religion (S. Griffith, *Habib ibn Hidmah Abu Ra'itah, a Christian mutakallim of the first Abbasid century*, in *Oriens Christianus*, lxiv [1980], 160-200). The problem of free will and predestination was treated by Moses b. Kēphā (d. 903). Chapter six of his treatise on this subject (in Syriac) is directed against the Mhaggrāyē (= *muhādjirūn* or Sons of Hagar), whose *mutakallimūn* are depicted, without any nuance, as defending a strict determinist position (Griffith, *Free will in Christian kalam. Moshe b. Kepha against the teachings of the Muslims*, in *Le Muséon*, c [1987] 143-59). Like Abū Rā'iṭa, Yaḥyā b. 'Adī, the capable student of Abū Naṣr al-Fārābī [*q.v.*], and the Nestorian philosopher Abū Bishr Mattā b. Yūnus [*q.v.*], tried to defend the Christian dogmas of the Trinity and the Incarnation with the help of a common, Muslim-Christian philosophical language, refuting one by one all single elements of the objections of his adversaries with great logical consistency. Due to the fact that he gives lengthy quotations of his Muslim interlocutors, some otherwise lost works have been preserved, e.g. of Abū Yūsuf al-Kindī or Abū 'Īsā al-Warrāḳ (D. Thomas, *Anti-Christian polemic in early Islam. Abu 'Isa al-Warraq's "Against the Trinity"*, Cambridge 1992). Abū 'Alī Ibn Zur'a and Muḥyī al-Dīn al-Iṣfahānī, authors respectively of a treatise on God's Unicity and Trinity (ed. M. Allard and G. Troupeau, Beirut 1962) and of a refutation of Islam, were to continue the tradition of West Syrian apologetics in Arabic. The last important West Syrian polemicist writing in Syriac was Dionysius bar Ṣalībī, Metropolitan of Āmid (d. 1171). His tract against the Muslims contains a section that describes the different groups into which the Muslims were divided, and it offers Syriac translations for Islamic technical terms, as well as quotations in Syriac from the Ḳur'ān (Griffith, *Dionysius b. Salibi on the Muslims*, in H. Drijvers *et alii* (eds.), *IVth Symposium Syriacum 1984*, Orient. Christ. Analecta 229, Rome 1987, 353-6).

Apologetic elements can also be found in works not primarily composed to serve apologetic purposes. Several works of historiography contain passages on different aspects of Islam. An example is the secular chronicle of Barhebraeus devoting much attention to the biography of Muḥammad, to *kalām*, etc. The same holds true for some theological writings composed primarily for the community itself, such as the *Kitāb al-Murshid*, a general theological, ethical and liturgical handbook by Yaḥyā b. Djarīr (end of the 11th century). In many passages, the author takes great care to make certain aspects of the Christian doctrine intelligible to Muslim readers by using a specific Muslim terminology such as *imām, sharī'a, sunna, nāsikh-mansūkh* (to explain the relation between the New and Old Testaments), etc. Other examples of such works are the (not yet edited) theological summa of Jacob bar Shakkō (d. 1241) known as the "Book of Treasures" (in Syriac) with a passage on the *Ṭayyāyē* "Arabs, Muslims". The theological summa of Barhebraeus, the "Candelabra of the sanctuary" contains passages refuting the Muslim accusation of *taḥrīf* [*q.v.*] (*Candélabre du sanctuaire. IV. De l'Incarnation*, ed. J. Khoury, in *PO*, xxxi, Paris 1964, 110).

(b) *Canonical decisions.* The growing influence of Islam can also be gathered from a number of canonical decisions dealing with different aspects of the relations with the Islamic world. The Jacobite canonists were mostly worried about the apparently growing number of Christian women marrying Muslims. Jacob of Edessa allows these women to continue to receive Holy Communion lest they apostasise. The Patriarch Athanasius II of Balad (d. 686) denounces the participation of Christians in Muslim festivals. The Patriarch Giwargis (d. 785) states that Christians are not allowed to marry their daughters to Muslims. Those who do, as well as the women concerned, are not allowed to receive Holy Communion. The Synod of the Monastery of Shilā (846) excommunicates all Christians who "marry Ḥanpē (lit. "pagans", but in this context to be interpreted as Muslims), Jews and Magi". Also, Dionysius bar Ṣalībī, in his penitential canons, devotes some attention to women entering into relations with "Arabs and Turks". Another important issue was the problem of Christians converted to Islam but desiring to return to their old faith. Instances of how this problem was dealt with can also be found in historiographical works, e.g. the case of the apostate Maphrian Ignatius b. Kīkī (*Chron. Michel Syr.*, iii, 127 iv, 554); Jacob of Edessa stipulates that rebaptism is not necessary, but a time of penitence has to be imposed. An allusion to mixed marriages is possibly to be found in a canon of bishop John of Mārdīn (d. 1165), stipulating that children of *Mashlemānē* are only entitled to receive the baptism of John for the remission of sins, to be distinguished from the baptism administered to Christian children (*The Synodicon in the West-Syrian Tradition. II*, ed. A. Vööbus, Louvain 1976, 246).

(c) *Cultural interaction.* Though to a lesser degree than the East Syrians, West Syrians also participated in the transmission of Greek philosophy and science to the Arab world, thus contributing to the achievements of the first 'Abbāsid period. Important translators into Arabic were 'Abd al-Masīḥ b. Nā'ima al-Ḥimṣī, Yaḥyā b. 'Adī and Ibn Zur'a, all mentioned in Ibn al-Nadīm's *Fihrist.* Yaḥyā b. 'Adī was at that time still the teacher of a number of Muslim students. In a later period, however, this situation was reversed. Barhebraeus states "we from whom (the Arabs) have acquired wisdom through translators who were all Syrians, are now in the necessity of asking for wisdom from them" (*Civil chron.*, ed. St. Ephrem the Syrian Monastery-Glanerbrug 1987, 90b). Authors like Jacob bar Shakkō, John bar Ma'danī and, especially, Barhebraeus were influenced by Islamic thinkers, the latter not only in his scientific, medical and philosophical writings (especially from Ibn Sīnā and Naṣīr al-Dīn al-Ṭūsī) and in his chronicles, but also in his ecclesiastical treatises (the second part of his nomocanon, a work of canon law, is strongly influenced by *fiḳh*) and, surprisingly, in his works on spirituality: both the *Ethicon* and the *Book of the Dove* show influences from al-Ghazālī's *Iḥyā' 'ulūm al-dīn* (H. Teule, *Barhebraeus' Ethicon, al-Ghazali and Ibn Sina*, in *Islamochristiana*, xviii [1992], 73-85).

YĀḲŪT (A.), corundum, one of the outstanding gems according to early and later Islamic writers, the others being *zumurrud* (emerald) and *luʾluʾ* (pearl) (al-Bīrūnī, *Djamāhir*, 81; *Nawādir*, 73 [from a manuscript dated 390/1000]). *Yāḳūt* (ruby) is considered by al-Bīrūnī to be the first-rated, most valuable and most expensive of all gems (*ibid.*, 32).

Etymology. Al-Djawharī opines that the word *yāḳūt* is an arabicised Persian word (*Ṣiḥāḥ*, ed. A.ʿA. ʿAṭṭār, Cairo n.d. [*ca.* 1372/1956], i, 271). Ḥamza al-Iṣfahānī, as quoted by al-Bīrūnī, derives *yāḳūt* from the Persian *yākand*. However, the term is most probably derived from the Greek *hyakinthos* via the Syriac *yaḳkundā* or *yaḳḳuntā* (there are further variants, see C. Brockelmann, *Lexicon Syriacum*, Hildesheim 1966, 307a); the Greek may also be the origin of the Persian term.

In the Ḳurʾān, *yāḳūt* is referred to only once to describe the young pure virgins in Paradise as resembling it (LV, 58); al-Bīrūnī says that *yāḳūt aḥmar* (ruby) is intended here, rather than any other variety of the stone (*ibid.*, 33).

Definition. A discussion of *yāḳūt* ought to begin with clarifying the common but erroneous modern use of the word as an equivalent to ruby. In mediaeval Arabic literary and scientific textual sources, *yāḳūt* is equivalent to all varieties of the mineral corundum that we know today. Corundum is a crystallised form of alumina (Al_2O_3) which occurs in many colours, among which *yāḳūt aḥmar* ("red corundum" or "ruby") is the finest. The second best, according to al-Tīfāshī [*q.v.*], is the *yāḳūt aṣfar*, known in English as "yellow sapphire" or "oriental topaz" (Cipriani, *Macdonald Encyclopedia of Precious stones*, 106). The third in rank is the *yāḳūt akhab* or *azraḳ* ("blue sapphire"), and the last is *yāḳūt abyaḍ* ("leuco-sapphire"). Al-Bīrūnī wondered how transparent stones like *yāḳūt* crystallised and obtained their various colours, and thought that knowing this was beyond man's comprehension. We know now that the different colours of the various types of *yāḳūt* are due to traces of a metallic oxide present in the stone as an impurity (Webster, *Gems*, 60; Bauer, *Precious stones*, 261).

Each of the four main types has gradation in colour. The *yāḳūt aḥmar*, for instance, being the most valuable, has seven shades of red, ranging from deep red, *bahramānī* (Rubicelle, Escarboucle) or *rummānī* (defined at the present time as "carmine" or "pigeon's blood"), to the pale rose-pink *wardī*. The colours of the *yāḳūt aṣfar* range from the deeply saturated (*djullanārī*) to the palest or straw-coloured (*tibnī*). The *yāḳūt akhab* or *azraḳ* ranges from the dark *kuḥlī* (ink blue) down to the lighter *samāwī* or *asmāndjūnī* (sky blue). The *yāḳūt abyaḍ* has two shades, the more prized of which is the *mahawī* or *billawrī* (rock crystal-like).

These four types, classified according to colour and value by a number of mediaeval Islamic writers such as Ibn Māsawayh, al-Bīrūnī quoting al-Kindī, al-Tīfāshī, Ibn al-Akfānī [*q.vv.*] and others, represent essentially varieties of the same mineral with the same degree of hardness and density.

Provenance. The mines of *yāḳūt* are in the Mogok region in Burma, in Thailand, Cambodia, Sri Lanka and other places. Al-Ḳazwīnī in *ʿAdjāʾib*, 277, locates its mines in the countries around the equator. The rough *yāḳūt* is obtained from deposits eroded from the mother-rock, and thus is normally found among sand, gravel and clay brought down the mountains by torrents and wind (Ibn Māsawayh, *Djawāhir*, 41-3; al-Bīrūnī, *Djamāhir*, 44; al-Tīfāshī, *Azhār*, 64; Bauer, 287). The best *yāḳūt* is that washed down by torrents, according to the first two of these authors.

Physical properties. *Yāḳūt* is brittle, though it is the hardest of all minerals after the diamond (*Djamāhir*, 48; *Azhār*, 70; *Nukhab*, 8), having number 9 in Mohs' scale of hardness (Bauer, 263; Webster, 74). It is also the densest of all precious stones, according to al-Bīrūnī, and it has a very high specific gravity of *ca.* 4 with insignificant variations (sapphire's specific gravity is 4.08, slightly higher than that of ruby which ranges between 3.99 and 4.06 (Bauer, 282). Al-Bīrūnī (*Djamāhir*, 77) states that, if the weight of a sapphire

is 100, that of a ruby of the same size is 97⅛, the ratio in integers being 800 to 777.

Yāḳūt is described in Muslim sources as resistant to fire; it neither melts nor calcifies as other precious stones like emerald do. When *yāḳūt* is exposed to high temperature, the red variety is neither changed nor destroyed, this being a test for simulants or fakes. Al-Tīfās̲h̲ī mentions that in the *K. al-Aḥd̲j̲ār*, ascribed to Aristotle, it is said that when *yāḳūt aḥmar* is exposed to the blowpipe, it is infusible, but its beauty enhances (*Azhār*, 72). However, while the colour of the ruby remains unaltered, that of the sapphire under similar conditions will disappear; blue and yellow *yāḳūt* turn white. Sapphire can be decolourised but it does not melt in fire. Resistance to heat without loss of colour is strictly a property of *yāḳūt aḥmar*.

The same authorities state that the immediate visible characteristics and distinctive features of *yāḳūt* are its vitreous lustre and its *s̲h̲uʿāʿ* (double refraction). Transparency is expressed by "abundance of water" (*wafrat al-māʾ*), by *mas̲h̲affa*, i.e. *s̲h̲affāfiyya* "translucency," or by *ṣafāʾ* "clarity". Uniform, intense and deeply saturated colour, *is̲h̲bāʿ* or *kat̲h̲rat al-ṣibg̲h̲*, is, in addition to glittering brightness, *rawnaḳ*, one of the good features that raise its value.

Defects or impurities appear in the form of "cleavage", *s̲h̲ibh al-tas̲h̲kīk*, *tas̲h̲ʿīr*, or *s̲h̲aʿra*; "freckles" or "inclusions", *namas̲h̲*; "cavities", *k̲h̲urūḳ* (sg. *k̲h̲arḳ*), like *sūs* in wood, either filled with air, *rīḥ*, or water, *māʾ*, or mud, *raym*, or sometimes worms, *dūd*. All of these could be removed from the stone by a drill; if left within, the stone will crack. Another defect is the uneven distribution of colour which gives an appearance of "piebaldness", *bulḳa*. While the ruby is usually coloured uniformly throughout, the distribution of colour in the sapphire is often very irregular. Moreover, if the colour of the ruby is not uniform, it will become uniformly coloured through gradual heating (Bauer, 265, 282).

Cloudiness, *g̲h̲aym*, is one of the flaws mentioned by al-Kindī and Ibn al-Akfānī, who call it *g̲h̲amāma bayḍāʾ ṣadafiyya* (i.e. milky and nacreous cloud), which sticks to the surface, and if not deep, disappears through rubbing. One of the flaws enumerated by al-Kindī is the *namas̲h̲* or "freckles", which appear as patches different from the original colour; if abundant and if deep and spreading, they will be difficult to remove (cited in al-Bīrūnī, *D̲j̲amāhir*, 38).

Medical and magical uses. Apart from the physical properties of *yāḳūt*, medicinal, psychological, and talismanic qualities were also attached to it. Ibn al-Akfānī quotes Aristotle, Ibn Sīnā, Ibn Zuhr and al-G̲h̲āfiḳī as saying that, if worn as a pendant or ring, *yāḳūt* repels pestilence vapours and poison, prevents attacks of epilepsy, and cures haemorrhage (*Nuk̲h̲ab*, 11). As for its psychological effect, Ibn Sīnā is quoted as saying that it is efficacious in strengthening the heart and boosting one's mood. The talismanic property is characterised as attracting divine favour and thus fulfilling the wearer's needs. The lucky wearer would also be assured of reverence among people and high regard by kings.

Prices and values. Besides size, high prices depend on the fulfillment of a set of quality conditions, namely, intensity of colour, *s̲h̲ibaʿ*; full "éclat" or transparency, *māʾ*; clarity, *ṣafāʾ*; splendour, *rawnaḳ*; and freedom from flaws (al-Bīrūnī, *D̲j̲amāhir*, 50). This same author, depending on information he read in a manuscript on precious stones written in al-S̲h̲ām, says that during the reign of the Umayyad ʿAbd al-Malik [*q.v.*], *yāḳūt aḥmar* and excellent *luʾluʾ* "pearls" were equal in value and price (*loc. cit.*). In the early ʿAbbāsid period, al-Manṣūr [*q.v.*] paid 100,000 dīnārs for the two-*mit̲h̲ḳāl* ruby called *al-d̲j̲abal* (see below). Al-D̲j̲āḥiẓ [*q.v.*] stated that the price of half a *mit̲h̲ḳāl* of *bahramānī* ruby was 5,000 dīnārs (*Tabaṣṣur*, 18-19). During al-Maʾmūn's reign, the price of one *mit̲h̲ḳāl* of *bahramānī* was 800 dīnārs, and centuries later, in Ibn al-Akfānī's time (8th/14th century), the prices of *yāḳūt* and other gems increased tremendously (*Nuk̲h̲ab*, 8-9).

Historical records of the ruby. The Rightly-Guided Caliphs abstained from collecting gems, and distributed those obtained through booty among the Muslims. Only a few of the Umayyads filled their treasuries with gems, and these were later seized by the ʿAbbāsids, most of whom had a passion for collecting and increasing their assets, according to al-Bīrūnī. In particular, Hārūn al-Ras̲h̲īd [*q.v.*] was known for his ardent passion for gems (*D̲j̲amāhir*, 57-8, 62-3).

Unset rubies were used by rulers either as a sign of power or out of a belief in their talismanic, medicinal, or magical powers. As described in the texts, and especially in the *K. al-Hadāyā wa 'l-tuḥaf* erroneously ascribed to the *ḳāḍī* Ibn al-Zubayr, a few known pieces were, when held in one hand, so large as to stick out from both ends of the fist. One was confiscated by the Umayyad His̲h̲ām from his governor in Baṣra. Of two others, which both looked like a handle of a mirror, one belonged to the G̲h̲aznawid Masʿūd I b. Maḥmūd [*q.v.*], the other to a king of Ceylon. A fourth, which was carved in the form of a lion, belonged to the G̲h̲aznawid Maḥmūd of G̲h̲azna [*q.v.*]. Still another piece, sculpted in the form of a phoenix head, was found by the Buwayhid Abū Kālīd̲j̲ār [*q.v.*] in the citadel of Iṣṭak̲h̲r. Corundum stones were carved in the form of small bowls, spoons, goblets, bottles and knife handles. During the Umayyad period, Yazīd I sent a ruby bottle as a gift to the Kaʿba (*D̲j̲amāhir*, 67). A scent pomade container of ruby belonged to ʿAbda, daughter of the Fāṭimid caliph al-Muʿizz [*q.v.*]. Ruby cabuchons were set in rings, the most famous cabuchons being known as *al-d̲j̲abal* ("mountain"), most probably due to their huge size. One was bought by the ʿAbbāsid caliph al-Mahdī [*q.v.*] (*D̲j̲amāhir*, 61), and another by al-Mutawakkil [*q.v.*] (*D̲j̲amāhir*, 56, 61; *Hadāyā*, 183). Hārūn's wife Zubayda had a *subḥa* or rosary made of *rummānī* ruby beads, each the size of a hazelnut and grooved like watermelon slices (*D̲j̲amāhir*, 58).

(Ghada al-Hijjawi al-Qaddumi)

YĀḲŪT al-MUSTAʿṢIMĪ, D̲j̲amāl al-Dīn Abu 'l-Durr b. ʿAbd Allāh, famed Arabic calligrapher

(*ca.* 618-98/*ca.* 1221-98), who derived his *nisba* from his master, the last ʿAbbāsid caliph in Baghdād, al-Mustaʿṣim [*q.v.*], who brought him up and had him educated.

Although Ḳāḍī Aḥmad states that he was a native of Abyssinia, another tradition identifies him as a Greek from Amasia, later an important centre of calligraphers. A eunuch, Yāḳūt had a school at Baghdād and his six most outstanding students were permitted to sign his name to their calligraphies, making the task of identifying authentic works by Yāḳūt extremely difficult. Yāḳūt himself was the continuer of the master of the six cursive scripts, ʿAlī b. Hilāl, known as Ibn al-Bawwāb (d. 413/1022 [*q.v.*]), who had refined the scripts codified and regularised in the 4th/10th century by Ibn Muḳla [*q.v.*]. His ability to imitate Ibn al-Bawwāb is illustrated by an anecdote in which he fooled his patron al-Mustaʿṣim into believing that an example of his own work was actually that of Ibn al-Bawwāb. However, his reputation rests on his calligraphic innovations rather than solely his skill in duplicating the work of his predecessor.

By cutting the nib of the *ḳalam*, or reed pen, at an angle and maintaining a long point, Yāḳūt produced a more elegant, rhythmic script than that of Ibn al-Bawwāb while still adhering to the rules of proportion established by Ibn Muḳla for the six scripts, *thuluth, rayḥān, muḥaḳḳaḳ, naskh, tawḳīʿ* and *riḳʿa*. Called the *ḳiblat al-kuttāb*, or model of calligraphers, Yāḳūt copied two *djuzʾ* [*q.v.*], of the Ḳurʾān every day and completed two Ḳurʾāns every month. He is reputed to have produced 1,001 Ḳurʾāns in his lifetime and to have given away 70 samples of his writing every day. In addition to being a demanding teacher, Yāḳūt himself was an incessant worker. When the Mongols took Baghdād in 656/1258, Yāḳūt took refuge in a minaret. He brought a pen and ink with him, but, lacking paper, he wrote on a linen towel, which in the 10th/16th century was preserved in the collection of Bahrām Mīrzā, the brother of the Ṣafawid Shāh Ṭahmāsp I. Although an album was compiled for Bahrām Mīrzā (TKS, H.2154), it does not contain Yāḳūt's writing on linen.

Yāḳūt spent his whole life in Baghdād, where he died reportedly at the age of eighty. Under the ʿAbbāsids, Yāḳūt had worked as librarian of the Mustanṣiriyya *madrasa* in Baghdād, and after the Mongol conquest he became the protégé of the historian Djuwaynī; amongst his own compositions, a collection of *nawādir* by him is extant in several mss., see Sezgin, *GAS*, ii, 89. The limited number of extant works convincingly attributed to his pen reveal the elegant, clear cursive scripts for which he is renowned.

Although a thorough stylistic study of works attributed to Yāḳūt has not been achieved, the following attributions are plausible: Ḳurʾān, dated 681/1282-3, parts 2 and 12, Topkapı Saray Library, Istanbul, EH227, EH226; part 8, Chester Beatty Library, Dublin, ms. 1452; part 15, Nasser D. Khalili Collection, London; Ḳurʾān, dated 688/1289, B.N., Paris, ms. arab. 6716; and possibly Ḳurʾān, dated 693/1294, Topkapı Saray Library, Istanbul, EH74 and Āstān-i Ḳuds Library, Mashhad, Faḍāʾilī, p. 202. Of non-Ḳurʾānic literature, he copied the *Dīwāns* of several Arabic poets, and copies from his pen are extant of the *Dīwāns* of the pre-Islamic poets al-Muthaḳḳib al-ʿAbdī and Ḳuṭba al-Ḥādira, of the *Dīwān* of the *mukhaḍram* poet Abū Miḥdjan al-Thaḳafī, and of a selection (*mukhtār*) from the poems of al-Mutanabbī (see Sezgin, ii, 89, 189, 214, 301, 497).

(Sheila R. Canby)

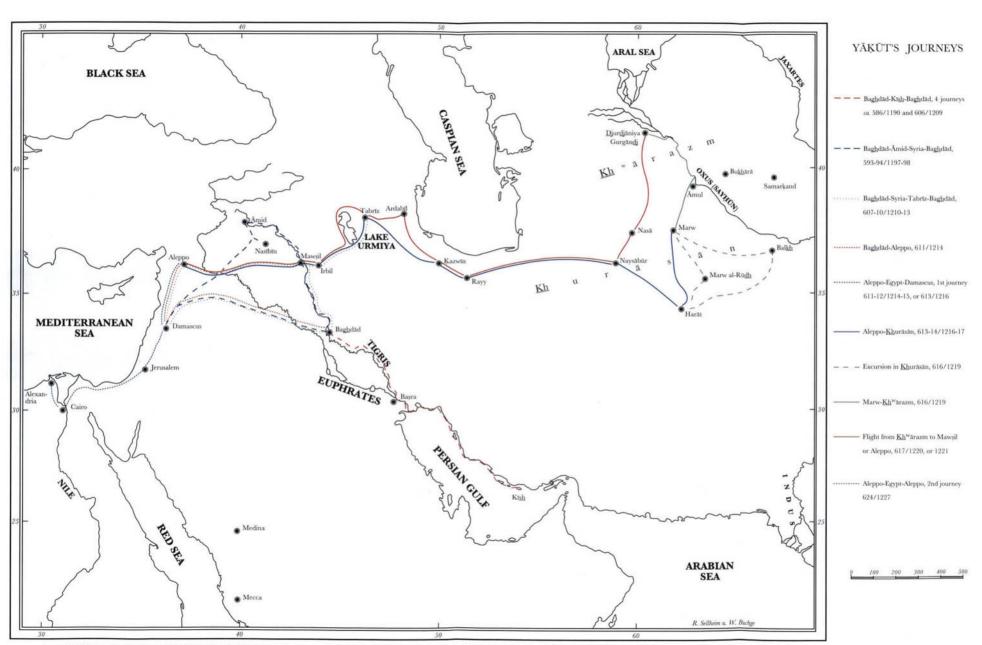
YĀḲŪT al-RŪMĪ, or, according to the genealogy that he adopted in order to conceal his slave's name, Shihāb al-Dīn Abū ʿAbd Allāh Yaʿḳūb b. ʿAbd Allāh al-Ḥamawī, celebrated traveller and scholar. He was born in 574 or 575/1179, and died on Sunday, 20 Ramaḍān 626/12 August 1229 at Aleppo.

1. His life.

His life can be divided into two parts: (a) from 574 or 575 to 606; and (b) from 606 to his death.

Life in the service of ʿAskar al-Ḥamawī. Yāḳūt was born in Byzantine territory of non-Arab parents, reduced to slavery while still a very young child, and taken to Baghdād at the age of five or six. There he was bought by an almost illiterate merchant, ʿAskar b. al-Naṣr al-Ḥamawī (d. 606/1209; Ibn Khallikān, vi, 127; Sellheim, 95), who gave him a Ḳurʾānic education, so that he could be useful to him in his business (al-Ḳifṭī, iv, 80-1). In fact, Yāḳūt made numerous journeys on behalf of his master to the island of Kīsh (Ḳays [*q.v.*]) and to al-Shām. Later, however, following a disagreement between the two men, he was emancipated and dismissed by his master (596/1199-1200), who afterwards re-engaged him. However, he had already become a copyist and a transcriber (*warrāḳ*), which was how, in the period of his dismissal between 596 and 603, he was able to copy 300 *mudjallads* (ʿAbbās, vi, 2887) to earn his living.

The scholar. His training began quite early, thanks to the education that ʿAskar had granted him, though also because of his intellectual curiosity, which he put to good use chiefly during his business travels. He perfected this throughout his life, through numerous profitable encounters and extended visits to libraries like that of Ibn al-Ḳifṭī in Aleppo, and to those of Marw al-Shāhidjān [*q.v.*], where he said he stayed for three years (see below, 2., *f-h*); also to the libraries of the al-Samʿānī, Sharaf al-Malik al-Mustawfī, Niẓām al-Malik Muḥammad b. Isḥāḳ, al-Wazīr Madjd al-Malik, al-ʿAmīdiyya, al-ʿAzīziyya, al-Khātūniyya, al-Kamāliyya and al-Ḍamriyya families (*Muʿdjam al-buldān*, iv, 509-10/v², 114).

It is worth noting that, among his teachers, he included the following (ʿAbbās, vii, 2907-9): Abu 'l-Muradjdjā al-Baghdādī for Arabic and metrics (Sālim b. Aḥmad, *Udabāʾ*³, no. 513); al-Wadjīh al-Mubārak b. al-Mubārak al-Ḍarīr, who taught grammar for many years at the Niẓāmiyya of Baghdād and of whom it was said that he knew Armenian, Greek, Ethiopian and "Indian" (*Udabāʾ*³, no. 932); Abu 'l-Baḳāʾ al-ʿUkbarī al-Baghdādī [*q.v.*], the scholar of grammar, lexicography, exegesis, law, *kalām* and Ḳurʾānic studies (*Udabāʾ*³, no. 645); the grammarian Abu 'l-Yumn al-Kindī (Zayd b. al-Ḥasan; *Udabāʾ*³, no. 504), whom he knew in Damascus; the historiographer Ibn al-Dubaythī [*q.v.*]; Abu 'l-Muẓaffar al-Samʿānī (ʿAbd al-Raḥīm; Dhahabī, *Siyar*, xxii, 107-9), the son of Abū Saʿd al-Samʿānī [*q.v.*], who allowed him to visit the two rich libraries owned by his family at Marw; Ibn Yaʿīsh [*q.v.*] (*Udabāʾ*, iii, 77/ii³, 841, 869; Sellheim,


Source: R. Sellheim, *Neue Materialen zur Biographie des Yāqūt*, in W. Voigt (ed.), *Forschungen und Fortschritte der Katalogisierung der orientalischen Handschriften in Deutschland*, Wiesbaden 1966. Reproduced by the kind permission of Professor R. Sellheim.

107) by whom he was taught either in Aleppo or Baalbek. He had no other teacher specifically for geography or astronomy, and none of his pupils is known. As can be seen from the long citations that he makes from the history of Kh^w^ārazm by Maḥmūd al-Kh^w^ārazmī, in which the latter attacks al-Shahrastānī [*q.v.*], he had but little appreciation of philosophy (*Muʿdjam al-buldān*, iii, 343/iii², 388).

He also had contact with learned friends and with his patrons. Among these were al-Ḳāḍī al-Akram, *wazīr* of Aleppo, Ibn al-Ḳifṭī [*q.v.*], whom he met in 609/1212 (Sellheim, 96) and to whom he wrote a letter from Mawṣil in 617/1220 or 618, expressing his distress at the Mongol advance (al-Ḳifṭī, iv, 86-7, with the answer on 87 ff.; Sellheim, 101-2). His profession as a copyist in Baghdād led him to share his love of books with his friend Abū Saʿd Ibn Ḥamdūn (al-Ḥasan b. Muḥammad; *Udabāʾ*³, no. 353; ʿAbbās, vii, 2887), the son of Abu 'l-Maʿālī Ibn Hamdūn [*q.v.*]), all of whom were great bibliophiles. He also formed a firm friendship at Mawṣil with the brother of Ibn al-Shaʿʿār al-Mawṣilī (al-Mubārak b. al-Bakr, d. 654/1256), which allowed him to have frequent contact with the latter, a great connoisseur of poetry and the poets (Ibn al-Shaʿʿār, *Ḳalāʾid al-djumān*, ix, 341; ʿAbbās, vii, 2955). His encounters with Andalusian scholars also motivated him to gather documentary evidence on the geography and culture of their region. This was also the case in Baghdād with Muḥammad b. Aḥmad b. Sulaymān al-Zuhrī, whom he claimed as a friend (*Udabāʾ*³, no. 991; al-Ṣafadī, *Wāfī*, ii, 104-5), and likewise in Aleppo with Ibn al-Muwaffaḳ (al-Ḳāsim b. Aḥmad al-Mursī al-Lūrḳī, d. 661/1263), who taught him the Spanish philological tradition, though he was probably also one of his sources for the geography of that region (Sellheim 104, no. 21, 108, 111; *Udabāʾ*, vi, 152-3/v³, no. 900).

2. His travels.

These not only gave him the opportunity of seeing many of the places to which he had devoted an entry in his geographical dictionary, with the exception of the toponyms of the Muslim West, where he never went; they also enabled him to collect scholarly and literary information from the libraries and sometimes from other sources for his dictionaries of scholars and poets.

The following survey of his travels is based on Sellheim's map (see foldout, and cf. Wüstenfeld, *Jâcût's Reisen*; ʿAbbās, vii, 2881 ff.).

a. Baghdād-Kīsh-Baghdād, *ca.* 586/1190 and 606/1209.

b. Baghdād-Āmid-Syria-Baghdād, 593-4/1197-8.

c. Baghdād-Syria-Tabrīz-Baghdād, 607-10/1210-13.

d. Baghdād-Aleppo, 611/1214.

e. Aleppo-Egypt-Damascus (the first Aleppo journey) 611-12/1214-15 (or 613/1216).

f. Aleppo-Khurāsān (particularly Nīshāpūr and Marw), 613-14/1216-17.

g. Travelling around Khurāsān (Balkh, Marw al-Rudh, Harāt, etc.), 616/1219.

h. Marw-Kh^w^ārazm (Djurdjāniyya), 616/1219.

i. Khurāsān to Mawṣil, then to Aleppo, 617/1220 (618).

j. Aleppo-Egypt-Damascus (the second Aleppo journey), 624/1227.

In addition to the pitfalls which were commonplace for travellers in that remote period, he met with particular difficulties. On one occasion he had to flee from Damascus where he had expressed certain anti-ʿAlid ideas, which may have caused him to be considered a proponent of the Khāridjites; he was almost lynched, took refuge for a few months in Aleppo (al-Ḳifṭī, iv, 82; Sellheim, 97), and continued his flight in the direction of Khurāsān (journeys *e-f*).

But a test, this time of a sentimental nature, awaited him at Nīshāpūr (Shādhiyākh), where he bought a very beautiful Turkish slave of whom he was enamoured, but from whom, to his great despair, he soon separated (*Muʿdjam al-buldān*, iii, 330/iii², 306-7; Sellheim, 97). The greatest peril, however, and the greatest disaster for him consisted of the advance of the troops of Čingiz Khān [*q.v.*] and it is known that Bukhārā [*q.v.*] among others surrendered to them in 615/1220 (travels *h-i*; Maʿrūf, *al-Ghazw*).

3. His works.

Dictionaries and historical works.

a. *Muʿdjam al-buldān*: the idea came to him at Marw in 615/1218-19, during a course with his teacher Abu 'l-Muẓaffar al-Samʿānī. The first draft was finished not at Mawṣil, as is often thought, but at Aleppo, on 20 Ṣafar 621/13 March 1224 (Sellheim, 103-4). He began what was to be the final version that same year and continued to revise it afterwards. He undertook the definitive edition on 21 Muḥarram 625/1 January 1228. This was for the library of his patron Ibn al-Ḳifṭī, but in this last revision he did not reach the article "Ruṣāfat Baghdād" (Sellheim, 108-9, no. 26; ʿAbbās, vii, 2916). This great work not only comprises geographical and toponymic information but also literary and poetic subjects and biographical details of prominent figures originating from the toponyms presented. Certain cities or regions are treated in more detail, such as Aleppo and district, and also Marw, etc., such places as Yāḳūt had stayed in for a long time. For the sources for this dictionary, see Herr and also Barbier de Meynard. The abridged version that ʿAbd al-Muʾmin b. ʿAbd al-Ḥaḳḳ (d. 735/1339) made is limited to the *materia geographica: Marāṣid al-iṭṭilāʿ ʿalā asmāʾ al-amkina wa 'l-biḳāʿ*, i-iv, ed. A.W.T. Juynboll, Leiden 1851-64, i-iii, ed. ʿA. al-Bidjāwī, Cairo 1954.

b. *al-Mushtarik waḍʿ^an^ wa 'l-muftarik ṣuḳʿ^an^* is a register of toponyms with identical orthography but designating different places. He composed it in 623/1226, then reworked it until his death. Ibn al-Shaʿʿār regards it as a sort of abridged form of the previous work.

c. *Muʿdjam/Akhbār al-shuʿarāʾ* (Mustawfī, 320) is a dictionary that has not survived to the present day. He began to assemble the material and perhaps even to draft it before his *Udabāʾ* (*Udabāʾ*³, i, 8). One of his principal sources was the *K. al-Aghānī*, and also the works of Ibn Sallām, Ibn Ḳutayba, al-Marzubānī, Ibn al-Muʿtazz, etc. The interest of this dictionary lay chiefly in the later poets whom he knew personally and from whom he received poetic pieces. It is perhaps even possible that some of the accounts found in the *Muʿdjam al-udabāʾ* in the state that we know them may have been included by Yāḳūt in his *Dictionary of poets* (ʿAbbās, vii, 2920). He himself wrote poems and fragments of his poetry have been collected (*Udabāʾ*³, vii, 2928-39).

d. *Muʿdjam al-udabāʾ/Irshād al-arīb ilā maʿrifat al-adīb/Irshād al-alibbāʾ ilā maʿrifat al-udabāʾ*. The idea of writing a dictionary apparently came to Yāḳūt in his twentieth year, when he met the poet and lexicographer Shumaym al-Ḥillī (ʿAlī b. al-Ḥasan b. ʿAntar; *Udabāʾ*³, no. 742) at Āmid (594/1198). He continued enriching the contents at will from his reading and from the people he met until the end of his life (ʿAbbās, vii, 2923). Unfortunately this monumental work has not completely survived to the present day even though in his recent edition I. ʿAbbās was able to restore 32

accounts that were not in that of Margoliouth. He did this by recourse to the part that was recovered from the abridged version of ʿAlī b. ʿAbd al-Sallām al-Takrītī (?), entitled *Bug̲h̲yat al-alibbāʾ min Muʿd̲j̲am al-udabāʾ*, and to a part of the addenda of Muṣṭafā D̲j̲awād (ʿAbbās, i, introd.). Furthermore, as stated earlier, the editors or copyists included in this may have been part of the original of his *Muʿd̲j̲am al-s̲h̲uʿarāʾ*.

Apart from the classical sources already indicated for this work (see G. Bergsträsser, in *ZDMG*, lxv, 797 ff.; *ZS*, ii, 184-218), attention should be given to the following histories: of Iṣfahān, by Ḥamza al-Iṣfahānī [*q.v.*]; of Bayhaḳ, by Abu ʾl-Ḥasan al-Bayhaḳī [*q.v.*]; of K̲h̲ʷārazm [*q.v.*], by Maḥmūd al-K̲h̲ʷārazmī, or by al-Bīrūnī; of Marw, by Abū Saʿd al-Samʿānī [*q.v.*]; of Harāt, by ʿAbd al-Raḥmān b. ʿAbd al-D̲j̲abbār al-Fāmī (d. 546/1151); and of Hamad̲h̲ān, by S̲h̲īruwayh Abū S̲h̲ud̲j̲āʿ (d. 509/1115) (ʿAbbās, vii, 2924-5); a great number of other works, among them the *Muʿd̲j̲am al-safar* of Abū Ṭāhir al-Silafī [*q.v.*], could also be mentioned.

e. Lost works: *al-Mabdaʾ wa ʾl-maʾāl fi ʾl-taʾrīk̲h̲*, perhaps identical to *Taʾrīk̲h̲ ʿalā ʾl-sinīn*, mentioned by Ibn al-Nad̲j̲d̲j̲ār; *K. al-Duwal* (ʿAbbās, vii, 2911-12).

The following titles are of works which have also been lost.

Grammatical works.

Mad̲j̲mūʿ kalām Abī ʿAlī al-Fārisī; K. al-Abniya; Awzān al-asmāʾ wa ʾl-afʿāl al-ḥāṣira li-kalām al-ʿArab; al-Radd ʿalā Ibn D̲j̲innī (ʿinda kalāmihi fi ʾl-hamza wa ʾl-alif min Sirr al-ṣināʿa).

Miscellaneous works.

ʿUnwān (or *ʿUyūn*) *K. al-Ag̲h̲ānī* (abridged); *al-Muḳtaḍab fi ʾl-nasab*, or *K. fi ʾl-Nasab*, or *K. al-Ansāb*, abridged as *al-D̲j̲amhara* by al-Kalbī [*q.v.*]; *Ḍarūrat al-s̲h̲iʿr*. With regard to the *Ak̲h̲bār al-Mutanabbī*, they were most definitely a part of his *Muʿd̲j̲am al-s̲h̲uʿarāʾ* (ʿAbbās, vii, 2913).

(Cl. Gilliot)

YALAVAČ [see maḥmūd yalawač].

YALİ, Yalu (t.), in modern Turkish, *yalı*, literally, "bank, shore", but coming to mean in Ottoman Turkish "residence, villa on the shore", cf. Redhouse, *A Turkish-English dictionary*, 2192: "a waterside residence".

1. Etymology.

The Turkish word stems from the Greek: Homeric Grk. αἰγιαλός, Modern Grk. γιαλός. It must have appeared in Ottoman Turkish early, since it is found in ʿĀs̲h̲ïk-pas̲h̲a-zāde and Nes̲h̲rī (end of the 9th/15th century). It entered into place-names, e.g. Yalıkavak, Yalıköy, Küçükyalı, etc.), and spread into the Balkans in one direction (Serbo-Croat *igolo*) and into Persia in the opposite direction (Pers. *yālū* "seashore, river bank").

Bibliography: R. Kahane and A. Tietze, *The lingua franca in the Levant. Turkish nautical terms of Greek origin*, Urban, Ill. 1958, 499-501 no. 929; G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, iv, 109-10 no. 1810.

(Ed.)

2. Architecture.

There are less than 40 *yalīs* now left along the Bosphorus shores, and some of these have been altered by the use of concrete behind the original woodwork. Formerly, fire was prevented in some *yalīs* by having a layer of sand between the ceiling and the floor above. There might also be layers of charcoal with which to absorb the damp. The quays of the houses have always been vulnerable to the fast current of the Straits, and now to the wash from tankers and large freighters. The ideal *yalī* was built with as many windows as possible from which to enjoy the view. These windows were made to standard sizes so that they could be replaced quickly after a storm.

By the end of the 17th century there were many kiosks with large gardens, but it is accepted that the first true *yalī* was built in 1698 by the Grand Vizier Amūdja-zāde Ḥüseyn Köprülü Pasha [see ḤUSAYN PASHA, AMŪDJA-ZĀDE], and it still stands, projecting dramatically over the water at Kanlıca. The great salon, although in need of restoration, was never surpassed. It is almost independent of the mansion behind. In the centre of the salon is a magnificent fountain under a shallow dome, and three-sided sofa areas form intimate retreats like those of the Baghdād Kiosk at Topkapı Sarayı; they have splendid views of the sea and boats and the wooded hills opposite. Faded, but still impressive, the formal paintwork turns this room into a paradaisical garden. Plans of *yalīs* vary, but central to the tradition is the landing on the first floor reached by a fine staircase. There are fine rooms at each corner which project over the quays or the gardens. There is concealed access to the harem wing from the central landing, but the harem, like the *ḥammām* [*q.v.*], could also be set quite separately from the *yalī* itself. Surviving, or partly surviving examples of various types of *yalı* include the remains of the Aptullah Yalı at Emirgân; the Hasıp Paşa Yalı at Beylerbey; the Köçeoğlu Yalı and the Yılanlı Yalı at Bebek; and the former Osterog Yalı at Kandilli.

Turkish love of the open air and picnics required terraced gardens that were filled with ornate fountains (*çeşme, sebil, selsebil*) and formal pools where trees and flowers rambled and intermixed. If there were guests in the evening, lanterns hung from tree to tree. Judas and magnolia blossom transformed the shores of the Bosphorus in the spring. The Pasha's garden was divided from the harem garden by high walls, a few of which can still be seen. Up the hillside beyond the formal terraces there were parks, such as that at the Kıbrızlı Yalı at Anadolu Hısar.

(G. GOODWIN)

YALOWA, modern Turkish YALOVA, a town and district of Turkey situated on the southern coast of the Sea of Marmara (the town in lat. 40° 40' N., long. 29° 17' E.).

The district occupies the northern edge of the Armutlu peninsula which runs between the Gulf of Izmit to the north and the Gulf of Gemlik to the south, and ends in the Boz Burun cape, in the south-east of the Sea of Marmara. In Antiquity, it was the region of Pitiya, incorporated after 280 B.C. within the kingdom of Bithynia, and like the latter, conquered by Rome in 74 B.C. The settlements of Pitipolis and Drapenon were created there, as well as thermal baths established under the protection of Hercules and a shrine to Aesculapius. The Emperor Constantine the Great erected Drapenon into a town called Helenapolis, after his mother's name, she having reconstructed the baths there. The town grew in importance because of its position on the road from Constantinople to Nicaea, and, amongst other visitors, received the Empress Theodora with a suite of 4,000 persons. At the time of the First Crusade, the retreat to Helenapolis of the people's army led by Peter the Hermit and Gauthier Sans Avoir, in face of the Saldjūḳ Turks, witnessed the death of 25,000 Crusaders. In 1307 the town passed into the hands of Yalwačoghlu, one of ʿOthmān's [*q.v.*] lieutenants, and it now took the name of Yalaḳābād, later replaced by that of Yalowa.

In the 19th century, up to 1867, Yalowa was a *ḳaḍā* of the central *sandjaḳ* of the *wilāyet* of Khudāwendigār [*q.v.*] or Bursa. It was then attached to the *wilāyet* of Istanbul, together with the whole of the *sandjaḳ* of Izmid, then in 1888 made into a *mutaṣarriflïḳ* directly attached to the Ministry of the Interior. Yalowa was at that time the chef-lieu of a *nāḥiye* dependent on the *ḳaḍā* of Ḳara Mürsel, with 27 villages and 2,426 houses. The town had *ca.* 1,025 inhabitants, 500 of them Muslim Turks, 250 Greek Orthodox and 275 Gregorian Armenians.

In 1930, under the Republic, Yalova was attached, at Atatürk's prompting, to the *il* of Istanbul as an *ilçe* of 496 km^2 with 36 villages. It had 22,235 inhabitants in 1950, 3,833 in the town and 18,422 in the villages. The town grew rapidly, thanks to its baths and hot springs being much frequented by people from Istanbul, it being a stage on the Istanbul-Bursa route, the place of boarding boats coming from Kabataş on the European shore of the Bosphorus or from Kartal, on the Asiatic shore of the Sea of Marmara, and on the route for road passenger transport connecting with Bursa via Orhangazi and Gemlik. According to the 1990 census, it had 65,823 persons. The rural population, 47,594 in 1990, is engaged in growing cereals, fruit trees (apples and peaches) and vegetables under glass. The towns of Çinarcık to Yalova's west and Çiftlikköy to its east have also developed bathing facilities and now have municipalities. The *ilçe* of Yalova, with territories added to it totalling 817 km^2, in 1995 became an *il*, the population of which reached 163,916 (78,210 in the town of Yalova and 85,706 in the smaller towns and villages) in 1997. Yalova and adjacent coastal resorts were severely damaged by the earthquake of 17 August 1999, which killed over 2,500 people in the *il* of Yalova.

Bibliography: V. Cuinet, *La Turquie d'Asie*, iv, Paris 1894, 318-20, 369-72; art. *İstanbul*, in *Yurt Ansiklopedisi*, Istanbul vi, 3889 ff. (M. BAZIN)

YĀM, the Persian and Arabic transcription of the Mongol term *jam* (*djam*), originally denoting "road, route, direction". In the 13th century, at the time of the creation of the Mongol empire, the term *yām* also signifies in general the postal service of the Mongol Khāns and sometimes a postal relay. Information regarding this state institution of the Mongols is available from Chinese, Persian, Arabic, Armenian and Western sources (see bibl. in Gazagnadou). The postal relay of the Mongol authorities seems to have been borrowed from the Chinese postal system (*yi*), dating from the time of Čingiz Khān (Waley, 50, 75); it was progressively diffused throughout the empire in tandem with conquests (Gazagnadou, ch. II). The very bureaucratic organisation of the post of the Mongols of China is quite

well known (Olbricht). On the other hand, a great deal less information is available on its functioning in the rest of the empire. But the topographical, technical, military and political constraints that the Mongol authorities were obliged to surmount in organising the rapid circulation of postal couriers (*yāmči, ulači, ilči*), make it possible to deduce the major principles of the organisation of the Mongol postal service.

The material and administrative organisation seems to have been as follows: relays were established every 18 to 30 km or thereabouts (Rashīd al-Dīn, i, 671), depending on the topography and on the type of animals used. There were two types of relay: either substantial buildings comprising accommodation, stabling, etc. (Djuwaynī, i, 24), or simple relay stations where the courier changed mounts (*ulagh*). The network of routes marked out by postal relays probably covered several tens of thousands of kilometres linking hundreds of relays. Horses were used predominantly, but sometimes camels, dromedaries and mules were used, and even, in Russia, sleigh-dogs, if Marco Polo is to be believed (tr. Yule-Cordier, ii, 480, Fr. tr. *Le devisement du monde*, ii, 528). The number of horses or other mounts maintained at each relay varied between one and several dozens. For the whole of the Mongol empire, Marco Polo gives the figure of 200,000 post horses (Yule-Cordier, i, 433-5, *Le devisement du monde*, i, 252-3). Each relay was supervised by a functionary (also *yāmči*, but here in the sense of the one responsible for the postal relay) who was required to oversee its efficient running and to report to the central authorities regarding the state and the requirements of his relay, especially in terms of mounts. This supervisor was in charge of employees, including ostlers (also *ulači*, but here in the sense of the one responsible for the welfare of the post horses). According to J.A. Boyle, it seems that a postal service involving the use of chariots also existed (62 n. 270). Relays were usually entrusted to the charge of the nearest town or village. According to the importance of the information being conveyed, there was recourse to either express couriers or normal couriers. Mongol couriers, riding day and night and changing horses at regular intervals, could carry messages over hundreds of kilometres in record time. They were supplied with an imperial tablet (*pāiza*) and a decree (*yarligh*) marked with a seal (*tamghā*), these giving them absolute powers of requisition. Couriers of the *yām* only conveyed official correspondence of the Khāns and of Mongol officials, never that of individuals, except by special imperial decree or in cases of corruption. The co-ordination of the Mongol postal service with the army seems to have been quite strong; postal couriers maintained constant liaison between the military units themselves, and between the latter and the residence of the Khān. Furthermore, the couriers conveyed information of fiscal and political nature concerning each *tumen*, an administrative and military zone comprising, besides the resident population, ten thousand combatants (Lambton, 1988). The Mongols offered opportunities, in exceptional cases, to merchants and certain others, to utilise the *yām*. Special imperial instructions were then given, and these merchants or distinguished invitees were issued with a *pāiza*, and a *yarligh* bearing the *ṭamghā* of the Khān, these enabling them to travel in security over postal routes, and to use the horses and other facilities of the institution. Overseeing the smooth operation of the *yām* was a responsibility devolved to a representative of the Mongol authorities (*darughači*) in charge of regional administration (*ibid.*, 51).

The decline of the Mongol empire did not result in the immediate disapearance of this postal system. On the contrary, each khānate attempted to retain it for as long as possible. The Ming dynasty, on expelling the Mongols from China, revived the strong and ancient Chinese postal tradition, which was maintained until the end of the 19th century. Among the Mongols of Persia and ʿIrāḳ, as in the Golden Horde of Southern Russia and in Central Asia, the system of the *yām* was retained for better or worse until the end of the khānates. Their disintegration prevented the maintenance of this institution, based as it was on a stable network and on postal relays. The Mongol postal service influenced the regions in which it was installed so strongly that, in the 15th century, the term *yām* was still being used in the Persian world to denote the last postal relays (see, for example, Ḥāfiẓ-i Abrū, *Zubdat al-tawārīkh*). In Russia, the postal relay service introduced by the Mongols continued for centuries. The efficacy of the *yām* so impressed travellers and enemies of the Mongols that it was borrowed by the Mamlūks of Egypt during the sultanate of Baybars al-Bunduḳdārī. The Mongol *yām* may also have influenced the postal systems of the West in the late Middle Ages (Gazagnadou). The definitive dissolution of the Mongol powers (14th-15th centuries) led to the disappearance of one of the most remarkable systems for the transmission of news of the premodern era.

(D. GAZAGNADOU)

YĀM, an Ismāʿīlī tribe now inhabiting the area of Nadjrān in southern Saudi Arabia, although at the time of the Ayyūbid conquest of the Yemen in 569/1173 [see AYYŪBIDS; TŪRĀNSHĀH B. AYYŪB] they also held Ṣanʿāʾ [*q.v.*] and territory to the north and north-east of the city in the Djawf area, which was overlooked by Djabal Yām and where they may have originated (see Ibrāhīm Aḥmad al-Maḳḥafī, *Muʿdjam al-buldān wa 'l-ḳabāʾil al-yamaniyya*, 706). Al-Hamdānī, 115, describes *Balad Yām* in some detail, giving their main *waṭan* as Nadjrān and other territories as far north as the borders of the Ḥidjāz.

Yām are of Ḥās̲h̲id and one of the fifteen *baṭns* of Hamdān (ʿUmar b. Yūsuf Ibn Rasūl, *Ṭurfat al-aṣḥāb fī maʿrifat al-ansāb*, ed. K.W. Zettersteen, Damascus 1949, 7). Al-Mak̲h̲afī gives a genealogy: Yām b. Aṣbā b. Dāfiʿ b. Mālik b. D̲j̲us̲h̲am b. Ḥās̲h̲id, etc., right back to Sabaʾ (see also Ibn al-Kalbī-Caskel, *Ǧamharat an-nasab*, i, Leiden 1966, 229, and Muḥammad b. Aḥmad al-Ḥad̲j̲arī, *Mad̲j̲mūʿ buldān al-Yaman wa-ḳabāʾili-hā*, iv, Ṣanʿāʾ 1984, 774). ʿUmar Riḍā Kaḥḥāla's two entries *Yām* and *Yām b. Aṣbā* (*Muʿd̲j̲am ḳabāʾil al-ʿArab*, iii, Beirut 1982, 1259) should therefore rather be one single entry. Ibn al-Kalbī-Caskel, ii, 272, and Ibn Rasūl, *Ṭurfa*, 9, also mention a Yām which was a *baṭn* of ʿAns of Mad̲h̲ḥid̲j̲ [*q.v.*].

Yām came to historical prominence from about 533/1138 when a family, the Banū Ḥātim (II), the third of three Hamdān families, Banū Ḥātim (I), Banu 'l-Ḳubayb and Banū Ḥātim (II), took control of Ṣanʿāʾ. They contested authority over the city and the territory to the north with the Zaydīs, and after 569/1173, with the Ayyūbids after their conquest of the southern highlands and Tihāma (see ṢANʿĀʾ and G.R. Smith, *The Ayyūbids and early Rasūlids in the Yemen*, London 1974-8, ii, 68, 70-5). The Banū Ḥātim (II) were certainly of Yām and continued as a political force until about 590/1193. One or two of their *amīrs*, despite their following forms of Ismāʿīlī Islam and their masters' staunch orthodoxy, found favour and high position with the Rasūlid administration in the north of the Yemen, particularly under the second Rasūlid sultan, al-Malik al-Muẓaffar Yūsuf (647-94/1249-95 [see RASŪLIDS]).

When the Ottoman sultan Selīm I's forces invaded Yemen, the Yām assisted the Turks and were rewarded by a grant of the right to levy tribute on the tribes forcibly subdued by the Turks. Nevertheless, they supported the Ḳāsimid Imām in *ca.* 1640 in driving out the Turks. From *ca.* 1760 the office of the *Dāʿī* of the Yām became hereditary in the Makramī family. In 1834 the then *Dāʿī* renewed relations with the Ottomans, and the tribe supported Turkish power in Yemen up to its end in 1918.

Bibliography: For older references, see A. Grohmann's *EI*[1] art. The major mediaeval historical sources are given in the text. Smith, *The Ayyūbids*, ii, 68-75, provides references to the original Yemeni works, both Sunnī and Zaydī, which throw light on the Yām in the history of Yemen. See also F. Daftary, *The Ismāʿīlīs, their history and doctrines*, Cambridge 1990, index s.v. Yām.

(G.R. SMITH)

AL-**YAMĀMA**, at the present time a town in the Kingdom of Saudi Arabia about 70 km/45 miles south-east of the capital al-Riyāḍ [*q.v.*] and situated in the region of al-K̲h̲ard̲j̲ within the al-Riyāḍ emirate, close to Maḥaṭṭat al-K̲h̲ard̲j̲ on the al-Riyāḍ to al-Ẓahrān (Dhahran) railway (Hussein Hamza Bindagji, *Atlas of Saudi Arabia*, Oxford 1980, 49; Zaki M.A. Farsi, *National guide and atlas of the Kingdom of Saudi Arabia*, 1989, 71). The town is now relatively small and has a population of less than 50,000 (Bindagji, 3). The origin of the name may be *yamāma*, singular of the collective *yamām*, meaning wild pigeons, as opposed to *ḥamām*, meaning domesticated ones (see Yāḳūt, *Muʿd̲j̲am al-buldān*, v, Beirut 1979, 441-2, for other less likely etymologies).

In early Islamic times al-Yamāma was a region of Nad̲j̲d [*q.v.*] with its centre Ḥad̲j̲r (Yāḳūt, v, 442). During his lifetime, the Prophet was visited in Medina by a deputation of the Banū Ḥanīfa from al-Yamāma, including Musaylima b. Ḥabīb al-Ḥanafī [*q.v.*], later called al-Kad̲h̲d̲h̲āb "the Great Liar" by Muslim writers. When the delegation arrived back in al-Yamāma, he renounced Islam and declared himself to be a prophet. The tribe were permitted to drink wine and dispense with prayer (Ibn His̲h̲ām, *al-Sīra al-nabawiyya*, ed. Muṣṭafā al-Saḳḳā *et alii*, ii, Cairo 1955, 576-7). The long struggle to bring Musaylima to book carried out by the famous Muslim warrior K̲h̲ālid b. al-Walīd [*q.v.*] is chronicled by al-Ṭabarī (i, 1929-50; see also *The History of al-Ṭabarī*, x, tr. F.M. Donner, Albany 1993, 105-26) and Ibn al-Athīr, ii, Beirut 1965, 360-5). Musaylima was killed by the Muslims in al-Yamāma in the year 11/632 (Yāḳūt, 442, has the year 12).

Ibn K̲h̲urradād̲h̲bih [*q.v.*] (193) calls al-K̲h̲ard̲j̲ a *manzil* or relay station of al-Yamāma, while the 4th/10th-century al-Hamdānī (139) states that al-K̲h̲ard̲j̲ was a village of Yamāma. There were scattered fortresses, al-Hamdānī continues, palm groves and gardens (*riyāḍ*). He also mentions silver and gold mines there (153-4). He calls Ḥad̲j̲r the chief town (*miṣr*) and centre of al-Yamāma, the seat of its *amīrs*. He mentions that there is an ancient market there (180).

Al-Yamāma was visited in the 5th/11th century by the Persian traveller Nāṣir-i K̲h̲usraw, who has some very interesting observations on the area (*Safar-nāma* ed. M. Dabīr-Siyāḳī, Tehran 1335/1956, 107-8, Eng. tr. W.M. Thackston, New York 1986, 85-6). He mentions a large and ancient fortress and a market in which all manner of crafts can be found, and a beautiful mosque. The *amīrs* of the region are ʿAlawīs, Nāṣir-i K̲h̲usraw goes on, and have been for a very long time. No one is able to seize al-Yamāma from them, so powerful are they, with their 300-400 cavalry. They belong to the Zaydī *mad̲h̲hab* [see ZAYDIYYA], he declares, and the words of their *iḳāma* (i.e. the second call to prayer [*q.v.*]) are *Muḥammad*[un] *wa-ʿAliyy*[un] *k̲h̲ayru 'l-bas̲h̲ar; wa-ḥayya ʿalā k̲h̲ayri 'l-ʿamal*. Nāṣir-i K̲h̲usraw goes on to mention the palm groves of al-Yamāma and says that, when dates are plentiful, a thousand *mann* (one *mann* = approximately two pounds; see W. Hinz, *Islamische Masse und Gewichte*, Leiden 1970, 16-23) cost only one dīnār. He ends by informing his reader that the route to al-Ḥasā [*q.v.*] from al-Yamāma is 40 parasangs, although the journey can only be undertaken during the winter when water is available.

By the 19th century, al-Yamāma had already become a town of the region of al-K̲h̲ard̲j̲, and a population figure of 6,000 is quoted by R. Bayly Winder from a report of 1865 by Col. Lewis Pelly (*Saudi Arabia in the nineteenth century*, London etc. 1965, 212).

Bibliography: Apart from the references found in the text, see the 3rd/9th century author al-Ḥasan b. ʿAbd Allāh al-Iṣfahānī, *Bilād al-ʿArab*, ed. Ḥamad al-D̲j̲āsir and Ṣāliḥ al-ʿAlī, Riyāḍ 1968, *passim*, and Hamdānī, *passim*, for routes to and from al-Yamāma, mountains, water, wadis and villages, etc. in the area; L. Pelly, *Report on a journey to the Wahabee capital of Riyadh in Central Arabia*, Bombay 1866 (not seen). (G.R. SMITH)

AL-**YAMAN**, YEMEN, the southwestern part of the Arabian peninsula, now coming substantially within the unified Republic of Yemen (which also includes as its eastern region the former People's Democratic Republic of South Yemen, the pre-1967 Aden Protectorate, essentially the historic Ḥaḍramawt [*q.v.* in Vol. III and also in Suppl.; see also SUḲUṬRA]).

1. Definition and general introduction
2. Geography

3. History
   (a) From pre-Islamic times to 1962
   (b) From 1962 to the present day
4. Ethnology and social structure of the Yemeni highlands
5. The Arabic dialects of al-Yaman

1. Definition and general introduction. The name is variously explained in the Arabic sources; some say it was given because al-Yaman lies to the right of the Kaʿba or to the right of the sun (al-Bakrī, ii, 856), others because Yuḳṭan b. ʿĀbir and his companions turned right on separating from the other Arabs (Ibn al-Faḳīh, 33, tr. Massé, 37-8; Yāḳūt, iv, 1034), while others again derive the name from the eponymous hero Yaman b. Ḳaḥṭān (cf. al-Wāsiʿī, *Taʾrīkh al-Yaman*, Cairo 1346/1927-8, 281). Sprenger thought that the Greeks and Romans translated Teman and Yaman by *Eudaemon* and *Felix* and included under Arabia Felix all the land south of al-Shām. This coincides roughly with the delimitation of al-Yaman attributed to Muḥammad, who is said to have climbed a mound at Tabūk and, pointing to the north, said "All this is al-Shām" and turning to the south, "All this is al-Yaman" (Sprenger, *Die alte Geographie Arabiens*, Berne 1875, 9). The greatest extension of al-Yaman to the north actually corresponds very well with the boundary of Arabia Felix which, according to Ptolemy, vi. 7, 2, 27, began about 6 miles south of al-ʿAḳaba, with its northern frontier running from there northeastwards to the foot of the Sharāʾ range and then, turning east, crossing the northern edge of the desert of the Nafūd [*q.v.*], ending at al-Nadjaf. Al-Wāsiʿī (282) also represents al-Yaman as bounded in the east by the Persian Gulf, in the south by the Arabian Sea, in the west by the Red Sea and in the north by the Gulf of Ḳulzum, the Syrian desert and ʿIrāḳ. The frontiers given by the Arab geographers are considerably narrower. According to Ibn Khurradādhbih (135, 137, 189), and al-Idrīsī (143-4), the northern frontier of al-Yaman ended at the tree called Ṭalḥat al-Malik between al-Muhdjira and Sarūm Rāḥ, south of Mecca. According to others, it began below Tathlīth, while al-Aṣmaʿī (in Yāḳūt, iv, 1035) made the northern boundary run from ʿUmān through Nadjrān; al-Hamdānī (*Ṣifa*, 51; Yāḳūt, iv, 1035) more accurately traced it through Yabrīn, south of al-Yamāma, via al-Hudjayra, Tathlīth, Djurash and Kutna to the coast towards Kudummul near Ḥamiḍa (lat. 17° 52'). Ibn Ḥawḳal (18), who included two-thirds of the Diyār al-ʿArab in al-Yaman, put the northern limit at al-Sirrayn, Yalamlam and al-Ṭāʾif, and made it run through the highlands to the Persian Gulf; this makes it intelligible why some geographers even include Mecca in the Tihāma of Yemen. Towards the east, al-Yaman extends over Ḥaḍramawt, al-Shiḥr (Mahra) and Ẓafār (Ḍofār); even ʿUmān is sometimes included in al-Yaman when it is not (as e.g. in al-Muḳaddasī, 68) made a separate province. The whole of this extensive territory, which al-Dimashḳī (*Nukbat al-dahr*, 216) divided into 24 administrative districts (*mikhlāf* [*q.v.*]), was in the early days of Islam divided into three: Ṣanʿāʾ, al-Djanad and Ḥaḍramawt (or Ẓafār), under separate governors. The taxes under the ʿAbbāsids yielded 600,000 dīnārs (Ibn Khurradādhbih, 144, 249, 251). After al-Yaman broke off from the ʿAbbāsid empire, its area diminished considerably and its administrative divisions varied substantially; sometimes the Sunnī Tihāma, with its capital Zabīd [*q.v.*], was actually independent of the Zaydī Shīʿī highlands with Ṣanʿāʾ as capital. When Carsten Niebuhr travelled in al-Yaman, he ascertained that the following districts were independent:

1. al-Yaman in the narrower sense, with Ṣanʿāʾ; 2. Aden, with its hinterland; 3. Kawkabān; 4. Ḥāshid and Bakīl; 5. Abū ʿArīsh; 6. the lands lying between this and the Ḥidjāz; 7. Khawlān; 8. Sahān with Ṣaʿda; 9. Nadjrān; 10. Ḳaḥṭān; 11. al-Djawf, with Mārib; 12. Nihm; 13. Khawlān, to the south-east of Ṣanʿāʾ; 14. Yāfiʿ.

The geographical definition of al-Yaman becomes still narrower under Ottoman Turkish rule. The *wilāyet* according to the provincial law of 19 Rabīʿ II 1331/28 March 1913 comprised the *sandjak* of Ṣanʿāʾ, with the *ḳaḍās* of Ḥarāz, Kawkabān, Anis, Ḥadja, Dhamār, Yarīm, Radāʿ and ʿAmrān; the *sandjak* of al-Ḥudayda, with the *ḳaḍās* of Zabīd, Luḥayya, Zaydiyya, Djabal Rīma, Ḥadjūr, Bayt al-Faḳīh and Bādjil; and the *sandjak* of Taʿizz, with the *ḳaḍās* of Ibb, ʿUdayn, Ḳaʿṭaba, Ḥudjariyya, Mukhā and Ḳamāʿira. In the north it was adjoined towards lat. 18° N. by the independent districts of Abū ʿArīsh, Ḳaḥṭān, Wādaʿa and Bilād Yām (Nadjrān); in the east by the Balad Kitāf, Baraṭ, the oasis of Khabb, al-Djawf with Arḥab and Nihm, and also Mārib, Khawlān, Ḥarīb, Bayḥān and Yāfiʿ, as well as the Faḍlī region; and in the south by the hinterland of Aden, which had been under a British protectorate since the later 19th century.

Bibliography: For the Arabic geographers and the European travellers in al-Yaman, see the *Bibl.* to *EI*[1] art. s.v. (A. Grohmann)

2. Geography. The highlands of Yemen form the southern end of the mountain chain that runs down the west coast of Arabia from the Ḥidjāz [see AL-SARĀT] and through ʿAsīr [*q.v.*] and that becomes more lofty as it goes southwards. The chain is an uplifted block, falling away along lines of faulting on its eastern edge to the desert interior; the ʿAsīr-Yemen highlands are in fact part of a single uplifted block that also comprises the Ethiopian highlands, cut in two by the rift valleys of the Red Sea and Gulf of Aden. In Yemen, a core of granite and schists is overlain with sandstone and limestone, in turn covered by a layer of volcanic basalt some 100 m/330 feet thick. This is the highest part of the Arabian peninsula, with Djabal Ḥāḍir Nabī Shuʿayb to the west-south-west of Ṣanʿāʾ rising to 3,760 m/12,336 feet; even the mountains in slightly lower ʿAsīr reach 2,820 m/9,250 feet in Djabal Suda. There is a steep western escarpment overlooking the Tihāma [*q.v.*] or coastal plain, but a less steep eastern one that slopes down to the sandy basin of the Ramlat al-Sabʿatayn. In the southeastern part of Yemen, the highland plateau is connected with the almost equally high crystalline ridges of the Kawr mountains, which in turn join the much-dissected limestone plateau of the Djōl or Djawl, which rises to 2,112 m/6,927 feet. The broad depression of the Djawf Mulays and Djawf Khudayf, which contain the sand dunes of Ramlat al-Sabʿatayn as their core, probably once, in a pluvial period after the Ice Age, contained a lake, but now its underground water drains to the east, through a narrow exit, to irrigate the oases of the Wādī Ḥaḍramawt. This wadi continues eastwards, sometimes with surface water, for some 320 km/200 miles before turning southwards to the Gulf of Aden through the precipitous Wādī al-Masīla [see further, ʿARAB, DJAZĪRAT AL-. ii-iii; ḤAḌRAMAWT. 3., in Suppl.].

In regard to climate, Yemen and the other lands of southern Arabia, Ḥaḍramawt and Ẓafār [*q.v.*], benefit from lying within the sphere of the South-West

Monsoon which brings appreciable rain to the highlands between June and September. The Tihāma of Yemen, about 80 km/50 miles wide, is very barren, as the monsoon rains fall on the higher mountain slopes, but these rains supply streams of water flowing down from the hills, often perennially, to irrigate the typically African crops of the "beehive" villages: millet, cotton, indigo (*nīl* [*q.v.*]), *wars* [*q.v.*], madder, safflower, henna and other dye-producing plants and shrubs and bananas. Above the Tihāma, the lower mountain slopes are semi-desert, with acacia and tamarisk scrub. But beyond 1,500 m/4800 feet, the monsoon winds bring rainfall amounting to more than 75 cm/30 inches per annum in e.g. the southwestern corner of the plateau, to the north and north-east of Taʿizz, and in midsummer the hillsides are cloaked in cloud and mist, and there are heavy dews. These conditions are ideal for coffee trees [see ḲAHWA], and the carefully-maintained multiple terraces also support plantations of fruits, nuts and the mildly narcotic qat or chat, *Cathula edulis* Forsk. [see ḲĀT]. The bulk of the rains and clouds fail, however, to mount the western crests, so that the high plateau to the east is in a rain-shadow, with a drier climate, and the fields of fertile wind-blown soil (loess) rely heavily on streams from the peripheral mountains for irrigating the staple cereal, millet, and the orchards of vines (cultivated since ancient times; the early Arabic geographers mention vineyards in Sarūm Rāḥ, Khaywān, Athāfir and the Wādī Ḍahr) and oranges. Unusually for Arabia, cattle are kept as draught animals. Temperatures may vary widely up here, with cold winter nights and frosty spells; ice is observed at Ṣanʿāʾ on winter mornings more frequently than the occurrence of frost would appear to warrant, an anomaly due to the low atmospheric pressure at over 2,200 m/7,200 feet combined with low humidity, which results in such rapid evaporation of water that its temperature can drop to freezing-point when the air temperature is several degrees above it. On the eastern edges of the highlands at the mouths of valleys there are perennial streams and springs, and such oases as Mārib have extensive date groves. Irrigation systems here have always been complex; it was in this region that ancient South Arabian kingdoms like Sabaʾ and Maʿin [*q.vv.*] arose, and the Dam of Mārib achieved fame in both pre-Islamic South Arabia and in post-Islamic lore and legend.

The Red Sea coastland of Yemen runs for about 450 km/280 miles down to the Bāb al-Mandab with a trend slightly east of south. There are sandy, mangrove-fringed beaches sloping gently up to the coastal plain of the Tihāma. The most significant ports of this coastland, which have historically served for the commerce of the more productive highland zone, are Luḥayya, al-Ḥudayda, Mukhā [*q.vv.*] or Mocha, and Perim [see MAYYŪN]. Along the Gulf of Aden lies, of course, the fine double port of Aden in a drowned volcano. The southern coastal plain from the Bāb al-Mandab eastwards through Aden is less continuous than that of the Tihāma of Yemen. Its widest part is the irrigated delta of Laḥidj [*q.v.* in Suppl.], which produces dates, coconuts, rice and cotton.

Yemen, together with Ḥaḍramawt and Ẓafār, formed the *Arabia Odorifera* of classical times, and in Yemen, in particular, such aromatics as myrrh were grown; but Yemen's ancient role as an entrepôt for the wares and products of India has long departed.

3. History.

(a) From pre-Islamic times to 1962.

Pre-Islamic Yemen. For the history of the four major pre-Islamic states of Yemen, the reader is referred to SABAʾ, ḲATABĀN, MAʿĪN and ḤAḌRAMAWT. Perhaps the history of the country would best be surveyed briefly here from the 1st century A.D. From beginnings in this century in the southern highlands, to a time towards the end of the 3rd century, a large tribal confederation, called Ḥimyar [*q.v.*] (Dhū Raydān in the pre-Islamic inscriptions) with its capital in Ẓafār [*q.v.*] near modern-day Yarīm, had annexed the territories of Sabaʾ, conquered Ḥaḍramawt and driven the Abyssinian colonialists from the land. In the late 4th century, the paganism of Ḥimyar had been replaced by Judaism, and this newly-found religious fervour had carried out the notorious massacre of the Christian community of Nadjrān [*q.v.*]. This act brought the Christian Abyssinians back into Yemen under Abraha [*q.v.*] who, after dealing with Ḥimyar, had become the virtual king of the country. Abraha's fame is mainly based on his building of a cathedral in Ṣanʿāʾ [*q.v.*] (al-Ḳalīs), his instigating what were to be the final repairs made to the already crumbling structure of the Mārib [*q.v.*] dam and, above all, his attempts at conquering Mecca [see MAKKA], allegedly, but impossibly, in the renowned "Year of the Elephant", A.D. 570, given in many traditions as the year of the birth of the Prophet Muḥammad. The task of ridding Yemen of the Abyssinian conquerors had been left to a leader from the Ḥimyarites, Abū Murra Sayf b. Dhī Yazan, although, by bringing in military assistance from the Persians, he had merely substituted one colonial power for another. The Persians thus ruled Yemen from Ṣanʿāʾ and continued even after the advent of Islam as governors there [see BĀDHĀM, in Suppl.].

If we were to believe without careful thought the Muslim writers who touch on the Islamisation of Yemen, we would accept that in 8/628 the governor in Ṣanʿāʾ, a Persian by the name of Bādhān, embraced Islam and the whole of the country immediately followed suit. In fact, we have information from Nestorian Christian sources implying the continued existence of Christianity, for example, at Ṣanʿāʾ and Nadjrān till *ca.* 900.

The pre-dynasty Islamic history. One of the greatest frustrations that the historian of early Islamic and mediaeval Yemen must face is the plain fact that there is so little information available concerning what can be termed the pre-dynasty history of the country. The Yuʿfirids [*q.v.*] (see below), centred on Shibām Kawkabān, and rulers on occasion over Ṣanʿāʾ itself, established the first local dynasty in Islamic Yemen in 232/847, and the period prior to their period, from the advent of Islam in A.D. 622, is what is more precisely meant by this term "pre-dynasty Islamic". The fact of the matter is that we have no contemporary literary sources extant and are compelled to rely on either later non-Arabian sources (e.g. al-Ṭabarī, Ibn al-Athīr, al-Balādhurī [*q.vv.*], etc.), or on even later Yemeni sources (e.g. al-Djanadī, al-Khazradjī [*q.v.*], Ibn al-Daybaʿ, etc.). All are equally disappointing, uninformative on the question of whence their data come, and in any case lacking in any detailed historical information.

Certainly under the Rightly-Guided Caliphs, when

the Islamic conquests got under way, thousands of Yemenis must have joined the Muslim armies, and indeed, Yemen provided the vast majority of the manpower for these military endeavours of such historical importance (see ʿAbd al-Muhsin Madʿaj M. al-Madʿaj, *The Yemen in early Islam 9-233/630-847, a political history*, London 1988, 64-101; also Radhi Daghfous, *Le Yaman islamique des origines jusqu'à l'avenement des dynasties autonomes* (*I*^er^*-III*^ème^ *s./VII*^ème^*-IX*^ème^ *s.*), Tunis 1995, i, 506).

The sources mention also any number of "representatives" despatched to Yemen by Muḥammad, but such accounts are full of confusion and contradiction. They become no more reliable for the later days of the Rightly-Guided, the Umayyad and the ʿAbbāsid caliphates. Surprisingly, the picture is not made any clearer after reference to the not inconsiderable numismatic evidence available to us (see e.g. in particular Ramzi J. Bikhazi, *Coins of al-Yaman 132-569 A.H.*, in *al-Abḥāth*, xxiii [1970], 3-127). Such representatives are usually described as governors (sing. *wālī*), though there were also on occasion *ḳāḍīs* and teachers, as well as alms collectors (sing. *djāmiʿ al-ṣadaḳa*). Some of those appointed, however, never reached Yemen for one reason or another and this further complicates the issue. The senior governor was the one appointed to Ṣanʿāʾ, although others were sometimes sent to al-Djanad, nowadays a suburb of Taʿizz [*q.v.*], and to Ḥaḍramawt, where they were on occasion to all intents and purposes independent and on other occasions evidently subordinate to Ṣanʿāʾ (see G.R. Smith, *The early and medieval history of Ṣanʿāʾ*, in R.B. Serjeant and R. Lewcock (eds.), *Ṣanʿāʾ, an Arabian Islamic city*, 53-4, and al-Madʿaj, *Yemen*, table 1, 13-14, table 4, 148-49, table 6, 169-70, table 8, 190-92 and table 11, 220-22, for attempts at listing these representatives).

The interesting question is, of course, what precisely were the duties of these officials? Initially they probably controlled little or nothing outside the walls of the town. They appear to have had a force under arms for the day-to-day policing of the urban area, though it is clear from our sources that they could not impose their will by tyrannical means on the local population; a number tried to do this, and complaints to the caliph, though perhaps slow to receive attention, eventually brought justice either in the form of a reprimand or in the actual dismissal of the governor and his replacement by another. Perhaps more importantly, they would have been charged with the task of promoting Islam and teaching the tenets of the new religion and the Islamic way of life.

As noted above, it is impossible to accept the naive assertion that with Bādhān's acceptance of Islam the whole population immediately followed. It is imperative that we now view the Islamisation of Yemen as a gradual process, taking place over at least three centuries. It is probably in this context, too, that we should see the appointments of governors to al-Djanad and Ḥaḍramawt. Ṣanʿāʾ, one assumes, still operated as a commercial and trading centre under some kind of special sanctity derived from the pre-Islamic *maḥram* institution. Al-Djanad and Ḥaḍramawt may also have operated in a similar fashion, and trade as much as anything else would have played the major role in the dissemination of Islam in Yemen over the years.

The Islamic history of Yemen down to the first Turkish invasion, 3rd-6th/9th-12th centuries. For the most part the history of the dynasties that held power in Yemen at this time can be seen in some detail in the entries devoted to them, and therefore only very brief notes are given below. The Ziyādids (203-409?/818-1018? [*q.v.*]) take their name, the Banū Ziyād, from Muḥammad b. Ziyād, a protégé of the ʿAbbāsid minister al-Faḍl b. Sahl [*q.v.*]. He was sent by the caliph al-Maʾmūn to quell tribal unrest in Tihāma [*q.v.*] and arrived there in 203/818. As commanded, Muḥammad founded and built a new capital of Tihāma, Zabīd [*q.v.*], and the dynasty appears to have held territory in the Yemeni highlands and along the Indian Ocean coast, as well as in Tihāma.

The Yuʿfirids (232-387/847-997 [*q.v.*]) were the first local Yemeni dynasty to emerge in Islamic times. The dynasty owes its name, the Banū Yuʿfir, to one Yuʿfir b. ʿAbd al-Raḥmān of Dhū Ḥiwāl of Shibām Kawkabān [*q.v.*], north-west of Ṣanʿāʾ. Their territory extended from Ṣaʿda [*q.v.*] in the northern to al-Djanad in the southern highlands. It was during this period that the Ḥasanī *sharīf*, Yaḥyā b. al-Ḥusayn, settled in the northern highlands and created a Zaydī imāmate that was to endure right down to the year 1962 [see ZAYDIYYA].

The Nadjāḥids, the Banū Nadjāḥ (412-551/1021-1156 [*q.v.*]), were named after a black Abyssinan slave, Nadjāḥ, and ruled over Tihāma from Zabīd, for the most part vying with the Ṣulayḥids [*q.v.*] (see below) for control there.

The Ṣulayḥids, the Banu 'l-Ṣulayḥī (439-532/1047-1138 [*q.v.*]), were a Shīʿī dynasty acknowledging the Fāṭimids and named after ʿAlī b. Muḥammad al-Ṣulayḥī, who had been brought up within orthodox Islam in the Ḥarāz area, south-west of Ṣanʿāʾ, and who was later converted by a Fāṭimid *dāʿī* operating in Yemen. They ruled firstly from Ṣanʿāʾ (439-*ca.* 480/1047-*ca.* 1087), but later from Dhū Djibla (*ca.* 480-532/*ca.* 1087-1138) and fought with the Nadjāḥids over Tihāma, controlling much of the country south of Ṣanʿāʾ.

The Sulaymānids were Ḥasanī *sharīfs*, originally from Mecca, who controlled northern Tihāma from Ḥaraḍ between the years *ca.* 462-569/*ca.* 1069-1173. They were firstly embroiled with the Nadjāḥids and later with the Mahdids), and it is suggested in some sources that they wrote to the Ayyūbids [*q.v.*] in Egypt and were instrumental in urging upon them their conquest of Yemen in 569/1173 (see below).

The Zurayʿids, the Banū Zurayʿ (473-569/1080-1173 [*q.v.*]), were named after Zurayʿ b. al-ʿAbbās, the son of a Ṣulayḥid protégé, and the family was of Yām [*q.v.*]. They were a Shīʿī dynasty, acknowledging the Fāṭimids like their masters, and they ruled over Aden and its surrounding area.

During the period 492-569/1099-1173, three separate dynasties of Hamdān dominated Ṣanʿāʾ and the territory north: the Banū Ḥātim (I), the Banu 'l-Ḳubayb and the Banū Ḥātim (II). The first two were in all probability of Fāṭimid allegiance, and the Banū Ḥātim (II), who claimed descent from the Yām, were certainly openly so. They vied with the Ayyūbids, particularly over Ṣanʿāʾ, and were not completely overwhelmed by them; indeed, we find them later in the service of the Rasūlids after they had taken over control in the southern highlands and Tihāma from the Ayyūbids.

The Mahdids [*q.v.*], the Banū Mahdī (554-69/1159-73), were founded by ʿAlī b. Mahdī, who had earlier in the 6th/12th century preached a religious message in Tihāma, where their power lay. The Mahdid dynasty had Zabīd as its capital and was finally crushed by the invading Ayyūbid army from Egypt which, under the command of Tūrānshāh b. Ayyūb [*q.v.*], the brother of Ṣalāḥ al-Dīn Yūsuf b. Ayyūb [*q.v.*], the Saladin of Western writers, in 569/1173 conquered much of southern Yemen and Tihāma.

The reasons for this conquest are several and complex, and cannot be dealt with here (see G.R. Smith, *The Ayyūbids and early Rasūlids in the Yemen*, ii, London 1978, 31-49) but the outcome is clear. The advancing Ayyūbid army wiped the Zuray'ids in Aden and the Mahdids in Tihāma off the historical map, and less dramatically brought an end to the Sulaymānids of northern Tihāma. Their solid military achievements during the years 569-628/1173-1230 paved the way for the political, administrative and cultural brilliance of their successors, the Rasūlids.

The Rasūlids [*q.v.*], who controlled vast areas of the southern highlands, Tihāma, and, at their zenith, as far east as Ẓafār, in what is at present the southern part of the Sultanate of Oman, and Ḥaḍramawt, brought unprecedented political stability to Yemen. Their period of power was between the years 626-858/1228-1454, and among their rulers were several who made their name as much for their literary and scientific efforts as for their political and administrative acumen [see RASŪLIDS. 3, 5].

Even the mighty and brilliant Rasūlids could not withstand the internal squabbles of the house, the revolts of the *mamlūk* troops and fickle tribes, and the ravages of the plague. Their rule in the southern highlands and Tihāma gave way in 858/1454 to a local Yemeni dynasty of *mashāyikh* from the area south of Radā', the Ṭāhirids [*q.v.*] or Banū Ṭāhir, a rule that was to last until 923/1517. The Ṭāhirids were defeated by an Ottoman force in 922/1516 near Zabīd, the main reason for this defeat apparently being the presence among the Ottoman troops of firearms, the first recorded evidence of their use in Yemen.

Ever fearful of the infidel Portuguese presence in the Red Sea and Indian Ocean, the Ottoman Turks launched a massive naval expedition into the area and arrived off the Red Sea island of Kamarān [*q.v.*] in 945/1538. The Zaydī *imāms*, who had taken much of the country after the downfall of the Ṭāhirids, were about to be much reduced in authority as a period of almost one hundred years of Turkish rule began.

The first Turkish occupation of the Yemen, 945-1045/1538-1636. After their naval victory, the Turks began to expand inland. They were besieging Ta'izz by the year 946/1539, were marching on Ṣan'ā' by 951/1544, and the city was in Turkish hands by about 954/1547 after a hard siege. The capital of Turkish Yemen was thus established, and the *ḳaṣr* in the east of Ṣan'ā' became the official residence of the governor-general (*beylerbeyi*), the first being Özdemir Pasha [*q.v.*].

The Turkish invasion of Yemen sent the Zaydīs in the north reeling for some time, and it was a while before they recovered. The recovery of their fortunes is first apparent in the person of the Zaydī *imām* al-Muṭahhar, son of Imām Sharaf al-Dīn Yaḥyā, who had died in 965/1557. Al-Muṭahhar had actually advanced on Ṣan'ā' in 974/1566, and the Turkish garrison was compelled to surrender to him. The imperial *dīwān* in Istanbul, greatly disturbed at this turn of events, appointed Sinān Pasha [see SINĀN PASHA, KHODJA. 2.] as commander-in chief of Yemen, and al-Muṭahhar was himself obliged to abandon Ṣan'ā' after a fierce counter-action against the Zaydīs led by Sinān.

Intermittent resistance on the part of the Zaydīs against the occupying Turks continued. Their struggle to recapture Yemen is associated with the *imām* al-Ḳāsim b. Muḥammad, generally known as al-Ḳāsim al-Kabīr. Before his death in 1029/1620, al-Ḳāsim had struggled at first against Sinān Pasha al-Kaykhiyā, albeit somewhat unsuccessfully, and later against the forces of Dja'fer Pasha. With al-Ḳāsim's death in 1029/1620, and since the Ottomans remained in parts of the country, it was left to his son, al-Mu'ayyad, to expel them. Sinān's successor Meḥmed Pasha, and in turn his successor, Ḥaydar Pasha, were relentlessly pushed back by al-Mu'ayyad. In 1038/1629, Ṣan'ā' fell to the Zaydīs, as did Ta'izz in the same year. Whilst the Turks remained a danger, particularly in Tihāma, their surrender to the Zaydīs in 1045/1636 brought an end to their first occupation of Yemen. Their commanders had on the whole been harsh with the Yemenis, and had imposed heavy taxes on them; the majority of governors, if not all of them, left Yemen having made their own personal fortunes.

The Zaydī imāmate up to the second Turkish invasion, 1045-1251/1636-1835. The major force throughout the country during this period of almost two centuries was the Zaydī imāmate. It would be wrong to assume, however, that the political situation was a consistent one, for the imāmate, as indeed had always been the case, was at times strong morally and physically, in which case the country was relatively stable and united and life more peaceful. Too often, however, a weak *imām* meant internal squabbles among the Zaydīs themselves, other claimants to the imāmate and tribal anarchy almost anywhere in the country. A few highlights of this period may be mentioned here, but the reader is referred to a more detailed history of the Zaydī *imāms* in the article ZAYDIYYA.

Al-Mutawakkil 'alā Allāh Ismā'īl (1054-87/1644-76 [*q.v.*]) presided over the imāmate for 33 years, during which the most brilliant era of Zaydī imāmic rule can be seen; the period also marks the furthest extent of their territory in Yemen. In particular, Ḥaḍramawt was conquered by the Zaydīs and that in its turn brought them into contact with the maritime power of 'Umān. Internally, al-Mutawakkil concerned himself with law and order and economic affairs, in particular, trying to regulate taxes. Security brought in merchants from other countries to trade in Yemen. Prosperity followed, and the *imām* was able to establish relations with India, with the Ḥidjāz and even with Istanbul.

Al-Mahdī Muḥammad (1098-1130/1687-1718), called Ṣāḥib al-Mawāhib, the latter place being where he resided near Dhamār, south of Ṣan'ā', may be briefly mentioned. He undid much of the great good which al-Mutawakkil had done, extracting unjust taxes and spending profligately.

Al-Mahdī 'Abbās (1161-89/1748-75) was well known for his scholarship as well as for his strength of character and effectiveness in authority. He did away with many oppressive practices that existed in the country, and would appear to have been the nearest to the Zaydī ideal of warrior-king, a follower of the *sharī'a* and a generous benefactor. There followed less able *imāms*, involving periods of internal anarchy, confusion and misery with Turco-Egyptian and Ottoman interference externally.
